CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

Sample Receipt:

Seven sediment samples were received for analysis at ALS Environmental on 05/06/2021. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

Semivoa GC:

Method 8151A, 05/27/2021: The analysis of multiple samples were initially performed on 5/25/21 . Due to extraction error all samples had to be re-extracted. Efforts were made to re-extract and reanalyze the samples as soon as possible. However, the re-extraction of the samples was performed past the recommended holding time. The results from the re-extraction were reported. The data was flagged to indicate the holding time violation.

Method 8151A, 05/27/2021: The upper control criterion was exceeded for 2,4,5-TP (Silvex) in Continuing Calibration Verification (CCV) KQ2109594-02. The field samples analyzed in this sequence did not contain the analyte in question. Since the apparent problem indicated a potential high bias, the data quality was not affected. No further corrective action was required.
