Dear WUTC,

It has come to my attention that PSA intends to install smart meters on Whidbey Island in the future. There has recently been much news about EMF exposure and I am concerned about it. I am concerned about increased exposure and I do not want smart meters installed on my property or anywhere on Whidbey Island.

I want WUTC to make all Washington investor-owned power companies do further study of the pivotal research results arriving in the last 5 years that throw into further question the safety of smart meters EMF. These findings are rarely included in the dated "evidence" about health and safety. (This includes results like the 2018 National Toxicology Project and the 2017 update of the International Bioinitiative Report).

We have had a suspicious number of medical cases lately that seem to be related to EMF here on the island and this is a great cause of concern.

I understand that a number of states and cities have rejected plans for these meters and would like to know more about their reasons. It is a cost passed on to the consumer at what benefit?

with respect,
Fred Hostetler
