1 **PUGET SOUND ENERGY, INC.**

2 **PREFILED DIRECT TESTIMONY (NONCONFIDENTIAL) OF**  
3 **KIMBERLY J. HARRIS**

4 **I. INTRODUCTION**

5 **Q. Please state your name, business address, and position with Puget Sound**  
6 **Energy, Inc.**

7 A. My name is Kimberly J. Harris. My business address is 10885 N.E. Fourth Street  
8 Bellevue, WA 98004. I am the Senior Vice President Regulatory Policy and  
9 Energy Efficiency for Puget Sound Energy, Inc. (“PSE” or “the Company”).

10 **Q. Have you prepared an exhibit describing your education, relevant**  
11 **employment experience, and other professional qualifications?**

12 A. Yes, I have. It is Exhibit No. \_\_\_(KJH-2).

13 **Q. What are your duties as Senior Vice President Regulatory Policy and Energy**  
14 **Efficiency for PSE?**

15 A. I am responsible for the Company’s policy strategy and relationships with  
16 regulatory commissions and departments. My duties include participation and  
17 negotiations in regional discussions related to energy matters, including issues  
18 involving the Bonneville Power Administration and regional transmission

1 organizations. I am also responsible for the Company's strategy and development  
2 of Energy Efficiency initiatives and programs.

3 **Q. What is the purpose of your testimony?**

4 A. My testimony provides a high level overview of the Company's general rate case  
5 filing including the relief that is being requested by the Company and the reasons  
6 for these requests. I also introduce the Company's other witnesses in the case and  
7 describe the topics that each witness addresses in his or her prefiled direct  
8 testimony.

9 **Q. Please summarize your testimony.**

10 A. The Company is asking for an increase in electric and natural gas rates through  
11 this general rate case filing because the costs of providing service to the  
12 Company's customers have increased above levels that existed or were projected  
13 at the time rates were last set. The Company has taken steps to control these cost  
14 increases, to the extent possible. But even after doing what it can to improve  
15 efficiencies in its operations, the Company's costs to provide service to its  
16 customers have increased beyond the revenues it collects in its current rates.

17 Power costs account for a majority of the Company's request for an increase in  
18 electric rates. Higher wholesale natural gas prices are driving up the costs of  
19 generating power as well as the cost of power the Company purchases in  
20 wholesale energy markets. The Company's costs of purchasing power in

1 wholesale energy markets are expected to decrease from what they otherwise  
2 would have been during the time rates set in this case go into effect and over the  
3 next twenty years because of PSE's acquisition of the Wild Horse Project -- a  
4 wind powered electric generation facility located near Ellensburg, Washington  
5 that is being presented for approval in this case. However, the up-front costs of  
6 building the facility are also driving power costs higher in the short term.

7 As in prior rate cases, the Company will be updating its power cost projections  
8 during the course of this case. If wholesale market forward natural gas prices  
9 return to lower levels, the Company's requested electric rate increase may well be  
10 significantly lower than is requested in this initial filing.

11 The Company's costs to provide natural gas service have increased primarily due  
12 to the need to keep up with increasing demand for gas service in the Company's  
13 service territory. These costs include the capital investment and operations costs  
14 required to expand PSE's gas distribution system to serve a growing gas customer  
15 base and to maintain or replace aging pipelines and related equipment.

16 The Company is also seeking a rate increase because it has already exceeded the  
17 target it had set for itself at the time of the 2004 general rate case of achieving a  
18 capital structure with 43% equity by early 2006. The Company's approved equity  
19 percentage, as well as its authorized return on this equity, now need to be raised  
20 to higher levels in order to support the Company's ability to meet the long-term  
21 interests of its customers by investing in new power plants and other

1 infrastructure. Improving the financial health of the Company, including its  
2 credit rating, will also better support the Company's efforts to engage in hedging  
3 activities that help protect customers from wholesale energy market volatility and  
4 price spikes.

5 In support of these goals, the Company is advancing several proposals in this case  
6 to improve its opportunity to actually collect the revenues that this Commission  
7 has approved in the Company's rate cases and to encourage increased electric and  
8 gas energy efficiency investment by the Company and more efficient use of  
9 electricity by the Company's customers.

10 Finally, recognizing the especially difficult burden that rate increases place on the  
11 Company's low income customers, the Company is proposing to increase the  
12 funding for its low income program to assist low income customers in paying  
13 their gas and electric bills.

## 14 II. REQUESTED RELIEF

15 **Q. Would you please specify in more detail what proposals for rate relief the**  
16 **Company is filing in this case?**

17 A. This rate case seeks Commission approval of the following key proposals:

- 18 a) additional revenue in rates to pay for increases in costs the  
19 Company incurs to serve its customers, including approval of the  
20 costs and prudence of the new electric and gas resources acquired  
21 by the Company that are presented in the filing;

31  
32  
33  
34  
35  
36  
37

- b) a fair and reasonable rate of return on equity of 11.25%, a level commensurate with the returns expected by investors if they are to provide the funds required for the Company’s extensive investments in the resources and systems needed to serve its customers;
- c) a capital structure comprised of 45% equity, a structure the Company will need to improve its corporate credit rating to BBB+, to improve the Company’s ability to access capital markets on reasonable terms and to improve the Company’s ability to engage in hedging activities to reduce the cost volatility in its energy portfolio;
- d) revisions to the sharing bands of the Company’s current Power Cost Adjustment (“PCA”) Mechanism in order to align the potential upside and downside of power cost volatility between the Company’s shareholders and customers;
- e) authority to pass through the PCA Mechanism and Purchased Gas Adjustment (“PGA”) Mechanism the costs of a new credit line to be established to support the Company’s wholesale market hedging efforts;
- f) a new Depreciation Tracker in order to support the Company’s extensive and growing investments in the electric and natural gas delivery infrastructure required to safely and reliably serve customers;
- g) an incentive mechanism to encourage the Company to invest in even more cost-effective electric energy efficiency measures than the Company is undertaking under its existing energy efficiency program, which currently provides only for penalties;
- h) a set of new electric demand side management pilot programs, as well as expansion of an existing program, so that the Company can determine whether voluntary customer efforts to reduce their energy usage during peak weather or price events holds promise for reducing overall system and power supply costs;
- i) a revised electric and natural gas rate design that better ensures that the Company will recover the fixed costs it incurs for serving its customers that have been approved by this Commission in a rate case even when individual customers subsequently use less electricity or natural gas than was projected in a rate case;

- 1                   j)     a new natural gas decoupling mechanism, known as the Gas  
2                             Revenue Normalization Adjustment (“GRNA”), to better assure  
3                             that the Company recovers the amount of revenues from its gas  
4                             customers that this Commission approves in rate cases even when  
5                             the amount of gas used by individual customers subsequently  
6                             declines or when the weather is warmer or colder than normal; and  
7                   k)     an increase in the benefits the Company provides to support the  
8                             ability of its low income customers to pay their electric and natural  
9                             gas bills.

10   **Q.     What level of rate increase is the Company requesting in this case?**

11   A.     This filing requests an annual increase in electric revenues of approximately  
12             \$148.8 million and in gas revenue of approximately \$51.3 million. This is an  
13             average 9.21% increase for electric customers and an average 5.34% increase for  
14             natural gas customers.

15             The requested increase described above includes the impact of the new  
16             Depreciation Tracker mechanism that the Company is proposing in this case. The  
17             additional revenue requirement associated with the Depreciation Tracker  
18             mechanism is approximately \$7.9 million, or 0.49%, for electric and  
19             \$10.9 million, or 1.13%, for natural gas.

20             The requested electric increase does not include the impact of an additional  
21             Production Tax Credit associated with the new Wild Horse Project, which is  
22             expected to provide a credit to electric customers’ bills during the rate year of  
23             \$18.7 million.

1 **Q. Would approval of the relief the Company is requesting serve the interests of**  
2 **its customers?**

3 A. Yes. Commission approval of this filing would improve the Company's recovery  
4 of costs incurred to serve customers and help to improve the Company's financial  
5 condition. This will better enable the Company to invest in the energy resources  
6 and infrastructure needed to provide reliable, cost-effective service to our  
7 customers, and to engage in hedging activities that help protect customers from  
8 volatile wholesale energy markets. We believe that over the long term, this will  
9 lower the customers' ultimate energy costs.

10 **III. COST PRESSURES FACING THE COMPANY AND ITS**  
11 **EFFORTS TO CONTROL THEM**

12 A. **Electric and Gas System Infrastructure Costs**

13 **Q. Why are the Company's costs related to its electric and gas systems**  
14 **increasing?**

15 A. The Company's aging gas and electric systems require substantial investment to  
16 maintain current levels of reliability and safety and to meet increasingly stringent  
17 reliability, safety and environmental standards. Growth is also a significant factor  
18 driving the increases to the Company's cost of service: growth in the number of  
19 customers served and growth in the distribution systems required to meet their  
20 needs. Ms. Susan McLain describes these delivery operations issues in her

1 prefiled direct testimony, Exhibit No. \_\_\_(SML-1CT). A failure to fund these  
2 required investments in the interest of avoiding rate increases in the short term  
3 could lead to much higher long-term costs for customers.

4 **Q. Has the Company attempted to control its costs before coming in for a rate**  
5 **increase?**

6 A. Yes. As detailed in Ms. McLain’s testimony, PSE has implemented a wide  
7 variety of process and performance improvements that have resulted in cost  
8 efficiencies as well as the provision of high quality service. The Company also  
9 has tools and methodologies in place to allocate its resources efficiently as  
10 between the gas and electric systems and between capital investments and  
11 operations and maintenance expenses.

12 Looking at all non-production/generation operations and maintenance expenses  
13 on a cost-per-customer basis, PSE is one of the lowest cost providers among  
14 investor owned utilities in the United States. At the same time, the Company has  
15 consistently met or exceeded the service quality standards (“SQIs”) that were  
16 established in the Company’s 2001 general rate case.

17 In short, the Company has done all it reasonably can to make its revenues go  
18 farther through operational efficiencies. Without rate relief, the Company will be  
19 unable to continue to provide the high quality service its customers expect and  
20 still be able to raise the significant amounts of capital required to provide low  
21 cost, reliable energy in the future.

1 **B. Power Costs**

2 **Q. How do the Company's projected power costs in this case compare to the**  
3 **2005 Power Cost Only Rate Case ("PCORC")?**

4 A. PSE's projected rate year net power costs for this case are approximately  
5 \$90.5 million – or 10.3% – higher than what is presently reflected in PSE's  
6 PCA Power Cost Baseline Rate as established in the 2005 PCORC, Docket  
7 No. UE-050870.

8 **Q. Why are the Company's power costs increasing?**

9 A. Generally, higher natural gas and oil prices are driving higher costs for generation  
10 from gas- and oil-fired resources. In turn, these higher gas prices result in higher  
11 wholesale power market prices, which increase the Company's power costs  
12 because it is a net purchaser of wholesale market power.

13 In addition, the projected power costs for this case reflect more market purchases  
14 due to increases in PSE's load. The need to purchase more power in the  
15 wholesale markets is partially offset by increased generation from the Wild Horse  
16 Project as well as from other Company generating resources.

17 Other factors affecting power costs include increased transmission costs and  
18 escalation in the costs of PSE's existing long-term power purchase agreements.

1 **Q. How would rate year projected power costs for this case change if the Wild**  
2 **Horse Project were not included as a resource?**

3 A. Without the forecasted generation from the Wild Horse Project, PSE's anticipated  
4 rate year power costs would increase by approximately \$27.5 million.

5 **Q. Does that mean that the Wild Horse Project results in a lower rate increase**  
6 **than PSE would otherwise have requested in this case?**

7 A. No, the power costs savings projected because of Wild Horse Project generation  
8 are just one aspect of the Project's impact on rates. The Company is incurring  
9 approximately \$383 million in capital costs for acquiring and constructing the  
10 Project that have to be recovered over time, as described in the testimonies of  
11 Mr. Eric Markell, Exhibit No. \_\_\_(EMM-1HT) and Mr. Roger Garratt, Exhibit  
12 No. \_\_\_(RG-1HCT). After taking into account recovery of such fixed costs and  
13 power cost savings provided by the Project, plus the Production Tax Credits  
14 associated with the new wind generation, the net impact of adding the Wild Horse  
15 Project to the Company's electric portfolio is an increased revenue requirement of  
16 \$18.1 million in this case. These calculations are provided in the testimonies of  
17 Mr. John Story, Exhibit No. \_\_\_(JHS-1T).

1 **Q. If the Wild Horse Project increases the Company's revenue requirement,**  
2 **why did it purchase the resource?**

3 A. The above discussion relates only to the rate year in this case, which is the first  
4 year of operation for the Wild Horse Project. The Project is a long-term resource  
5 that, over its service life, is expected to reduce costs compared to what they would  
6 have been if the Company had not acquired the Project. The Company projected  
7 during its evaluation process that acquisition of the Wild Horse Project would  
8 provide a net present value benefit to PSE's electric portfolio of greater than  
9 \$50 million over the next twenty years, as explained in the testimony of  
10 Mr. W. James Elsea, Exhibit No. \_\_\_(WJE-1HCT).

11 **Q. Has the Company taken other steps to control its power costs?**

12 A. Yes, the Company continuously works to reduce energy costs associated with its  
13 wholesale market purchases of power and natural gas. As described in Mr. Mills'  
14 testimony, the Company actively manages the power and gas cost risks faced by  
15 its customers and shareholders through robust and sophisticated organizational  
16 structures, tools and strategies that guide its portfolio management and hedging  
17 activities.

18 The Company has also continued to seek out and acquire new sources of power  
19 for its electric portfolio that will reduce the Company's dependence on wholesale  
20 power markets. Three such acquisitions in addition to the Wild Horse Project are  
21 presented for the Commission's prudence determination in this case. The

1 Company anticipates that these new resources will provide benefits to its electric  
2 customers for decades to come by reducing the costs that would otherwise have  
3 been incurred to provide electric service.

4 **Q. For what resources is the Company seeking a prudence determination from**  
5 **the Commission in this case?**

6 A. PSE is seeking a prudence determination in this proceeding with respect to the  
7 following electric portfolio resource acquisitions, along with their associated  
8 capital and operating costs:

- 9 1. acquisition of the Wild Horse Project;
- 10 2. execution of a new purchased power agreement with OrSumas,  
11 LLC for the output of the Northwest Pipeline recovered heat  
12 generation resource at Sumas developed by ORMAT (“ORMAT  
13 PPA”);
- 14 3. execution of a new purchased power agreement and related  
15 transmission agreement with Public Utility District No. 1 of  
16 Chelan County, Washington for the output from the Rock Island  
17 and Rocky Reach Hydroelectric Projects (“Chelan Contract”); and
- 18 4. relicensing of the Company’s Baker River Hydroelectric Project.

19 The Company is also seeking a prudence determination from the Commission  
20 with respect to the Company’s acquisition of additional long-term gas pipeline  
21 transportation capacity from Duke Energy Trading and Marketing for PSE’s gas  
22 portfolio.

1 **Q. What is your understanding of the Commission’s prudence standard?**

2 A. In the Company’s 2003 PCORC proceeding, Docket No. UE-031725, the  
3 Commission reaffirmed the standard it applies in reviewing the prudence of  
4 power generation asset acquisitions as follows:

5 The test the Commission applies to measure prudence is what  
6 would a reasonable board of directors and company management  
7 have decided given what they knew or reasonably should have  
8 known to be true at the time they made a decision. This test  
9 applies both to the question of need and the appropriateness of the  
10 expenditures. The company must establish that it adequately  
11 studied the question of whether to purchase these resources and  
12 made a reasonable decision, using the data and methods that a  
13 reasonable management would have used at the time the decisions  
14 were made. (Order No. 12, Docket No. UE-031725, at ¶ 19)

15 In addition to this generic reasonableness standard, the Commission has cited  
16 several specific factors that are relevant to the question whether a utility’s  
17 decision to acquire a new resource was prudent. These factors include the  
18 following:

- 19 • First, the utility must determine whether new resources are  
20 necessary.<sup>1</sup>
- 21 • Once a need has been identified, the utility must determine how to  
22 fill that need in a cost-effective manner. When a utility is  
23 considering the purchase of a resource, it must evaluate that  
24 resource against the standards of what other purchases are  
25 available, and against the standard of what it would cost to build  
26 the resource itself.<sup>2</sup> The utility must analyze the resource  
27 alternatives using current information that adjusts for such factors

---

<sup>1</sup> See, e.g., *WUTC v. Puget Sound Power & Light Co.*, Docket No. UE-921262, *et al.*,  
Nineteenth Supplemental Order (September 27, 1994) (“*Prudence Order*”) at 11.

<sup>2</sup> *Id.*

1 as end effects, capital costs, impact on the utility's credit quality,  
2 dispatchability, transmission costs, and whatever other factors  
3 need specific analysis at the time of a purchase decision.<sup>3</sup>

- 4 • The utility should inform its board of directors about the purchase  
5 decision and its costs. The utility should also involve the board in  
6 the decision process.<sup>4</sup>
- 7 • The utility must keep adequate contemporaneous records that will  
8 allow the Commission to evaluate its actions with respect to the  
9 decision process. The Commission should be able to follow the  
10 utility's decision process; understand the elements that the utility  
11 used; and determine the manner in which the utility valued these  
12 elements.<sup>5</sup>

13 **Q. Did the Company's resource acquisitions meet this standard?**

14 A. Yes. As described in the testimonies and exhibits in this case of Mr. Markell and  
15 five members of his Energy Resources department, the Company had a clear,  
16 documented need for power as well as for gas transportation capacity. The  
17 Company's decision to acquire the electric projects occurred as a result of, or in  
18 the context of, formal requests for proposals issued pursuant to the Commission's  
19 competitive bidding rules, WAC Chapter 480-107, shortly after completion of the  
20 Company's 2003 Least Cost Plan (the "2004 RFP Process"). The Company then  
21 conducted an extensive process through which it evaluated the relative costs and  
22 risks of many potential alternative resource opportunities, and repeatedly updated  
23 the information and assumptions it considered in this process. The evaluation

---

<sup>3</sup> *Id.* at 2, 33-37, 46-47.

<sup>4</sup> *Id.* at 37, 46.

<sup>5</sup> *Id.* at 2, 37, 46.

1 process also included significant modeling that can be replicated. Consistent with  
2 the Commission's prior orders, the Company kept detailed records in connection  
3 with this evaluation process and the management decisions that resulted from that  
4 process. Extensive analyses were also undertaken for the resource acquisitions  
5 presented in this case that arose outside the 2004 RFP Process. The gas  
6 transportation capacity acquisition for the gas sales portfolio was acquired  
7 consistent with analyses in PSE's 2005 Least Cost Plan and additional evaluation  
8 undertaken by the Company.

9 The Company's efforts clearly meet the "adequate study" and "reasonable data  
10 and methods" standards applied by the Commission in determining whether an  
11 acquisition was prudent. In addition, through acquiring these resources, the  
12 Company obtained new electric and natural gas resources at a reasonable cost  
13 compared to other potential resource options.

14 **IV. IMPROVING THE COMPANY'S FINANCIAL STRENGTH**  
15 **WILL ALSO HELP CONTROL COSTS IN THE LONG RUN**

16 **Q. Is the Company's financial strength an issue in this case?**

17 A. Yes. Although the Company's financial strength has continued to improve since  
18 the 2001 and 2004 rate cases, it is still not where it needs to be to support the  
19 huge investments that must be made in PSE's gas and electric systems and in new  
20 resources for PSE's customers. Over the three year period of 2005-2007 alone,  
21 the Company projects the need to invest in the range of \$2 billion, with continued

1 substantial investments thereafter. As explained by Mr. Bertrand Valdman,  
2 Exhibit No. \_\_\_(BAV-1CT), it is particularly important for the Company to  
3 maintain a high level of credit and capital market access in order to make these  
4 needed investments. The Company must improve its corporate credit rating and  
5 be able to realize its full earnings power to better enable it to raise the capital that  
6 will be required for these investments in external financial markets at the lowest  
7 cost to customers.

8 In addition, while the Company has continued to improve its risk management  
9 systems and tools to help reduce the risks and volatility of energy costs associated  
10 with its electric and gas portfolio, the Company's financial position limits its  
11 ability to make use of hedging products.

12 **Q. What is the issue with the Company's credit rating?**

13 A. The Company's corporate credit rating is the lowest rating in the investment  
14 grade category (Standard & Poor's "BBB-"). This places the Company in a weak  
15 position relative to the counterparties with which it does business, makes debt  
16 more expensive, interferes with the extent to which the Company can enter into  
17 transactions to hedge against wholesale energy market risks, and places the  
18 Company and its customers at risk of serious financial consequences if the  
19 occurrence of an event impacting the Company or the industry were to trigger a  
20 downgrade by the credit rating agencies.

1 **Q. What do you mean that the Company must “be able to realize its full**  
2 **earnings power”?**

3 A. Investors have expressed a concern regarding the Company’s inability over the  
4 past several years to actually earn the returns on equity that have been allowed by  
5 this Commission. Viewed from an investor’s perspective, PSE’s actual return on  
6 equity has consistently and significantly trailed its authorized return on equity.  
7 This concern is heightened because of the Company’s large capital investment  
8 projections over the next several years. Although investors are aware that capital  
9 expenditures of this type are generally approved and ultimately included in  
10 ratebase, there has been concern expressed as to the delay in actually getting these  
11 costs included in rates. The impact of this delay is seen as a further barrier to the  
12 Company having the opportunity to earn its allowed return on equity. These  
13 matters are discussed by Mr. Valdman and Dr. Roger Morin, Exhibit  
14 No. \_\_\_(RAM-1T).

15 **Q. How does the Company’s case address these issues?**

16 A. The Company’s proposed higher equity ratio and return on equity would position  
17 it to improve its corporate credit rating toward the “BBB+” level, to attract the  
18 capital that is needed to fund the Company’s resource acquisition program, and to  
19 continue, and expand upon, its risk management efforts.

20 Several of the Company’s other proposals in this case are also intended to address  
21 the concern about the delay between the time investments are made and the time

1 the Company begins to recover the investment in rates – which is sometimes  
2 called “regulatory lag” – as well as the concern about the Company’s ability to  
3 actually earn the return that the Commission has authorized.

4 The proposed Depreciation Tracker will help capture and recover depreciation  
5 expense as increasing investments are made in the Company’s electric and gas  
6 transmission and distribution systems. The proposed natural gas decoupling  
7 mechanism addresses the Company’s under-recovery of its fixed costs of  
8 providing natural gas service due to decreasing usage per customer and weather  
9 variability. The proposed revisions to the PCA Mechanism sharing bands will  
10 result in a more consistent recovery of the commodity costs the Company incurs  
11 to serve its electric customers, while also providing customers a greater  
12 opportunity to share the benefits of future power cost savings.

13 **Q. Has the Company attempted to improve its financial condition prior to**  
14 **seeking rate relief from this Commission?**

15 A. Yes. In addition to the efforts to control operations and power costs described  
16 above, the Company improved its equity ratio from a level of 30% in 2001 to the  
17 44% level we achieved by year-end 2005. The Company accomplished this  
18 through: (i) the issuance of 25.4 million additional common shares that generated  
19 net proceeds of nearly \$527 million, and (ii) by increasing its retention of  
20 earnings by lowering its dividend. The Company has also worked actively to

1 lower its cost of debt, where possible, as described by Mr. Don Gaines, Exhibit  
2 No. \_\_\_(DEG-1CT).

3 Despite these efforts, the Company has not yet achieved the financial strength,  
4 stability and flexibility needed to support its energy supply and infrastructure  
5 requirements. This situation is expensive for both the Company's customers and  
6 shareholders and should be corrected. This rate case is another important step in  
7 that direction.

8 **V. THE COMPANY'S ADDITIONAL PROPOSALS**  
9 **IN THIS CASE**

10 **A. Proposed Revisions to the Company's PCA Mechanism**

11 **Q. How does the Company's current PCA Mechanism work?**

12 A. The PCA Mechanism provides for some level of sharing between PSE's  
13 shareholders and its customers of excess power costs (power costs higher than the  
14 "Power Cost Baseline Rate" set in rates) and of power cost savings (power costs  
15 lower than the Power Cost Baseline Rate). Whether there is any sharing of costs  
16 or benefits and if so, how much, depends on how the costs or benefits fall in a  
17 given year within four "bands" of power cost variances.

18 Currently, the Company must absorb the first \$20 million of excess power costs  
19 and also keeps all the benefits of the first \$20 million in power cost savings each  
20 year. This first +/- \$20 million is called the "dead band." The next +/-

1 \$20 million is shared 50/50, the next +/- \$40 to 120 million is shared 90% by  
2 customers and 10% by the Company, and costs or benefits over \$120 million are  
3 shared 95% by customers and 5% by the Company.

4 In addition, when the PCA Mechanism was established, it set a +/- \$40 million  
5 cumulative cap on the Company's potential exposure over a 4-year period ending  
6 June 30, 2006. On power cost variances over the \$40 million cap, the PCA  
7 sharing mechanism allocated 99% of costs or benefits to customers and the  
8 remaining 1% of costs or benefits to the Company.

9 **Q. Why is the Company proposing changes to the PCA Mechanism?**

10 A. As experience has shown, it is difficult to set a Power Cost Baseline Rate so that  
11 future power costs can be recovered within a reasonable margin of error. The fact  
12 is simply that actual power costs are likely to vary substantially from year to year  
13 above or below the power cost baseline that is embedded in rates based on  
14 projections of future conditions that cannot be known at the time rates are set.  
15 Factors such as streamflow and weather uncertainty make it very difficult to  
16 predict the amount of power PSE's resources will produce and that PSE's electric  
17 customers will use. In addition, many of these factors are beyond the Company's  
18 ability to control.

19 The Company's sophistication in modeling these power cost risks has also  
20 increased since the PCA Mechanism was first established. As Mr. Salman Aladin  
21 describes in his testimony, Exhibit No. \_\_\_(SA-1CT), the Company has

1 performed extensive modeling work in order to better understand the magnitude  
2 of potential variations in power costs above or below a baseline power cost rate  
3 that is projected at the time of a rate case and embedded in PSE's electric rates.

4 Based on this modeling work and the financial considerations described in  
5 Mr. Valdman's testimony, the Company is proposing in this case to revise the  
6 sharing bands and percentages of the PCA Mechanism to better align shareholder  
7 and customer interests.

8 **Q. What is the Company's proposal?**

9 A. The Company is proposing in this case that the annual sharing bands be revised to  
10 the following:

Power Costs (\$ in millions) (over or under the PCA baseline)	Customers' Share	Shareholders' Share
\$0 - \$25 +/-	50%	50%
\$25 - \$120 +/-	90%	10%
> \$120 +/-	95%	5%

11 **Q. Why is the Company proposing these revised sharing bands?**

12 A. It is the Company's hope that elimination of a dead band and a 50/50 sharing of  
13 the first \$25 million of power costs or benefits will align all parties to seek to set  
14 the Power Cost Baseline Rate as close as possible to the level of power costs that  
15 are actually likely to prevail in future PCA years. By sharing this first band  
16 50/50, shareholders and customers will also typically share equally in the upside

1 of good hydro years and the downside of bad hydro years -- outcomes which are  
2 inherently unpredictable.

3 The second band, from \$25 million to \$120 million, is meant to capture a  
4 significant range of power cost risks reflected in PSE's electric portfolio. By  
5 retaining 10% of the upside or downside of this second band, the Company will  
6 continue to have significant incentive to manage power costs and achieve power  
7 cost savings.

8 The final sharing band, for costs or savings plus or minus \$120 million, with 95%  
9 customer sharing and 5% shareholder sharing, is meant to continue to provide  
10 protection to the Company in the current PCA Mechanism sharing bands from  
11 extreme negative departures from the power costs that are embedded in rates, as  
12 well as to continue to provide a small upside incentive in the event such  
13 significant power cost savings could be achieved.

14 **B. A New Credit Line to Support Hedging**

15 **Q. Please briefly describe the Company's proposal regarding a new credit line**  
16 **to support hedging.**

17 A. As Mr. Mills explains in his testimony, parties to wholesale energy market  
18 transactions are concerned about each others' ability to actually perform contracts  
19 that are entered into to purchase or sell energy or natural gas at some time in the  
20 future. They control this risk by limiting the amount of exposure they have to any

1 one party unless the other party is willing to back transactions beyond this limit  
2 by posting collateral. The limited amount of credit one party is willing to give  
3 another without collateral is called “open credit.”

4 The Company’s current hedging strategies have virtually exhausted the open  
5 credit that is available to the Company from wholesale energy market  
6 counterparties. However, the Company’s current credit facilities are also needed  
7 to support its operations other than hedging activities. PSE is therefore proposing  
8 in this case to establish a separate credit line dedicated to supporting its wholesale  
9 energy market transactions and to pass the costs of such credit facility through to  
10 PSE’s customers in the same manner as other power and gas commodity costs, via  
11 the PCA and PGA Mechanisms.

12 **C. A New Depreciation Tracker**

13 **Q. What are the concerns that led the Company to propose a Depreciation**  
14 **Tracker?**

15 A. As described above and in Ms. McLain’s testimony, the Company is facing very  
16 high levels of capital investment in its electric and gas system infrastructure to  
17 address customer growth, replacement and maintenance of PSE’s aging system,  
18 and increased reliability and safety regulations or requirements. As soon as this  
19 new plant is placed in service, the Company must start depreciating the new plant,  
20 meaning that the Company is generating depreciation expense. However, the

1 Company does not begin to recover the cost of the new plant or a return on that  
2 investment in rates until the next rate case after it makes the investment. This has  
3 a negative impact on PSE's earnings, particularly because the new plant is  
4 typically far more costly to install than the cost of similar plant that was  
5 embedded in rates decades earlier.

6 **Q. Please describe the Company's proposed Depreciation Tracker.**

7 A. The Company is proposing that the increased expense associated with growth in  
8 depreciation for electric and natural gas transmission and distribution plant  
9 investments be recovered using a tracker mechanism. A tracker mechanism is a  
10 surcharge to the Company's existing tariff schedules that can be changed or trued  
11 up in between rate cases. The Depreciation Tracker surcharge would be based on  
12 the incremental depreciation expense of natural gas and electric transmission and  
13 distribution investment over and above the depreciation expense reflected in  
14 existing rates. The mechanism would not apply to depreciation on generation  
15 investments, which can be addressed in a PCORC. Additional details regarding  
16 the proposed Depreciation Tracker are described in Mr. John Story's testimony,  
17 Exhibit No. \_\_\_(JHS-1T).

1 **Q. Would this solve the “regulatory lag” issue associated with the Company’s**  
2 **increasing infrastructure investments?**

3 A. No, the Depreciation Tracker is only a partial step. It offsets the negative  
4 pressure caused by increased depreciation expense but does not address the lack  
5 of recovery *of or on* the new plant from the time it is placed into service until the  
6 plant is included in the Company’s next general rate case. However, the  
7 Company is proposing the Depreciation Tracker at this time because it is a  
8 relatively simple, transparent mechanism that can be estimated in advance, trued  
9 up to actuals after the fact, and will go part of the way toward addressing the  
10 financial pressures the Company is experiencing related to its increasing  
11 infrastructure investments.

12 **D. Electric Energy Efficiency Proposals**

13 **Q. Why is PSE requesting that the Commission approve an electric energy**  
14 **efficiency incentive mechanism?**

15 A. Under the Company’s current energy efficiency program, which was established  
16 in its 2001 general rate case, the Company must achieve minimum threshold  
17 energy savings goals in order to avoid incurring a financial penalty, but there is  
18 no reward for meeting or exceeding those goals. Thus, the Company has no  
19 incentive to aggressively pursue energy efficiency beyond the threshold goals. In

1 fact, there is a built-in disincentive since reductions in the volume of energy sales  
2 due to energy efficiency programs result in lost revenue to the Company.

3 Despite these disincentives, the Company has undertaken aggressive energy  
4 efficiency efforts and would like to explore whether additional investments in  
5 cost-effective energy efficiency measures are feasible.

6 PSE seeks support for its goal of further expanding cost-effective energy  
7 efficiency through its proposal to offset the disincentives described above by  
8 proposing a mechanism that encourages continued outstanding performance of its  
9 electric energy efficiency programs over the long term. A performance-based  
10 incentive mechanism for energy efficiency would provide positive reinforcement  
11 for the Company to continue to aggressively pursue low cost, clean alternatives to  
12 traditional fossil fuel generation. It would also encourage innovation to develop  
13 and deliver new energy efficiency measures as they emerge. The Company's  
14 proposal is detailed in the testimony of Mr. Calvin E. Shirley, Exhibit  
15 No. \_\_\_(CES-1T).

16 **Q. Why isn't the Company proposing to apply the incentive mechanism to**  
17 **natural gas energy efficiency?**

18 A. The Company is proposing a decoupling mechanism in this case as the most  
19 appropriate method to address the disincentives to natural gas energy efficiency,  
20 as described below.

1 **Q. Is the Company proposing any other electric energy efficiency initiatives?**

2 A. Yes. The Company has submitted with this rate case filing proposed revisions to  
3 existing electric tariff Schedule 93 and several new voluntary pilot programs that  
4 are designed to offer customers a “menu” of demand-response options  
5 specifically targeted toward reducing winter peak electric demand.

6 **Q. Why is the Company proposing to pilot these types of programs?**

7 A. The proposed voluntary pilot programs are part of the Company’s effort to  
8 develop resources to meet its peak resource needs. Reducing demand during a  
9 relatively small number of peak hours can help reduce rates by reducing utility  
10 power costs during those hours, when costs may be much higher than the rest of  
11 the year. Reduction of peak demand can also help the Company delay or avoid  
12 making expensive investments that would be required to meet peak demand but  
13 that would otherwise generally not be needed during the rest of the year.

14 The Company’s proposed pilot programs are intended to test a variety of demand  
15 response strategies in order to gain implementation experience and information  
16 that is necessary in order to determine the feasibility and cost-effectiveness of  
17 expanding these programs in the future.

1 **E. Proposals to Better Recover PSE's Revenue Requirement and the**  
2 **Fixed Costs of Serving Customers**

3 **Q. How does the Company's current rate design impact its recovery of the costs**  
4 **of serving customers?**

5 A. PSE's current rate schedules rely heavily on volumetric rates to recover fixed  
6 delivery costs. That is, if customers pay only the basic charge to PSE, PSE will  
7 not recover the fixed costs required just to have the customers hooked up to its  
8 electric grid or gas system. Instead, a portion of these fixed costs are recovered in  
9 the portion of the customers' bill that varies depending on how much electricity  
10 or natural gas the customers use (i.e., the volumetric portion of the rate).

11 Under this rate design, in order to recover the revenue requirement that is  
12 assigned to the rate schedules of each customer class in a rate case, PSE's  
13 customers must use at least as much electricity or natural gas as they were  
14 projected to use during the rate year at the time rates were set. However, the  
15 electricity and natural gas usage of PSE's residential customers has been  
16 decreasing over time due to a number of factors including conservation, fuel  
17 switching, and changes in the housing mix in PSE's service territory. Because of  
18 this declining use per customer, PSE is under recovering the costs of providing  
19 service to its customers.

1 **Q. How is the Company proposing to address this issue?**

2 A. The Company is proposing to increase the basic or customer charges for its  
3 electric and natural gas customers to recover more of its fixed costs in that basic  
4 charge. Even after the proposed increases, PSE's residential basic charges will  
5 continue to be considerably below the Company's cost of service.

6 The Company is also proposing to address this issue by implementing a new  
7 natural gas decoupling mechanism, called the Gas Revenue Normalization  
8 Adjustment ("GRNA"). The GRNA will permit the Company to recover the  
9 overall amount of revenues from its gas customers that this Commission approves  
10 in rate cases even when the amount of gas used by individual customers  
11 subsequently declines or when the weather is warmer than normal. The GRNA  
12 will also remove the disincentive that currently exists for the Company to invest  
13 in more gas energy efficiency measures. The Company's proposed GRNA is  
14 described in the testimony of Mr. Ron Amen, Exhibit No. \_\_\_(RJA-1T).

15 **Q. Why is the Company proposing to include weather in its GRNA?**

16 A. Rates are set based on "normal" or average weather conditions. If actual  
17 temperatures are colder than normal after rates are set, PSE's natural gas  
18 customers would typically use more gas, pay more for utility service, and  
19 potentially overpay their share of fixed costs. This would also typically generate  
20 higher revenues for the Company than the level of fixed costs established for  
21 ratemaking purposes. But in warmer than normal weather, the reverse situation

1 will occur. Customers' gas usage would decrease with warmer temperatures,  
2 thus generating lower revenues than required to recover the Company's total  
3 fixed costs that do not decrease due to warm weather.

4 The Company's GRNA, consistent with many other natural gas decoupling  
5 measures across the country, proposes to adjust for these weather impacts in order  
6 to better match the revenues it receives from customers with the amount of  
7 revenues the Commission has approved for recovery in rates.

8 **F. Expanded Benefits for Low Income Customers**

9 **Q. Why is the Company proposing to increase the benefits that are available to**  
10 **qualifying low income customers?**

11 A. The Company's approved level of funding for the low income bill assistance  
12 program has not been revised since it was originally established in PSE's 2001  
13 general rate case, Docket Nos. UE-011570 et al. Since that time, both electric and  
14 natural rates have increased. For an average residential customer, their electric  
15 bill has increased by about 9.5% since 2002. For an average residential natural  
16 gas customer, their base rates increased by about 5% in the 2004 general rate  
17 case. Gas customers have also had higher bills since that time due to higher  
18 wholesale market gas prices, which have been passed through to customers in  
19 accordance with the Company's PGA Mechanism.

1 **Q. Please describe the Company's proposal.**

2 A. The Company proposes to increase the existing overall funding cap by \$1 million,  
3 from the current \$8.5 million to \$9.5 million. This represents an overall increase  
4 of 11.8% for funds available for program costs and bill assistance. These funds  
5 would be allocated between the low income assistance programs for gas and for  
6 electric customers consistent with the Company's allocation methods in this case.

7 For the electric program, Electric Schedule 129, the annual program cap would  
8 increase from \$5.7 million to \$6.1 million, or 7.0%. For the gas program, natural  
9 gas Schedule 129, the annual program cap would increase from \$2.8 million to  
10 \$3.4 million, or 21.4%.

11 **Q. When would the increased caps in cost recovery go into effect?**

12 A. The changes to the caps in Schedules 129 would go into effect upon the approval  
13 of the Commission, but the money available to match those new caps would not  
14 be available until the next full low income bill assistance Program Year. The  
15 Program Year starts on October 1 and ends on September 30. The Company  
16 would also file new rates in Schedule 129 to collect the funds necessary for cost  
17 recovery, as it has done in the past.

1 **VI. OVERVIEW OF OTHER WITNESSES**

2 **Q. Please summarize the testimony of the other witnesses who appear for PSE.**

3 A. The following additional witnesses present direct testimony on PSE's behalf:

4 **Ms. Susan McLain**, the Company's Senior Vice President  
5 Operations, discusses the Company's work to control costs related  
6 to its electric and natural gas systems while providing high quality  
7 service and reliability. She also describes the cost increases the  
8 Company is facing to replace and maintain its aging infrastructure  
9 and to expand that infrastructure to serve new customers.

10 **Mr. Eric Markell**, Senior Vice President Energy Resources,  
11 describes the magnitude of the Company's need to acquire new  
12 electric resources for its customers. He then presents an executive  
13 summary of the Company's electric and gas supply portfolios and  
14 the new acquisitions for these portfolios for which the Company is  
15 seeking the Commission's approval in this case. Mr. Markell's  
16 executive summary of these matters is supported by five members  
17 of his Energy Resources team, whose testimonies are described  
18 next.

19 **Mr. Roger Garratt**, Director of Resource Acquisition, describes  
20 in greater detail than Mr. Markell's executive summary the due  
21 diligence, negotiations and evaluation that the Company undertook  
22 prior to acquiring the Wild Horse Project and the ORMAT PPA.  
23 He presents additional detail regarding the costs and construction  
24 schedule for the Wild Horse Project as well as an update of the  
25 status and costs of the Hopkins Ridge Project that the Commission  
26 approved in the 2005 PCORC.

27 **Mr. Joel L. Molander**, Manager Hydro Contracts, provides  
28 additional detail regarding the Chelan Contract.

29 **Mr. Kris Olin**, Manager Hydro Assets, presents additional detail  
30 regarding the Baker River Hydroelectric Project relicensing  
31 process and related costs.

32 **Mr. W. James Elsea**, Financial Analysis Manager of Energy  
33 Resources, describes the modeling updates and additional analyses  
34 that were completed after the Hopkins Ridge acquisition and were  
35 utilized to further evaluate the costs and benefits of the Wild Horse

Project and ORMAT PPA. He also describes how the Company’s modeling tools, analyses and additional information were utilized to evaluate the costs and benefits of the Chelan Contract.

**Mr. William (Bill) F. Donahue**, Manager Gas Resource Planning and Analysis, provides more detail regarding the Company’s Gas Supply Portfolio and its acquisition of pipeline capacity from DETM. He also describes how the Company plans for and acquires gas transportation capacity needed to serve its natural gas customers and provides a recommendation as to the allocation of certain pipeline capacity costs in the Company’s gas cost of service study.

**Mr. Salman Aladin**, the Company’s Director of Structuring, Asset Optimization and Analytics, describes the volatility and risk inherent in the Company’s electric portfolio and the modeling work the Company has performed regarding the magnitude of potential variations in power costs. He also presents the Company’s proposed revisions to the sharing bands in its existing PCA Mechanism and explains why PSE’s proposal is fair and will result in risk sharing that better aligns the interests of the Company’s customers and shareholders.

**Mr. David E. Mills**, Director Power and Gas Supply Operations, presents the Company’s projection of power costs for this case and compares them to those the Commission approved in the 2005 PCORC. Mr. Mills also describes the structures and policies the Company has in place to manage the volatility in its electric and natural gas portfolios, the manner in which such policies are implemented, and the limitations that credit concerns are placing on the Company’s ability to engage in further hedging activities.

**Mr. Bertrand Valdman**, the Company’s Senior Vice President Finance and Chief Financial Officer, describes the importance of PSE’s financial condition to its shareholders and customers. He provides an assessment of PSE’s financial condition and explains why improving the Company’s financial condition beyond existing levels is essential to managing the business and financial risks associated with providing electric and natural gas service to PSE’s customers.

**Mr. Donald Gaines**, Vice President Finance and Treasurer, discusses the steps taken by the Company to strengthen its financial condition since its last general rate case, the Company’s

1 current credit ratings, and the Company's requested capital  
2 structure, cost of capital calculations and overall rate of return.

3 **Dr. Roger Morin**, Professor of Finance at the College of Business,  
4 Georgia State University, Professor of Finance for Regulated  
5 Industry at the Center for the Study of Regulated Industry at  
6 Georgia State University, and principal in Utility Research  
7 International, presents his appraisal of the just, fair, reasonable and  
8 sufficient rate of return on the Company's combined gas and  
9 electric utility operations, with particular emphasis on the fair  
10 return on the Company's common equity capital committed to that  
11 business.

12 **Mr. Calvin E. Shirley**, the Company's Vice President Energy  
13 Efficiency Services, presents the incentive mechanism that PSE is  
14 proposing in this case to better align the interests of the  
15 Company's customers and its shareholders with respect to the  
16 Company's efforts to promote electric energy efficiency. He also  
17 describes the electric demand response measures that PSE is  
18 proposing in this case to reduce power costs and transmission and  
19 distribution system costs by reducing customers' use of electricity  
20 at key times of the day or on especially cold days when the  
21 demand for energy is at its highest.

22 **Mr. John Story**, Director of Cost and Regulation, presents the  
23 electric results of operations and revenue requirement, as well as  
24 the allocation of common expenditures between electric and  
25 natural gas. Mr. Story also presents details regarding the proposed  
26 revised PCA Mechanism and Depreciation Tracker.

27 **Mr. Karl Karzmar**, Director of Regulatory Relations, presents the  
28 gas results of operations and revenue requirement. He also  
29 describes the change to the Company's PGA Mechanism required  
30 to implement PSE's proposal to pass through costs related to the  
31 new credit line to support the Company's hedging efforts.

32 **Mr. James Heidell**, of PA Consulting Group, Inc., presents the  
33 Company's electric cost of service study and its proposed rate  
34 spread, rate design, and revised electric tariff schedules.

35 **Mr. Ronald J. Amen**, of Navigant Consulting, Inc. ("NCI"),  
36 describes the NCI Cost of Service Model used by PSE in the  
37 Company's electric and gas cost of service studies, as well as the  
38 results of the Company's gas cost of service study. He also  
39 presents PSE's proposed natural gas decoupling mechanism.

1 **Ms. Janet K. Phelps**, the Company's Senior Regulatory Analyst  
2 in Pricing and Cost of Service, presents PSE's pro forma revenue  
3 from gas operations, gas cost of service study, proposed rate  
4 spread and rate design for gas service, and revised gas tariff  
5 schedules.

6 **Dr. Jeffrey A. Dubin**, of Pacific Economics Group L.L.C. and  
7 tenured Professor of Economics at the California Institute of  
8 Technology (Caltech), describes his review of the Company's  
9 weather normalization methodology, including consideration of  
10 comments and suggestions made by Commission Staff in the  
11 weather normalization methodology collaborative. He also  
12 describes the recommendations he made for changes to PSE's  
13 existing weather normalization models and presents the final  
14 weather normalization models that the Company used to develop  
15 its temperature adjustments for this case.

16 **Mr. Thomas (Tom) Hunt**, Director Compensation and Benefits,  
17 describes PSE's compensation and benefits programs and how  
18 they are competitive and benefit the Company's customers.

## 19 VII. CONCLUSION

20 **Q. Do you have any concluding remarks?**

21 A. Yes. The Company understands that our customers would prefer not to see their  
22 rates increase. We know that such increases can be particularly difficult for low  
23 income customers and for customers on fixed incomes such as seniors. The  
24 Company is working hard to control the costs and risks that it can in order to  
25 avoid having to come back to customers for rate increases.

26 Nevertheless, the Company is struggling, like many others in the economy, with  
27 the recent increases in the costs of natural gas and energy in wholesale markets  
28 that are beyond the Company's control. The Company must also take a long-term

1 view of the best interests of its customers. We need to make sure that we have  
2 generating resources and long-term power contracts in place to provide the power  
3 our customers will need into the future as this region continues to grow. We also  
4 need to invest in the electric and natural gas systems that are critical to providing  
5 safe, reliable service to our customers. The additional revenues we are asking our  
6 customers to pay in this case will be put to good use to meet these long-term  
7 objectives. We believe the changes suggested here will only marginally affect  
8 short-term customer rates and represent an excellent investment in the future for  
9 our customers.

10 **Q. Does this conclude your testimony?**

11 A. Yes it does.

12 [\[BA060450045\]](#)
