

**Discussion Topics for Market Workgroup Discussion**  
**Issue 2: CETA Resource Eligibility Criteria**

11/18/20

What are the options for documenting generation source of electricity. For each option, what are the potential implications on markets and CETA compliance?

*Comment: acknowledgement that some or some aspects of these options may not currently exist, but a discussion on what is needed could help drive innovation towards one or more options.*

- Delivery to load
- Demonstration of ownership of energy
- Attribute-based compliance with eligibility criteria specified such as vintage, geographic location, and/or system interconnection point
- Attribute based compliance where you have to demonstrate that you acquired power with attribute and did not resell it as specified.
- Specific requirement for market purchases which assumes some pro rata share of fossil generation for each transaction.
- Evolution of a regional generation attribute tracking system.
- Other?
