Attachments: 286 Unique WA Comments on Dockets UE-141170 and UG-141169.pdf

Dear Ms. Wyse,

Attached is a PDF containing 286 unique comments from Washington residents on PSE's 2015 Integrated Resource Plan (Dockets UE-141170 and UG-141169). Please let me know if you have any problems with the file.

Best,
Jessica

Comment on Dockets UE-141170 and UG-141169

Berinda Van Cleave
15709 NE 249TH STREET
BATTLE GROUND, WA 98604

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future.

COAL IS NOT THE ANSWER, LOOK AT CHINA AND ALL OF THE POLLUTION IT IS CAUSING! YOUR PROFITS ARE WHATS CAUSING GOBAL WARMING? LOOK AT WHAT JUST HAPPENED IN THE CAROLINA'S!! NO COAL, IN WASHINGTON STATE!!

Sincerely,
Berinda Van Cleave

Bothell, WA 98011

Dear Chairman Danner and Commissioners Rendahl and Jones:

(The rest is form, but I wanted to point out that in an otherwise environmentally-conscious region, I was appalled to discover that we were still reliant on some level of coal [Oil I knew about from Anacortes] when it seems as if we ought to be leading on clean and renewable energies.) As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. David Border
640 Nash St Unit G
Friday Harbor, WA 98250

Dear Chairman Danner and Commissioners Rendahl and Jones:

My father worked at Colstrip as an electrician 40 years ago. At that time coal was a reasonable energy source. Today we are destroying our ability to live on this planet if we continue to use coal. Please!!, it is time to retire Colstrip and move on to more sustainable energy solutions. Thank You!!! As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. Joel Carlson
3634 Loren St NE
Lacey, WA 98516

Dear Chairman Danner and Commissioners Rendahl and Jones:

Global warming fossil fuels must stay in the ground so we don't destroy life on earth in our current sixth great mass extinction. Almost all life on earth disappeared in previous mass extinctions. We must very quickly switch to renewable energy including solar. Electric vehicles keep costing less while going farther on a charge so fossil fuel vehicles must be eliminated. Wood construction including large multi-story projects sequesters a lot of carbon. Many trees must be planted. Now is the time for action! See <https://www.youtube.com/watch?v=sRGVTK-AAvw> . As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future.

Comment on Dockets UE-141170 and UG-141169

Glen Anderson
5015 15th Ave SE
Lacey, WA 98503

Dear Chairman Danner and Commissioners Rendahl and Jones:

I am a lifelong Washingtonian who has been following electric energy issues since 1978. Puget Sound Energy (formerly Puget Power) has a long track record of FAILING TO SERVE CUSTOMERS AND THE ENVIRONMENT in several ways. I opposed their attempts to build nuclear power plants in the 1970s, and I oppose their reliance on EXTREMELY DIRTY, CLIMATE-DISRUPTING COAL now. The WUTC has a SOLEMN RESPONSIBILITY TO PROTECT US FROM THIS GROSSLY NEGLIGENT UTILITY. Do not be fooled by the few good things they did. They were negligent when they were owned by shareholders in the U.S., and they are even less accountable to us now that they are owned by a tight group based in Australia. I STRONGLY URGE THE WUTC to DENY any proposal that does not clearly and firmly retire PSE's dirty, dangerous, and increasingly expensive coal plant. You yourselves have stated: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." PROTECT THE BROAD PUBLIC INTEREST: Ratepayers and all who live in the world and would deal with the rapidly worsening climate!!!! STOP WASTING hundreds of millions of dollars of our hard earned money on an outdated, out-of-state coal plant!!!! PROTECT OUR CLIMATE!!!! It makes much more sense to invest this money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. WORLDWIDE, nations are moving away from coal and toward conservation and renewable energy, such as solar and wind. In our region, both Portland General Electric and TransAlta are switching away from coal. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future.

Sincerely,
Glen Anderson

EJ Zita
PO Box 1441
Olympia, WA 98507

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a climate scientist, I know that we cannot afford to keep burning coal. Health and environmental impacts triple the cost of coal. As an energy physicist, I know that renewable energies are a better deal. Their costs are lower than ever, they are clean and safe, and they provide jobs and energy security for our future. As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make-- dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. Steve Ditore
11319 8th Ave NE Apt 202
Seattle, WA 98125

Dear Chairman Danner and Commissioners Rendahl and Jones:

Do not acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." Leaving it out of the proposal is either the dumbest oversight imaginable, or sop for somebody's pet crony. We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future.

Sincerely,
Steve Ditore

Olympia, WA 98513

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a young person who is concerned about the quality of health in the only environment we have to live in -- I urge you to dismiss the PSE proposal to include coal mining in Washington's energy future. Coal is not a clean or renewable energy, and we MUST move towards a future that capitalized on clean, renewables and which cleans up from and leaves in the ground polluting, destructive, nonrenewable energy sources. As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. Bethany Potter
4318 Evanston Ave N Apt 2
Seattle, WA 98103

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a concerned Washington resident, I urge you force an immediate retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. Fossil fuels should be left in the ground. And a lackluster plan from a shady energy company touting to be the greenest in the nation?is NOT a step in the right direction. Protect our health, jobs, and livelihoods by stopping PSE, the Montant mine, and all dirty energy companies from continuing production. And you said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." You're right. I'm on the edge of being able to afford this city anyways, and could easily move to a state which is ACTUALLY recognizing the climate change is negatively impacting the face of our planet, and acting to hault big polluters causing it. You could be on that forefront. I could stay here and support your decision. Because we have a choice to make together?and with the influx of people in the region, we all require energy efficiency and renewable solutions. It seems like an easy choice to make. Defend the climate and shut down ALL fossil fuel production, including natural gas mining, oil mining, and this terribly dangerous, polluting coal mine. Don't just refuse a PSE proposal?help shut down dirty energy sources! There's no reason to deny climate change and continue to accept payouts from polluters of any kind. Join the people. Bring the city back to our hands. Help me get a job. And stop climate disruption in the process. Easy solution to a global crisis: Stop PSE from using the Montana mine. Stop Montana from digging. And set an example by saying NO to all dirty forms of energy and fossil fuels. Please, give us hope.

Sincerely,
Bethany Potter

We might turn to nuclear fuel in addition to other alternative energy sources . However should turn more to the use of nuclear energy to reduce our carbon footprint and while meeting our energy needs . If we choose to do this I would be concerned that we tighten up current regulations . I find the NRC regulations to be to lax .

Sincerely,
Cynthia Schumacher

It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future. PSE, I can't believe you want to go after Colstrip to raise our carbon contribution. You've put power lines underground and now you want to destroy trees to put new power lines upside! Who is in charge there? Eighth grade boys PE? Get real and stop joining the evil forces. Had to say it.

Sincerely,
Judy Mason

marysville, WA 98207

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future. Thank you., Sincerely,

Sincerely,
anold lane

Donna Albert
608 W Broadway Ave
Montesano, WA 98563

Dear Chairman Danner and Commissioners Rendahl and Jones:

UTC Commissioners, Our children's and grandchildren's lives will be gravely affected by climate change. The only responsible thing for industrialized countries to do is to quickly reduce fossil fuel use. Please require PSE to provide a plan to stop using coal immediately and rapidly transition away from all fossil fuel use, including natural gas. See the strategies in plans such as those by Mark Jacobson of Stanford University. As a concerned Washington resident, I urge you not to acknowledge any proposal that does not include a very quick retirement plan for PSE's dirty, dangerous, and increasingly expensive coal plant. Coal use is immoral in light of recent reports on accelerating climate change.

Sincerely,
Donna Albert

Jack Scott
181 Sundial Loop
Sequim, WA 98382

Dear Chairman Danner and Commissioners Rendahl and Jones:

As Cliven Bundy has shown, being a right-winger is a free pass in America today. This is because the American right wing prevents income taxes on Hollywood's wealth. Easy. For alternative energy this is bad news. TV advertises fossil fuels and Satanic Entertainers intend to kill planet Earth. They know Solar Panels would save the Earth, and they don't want that. So, it's a simple equation, for Cliven Bundy and all. Attack nature, kill sage grouse or any wild creature, use Republican Shell oil in you car, all in the name of toadying up to Hollywood, and it's all cool. Hollywood rules America, and keeps America ignorant. Give it up, L.A. TV supports coal, the port will be approved, it's really simple. Me objecting will make NO difference! As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future.

Sincerely,
Jack Scott

Yakima, WA 98903

Dear Chairman Danner and Commissioners Rendahl and Jones:

Even if I-723 does not pass, some form of carbon fee will be implemented soon. With price ceilings on energy, it would be unwise to expand fossil fuel based power. Coal is also very unpopular and will likely become less popular in the near future. Something to think about. As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future. There is no excuse for continuing to subsidize the fossil fuel industry. It is time for these companies to bear the true costs of their toxic product. Taxpayers should not pay for required infrastructure improvements for rail road beds, new over/under passes to ensure free flow of traffic while slow trains transit communities, and training and support for emergency response teams in anticipation of that next catastrophic accident. We also need to require certified bonds so that these for profit companies cover the costs of the devastation caused when their oil and coal trains explode or contaminate the environment instead of their current business plan of walking away claiming bankruptcy. Sustainable energy alternatives exist. We need the backbone and political will to just SAY NO to the toxic fossil fuel industry.

Sincerely,
Rod Tharp

Kennewick, WA 99336

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant, or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future.

Sincerely,
Nancy Lovejoy

As an electric car driver and a member of the Seattle Electric Vehicle Association, I look forward to a progressively "greener" electrical grid. We need to take action at the individual level to reduce our carbon emissions, but even when selecting an electric vehicle the choice of utility power is a decision which we make collectively and one that affects us all. Please do the right thing and retire the aging Colstrip coal facility! Sincerely, Lee Colleton

Joseph Donnaway
24303 84th Ave CT E
Graham, WA 98338

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a concerned Washington resident, a Certified Energy Manager and a member of the Association of Energy Engineers, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." I have added 'good load' to my household in the form of two electric vehicles in the past four years, but our net electric consumption from the grid has gone down due to conservation measures and the installation of a solar array. Our average daily load profile has also flattened, with significant overnight demand for EV charging balancing out more efficient daytime use. With TOU metering incentives, I could do much more. The large institutional facilities that manage for my employer have also shown significant reductions in both consumption and peak demand by taking advantage of conservation incentives through PSE. Thank you for getting those programs put in place and continuing their intelligent expansion. Please now take the next step to get Washington off of coal. Joseph R Donnaway, C.E.M.

Sincerely,
Joseph Donnaway

Marian Hennings
327 East Broad Avenue
Spokane, WA 99207

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." I divested stock in Avista, the utility which serves northeast Washington and north Idaho, in part because I was concerned about the costs involved in renovating Colstrip and the likelihood that Avista would dump those costs onto ratepayers and shareholders before cutting its executives' salaries. I doubt that Avista would be any more likely than PSE to address a retirement plan for its salaried workers. We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. The manufacture of solar panels would provide good jobs for our region, and wind turbines also. We certainly get plenty of wind here in eastern Washington! All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. Unfortunately, Avista thus far has no plans to eliminate coal as part of its energy planning. Although they have made some investments in wind and solar, they are insufficient. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future. The Colstrip workers should be retrained for manufacture of solar panels or wind turbines.

Sincerely,
Marian Hennings

All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future.

Marjorie Mccoid

Sincerely,
Marjorie McCoid

Tacoma, WA 98402

Dear Chairman Danner and Commissioners Rendahl and Jones:

As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future. We need clean energy now.

Sincerely,
Debby Herbert

Seattle, WA 98104

Dear Chairman Danner and Commissioners Rendahl and Jones:

I was born and raised in Washington state and as a resident I would greatly appreciate and urge you to acknowledge any proposal that does (actually and ethically) address a retirement plan for Puget Sound Energy's increasingly expensive and environmentally illogical coal plant. You said it yourselves: "To embark on investments [in Colstrip] with so much uncertainty could be harmful to PSE, its ratepayers and the broader public interest." Help Washington step a way from coal. We are a leading state, coal will hold us back. We have a choice to make--dump hundreds of millions of dollars of our hard earned money into an outdated, out-of-state coal plant or invest that money right here in Washington and throughout the region building energy efficiency and renewable energy solutions that will create thousands of well-paying jobs, improve public health, and significantly cut carbon pollution. All across the country, communities and utilities have declared that coal is too costly and risky for ratepayers, including Portland General Electric and TransAlta here in the Northwest. More than 200 coal plants are slated to retire. It is time to develop a plan to transition off coal and to invest in clean energy for the benefit of ratepayers, our local economy, and our children's future. Please, I strongly encourage you to consider and enforce actions that will benefit our state land and residents. By dissociating Washington from coal we will gain an improved chance to become a leader in the energy revolution that is coming regardless. We could walk the path after its built or we can help build it. Thank you for your time, your hard work, and your intention to do good for WA! Sincerely,

Sincerely,
Lizzie Haworth

Dear Chairman Danner and Commissioners Rendahl and Jones:

Dear UTC Commissioners Everything said bellow is true but it's only a portion of the truth. To invest in coal is kick-back & bribery politics because no one with an ounce of conviction, conscience or integrity would support such a toxic industry. We have amazing new technologies that if given the tax breaks & preferential treatment, could create and get to market the most amazing, sustainable energy that would benefit the entire world. But that's the bottom line to this. There's no money in doing it for the good of the people. There's only money when you can keep it all controlled and your palms get greased for paving the way. ".... As a concerned Washington resident, I urge you not to acknowledge any proposal that does not address a retirement plan for Puget Sound Energy's dirty, dangerous, and increasingly expensive coal plant..." Sincerely,

Sincerely,
Sonny Kalabum
