**Service Request:** K2102809  
**Date Received:** 03/19/2021

#### CASE NARRATIVE

All analyses were performed consistent with the quality assurance program of ALS Environmental. This report contains analytical results for samples for the Tier level IV requested by the client.

#### Sample Receipt:

Twenty soil samples were received for analysis at ALS Environmental on 03/19/2021. Any discrepancies upon initial sample inspection are annotated on the sample receipt and preservation form included within this report. The samples were stored at minimum in accordance with the analytical method requirements.

#### Semivoa GC:

Method 8151A, 04/01/2021: The Relative Percent Difference (RPD) for 2,4,5-TP (Silvex) and 2,4-D in the replicate matrix spike analyses of K2102809-008 was outside control criteria. In general, the RPD was relatively high for all spiked compounds, which indicates a high bias in the Matrix Spike (MS)/Matrix Spike Duplicate (DMS). All spike recoveries in the MS, DMS, and associated Laboratory Control Sample (LCS) were within acceptance limits, indicating the analytical batch was in control. No further corrective action was appropriate.

The analysis of 8151A requires the use of dual column confirmation. For the Initial Calibration Verification (ICV) at least one of the analytical systems in a dual column or dual detector system must meet the criteria. This criteria was met on one column for 2,4-D. The data quality was not affected. No further corrective action was necessary.
