Public invited to comment on “smart meter” rulemaking

RE:

Public invited to comment on “smart meter” rulemaking

I believe they have just asked for more money for profits now they will have the money for new meters.....when will this shabby scam stop.
Whats to stop them from turning off the meters anytime they want, but now it will be by automation rather than physically. They can scam us at anytime by making adjustments to the
meter to benefit themselves and how are we to know? I do not trust these private co's. If they were controlled by the gov't or better yet the cities than perhaps I could trust them.
As of now there are too many of these co's that are out of control. I don't support their extra charges or there meters.

Thank you,
