Address: 6037 6th Ave. NW, Seattle, 98107

Comment: My reason for coming today was to oppose the use of coal until 2035 and the LNG terminal on Puyallup land. The area around Puget Sound is geologically on a fault line. Fracking causes more geologic instability - that's why Oklahoma and North Dakota are suffering from earthquakes. Coal plants are being retired earlier than scheduled because the economics of extraction versus renewable are clear. Please update PSE's plan to reflect current reality and their customers' safety.
