AVISTA UTILITIES CALCULATION OF K-FACTOR STUDY REVENUE WASHINGTON ELECTRIC TWELVE MONTHS ENDED DECEMBER 31, 2016

The following information provides the Company's "K-Factor Study" results for the period 5/1/2018 through 4/30/2021. This Study provides the K-Factor calculations for Rate Years 1 - 3, as well as the revenue requirement results if the K-Factor was applied for each year during the Three-Year Rate Plan. The revenue requirement for each of the years effective May 1, 2018, May 1, 2019 and May 1, 2020 shown in this Study are provided to support that requested by the Company during the 5/1/2018 - 4/30/2021 Three-Year Rate Plan. See Exh. EMA-3 for the EOP Rate Base Study representing the Company's requested electric rate relief proposed in this case.

(1) The Restated TOTAL column does not represent 12/31/2016 Test Period Commission Basis results of operation on a normalized basis (CBR basis). Two differences exist here: 1) inclusion of proposed (Pro Forma) cost debt (pro forma versus CBR cost of debt) impacting Adjustment 2.17 above; and 2) Authorized (ERM) Power Supply (Adj 2.18 above) versus revised Authorized Power Supply (CB) which included the updated Production/ Transmission (P/T) ratio. The P/T ratio update is included in PF Power Supply Adjustment 4.00 in order to seperate increased power supply costs from non-energy increased costs requested byt he Company.

(1) This efficiency adjustment is on top of the already reduced O&M growth in 2017 and beyond compared to past planned growth in O&M. As noted in the Company's prior 2016 case (Docket UE-160226, Exhibit No. (EMA-1T), page 35, line 2, the previous growth trend in O&M per the Company's forecast from 2015 to 2017 had expected to be 4.24% annually for electric operations. The Company has recently reduced its expected O&M annual increases for the period 2017-2020 to 2.71% annually, a significant reduction, and one more in-line with recent years 2013-2016 average growth of 2.84% for electric operations.

(2) Reduction in net plant compared to previous years trend warrants a growth rate reduction for the 2-Year period 2019-2020. This is based on planned transfers to plant and impacts of A/D & ADFIT for those years. Reductions in net plant in 2019 and 2020 results from: 1) timing of transfers to plant (less in 2019-2020); 2) the continuing impact of repairs and bonus depreciation on ADFIT through 2020; and 3) carrying forward A/D on all plant from December 31, 2016 on an AMA basis to each rate year, increases A/D, reducing the net plant adjustment amount in each year.

Exh. EMA-4 – Electric K-Factor Study

Q. Please explain the purpose of the electric K-Factor Study.

A. The Company's electric K-Factor Study was produced to provide additional evidence demonstrating Avista's need for rate relief during the Three-Year Rate Plan. The electric K-Factor Study includes the results of determining Avista's revenue requirement need over the Three-Year Rate Plan, based on 2016 restated Commission Basis results and applying an annual revenue escalator (K-Factor) for a multi-year period to determine the revenue adjustments. The results of this Study for Rate Year 1 is \$58.1 million, effective May 1, 2018; \$13.9 million for Rate Year 2, effective May 1, 2019; and \$14.3 million for Rate Year 3, effective May 1, 2020.

This Study also provides the calculation of the K-Factor used to determine the revenue requirement requested in this case for Years 2 and 3, as discussed in Exh. EMA-1T.

Q. Please explain what is shown on page 1 of Exh. EMA-4.

A. Page 1 of Exh. EMA-4, lines 1-3, column (a), first shows the revenue requirement per the restated 2016 Commission Basis (CB) results¹ of \$4,330,000 and the associated base increase of 0.88%. Column (b) shows the K-Factor Adjustments, in addition to the restated CB adjustment, totaling \$37,112,000 (7.54%). Column (c) is the total of columns (a) and (b), of \$41,442,000, reflecting the base revenue increase beginning May 1, 2018 per the K-Factor Study, or 8.42%. This balance does not include the Pro Forma Power Supply increase of \$16,609,000 (3.37%), shown in column (d). Column (e) shows

¹ This level of revenue requirement includes the impact of the K-Factor cost of capital included of 48.5% equity/51.5% debt, cost of debt of 5.62% and overall return of 7.69%.

- the overall revenue increase total of the CB, K-Factor and Pro Forma Power Supply
- adjustments, for a total revenue requirement effective May 1, 2018 of \$58,051,000 or
- 3 11.79% base increase.
- This page, at lines 6-8, also shows the effect on billed rates, per the K-Factor Study,
- 5 with the expiration of Schedule 93 (Power Cost Rate Adjustment (PCRA)) totaling \$14.976
- 6 million, resulting in a bill impact of \$43,075,000, or 8.42% on an overall billed basis (net
- 7 of the expiration of Schedule 93). ²
- 8 Lastly, page 1, lines 9-12 provides the incremental revenue increases for Rate Years
- 9 2 and 3. Rate Year 2 revenue increase, effective May 1, 2019 is \$13.9 million or 2.51% on
- a billed basis. Rate Year 3 revenue increase, effective May 1, 2020 is \$14.3 million or
- 11 2.52% on a billed basis.
- 12 Q. Please explain what is shown on pages 2 and 3 of Exh. EMA-4.
- 13 A. Page 2 of Exh, EMA-4, shows the Cost of Capital and Capital Structure
- included in the K-Factor Study, including: 1) 48.5% Common Equity / 51.5% Debt capital
- structure; 2) Return on Equity of 9.9%; and 3) cost of debt of 5.62%, resulting in an overall
- Rate of Return (weighted average cost of capital) of 7.69%. Company witness Mr. Thies
- discusses the Company's rate of return and the capital structure, while Company witness
- 18 Mr. McKenzie provides additional testimony related to the appropriate return on equity for
- 19 Avista.
- 20 Page 3 of Exh. EMA-4, shows the derivation of the electric net-operating-income-
- 21 to-gross-revenue conversion factor. The conversion factor takes into account uncollectible

² The overall electric K-Factor revenue requirement includes \$16.6 million of increased power supply costs. If the proposed \$15.0 million Power Supply Rate Adjustment is approved effective September 1, 2017, the total revenue requirement amount would be offset by the \$15.0 million on a billed basis.

accounts receivable, Commission fees and Washington State excise taxes. Federal income
 taxes are reflected at 35%.

Q. Now turning to pages 4 through 6 of Exh. EMA-4, please explain what is included on those pages?

- A. Page 4 begins with actual operating results and rate base for the twelve-months-ending December 31, 2016 test period on an AMA basis in column (1.00). Individual normalizing and restating adjustments that are standard components of our annual reporting to the Commission begin in column (1.01) on page 4 and continue through column (2.18) on page 6.³ The last column on page 6, labeled "Restated Total" is the subtotal of the previous columns (1.00) through (2.18), and produces the 2016 restated Commission Basis net operating income (NOI), total rate base, and revenue requirement totaling \$4,330,000.
 - Q. Turning to page 7, please explain the two final columns shown there.
- A. The first column on page 7, labeled **Remove Authorized Power Supply,** is the adjustment necessary to remove total current authorized power supply revenues and expenses. Removing this adjustment results in the final column (NE-Total), **Non-Energy Restated Total**, representing the total electric normalized 2016 non-ERM restated CB results.

For Rate Year 1, the normalized 2016 non-ERM revenues are multiplied by the proposed K-Factor (discussed below) for each year between 2016 and Rate Year 1 (from 2016 through the first rate year beginning May 1, 2018). For Rate Years 2 & 3, the annual

³ The individual adjustments and descriptions for the restating adjustments as shown in Exh. EMA-4, pages 4-6, are consistent with those described at Exh. EMA-2, and therefore will not be repeated here.

- 1 K-Factor is applied to the non-ERM revenues at the time Year 2 and Year 3 rate changes
- 2 go into effect.

5

- The calculation of the K-Factor is discussed in Exh. EMA-1T, provided at page 7
- 4 of Exh. EMA-4, and discussed further below.
 - Q. Before explaining the calculation of the K-Factor, please explain what
- 6 is shown on pages 8 -9 of Exh. EMA-4.
- A. Page 8 provides data from the annual normalized Commission Basis
- 8 Reports, showing Washington electric expenses and rate base for the periods 2007 through
- 9 2016. Years 2007 through 2012 are provided for informational purposes. Years 2013
- through 2016 are used to analyze the K-Factor annual growth rates of the four rate base
- and expense categories used in the K-Factor revenue escalator.
- Page 9 shows the development of electric adjusted data and balances for the period
- 13 2007 through 2016. Again, Years 2007 through 2012 are provided for informational
- purposes. Years 2013 through 2016 are used to determine of the four rate base and expense
- 15 categories used in the K-Factor revenue escalator provided on page 9.
- The K-Factor revenue escalator is applied to non-energy costs only. Therefore it is
- 17 necessary to remove the energy-related costs and revenues from the historical data. The
- Washington share of the normalized power supply costs and revenues from each year's
- 19 Commission Basis Report (CBR) filing are deducted from the O&M in the historical
- 20 reports. Similarly, adder schedule revenues and related expenses such as the DSM Tariff
- 21 Rider and the Residential Exchange Credit that were included in the CBRs are also
- deducted from the historical results to create equivalent values for our trend analysis.

| 1 | Results are presented for the four aggregated K-Factor categories: Operating |
|---|--|
| 2 | Expenses; Depreciation Expense; Taxes Other Than Income Tax; and Net Plant After |
| 3 | Deferred Income tax. |

At the bottom of page 9, are the compound growth rates for each K-Factor escalation category, using the growth rates on page 9. The growth change by category for the period 2013 through 2016 is used as the basis for the K-Factor for Rate Year 1.

In addition to the compound growth rates shown on page 9, are the percentage proportion of each non-ERM revenue requirement category, based on the 2016 restated commission basis balances, included in the K-Factor calculation. The revenue proportion by category is determined on page 7 of Exh. EMA-4.

K-Factor Calculation:

- Q. Returning to Page 7, of Exh. EMA-4, please discuss the data available there.
 - A. Provided on page 7 are the total electric normalized 2016 non-ERM restated Commission Basis (CB) results. These data provide the CB expenses and plant related data grouped in the following categories: 1) net plant after ADFIT; 2) depreciation expense; 3) taxes other than income expense (mainly property taxes); and 4) all other operating expenses, including O&M, customer service, and administrative and general expenses. The proportion of revenue to cover each of these categories is used to determine the percentage or proportion of each category to apply to the individual growth factors of the same category discussed below.

Annual Sales Revenues for the period is also provided here, representing the offsetting annual revenue included within the overall K-Factor calculation.

Q. Please discuss the purpose of the K-Factor and the calculation of the K-Factor for Rate Year 1.

A. The K-Factor represents a weighted average revenue escalation factor based on the percentage of non-ERM revenue requirements for the four categories discussed above: 1) net plant after ADFIT; 2) depreciation expense; 3) taxes other than income expense; and 4) O&M expense. The result of the weighted average components are then offset by the growth in sales to customers (revenue) between the 2016 test year and Rate Year 1.

The calculation of the Rate Year 1 K-Factor is provided below in Table No. 1 including: a) individual K-Factor category "Growth Rate" result; b) "Revenue Portion of Category," providing the proportion of revenue for each category to cover its cost versus the total non-gas cost revenue amount (excluding gas cost related revenues and expenses); and c) "K-Factor %," which is the calculated K-Factor result for each category determined by multiplying a) times b). Also provided are the "Annual Growth In Sales Revenues," representing the offsetting annual revenue reducing the K-Factor. The K-Factor percentage result for Rate Year 1 is 3.92%.

Table No. 1

| (a) | (b) | (c) | | | | | |

Q. Please explain the K-Factor calculation for Rate Years 2 and 3.

A. For Rate Years 2 and 3, as explained in Exh. EMA-1T, the company discounted the growth rate for O&M expenses and net plant after ADFIT components to calculate the K-Factor revenue escalator for Rate Years 2 and 3.

For the O&M category, Avista has included an additional 10% "efficiency adjustment," reducing the electric O&M growth percentage from 2.84% included in the Rate Year 1 K-Factor to 2.55% for the K-Factor used in Rate Years 2 and 3.

For the net plant after ADFIT (Net Plant) category, the Company discounted the growth in Net Plant, reducing the growth rate from 4.81% to 3.04%. During the process of reviewing the Company's Net Plant included in its electric Rate Year Study, it came to the Company's attention that a reduction in the growth rate of Net Plant is expected to occur in years 2019 and 2020. This reduction in Net Plant between 2018 and 2020 was

- 1 determined based on planned transfers to plant and the impacts of A/D and ADFIT, as 2 explained by Company witness Ms. Schuh.
- 3 Table No. 2 below shows the discounted K-Factor calculation for Rate Years 2 and 3 of 3.21%.⁴ 4

Q. Please explain the final page, page 10, of Exh. EMA-4.

A. The final page of Exh. EMA-4, page 10 is provided for informational purposes only. As explained in Exh. EMA-1T, in Order 06 in Dockets UE-160228 and UG-160229, the Commission stated a Company's requested rate relief should start with its Traditional Pro Forma Study results. This page is provided to shows the results of applying the K-Factors for Years 1 through 3 of the Rate Plan, if the starting point of applying the K-Factor was to Pro Forma level adjusted revenues, rather than the restated Commission Basis revenue levels.

⁴ As discussed in Exh. EMA-1T and Exh. EMA- 3, this Year 2 and 3 K-Factor of 3.21% is used within the electric EOP Rate Base Study to determine the revenue requirement requested in Rate Year 2, effective May 1, 2019 and Rate Year 3, effective May 1, 2020.

To perform this analysis the Company has included the pro forma level information (prior to including pro forma power supply costs – column "Non-Energy Pro Forma Subtotal") from page 8 of Exh. EMA-2 (electric Traditional Pro Forma Study). Authorized Power Supply revenues and expenses were excluded, producing "Pro Forma Excluding PS Total" results. The K-Factors are then applied to the pro forma revenue results to determine Rate Years 1 – 3, similar to that discussed using the Commission Basis level of revenues.

Because the Traditional Pro Forma Study already pro forms some costs beyond the 2016 historical test period to 2017 and others to 2018, certain costs in Rate Year 1 would be understated, while other costs may be overstated. Using the Traditional Pro Forma results as the starting point to apply the K-Factor does not provide a "matching of revenues and costs," and is therefore, not the "proper" starting place in which to apply the K-Factor. Whereas, annual Commission Basis results do provide a matching of revenues with costs as a starting point.
