Notes:

1. As communicated in EPA's email dated October 28, 2022 (EPA 2022c), the remediation thresholds for TCDD and PeCDD are 0.001 and 0.0025 µg/kg, respectively. It is NW Natural's understanding that these remediation thresholds will be used in the BODR to fully delineate SMAs and identify DOC. These revised thresholds are not used for the comparison to site-wide RALs in this Combined DSR-PDIWP, and NW Natural has confirmed that application of these revised thresholds does not affect the scope of the second phase PDI discussed in Section 5.

a: This COC exceeded either the RAL or the PTW threshold within at least one of the bottom two 1-foot intervals.

µg/kg: microgram per kilogram

BODR: Basis of Design Report

COC: contaminant of concern

Combined DSR-PDIWP: *Combined Sediment Remedy Basis of Design and Preliminary Design Report*

1. Arrow indicates direction of flow of river.
2. Horizontal datum is NAD83 (HARN 91) Oregon State Plane North, International Feet.
3. Vertical datum is City of Portland (COP), Feet.
4. Aerial imagery from City of Portland 2018.
5. Sediment management areas developed using surface sediment data consistent with the ROD-identified methods using the post-ROD data set identified in the Pre-Design Investigation Work Plan and first phase PDI results. Following the second phase PDI, the

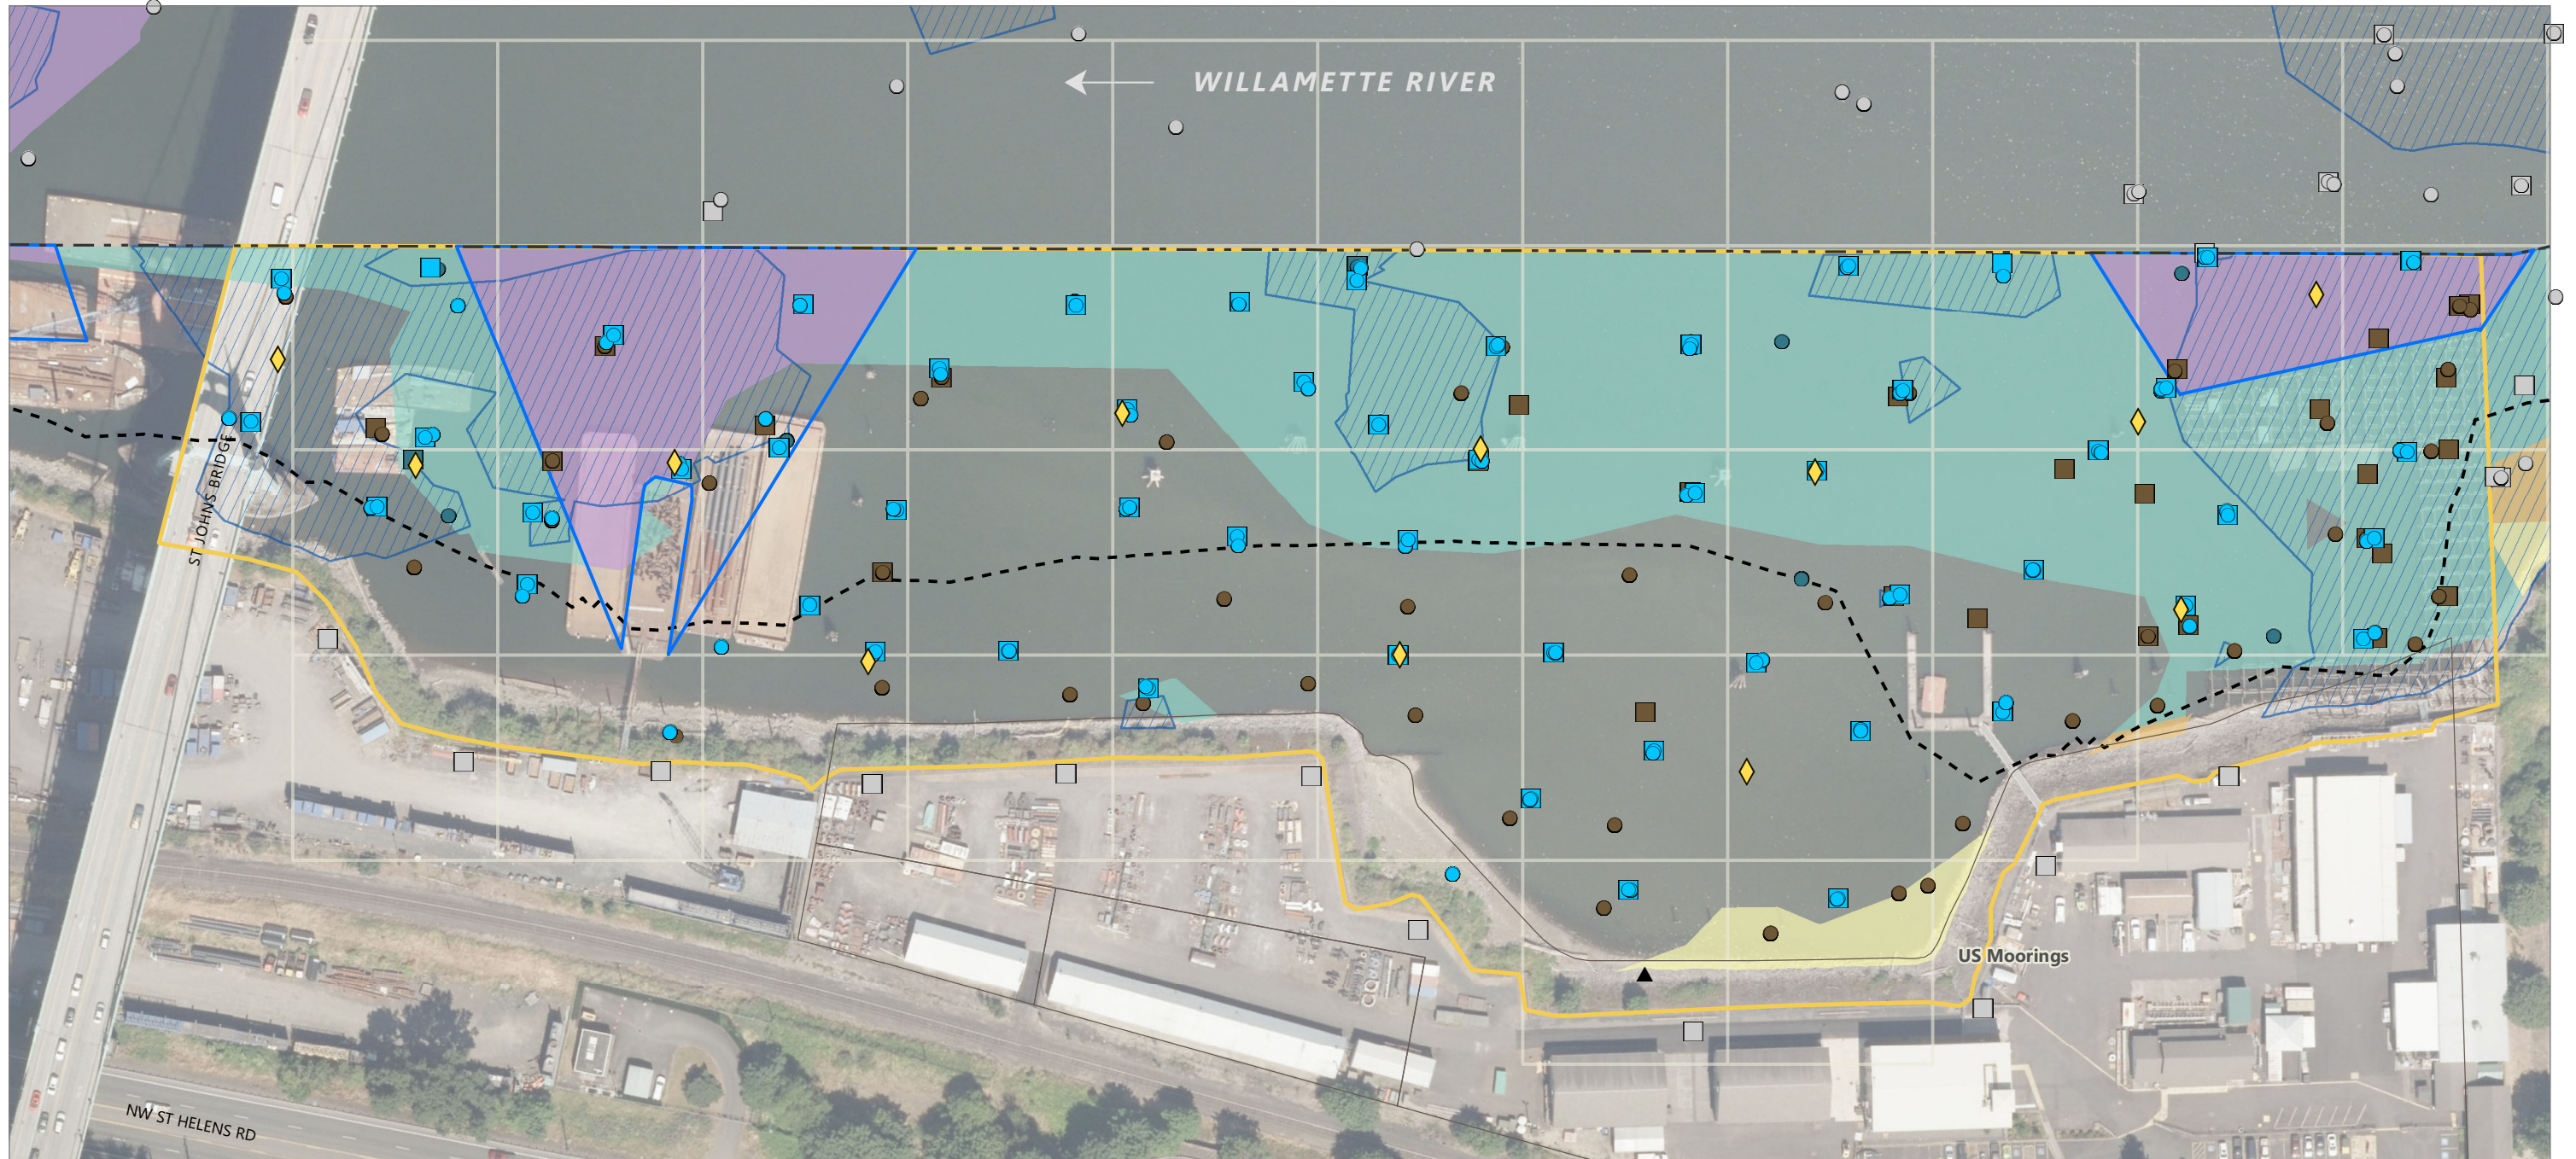

sediment management areas will be revised to include subsurface sediment data.
 6. Sediment management areas include the revised 1,2,3,4,7,8-HxCDF PTW-highly toxic threshold of 0.4 µg/kg per EPA Errata #3 dated September 7, 2022.
