**ALLIED WASTE OF BELLEVUE RECYCLING AND COMMODITY  
REVENUE SHARING PLAN FOR KING COUNTY  
Calendar Year 2009**

Per RCW 81.77.185, Rabanco Ltd., aka Allied Waste of Bellevue, is setting forth this plan to increase recyclable materials and decrease garbage and other materials that would otherwise be disposed of in a landfill. By way of this plan, Allied Waste of Bellevue seeks to continue retaining 30% of the commodity value revenues generated through effective recycling practices for calendar year 2009 (January 1, 2009 through December 31, 2009 inclusive). The intent of this plan, developed in partnership with the King County Solid Waste Division, is to significantly impact the amounts and types of materials recycled at single-family homes and multi-family dwellings in the Allied Waste of Bellevue service area defined in Tariff No. 11, Rabanco LTD and Rabanco Recycling, Inc., Certificate G-12.

**A. Continued Timely Data Reporting (15% of total 30%)**

As determined by KCC 10.18.060, Allied Waste of Bellevue will continue to provide to the County all required data and monthly reporting. By copy, such data and reporting will be provided to the WUTC at the same time, and shall be provided on a timely basis and in an accurate manner to both parties.

Further, Allied Waste of Bellevue will continue to report customer and tonnage information to the County, along with copies to the WUTC, as originally outlined in Section F of the 2003 plan.

Multifamily reporting will include both MSW and recycling tonnage information on a monthly basis. Areas reported on will include WUTC areas and cities under contract or currently serviced by Allied Waste of Bellevue.

**B. Service Enhancements (85% of total 30%)**

1. Allied Waste of Bellevue will continue to aggressively partner with its affiliated company, Rabanco Recycling, to provide superior single stream processing of all recycled materials. Enhancement at Rabanco Recycling made in mid-2008 have led to proven significant reduction in glass contamination, optical sorting of plastics by grade, increased front-end volumes due to convenience of curbside recycling and ease of single-stream processing at the MRF, and residual waste reduced to well below 10%.

2. Allied Waste of Bellevue will partner with King County Solid Waste to develop high quality educational materials and presentation materials regarding recycling, with emphasis on inclusion of food waste in yard waste recycle streams. Materials and presentations will focus on inclusion of both vegetative and protein-based food waste in yard waste. Allied Waste will distribute materials to include targeted mailings, post cards, brochures, container decals, and invoice enclosures (a minimum of three billing invoice messages promoting recycling and food scrap recycling will be sent out throughout the year). Mailings will take place on March 1, 2009, June 1, 2009, September 1, 2009, and potentially December 1, 2009. All materials will be pre-approved by King County Solid

2009 Allied of Bellevue Revenue Sharing Plan for King County

Waste prior to distribution. Additionally, Allied Waste of Bellevue will continue to distribute County-supplied biodegradable food waste bags, with instructions, to all new customers. Mailings to single-family customers will include a comprehensive how-to brochure (annually), as well as annual information to single-family customers without organic collection service to promote signup. A mailer promoting collection services (annual) will be sent to non-subscribing single-family households.

3. Allied Waste of Bellevue will, in cooperation with King County Solid Waste, enhance its website presence to include appropriate informational links. Focus will be on food waste recycling, with appropriate educational resources for customers. We will enable customers to request bag samples (to be supplied by King County) via the web site.

4. Allied Waste of Bellevue will capitalize on recent conversions of over 2500 three-bin recycling systems to single stream 96-gallon curbside recycling containers. We will do so by providing updated recycling stickers for all containers, with comprehensive instructions for recycling, as well as distribution of informational literature.

5. Allied Waste of Bellevue will convert all customer yard waste pickup schedules within its service area to a minimum of every-other-week pick up on a year-round basis (no reversion to once-per-month pickup during winter months).

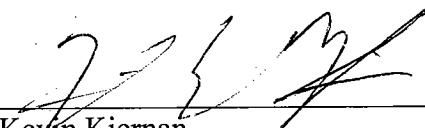

6. In concert with the County, Allied Waste of Bellevue will develop a recycling stream characterization protocol in an effort to update existing characterization assumptions. Further, we will simultaneously assess existing contamination issues. It is anticipated that recycling stream characterization will be reassessed every two years.

7. Allied Waste of Bellevue agrees to be an active participant in regional meetings to discuss strategies for increasing multi-family recycling.

**C. Continuation beyond December 31, 2009**

Extension of the revenue sharing program beyond December 31, 2009 will require WUTC approval based in part upon the results of this year's program and the submittal by Allied Waste of Bellevue of another plan certified by King County. Allied Waste of Bellevue must submit a draft plan to King County on a timely basis prior to the close of 2009 in order for certification to be considered.
