    A. PSE Has Decided to Retire Colstrip Units 1 & 2 No Later Than  
    July 1, 2022.....14

    B. PSE Has Entered Into the CAISO EIM, Which PSE Projects Will  
    Produce Substantial Annual Benefits to PSE Customers .....18

    C. PSE Has Begun Implementation of the “Get to Zero” Initiative  
    Designed to Anticipate Customer Needs and Provide Solutions to  
    Address Those Needs.....23

IV. INTRODUCTION OF WITNESSES .....25

V. CONCLUSION.....29

1 **PUGET SOUND ENERGY**

2 **PREFILED DIRECT TESTIMONY (NONCONFIDENTIAL) OF**  
3 **DAVID E. MILLS**

4 **I. INTRODUCTION**

5 **Q. Please state your name, business address, and position with Puget Sound**  
6 **Energy.**

7 A. My name is David E. Mills. My business address is 10885 NE Fourth Street, P.O.  
8 Box 97034, Bellevue, WA 98009-9734. I am the Vice President, Energy  
9 Operations for Puget Sound Energy (“PSE”).

10 **Q. Have you prepared an exhibit describing your education, relevant**  
11 **employment experience, and other professional qualifications?**

12 A. Yes, I have. It is Exhibit No. \_\_\_(DEM-2).

13 **Q. What are your duties as Vice President, Energy Operations at PSE?**

14 A. As Vice President, Energy Operations, my responsibilities include oversight of  
15 PSE’s Power and Gas Supply Operations, Load Serving Operations, Transmission  
16 Contracts, and Energy Operations Policy, Planning & Compliance groups. My  
17 responsibilities include management of PSE's short- and medium-term wholesale  
18 power and natural gas portfolios (up to three years) and involvement with long-  
19 term hedging requirements and integrated resource planning. My responsibilities  
20 also include developing strategies to address risks related to PSE’s electric and  
21 gas portfolios as well as the continuous operation that monitors, operates, and

1 controls transmission switching, generation dispatch, control area load balancing,  
2 real-time transmission scheduling, and Energy Imbalance Market participation for  
3 PSE and its customers. Finally, I am also responsible for certain strategic  
4 customer initiatives related to customer experience and satisfaction.

## 5 II. OVERVIEW OF THE CHALLENGES FACING THE 6 INDUSTRY AND PSE'S VISION

7 **Q. Please provide a high level overview of PSE and its vision for the future.**

8 A. PSE and its predecessor companies have served Western Washington for more  
9 than a century. In that time, customers' needs have continuously evolved, with  
10 today's customers having increasing expectations for the energy services and  
11 customer experience. PSE is committed to meeting those expectations and has  
12 built its vision of the future on that "voice of the customer." Currently, PSE hears  
13 its customers continue to demand safe, reliable and affordable energy service, but  
14 also lower emission energy sources and options for choice and control from their  
15 utility.

16 PSE is Washington's largest electric and natural gas utility, with approximately  
17 1.1 million electric customers and approximately 800,000 natural gas customers.  
18 PSE employs approximately 3,000 Washington residents and covers a service  
19 territory that spans approximately 6,000 square miles in ten counties. PSE owns  
20 and maintains more than 20,000 miles of electric transmission and distribution  
21 lines and underground cables to deliver electricity to its customers. Additionally,  
22 PSE owns and maintains approximately 26,000 miles of natural gas lines that  
23 serve its natural gas customers.

1 PSE has been a leader in the development of renewable and low-carbon resources,  
2 and it is PSE's vision to serve customers' needs with an increasingly cleaner  
3 portfolio of energy resources. PSE remains one of the country's largest utility-  
4 owners of wind assets, and its power portfolio includes more than 800 MW of  
5 wind generation. Throughout its history, PSE has built, owned and operated  
6 FERC-licensed hydroelectric plants that have provided low-cost, reliable, carbon-  
7 free energy to Washington residents for more than a hundred years. PSE  
8 continues that legacy through recent upgrades to its Snoqualmie Falls and Baker  
9 River Hydroelectric Projects. Those recent upgrades increased the carbon-free  
10 power generated from those plants and ensured compliance with FERC license  
11 requirements.

12 In addition to building new, low-carbon energy sources, PSE is also phasing out  
13 older, carbon-intensive resources from its portfolio. As discussed in more detail in  
14 this filing, PSE is presenting a plan to retire Colstrip Units 1 & 2, which will  
15 significantly reduce carbon emissions in the region. In fact, PSE will reduce its  
16 carbon emissions from coal by 65% within the next decade.

17 PSE's bedrock continues to be offering its customers safe, dependable and  
18 reliable electric and natural gas service efficiently and at a reasonable price.

19 PSE's vision going forward is to build upon that bedrock with greater offerings  
20 that give customers choices in their source of power, ability to monitor and  
21 conserve usage, and avenues for contacting PSE. PSE is offering greater options  
22 for customers who want to purchase renewable power in the future. PSE has long  
23 been a leader in energy efficiency and conservation programs and will continue to

1 work with stakeholders to develop incentives that encourage the efficient use of  
2 energy by customers. PSE will increase its capacity to anticipate customer needs  
3 and provide more options for customers to interact with their utility.

4 Finally, PSE recognizes that the energy industry is in transition and that utilities  
5 must adapt and evolve if they are to be able to remain financially stable while  
6 providing reliable energy service to customers and meeting their expectations in  
7 this changing environment. This case includes several proposals that will help  
8 PSE to remain financially sound while providing safe, dependable, and reliable  
9 service to its customers, and also providing customers choices in terms of their  
10 power sources, usage and interactions with PSE.

11 **Q. Please summarize the environment in which PSE operates and the challenges**  
12 **faced.**

13 A. PSE is filing its rate case in a time of increasing uncertainty but also great  
14 opportunity. While utilities around the country are still called upon to provide  
15 their services in the safest, most dependable and most efficient way possible, they  
16 are increasingly being asked to do so in the face of mounting financial and  
17 competitive pressure. Utilities are also challenged to provide reliable utility  
18 service in a way that protects the environment and gives customers more choices  
19 as to the source of the energy and how they interact with their utilities. In light of  
20 these changes, PSE and its regulators must be willing to embrace new, flexible,  
21 and dynamic approaches that will meet customers' changing needs and choices  
22 while also allowing PSE to operate as a financially healthy utility that can reliably  
23 provide energy service to its customers and the region.

1 **Q. What steps has PSE taken to provide reliable utility service that protects the**  
2 **environment and gives customers more choices?**

3 A. Customers have a growing interest in the environmental impact of their energy  
4 consumption. The preeminent environmental issue being discussed today is how  
5 to address factors that contribute to global climate change, particularly the  
6 emissions of carbon dioxide (CO<sub>2</sub>). As owners of some of the largest stationary  
7 sources of CO<sub>2</sub>, utilities are a key stakeholder in that discussion. Although there  
8 is uncertainty as to how the recent election will affect the U.S. Environmental  
9 Protection Administration's ("EPA") Clean Power Plan, one thing is certain—  
10 PSE, its customers, and the state of Washington, recognize the need to address  
11 climate change, and CO<sub>2</sub> emissions in particular. PSE understands this concern  
12 and is offering solutions to increase sources of clean energy and reduce sources of  
13 carbon-intensive energy.

14 For example, PSE recently began offering a voluntary tariffed service that allows  
15 larger customers the option to purchase renewable energy from resources PSE  
16 owns or contracts for, and also to purchase renewable energy credits ("RECs")  
17 generated from electric production. This supplements PSE's very successful green  
18 power program that allows customers to support locally-sourced Green-e certified  
19 energy sources. This program is structured around the purchase of RECs that  
20 supplement the revenues received by the green resource owners through their  
21 traditional power sales agreements.

22 Another step PSE has taken to address environmental concerns is a commitment  
23 to decommission Colstrip Units 1 & 2, of which PSE is a 50 percent owner.

1 Colstrip Units 1 & 2 have been generating reliable, base load, coal-fired  
2 electricity for nearly half a century. However, they are the source of a significant  
3 amount of CO<sub>2</sub> emissions, and the units are reaching the end of their useful lives.  
4 Therefore, PSE plans to retire the boilers for Colstrip Units 1 & 2 by July 1, 2022,  
5 which will result in a significant decrease in carbon emissions. The  
6 decommissioning and remediation plan for these units, and the proposed funding  
7 for this work, is set forth in the Prefiled Direct Testimony of Ronald J. Roberts,  
8 Exhibit No. \_\_\_(RJR-1CT), Prefiled Direct Testimony of Daniel A. Doyle,  
9 Exhibit No. \_\_\_(DAD-1T), and the the Prefiled Direct Testimony of Katherine J.  
10 Barnard, Exhibit No. \_\_\_(KJB-1T).

11 PSE has taken steps to transition a portion of the State’s transportation sector  
12 away from petroleum-based fuels. For example, PSE implemented tariff offerings  
13 that promote the use of compressed natural gas and electricity in the residential  
14 and small commercial transportation sector. PSE has recently received  
15 Commission approval to pursue the development of a liquefied natural gas  
16 (“LNG”) facility at the Port of Tacoma that will serve the dual purpose of meeting  
17 PSE customers’ peak gas resource needs while also promoting LNG as a  
18 transportation fuel, primarily for the maritime sector. The use of LNG for  
19 shipping on Puget Sound (versus diesel) will benefit both local air quality as well  
20 as have a positive effect on greenhouse gas emissions.

21 PSE is exploring electric vehicle service. The Commission approved a PSE Pilot  
22 Program (Schedule 195) in Docket UE-140626 that allows PSE to offer a

1 customer rebate of \$500 to customers that install a level-2 charger. Thus far, over  
2 1,200 customers have enrolled in the program.

3 In addition to addressing emissions and air quality issues, PSE took a significant  
4 step forward towards aligning its financial incentives with those of its customers  
5 when the Commission approved its electric and gas decoupling mechanisms. The  
6 Commission recognized that in approving these mechanisms it was removing the  
7 “throughput incentive” created by tying the recovery of PSE’s fixed delivery  
8 system costs to the amount of energy it sold. However, this incentive remained for  
9 the recovery of PSE’s fixed production costs.

10 As part of the current rate case, PSE is proposing to address this last remaining  
11 throughput incentive by moving the recovery of PSE’s fixed production costs into  
12 its electric decoupling mechanisms. Doing so, PSE will no longer be dependent  
13 on energy sales to recover its fixed production costs and thereby further align its  
14 financial incentives with its customers’ interests in acquiring conservation  
15 resources.

16 **Q. Please elaborate on the customer choice challenges that PSE and the utility**  
17 **industry face.**

18 A. Customer expectations continue their swift rise, both in terms of choices desired  
19 and services expected. This is true of all industries, whether they serve business-  
20 to-consumer or business-to-business markets, and utilities are no exception. PSE  
21 customers today desire choice, including choices in the source of their energy.  
22 Green tariff options are becoming increasingly common, as are opportunities for

1 customers to obtain some or all of their power from someone other than their local  
2 utility. Many customers already exercise their ability to participate in utility net  
3 metering programs, where some or all of their energy requirements are provided  
4 on-site.

5 Customer service challenges are no less daunting. With the rapid evolution of  
6 digital customer engagement, exemplified by companies like Amazon, Apple and  
7 Google, other industries are under increasing pressure to follow suit. Utilities are  
8 not immune, with consumers increasingly interested in interacting with their  
9 utility through multiple communications channels, including online and via  
10 smartphone applications. Many utility customers want data available to them,  
11 including their daily or hourly energy usage, payment history and service options,  
12 and expect this data to be available via their choice of platform, including mobile  
13 devices. They also increasingly expect the same payment options that are  
14 available to them from other businesses, particularly the ability to pay by credit  
15 card.

16 **Q. What steps has PSE taken to address these customer choice challenges?**

17 A. PSE has taken steps to adapt to the changing, modern digital environment. For  
18 example, the Commission recently approved an accounting petition filed by PSE  
19 that allows consumers to pay their utility bills with credit cards without incurring  
20 a fee. Additionally, PSE is in the beginning stages of replacing its aging  
21 automated meter reading system with advanced metering infrastructure that will  
22 enable future abilities for customers' to monitor and control their energy usage.

1 PSE is also engaged in a long-term initiative that will facilitate customers' ability  
2 to do most, if not all, of their business with PSE through computers or smart  
3 phones and other devices, rather than talking with an agent in the call center. PSE  
4 calls this the "Get to Zero" or "GTZ" initiative because the goal is to anticipate  
5 customer needs and provide customers with their preferred pathways to address  
6 these needs, rather than requiring customers to call in and speak to a customer  
7 service representative. PSE will focus on addressing the operational and service  
8 issues that spur customers to pick-up the phone. This program will look to further  
9 improve customer experience by providing more self-service options that  
10 customers are requesting, developing new ways to proactively communicate with  
11 customers and creating seamless, integrated operations to tie all of PSE's business  
12 processes together. Simply put, PSE will operate so efficiently and in a  
13 consistently excellent fashion that customers will no longer have a need or desire  
14 to call. The "Get to Zero" initiative is discussed in more detail below.

15 **Q. Please elaborate on the reliability challenges that PSE and the industry faces.**

16 A. While the industry focuses on disruptive technologies, renewable energy, and  
17 customer choice, our customers' core requirements remain the same. All  
18 customers expect to receive safe, dependable and efficient energy service.

19 As consumers increasingly rely on electronic devices for work and recreation, the  
20 reliability of these services becomes even more important. Challenges to utility  
21 reliability have been highlighted recently by the significant disruptions to utility  
22 service created by the increasingly frequent occurrences of "extreme" weather  
23 events, such as 2012's Superstorm Sandy. Such events have led to an increased

1 focus on “system hardening” by utilities. While the Northwest has been fortunate  
2 enough to be spared these more catastrophic events, here too “extreme” weather  
3 appears to becoming the norm. For instance, PSE suffered unusual wind-related  
4 service interruptions in a freak August 2015 windstorm, which resulted in more  
5 than 400,000 PSE electric customers losing service. While not as unusual, PSE  
6 also experienced a series of November storms in 2015 that, at their peak, cut  
7 electric service to 220,000 PSE customers.

8 Finally, with the upward pressure on utility rates created by the dual effects of  
9 dampening load growth and the continued need for infrastructure replacement,  
10 whether planned or to repair storm damage, the need for efficient utility service  
11 has intensified.

12 **Q. Please elaborate on the cost pressures that PSE and the utility industry face.**

13 A. Attrition, which is simply the presence of costs growing faster than revenues, has  
14 been a problem for the utility industry for some time. In decades past, it was  
15 principally driven by the need for significant infrastructure investment combined  
16 with inflationary pressures. These pressures had traditionally been mitigated by  
17 growing energy sales, which produced a certain amount of offsetting revenue.

18 More recently, with growing interest by customers in efficient energy use, growth  
19 in energy sales has largely stalled and so too has the associated growth in  
20 revenues. Simply maintaining the existing level of service with stagnant revenue  
21 growth has been a more common source of attrition in the current era.

1 In response, and in addition to simply accelerating the pace of rate case activity,  
2 utilities have proposed a variety of means by which to address the underlying  
3 causes of attrition, many of which have been adopted by regulators. More  
4 progressive examples include cost tracking mechanisms that accelerate the  
5 recovery of prudently incurred investments, the more widespread adoption of  
6 decoupling mechanisms, formula rates and the increased use of multi-year “rate  
7 plans.”

8 **Q. Have some of these progressive forms of ratemaking been available to PSE?**

9 A. Yes. The multi-year rate plan, expedited rate filing, and decoupling mechanisms  
10 approved by the Commission in 2013 have allowed PSE to avoid filing rate cases,  
11 while operating efficiently and coming closer to earning its return on equity than  
12 PSE had otherwise done for several years. However, as discussed in the Prefiled  
13 Direct Testimony of Katherine J. Barnard, Exhibit No. \_\_\_(KJB-1T), PSE would  
14 not have been able to earn its authorized rate of return without the annual rate  
15 increases included in the rate plan.

16 Additionally, the gas cost recovery mechanism authorized by the Commission a  
17 few years ago has allowed PSE to dedicate capital to replacement of higher risk  
18 pipe, and to replace this pipe on a more accelerated basis than otherwise would  
19 have been possible. The gas cost recovery mechanism improves safety and  
20 reliability while also allowing for more certain and timely recovery of costs for  
21 gas infrastructure replacement.

1 **Q. Is there still a need for these alternative forms of ratemaking?**

2 A. Yes. There is still a need for the Commission to be creative and use alternative  
3 forms of ratemaking in order to address attrition and maintain strong utilities that  
4 can reliably meet the energy needs of their customers.

5 In this case, PSE is requesting that the Commission authorize PSE to file an  
6 expedited rate filing that will allow adjustment of rates between general rate  
7 cases. This is discussed in more detail in the Prefiled Direct Testimony of  
8 Katherine J. Barnard, Exhibit No. \_\_\_(KJB-1T).

9 PSE also requests that the Commission authorize an electric cost recovery  
10 mechanism, similar to the mechanism the Commission has authorized for natural  
11 gas pipeline replacement. This mechanism will allow PSE to focus on its electric  
12 circuits that have proved to be the least reliable over the past several years.

13 Additionally, through this mechanism, PSE will accelerate the replacement of  
14 underground cables across its service territory that were installed more than  
15 30 years ago and have been prone to failure. This is discussed in more detail in the  
16 Prefiled Direct Testimony of Booga K. Gilbertson, Exhibit No. \_\_\_(BKG-1T), and  
17 the Prefiled Direct Testimony of Cathy A. Koch, Exhibit No. \_\_\_(CAK-1CT).

18 **Q. What steps has PSE taken to improve its operational efficiency?**

19 A. There are several steps PSE has taken to improve its efficiency. Among the most  
20 prominent examples were the successful launch of PSE's "Big S" project, which  
21 included a new customer information system, as well as a geographical  
22 information system and outage management system completed in 2013. The

1 “Big S” project provided a significant risk mitigation to replace an aging, obsolete  
2 system.

3 In terms of production efficiency, in October 2016, PSE began participating in the  
4 Energy Imbalance Market (“EIM”) operated by the California Independent  
5 System Operator (“CAISO”). The CAISO EIM is an automatic, sub-hourly means  
6 to economically match customer demand (load) and supply (dispatch of  
7 resources). The market is operated by an independent market operator—CAISO—  
8 which optimizes and leverages generation resources within the CAISO EIM  
9 footprint, dispatching the most economic resources to serve intra-hour changes in  
10 supply or demand. According to preliminary estimates, PSE could save its electric  
11 customers up to \$10 million to \$20 million per year through its participation in the  
12 CAISO EIM. The CAISO EIM is discussed in more detail below.

13 **III. PSE INITIATIVES TO ADDRESS THE**  
14 **CHALLENGES FACING THE INDUSTRY**

15 **Q. Are there particular initiatives of PSE that exemplify the challenges facing**  
16 **the industry and PSE’s efforts to address those challenges?**

17 A. Yes. There are three PSE initiatives that exemplify the challenges facing the  
18 industry and PSE’s efforts to address those challenges.

19 First, the decision to retire the boilers of Colstrip Units 1 & 2 correlates with  
20 PSE’s broader vision to lower the emission’s intensity of its energy portfolio and  
21 reduce dependence on older coal plants that are reaching the ends of their useful  
22 lives. This retirement decision both (i) fulfilled previous commitments of PSE to

1 provide the Commission with a plan in this general rate case to address the future  
2 of Colstrip Units 1 & 2 and (ii) reduces future risk exposure for customers in  
3 several areas.

4 Second, PSE’s decision to join the CAISO EIM could save electric customers up  
5 to \$10 to \$20 million per year. PSE began participating in the CAISO EIM on  
6 October 1, 2016, and was able to begin operations through a process that included  
7 stakeholder input and had a reasonable cost.

8 Finally, the “Get to Zero” initiative will facilitate customers’ ability to do most, if  
9 not all, of their business with PSE through computers or smart phones and other  
10 devices, rather than through the call center. The following testimony will  
11 highlight the operational and service areas that PSE plans to address so that  
12 customers no longer feel the need to pick up the phone and call PSE’s Customer  
13 Care Center.

14 **A. PSE Has Decided to Retire Colstrip Units 1 & 2 No Later Than**  
15 **July 1, 2022**

16 **Q. How does the decision to retire Colstrip Units 1 & 2 fit with PSE’s vision and**  
17 **goals?**

18 A. The decision to retire Colstrip Units 1 & 2 was complex. The Prefiled Direct  
19 Testimony of Ronald J. Roberts, Exhibit No. \_\_\_(RJR-1CT), provides detail  
20 about the many complexities and factors considered by PSE in making its  
21 decision. However, the decision to retire Colstrip Units 1 & 2—and its plan to pay  
22 for decommissioning and remediation—are in line with PSE’s broader goals and

1 customer expectations to deliver lower emissions energy, keep rates predictable  
2 and mitigate future risks.

3 **Q. How will the retirement of Colstrip Units 1 & 2 align with customer**  
4 **expectations to lower emissions?**

5 A. PSE has a long-term goal to become a carbon neutral utility, and coal is the most  
6 carbon-intensive resource within the generation portfolio. Therefore, retiring the  
7 307 megawatts (MW) of coal-based energy that PSE receives from Colstrip  
8 Units 1 & 2 will lower the overall emissions profile in PSE's generation portfolio.  
9 While an all-source Request for Proposal ("RFP") will determine the next  
10 resource or resources that PSE uses to replace the lost energy and capacity from  
11 Colstrip Units 1 & 2, it is reasonable to assume that any new resource will have a  
12 lower emissions profile than coal.

13 **Q. How does PSE plan to address the sometimes competing desires of customers**  
14 **for lower emissions energy, predictable rates, and low risks?**

15 A. PSE shares customers' goals for lower emissions, predictable rates and minimized  
16 future risks. The decision to retire Colstrip Units 1 & 2 and the plan to pay for  
17 remediation and decommissioning was made with all three goals in mind. The  
18 Prefiled Direct Testimony of Daniel A. Doyle, Exhibit No. \_\_\_(DAD-1T), and the  
19 Prefiled Direct Testimony of Katherine J. Barnard, Exhibit No. \_\_\_(KJB-1T),  
20 describe PSE's innovative proposals to pay for decommissioning and remediation  
21 costs for Colstrip Units 1 & 2 in a manner that minimizes rate shock and helps to  
22 keep rates predictable for customers.

1 Colstrip Units 1 & 2 face myriad future risks beyond just decommissioning and  
2 remediation. The Prefiled Direct Testimony of Ronald J. Roberts, Exhibit  
3 No. \_\_\_(RJR-1CT), describes the growing number of known and unknown risks  
4 such as partnership status, contracts, regulation, and operations that make it clear  
5 retirement of the Colstrip Units 1 & 2 was in the best interest of PSE's customers.

6 **Q. Please describe the commitments that PSE made to the Commission**  
7 **regarding Colstrip Units 1 & 2 in the joint petition to delay the filing of this**  
8 **general rate case.**

9 A. In the joint petition approved by the Commission to extend the date by which PSE  
10 must file a general rate case, PSE committed<sup>1</sup> to provide a comprehensive plan for  
11 addressing the future of Colstrip Units 1 & 2 in its next general rate case which  
12 would include the following:

- 13 1. *A depreciation schedule for all four units that align with*  
14 *PSE's most current analysis of the plants' useful life.*  
15 Please see the Prefiled Direct Testimony of John J. Spanos,  
16 Exhibit No. \_\_\_(JJS-1T), and the supporting exhibits  
17 thereto, for a depreciation schedule for all four units that  
18 align with PSE's most current analysis of the plants' useful  
19 life.
- 20 2. *Known Major Maintenance obligations and their projected*  
21 *costs for Colstrip Units 1 & 2.* Please see the Prefiled  
22 Direct Testimony of Ronald J. Roberts, Exhibit  
23 No. \_\_\_(RJR-1CT), for an analysis of major maintenance  
24 obligations and their projected costs for Colstrip  
25 Units 1 & 2.

3. *A narrow window of dates for the planned retirement of Colstrip Units 1 & 2. Please see the Prefiled Direct Testimony of Ronald J. Roberts, Exhibit No. \_\_\_(RJR-1CT), for a discussion of (i) the decision of PSE to retire Colstrip Units 1 & 2 no later than July 1, 2022, and (ii) factors that could prompt an earlier retirement of Colstrip Units 1 & 2 such as partner agreements, operational and economic factors, or potential policy or regulatory changes.*

4. *Detailed information regarding the planned decommissioning and remediation activities for Colstrip Units 1 & 2, including costs associated therewith. Please see the Prefiled Direct Testimony of Ronald J. Roberts, Exhibit No. \_\_\_(RJR-1CT), for a discussion of the known and planned decommissioning and remediation activities for Colstrip Units 1 & 2, including costs associated therewith.*

5. *A basic framework for how power replacement decisions will be made if the planned retirement of Colstrip Units 1 & 2 is out of sync with the development of the 2017 Integrated Resource Plan (“IRP”). PSE does not expect the retirement of Colstrip Units 1 & 2 to be out of sync with the 2017 IRP. Please see the Prefiled Direct Testimony of Ronald J. Roberts, Exhibit No. \_\_\_(RJR-1CT), for a brief discussion of the process for selecting replacement power in the future, which is consistent with existing laws and regulations regarding resource planning and acquisition.*

In short, PSE has satisfied its commitment to this Commission for a comprehensive plan for addressing the future Colstrip Units 1 & 2. Additionally, PSE has exceeded its commitment by including further discussion on financing mechanisms for Colstrip Units 1 & 2 decommissioning and remediation activities that may help minimize rate shock to customers and address potential fairness issues that may arise from paying to decommission and remediate Colstrip Units 1 & 2.

1 **B. PSE Has Entered Into the CAISO EIM, Which PSE Projects Will**  
2 **Produce Substantial Annual Benefits to PSE Customers**

3 **Q. Briefly describe the CAISO EIM.**

4 A. The CAISO EIM is a new and expanding market in the Western Electric  
5 Coordinating Council (“WECC”) territory that is operated by CAISO as an  
6 extension of its existing market footprint. The CAISO EIM is a voluntary, sub-  
7 hourly market that allows for participating utilities to balance supply and demand  
8 every fifteen and five minutes with a coordinated and automated generation  
9 dispatch. Utilities participating in this real-time market share resources more cost  
10 effectively across a larger geographic footprint, which significantly lowers the  
11 cost of delivering power to customers. CAISO is a non-profit market operator that  
12 operates the CAISO EIM in eight western states. Current participants include  
13 Arizona Public Service, Nevada Energy, PacifiCorp, and PSE. Portland General  
14 Electric (2017), Idaho Power (2018), and Seattle City Light (2019) have signed  
15 agreements with CAISO to join the CAISO EIM. Please see the Prefiled Direct  
16 Testimony of Paul K. Wetherbee, Exhibit No. \_\_\_(PKW-1CT), for a discussion of  
17 how the EIM interacts with existing energy markets.

18 **Q. What was the impetus for PSE joining the CAISO EIM?**

19 A. PSE is continually looking for ways to increase efficiencies, manage costs and  
20 create long-term benefits for customers. The CAISO EIM was growing and had  
21 proven effective for other utilities in the region at managing costs, generating  
22 customer benefits, and effectively reducing carbon emissions through more  
23 efficient generation dispatch and a reduction in renewable curtailment. Therefore,

1 PSE decided to study whether entering the CAISO EIM would do the same for its  
2 customers.

3 **Q. What studies did PSE complete to assess the benefits of participation in the**  
4 **CAISO EIM?**

5 A. Energy and Environmental Economics, Inc. (“E3”) completed a benefits study of  
6 the EIM for PSE in 2014. Please see Exhibit No. \_\_\_(DEM-3) for a copy of the  
7 E3 study. For the 2020 study year (assuming commencement of market  
8 participation in 2016), the benefits of sub-hourly dispatch efficiency and  
9 flexibility reserves were estimated to be between \$18.3 million and \$20.1 million  
10 per year. In addition, E3 estimated an additional \$9 million per year from cost-  
11 effective renewable resource integration. This projection of an additional  
12 \$9 million per year would result from transitioning the Hopkins Ridge and Lower  
13 Snake River Wind Generating Stations from the Balancing Authority Area of  
14 Bonneville Power Administration (“BPA”) to the Balancing Authority Area of  
15 PSE. PSE and BPA have initiated this transaction project, but PSE does not  
16 anticipate that it will be complete during the rate year.

17 PSE estimated (i) start-up costs to join the EIM of \$14.2 million and (ii) ongoing  
18 costs of \$3.5 million per year. The start-up costs, taken together with a 20-year  
19 series of ongoing costs and annual benefits, produced a net present value of  
20 \$153.7 million to \$174.4 million. The E3 study also noted potential reliability  
21 benefits tied to increased situational awareness and resource control.

1 **Q. What other alternatives did PSE consider besides the CAISO EIM?**

2 A. The Northwest Power Pool (“NWPP”) was considering the formation of an EIM  
3 for the Pacific Northwest region. In 2014, PSE evaluated the NWPP EIM  
4 alternative with the information available at the time. The NWPP EIM was in  
5 early development, and there was uncertainty whether the NWPP members would  
6 fully support an EIM and elect to move forward with it at any level.

7 The earliest anticipated operation date for the NWPP EIM was late 2017 or early  
8 2018. In contrast, the CAISO EIM began operations on November 1, 2014, with  
9 the participation of PacifiCorp and was an established market that produced real  
10 data for PSE to evaluate. In addition, PSE projected annual benefits from the  
11 NWPP EIM of between \$2.1 million and \$6.6 million that were lower than the  
12 projected benefits from the CAISO EIM of between \$10 million and \$20 million.  
13 (The start-up costs and the on-going costs were estimated to be identical for either  
14 EIM alternative.) Ultimately, the NWPP initiative stalled and was terminated.

15 **Q. Did PSE engage outside stakeholders before entering the CAISO EIM?**

16 A. Yes. PSE engaged with BPA and PacifiCorp to use existing BPA transmission  
17 rights to interconnect with PacifiCorp.

18 PSE engaged with BPA to coordinate the use of long term transmission rights in a  
19 way that did not impact other transmission customers. BPA conducted a full  
20 stakeholder process for PSE’s proposed use of existing transmission rights for the  
21 CAISO EIM. BPA held PSE-related CAISO EIM stakeholder meetings on  
22 January 12, February 18, and March 30, 2016.

1 PSE also engaged with a number of stakeholders prior to filing revisions to PSE's  
2 Open Access Transmission Tariff ("OATT") with the Federal Energy Regulatory  
3 Commission ("FERC"). This stakeholder engagement consisted of public  
4 meetings, public input and PSE response, customer education and outreach from  
5 PSE and CAISO. PSE's stakeholder engagement, much of which is documented  
6 on PSE's Open Access Same Time Information Site ("OASIS") helped in the  
7 filing and approval process of PSE's OATT revisions at FERC.

8 **Q. Did PSE meet the October 1, 2016 deadline to join the CAISO EIM?**

9 A. Yes. PSE began full participation on October 1, 2016, per the CAISO EIM  
10 participation agreement. PSE met the milestones and project delivery dates per the  
11 agreement, including full completion of the readiness criteria as noted in CAISO's  
12 filing with FERC on August 24, 2016. PSE also received approval from the FERC  
13 to transact in the CAISO EIM at market-based rates.

14 **Q. What are key indicators of PSE's performance in the CAISO EIM to date?**

15 A. There are several indicators of PSE performance in the CAISO EIM that have  
16 been positive to date. Many of those indicators are produced for CAISO EIM  
17 participants (including PSE) by CAISO each month and filed at FERC. CAISO's  
18 first monthly report of PSE's participation in the CAISO EIM noted a smooth  
19 transition. At a high level, these metrics are the results of tests that CAISO  
20 performs continuously to ensure loads and resources for market participants are  
21 balanced and that the overall markets function properly from a physical and  
22 financial perspective.

1 PSE passed over 97% of its balancing tests and 98% of its flex ramp sufficiency  
2 tests in the month of October 2016. PSE observed power balance constraint  
3 feasibilities in 0.03% of intervals in the fifteen-minute market and in 0.25% of the  
4 intervals in the real-time dispatch market. With the low frequencies of power  
5 balance constraint infeasibilities experienced in the month of October in the PSE  
6 Balancing Authority Area, transitional period pricing had little impact on CAISO  
7 EIM prices.

8 The CAISO noted in its October report that average prices in the PSE Load  
9 Aggregation Point were \$22.89/MWh in the fifteen-minute market and  
10 \$19.56/MWh in the real-time dispatch. These prices were stable in the month and  
11 tracked closely between markets. The prices also track well with an estimated  
12 proxy price, which is the Mid-C hub price from the Intercontinental  
13 Exchange (“ICE”).

14 **Q. Have the economic benefits of the CAISO EIM met PSE’s expectations to**  
15 **date?**

16 A. It is too soon to tell whether the economic benefits of the CAISO EIM have met  
17 PSE’s expectations to date due to the short time that PSE has participated in the  
18 market. CAISO issues quarterly benefits reports for the CAISO EIM, and the  
19 quarterly benefit report for the fourth quarter of 2016 will contain the first  
20 summary of PSE’s gross benefits. PSE expects that CAISO will release the  
21 quarterly benefit report for the fourth quarter of 2016 in late January 2017.

1 **C. PSE Has Begun Implementation of the “Get to Zero” Initiative**  
2 **Designed to Anticipate Customer Needs and Provide Solutions to**  
3 **Address Those Needs**

4 **Q. Please describe PSE’s “Get to Zero” initiative.**

5 A. The “Get to Zero” initiative is a long-term initiative to further improve customer  
6 experience with PSE by providing more self-service options that customers are  
7 requesting, developing new ways to proactively communicate with customers and  
8 creating seamless, integrated operations to tie PSE’s business processes together.  
9 PSE’s broad goal for the technology and business processes advanced by the “Get  
10 to Zero” initiative is to anticipate customer needs and provide solutions to address  
11 those needs. These advancements and experiences will reduce customers need to  
12 call in and speak to a customer service representative and will build customer  
13 trust.

14 **Q. Why has PSE initiated GTZ?**

15 A. PSE initiated GTZ because we have been continuously listening to our customers.  
16 The Prefiled Direct Testimony of Greg J. Zeller, Exhibit No. \_\_\_(GJZ-1T)  
17 describes the survey work PSE has done to understand its customers’ evolving  
18 expectations for self-serve options and preferences for web, mobile applications  
19 and social media as primary communication channels. PSE customers are  
20 accustomed to interacting with other businesses through smart devices, at all  
21 hours, and with minimal friction. They expect the same of PSE.  
22 The goal of the “Get to Zero” initiative is to implement digital solutions that  
23 continue to enable self-service advancement in a way that reduces friction and

1 enhances the experience for customers looking to meet their needs with PSE. The  
2 aim is to make customer experience so good that customers will not have a need  
3 to pick up the phone and call PSE.

4 Meeting this goal requires PSE to simultaneously look inward and outward.  
5 Internally, PSE will integrate personnel, business processes, and existing  
6 technology in customer service, operations, supply chain, energy efficiency, and  
7 other PSE organizations in order to eliminate customer problems and handle any  
8 customer inquiry at a customer's first contact with PSE through the customer's  
9 preferred communication channel.

10 **Q. What metrics will determine the successes of the "Get to Zero" initiative?**

11 A. In the near-term, the metric for the "Get to Zero" initiative will be call volume to  
12 the Customer Care Center. In 2015, PSE received two million calls to its  
13 Customer Care Center, which represents two million issues that customers needed  
14 help resolving. PSE estimates that near-term "Get to Zero" initiative efforts  
15 focused on meaningful business process and technology tweaks will reduce call  
16 volume by as much as 300,000 calls by the end of 2017, with similar results in  
17 future years. Although difficult to measure, PSE expects that customer  
18 satisfaction will also improve because of "Get to Zero" initiative efforts.

**IV. INTRODUCTION OF WITNESSES**

**Q. Please introduce the witnesses who will be testifying in this case and provide a brief summary of the topics they will address.**

A. The following witnesses have submitted testimony on behalf of PSE:

**Mr. Daniel A. Doyle**, the Chief ~~Executive~~Financial Officer for PSE, discusses the results of decoupling, the earnings sharing mechanism, the expedited rate filing, and annual K-factor increases since they were instituted in July 2013. Mr. Doyle also addresses cost of equity, equity in the capital structure, certain cost management and efficiency efforts at PSE, and certain aspects of PSE’s decommissioning and remediation proposals as they pertain to the shutdown of Colstrip Units 1 & 2.

**Mr. Brandon J. Lohse**, Corporate Treasurer for PSE, describes PSE’s requested capital structure and overall rate of return.

**Dr. Roger A. Morin**, Emeritus Professor of Finance at the Robinson College of Business, Georgia State University, and Professor of Finance for Regulated Industry at the Center for the Study of Regulated Industry at Georgia State University, discusses why PSE’s rate of return on common equity of 9.8% requested by PSE, which was authorized by the Commission in PSE’s last rate case, remains fair and reasonable under current capital market conditions.

**Ms. Booga K. Gilbertson**, Senior Vice President, Operations for PSE, provides an overview of PSE’s approach to providing safe, dependable and efficient gas and electric services for its customers and addresses PSE’s request for an Electric Reliability Plan and associated Cost Recovery Mechanism.

1 **Ms. Catherine A. Koch**, Director, Planning for PSE, provides additional detail  
2 with respect to PSE’s request for an Electric Reliability Plan and associated Cost  
3 Recovery Mechanism.

4 **Mr. Paul K. Wetherbee**, Director, Energy Supply Merchant for PSE, addresses  
5 power costs for the rate year for this proceeding—January 1, 2018 through  
6 December 31, 2018, and provides an update on the status of the White River  
7 surplus properties.

8 **Mr. Ronald J. Roberts**, Director, Thermal Resources for PSE, discusses (i) how  
9 PSE’s decision to transition from the use of Colstrip Units 1 & 2 in a measured  
10 and thoughtful way provides a clearer pathway for reduced risk to PSE’s  
11 customers and reduction of carbon emissions without compromising reliability  
12 and (ii) provides an overview of the rate year production operations and  
13 maintenance expense for PSE’s thermal, hydroelectric, and wind generation  
14 facilities, including major maintenance.

15 **Mr. Michael Mullally**, Manager, Business Initiatives for PSE, addresses  
16 (i) PSE’s purchase of the Buckley Natural Gas Distribution System; (ii) PSE’s  
17 Glacier Battery Storage System pilot project; and (iii) PSE’s agreement to  
18 purchase power from the Wells Hydroelectric Project.

19 **Mr. Greg J. Zeller**, Director, Customer Care for PSE, provides an overview of  
20 PSE’s Service Quality Index (“SQI”) Program and PSE’s recommendation to  
21 modify SQI No. 5 – Customer Access Center Answering Performance metric.  
22 PSE is proposing to include the Integrated Voice Response (“IVR”) self-service

1 transactions in the calculation in order to better reflect today's customer service  
2 expectations.

3 **Mr. Joel L. Molander**, Director, Corporate Shared Services for PSE, addresses  
4 PSE's decision to acquire the South King Complex in Kent, Washington.

5 **Mr. Thomas M. Hunt**, Director, Compensation and Benefits for PSE, describes  
6 the elements of PSE's pay philosophy, which includes the compensation and  
7 benefit programs, and explains the steps that PSE has taken to compete in a  
8 challenging labor market while controlling wage and benefit costs.

9 **Mr. John K. Rork**, Manager, Environmental Programs & Sciences Department  
10 for PSE, describes the environmental remediation program undertaken by PSE as  
11 required by state and federal laws.

12 **Mr. Roque Bamba**, Manager, Major Projects, for PSE, provides an update on the  
13 redevelopment work at the Snoqualmie Hydroelectric Project and the cost of this  
14 work.

15 **Ms. Suzanne M. Sasville**, Supervisor, Energy Assistance Programs for PSE,  
16 provides an overview of PSE's Home Energy Lifeline Program (HELP) and  
17 presents PSE's proposal for low-income funding. She also proposes a pilot that  
18 will allow seniors and disabled individuals the option to certify their eligibility for  
19 the program every two years, instead of annually, which will increase efficiency  
20 in administering the program and reduce the burden on local agencies.

21 **Ms. Katherine J. Barnard**, Director, Revenue Requirements and Regulatory  
22 Compliance for PSE, addresses the results of operations and the associated base

1 rates revenue deficiency for electric operations. Additionally, Ms. Barnard  
2 addresses PSE's request for an expedited rate filing and ratemaking  
3 considerations related to PSE's requested Electric Cost Recovery Mechanism.

4 **Ms. Susan E. Free**, Manager, Revenue Requirement for PSE, addresses the  
5 results of operations and the associated base rates revenue deficiency for gas  
6 operations.

7 **Dr. Chun K. Chang**, Regulatory Consultant in Pricing and Cost of Service for  
8 PSE, presents PSE's electric and gas temperature adjustment methodologies and  
9 results used to develop the pro forma electric and gas sales for the ~~rate~~test year for  
10 this proceeding—October 1, 2015, through September 30, 2016.

11 **Mr. John J. Spanos**, Senior Vice President for Gannett Fleming Valuation and  
12 Rate Consultants, LLC, sponsors the depreciation study performed for PSE,  
13 which sets forth the calculated annual depreciation accrual rates by account as of  
14 September 30, 2016, for all electric, gas and common plant.

15 **Mr. Jon A. Piliaris**, Manager, Pricing and Cost of Service for PSE, presents,  
16 among other things, (i) PSE's pro forma revenue from electric and natural gas  
17 operations; (ii) PSE's cost of service study and PSE's proposed rate spread and  
18 rate design for electric and natural gas service; (iii) an evaluation of PSE's electric  
19 and gas decoupling mechanisms, along with proposed changes to these  
20 mechanisms; and (iv) the proposed cost allocation and rate design for PSE's  
21 Electric Cost Recovery Mechanism.

**V. CONCLUSION**

1

2

**Q. Does this conclude your testimony.**

3

**A. Yes it does.**
