WN U-7  
FIRST REVISED SHEET NO. 180  
CANCELING ORIGINAL SHEET NO. 180

INLAND TELEPHONE COMPANY

SCHEDULE NO. 12

CALLING FEATURES (Continued)

DEFINITIONS:

ACCOUNT CODE FORCED

This feature prevents the use of a telephone by unauthorized individuals. A code must be dialed which is recognized by the system, thereby allowing the use of the telephone. If an invalid code is dialed, then reorder/NU tone is returned to the subscriber.

ACCOUNT CODE VERIFIED

A Verified Account Code is an account code that can be dialed by a subscriber when certain features or enhanced facilities are required (but which are not normally available to the subscriber). The account code can be entered by a subscriber at any telephone. The entry of the verified account code changes the service category of the subscriber to the service category (and its associated features) assigned to the account code. The facility restriction of the subscriber is also changed, when the account code is entered, to the restriction assigned to the account code. These changes only apply for the duration of the call.

ANONYMOUS CALL REJECTION

Allows a customer to dial a code that will cause the feature to reject anonymous calls made to their stations. An anonymous call is one for which the calling number is unavailable, either because the caller has elected per call blocking, the line from which the call originates is subject to per line blocking, or for any other reason caller identification is unavailable.

AUTOMATIC CALL BACK

Allows a customer to dial a code (\*66) that will cause the feature to place a call to the last telephone number that the customer dialed.

WN U-7  
FIRST REVISED SHEET NO. 184  
CANCELING ORIGINAL SHEET NO. 184

INLAND TELEPHONE COMPANY

SCHEDULE NO. 12

CALLING FEATURES (Continued)

DEFINITIONS: (Continued)

CALLER IDENTIFICATION – NAME AND NUMBER (Continued)

(T) (M)\*

The name displayed will be the name associated with the calling telephone number as shown on the Company's records if the call originates from a telephone number to which dial tone is provided by the Company. The Company in its discretion may abbreviate or limit the name for display purposes. The Company does not assure name accuracy, and shall not be liable to any party for errors, omissions or mistakes. The Company's sole and only obligation shall be reasonably to correct errors in names from its records when notified in writing of such errors.

CALLER IDENTIFICATION – BLOCKING PER CALL

Enables a customer to control the delivery of his/her name and/or telephone number to a subscriber of Caller Identification (where technically feasible) by temporarily changing the public/private status indicator of the caller's telephone number. A customer must dial a code before each call to change the indicator from public to private. "Public Status" allows delivery of the name and/or telephone number. "Private Status" prevents delivery of the name and/or telephone number.

CALLER IDENTIFICATION – BLOCKING PER LINE

Provides a permanent "Private Status" indicator on the customer's line. The customer can temporarily deactivate the "Private Status" indicator for a specific call by dialing a code before the call. If a line is equipped with this feature, the name and number of that line will not be delivered to any subscriber of Caller Identification, unless the customer has temporarily deactivated the "Private Status" indicator. Poison control centers, hospitals, medical centers and others who might use Caller Identification will not be able to identify callers with Caller Identification – Blocking Per Line who needs assistance unless the customer has temporarily deactivated the "Private Status" indicator. This feature does not affect ANI based services, including E911.
