

**EXHIBIT NO. RCS-1CT
DOCKET NO. UE-170033/UG-170034
2017 PSE GENERAL RATE CASE
WITNESS: RALPH C. SMITH**

**BEFORE THE
WASHINGTON UTILITIES AND TRANSPORTATION COMMISSION**

**WASHINGTON UTILITIES AND
TRANSPORTATION COMMISSION,**

Complainant,

v.

PUGET SOUND ENERGY, INC.,

Respondent.

**Docket No. UE-170033
Docket No. UG-170034
(Consolidated)**

**PREFILED
DIRECT TESTIMONY OF
RALPH C. SMITH
ON BEHALF OF
PUBLIC COUNSEL**

JUNE 30, 2017

**CONFIDENTIAL PER PROTECTIVE ORDER
IN DOCKETS UE-170033 AND UG-170034
(Confidential Information Is Shaded in Grey)**

REDACTED VERSION

1 PREFILED DIRECT TESTIMONY OF RALPH C. SMITH (RCS-1CT)
 2 DOCKETS UE-170033 and UG-170034 (*Consolidated*)

3 **TABLE OF CONTENTS**

4 I. INTRODUCTION 1
 5 II. SUMMARY OF FINDINGS AND CONCLUSIONS 8
 6 A. Electric Utility Operations 8
 7 B. Gas Utility Operations 10
 8 III. RATE BASE 12

1 **I. INTRODUCTION**

2 **Q: Please state your name and business address.**

3 A: Ralph C. Smith, 15728 Farmington Road, Livonia, Michigan 48154.

4 **Q: What is your occupation?**

5 A: I am a certified public accountant and a senior regulatory utility consultant with
6 the firm Larkin & Associates, PLLC, certified public accountants and regulatory
7 consultants.

8 **Q: Please summarize your educational background.**

9 A: I received a Bachelor of Science degree in Business Administration (Accounting
10 Major) with distinction from the University of Michigan - Dearborn, in April
11 1979. I passed all parts of the Certified Public Accountant (“C.P.A.”)
12 examination in my first sitting in 1979, received my CPA license in 1981, and
13 received a certified financial planning certificate in 1983. I also have a Master of
14 Science in Taxation from Walsh College, 1981, and a law degree (J.D.) cum laude
15 from Wayne State University, 1986. In addition, I have attended a variety of
16 continuing education courses in conjunction with maintaining my accountancy
17 license. I am a licensed C.P.A. and attorney in the State of Michigan.¹ I am also
18 a Certified Financial Planner™ professional and a Certified Rate of Return
19 Analyst (“CRRRA”). Since 1981, I have been a member of the Michigan

¹ My testimony in this proceeding is as a Senior Regulatory Consultant, and I am not offering any legal opinions.

1 Association of Certified Public Accountants. I am also a member of the Michigan
2 Bar Association. I have been a member of the Society of Utility and Regulatory
3 Financial Analysts (“SURFA”), and the American Bar Association (ABA), and
4 the ABA sections on Public Utility Law and Taxation.

5 **Q: Please summarize your professional experience.**

6 A: After graduating from the University of Michigan, and after a short period of
7 installing a computerized accounting system for a Southfield, Michigan realty
8 management firm, I accepted a position as an auditor with the predecessor CPA
9 firm to Larkin & Associates in July 1979. Before becoming involved in utility
10 regulation, where I have spent the majority of my time for the past 37 years, I
11 performed audit, accounting, and tax work for a wide variety of business clients.

12 During my service in the regulatory section of our firm, I have been
13 involved in rate cases and other regulatory matters concerning electric, gas,
14 telephone, water, and sewer utility companies. My present work consists
15 primarily of analyzing rate case and regulatory filings of public utility companies
16 before various regulatory commissions, and, where appropriate, preparing
17 testimony and schedules relating to the issues for presentation before these
18 regulatory agencies.

19 I have performed work in the field of utility regulation on behalf of
20 industry, state attorneys general, consumer groups, municipalities, and public
21 service commission staffs concerning regulatory matters before regulatory
22 agencies in Alabama, Alaska, Arizona, Arkansas, California, Connecticut,

1 Delaware, Florida, Georgia, Hawaii, Indiana, Illinois, Kansas, Kentucky,
2 Louisiana, Maine, Maryland, Michigan, Minnesota, Mississippi, Missouri, New
3 Jersey, New Mexico, New York, Nevada, North Carolina, North Dakota, Ohio,
4 Pennsylvania, Rhode Island, South Carolina, South Dakota, Tennessee, Texas,
5 Utah, Vermont, Virginia, Washington, Washington D.C., West Virginia, and
6 Canada, as well as the Federal Energy Regulatory Commission and various state
7 and federal courts of law.

8 **Q: Have you previously testified before the Washington Utilities and**
9 **Transportation Commission ("WUTC" or "Commission")?**

10 A: Yes. I testified in previous Puget Sound Energy rate cases in Docket Nos.
11 UE-072300 and UG-072301, UE-090704 and UG-090705, and UE-111048 and
12 UG-111049.

13 **Q: Have you prepared an exhibit describing your qualifications and experience?**

14 A: Yes. Exhibit RCS-2 contains a summary of my regulatory experience and
15 qualifications.

16 **Q: On whose behalf are you appearing?**

17 A: I am appearing on behalf of the Public Counsel Unit ("Public Counsel") of the
18 Washington State Attorney General's Office.

19 **Q: Please describe the tasks that you performed related to your testimony in this**
20 **case.**

1 A: We reviewed the Company's testimony, exhibits, and workpapers, issued
2 information requests, and analyzed Puget Sound Energy's ("PSE", "Puget", or
3 "Company") responses to them. We reviewed and analyzed data (1) to obtain an
4 understanding of PSE's rate filing package as it relates to the Company's
5 proposed rate increase and (2) to formulate an opinion concerning the
6 reasonableness of the Company's proposals on those selected issues.

7 **Q: What is the scope and purpose of your testimony?**

8 A: Larkin was engaged by Public Counsel to conduct a review and analysis and
9 present testimony regarding rate base, operating income, and revenue requirement
10 aspects of the filing.

11 The purpose of my testimony is to present to the Commission the
12 appropriate test year rate base, overall rate of return, and utility operating income,
13 as well as the appropriate overall revenue requirement and rate increase for the
14 Company in this proceeding.

15 **Q: Are you presenting any exhibits with your testimony?**

16 A: Yes. I am including the following Exhibits with my testimony:

- 17 • Exhibit RCS-2 Qualifications of Ralph C. Smith.
- 18 • Exhibit RCS-3 presents my electric utility revenue requirement and
19 adjustment schedules.
- 20 • Exhibit RCS-4 presents my gas utility revenue requirement and
21 adjustment schedules.

- Exhibit RCS-5 provides data request responses related to Plant Held for Future Use.
- Exhibit RCS-6 provides data request responses related to temperature normalization. Voluminous attachments to these responses are not included.
- Exhibit RCS-7 provides data request responses related to incentive compensation.
- Exhibit RCS-8C provides data request responses related to pension expense. This exhibit contains confidential information.
- Exhibit RCS-9 provides data request responses related to environmental remediation.
- Exhibit RCS-10C provides data request responses related to Colstrip. This exhibit contains confidential information.
- Exhibit RCS-11C presents PSE’s confidential Colstrip Strategic Planning Update, dated March 2, 2017, an internal presentation to its Board of Directors.
- Exhibit RCS-12C is a confidential illustration of our analysis of PSE’s pension plan.

Q: What test year is being used in PSE’s filing?

A: Puget’s request for a rate increase is based on a test year ending September 30, 2016, and a rate year of January through December 2018.

1 **Q: What amount of base rate revenue increase has the Company requested for**
2 **electric utility service?**

3 A: In its original filing for electric utility service dated January 13, 2017, PSE
4 requested an increase in its base rates for electric utility service of \$149.062
5 million. After allocation to wholesale and special contract customers, the
6 Company's requested increase is \$148.656 million over the test year adjusted base
7 revenues of \$2.064 billion for an increase of approximately 7.20 percent.²

8 **Q: What amount of base rate revenue increase had the Company requested for**
9 **gas utility service?**

10 A: In its original filing for gas utility service dated January 13, 2017, PSE requested
11 an increase in its base rates for gas utility service of \$22.993 million over the test
12 year adjusted base revenues of \$815.784 million for an increase of approximately
13 2.82 percent.³

14 **Q: You referenced PSE's original electric and gas filings. Did the Company file**
15 **a supplemental filing?**

16 A: Yes. PSE filed a supplemental filing on April 3, 2017, in which it updated its
17 requested base rate revenue increase for both electric and gas operations.

18 **Q: What amount of base rate revenue increase did the Company request in its**
19 **supplemental filing for electric utility service?**

² Direct Testimony of Katherine J. Barnard, Exh. KJB-1T at 12:5-7.

³ Direct Testimony of Susan E. Free, Exh. SEF-1T at 4:14-16.

1 A: In its supplemental filing, PSE reduced its initial request for electric utility service
2 of \$149.062 million to \$144.053 million. After allocation to wholesale and
3 special contract customers, the Company's revised requested increase for electric
4 utility service is \$143.648 million over the test year adjusted base revenues of
5 \$2.067 billion for an increase of approximately 6.95 percent.⁴

6 **Q: What amount of base rate revenue increase did the Company request in its**
7 **supplemental filing for gas utility service?**

8 A: In its supplemental filing, PSE reduced its initial request for gas utility service of
9 \$22.993 million to \$22.813 million over the test year adjusted base revenues of
10 \$815.734 million, for an increase of approximately 2.80 percent.⁵

11 **Q: What cost of capital and return on equity is the Company requesting?**

12 A: In both its original and supplemental filings, PSE is requesting a test year cost of
13 capital of 7.74 percent and a proposed return on equity of 9.80 percent. The cost
14 of capital that the Company has requested has been reproduced on Exhibit RCS-3,
15 Schedule D for the electric utility and on Exhibit RCS-4, Schedule D for the gas
16 utility.

17 **Q: Which of the Company's filings did you use as your starting point in**
18 **determining the appropriate overall revenue requirement and rate increase**
19 **for the Company in this proceeding?**

⁴ Prefiled Supplemental Direct Testimony of Katherine J. Barnard, Exh. KJB-10T at 1:19-2:4.

⁵ Prefiled Supplemental Direct Testimony of Susan E. Free, Exh. SEF-8T at 1:16-22.

1 A: I used the Company's original filing dated January 13, 2017, as the starting point
2 in determining the appropriate overall revenue requirement and rate increase for
3 the Company.

4 **Q: How have you incorporated the changes made in the Company's April 3,**
5 **2017 supplemental testimony?**

6 A: I incorporated the Company's supplemental base revenue rate increase request
7 through a series of adjustments, as discussed later in my testimony.

8 **II. SUMMARY OF FINDINGS AND CONCLUSIONS**

9 **A. Electric Utility Operations**

10 **Q: Please summarize your findings and conclusions for electric utility service in**
11 **this proceeding.**

12 A: I have reached the following conclusions in this proceeding concerning PSE's
13 electric utility revenue requirement:⁶

- 14 1. The appropriate rate base for electric operations in this proceeding
15 amounts to \$5.106 billion, which is approximately \$8.168 million higher
16 than the Company's proposed rate base of \$5.098 billion, as shown on
17 Exhibit RCS-3, Schedule A, line 1 and on Schedule B.

⁶ The Company requested amounts in this section are from the PSE's original filing dated January 13, 2017. As noted above, I used the Company's original filing as the starting point in the determination of my recommended revenue requirement.

- 1 2. The Public Counsel's expert cost of capital witness, Dr. Woolridge, has
2 recommended a return on equity of 8.85 percent, and overall rate of return
3 of 7.28 percent for PSE's electric operations. In contrast, PSE has
4 requested an overall rate of return of 7.74 percent, including a return on
5 equity of 9.80 percent, as shown on Exhibit RCS-3, Schedule A, line 2
6 and on Schedule D.
- 7 3. The appropriate test year utility operating income for PSE's electric
8 operations amounts to approximately \$327.94 million, which is
9 approximately \$25.64 million higher than the Company's proposed test
10 year utility operating income of \$302.31 million, as shown on Exhibit
11 RCS-3, Schedule A, line 4 and on Schedule C.
- 12 4. To calculate the base rate revenue increase, I used a gross revenue
13 conversion factor ("GRCF") of 0.619051, as shown Exhibit RCS-3,
14 Schedule A-1. This factor is the same as the 0.619051 used by PSE.
- 15 5. The application of the recommended overall rate of return of 7.28 percent
16 to the recommended rate base of \$5.106 billion produces a required return
17 of approximately \$371.73 million, as shown on Exhibit RCS-3, Schedule
18 A, column B, line 3. Compared to the adjusted net operating income of
19 approximately \$327.94 million, this represents a deficiency of
20 approximately \$43.79 million, as shown on Exhibit RCS-3, Schedule A,
21 column B, line 5. Applying the GRCF of 0.619051 indicates that the
22 Company has an annual base rate revenue requirement deficiency of

1 approximately \$70.73 million, as shown on Exhibit RCS-3, Schedule A,
2 column B, line 7. As shown on Exhibit RCS-3, Schedule A, column C,
3 line 7, this represents a difference of approximately \$78.33 million versus
4 the Company's proposed base rate revenue deficiency of \$149.062 million
5 (before the allocation to wholesale and special contact customers).

- 6 6. The total base rate revenue increase of approximately \$70.33 million
7 (after the allocation to wholesale and special contract customers) is an
8 overall increase of 3.40 percent over adjusted revenue at current rates of
9 approximately \$2.067 billion, as shown on Exhibit RCS-3, Schedule A,
10 lines 10 and 11.

11 **B. Gas Utility Operations**

12 **Q: Please summarize your findings and conclusions for gas utility service in this**
13 **proceeding.**

14 **A:** I have reached the following findings and conclusions in this proceeding
15 concerning PSE's gas utility revenue requirement:

- 16 1. The appropriate rate base for gas operations in this proceeding amounts to
17 \$1.766 billion, which is approximately \$5.47 million higher than the
18 Company's proposed rate base of \$1.761 billion, as shown on Exhibit
19 RCS-4, Schedule A, line 1 and on Schedule B.
- 20 2. Public Counsel's expert cost of capital witness, Dr. Woolridge, has
21 recommended a return on equity of 8.85 percent, and overall rate of return

1 of 7.28 percent for PSE's gas operations. In contrast, PSE has requested
2 an overall rate of return of 7.74 percent, including a return on equity of
3 9.80 percent, as shown on Exhibit RCS-4, Schedule A, line 2 and on
4 Schedule D.

5 3. The appropriate test year utility operating income for PSE's gas operations
6 amounts to approximately \$136.97 million, which is approximately
7 \$14.96 million higher than the Company's proposed test year utility
8 operating income of \$122.012 million, as shown on Exhibit RCS-4,
9 Schedule A, line 4 and on Schedule C.

10 4. To calculate the base rate revenue increase, I used a GRCF of 0.620450,
11 as shown Exhibit RCS-4, Schedule A-1. This factor is the same as the
12 0.620450 used by PSE.

13 5. The application of the recommended overall rate of return of 7.28 percent
14 to the recommended rate base of \$1.766 billion produces a required return
15 of approximately \$128.58 million, as shown on Exhibit RCS-4, Schedule
16 A, column B, line 3. Compared to the adjusted net operating income of
17 approximately \$136.97 million, this represents a sufficiency of
18 approximately \$8.40 million, as shown on Exhibit RCS-4, Schedule A,
19 column B, line 5. Applying the GRCF of 0.620450 indicates that the
20 Company has an annual base rate revenue requirement sufficiency of
21 approximately \$13.53 million, as shown on Exhibit RCS-4, Schedule A,
22 column B, line 7. As shown on Exhibit RCS-4, Schedule A, column C,

1 line 7, this sufficiency represents a difference of approximately \$36.53
2 million versus the Company's proposed base rate revenue deficiency of
3 \$22.993 million.

- 4 6. The total base rate revenue decrease of approximately \$13.533 million is
5 an overall decrease of 1.66 percent over adjusted revenue at current rates
6 of approximately \$815.734 million, as shown on Exhibit RCS-4, Schedule
7 A, lines 8 and 9.

8 **III. RATE BASE**

9 **Q: What adjustments are you recommending to PSE's electric and gas rate**
10 **base?**

11 A: I am recommending the adjustments to PSE's requested electric and gas utility
12 rate base discussed below.

13 **A. B-1, White River Hydroelectric Project (Electric)**

14 **Q: Where does PSE discuss the background of the White River Hydroelectric**
15 **Project?**

16 A: This is discussed on pages 55-59 of the Prefiled Direct Testimony of Company
17 witness Ms. Barnard.

18 **Q: Please explain PSE's originally proposed adjustment to rate base as it relates**
19 **to White River.**

1 A: As discussed on page 59 of PSE witness Ms. Barnard's Prefiled Direct Testimony,
2 the Company proposes to transfer the value of the land out of the regulatory asset
3 and into plant in service (FERC account 101) and plant held for future use (FERC
4 account 105). In addition, the Company's adjustment pro forms the regulatory
5 assets, including the value of the unrecovered plant net of accumulated
6 amortization and the net proceeds related to the White River land sold at the
7 beginning of the rate year at the existing level of amortization.

8 As originally proposed, this adjustment reduced PSE's rate base for
9 electric operations by \$3,888,479.⁷ As discussed in further detail in the Operating
10 Income section of my testimony, PSE is proposing to amortize the White River
11 regulatory assets over a three-year period beginning January 1, 2018.

12 **Q: Did the Company update its proposed rate base adjustment related to White**
13 **River?**

14 A: Yes. As discussed on page 10 of her Prefiled Supplemental Direct Testimony,
15 PSE witness Ms. Barnard stated that this adjustment was updated to reflect (1) net
16 proceeds received that related to a timber contract on the White River property,
17 and (2) an update to incorporate the February 28, 2017, balance of the regulatory
18 asset accounts to reflect charges related to prior sales of White River surplus
19 properties.

⁷ This adjustment does not impact PSE's gas operations.

1 **Q: How did you reflect the Company's updates to the White River related**
2 **adjustments in the determination of your recommended rate base?**

3 A: As shown on Exhibit RCS-3, Schedule B-1, incorporating the Company's updated
4 adjustment reduces PSE's rate base for electric operations by an additional net
5 amount of \$220,245. As noted above, this adjustment does not impact the
6 Company's gas operations.

7 **Q: Did the Company's update to its proposed White River adjustment also**
8 **impact the amount of the regulatory assets that PSE proposes to amortize**
9 **over a three-year period?**

10 A: Yes. This aspect of the Company's updated White River adjustment is discussed
11 in the Operating Income section of my testimony under Adjustment No. C-10.

12 **B. B-2, Production Adjustment (Electric)**

13 **Q: Please explain PSE's originally proposed production adjustment.**

14 A: As discussed on pages 60-62 of Ms. Barnard's Prefiled Direct Testimony, this
15 proposed adjustment decreased production related rate base, as well as certain
16 production expenses by the load and customer production factors that PSE used to
17 calculate power costs. Specifically, the Company applied this proposed
18 adjustment to production related items in order to reduce the expense levels as
19 PSE anticipates that the recovery of these expenses will be offset by expected
20 load and/or customer growth between the test year and the rate year. As
21 originally proposed, the Company's production adjustment reduced rate base for

1 electric operations by \$54,768,452. This proposed adjustment does not impact
2 gas operations. As discussed in further detail in the Operating Income section of
3 my testimony under Adjustment C-11, PSE's proposed production adjustment also
4 reduced net operating income for electric operations by \$3,130,918.

5 **Q: Did the Company update its proposed production adjustment in its**
6 **supplemental filing?**

7 A: Yes. As discussed on page 11 of her Prefiled Supplemental Direct Testimony,
8 PSE witness Ms. Barnard revised this adjustment to reflect the update to the
9 White River regulatory assets discussed above. After applying a fixed production
10 factor of 2.535 percent, the Company's updated production adjustment increases
11 rate base for electric operations by \$5,583.

12 **Q: How did you reflect the Company's update to its proposed production**
13 **adjustment in the determination of your recommended rate base?**

14 A: As shown on Exhibit RCS-3, Schedule B-2, incorporating the Company's updated
15 adjustment increases PSE's rate base for electric operations by the \$5,583 noted
16 above. As previously discussed, this adjustment does not impact the Company's
17 gas operations.

18 **C. B-3, Accumulated Depreciation (Electric and Gas)**

19 **Q: Please explain the adjustment to accumulated depreciation.**

20 A: This adjustment reflects the impacts of the new depreciation rates that are being
21 recommended by Public Counsel witness Roxie McCullar and the resulting

1 impact on depreciation expense. Specifically, as shown on Exhibit RCS-3,
2 Schedule B-3, as the result of the new depreciation rates being recommended by
3 Ms. McCullar, this adjustment reduces accumulated depreciation (thus increases
4 rate base) for electric operations by \$13,568,804, or 50 percent of the adjustment
5 to depreciation expense that is shown on Exhibit RCS-3, Schedule C-12.

6 **Q: Was there a similar adjustment for PSE's gas utility operations?**

7 A: Yes. Similarly, as shown on Exhibit RCS-4, Schedule B-3, this adjustment
8 reduces accumulated depreciation (thus increases rate base) for gas operations by
9 \$8,415,549, or 50 percent of the adjustment to depreciation expense that is shown
10 on Exhibit RCS-4, Schedule C-12.

11 **D. B-4, Accumulated Deferred Income Taxes (Electric and Gas)**

12 **Q: Please explain your adjustment to Accumulated Deferred Income Taxes**
13 **("ADIT").**

14 A: This adjustment reflects the impacts of the new book depreciation rates for PSE
15 recommended by Public Counsel witness Roxie McCullar. As shown on Exhibit
16 RCS-3, Schedule B-4, this adjustment increases ADIT (thus reduces rate base) for
17 electric operations by \$4,749,081. The impact on ADIT reflects the difference
18 between book and tax depreciation. As a result of the recommendations of
19 Ms. McCullar, the adjusted book depreciation expense will be lower than the
20 amount proposed by PSE. Ms. McCullar's recommendation only addresses
21 depreciation rates that would be used for book depreciation. Tax depreciation is

1 not changed. Consequently, the results of Ms. McCullar's recommended
2 depreciation rates results in lower book depreciation expense and a larger
3 difference between book and tax depreciation.

4 **Q: Is there a similar adjustment for PSE's gas utility operations?**

5 A: Yes. As shown on Exhibit RCS-4, Schedule B-4, this similar adjustment
6 increases ADIT (thus reduces rate base) for gas operations by \$2,945,442.

7 **E. B-5, Plant Held For Future Use (Electric)**

8 **Q: Does the Company's proposed rate base for electric and gas operations**
9 **include amounts for Plant Held for Future Use ("PHFFU").**

10 A: Yes. PSE reflected a test year balance of PHFFU totaling approximately \$49
11 million.⁸

12 In addition, as it relates to gas operations, PSE reflected a test year balance
13 of PHFFU totaling approximately \$1.4 million.⁹

14 **Q: What is the basis for the Company's request for inclusion of this land in rate**
15 **base in this proceeding?**

16 A: PSE cited the Commission's Eleventh Supplemental Order, dated
17 September 21, 1993, in Docket Nos. UE-920433, UE-920499, and UE-92162.
18 (Hereinafter "Eleventh Supplemental Order".) In those dockets, the Commission
19 Staff had recommended the removal of properties that (1) Puget Sound Power &

⁸ Exh. RCS-5, PSE response to ICNU Data Request No. 63.

⁹ Exh. RCS-5, PSE Response to Public Counsel Data Request No. 297.

1 Light Company did not have specific plans for as required by the system of
2 accounts, and (2) had been in PHFFU for longer than 20 years.¹⁰

3 **Q: Did the Commission adopt Staff's recommendations regarding PHFFU in**
4 **that Order?**

5 A: Yes. Specifically, on page 90 of its Eleventh Supplemental Order in those
6 dockets, the Commission stated in part that:

7 The Commission is also concerned with the number of properties
8 which have been held in this account for many, many years
9 without action. Although litigation may cause some delays in a
10 proposed use of property, some of the properties are apparently
11 just "sitting".

12 The Commission therefore adopts the Commission Staff's proposal
13 for treatment of this account, including Mr. Martin's **twenty-year**
14 **benchmark for exclusion of properties. If property has not**
15 **been acted on within twenty years, the ratepayers should not**
16 **continue to bear these costs.** The Commission specifically rejects
17 the company's claim that establishment of a benchmark would be
18 retroactive ratemaking. If that were the case, the Commission
19 would never be able to establish reasonable guidelines. (Emphasis
20 supplied.)

21 **Q: Do any of the properties included in PSE's test year PHFFU account meet**
22 **the Commission's directive that properties that have not been acted on**
23 **within 20 years should be excluded from rate base as discussed in the**
24 **Eleventh Supplemental Order?**

25 A: Yes. The property listed in the table below was first placed into the PHFFU
26 account on December 31, 1992. PSE shows a projected use date of

¹⁰ Exh. RCS-5, PSE Response to ICNU Data Request No. 065.

1 October 1, 2019. This is more than 20 years. This information was provided with
 2 PSE's first revised response to ICNU No. 063, which is included in Exhibit
 3 RCS-5. PSE has included this PHFFU in its test year rate base for electric
 4 operations:

PP Asset Number	WO #	Vintage Year	FERC #	Description	9/30/2016 Balance	Date in Future Use	Projected In Service Date	Super Number
39060	CONV	1992	E3500	BPA KITSAP Naval Trans Plant Land RTS	\$ 147,139	12/31/1992	10/1/2019	TLN-0052
39061	CONV	1993	E3500	BPA KITSAP Naval Trans Plant Land RTS	\$ 289,426	12/31/1992	10/1/2019	TLN-0052
Total					\$ 436,566			

5 Source: First revised response to ICNU No. 063, Attachment A

6 As shown in the table under the "Vintage Year" column, the years 1992 and 1993
 7 are reflected for this property under each respective PP Asset Number. In
 8 addition, under the "Date in Future Use" column, the date indicated for this
 9 property is December 31, 1992. According to the response to ICNU Data Request
 10 No. 067, the "Vintage Year" column reflects the year in which the property was
 11 originally acquired and the "Date in Future Use" column reflects the date when
 12 the property was originally recorded in PHFFU. PSE's response to ICNU Data
 13 Request No. 067 is included in Exhibit RCS-5.

14 **Q: Has PSE indicated when the property identified above is scheduled to be in**
 15 **service?**

16 A: Yes. As reflected in Exhibit RCS-5, PSE indicates in the "Notes" section of
 17 Attachment A from ICNU No. 063 that the Kitsap Naval Land is scheduled to be
 18 in service on October 1, 2019. Based upon the date when PSE first recorded the
 19 Kitsap Naval Land property in PHFFU (i.e., December 31, 1992, per the "Date in

1 Future Use" column from Attachment A in ICNU No. 063), this property has been
2 in PHFFU for nearly 25 years as of the end of the test year, and it would be in
3 PHFFU for nearly 27 years if this asset is placed into service on October 1, 2019.

4 **Q: What is your recommendation?**

5 A: Based upon applying the criteria stated in the Commission's Eleventh
6 Supplemental Order, which states in part that the cost of property that has been
7 held in PHFFU for longer than 20 years should not be borne by ratepayers, I am
8 recommending that the two components of the Kitsap Naval Land (as identified
9 by PP Asset Numbers 39060 and 39061) be removed from PHFFU for electric
10 operations. As shown on Exhibit RCS-3, Schedule B-5, this adjustment decreases
11 electric rate base by \$466,566. This adjustment does not apply to gas operations.

12 **IV. OPERATING INCOME**

13 **Q: What amounts of operating income did PSE propose in its original filing?**

14 A: In its original filing, PSE proposed net operating income of \$302.31 million for
15 electric utility operations and \$122.01 million for gas utility operations.

16 **Q: Did PSE make revisions to some of its net operating income adjustments in
17 its April 3, 2017 supplemental filing?**

18 A: Yes. In its supplemental filing, PSE proposed net operating income of \$305.39
19 million for electricity utility operations and \$122.12 million for gas utility
20 operations.

1 **Q: How have you reflected those PSE updates to net operating income?**

2 A: I incorporated the Company's supplemental net operating income request through
3 a series of adjustments, as discussed in the following section of my testimony.

4 **Q: Are you recommending adjustments to net operating income that were not**
5 **made by PSE in its original or supplemental filing?**

6 A: Yes. I am recommending the adjustments to PSE's net operating income
7 discussed below.

8 **A. C-1, Temperature Normalization (Gas)**

9 **Q: Please explain PSE's proposed temperature normalization adjustment.**

10 A: As discussed in the Prefiled Direct Testimonies of Company witnesses
11 Ms. Barnard (electric operations) and Ms. Free (gas operations), PSE's revenues
12 have been reflected on a volumetric basis at 2011 general rate case base rate
13 levels during the test year. Therefore, PSE proposed a temperature normalization
14 adjustment for both electric and gas operations to restate test year delivered load
15 and revenue to the level it expects to occur under "normal" weather conditions, as
16 the test year was warmer than usual.

17 For electric operations, PSE based its adjustment on the difference
18 between actual test year generated, purchased, and interchange ("GPI") load for
19 electric, as well as temperature normalized GPI MWh adjusted for system losses.
20 For gas operations, PSE based its adjustment on the difference between actual and
21 normalized therms.

1 **Q: What is the impact of the Company's temperature normalization**
2 **adjustments on its requested revenue requirement for electric and gas**
3 **operations?**

4 A: For electric operations, the Company's adjustment increased operating revenues
5 by \$28,313,253 and operating expenses by \$10,785,909 for a net increase to
6 operating income of \$17,527,344.

7 For gas operations, the Company's adjustment increased operating
8 revenues by \$58,088,570, purchased gas costs by \$30,724,734 and operating
9 expenses by \$11,293,877 for a net increase to operating income of \$16,069,959.

10 **Q: Did the Company update its proposed temperature normalization**
11 **adjustment in its April 3, 2017, supplemental filing?**

12 A: Yes. In its April 3, 2017, supplemental filing, PSE updated its temperature
13 normalization adjustment for its gas utility operations. As discussed on page five
14 of his Prefiled Supplemental Direct Testimony, PSE witness Jon A. Pilaris stated
15 that subsequent to the Company's January 13, 2017, filing, an error was
16 discovered in the weather normalization calculations for PSE's gas operations
17 whereby an incorrect historic period was used to estimate the natural gas weather
18 normalization coefficients.¹¹

¹¹ Exh. RCS-6, PSE Responses to WUTC Staff Data Request Nos. 006 and 046.

1 **Q: How did you reflect the Company's corrected temperature normalization**
2 **adjustment in the determination of your recommended net operating income**
3 **for gas operations?**

4 A: As shown on Exhibit RCS-4, Schedule C-1, incorporating the Company's updated
5 temperature normalization adjustment reduces gas operating revenue by \$50,044,
6 reduces purchased gas by \$11,594, and reduces gas utility operating expenses by
7 \$2,275. As previously discussed, this adjustment does not impact the Company's
8 electric operations.

9 **B. C-2, Bad Debt Expense (Electric and Gas)**

10 **Q: Please explain PSE's proposed adjustment to bad debt expense.**

11 A: As discussed on page 33 of her Prefiled Direct Testimony, PSE witness
12 Ms. Barnard stated that, consistent with prior cases, the Company calculated its
13 proposed bad debt rate by using the average bad debt percentage for three of the
14 last five years after removing the high and low years (i.e., a three-year average).
15 In addition, Ms. Barnard stated that it takes four months to write off a customer's
16 bill. As a result, the ratio of the write-off versus revenue is offset by four months.
17 Using this methodology, PSE calculated its proposed bad debt rate by dividing
18 actual test year write-offs by net revenues as of May 31 for the three (out of the
19 five years) that were used. PSE then multiplied test year net revenues by the
20 average bad debt percentage to derive its proposed level of bad debt expense.
21 PSE made an adjustment to reduce O&M expense by \$845,154 for electric

1 operations and increase O&M expense by \$244,361 for gas operations in its
2 January 13, 2017, filings.

3 **Q: Did the Company update its proposed bad debt expense adjustment in its**
4 **supplemental filing?**

5 A: Yes. As discussed on page seven of her Prefiled Supplemental Direct Testimony,
6 PSE witness Ms. Barnard stated that the Company's bad debt expense
7 adjustments, as originally filed, contained an error in that the proposed bad debt
8 rate was applied to revenues that were also included in the temperature
9 normalization adjustment, which reflected a double-count of expenses. The
10 Company's revised bad debt expense adjustment removed the revenues that were
11 associated with the temperature normalization adjustment.

12 **Q: How did you reflect the Company's revised bad debt expense adjustment in**
13 **the determination of your recommended net operating income?**

14 A: As shown on Exhibit RCS-3, Schedule C-2, for electric operations, incorporating
15 the Company's updated bad debt expense adjustment reduces O&M expenses by
16 an additional \$202,638.

17 As shown on Exhibit RCS-4, Schedule C-2, for gas operations,
18 incorporating the Company's updated bad debt expense adjustment reduces O&M
19 expense by \$298,575.

1 **C. C-3, Incentive Compensation Expense (Electric and Gas)**

2 **Q: Please explain PSE's proposed adjustment to incentive compensation**
3 **expense.**

4 A: As discussed on pages 15-16 of the Prefiled Direct Testimony of PSE witness Ms.
5 Free, the Company's proposed adjustment to incentive compensation expense uses
6 a four-year average of incentive compensation paid to employees and is based on
7 payouts which occurred in March for years 2013 through 2016, which relate to
8 calendar years 2012 through 2015. As originally proposed, PSE's adjustment to
9 incentive compensation expense reduced operating expenses by \$157,551 for
10 electric operations and by \$213,058 for gas operations.

11 **Q: Did the Company update its proposed incentive compensation expense**
12 **adjustment in its supplemental filing?**

13 A: Yes, the Company updated its proposed incentive compensation expense
14 adjustment in its supplemental filing. As discussed on page five of her Prefiled
15 Supplemental Direct Testimony, PSE witness Ms. Free stated that the Company's
16 proposed adjustment to incentive compensation expense has been updated to
17 include the March 2017 payout and now reflects a four-year average of incentive
18 compensation paid to employees that is based on payouts which occurred in
19 March for years 2014 through 2017, which relate to calendar years 2013 through
20 2016.

1 **Q: How did you reflect the Company's revised incentive compensation expense**
2 **adjustment in the determination of your recommended net operating**
3 **income?**

4 A: As shown on Exhibit RCS-3, Schedule C-3, incorporating the Company's updated
5 incentive compensation expense adjustment increases operating expenses by
6 \$411,468 for electric operations. In addition, as shown on Exhibit RCS-4,
7 Schedule C-3, incorporating the Company's updated incentive compensation
8 expense adjustment increases operating expenses by \$167,747 for gas operations.

9 **Q: Did the Company include amounts related to stock-based compensation in its**
10 **requested revenue requirement?**

11 A: No. PSE's response to Public Counsel Data Request No. 126 stated that the
12 Company does not have any stock based programs. The response to ICNU Data
13 Request No. 060 also indicated that PSE is not including SERP in establishing its
14 revenue requirement. Exhibit RCS-7 contains copies of PSE's response to Public
15 Counsel Data Request No. 126 and PSE's response to ICNU Data Request No.
16 060.

17 **D. C-4, Interest on Customer Deposits (Electric and Gas)**

18 **Q: Please explain PSE's proposed adjustment to interest on customer deposits.**

19 A: As discussed in the Prefiled Direct Testimony of PSE witness Ms. Free, this
20 adjustment reflects the impact of the interest associated with using customer
21 deposits as a reduction to rate base. Specifically, this adjustment reflects the cost

1 of interest on customer deposits. It was initially based on the most current annual
2 interest rate at the time of the Company's January 13, 2017, filing, which was 0.49
3 percent for 2016. As indicated in Ms. Free's testimony, this interest rate is
4 determined annually and is based on the interest rate for a one year Treasury
5 Constant Maturity as of the 15th day of January.

6 **Q: Did the Company update its proposed interest on customer deposits in its**
7 **supplemental filing?**

8 A: Yes, the Company updated its proposed interest on customer deposits in its
9 supplemental filing. As discussed on page six of her Prefiled Supplemental
10 Direct Testimony, Ms. Free stated that the interest on customer deposits
11 adjustment was updated to reflect the interest rate of 0.80 percent, which became
12 effective on January 15, 2017.

13 **Q: How did you reflect the Company's revised interest on customer deposits**
14 **adjustment in the determination of your recommended net operating**
15 **income?**

16 A: As shown on Exhibit RCS-3, Schedule C-4, for electric operations, incorporating
17 the updated interest rate on customer deposits increases expense by \$68,435.

18 As shown on Exhibit RCS-4, Schedule C-4, for gas operations,
19 incorporating the updated interest rate on customer deposits increases expense by
20 \$19,428.

1 **E. C-5, Payroll Expense (Electric and Gas)**

2 **Q: Please explain PSE's proposed adjustment to payroll expense.**

3 A: As discussed on pages 19-22 of the Prefiled Direct Testimony of Company
4 witness Ms. Free, PSE's proposed wage increases for the Company's union and
5 non-union employees. The union employees including those that are represented
6 by the International Brotherhood of Electrical Workers ("IBEW") and those
7 represented by the United Association of Plumbers and Pipefitters ("UA"). The
8 wage increases proposed by PSE for these union employees are based upon
9 annual wage increases that are included in the approved contracts for the IBEW
10 and UA union employees. Specifically, for the IBEW union employees, the
11 Company has proposed a compounded wage increase of 0.69 percent, which
12 reflects the portion of a contracted wage increase of 2.75 percent that was
13 effective January 1, 2016, that falls outside of the test year ended
14 September 30, 2016, (i.e., October through December 2016). For the UA
15 employees, the Company has reflected a contracted wage increase of 3.00 percent
16 which became effective October 1, 2016.

17 For the Company's non-union employees, PSE initially used an average
18 wage increase that includes a wage increase of 2.91 percent that was effective
19 March 1, 2016, as well as an estimated 3.00 percent increase effective
20 March 1, 2017, for compounded wage increase over test year levels of 4.25
21 percent.

1 In addition, PSE weighted this increase by prior year actual salary
2 increases to account for what the Company refers to as "slippage" whereby newly
3 hired non-union employees' salaries are less than the salaries of the non-union
4 employees being replaced. To calculate the slippage adjustment, the Company
5 used the annualized payroll for non-union employees as of March 1 over the last
6 five years from which the average annual salary per non-union employee was
7 determined.

8 As originally proposed, PSE's adjustment to payroll expense increased
9 operating expenses by \$1,497,038 for electric operations and by \$972,167 for gas
10 operations.

11 **Q: Did the Company update its proposed payroll expense adjustment in its**
12 **supplemental filing?**

13 A: Yes, the Company updated its proposed payroll expense adjustment in its
14 supplemental filing. As discussed on page six of her Prefiled Supplemental
15 Direct Testimony, PSE witness Ms. Free stated that the Company updated its
16 proposed adjustment to reflect the actual wage increase effective March 1, 2017,
17 for non-union employees to 2.85 percent from the original estimate of 3.00
18 percent. Using the actual wage increase of 2.85 percent reduced the compounded
19 wage increase over test year levels from 4.25 percent to 4.10 percent.

20 In addition, using the actual 2.85 percent wage increase resulted in an
21 updated "slippage" calculation that changed from 78.78 percent as originally
22 proposed to 72.73 percent.

1 Applying the updated overall slippage percentage of 72.73 percent to the
2 compounded wage increase of 4.10 percent resulted in an effective wage increase
3 of 2.98 percent for non-union employees versus the 3.35 percent as originally
4 proposed by PSE.

5 **Q: How did you reflect the Company's updated payroll expense adjustment in**
6 **the determination of your recommended net operating income?**

7 A: As shown on Exhibit RCS-3, Schedule C-5, incorporating the Company's updated
8 payroll expense adjustment decreases operating expenses (including payroll taxes)
9 by \$214,343 for electric operations. In addition, as shown on Exhibit RCS-4,
10 Schedule C-5, incorporating the Company's updated payroll expense adjustment
11 decreases operating expenses (including payroll taxes) by \$99,628 for gas
12 operations.

13 **F. C-6, Investment Plan Expense (Electric and Gas)**

14 **Q: Please explain PSE's proposed adjustment to investment plan expense.**

15 A: As discussed on pages 22-23 of the Prefiled Direct Testimony of Company
16 witness Ms. Free, the Company's proposed adjustment to investment plan expense
17 is tied to PSE's proposed payroll expense adjustment and is based on current
18 employee contribution rates.

19 **Q: Did the Company update its proposed investment plan expense adjustment**
20 **in its supplemental filing?**

1 A: Yes, the Company updated its proposed investment plan expense adjustment in its
2 supplemental filing. As discussed on page eight of her Prefiled Supplemental
3 Direct Testimony, Ms. Free stated that this adjustment was updated to reflect the
4 revised payroll expense adjustment previously discussed above.

5 **Q: How did you reflect the Company's updated investment plan expense**
6 **adjustment in the determination of your recommended net operating**
7 **income?**

8 A: As shown on Exhibit RCS-3, Schedule C-6, for electric operations, this
9 adjustment reduces O&M expense by \$15,134. As shown on Exhibit RCS-4,
10 Schedule C-6, for gas operations, this adjustment reduces O&M expense by
11 \$7,307.

12 **G. C-7, Power Costs (Electric)**

13 **Q: Please explain PSE's proposed adjustment to power costs.**

14 A: As discussed on pages 40-42 of the Prefiled Direct Testimony of Company
15 witness Ms. Barnard, the Company's proposed adjustment is to adjust the test year
16 power costs to reflect the production related revenues and expenses, as well as
17 production O&M expenses, which relate to power costs that are projected to be
18 incurred in the rate year. This adjustment as proposed in PSE's original filing
19 reduced net operating income for electric operations by \$19,501,105. This
20 adjustment does not apply to gas operations.

1 **Q: Did the Company update its proposed power cost adjustment in its**
2 **supplemental filing?**

3 A: Yes, the Company updated its proposed power cost adjustment in its supplemental
4 filing. As discussed on page 11 of her Prefiled Supplemental Direct Testimony,
5 Ms. Barnard stated that the Company's proposed power cost adjustment was
6 updated to reflect the revised power costs that relate to the Company's revised
7 production costs and updated PCA Baseline Power Rate.

8 **Q: How did you reflect the Company's updated power cost adjustment in the**
9 **determination of your recommended net operating income?**

10 A: As shown on Exhibit RCS-3, Schedule C-7, for electric operations, incorporating
11 the Company's updated power cost adjustment increases operating revenue by
12 \$2,985,417 and reduces power costs by \$4,289,345. As noted above, this
13 adjustment does not apply to gas operations.

14 **H. C-8, Montana Electric Energy Tax (Electric)**

15 **Q: Please explain this PSE proposed adjustment.**

16 A: As discussed on page 43 of the Prefiled Direct Testimony of Company witness
17 Ms. Barnard, the purpose of this adjustment, which applies to electric operations,
18 is to adjust the test year level of Wholesale Energy Transaction Tax ("WETT")
19 and Electricity and Electrical Energy License Tax ("EELT") to the amounts
20 projected to be incurred during the rate year that are associated with the power

1 generated at Colstrip based upon the current tax structure. This adjustment as
2 originally proposed by PSE, reduced taxes other than income by \$69,720.

3 **Q: Did the Company update its proposed Montana Electric Tax adjustment in**
4 **its supplemental filing?**

5 A: Yes, the Company updated its proposed Montana Electric Tax adjustment in its
6 supplemental filing. As discussed on page nine of her Prefiled Supplemental
7 Direct Testimony, Ms. Barnard stated that the Montana Electric Tax adjustment
8 was updated to reflect the revised power costs that relate to rate year generation at
9 Colstrip and to which the WETT and EELT are applied.

10 **Q: How did you reflect the Company's revised Montana Electric Tax**
11 **adjustment in the determination of your recommended net operating**
12 **income?**

13 A: As shown on Exhibit RCS-3, Schedule C-8, for electric operations, incorporating
14 the updated Montana Electric Tax adjustment decreases taxes other than income
15 by \$24,331 for electric operations. As noted above, this adjustment does not
16 apply to gas operations.

17 **I. C-9, Storm Damage Expense (Electric)**

18 **Q: Please explain PSE's adjustment to storm damage expense.**

19 A: There are two components to the Company's proposed storm damage expense
20 adjustment as discussed on pages 44-46 of the Prefiled Direct Testimony of PSE
21 witness Ms. Barnard. First, the Company proposes to normalize the test year

1 level of normal storm expense based on a six-year average. The second
2 component of PSE's proposed storm damage expense adjustment relates to
3 amortizing the costs associated with catastrophic storms, which the Company has
4 deferred. This portion of PSE's proposed adjustment is broken down into three
5 separate components.

6 **Q: Please discuss the three separate components of PSE's proposed storm**
7 **damage expense adjustment that relates to catastrophic storms.**

8 A: For the first component of the proposed adjustment that relates to catastrophic
9 storm damage expense, PSE initially proposed to amortize over four years, new
10 deferred catastrophic storm costs, covering the period 2010 through 2016, that
11 have not yet been approved for recovery and totals \$50.7 million. This amount is
12 offset by a credit amount of \$12.6 million, which reflects catastrophic storm
13 deferral balances that were approved for recovery in the Company's 2011 rate
14 case and were fully amortized prior to the end of the test year in the current
15 proceeding.

16 The second component of catastrophic storm deferrals relates to the
17 December 13, 2006, "Hanukkah Eve" wind storm in which a 10-year amortization
18 period was approved by the Commission in the Company's 2007 rate case.¹²
19 Ms. Barnard stated that the remaining portion of these deferred 2006 wind storm

¹² See Order 12 dated October 8, 2008, from Docket Nos. UE-072300 and UG-072301 in which the Commission adopted a settlement between PSE and the intervenors in that proceeding.

1 costs, which total \$6.6 million, are set to be fully amortized over 10 months into
2 the rate year in the current proceeding.

3 The third component of catastrophic storm deferrals relates to the January
4 2012 snow, ice, and wind event referred to as "Snowmageddon"¹³ in which a
5 large storm damage balance totaling \$60.3 million was deferred. The Company is
6 proposing that the deferred costs related to the January 2012 snow event be
7 amortized over a six-year period.

8 The Company's overall storm damage amortization adjustment as
9 originally proposed increases operating expenses by \$6.7 million for electric
10 operations. This adjustment does not apply to gas operations.

11 **Q: Did the Company update its proposed storm damage expense adjustment in**
12 **its supplemental filing?**

13 A: Yes, the Company updated its proposed storm damage expense adjustment in its
14 supplemental filing. As discussed on pages 9-10 of her Prefiled Supplemental
15 Direct Testimony, Ms. Barnard stated that the Company's proposed storm damage
16 expense adjustment was updated to (1) reflect the deferral balance through
17 February 28, 2017, as relates to the storm event which occurred on
18 October 14, 2016, and (2) to include an additional deferral related to a snow storm
19 that occurred on February 4, 2017, and for which notice was provided by PSE to

¹³ The "Snowmageddon" events were comprised of a snow and ice event that occurred on January 18, 2012, and a wind event that occurred on January 24, 2012.

1 the Commission. The result of the Company's update to storm damage expense is
2 an increase to operating expenses totaling \$2.579 million.

3 **Q: Are you recommending any adjustments to the Company's proposed storm**
4 **damage amortization expense?**

5 A: Yes, I am recommending one adjustment. Specifically, I recommend that the
6 \$60.3 million cost related to the January 2012 catastrophic Snowmageddon events
7 be amortized over 10 years, rather than PSE's proposed six years. Reasons for
8 this recommendation include the following:

- 9 1. Using a longer amortization period for this extremely costly storm will
10 help ameliorate the rate impacts.
- 11 2. Using a longer amortization period is better correlated with the infrequent
12 experience of storms as devastating and costly as the extraordinary
13 January 2012 Snowmageddon event.

14 **Q: Does PSE agree that using a longer amortization period for these extremely**
15 **costly storm events will help ameliorate the rate impacts on customers?**

16 A: Apparently, PSE agrees with this concept. As stated on page 46 of her Prefiled
17 Direct Testimony, Ms. Barnard stated: "Due to the relative size of the balance,
18 PSE proposes that this amount be amortized over six years instead of four years in
19 order to mitigate rate impact on customers." The rate impact on customers of this
20 extraordinarily costly storm would be better mitigated by a longer amortization
21 period.

1 **Q: What amortization period do you recommend for the costs related to the**
2 **2012 Snowmageddon events?**

3 A: I recommend a 10-year amortization period. As shown in the table below, the
4 \$60.3 million cost of the 2012 Snowmageddon storm events is significantly
5 higher than the costs of other catastrophic storms that occurred between 2014 and
6 2017, all of which are being amortized over a four-year period.

Description	2014	2015	2016	2017
2012 Snowmageddon Storm Costs	\$ 60,295,490	\$ 60,295,490	\$ 60,295,490	\$ 60,295,490
Other Catastrophic Storm Costs	\$ 18,185,673	\$ 24,157,767	\$ 10,432,667	\$ 8,153,023
Difference	\$ 42,109,817	\$ 36,137,723	\$ 49,862,823	\$ 52,142,467
Percentage Difference	231.55%	149.59%	477.95%	639.55%
Source: Adjustment No. 14.05 from PSE's supplemental filing				

7
8 The use of a 10-year recovery period, in essence, treats PSE's cost related to the
9 Snowmageddon storm events as a "once-per-decade" event for ratemaking
10 purposes. A period longer than 10 years could be justified based on the historic
11 infrequency of storms of such extraordinary devastation.

12 **Q: Please explain how your recommendation of a 10-year amortization period**
13 **better mitigates the impact on ratepayers than PSE's proposed period of six**
14 **years for the extraordinary cost of the Snowmageddon storm event.**

15 A: The annual allowance for catastrophic storm costs of \$24.8 million under my
16 recommendation better mitigates the impact on ratepayers than the Company's
17 proposed \$28.8 million. Using a 10-year amortization period produces an annual
18 amortization amount for the \$60.295 million Snowmageddon storm events of
19 approximately \$6.03 million (versus approximately \$10 million using the six-year

1 amortization period requested by PSE). In addition to the \$18.7 million being
2 requested by PSE for amortization of other catastrophic storms, this produces an
3 annual allowance for catastrophic storm costs of \$24.8 million. This allowance is
4 approximately 60 percent higher than the test year recorded catastrophic storm
5 amortization expense of \$15.5 million.

6 **Q: What adjustment to PSE's proposed operating expenses results from your**
7 **recommendation concerning storm damage costs?**

8 A: My recommendation concerning storm damage costs decreases PSE's requested
9 catastrophic storm amortization expense by \$4.020 million for electric operations.
10 As noted above, this adjustment does not apply to gas operations.

11 **Q: After reflecting the Company's update along with your recommended**
12 **adjustment related to the Snowmageddon snow event amortization period,**
13 **what is your overall adjustment to storm damage expense?**

14 A: As shown on Exhibit RCS-3, Schedule C-9, after reflecting the Company's update
15 and my recommended adjustment related to the Snowmageddon snow event
16 amortization, my net adjustment to storm damage expense is a decrease to O&M
17 expense of \$1.441 million.

18 **J. C-10, White River Amortization Expense**

19 **Q: Please explain your adjustment to White River amortization expense.**

20 A: This adjustment relates to the Company's updated adjustment that is associated
21 with the White River hydroelectric project that was previously discussed in my

1 testimony pursuant to Schedule B-1. After the Company's original filing, PSE
2 updated its proposed White River adjustment to reflect (1) net proceeds received
3 that related to a timber contract on the White River property, and (2) an update to
4 incorporate the February 28, 2017, balance of the regulatory asset accounts to
5 reflect charges related to prior sales of White River surplus properties.¹⁴ The
6 impact of these adjustments to the White River regulatory asset results in a
7 change to the associated amortization expense.

8 **Q: How did you reflect the Company's revised amortization of the White River**
9 **regulatory asset in the determination of your recommended net operating**
10 **income?**

11 A: As shown on Exhibit RCS-3, Schedule C-10, for electric operations, incorporating
12 the Company's updated amortization of the White River regulatory asset
13 decreases amortization expense by \$135,536. This adjustment does not apply to
14 gas operations.

15 **K. C-11, Production Expense Adjustment (Electric)**

16 **Q: Please explain the adjustment for Production Expense.**

17 A: As previously discussed in my testimony pursuant to Exhibit RCS-3, Schedule
18 B-2, for electric operations the Company proposed a production adjustment,
19 which decreased certain production expenses by the load and customer production
20 factors that PSE used to calculate power costs. Specifically, the Company applied

¹⁴ See Barnard, Exh. KJB-10T, at 10.

1 this proposed adjustment to production related items to reduce the expense levels
2 because PSE anticipates recovery of these expenses will be offset by expected
3 load or customer growth between the test year and the rate year. As originally
4 proposed, PSE's production adjustment reduced net operating income for electric
5 operations by \$3,130,918.¹⁵

6 As discussed on page 11 of her Prefiled Supplemental Direct Testimony,
7 PSE witness Ms. Barnard supplemented the Company's proposed adjustment to
8 reflect the update to the White River regulatory assets discussed above pursuant to
9 Schedule B-1. As shown on Exhibit RCS-3, Schedule C-11, for electric
10 operations, the Company's update to production costs increases pre-tax operating
11 expenses by a net amount of \$2,502.

12 **L. C-12, Depreciation & Amortization Expense Under Proposed New**
13 **Depreciation Rates (Electric and Gas)**

14 **Q: Please explain your adjustment to depreciation and amortization expense.**

15 A: This adjustment reflects the impacts on depreciation and amortization expense of
16 the new depreciation rates that are being recommended by Public Counsel witness
17 Ms. McCullar. As shown on Exhibit RCS-3, Schedule C-12, for electric
18 operations, this adjustment reduces PSE's proposed depreciation expense by
19 \$27,137,608.

20 Similarly, as shown on Exhibit RCS-4, Schedule C-12, for gas operations,
21 this adjustment reduces PSE's proposed depreciation expense by \$16,831,098.

¹⁵ See Barnard, Exh. KJB-10T at 60-62.

1 **Q: Did the adjustment to depreciation expense for new depreciation rates**
2 **impact rate base?**

3 A: Yes. As discussed previously in my testimony, these adjustments to depreciation
4 expense for new depreciation rates resulted in related adjustments to accumulated
5 depreciation and ADIT for PSE's electric and gas operations that are reflected in
6 Exhibit RCS-3, Schedules B-3 and B-4, respectively, for electric utility
7 operations, and in Exhibit RCS-4, Schedules B-3 and B-4 for gas utility
8 operations.

9 **M. C-13, Interest Synchronization (Electric and Gas)**

10 **Q: Please explain the interest synchronization adjustment.**

11 A: The interest synchronization adjustment applies the weighted cost of debt to the
12 adjusted rate base to derive the interest deduction applicable to the calculation of
13 test year income tax expense. My overall recommended rate base for PSE's
14 electric and gas operations differ from the Company's requested amounts. This
15 results in an adjustment to the amount of synchronized interest included in the
16 income tax calculation for PSE's electric and gas utility operations. The
17 calculations of the interest synchronization adjustment for PSE's electric and gas
18 operations are shown on Schedule C-13 of Exhibits RCS-3 and RCS-4,
19 respectively.

20 **N. C-14, Pension Expense (Electric and Gas)**

21 **Q: Please explain the Company's requested pension expense.**

1 A: As discussed on pages 18-19 in the Prefiled Direct Testimony of Company
2 witness Ms. Free, the Company has calculated pension expense based on a four-
3 year average of cash contributions to PSE's qualified pension fund. Specifically,
4 the Company made cash contributions totaling \$86.1 million to its qualified
5 pension plan for the four-year period ending September 30, 2016. From this
6 amount, PSE calculated a four-year average of \$21.5 million. The Company
7 allocated that amount to O&M expense based on wage distributions. PSE then
8 allocated the O&M expense amount between electric and gas operations based on
9 its direct labor allocator. PSE's proposed adjustment increased test year O&M
10 expense by \$1.8 million and \$0.880 million for electric and gas operations,
11 respectively.¹⁶

12 **Q: What is the Company's basis for using a four-year average of cash**
13 **contributions in its determination of pension expense?**

14 A: On page 19 of her Prefiled Direct Testimony, Ms. Free states:

15 In the 2009 general rate case, the Commission affirmed that the
16 actual four-year average of cash contributions ending with the
17 historical test year should be used for setting rates. Using cash
18 contributions instead of expenses recognized under the Financial
19 Accounting Standards Board Accounting Standards Codifications
20 allows for consistency when applying this adjustment.¹⁷

21 **Q: Do you agree with the Companies' proposed calculation of pension expense?**

¹⁶ See Free, Exh. SEF-1T, at 19; Barnard, Exh. KJB-4; and Free, Exh. SEF-4.

¹⁷ Free, Exh. SEF-1T, at 19.

1 A: No, I do not agree with PSE's proposed calculation for several reasons, which I
2 will explain below. I am recommending that the pension expense allowance for
3 the rate year be set at \$18.4 million.

4 **Q: Please discuss how the Commission determined PSE's allowance for pension**
5 **expense in the 2009 rate case.**

6 A: In its Order 11 in Docket Nos. UE-090704 and UG-090705, the Commission
7 stated at page 31, paragraphs 79 and 80, the following:

8 We find that the actual four-year average pension expense ending
9 December 31, 2008, provides a reasonable measure of the amount
10 of pension expense that should be allowed for recovery in rates.
11 This approach has been reliably used in recent cases and it
12 provides at least some degree of normalization with respect to
13 contributions that have tended to be highly variable from year to
14 year. PSE's use of projected 2009 contributions is similar in some
15 respects, but does not satisfy the known and measurable standard.

16 We do not find FEA's case for moving to an actuarial basis for
17 measuring this expense sufficiently developed to apply it in this
18 case, **but a more fully developed record could convince us to**
19 **order such a change in a future proceeding.**¹⁸

20 **Q: Do you believe that a more fully developed record exists in the current**
21 **proceeding which supports your recommendation that PSE's pension**
22 **expense allowance in this rate case be established at \$18.4 million per year?**

23 A: Yes, I do. I explain my reasoning below in this section of my testimony.

24 **Q: What type of qualified pension plan does PSE offer its employees?**

¹⁸ *Wash. Utils. & Transp. Comm'n v. Puget Sound Energy*, Dockets UE-090704 & UG-090705, Order 11, ¶¶ 79-80 (Apr. 2, 2010) (emphasis added).

1 A: PSE offers a defined benefit pension plan to its employees.¹⁹

2 **Q: What is a defined benefit pension plan?**

3 A: There are two general types of pension plans: (1) defined benefit pension plans
4 and (2) defined contribution plans. In a defined benefit pension plan employees
5 accrue benefits during their years of service and receive specified benefits in the
6 form of an annuity or lump sum, after they retire, and the employer bears the risk
7 of investment market fluctuations and assuring that there are sufficient funds
8 available to pay the pensioners at the specified level. In contrast, in defined
9 contribution pension plans, such as 401(k) savings plans or money purchase
10 pension plans, employees and employers make contributions at a predefined level
11 and employees bear the risk of investment market fluctuations in the value of their
12 investments.

13 **Q: What is FAS 87?**

14 A: FAS 87 is an accounting standard promulgated by the Financial Accounting
15 Standards Board (“FASB”) in December 1985 relating to employer’s accounting
16 for pensions. It has been codified in the Accounting Standards Codification
17 (“ASC”) as ASC 715. For purposes of this testimony, I will generally refer to this
18 as FAS 87 rather than ASC 715.

19 **Q: What is net periodic pension cost?**

¹⁹ See Confidential Attachment A, Appendix A, page A-1 to the response to ICNU Data Request No. 057, which is the most recent actuarial report for the Retirement Plan for Employees of PSE. This is included in Exhibit RCS-8C.

1 A: As it pertains to a defined benefit pension plan, net periodic pension cost is the
2 amount recognized in an employer's financial statement as the cost of the pension
3 plan for the period. Put another way, the net periodic pension cost is the annual
4 accounting expense or income a company must recognize in their income
5 statement, and direct adjustments to the plan sponsor's balance sheet, if
6 applicable.

7 **Q: What are the components of net periodic pension cost under FAS 87?**

8 A: Under FAS 87, the net periodic pension cost is the sum of the following
9 components:

- 10 • **Service cost**, which is the value of the benefits earned, or accrued, during the
11 current year based on the applicable benefit formula for each participant.
- 12 • **Interest cost**, which represents the interest on the pension plan liability (i.e.,
13 Projected Benefit Obligation, or "PBO") for the year. This amount increases
14 pension cost and reflects the passage of time or the time value of money on
15 the PBO.
- 16 • **Expected return on assets for the year**, which reduces pension cost and is
17 based on applying an expected rate of return to pension trust assets.
18 Differences between the actual return on assets and the expected return on
19 assets represent an actuarial gain or loss that will be recognized in future
20 pension cost.
- 21 • **Amortizations of unrecognized costs and gains**, which can include
22 amortizations related to changes in liability due to plan changes, changes in
23 actuarial assumptions used to value plan liabilities, differences between
24 expected and actual asset returns, and/or experienced gains or losses to be
25 recognized over time and subject to amortization. The amortization period is
26 not to exceed the average future lifetime of plan participants. Prior Service
27 Cost amortization is generally the cost of retroactive benefits granted in a plan
28 amendment. Retroactively increasing benefits increases the PBO and prior
29 service cost at the date of amendment and vice-versa. The increased (or
30 decreased) cost is amortized as a component of net periodic pension cost.
31 Amortization can be done on straight line basis that amortizes cost over the
32 average remaining service life of the active employees. Actuarial gains and
33 losses occur due to changes in actuarial assumptions. Gains decrease and
34 losses increase the pension cost. There are two components of gains/losses:

1 (1) the current period difference which is the difference between actual and
2 expected return (expected rate of return on plan assets times the market related
3 value of plan assets) and (2) the amortization of the unrecognized gain/loss for
4 previous periods. In amortizing unrecognized gains or losses, a 10 percent
5 corridor is allowed to be used in which only those gains or losses in excess of
6 the greater of 10 percent of the PBO or the market-related value of assets are
7 subject to amortization.

8 **Q: When FAS 87 was initially adopted for financial reporting purposes, was**
9 **there also a transitional component of the net periodic pension cost?**

10 A: Yes. When FAS 87 was promulgated by the FASB in December 1985, it also
11 included a component of net periodic pension cost for Amortization of Transition
12 Benefit Asset (decrease) or Obligation/Liability (increase) to pension cost. The
13 Transition Benefit (or Obligation) amount was based on the funded status of the
14 defined benefit pension plan, when FAS 87 was initially adopted for financial
15 reporting purposes. The employer recorded the amortization of the Transition
16 Benefit Obligation (“TBO”) over average remaining service of plan employees, or
17 over a 15-year period if the service period was less than 15 years. Most
18 companies are now beyond the TBO amortization periods, so TBO amortization
19 would generally no longer be a component of a utility’s net periodic pension cost.

20 **Q: Have companies been required to use FAS 87 for accounting purposes for**
21 **defined benefit pensions?**

22 A: Yes. As noted above, in December 1985, the FASB issued FAS 87. FAS 87
23 provided guidance as to how companies would recognize costs associated with
24 defined benefit pension plans for financial statement reporting purposes, effective

1 for fiscal years beginning after December 15, 1986. Prior to the issuance of
2 FAS 87, the amount of pension costs recorded by a company for financial
3 statement purposes was generally equal to the level of contributions actually made
4 into the pension trust fund.²⁰ As a result of FAS 87, the FASB determined that
5 pension costs reported for financial statements purposes would not automatically
6 be equal to the pension trust fund contribution, breaking the historical linkage
7 between financial reporting of net periodic pension costs (expense and capital)²¹
8 and pension funding contributions.

9 **Q: Did FAS 87 dictate a particular ratemaking treatment?**

10 A: No. FAS 87 provided accounting guidance with respect to the financial
11 accounting disclosure of pension costs, related assets, and liabilities. FAS 87
12 neither prescribes, nor imposes any regulatory guidance or authoritative
13 ratemaking treatment for the net periodic pension cost or for the prepaid pension
14 asset or pension liability. FAS 87 set forth the required framework for all
15 publicly traded companies to quantify and record net periodic pension costs.

²⁰ The pension fund is **separate** from the utility's financial statements. The monies in the pension fund are held by the pension trustee. The utility's contributions (i.e., monies deposited) to the pension fund are invested by the pension trustee to ensure that the fund balances are sufficient to pay future pension obligations to the utility's employees.

²¹ The full amount of net periodic pension cost determined by the Company's actuary is initially recorded in expense Account No. 926, Employee Pensions and Benefits. The portion of net periodic pension cost that is capitalized to plant or billed to others is recorded in a contra-expense to Account No. 926, Employee Benefits Transfer. This latter account recognizes that a pro-rata portion of employee benefits are attributable to the labor costs that are charged to capitalized construction projects and eventually to utility plant in service.

1 **Q: What is the usual source for the amounts recorded by a company on its**
2 **books for its net periodic pension cost for a defined benefit pension plan?**

3 A: It is typically an actuarial report. Each year, with assistance from its actuarial
4 consultants, the employer providing the defined benefit pension plan would
5 record a journal entry in its accounting records in order to accrue the net periodic
6 pension cost pursuant to FAS 87. The actuarial consultants may also provide
7 assistance in quantifying the range in pension contributions that are required or
8 permitted under existing regulations.²²

9 **Q: How have the minimum funding levels for a defined benefit pension plan**
10 **generally been determined?**

11 A: Prior to 2008, the Employee Retirement Income Security Act (ERISA) specified
12 the minimum required funding requirements.²³ ERISA is a federal law that
13 established minimum standards for pension plans in private industry and provides
14 for extensive rules on the federal income tax effects of transactions associated
15 with employee benefit plans. ERISA was enacted to protect the interests of
16 employee benefit plan participants and their beneficiaries by:²⁴

- 17 • Requiring the disclosure of financial and other information concerning
- 18 the plan to beneficiaries;
- 19 • Establishing standards of conduct for plan fiduciaries;
- 20 • Providing for appropriate remedies and access to the federal courts.

²² This information may include minimum required funding contributions and the maximum tax-deductible contributions.

²³ Pub.L. 93-406, 88 Stat. 829, enacted September 2, 1974, codified in part at 29 U.S.C. Ch. 18.

²⁴ See, U.S. Dept. of Labor, Employee Benefits Security Administration, *Retirement Plans and ERISA FAQs*, <https://www.dol.gov/agencies/ebsa/about-ebsa/our-activities/resource-center/faqs/retirement-plans-and-erisa-consumer> (last visited Jun. 28, 2017).

1 **Q: Does ERISA require that pensions be provided in a defined benefit plan?**

2 A: No. ERISA does not require employers to establish pension plans. Likewise, as a
3 general rule, ERISA does not require that pension plans provide a minimum level
4 of benefits. Instead, ERISA regulates the operation of a pension plan once it has
5 been established. Under ERISA, pension plans must provide for vesting of
6 employees' pension benefits after a specified minimum number of years. ERISA
7 requires that the employers who sponsor plans satisfy certain minimum funding
8 requirements. ERISA also regulates the manner in which a pension plan may pay
9 benefits. For example, a defined benefit plan must pay a married participant's
10 pension as a "joint-and-survivor annuity" that provides continuing benefits to the
11 surviving spouse unless both the participant and the spouse waive the survivor
12 coverage.

13 **Q: How has ERISA helped assure that defined benefit pension plans would have**
14 **sufficient assets from which to pay benefits?**

15 A: Among other things, ERISA established the Pension Benefit Guaranty
16 Corporation ("PBGC") to provide coverage in the event that a terminated defined
17 benefit pension plan does not have sufficient assets to provide the benefits earned
18 by participants. Later amendments to ERISA require an employer who withdraws
19 from participation in a multi-employer pension plan with insufficient assets to pay
20 all participants' vested benefits to contribute the pro rata share of the plan's
21 unfunded vested benefits liability.

1 Under ERISA, minimum funding requirements were also established for
2 defined benefit plans.²⁵ Under ERISA, a defined benefit pension plan maintained
3 a “funding standard account,” which was charged annually for the cost of benefits
4 earned during the year and credited for employer contributions. Increases in the
5 plan's liabilities due to benefit improvements, changes in actuarial assumptions,
6 and any other reasons were amortized and charged to the account. Decreases in
7 the plan’s liabilities were amortized and credited to the account. Every year, the
8 employer was required to contribute the amount necessary to keep the funding
9 standard account from falling below zero at year-end. Minimum annual funding
10 requirements are therefore sometimes referred to as the ERISA funding
11 requirement or the ERISA minimum.

12 **Q: Are the minimum funding requirements for a defined benefit pension plan**
13 **now also impacted by another act?**

14 A: Yes. The Pension Protection Act of 2006 (“PPA”) included additional funding
15 requirements to improve the benefit security provided by defined benefit pension
16 plans. The PPA redefined minimum required cash funding requirements for
17 defined benefit pension plans for 2008 and beyond.

18 **Q: Please describe the general funding requirements for a defined benefit**
19 **pension plan under the PPA.**

²⁵ By their nature, defined contribution plans are always fully funded, even if the employee has not yet become vested in the employer contributions.

1 A: In 2008, when the PPA funding rules went into effect, single-employer defined
2 benefit pension plans no longer maintain funding standard accounts. The funding
3 requirement under PPA is basically that a plan must stay fully funded (that is, its
4 assets must equal or exceed its liabilities). If a plan is fully funded, the minimum
5 required contribution is the cost of benefits earned during the year. If a plan is not
6 fully funded, the contribution also includes the amount necessary to amortize over
7 seven years the difference between its liabilities and its assets. Stricter rules apply
8 to severely underfunded plans (called “at-risk status”).

9 The PPA has different funding requirements for multi-employer pension
10 plans, which preserve most of the pre-PPA funding rules including the funding
11 standard account. Under the PPA, increases and decreases in the plan’s liabilities
12 will be amortized, but the amortization period for benefit improvements adopted
13 after 2007 will be shortened. As with single-employer plans, multi-employer
14 pension plans that are significantly underfunded are subject to restrictions. The
15 restrictions, which may limit the plan's ability to improve benefits or require the
16 plan to reduce employees’ benefits, vary depending whether a pension plan’s
17 funding status is termed “endangered,” “seriously endangered,” or “critical.” The
18 restrictions accompanying each deficient funding status are progressively more
19 severe as funding status worsens.

20 In general, the PPA requires a sponsor of a defined benefit pension plan to
21 contribute into the plan annually an amount equal to: (1) the benefits being
22 earned for the year, plus (2) a seven-year amortization of the amount the plan is

1 underfunded. The seven-year amortization base is established each year based on
2 the difference between the funded status of the plan and the value of the previous
3 seven-year amortization bases that still exist. Once the plan becomes fully
4 funded, all amortization bases are eliminated and the required contribution simply
5 becomes the benefits being earned for the year. This is sometimes referred to as
6 the “normal cost.” If the plan becomes overfunded by more than the benefits
7 being earned for the year, no new funding contribution is required for that year.
8 Contributions are typically to be made on a quarterly basis. More frequent
9 funding (e.g., monthly) is not prohibited. A final contribution for the year is
10 generally allowed to be made up to eight and one-half months after the end of the
11 plan year.

12 **Q: Please explain the concept of the maximum tax deductible contribution for**
13 **funding of a defined benefit pension plan.**

14 A: The Internal Revenue Code contains provisions limiting the maximum tax
15 deduction for contributions made to fund various types of retirement benefits,
16 including defined benefit pension plans.

17 **Q: Can you provide an explanation of how the maximum tax deductible**
18 **contribution for a defined benefit pension plan is generally determined?**

19 A: Generally, an actuary will provide the plan sponsor with information on both (1)
20 the minimum funding obligation (representing the lowest amount needed to meet
21 the minimum funding obligation, as discussed above) and (2) the maximum

1 tax-deductible funding contribution. The latter generally involves actuarial
2 calculations, which can be quite complex, to derive a “full funding limitation.”

3 Basically, two provisions determine the maximum amount an employer
4 can contribute and take as a deduction to a qualified pension plan in any one
5 taxable year.

6 The first of these rules permits a deduction for a contribution that will
7 provide, for all employees participating in the plan, the unfunded cost of their past
8 and current service credits distributed as a level amount or as a level percentage of
9 compensation over the remaining future service of each such employee. If this
10 rule is followed, and if the remaining unfunded cost for any three individuals is
11 more than 50 percent of the total unfunded cost, the unfunded cost attributable to
12 such individuals must be distributed over a period of at least five taxable years.
13 Contributions under individual policy pension plans are typically claimed under
14 this rule.

15 The second rule, while occasionally used with individual policy plans, is
16 used primarily in group pension and trust fund plans. This rule permits the
17 employer to deduct the normal cost of the plan plus the amount necessary to
18 amortize any past service or other supplementary pension or annuity credits in
19 equal annual installments over a 10-year period. However, the maximum
20 tax-deductible limit cannot exceed the amount needed to bring the plan to its
21 full-funding limit. The full-funding limit is defined as the lesser of 100 percent of
22 the plan’s actuarial accrued liability (including normal cost) or 150 percent of the

1 plan's current liability, reduced by the lesser of the market value of plan assets on
2 their actuarial value. If the plan's actuarial cost method does not generate an
3 accrued liability, the value that would be generated by the entry age normal
4 method is used. The plan's funding standard account credit balance is subtracted
5 from the asset value before determining the full-funding limitation.

6 **Q: Do other income tax considerations also apply?**

7 A: Yes. If amounts contributed in any taxable year are in excess of the amounts
8 allowed as a deduction for that year, the excess may be carried forward and
9 deducted in succeeding taxable years, in orders of time, to the extent that the
10 amount carried forward to any such succeeding taxable year does not exceed the
11 deductible limit for such succeeding taxable year. However, a 10 percent excise
12 tax is imposed on nondeductible contributions by an employer to a qualified plan.
13 For purposes of the excise tax, nondeductible contributions are defined as the sum
14 of (1) the amount of the employer's contribution that exceeds the amount
15 deductible under Internal Revenue Code section 404 and (2) any excess amount
16 contributed in the preceding tax year that has not been returned to the employer or
17 applied as a deductible contribution in the current year.

18 Additionally, obtaining benefit from taking an income tax deduction for
19 pension funding contributions can also be impacted by other deductions and
20 whether the company has taxable income against which to take a deduction.

1 **Q: Does utility management generally have a wide range of discretion as to how**
2 **much to contribute to funding a defined benefit pension plan in a given year?**

3 A: Yes. Utility management's discretion as to how much funding to contribute into
4 the defined benefit pension plan trust for a given year is generally confined by (1)
5 the minimum funding obligation (representing the lowest amount needed to meet
6 the minimum funding obligation, as discussed above) and (2) the maximum
7 tax-deductible funding contribution (which can represent the maximum amount to
8 be considered for the pension funding contribution). Contributions above the
9 minimum funding obligation and up to the maximum tax deductible amount for
10 the year are sometimes referred to as discretionary contributions. For larger
11 pension plans, this range of potential discretionary contributions can amount to
12 hundreds of millions of dollars.

13 **Q: Can management's decisions on how much to contribute into a defined**
14 **benefit pension plan also impact the amount of net periodic pension cost in a**
15 **year?**

16 A: Yes, it can. Generally, the most directly impacted component of net periodic
17 pension cost is the expected return on assets for the year. As I discussed above,
18 the expected return on plan assets is derived by applying an expected rate of
19 return to pension trust assets. The expected return on plan assets reduces the net
20 periodic pension cost.

1 **Q: How should the cost of PSE's defined benefit pension plan be reflected in**
2 **rates in the current rate case?**

3 A: I recommend that the allowance for pension expense in the current PSE rate case
4 be limited to the average annual net periodic pension cost costs determined
5 pursuant to FAS 87 for the four year period ending December 31, 2016, as
6 allocated to expense, as allocated between PSE's electric and gas operations. As
7 shown on Exhibit Nos. RCS-3 and RCS-4, Schedule C-14, prior to such
8 allocations, the four-year average net periodic pension cost is approximately
9 \$18.4 million.

10 **Q: Why should a four-year average be used?**

11 A: A four-year average should be used because such an average appears to be
12 consistent with Commission practice,²⁶ and it helps smooth out or "normalize" the
13 expense allowance for ratemaking purposes. I note that the Company is also
14 proposing to use a four-year average, but the Company's proposal is based on
15 historic funding contributions for the period September 30, 2013, through
16 September 30, 2016, which if used in the current general rate case, would
17 significantly overstate the 2018 rate year pension expense.

18 **Q: Why is the FAS 87 accounting preferable to using a four-year average of**
19 **cash contributions for pension expense?**

²⁶ See, *Wash. Utils. & Transp. Comm'n v. Puget Sound Energy*, Dockets UE-090704 & UG-090705, Order 11, ¶ 79 (Apr. 2, 2010).

1 A: Recognition of pension costs for ratemaking for most utilities is typically based
2 on some variant of FAS 87 cost. The use of a backward looking historical period
3 of cash funding contributions as the basis for ratemaking recognition of utility
4 pension cost as PSE proposes (although allowed by the Commission in past PSE
5 rate cases), is inconsistent with generally accepted accounting principles
6 (“GAAP”) and would result in overstating PSE’s pension expense for an extended
7 period. PSE’s proposed pension expense in the current case exceeds estimates for
8 2018 and other years, as I explain below.

9 **Q: Would PSE's proposed four-year average of cash contributions result in the**
10 **Company's pension expense being significantly overstated on a going**
11 **forward basis?**

12 A: Yes. The chart below reflects the data that was compiled from confidential
13 Company Exhibit TMH-7C,²⁷ which was filed in conjunction with the Prefiled
14 Direct Testimony of PSE witness Thomas H. Hunt.

15 //

16 ///

17 ////

18 /////

²⁷ The response to WUTC Staff Data Request No. 212 states that PSE's actuarial firm, Milliman, prepared the materials included in confidential Exhibit TMH-7C and that the assumptions used by Milliman were consistent with those used in their 2016 actuarial valuation of PSE's pension plan. Exhibit 8C contains a copy of PSE’s response to WUTC Staff Data Request No. 212.

[REDACTED]

[REDACTED]

My recommended use of a four-year average of net periodic pension cost is generally in line with the Company's projected cash contributions. Therefore, the use of the FAS 87 amounts for pension expense is the preferable method and should be applied in the current PSE rate case.

Q: What is your recommendation for the pension expense allowance in PSE's current general rate case?

A: I recommend a pension expense allowance of \$18.4 million per year. This is based on a four-year average of net periodic pension cost for years 2013 through 2016, and also has taken into consideration the Company's projections. As shown on Exhibit RCS-3, Schedule C-14, for electric operations, my recommended adjustment to pension expense reduces O&M expense by \$1.151 million. As shown on Exhibit RCS-4, Schedule C-14, for gas operations, my recommended adjustment to pension expense decreases O&M expense by \$0.556 million.

O. C-15, Environmental Remediation Expense (Electric and Gas)

Q: Please explain the Company's proposed environmental remediation expense adjustment.

A: As discussed on page 23 of the Prefiled Direct Testimony of Company witness Ms. Free, PSE has used deferred accounting for its environmental remediation

1 costs and related recoveries since the early 1990s.²⁹ As it relates to the recovery
2 of the Company's net deferred environmental remediation costs, Ms. Free
3 references the Commission's Final Order in Docket No. UE-070724, where at
4 paragraph 6 (e) it states:

5 Allowed net deferred costs will be amortized over a five year
6 period on the date all costs, net of recoveries, become known and
7 declared prudent. The deferrals will be consistent with the
8 Commission's Merger Order in Docket UE-960195.³⁰
9

10 In terms of the environmental remediation costs that PSE is requesting for
11 recovery in this proceeding, Ms. Free outlined the following on pages 24-25 of
12 her Prefiled Direct Testimony:

13 1. Only actual costs are being requested for recovery. PSE
14 included actual costs through September 30, 2016.³¹

15 2. In order to maintain insurance and third-party recoveries to
16 offset future remediation costs on existing environmental sites,
17 PSE is proposing to include only a portion of the unassigned
18 insurance and third-party recoveries to offset the actual costs
19 included in this proceeding.

20 . . .

21 3. Consistent with paragraph 6 (e) of the Commission's Final Order
22 in Docket No. UE-070724, PSE is requesting a five-year
23 amortization period for the net deferred costs.

²⁹ See Prefiled Direct Testimony of PSE witness John K. Rork, Exh. JKR-1T, for a discussion of the history of the Company's environmental remediation activities.

³⁰ *In re: Puget Sound Energy For An Accounting Order Regarding the Accounting Treatment for Costs of its Elec. Env't Remediation Program*, Docket UE-070724, Order 01, ¶ 6 subpart (e) (Oct. 8, 2008).

³¹ Ms. Free stated that these costs will be updated to more current amounts throughout this proceeding, but PSE did not update its proposed environmental remediation adjustment for either electric or gas operations in its supplemental filing dated April 3, 2017.

1 The Company's proposed environmental remediation adjustment increases O&M
2 expense by \$1.423 million for electric operations and by \$8.561 million for gas
3 operations.

4 **Q: Are PSE's environmental remediation efforts required by law?**

5 A: Yes. As discussed on page three of the Prefiled Direct Testimony of Company
6 witness John K. Rork, PSE's environmental remediation efforts are governed by
7 the Comprehensive Environmental Response, Compensation and Liability Act
8 ("CERCLA") under federal statute³² and by the State of Washington's Model
9 Toxics Control Act ("MTCA") under state statute.³³

10 **Q: Since PSE's environmental remediation efforts began, what is the total**
11 **amount of proceeds received from insurance and third parties?**

12 A: As of September 30, 2016, the Company has received proceeds from insurance
13 carriers and third parties totaling \$5.344 million for environmental remediation
14 sites related to electric operations and \$50.268 million for environmental
15 remediation sites related to gas operations, for total recoveries of \$55.612
16 million.³⁴

³² See, U.S. Environmental Protection Agency, *Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) and Federal Facilities*, <https://www.epa.gov/enforcement/comprehensive-environmental-response-compensation-and-liability-act-cercla-and-federal> (last updated on Feb. 16, 2017).

³³ See, RCW 70.105D, Hazardous Waste Cleanup-Model Toxics Control Act.

³⁴ See, Rork, Exh. JKR-3.

1 **Q: Do the proceeds referenced above represent actual insurance and third-party**
2 **recoveries?**

3 A: Yes. According to the response to WUTC Staff Data Request No. 284,³⁵ the
4 electric and gas related proceeds totaling \$55.612 million reflect actual recoveries
5 received by PSE as of September 30, 2016, and do not represent future
6 remediation or monitoring obligations.

7 **Q: You previously stated that PSE proposes to only include a portion of its**
8 **unassigned insurance and third-party recoveries to offset the actual**
9 **environmental remediation costs in this proceeding. Please explain.**

10 A: As shown on PSE Adjustment No. 6.19E, the Company is proposing to offset
11 deferred environmental remediation costs totaling \$9.596 million for electric
12 related sites by only \$2.484 million, or approximately 46 percent of the \$5.344
13 million in proceeds received from insurance carriers and third-parties.

14 As shown on PSE Adjustment No. 6.19G, the Company is proposing to
15 offset deferred environmental remediation costs totaling \$72.192 million for gas
16 related sites by only \$29.385 million, or approximately 58 percent of the \$50.268
17 million in proceeds received from insurance carriers and third-parties.

18 **Q: Has PSE explained its rationale for proposing to include only a portion of the**
19 **proceeds from insurance carriers and third-parties as an offset against the**

³⁵ Exh. No. RCS-9.

1 **actual deferred environmental remediation costs being requested for**
2 **recovery?**

3 A: Yes. In its response to WUTC Staff Data Request No. 278,³⁶ the Company stated:

4 Puget Sound Energy ("PSE") has substantially exhausted many
5 available policies and believes the prospect of additional
6 significant recoveries is low. Because current future cost estimates
7 exceed potential additional recoveries, PSE has proposed to retain
8 a portion of its existing recoveries to help offset additional
9 remediation costs in the future. In addition, there are a small
10 number of sites where PSE regularly receives proceeds from third
11 parties. These recoveries are directly applied to each specific site
12 to offset costs incurred.

13 PSE had concerns about intergenerational inequities that could
14 occur if the entire amount of proceeds were used to offset actual
15 costs and thought it best to reserve a portion of the proceeds to
16 ensure that some recoveries would be available to address the
17 remediation associated with projects that are still early in the
18 remediation process. As a result, PSE relied on existing Generally
19 Accepted Accounting Principles ("GAAP") under Financial
20 Accounting Standards Board Accounting Standards Codification
21 No. 410-30-25 Asset Retirement and Environmental Obligations
22 ("ASC 410-30-25"), which requires recognition of liabilities
23 associated with environmental liabilities. PSE utilized this existing
24 GAAP requirement to determine a reasonable estimate of what the
25 total net environmental costs would be by adding the mid-range of
26 the future cost estimate to the existing net environmental costs as
27 of September 30, 2016. The proportion of the net environmental
28 costs incurred through September 30, 2016 to the total net
29 environmental costs was used to determine the proportion of
30 unallocated insurance and third party proceeds to pass back in the
31 current proceeding. Conversely, the remaining portion would be
32 held to apply against the future costs yet to be incurred, for which
33 ASC 410-30-25 provides a reasonable estimate.

³⁶ Exh. No. RCS-9.

1 As shown in the table below, it is through the process described in the above
 2 passage that PSE calculated the percentages it has applied to the proceeds it has
 3 received from insurance carriers and third parties:

Line No.	Description	Low Future Costs	High Future Costs	Mid-Range Future Costs
1	Gas	\$ 37,855,000	\$ 64,749,500	\$ 51,302,250
2	Electric	\$ 5,111,000	\$ 16,996,500	\$ 11,053,750
3	Total Estimated Electric and Gas Future Cost Estimate	<u>\$ 42,966,000</u>	<u>\$ 81,746,000</u>	<u>\$ 62,356,000</u>
		<u>Electric</u>	<u>Gas</u>	
4	Total Deferred Costs Requested for Recovery	\$ 9,596,412	\$ 72,192,483	
5	Mid-Range of Future Costs	\$ 11,053,750	\$ 51,302,250	
6	Total Cost Estimate	<u>\$ 20,650,162</u>	<u>\$ 123,494,733</u>	
7	Percentage to Allocate a Pro-Rata Share of Insurance and Third-Party Proceeds	<u>46%</u>	<u>58%</u>	

4 Source: Workpapers filed with Adjustment No. 6.19 (E&G)

5 **Q: Do you agree with the Company's rationale for its proposal to retain a**
 6 **portion of existing recoveries to offset potential remediation costs in the**
 7 **future?**

8 A: No, I do not. As previously noted, PSE's response to WUTC Staff Data Request
 9 No. 284³⁷ stated that proceeds received from insurance carriers and third parties
 10 which totaled \$55.612 million are actual recoveries received as of the
 11 September 30, 2016, the end of the test year. The actual deferred environmental
 12 remediation costs and the actual proceeds received from insurance carriers and
 13 third parties reflect known and measurable amounts as of the end of the test year.
 14 In contrast, the future environmental remediation costs to which PSE proposes to
 15 allocate a portion of the actual recoveries to are estimates. The mismatch

³⁷ Exh. No. RCS-9.

1 proposed by PSE should be corrected by offsetting actual environmental
2 remediation costs incurred through the test year with the actual insurance and
3 third-party recoveries received through the end of the test year.

4 **Q: What is your recommendation?**

5 A: I recommend that 100 percent of the proceeds received from insurance carriers
6 and third parties through the test year be used to offset the actual deferred
7 environmental remediation costs as of September 30, 2016. This contrasts with
8 PSE's proposal to only use 46 percent of the electric related proceeds and 58
9 percent of the gas related proceeds to offset environmental remediation costs
10 through the end of the test year. As shown on Exhibit RCS-3, Schedule C-15, for
11 electric operations, my recommended adjustment decreases O&M expense by
12 \$0.572 million. As shown on Exhibit RCS-4, Schedule C-15, for gas operations,
13 my recommended adjustment decreases O&M expense by \$4.176 million.

14 **P. C-16, Credit Card Payment Processing Costs**

15 **Q: Please explain the Company's proposed adjustment related to payment**
16 **processing costs.**

17 A: As discussed on page 38 of the Prefiled Direct Testimony of Company witness
18 Ms. Barnard, PSE proposes to incorporate the provisions of Commission Order 01
19 from Docket Nos. UE-160203 and UG-160204, whereby the Company was
20 authorized to defer for future recovery the costs associated with customers' use of
21 debit and credit cards to pay their bills. Specifically, the Commission's Order,

1 dated March 24, 2016, authorized PSE to defer the costs incurred until the
2 beginning of the rate year in its next general rate case proceeding. In addition, the
3 Commission's Order also allowed PSE to recover credit card processing fees
4 incurred during the rate year in its next rate case.

5 **Q: What are the specific components of PSE's proposed adjustment?**

6 A: As discussed on pages 38 and 39 of Ms. Barnard's testimony, there are three
7 components to the Company's proposed adjustment. The first component relates
8 to the amortization of the costs that were deferred prior to the rate year. The
9 Company's proposed deferred balance is based on (1) actual debit and credit card
10 fees from August 31, 2015, through September 30, 2016, and (2) estimated costs
11 from October 2016 through December 2017.³⁸ PSE is requesting to recover the
12 entire deferred balance over one year.

13 The second component of the Company's proposed adjustment is that PSE
14 included an estimate of the costs PSE will incur during the rate year period of
15 January through December 2018. This estimate is based on the actual average
16 cost per transaction as of September 30, 2016, which was then applied to the
17 estimated number of transactions during the rate year. Similar to the deferral
18 balance, Ms. Barnard stated in her Prefiled Direct Testimony that the estimated
19 rate year cost per transaction and number of transactions will be updated during

³⁸ On page 39 of her Prefiled Direct Testimony, Ms. Barnard stated that the costs included in the deferral balance will be trued-up during the course of this proceeding, but the Company did not update its proposed adjustment for credit card payment processing costs in its supplemental filing dated April 3, 2017.

1 the course of this proceeding. However, the Company did not update its proposed
2 adjustment in its April 3, 2017, supplemental filing.

3 The third component of the Company's proposed adjustment incorporates
4 the impact of a new service agreement between PSE and its third-party payment
5 processor Fiserv, which became effective on October 31, 2016, and which
6 decreases the overall costs for processing non-credit card and debit card
7 transactions by approximately \$365,000 for electric and gas operations.

8 The overall impact of PSE's proposed adjustment is to increase O&M
9 expense by \$4.750 million for electric operations and \$3.424 million for gas
10 operations.

11 **Q: Do you agree with the Company's proposed adjustment to credit card
12 payment processing costs?**

13 A: Not entirely. While I agree conceptually with the Company's proposed
14 adjustment relative to the provisions of the Commission's Order in Docket Nos.
15 UE-160203 and UG-160204, I disagree with PSE's proposed one-year
16 amortization period for the deferred balance.

17 **Q: Does the Commission's Order in Docket Nos. UE-160203 and UG-160204
18 address the amortization period to be used for recovering the deferred
19 balance?**

20 A: No. The Commission's Order in Docket Nos. UE-160203 and UG-160204 does
21 not address the amortization period to be used for recovering the deferred balance.

1 Specifically, on page 3 of the Commission's Order, the first directive under the
2 "Order" section states:

3 Puget Sound Energy's Amended Petition to defer, for later
4 recovery in rates, the costs incurred to offer a fee-free payment
5 program for its residential and small business customers, including
6 customers who pay with a credit and debit card is granted.³⁹

7 As noted in the passage above, the Commission authorized the recovery of the
8 deferred balance, but did not specifically authorize the Company to use a one-year
9 amortization period for the deferred balance.

10 **Q: What amortization period do you recommend for the deferral portion of the**
11 **Company's proposed adjustment?**

12 A: I recommend that the deferred cost for such fees through December 31, 2017, be
13 amortized over three years rather than one year as proposed by PSE. By
14 amortizing the deferred balance over three years, the impact of these costs on
15 ratepayers will be mitigated while still allowing the Company recovery of the
16 deferred credit card payment processing costs as approved by the Commission in
17 Order 01 in Docket Nos. UE-160203 and UG-160204.

18 **Q: What impact does your recommended adjustment have on PSE's 2018 rate**
19 **year operating expenses?**

20 A: As shown on Exhibit RCS-3, Schedule C-16, my recommended adjustment
21 decreases 2018 rate year O&M expense by \$1.657 million for electric operations.

³⁹ *In re: Puget Sound Energy For An Order Authorizing Accounting and Ratemaking Treatment of Fees for Payments Made by Residential and Small-Business Customers*, Dockets UE-160203 & UG-160204, Order 01: Order Granting Amended Accounting Petition, ¶ 14 (Mar. 24, 2016).

1 As shown on Exhibit RCS-4, Schedule C-16, my recommended adjustment
2 decreases 2018 rate year O&M expense by \$1.195 million for gas operations.

3 **V. COLSTRIP ISSUES**

4 **A. Colstrip Background**

5 **Q: Please provide some background on the Colstrip generating station.**

6 A: The Colstrip power plant is located in Montana and consists of four coal-fired
7 generating units capable of producing up to 2,094 megawatts of electricity. The
8 plant is co-owned by PSE and others (as discussed below), and is operated by
9 Talen Energy (Talen).⁴⁰ The Prefiled Direct Testimony of PSE witness Ronald
10 Roberts provides an overview of Colstrip ownership and operation. A review of
11 Talen Energy's web page states as follows concerning the Colstrip plant:

12 **Plant Details**

13 The Colstrip power plant, east of Billings, operates four coal-fired
14 generating units capable of producing up to 2,094 megawatts of
15 electricity. Units 1 and 2 began commercial operation in 1975 and
16 1976, and units 3 and 4 started in 1984 and 1986. Units 1 and 2
17 each have about 307 megawatts of generating capacity; Talen
18 Energy has 50 percent ownership of each. Units 3 and 4 each have
19 about 740 megawatts of generating capacity; Talen Energy has 30
20 percent ownership in Unit 3 and no ownership in Unit 4. Talen
21 Energy's share in the plant's generating capacity is 529 megawatts.
22 The plant employs about 360 people and is owned by Talen
23 Energy LLC, Puget Sound Energy Inc., Portland General Electric
24 Company, Avista Corporation, PacifiCorp and NorthWestern
25 Energy. Low-sulfur coal and state-of-the-art scrubbers restrict
26 sulfur dioxide emissions to less than levels required by the Clean

⁴⁰ In December 2016, Talen Energy was acquired by Riverstone Holdings LLC ("Riverstone") and changes to the executive management were made. *See, e.g.*, PSE's response to Sierra Club Data Request No. 16, Att. A, "Colstrip Strategic Planning Update" dated March 2, 2017, attached as Exhibit RCS-11C.

1 Air Act. The plant also meets Environmental Protection Agency
2 standards for nitrogen oxides emission. **The plant consistently**
3 **ranked as one of the lowest-cost fuel plants in the Western**
4 **Electricity Coordinating Council, a regional member of the**
5 **North American Electricity Reliability Council that includes**
6 **all the western states and the Canadian provinces of Alberta**
7 **and British Columbia.**⁴¹

8 Public Counsel asked PSE about the highlighted statement in Public Counsel Data
9 Request No. 394, which is included in Exhibit RCS-10C. PSE's response
10 indicated that the statement was made by Talen Energy not by PSE. The
11 Company's response stated further that: "Talen and PSE are separate, privately
12 held companies. PSE does not have information on what criteria or report Talen
13 may have relied on to make the statement."

14 PSE was also asked in Public Counsel Data Request No. 394(b)
15 concerning whether the Colstrip Plant is expected to continue to be ranked as one
16 of the lowest-cost fuel plants in the Western Electricity Coordinating Council.
17 PSE responded similarly, however, stating only that: "Since the claim referenced
18 above was by Talen and not PSE, PSE cannot comment on the continuation of the
19 statement made by Talen."

20 **Q: Please discuss the ownership of the Colstrip Plant.**

21 A: Talen Energy, now owned by Riverstone, is the current plant operator. Talen
22 owns 50 percent of Colstrip Units 1 and 2, and 30 percent of Unit 3 (15 percent in
23 a reciprocal sharing agreement across Units 3 and 4) and acts as the current

⁴¹ Talen Energy, Colstrip Power Plant, <https://www.talenenergy.com/generation/fossil-fuels/colstrip> (last visited Jun. 28, 2017) (emphasis added).

1 operator of the facility. Unlike the other co-owners of the Colstrip units which
2 are all public utilities, Talen is a merchant generator. As such, Talen has
3 expressed concerns about the continued operation of Units 1 and 2, as well as
4 indicating that it wishes to discontinue its role as plant operator.

5 PSE owns the other 50 percent of Colstrip Units 1 and 2. The current
6 ownership interests of Colstrip Units 3 and 4 are as follows:⁴²

Colstrip Units 3 and 4		
Current Owership Interests		
Owner	Units 3 and 4	Total MW
Puget	25%	370
PGE	20%	296
Talen	15%	222
Northwestern	15%	222
Avista	15%	222
PacifiCorp	10%	148
TOTALS	100%	1480

7
8 **Q: What concerns have been raised regarding the continued operation of the**
9 **Colstrip plant?**

10 **A:** As described in PSE's "Colstrip Strategic Planning Update" dated March 2, 2017
11 (*see* Exhibit RCS-11C), Talen has reported that Units 1 and 2 are losing money.

12 On May 23, 2016, Talen provided a two-year notice of resignation as operator of

⁴² *See, e.g.,* PSE's "Colstrip Strategic Planning Update" dated March 2, 2017, at page 4. This document is reproduced for ease of reference as Exhibit RCS-11C. While this document has been designated as CONFIDENTIAL, the ownership percentages are public information.

1 Units 3 and 4.⁴³ This raised concerns about the remaining service life of Units 1
2 and 2, as well as the continued operation of Units 3 and 4.

3 **Q: What service life has PSE projected for Colstrip Units 1 and 2?**

4 A: PSE has reflected a retirement date Colstrip Units 1 and 2 of July 1, 2022.

5 **Q: What is the basis for that retirement date?**

6 A: As explained in the testimony of PSE witness Ronald Roberts, at page 39, line 5-
7 6, and in PSE's response to Public Counsel Data Request No. 395,⁴⁴ PSE intends
8 to keep Colstrip Units 1 and 2 in operation until the legal settlement date of on or
9 before July 1, 2022. That date is based on a legal settlement which specifies a
10 retirement date of Colstrip Units 1 and 2 in operation until the legal settlement
11 date of on or before July 1, 2022. PSE witness Ronald Roberts discusses the
12 decision to settle litigation and retire Colstrip Units 1 and 2 at pages 34-39 of his
13 Prefiled Direct Testimony.

⁴³ See, e.g., Carly Garrison, *Colstrip Power Plant Closure Could Come Earlier than 2022*, KTVH, <http://www.ktvh.com/2017/01/colstrip-power-plant-closure-could-come-earlier-than-2022> (Jan. 18, 2017); see also, e.g., Tom Lutey, *Colstrip Operator Wants Out in 2 Years or Less*, *The Missoulian*, http://missoulian.com/news/state-and-regional/colstrip-operator-wants-out-in-years-or-less/article_d0aae700-4348-5007-9bf3-1ed9758de6f8.html (May 25, 2016); and Krysti Shallenberger, *Talen Energy Will Cease Operating Embattled Colstrip Cola Plant in 2018*, *Utility Dive*, <http://www.utilitydive.com/news/talen-energy-will-cease-operating-embattled-colstrip-coal-plant-in-2018/419895/> (May 26, 2016). See also, PSE's response and first supplemental responses to Sierra Club Data Request No. 4, which are reproduced in Exhibit RCS-10C. Notably, PSE's first supplemental response to Sierra Club Data Request No. 4 included a copy of a notice from Talen dated June 19, 2017, to the co-owners of Colstrip Units 3 and 4 withdrawing Talen's Resignation as Operator. Moreover, that response states that: "Talen Montana has no intention of resigning as the operator of Units 1 and 2, resulting in inefficiencies because of separate operators for Units 1 and 2 and Units 3 and 4." The response presents several reasons that were stated by Talen for continuing to function as the operator of the Colstrip plant.

⁴⁴ Exh. No. RCS-10C.

1 **Q: Is it possible that that Colstrip Units 1 and 2 could be retired prior to**
2 **July 1, 2022?**

3 A: Yes. As stated by PSE witness Ronald Roberts at pages 39-41 of his Prefiled
4 Direct Testimony, PSE plans for the operation of Colstrip Units 1 and 2 until
5 July 1, 2022. However, forces not under PSE's control may cause the retirement
6 of Colstrip Units 1 and 2 prior to July 1, 2022.

7 **Q: If Talen Energy exits its role as operator of the Colstrip Plant, how would**
8 **that affect the operation and projected retirement of Colstrip Units 1 and 2?**

9 A: Public Counsel asked this question of PSE Public Counsel Data Request No.
10 395(a).⁴⁵ PSE's response states that:

11 a) PSE does not currently foresee significant changes in the
12 operation of Colstrip Units 1 and 2 under a potential new operator.
13 However, the joint Colstrip owners are currently in the due
14 diligence phase of identifying a potential new operator; therefore,
15 additional information that affects this question may be identified.
16 PSE does not envision an operator change effecting the date of
17 retirement for Colstrip Units 1 and 2.⁴⁶

18 **Q: If Talen Energy exits its role as operator of the Colstrip Plant, how would**
19 **that affect the operation and projected retirement of Colstrip Units 3 and 4?**

20 A: Public Counsel asked this question of PSE in Public Counsel Data Request No.
21 395(b).⁴⁷ PSE's response states that:

22 b) PSE does not currently foresee significant changes in the
23 operation of Colstrip Units 3 and 4 under a potential new operator.

⁴⁵ Exh. RCS-10C.

⁴⁶ Exh. RCS-10C.

⁴⁷ Exh. RCS-10C.

1 However the joint Colstrip owners are currently in the due
2 diligence phase of identifying a potential new operator; therefore,
3 additional information that affects this question may be identified.
4 There is no projected retirement date agreement between the
5 owners of Colstrip Units 3 and 4.⁴⁸

6 **Q: Has recent information indicated that Talen will continue as operator of the**
7 **Colstrip plant?**

8 A: Yes. PSE's supplemental response to Sierra Club Data Request No. 4, for
9 example, includes a letter from Talen to the co-owners dated June 18, 2017,
10 which indicates that Talen has withdrawn the previous notice of resigning as
11 operator of Colstrip (dated May 23, 2016) and states further that Talen will
12 continue to operate the Colstrip plant.⁴⁹ Talen's letter presents several reasons for
13 its decision to continue as operator of the Colstrip plant.

14 **Q: Does Talen's June 19, 2017, letter indicate that Talen Montana will**
15 **reimburse the other owners for their reasonable out-of-pocket costs incurred**
16 **to date related to the effort to transition to a new operator?**

17 A: Yes. Talen's June 19, 2017, letter on page 2 states that:

18 Additionally, as a gesture of good faith and to remedy the financial
19 impacts resulting from the notice of intent to resign, Talen
20 Montana is prepared to reimburse the other owners for their
21 reasonable out-of-pocket costs incurred to date related to the effort
22 to transition to a new operator, including the fees paid to the
23 Owners' joint legal counsel, up to \$225,000 in the aggregate.

24 **Q: Do you have a recommendation relating to this commitment by Talen**

⁴⁸ Exh. RCS-10C.

⁴⁹ Exhibit RCS-10C includes a copy of PSE's response and first supplemental response to Sierra Club Data Request No. 4, including the Talen letter dated June 18, 2017, that was attached to that response.

1 **Montana?**

2 A: Yes. I recommend that PSE compile and report all of its out-of-pocket costs
3 related to efforts to transition to a new operator of the Colstrip plant. I
4 recommend that the Commission instruct PSE to remove such costs from the
5 revenue requirement in the current rate case, and to collect such costs from Talen
6 Montana, and not from PSE's ratepayers.

7 **Q: You mentioned that there is a projected retirement date for Colstrip Units 1**
8 **and 2 of on or before July 1, 2022 that is based on a legal settlement. Is there**
9 **a projected retirement date agreement between the owners for Colstrip Units**
10 **3 and 4?**

11 A: No, according to PSE's response to Public Counsel Data Response No. 395(c)(i)
12 which states that: "There is no projected retirement date agreement between the
13 owners of Colstrip Units 3 and 4."⁵⁰

14 **Q: What has PSE reflected in its general rate case for the assumed retirement**
15 **dates for the Colstrip units?**

16 A: As described in the Prefiled Direct Testimony of PSE witness Ronald Roberts at
17 page 48, Colstrip Units 1 and 2 now have a planned retirement date of
18 July 1, 2022. Colstrip Units 3 and 4 do not have any planned date for retirement.
19 For determining depreciation rates and for purposes of analyzing

⁵⁰Exh. RCS-10C.

1 decommissioning and demolition costs, PSE assumed that Colstrip Units 3 and 4
2 would be retired in 2035.

3 **Q: Has the ownership of Talen changed in December 2016?**

4 A: Yes. In December 2016, Talen was acquired by Riverstone Holdings, LLC
5 ("Riverstone") for \$1.8 billion. As described in PSE's response to WUTC Staff
6 Data Request No. 461:⁵¹

7 Riverstone has replaced the executive team and officers at Talen ...
8 and begun their due diligence on the assets they acquired in
9 December from Talen. ... [A]s Riverstone has learned more about
10 Colstrip operations and financials, they are reevaluating the
11 statements made by former management (Mr. McGuire) [REDACTED]
12 [REDACTED]
13 [REDACTED].

14 **Q: Has PSE indicated that anticipatory steps have been taken by the non-Talen**
15 **owners of Colstrip?**

16 A: Yes. PSE's "Colstrip Strategic Planning Update" dated March 2, 2017 (*see*
17 Exhibit RCS-11C), indicates at page 3 that [REDACTED]
18 [REDACTED]:

- 19 • [REDACTED]
20 • [REDACTED]
21 [REDACTED]
22 • [REDACTED]
23 [REDACTED]

[REDACTED]

B. Costs Requested by PSE Related to Colstrip

Q: What are some of the types of costs have been requested by PSE in its general rate case related to Colstrip?

A: PSE's general rate case reflects Colstrip costs, including the following:

- Costs for Plant net of Accumulated Depreciation
- Depreciation Expense
- Costs for Decommissioning and Demolition
- Costs for Coal Combustion Residuals ("CCRs")
- Operating and Maintenance Expense

C. Colstrip Plant and Accumulated Depreciation

Q: How have you reflected Colstrip Plant and Accumulated Depreciation?

A: I have reflected PSE's proposed amounts for Colstrip Plant. I have reflected an adjustment for electric utility Accumulated Depreciation to reflect the impact of the recommended new depreciation rates sponsored by Public Counsel witness Ms. McCullar, as discussed above. Beyond that, there is no other adjustment for Colstrip Accumulated Depreciation.

1 **D. Costs for Decommissioning and Demolition**

2 **Q: What costs for decommissioning and demolition of Colstrip Units 1 and 2**
3 **have PSE requested?**

4 **A:** The Prefiled Direct Testimony of PSE witness Daniel Doyle addresses this,
5 starting at page 41. At pages 42-43 he states that:

6 As explained in the Prefiled Direct Testimony of Ms. Katherine J.
7 Barnard, Exhibit No. KJB-1T, decommissioning and remediation
8 costs of Colstrip Units 1 & 2 have not been recovered from
9 customers in any material amount during the 40+ year period those
10 units operated because there was no legal obligation to undertake
11 remediation, the costs for decommissioning and remediation were
12 not known and measurable, and these costs were not included in
13 depreciation rates.

14 This proceeding is the appropriate venue for considering,
15 reviewing and adjudicating the complex array of issues connected
16 with the imminent retirement of the boilers of Colstrip Units 1 & 2
17 for the following reasons:

- 18 (i) PSE has projected anticipated decommissioning and
19 remediation costs of approximately \$109 million (in
20 real dollars) for Colstrip Units 1 & 2 (see the
21 Prefiled Direct Testimony of Mr. Ron Roberts,
22 Exhibit No. ___(RR-ICT), for details of these
23 projected costs);
- 24 (ii) the settlement agreement with the Sierra Club and
25 Montana Environmental Information Center
26 requires that the boilers of Colstrip Units 1 & 2 be
27 retired no later than July 1, 2022, which leaves
28 limited time for planning, financing, and regulatory
29 review of all aspects of decommissioning and
30 remediating activities;
- 31 (iii) PSE was successful in obtaining legislation in early
32 2016 that allows for the repurposing of certain
33 regulatory liabilities (i.e., Treasury Grants and
34 wind-related Production Tax Credits) to offset
35 decommissioning and remediation costs for Colstrip

Units 1 & 2 (see Chapter 80.84 RCW (Transition of Eligible Coal Units)); and

- (iv) RCW 80.84.020 requires an adjudicative proceeding under chapters 34.05 and 80.04 RCW prior to the authorization of PSE to place amounts from one or more regulatory liabilities into a retirement account to cover decommissioning and remediation costs of eligible coal units.

Q: The last item refers to a request by PSE for authorization to place amounts from one or more regulatory liabilities into a retirement account to cover decommissioning and remediation costs of eligible coal units. How is PSE proposing to apply that to Colstrip Units 1 and 2 decommissioning and demolition costs in the current general rate case?

A: As described at page of Mr. Doyle's Prefiled Direct Testimony, PSE proposes to "repurpose" certain regulatory liabilities (i.e., Treasury Grants and wind-related Production Tax Credits) into a recovery mechanism for Colstrip Units 1 & 2 decommissioning and remediation costs. Under this proposal, PSE would "repurpose" these regulatory liabilities to offset and fund Colstrip Units 1 & 2 decommissioning and remediation costs rather than pass back these tax benefits to customers in the form of lower current rates than would be provided prior to having to incur the decommissioning and remediation costs.

Q: Is such a "repurposing" proposal permitted by legislation that was passed in Washington?

1 A: Yes. In the 2016 legislative session, a bill was enacted⁵² that provides for the
2 repurposing of tax benefits to recover Colstrip Units 1 & 2 decommissioning and
3 remediation costs.

4 **Q: How does PSE propose to apply the "repurposed" regulatory liabilities**
5 **toward the recovery of Colstrip Units 1 & 2 decommissioning and**
6 **remediation costs?**

7 A: As explained in the Prefiled Direct Testimony of PSE witness Ms. Barnard on
8 page 31, and in PSE's response to Public Counsel Data Request No. 355, PSE
9 proposes to discontinue amortization of a regulatory liability that PSE had
10 recorded for Treasury Grants that PSE received for the upgrades to its
11 hydroelectric facilities. PSE proposes to transfer the unamortized balance related
12 to that regulatory liability into a FERC 108 retirement account⁵³ that would be
13 established to help fund the decommissioning and remediation costs associated
14 with Colstrip Units 1 and 2. As explained in PSE's response to Public Counsel
15 Data Request No. 355(c),⁵⁴ the amounts reflected in PSE Adjustment 7.12
16 represent PSE's calculation of the hydro grants net balance for the Company's
17 proposed transfer.

⁵² See, e.g., Chapter 80.84 RCW (Transition of Eligible Coal Units).

⁵³ FERC account 108 is also commonly referred to as Accumulated Depreciation.

⁵⁴ Exh. No. RCS-10C.

1 **Q: What reasons does PSE give for applying the "repurposed" regulatory**
2 **liabilities towards the cost recovery of Colstrip Units 1 & 2 decommissioning**
3 **and remediation costs?**

4 A: As explained by PSE witness Mr. Doyle at page 46 of his Prefiled Direct
5 Testimony:

- 6 • By applying the "repurposed" regulatory liabilities toward the recovery of
7 Colstrip Units 1 & 2 decommissioning and remediation costs, PSE avoids
8 charging current and future ratepayers for those costs.
- 9 • PSE will continue to treat these regulatory liabilities as reductions to rate
10 base (and thereby benefitting customers) until the tax benefits are fully
11 utilized to offset Colstrip Units 1 & 2 decommissioning and remediation
12 costs.
- 13 • PSE also states that this treatment eliminates the need for recovery of
14 carrying costs associated with regulatory assets that would likely be
15 established to recover these costs under traditional ratemaking
16 methodologies.

17 **Q: Does PSE claim that its proposed treatment results in a net savings to**
18 **ratepayers?**

19 A: Yes. PSE witness Mr. Doyle asserts at page 46 of his Prefiled Direct Testimony
20 that the Company's proposed treatment will save customers approximately \$71.2
21 million in nominal terms and \$49.5 million on a net present value basis versus
22 collecting those costs through a new tracker mechanism.

1 **Q: Do you have a recommendation related to assuring that PSE's ratepayers**
2 **realize these savings?**

3 A: Yes. PSE's Colstrip related decommissioning and remediation costs should
4 continue to be monitored to assure that ratepayers realize these savings and
5 specifically to assure that these ratepayer savings are not negated by additional
6 higher Colstrip decommission and remediation costs, beyond those currently
7 reflected by PSE in its calculations.

8 **Q: Are you proposing any adjustments for a different application of the**
9 **regulatory liability for income tax benefits that PSE proposes to apply to**
10 **recover Colstrip Units 1 & 2 decommissioning and remediation costs?**

11 A: No. PSE's proposal appears to be consistent with the authorizing legislation. The
12 regulatory liabilities for Treasury Grants for hydroelectric facility upgrades (and
13 the Production Tax Credit tax benefits) that PSE proposes to apply to recover
14 Colstrip Units 1 & 2 decommissioning and remediation costs are not otherwise
15 related to Colstrip. Nevertheless, PSE's proposal appears to be consistent with the
16 authorizing legislation noted above and reasonable in the context of the current
17 general rate case.

18 **Q: Will the actual decommissioning and remediation costs need to be reviewed?**

19 A: Yes. Even though there is not a challenge to these funding mechanisms, this
20 should not be construed as granting preapproval of the activities or the costs that
21 are to be used to fund these activities. In other words, the Colstrip owners,

1 including PSE, have not performed the specific decommissioning and remediation
2 activities yet, so actual cost recovery must still be based on those activities
3 happening and the related costs being reviewed and being reasonable and prudent.

4 The review of actual Colstrip decommissioning and remediation costs for
5 prudence and reasonableness should, therefore, continue to be an issue in future
6 PSE rate cases, through and including when those activities are completed.

7 **E. PSE's Proposed Use of Production Tax Credits to Recover Colstrip**
8 **Units 1 and 2 Costs**

9 **Q: What does PSE propose for the potential use of Production Tax Credits**
10 **("PTCs")?**

11 **A:** PSE witness Mr. Doyle at page 47 of his Prefiled Direct Testimony states that:

12 Regulatory liabilities for Production Tax Credits could similarly be
13 repurposed to recover decommissioning and remediation costs. To
14 date, PSE has generated approximately \$200 million of Production
15 Tax Credits. Those Production Tax Credits are currently reflected
16 on PSE's balance sheet as a regulatory liability along with the
17 associated deferred tax treatment. Although these Production Tax
18 Credits have been generated, PSE has not yet had the opportunity
19 to use the credits on tax returns. Therefore, the Production Tax
20 Credits have not yet been "funded" in cash through reduced current
21 taxes payable.

22 **Q: How does PSE propose to apply the PTCs once they are "funded" through**
23 **reduced income taxes payable?**

24 **A:** PSE witness Mr. Doyle at pages 47-48 of his Prefiled Direct Testimony states
25 that:

26 As the Production Tax Credits are utilized on tax returns and
27 become funded in cash through reduced current taxes payable, the

1 funded portion of the regulatory liability will be reclassified to the
2 new FERC 108 account established for Colstrip Units 1 & 2, at
3 which time it will become a reduction to PSE's rate base. Please
4 see the Prefiled Direct Testimony of Katherine J. Barnard, Exhibit
5 No. ___(KJB-1T), for additional details.

6 **Q: When does PSE project that "funding" of the PTCs would occur?**

7 A: PSE projects that "funding" of the PTCs would occur in 2019 and beyond as the
8 ability to claim bonus tax depreciation is phased out.⁵⁵ PSE witness Mr. Doyle
9 states that PSE anticipates that "PSE expects the utilization of Production Tax
10 Credits to accelerate into 2019 and beyond" and "[b]ased on current tax law, it is
11 highly probable that all of PSE's generated Production Tax Credits will be
12 utilized by 2020." However, he qualifies this by pointing out that prediction of
13 utilizing Production Tax Credits over the next few years is uncertain.⁵⁶

14 **Q: What would happen if the combined total of repurposed Treasury Grants
15 and Production Tax Credits were to exceed Colstrip Units 1 & 2
16 decommissioning and remediation costs?**

17 A: As explained by PSE witness Mr. Doyle, if the combined total of repurposed
18 Treasury Grants and PTCs were to exceed Colstrip Units 1 & 2 decommissioning
19 and remediation costs, any remaining funds in the retirement account would be
20 returned to customers.⁵⁷ Returning any such excess amounts to ratepayers appears
21 to be required by RCW 80.84.020(2)(c).

⁵⁵ See, e.g., Prefiled Direct Testimony of Daniel A. Doyle, Exh. DAD-1T at 48-49.

⁵⁶ *Id.*

⁵⁷ *Id.*, at 49.

1 **F. Costs for Colstrip Coal Combustion Residuals ("CCRs")**

2 **Q: What are Coal Combustion Residuals costs?**

3 A: Coal Combustion Residuals ("CCRs") costs are costs related to cleaning up ash
4 ponds and landfills into which coal ash and other residuals associated with
5 coal-fired generation have been stored. The costs that PSE and the other Colstrip
6 owners will likely eventually have to spend relating to ash pond closures and
7 remediation are related to issues contained in the United States Environmental
8 Protection Agency's ("EPA") Coal Combustion Residuals ("CCR") Rule which
9 was published on April 17, 2015. The CCR rules were published by the EPA in
10 2015 and the costs that PSE (and the other Colstrip owners) will incur for the ash
11 ponds will be pursuant to those rules.

12 **Q: What costs for Colstrip CCRs has PSE requested?**

13 A: As shown on PSE Exhibit RJR-23, PSE projects total CCR costs of \$149.988
14 million in 2016 dollars and \$205.846 million in real dollars for the period 2016
15 through 2051, of which PSE's share is \$74.994 million and \$102.923 million,
16 respectively.

17 **Q: Has PSE indicated whether the amounts of CCR costs in its Exhibit RJR-23**
18 **are for Colstrip Units 1 and 2?**

1 A: Yes. In response to Public Counsel Data Request 420(f),⁵⁸ PSE indicated that the
2 CCR plan costs listed on page 2 of Exhibit RJR-23 are for PSE's share of the CCR
3 amounts for Colstrip Units 1 and 2.

4 **Q: Has PSE presented another exhibit for CCR costs for Colstrip Units 3 and 4?**

5 A: Yes. PSE's response to Public Counsel Data Request 420(f), PSE indicated that
6 the CCR plan costs for Colstrip Units 3 and 4 are included in Exhibit RJR-24 but
7 have not been summarized in the same fashion as Colstrip Units 1 and 2 costs
8 were on PSE's Exhibit RJR-23.

9 **Q: Has PSE recorded Asset Retirement Obligations ("AROs") for Colstrip**
10 **Units 1 and 2 decommissioning and dismantlement costs?**

11 A: According to PSE's response to Public Counsel Data Request 420(c) PSE has not
12 recorded AROs for Colstrip Units 1 and 2 decommissioning and dismantlement
13 costs. Moreover, according to PSE's response to WUTC Staff Data Request 142,
14 there is not a detailed list of activities or projects associated with
15 the Colstrip Units 1 & 2 non-legal (Non-Asset Retirement
16 Obligation) cost of removal portion of the accumulated
17 depreciation reserve balance. The non-legal portion of cost of
18 removal associated with Colstrip Units 1 & 2, as of September 30,
19 2016, is \$8,836,193.

20 PSE included with that response a listing of the amounts through
21 September 30, 2016 by year.⁵⁹

⁵⁸ Exh. No. RCS-10C.

⁵⁹ These responses are included in Exhibit RCS-10C.

1 **Q: How has PSE treated the CCR costs in its general rate case application?**

2 A: PSE has treated the CCR costs estimated for Colstrip Units 1 and 2 as being
3 funded by the repurposing of the treasury grants for the hydroelectric facilities
4 and by applying tax benefits expected to be realized from Production Tax
5 Credits.⁶⁰

6 **Q: Are you recommending an adjustment for the Colstrip CCR costs?**

7 A: No. I am not recommending a specific adjustment for Colstrip Units 1 and 2 CCR
8 costs. I note that Public Counsel witness Ms. McCullar has incorporated the cost
9 of removal amount she recommends for Colstrip Units 3 and 4 into her
10 recommended depreciation rates, which I have reflected in determining PSE
11 revenue requirements.

12 **G. Operating and Maintenance Expense**

13 **Q: What O&M Expense for Colstrip has PSE requested?**

14 A: As explained in the Prefiled Direct Testimony of PSE witness Ronald Roberts at
15 pages 58-59, PSE has requested amortization, based on a 36-month amortization
16 period, of the following Colstrip overhaul costs, which are listed in his Table 3
17 and his Exhibit RJR-26C (shaded amounts are CONFIDENTIAL):

18 //

19 ///

⁶⁰ See, e.g., PSE's responses to Public Counsel's Data Request Nos. 420(a) and 426(g) and PSE's response to WUTC Staff's Data Request Nos. 296 and 359. These responses are included in Exhibit RCS-10C.

13

The overhaul expense requested by PSE for Colstrip is approximately ██████████
 ██████████.

In addition, PSE has included non-overhaul Colstrip O&M expense for the rate year of \$39.1 million based on the operator budget. This compares with \$35.8 million for the 2014 PCORC rate year and \$36.1 million in the test year.

PSE includes the costs for the Colstrip major overhaul expense in its AURORA model runs which PSE uses to determine its requested rate year power costs.

Q: Are you recommending any adjustments for the Colstrip major overhaul or non-overhaul O&M expenses at this time?

A: No, not at this time, based on the information provided by PSE that Colstrip Units 1 and 2 are currently projected to operate through July 1, 2022. If during the

1 course of this proceeding it becomes apparent that Colstrip Units 1 and 2 will be
2 retired prior to July 1, 2022, there may be a need to eliminate or scale back the
3 projected expenses that been used by PSE for a Colstrip Unit 2 overhaul outage
4 for June 2018 of [REDACTED].

5 **Q: Does that conclude your testimony?**

6 **A:** Yes, it does.
