I am disappointed that PSE's 20 year plan includes continued dependence on the coal fired plant in Coalstrip Montana. We, in the northwest, are well positioned to make the transition to clean energy. With the cost of renewables continuing to drop and our failed accounting for the costs of dirty fuel in terms of adverse health consequences of air pollution and climate change it is both unethical and economically unnecessary to continue to burn coal for our electricity needs. I am joining a growing chorus of voices demanding that my supplier of electricity wean itself off of dirty coal as rapidly as possible.
