Dear Washington UTC,

As a ratepayer and resident whom the UTC is supposed to act in service of, I implore you to deny any new fossil fuel projects, especially PSE's gas plans.

We must transition to 100% Renewable Energy using wind, wave, solar and responsible hydro as rapidly as possible. Already the destabilization of our climate and the poisoning of our communities' and shared lands, waters and AIR, is wreaking havoc and causing tragic health effects and shortening my generation's life-spans.

We have the technological ability to transition to 100% clean, renewable energy, the economic power to do so, and that's without making great sacrifices or changing our way of life.

What we need now is the leadership and political will to take the rational clear-minded steps to align our energy production and utilities with the overwhelming science of climate change.

We need YOU to exercise this leadership. The rest of human history will critically judge the actions we take today.

I am writing to ask the Utilities and Transportation Commission to not allow Puget Sound Energy (PSE) to build new gas power plants for their long-range electricity plan and to reduce their use of gas for the long-range gas plan.

According to the International Panel on Climate Change (IPCC), natural gas is far more damaging to the climate than previously thought. Gas may be as bad as coal for the climate. And natural gas certainly is not "natural" when the impacts of hydraulic fracturing or "fracking" to extract gas is poisoning groundwater in communities across the country.

Our new 100% clean electricity law -- the Clean Energy Transformation Act (CETA) -- requires all utilities to be 80% fossil fuel free by 2030 and 100% by 2045. The last thing we need to do is build new gas power plants that would be around for decades. The intent of CETA is to wind down on gas power in our electricity, not ramp it up.

Our new state law that establishes science-based fossil fuel reductions that come from the IPCC, calls for 95% reductions by 2050 and 45% reductions by 2030. Yet PSE's long-range plan for its gas utility shows virtually no reductions for the next 20 years. PSE fails to follow recommendations in Washington's new State Energy Strategy that identifies moving buildings from gas to electricity as a key strategy for climate protection.

Enough is enough. PSE must take climate change seriously before it is too late. Please reject PSE's electricity and gas plans.

Sincerely,

Eric Ross
