State Of WASH.
UTIL. AND TRANSP.
COMMISSION

UE-210183

November 7, 2021

Greetings, my name is Alexa Fay and I am a registered nurse with Washington Physicians for Social Responsibility commenting on the UTC's draft rule implementing the Clean Energy Transformation Act (Docket UE-210183). I'm especially concerned that the current rule would allow fossil fuel resources to be used by utilities indefinitely. This is not consistent with the current planetary crisis we are in and fails to implement the requirement for clean energy that CETA mandates. Furthermore, the UTC must revise its draft rule to eliminate the use of "retained Renewable Energy Credits", which is a term that has not been mentioned in the statute or in common use. We also need to eliminate provisions that would allow utilities to rely on electricity it has sold to meet obligations to serve customers in Washington with clean energy. Instead, we need utilities to use clean energy to serve their Washington customers. This year has been a clear indication that we can no longer rely on fossil fuels for energy generation – from wildfires to extreme storms, the health and social effects of climate change are already here. CETA's clean energy requirement is essential to mitigating the harms of climate change, and the UTC should revise the draft rule to ensure utilities cannot continue to use fossil fuels to destroy our health and environment.
