

**AGREEMENT FOR TERMS AND CONDITIONS FOR INTERCONNECTION,  
UNBUNDLED NETWORK ELEMENTS, ANCILLARY SERVICES,  
AND RESALE OF TELECOMMUNICATION SERVICES  
BETWEEN  
QWEST CORPORATION  
AND  
AT&T COMMUNICATIONS OF THE PACIFIC NORTHWEST, INC.  
IN THE STATE OF WASHINGTON**

appropriate recurring and non-recurring charges will apply. Features provided through AIN capabilities in Qwest's signaling network are not available.

9.11.2.2 Local Switch Ports include CLEC use of Qwest's signaling network for traffic originated from the line-side Switching Port. CLEC access to the Qwest signaling network shall be of substantially the same quality as the access that Qwest uses to provide service to its own End User Customers.

9.11.2.3 CLEC shall be responsible for updating the 911/E911 database through Qwest's third party database provider for any unbundled Switch Port ordered. Additional 911/E911 provisions are contained in the Ancillary Services Section of this Agreement.

9.11.2.4 The line-side Port includes the connection between the End Office Switch and the MDF. The connection from the MDF to the Demarcation Point shall be an ITP provided by Qwest pursuant to the rates in Exhibit A. The Trunk Side Port includes the connection between the End Office Switch and the TMDF. The connection from the TMDF to the Demarcation Point shall be an ITP provided by Qwest pursuant to the rates in Exhibit A. The Demarcation Point for line-side and Trunk Side Ports shall be as described earlier in this Section. Neither ITP charge applies to the purchase of UNE Combinations of Switching and Loop.

9.11.2.5 Unbundled Local Switching does not constitute a UNE, at a given End-User Customer location, and is therefore not available at UNE rates, when CLECs End User Customers to be served with Unbundled Local Switching has four (4) access lines or more at such locations and the End User of the lines is located in density zone 1 in specified Metropolitan Statistical Areas (MSAs). Unbundled Local Switching is available at market-based rates at a given location when CLECs End User Customer to be served with Unbundled Local Switching has four (4) or more access lines at such location and the End User of the lines is located in density zone 1 in specified MSAs. This exception applies to density zone 1 as it was defined by Qwest on January 1, 1999. Qwest has not implemented market-based rates for stand-alone Unbundled Local Switching nor for Unbundled Local Switching as supplied with UNE-P combinations. Qwest currently offers stand-alone Unbundled Local Switching and UNE-P combinations in all Qwest geographic locations at TELRIC rates. However, Qwest reserves the right to charge on a prospective basis market-based rates for stand-alone Unbundled Local Switching and for Unbundled Local Switching as supplied with UNE-P combinations as described in Section 9.11.2.5. Qwest may apply such charges only after providing CLEC with thirty (30) Days advance written notice.

9.11.2.5.1 For the purposes of the above paragraph, the following Wire Centers constitute density zone 1 in each of the specified MSAs:

| <b>MSA</b>     | <b>CLLI</b> | <b>Wire Center Name</b> |
|----------------|-------------|-------------------------|
| Seattle/Tacoma | STTLWA06    | Seattle Main            |
|                | STTLWAEL    | Seattle Elliott         |

9.11.2.5.1.1 For End User Customers located within the Wire Center specified above, CLEC will determine whether End User Customer's locations it intends to serve with UNEs have four access lines or more at a given location in advance of submitting an order to Qwest for

Unbundled Local Switching at UNE rates. For those End User Customer locations served by four access lines or more at a given location, CLEC will not submit an order to Qwest for Unbundled Local Switching at UNE rates.

9.11.2.5.2 This exclusion will be calculated using the number of DS0-equivalent access lines CLEC intends to serve an End User Customer location within a Wire Center specified above.

9.11.2.5.3 This exclusion will not apply in Wire Centers where Qwest has held orders for transmission facilities needed for EELs or where CLECs are unable to obtain sufficient Collocation space to terminate EELs or where CLEC orders an EEL and Qwest cannot provision the service.

9.11.2.5.4 Only dial-tone lines shall be used in counting the exclusion. Private line type data lines, alarm or security lines, or any other type of non-dial-tone lines shall not be used in the count.

9.11.2.5.5 The high frequency portion of a Loop shall not count as a second line.

9.11.2.5.6 End-user Customers shall be considered individually in MTE buildings or any other multiple use or high-rise building or campus configuration, as long as they are individually billed as the Customer of record.

9.11.2.5.7 CLEC may order new Unbundled Local Switching or UNE-P Combinations in quantities that exceed three (3). If CLEC orders four (4) or more such Unbundled Local Switching elements or UNE-P Combinations for an individual End User Customer at a given location within the Wire Center(s) identified above in this Section, market-based rates for the Unbundled Local Switching elements or for the unbundled switching component of the UNE-P service as provided in Exhibit A to this Agreement shall apply.

9.11.2.5.7.1 When a CLEC's End User Customer with three (3) lines or fewer served by UNE-P or unbundled switching adds lines so that it has four (4) or more lines at a given location, CLEC shall do one of the following regarding the original three (3) Unbundled Local Switching elements or UNE-P lines within sixty (60) Days from the date the fourth line is added: 1) CLEC may retain such unbundled switching lines at a market-based rate or retain such UNE-P lines as UNE-P Combinations with a market-based rate for the unbundled switching component shown in Exhibit A of this Agreement; or 2) CLEC shall convert such lines from UNE-P lines or unbundled switching elements to resold services or other appropriate arrangement.

9.11.2.5.8 A BRI ISDN line counts as one line.

9.11.2.6 CLEC must order DID numbers in blocks of 20. One primary Directory Listing in the main directory is provided for each PBX system.

9.11.2.7 CLEC is required to subscribe to a sufficient number of trunk Ports to
