Dear UTC Commissioners,

My name is Zoey. I'm 20 years old and I study environmental science. I'm extremely scared for my future. You have actual power to save millions of lives, please put people before profit, please be a hero not a villain. My generation is looking down the barrel of a gun that was loaded by the energy sector. You have the power to make this right. I'm bracing myself to watch our ecosystems and society collapse around me. I'm expecting to die in a fire, a war over water, shot during a protest for my life, lung cancer, an exotic disease due to a massive influx of refugees and viruses released from permafrost, or maybe just dehydration. And I'm expecting to watch the Global South struggle and die while I wait for the end to reach us on our pedestal in America. Please be a part of the solution, please put people before profit. Please value my life. I'm so scared.

Sincerely,
Zoey Plut
