

PSE Integrated Resource Plan

In Opposition

February 21 2018

I believe the PSE plan is flawed and out dated compared to current technical advances in power management and renewable resources. In addition to PSE relying on finite and polluting energy resources the monetary investment is unjust to their consumers. Other advances in batteries and the proliferation of solar and wind energy is the trend worldwide. PSE needs to take advantage of these advances in technology. PSE needs to conduct new studies with this in mind. Please encourage PSE to do so.

Respectfully

Jeffrey Hummer
