| 1  |    | I. INTRODUCTION   |
|----|----|---|
| 2  | Q: | Please state your name and business address.  |
| 3  | A: | My name is Glenn A. Watkins. My business address is 1503 Santa Rosa Road, Suite           |
| 4  |    | 130, Richmond, Virginia 23229.  |
| 5  | Q: | By whom are you employed and in what capacity?  |
| 6  | A: | I am a Principal and Senior Economist with Technical Associates, Inc., which is an        |
| 7  |    | economics and financial consulting firm with offices in Richmond, Virginia.               |
| 8  | Q: | On whose behalf are you testifying?   |
| 9  | A: | I am testifying on behalf of the Public Counsel Unit of the Washington Attorney           |
| 10 |    | General's Office (Public Counsel).  |
| 11 | Q: | Please describe your professional qualifications.   |
| 12 | A: | Except for a six-month period during 1987 in which I was employed by Old Dominion         |
| 13 |    | Electric Cooperative as its forecasting and rate economist, I have been employed by       |
| 14 |    | Technical Associates continuously since 1980.   |
| 15 |    | During my thirty-six year career at Technical Associates, I have conducted                |
| 16 |    | marginal and embedded cost of service, rate design, cost of capital, revenue requirement, |
| 17 |    | and load forecasting studies involving numerous gas, electric, water/wastewater, and      |
| 18 |    | telephone utilities, and have provided expert testimony in Alabama, Arizona, Delaware,    |
| 19 |    | Georgia, Indiana, Kansas, Kentucky, Maine, Maryland, Massachusetts, Michigan, North       |
| 20 |    | Carolina, New Jersey, Ohio, Illinois, Pennsylvania, Vermont, Virginia, South Carolina,    |
| 21 |    | Washington, and West Virginia. I hold an M.B.A. and B.S. in Economics from Virginia       |
| 22 |    | Commonwealth University. I am a member of several professional organizations as well      |

- as a Certified Rate of Return Analyst. A more complete description of my education and
   experience is provided in Exhibit No. GAW-2.
- 3 Q: What is your ratemaking experience within Washington State?
- 4 A: I have testified on behalf of Public Counsel in numerous electric and gas rate cases over
- 5 the last several years, including the last three general rate cases involving Puget Sound
- 6 Energy, several Pacific Power and Light rate cases, the recent Cascade Natural Gas rate
- 7 case, as well as Avista's 2009, 2012, and 2014 rate cases.
- 8 Q: What is the purpose of your testimony in this proceeding?
- 9 A: Technical Associates has been engaged to examine and evaluate various aspects relating
- 10 to the appropriateness or need for allowing an attrition adjustment within the ratemaking
- 11 process for Avista. Specifically, my investigation focused on the historical trends of
- 12 Avista's profitability (before and after Avista began requesting attrition allowances in its
- 13 rate filings), trends in inflation, and Avista's increases in expenses and capital
- 14 investments over the last several years. The purpose of this testimony is to present my
- 15 findings as a result of my investigation.
- 16 Q: Generally speaking, what is the concept and purpose of attrition adjustments when
   17 applied to the ratemaking process?
- A: Attrition adjustments are conceptually a factor, or add-on, to the revenue requirement that
  would otherwise be determined in the ratemaking process. As such, the theoretical
  concept of attrition is that absent such an adjustment, a utility's capital and operating
- 21 costs are expected to increase faster than revenues causing the utility to not have a
- reasonable opportunity to recover its costs and earn a fair rate of return ("ROR").

2

**Q**:

### that must also be considered?

3 A: Yes. While it is generally agreed that regulation should serve as a surrogate for 4 competition, the reality is that the ratemaking process does not, and perhaps cannot, 5 emulate the efficiencies obtained through truly competitive market pricing. That is, 6 under true competition, a firm may not increase prices simply because its individual cost 7 of providing service increases. In competitive markets, prices may only change when the 8 costs of all producers in that industry increase or decrease. Therefore, if an individual 9 firm is inefficient, it may not pass its increased costs along to its customers. However, 10 under traditional utility ratemaking, regulators typically allow individual utilities to pass 11 along their costs to ratepayers with little recognition of whether the utility's cost structure 12 is truly efficient. Therefore, a major shortcoming of traditional utility ratemaking is that 13 little attention is given to the question of whether a particular utility's cost structure is or 14 is not as efficient as would occur in competitive markets.

In the context of attrition, is there a fundamental economic and regulatory principle

### Q: How does the economic and regulatory principle discussed above relate to whether an attrition adjustment is or is not appropriate within the ratemaking process?

A: In the 1980s and early 1990s, attrition allowances became somewhat common in the
United States simply due to the high rates of inflation experienced by utilities and prices
generally. As such, simply due to the rising costs of providing service, many utilities
were granted attrition allowances to account for inflation. However, for many years, the

21 United States has enjoyed very low rates of inflation and the inquiry has shifted in current 22 times to whether a utility's increases in costs are absolutely prudent and clearly beyond 23 its control.

### 1 Q: Has this Commission opined or provided guidance in this regard?

- 2 A: Yes. In its Order for Avista's last rate case (Dockets UE-150204 and UG-150205), the
- 3 Commission stated as follows:

4 For this very reason, while we no longer find it necessary to justify 5 granting attrition adjustments on the existence of extraordinary 6 circumstances, we do require utilities to demonstrate persuasively 7 that the attrition occurring is outside of their control. We 8 understand Avista's contention that it operates in a challenging 9 environment in which low load and revenue growth is outpaced by 10 capital investment requirements and changes in operating expense 11 levels. However, we also recognize there is a risk to the Company's 12 ratepayers by embracing an attrition adjustment that may allow Avista 13 to manage its capital expenditures without regard to rate impact, 14 effective cost control, demonstrated benefit, or actual need, and only in 15 reference to its own budgeted targets. Simply stated, we are 16 concerned about authorizing a practice that simply projects future 17 levels of expense and capital expenditures that may, as multiple 18 commenters point out, "become a 'self-fulfilling prophecy' where there is an incentive for rates of capital expenditure to be driven by 19 an effort to match earlier projections."<sup>1</sup> 20

- 21 Q: Have you conducted analyses to determine if an attrition adjustment is warranted
- 22 for Avista in light of the standard expressed by this Commission requiring that cost
- 23 increases be beyond the control of Avista's management?
- A: Yes. I have evaluated the actual RORs earned by Avista for its electric and natural gas
- 25 operations, as well as historical trends in the Company's growth in customers, revenues,
- 26 rate base, various expense categories, and electric distribution reliability measures. I will
- 27 first discuss Avista's electrical operations and then its natural gas operations.

### 28 Q: You mentioned the impact of inflationary pressures on utilities cost of providing

### 29 service earlier in your testimony. What have been the trends in inflation over the

30 **last several years**?

<sup>&</sup>lt;sup>1</sup> Wash. Utils. & Transp. Comm'n v. Avista Corp. Dockets UE-150204 & UG-150205, Order No. 05 at 43-44 (emphasis added).

- The following Table 1 provides the annual rates of inflation as measured by the Producer 1 A:
- 2 Price Index ("PPI") and Consumer Price Index ("CPI") over the last several years:

| TABLE 1Annual Inflation Rates2 |       |      |
|--------------------------------|-------|------|
| Year                           | PPI   | СРІ  |
| 2016-Annualized <sup>3</sup>   | 1.1%  | 1.4% |
| 2015                           | -1.1% | 0.7% |
| 2014                           | 0.9%  | 0.8% |
| 2013                           | 1.2%  | 1.5% |
| 2012                           | 1.9%  | 1.7% |
| 2011                           | 3.2%  | 3.0% |
| 2010                           | 2.8%  | 1.5% |
| 2009                           | N/A   | 2.7% |
| 2008                           | N/A   | 0.1% |
| 2007                           | N/A   | 4.1% |

| 3  |    | As indicated above, general inflation has been exceptionally low and less than two       |
|----|----|--|
| 4  |    | percent for each of the last five years. Currently, inflation is running between one     |
| 5  |    | percent and 1.5 percent.   |
| 6  |    | II. TRENDS IN ELECTRIC OPERATIONS  |
| 7  | Q: | What are Avista's achieved RORs for its Washington jurisdictional electric               |
| 8  |    | operations over the last several years?  |
| 9  | A: | Table 2, which is provided below, presents Avista's actual RORs on rate base as reported |
| 10 |    | in their annual Commission Basis Reports ("CBR"). This table shows actual per books      |
| 11 |    | earned RORs, as well as Avista's "reported" and "adjusted" RORs presented in each        |
| 12 |    | annual CBR:  |
| 13 |    | //   |
|    |    |  |

 <sup>&</sup>lt;sup>2</sup> Per Economic Indicators, U.S. Council of Economic Advisors, June 2016.

## TABLE 2AVISTA ELECTRIC OPERATIONS(WASHINGTON JURISDICTION)

| 1      |    | As can be seen above, Avista's earned RORs for its Washington electric operations have  |
|--------|----|---|
| 2      |    | increased each year since 2011. Indeed, Avista's authorized RORs in the last two cases  |
| 3      |    | have been 7.32 percent (UE-140188) and 7.29 percent (UE-150204). Avista has earned  |
| 4      |    | in excess of these authorized amounts each year since attrition adjustments became part   |
| 5      |    | of the ratemaking process for Avista in Docket UE-120436, i.e., beginning in 2013.  |
| 6      | Q: | Have you examined the growth trends in Avista's electric number of customers and  |
|        |    |   |
| 7      |    | MWH sales?  |
| 7<br>8 | A: | <b>MWH sales?</b><br>Yes. The following Table 3 provides Avista's number of Washington electric customers   |
|        | A: |   |
| 8      | A: | Yes. The following Table 3 provides Avista's number of Washington electric customers  |
| 8<br>9 | A: | Yes. The following Table 3 provides Avista's number of Washington electric customers over the last several years along with the annual rates of change: |

<sup>&</sup>lt;sup>4</sup> Glenn A. Watkins, Exhibit No. GAW-3 (Per Avista response to Public Counsel Data Request No. 3).

<sup>&</sup>lt;sup>5</sup> Watkins, Exhibit Nos. GAW-4 and GAW-5 (Per Avista responses to Public Counsel Data Request No. 7 and Industrial Customers of Northwest Utilities (ICNU) Data Request No. 104).

| TABLE 3                                |  |  |  |
|--|--|--|--|
| No. of Electric Customers <sup>6</sup> |  |  |  |
|  | Annual   |  |  |
| WA                                     | % Change   |  |  |
| 245,401                                | 1.81%  |  |  |

| 2  | As can be seen above, Avista's growth rate in number of Washington electric customers  |
|----|--|
| 3  | has been modestly increasing since the Great Recession that began in about 2009. That  |
| 4  | is, during the period of the Recession, Avista's customer growth was minimal and at or |
| 5  | below one-half of one percent annually. However, as the economy has improved,          |
| 6  | Avista's growth rate has also improved such that by 2014 its customer growth rate was  |
| 7  | somewhat greater than one percent, and by 2015, customer growth was almost two         |
| 8  | percent.   |
| 9  | Table 4 provides Avista's annual Washington MWH sales over the last several            |
| 10 | years along with the annual rates of change:   |

| 1 | Although Avista's annual energy sales tend to vary due to seasonal weather patterns, we |
|---|---|
| 2 | can see that the Company has seen modest growth in its energy sales over the last nine  |
| 3 | years.  |

### 4 Q: What has been the growth in Avista's Washington electric jurisdictional investment 5 over the last several years?

A: Table 5 provides Avista's Washington electric net distribution plant and total reported
rate base for each of the last five years. I have considered distribution plant separately
because the Commission noted concerns regarding Avista's investment in distribution
plant in the Company's last general rate case:

| 2012 | Not Reported                               | 133                 | 1.04               |  |  |
| 2011 | 11,874                                     | 112                 | 1.11               |  |  |
| 2010 | 12,106                                     | 132                 | 1.27               |  |  |
| 2009 | 12,000                                     | 192                 | 1.47               |  |  |
| 2008 | Not Reported                               | 144                 | 1.22               |  |  |
| 2007 | Not Reported                               | 95                  | 0.81               |  |  |

TARLE 6

As indicated above, Avista's Washington distribution system has not expanded very 13

much in the last several years. Indeed, the compound annual growth rate between 2009

\_

 <sup>&</sup>lt;sup>9</sup> Watkins, Exhibit No. GAW-6 (Per Avista response to Public Counsel Data Request No. 24).
 <sup>10</sup> Watkins, Exhibit No. GAW-7 (Per Avista response to Public Counsel Data Request No. 29).

| 1  |                 | and 2015 has been less than one-half of one percent (0.32%). This indicates that the   |
|--|-----------------|--|
| 2  |                 | majority of the Company's additional investments in distribution plant have been devoted   |
| 3  |                 | to replacements and improvements to system reliability. However, when one examines   |
| 4  |                 | Avista's Washington SAIDI and SAIFI indices, we can see that there has been virtually  |
| 5  |                 | no improvement in the average duration of outages between 2010 and 2015 and in fact,   |
| 6  |                 | have somewhat worsened. Based on the data above, the average frequency of outages  |
| 7  |                 | has remained relatively constant and perhaps, improved ever so slightly.   |
| 8  |                 | Given the factors above, it is questionable as to how Avista's recent growth in  |
| 9  |                 | distribution capital investments has benefited ratepayers given the fact that there has been   |
| 10   |                 | virtually no improvement in system reliability, let alone, any need for an attrition   |
| 11   |                 | allowance for distribution plant or rate base in general.  |
|  |                 |  |

| 2012 | \$21,152            | \$28,828                            | \$49,333 |
| 2011 | \$19,081            | \$31,571                            | \$44,779 |
| 2010 | \$18,354            | \$30,269                            | \$44,662 |
| 2009 | \$17,267            | \$30,042                            | \$38,461 |
| 2008 | \$17,329            | \$21,337                            | \$35,982 |
| 2007 | \$14,563            | \$15,668                            | \$35,844 |

<sup>&</sup>lt;sup>11</sup> Watkins, Exhibit Nos. GAW-4 and GAW-5 (Per Avista response to Public Counsel Data Request No. 7 and ICNU Data Request No. 104).

<sup>&</sup>lt;sup>12</sup> Watkins, Exhibit Nos. GAW-4 and GAW-5 (Per Avista response to Public Counsel Data Request No. 7 and ICNU Data Request No. 104).

| 1  | Table 7 and Table 8 indicate that distribution O&M expenses have increased by about             |
|----|---|
| 2  | \$9.5 million (65%) over the last nine years. In evaluating trends in customer accounting,      |
| 3  | customer service/information, and sales expense, it is important to recognize the               |
| 4  | difference between as-reported and restated amounts. By far, the biggest difference             |
| 5  | relates to elimination of tariff rate riders relating to revenue producing programs such as     |
| 6  | conservation, etc. Such programs did not exist in the earlier period. Due to the                |
| 7  | significant influence of tariff rate adders, it is difficult to evaluate the specific trends in |
| 8  | this expense category. However, based on my analysis, it appears that there have been no        |
| 9  | extraordinarily large increases in this expense category over the last several years when       |
| 10 | tariff rate adders (and attendant expenses) are considered. With regard to A&G                  |
| 11 | expenses, these overhead expenses have increased by more than \$14 million (39%) over           |
| 12 | the last nine years.  |
| 13 | When the annual rates of change for distribution O&M and A&G expenses are                       |
| 14 | evaluated, a disturbing trend is observed. Tables 9 and 10 below provide the compound           |
|    |   |

16 periods based on as reported CBR and Avista restated CBR:

| TABLE 9Washington Electric ExpensesAs Reported In CBRAnnual Compound Growth Rates13 |        |       |

| 2  | 2 | As can be seen above, the distribution O&M annual growth rates during the periods         |
|----|---|---|
| 3  | 3 | 2010-2015, 2011-2015, and 2012-2015 have been about double that of inflation.             |
| 4  | Ļ | However, when we evaluate the growth rates subsequent to when attrition has been          |
| 5  | 5 | reflected in the ratemaking process, we see much higher growth of about 7.3% annually     |
| 6  | 5 | for the 2013-2015 period and almost 13% between 2014 and 2015. With regard to A&G         |
| 7  | 7 | expenses, the annual rate of growth has been fairly close to general inflation during the |
| 8  | 3 | 2010-2015, 2011-2015, and 2012-2015 periods. However, and once again, when we             |
| 9  | ) | evaluate the growth in these expenses subsequent to the recognition of attrition, we see  |
| 10 | ) | rates of growth of 7% to 8% annually between 2013 and 2015, as well as between 2014       |
| 11 |   | and 2015.   |

<sup>&</sup>lt;sup>14</sup> Calculated per Table 8.

### 1 Q: Are distribution O&M and A&G expenses within the control of Avista's

2 management?

9

10

11

12

13

- 3 A: By and large, yes. While distribution O&M expenses do include some materials and
- 4 supplies as well as outside contractors, the majority of these expenses are labor-related.
- 5 Furthermore, the vast preponderance of A&G expenses are labor-related.

### 6 Q: Have you analyzed the trends in Avista's labor costs over the last several years?

- 7 A: Yes. Table 11 provides Avista's Washington electric operations total salaries and wages,
- 8 i.e., includes capitalized labor over the last several years:

| <b>Direct</b>                         | Allocated<br>\$42,890,84842,505,602                        | Total  |

| '13        | -'15   | <del>11.49<u>6.29</u>%</del> | <u>8.107.62</u> %            | <del>9.36<u>7.13</u>%</del> |  |  |
| '12        | -'15   | <u>5.171.87</u> %            | <u>5.355.03</u> %            | <u>5.28</u> 3.85%           |  |  |
| '11        | -'15   | <u>3.791.34</u> %            | <del>6.89<u>6.65</u>%</del>  | <del>5.65<u>4.57</u>%</del> |  |  |
| '10        | -'15   | 4 <u>.902.92</u> %           | <u>6.376.18</u> %            | <del>5.80</del> 4.93%       |  |  |

As shown above, Washington electric salaries and wages annual growth rates during the periods 2010-2015, 2011-2015, and 2012-2015 have been two to three times the general rate of inflation. However, when we evaluate the growth rates subsequent to when attrition has been reflected in the ratemaking process, we see even higher growth rates of about 97% annually for the 2013-2015 period and <u>aboutalmost 149</u>% between 2014 and 2015.

9 Q: Are these recent exceptionally high annual growth rates in Washington electric total
 10 salaries and wages attributable to increases in the number of employees or the
 11 average wage levels of the Company's employees?
 12 A: The increases in Avista's Washington electric salaries and wages expense can be

13 attributed mostly to increases in average wage levels per employee and to a lesser extent,

<sup>&</sup>lt;sup>16</sup> Calculated per Table 11.

growth in the number of electric employees. Table 13 below provides the annual number

of direct Washington employees, as well as the average direct wage per employee<sup>17</sup>:

| TABLE 13        |                         |                      |  |  |  |

8

1

2

As shown above, Avista has added 45 additional Washington direct electric employees

since 2007 for an increase of 19.6%. At the same time, the average Washington direct

electric employee wage has increased by \$25,361, or 35.8% over this same time period.

**Q:** Have there been similar trends in the compound annual growth rates of the average

wage per Washington electric employee to those observed for distribution O&M,

### A&G, and total salaries and wages?

9 A: Yes. Table 14 below shows the compound annual growth rates of change for the average

10 Washington electric direct wage per employee:

### TABLE 14 Washington Electric Avg. Wage Per Employee Annual Compound Growth Rates<sup>19</sup>

<sup>3</sup> 

<sup>&</sup>lt;sup>47</sup> The number of allocated Washington electric employees are not reported as they include employees dedicated to other jurisdictions as well as Avista's gas operations.

<sup>&</sup>lt;sup>48</sup> Watkins, Exhibit Nos. GAW-9 (Avista response to Public Counsel Data Request No. 14).

| <b>Direct</b>     |
|-------------------|
|                   |
| <del>10.66%</del> |
| <del>6.51%</del>  |
| <del>5.04%</del>  |
| 4 <del>.35%</del> |
| 4 <del>.21%</del> |
|                   |

As shown above, the average wage level tended to increase about double the rate of
 inflation during the 2010-2015, 2011-2015, and 2012-2015 periods. However,
 subsequent to the recognition of attrition, we see much higher rates of growth of 6.5%
 annually over the 2013-2015 period and 10.7% between 2014 and 2015.

### 5 Q: What are your conclusions regarding the trends in cost increases associated with 6 Avista's Washington electric operations?

While I do not know if the exceptionally high growth in Avista's Washington electric 7 A: 8 costs are the result of a "self-fulfilling prophecy" due to the allowance of attrition 9 adjustments within the ratemaking process, it is clear that the Company's cost increases, 10 which are under the control of management, have greatly exceeded general rates of 11 inflation and have increased at a much faster rate subsequent to 2013. As discussed 12 earlier in my testimony, such trends are clearly at odds with competitive or efficient 13 firms. Indeed, under the attrition allowance mechanisms that have been approved by this 14 Commission, Avista has little incentive to control its level of costs or the growth of these costs. Shareholders have been earning a fair ROR on their investments such that the 15 16 majority of these increases are attributable to employee salaries and wages, with no 17 observed benefits to ratepayers.

<sup>&</sup>lt;sup>19</sup> Calculated per Table 13.

| 1 |    | III. TRENDS IN NATURAL GAS OPERATIONS  |
|---|----|--|
| 2 | Q: | What are Avista's achieved RORs for its Washington jurisdictional natural gas        |
| 3 |    | operations over the last several years?  |
| 4 | A: | Table 15, which is provided below, presents Avista's natural gas actual RORs on rate |
| 5 |    | base, as reported in their annual CBR. This table shows earned RORs on an "as        |
| 6 |    | reported" and "adjusted" bases:  |

<sup>3</sup> As can be seen above, Avista's growth rate in number of Washington natural gas 4 customers has been increasing since the Great Recession that began in about 2009. That 5 is, during the period of the Recession, Avista's customer growth was about three-quarters 6 of one percent. However, as the economy has improved, Avista's growth rate has also 7 improved such that by 2014 its customer growth rate was somewhat greater than 1%, and 8 by 2015, customer growth was almost 2%. 9 **O**: What has been the growth in Avista's Washington natural gas jurisdictional 10 investment over the last several years? Table 17 provides Avista's Washington natural gas net distribution plant and total 11 A: 12 reported rate base for each of the last five years. 11 13

|      |                     |                                     |          |

<sup>&</sup>lt;sup>26</sup> Watkins, Exhibit Nos. GAW-10 and GAW-5 (Avista responses to Public Counsel Data Request No. 8 and ICNU Data Request No. 104).

<sup>&</sup>lt;sup>27</sup> Watkins, Exhibit Nos. GAW-10 and GAW-5 (Avista responses to Public Counsel Data Request No. 8 and ICNU Data Request No. 104).

| 1  | The above tables indicate that distribution O&M expenses have increased by about \$5.7           |
|----|--|
| 2  | million (86%) over the last nine years. In evaluating trends in customer accounting,             |
| 3  | customer service/information and sales expense, it is important to recognize the                 |
| 4  | difference between as-reported and restated amounts. By far, the biggest difference              |
| 5  | relates to elimination of tariff rate riders relating to revenue producing programs, such as     |
| 6  | conservation, etc., that did not exist in the earlier period. Due to the significant influence   |
| 7  | of tariff rate adders, it is difficult to evaluate the specific trends in this expense category. |
| 8  | However, based on my analysis, it appears that there have been no extraordinarily large          |
| 9  | increases in this expense category over the last several years when tariff rate adders (and      |
| 10 | attendant expenses) are considered. With regard to A&G expenses, these overhead                  |
| 11 | expenses have increased by more than \$5.1 million (58%) over the last nine years.               |
| 12 | When the annual rates of change for distribution O&M and A&G expenses are                        |
| 13 | evaluated, we can see that the Company's natural gas distribution O&M expenses have              |
| 14 | been increasing at an annual rate of more than four times that of inflation, while A&G           |
| 15 | expenses have been increasing at a much faster annual rate subsequent to the recognition         |
| 16 | of attrition within the ratemaking process. Tables 21 and 22 below provide the                   |
| 17 | compound annual growth rates for distribution O&M and A&G expenses during several                |
| 18 | recent time periods based on as-reported CBR and Avista restated CBR:                            |

| 8 | Q: | Have you analyzed the trends in Avista's labor costs over the last several years?      |
|---|----|--|
| 7 |    | 2013 and beyond, we see much higher rates of growth of 8% to 10% annually.             |
| 6 |    | the Company's electric operations, when we evaluate the growth in these expenses from  |
| 5 |    | prior to 2013 range from 1.4% to almost 5% annually. However, and as is the case for   |
| 4 |    | increase of more than 15%. With regard to A&G expenses, the annual rate of growth      |
| 3 |    | to four times that of inflation with the exception of the most recent 2014-2015 annual |
| 2 |    | As can be seen above, the distribution O&M annual growth rates have been about three   |

<sup>&</sup>lt;sup>28</sup> Calculated per Table 19.
<sup>29</sup> Calculated per Table 20.

- 1 A: Yes. Table 23 provides Avista's Washington natural gas operations total salaries and
- 2 wages, i.e., includes capitalized labor over the last several years:

| 2013                             | \$8,237,739 | \$7,084,765 | \$15,322,504 |  |  |  |  |
| 2012                             | \$7,628,225 | \$7,203,736 | \$14,831,961 |  |  |  |  |
| 2011                             | \$6,849,801 | \$6,285,958 | \$13,135,759 |  |  |  |  |
| 2010                             | \$6,512,994 | \$5,571,886 | \$12,084,880 |  |  |  |  |
| 2009                             | \$6,936,631 | \$5,230,626 | \$12,167,257 |  |  |  |  |
| 2008                             | \$6,596,499 | \$4,746,557 | \$11,343,056 |  |  |  |  |
| 2007                             | \$6,345,622 | \$4,966,833 | \$11,312,455 |  |  |  |  |
|                                  |             |             |              |  |  |  |  |

3 As indicated above, this table provides Avista's Washington electric "direct" and

"allocated" employee salaries and wages. The above table indicates that Washington's
natural gas salary and wage expenses have increased by about \$6.3 million (55%) over
the last nine years. When the annual rates of change for salaries and wages are evaluated,
a similar trend to that seen for electric salaries and wages is observed. Table 24 below
provides the compound annual growth rates for Washington natural gas salary and wage
expenses during several recent time periods:

| 1  |    | With the exception of t   | he most recent 20   | 14 to 2015 change,    | the average wage level        |  |
| 2  |    | tended to exceed the rat  | te of inflation by (  | two to three times.   |                               |  |
| 3  | Q: | What are your conclu  | sions regarding (   | the trends in cost i  | ncreases associated with      |  |
| 4  |    | Avista's Washington   | gas operations?   |                       |                               |  |
| 5  | A: | While I do not know if  | growth rates in A   | vista's Washington    | natural gas costs are the     |  |
| 6  |    | result of a "self-fulfillir   | ig prophecy," it is   | s clear that the Com  | pany's cost increases, which  |  |
| 7  |    | are under the control of  | management, ha  | ve greatly exceeded   | l general rates of inflation. |  |
| 8  |    | As discussed earlier in   | my testimony, suc   | ch trends are clearly | y at odds with competitive or |  |
| 9  |    | efficient firms. Indeed,  | under the attritio  | n allowance mecha     | nisms that have been          |  |
| 10 |    | approved by this Comn   | nission, Avista ha  | s little incentive to | control its level of costs or |  |
| 11 |    | the growth of these costs. Shareholders have been earning a fair ROR on their               |   |                       |                               |  |
| 12 |    | investments such that the majority of these increases are attributable to employee salaries |   |                       |                               |  |
| 13 |    | and wages, with no obs  | erved benefits to   | ratepayers.           |                               |  |
| 14 |    | //  |   |                       |                               |  |
| 15 |    | ///   |   |                       |                               |  |
| 16 |    | ////  |   |                       |                               |  |
| 17 |    | /////   |   |                       |                               |  |
| 18 |    | /////   |   |                       |                               |  |

### IV. CONCLUSIONS

# Q: Based on your analyses of trends in the Company's specific costs, what are your conclusions regarding the need for, and appropriateness of, attrition allowances for Avista?

5 A: When specific cost categories that are, or should be, within the control of Avista's 6 management are evaluated, it is apparent that these costs have escalated at a much faster 7 rate than inflation and general price increases in the economy. Furthermore, it does not 8 appear that these increases in the Company's cost structure are the result of major 9 expansions or replacement of its existing system, but rather, largely a result of 10 exceptionally high increases in salaries and wages, as well as general overhead expenses. 11 My understanding is that the burden of proof in rate cases rests squarely on the applicant, 12 and this Commission has unequivocally put Avista on notice that it must provide clear 13 evidence for a need to consider attrition in the ratemaking process. Indeed, if an attrition 14 allowance is allowed in this rate case, the economic burden falls squarely on ratepayers 15 even though the efficiency and prudency of Avista's continually large increases in costs 16 are questionable and likely indicate serious inefficiencies within the Company's 17 management. As a result, I recommend no attrition allowance be given to either the Company's electric or natural gas operations in this case and that the Commission order a 18 19 detailed management audit of Avista, specific to its efficiencies and levels of costs. Does this complete your testimony? 20 **O**: 21 A: Yes.
