This is a comment on PSE's 2017 Integrated Resource Plan, Docket numbers UE-160918 and UG-160919”

PSE has been presenting a focused image of moving to power sources which are sustainable and renewable. The plan presented is not living up to the talk. The earth is finite in size and resources. Destroying the earth will actually destroy life and cancel out the need for using all this energy infrastructure proposed.

Also, when there is an earthquake, moving power long distances has a high probability of being disrupted. If PSE is an organization of and for the people, then it needs to be placed within the communities of the people. Solar panel on schools, libraries, community centers and sending the energy into the surrounding communities. Panels can also be placed on homes and the massive average of warehouse and box store roofs.

The people in charge of making the decisions and choices and writing this plan, would most likely be forward thinkers and plan into the future. So, how about all you all get creative and make a plan that will be sustainable for generations to come.

Thank you for your time,  
Ann Marie Bennett
