Subject: Request for 350 DID numbers

To: Washington Utilities and Telephone Commission

As requested, we submit the following information associated with our request for :  
numbers.

Our current DID numbers are not assigned out of one number block. They are department main numbers that were converted to DID's.

This accounting of numbers does not include our main phone number, which we do NOT want to change.

We currently have almost 300 extensions in use between our various locations.

We are not moving. Any disconnects of existing lines will have a recording directing callers to the new DID numbers (maximum number of days allowed without charge).

Denial of the numbering request is not acceptable for our best business practices.

There will be some 1FB lines that we will need to retain for fax machines and other analog devices. A list of these numbers will be forthcoming.
