## Median Household Income Estimates by County: 1989 to 2004 and Projection for 2005 October 2005

In current dollars; series revised 1990 forward. The estimation relies on both 1990 and 2000 census data. These estimates are based on past relationships between available indicator data and median household income. The estimates shown may differ from other median household income data developed from the Office of Financial Management's State Population Survey, Bureau of the Census estimates, or other sources. Survey data, which are subject to sampling variability and errors, are not necessarily more correct than the estimate data.

Note: 1989 and 1999 median income numbers are derived from the 1990 and 2000 U.S. Census of Population and Housing, respectively. Estimates of median household money income for 1990 through 1998 are based on 1989 and 1999 federal census money income data and 1989 through 1999 Bureau of Economic Analysis (BEA) county level per capita income data.

Money income, as defined by the Bureau of the Census, includes wage or salary income; self-employment income; interest, dividend, or rental income; social security or public assistance income; retirement or disability income; etc. It excludes some of the income components of personal income defined by the BEA. For example, employer-paid pension and medical benefits are included in personal income but not in money income. The median measures the point at which half of all households have more income and half have less.

<sup>\*</sup>Preliminary estimates for 2004 are based on the 2003-04 payroll data compiled by the state Employment Security Department and the state total personal income data published by BEA.

<sup>\*\*</sup>Projection for the year 2005 is based mainly on the Forecast Council's September 2005 forecast of total state personal income.
