

Comments for smart meter policy regulators:

I, my wife, and all my employees are strongly opposed to smart metering of our premises. We are in complete agreement with the attached letter from CLEAR.

We have been bombarded by dangerous electromagnetic radiation. The scientific evidence is growing. We recently had the levels of electromagnetic radiation in our home and being emitted by all our electronic devices tested. The EMR was off the charts. Consequently, we have turned off all wifi devices and other electronic equipment emitting EMR. We instead are now directly wired into the ethernet.

The last thing we want, after spending all this money to have the testing done and to protect our health, is to have PSE install a smart meter, which will be located right next to one of our desks and our bedroom.
