Supreme Court of the United States
BLUEFIELD WATERWORKS & IMPROVEMENT CO.
v.
PUBLIC SERVICE COMMISSION OF WEST VIRGINIA et al.
No. 256.

Argued January 22, 1923.
Decided June 11, 1923.

In Error to the Supreme Court of Appeals of West Virginia.

Proceedings by the Bluefield Waterworks & Improvement Company against the Public Service Commission of the State of West Virginia and others to suspend and set aside an order of the Commission fixing rates. From a judgment of the Supreme Court of West Virginia, dismissing the petition, and denying the relief (89 W. Va. 736, 110 S. E. 205), the Waterworks Company bring error. Reversed.

92 Constitutional Law
92XII Due Process of Law
92k298 Regulation of Charges and Prices
92k298(3) k. Water and Irrigation Companies. Most Cited Cases

Under the due process clause of the Fourteenth Amendment of the Constitution, U.S.C.A., a waterworks company is entitled to the independent judgment of the court as to both law and facts, where the question is whether the rates fixed by a public service commission are confiscatory.

of Charges. Most Cited Cases
Since the investors take into account the result of past operations as well as present rates in determining whether they will invest, a waterworks company which had been earning a low rate of returns through a long period up to the time of the inquiry is entitled to return of more than 6 per cent. on the value of its property used in the public service, in order to justly compensate it for the use of its property.

A proceeding in a state court attacking an order of a public service commission fixing rates, on the ground that the rates were confiscatory and the order void under the federal Constitution, is one where there is drawn in question the validity of authority exercised under the state, on the ground of repugnancy to the federal Constitution, and therefore is reviewable by writ of error.

****675 *680** Messrs. Alfred G. Fox and Jos. M. Sanders, both of Bluefield, W. Va., for plaintiff in error.
Mr. Russell S. Ritz, of Bluefield, W. Va., for defendants in error.

***683** Mr. Justice BUTLER delivered the opinion of the Court.
Plaintiff in error is a corporation furnishing water to the city of Bluefield, W. Va., ****676** and its inhabitants. September 27, 1920, the Public Service Commission of the state, being authorized by statute to fix just and reasonable rates, made its order prescribing rates. In accordance with the laws of the state (section 16, c. 15-O, Code of West Virginia [sec. 651]), the company instituted proceedings in the Supreme Court of Appeals to suspend and set aside the order. The petition alleges that the order is repugnant to the Fourteenth Amendment, and deprives the company of its property without just compensation and without due process of law, and denies it equal protection of the laws. A final judgment was entered, denying the company relief and dismissing its petition. The case is here on writ of error.

[1] 1. The city moves to dismiss the writ of error for the reason, as it asserts, that there was not drawn in question the validity of a statute or an authority exercised under the state, on the ground of repugnancy to the federal Constitution.

The validity of the order prescribing the rates was directly challenged on constitutional grounds, and it was held valid by the highest court of the state. The prescribing of rates is a legislative act. The commission is an instrumentality of the state, exercising delegated powers. Its order is of the same force as would be a like enactment by the Legislature. If, as alleged, the prescribed rates are confiscatory, the order is void. Plaintiff in error is entitled to bring the case here on writ of error and to have that question decided by this court. The motion to dismiss will be denied. See ***684**Oklahoma Natural Gas Co. v. Russell, 261 U. S. 290, 43 Sup. Ct. 353, 67 L. Ed. 659, decided March 5, 1923, and cases cited; also Ohio Valley Co. v. Ben Avon Borough, 253 U. S. 287, 40 Sup. Ct. 527, 64 L. Ed. 908.

2. The commission fixed $460,000 as the amount on which the company is entitled to a return. It found that under existing rates, assuming some increase of business, gross earnings for 1921 would be $80,000 and operating expenses $53,000 leaving $27,000, the equivalent of 5.87 per cent., or 3.87 per cent. after deducting 2 per cent. allowed for depreciation. It held existing rates insufficient to the extent of 10,000. Its order allowed the company to add 16 per cent. to all bills, excepting those for public and private fire protection. The total of the bills so to be increased amounted to $64,000; that is, 80 per cent. of the revenue was authorized to be increased 16 per cent., equal to an increase of 12.8 per cent. on the total, amounting to $10,240.

As to value: The company claims that the value of the property is greatly in excess of $460,000. Reference to the evidence is necessary. There was submitted to the commission evidence of value which it summarized substantially as follows:

a. Estimate by company's engineer

(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)

	on. basis of reproduction new, less. depreciation, at prewar prices.	$ 624,548 00
b.	Estimate by company's engineer on. basis of reproduction new, less. depreciation, at 1920 prices.	1,194,663 00
c.	Testimony of company's engineer. fixing present fair value for rate. making purposes.	900,000 00
d.	Estimate by commissioner's engineer on. basis of reproduction new, less. depreciation at 1915 prices, plus. additions since December 31, 1915, at. actual cost, excluding Bluefield. Valley waterworks, water rights,. and going value.	397,964 38
e.	Report of commission's statistician. showing investment cost less. depreciation.	365,445 13
f.	Commission's valuation, as fixed in. case No. 368 ($360,000), plus gross. additions to capital since made. ($92,520.53).	452,520 53

***685** It was shown that the prices prevailing in 1920 were nearly double those in 1915 and pre-war time. The company did not claim value as high as its estimate of cost of construction in 1920. Its valuation engineer testified that in his opinion the value of the property was $900,000-a figure between the cost of construction in 1920, less depreciation, and the cost of construction in 1915 and before the war, less depreciation.

The commission's application of the evidence may be stated briefly as follows:

As to ‘a,’ supra: The commission deducted $204,000 from the estimate (details printed in the margin), FN1 leaving approximately $421,000, which it contrasted with the estimate of its own engineer, $397,964.38 (see ‘d,’ supra). It found that there should be included $25,000 for the Bluefield Valley waterworks plant in Virginia, 10 per cent. for going value, and $10,000 for working capital. If these be added to $421,000, there results $500,600. This may be compared with the commission's final figure, $460,000.

FN1

Difference in depreciation allowed.	$ 49,000
Preliminary organization and development. cost.	14,500
Bluefield Valley waterworks plant.	25,000
Water rights.	50,000
Excess overhead costs.	39,000
Paving over mains.	28,500
	$204,000

(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)

***686** As to 'b' and 'c,' supra: These were given no weight by the commission in arriving at its final figure, $460,000. It said:

'Applicant's plant was originally constructed more than twenty years ago, and has been added to from time to time as the progress and development of the community required. For this reason, it would be unfair to its consumers to use as a basis for present fair value the abnormal prices prevailing during the recent war period; but, when, as in this case, a part of the plant has been constructed or added to during that period, in fairness to the applicant, consideration must be given to the cost of such expenditures made to meet the demands of the public.'

****677** As to 'd,' supra: The commission, taking $400,000 (round figures), added $25,000 for Bluefield Valley waterworks plant in Virginia, 10 per cent. for going value, and $10,000 for working capital, making $477,500. This may be compared with its final figure, $460,000.

As to 'e,' supra: The commission, on the report of its statistician, found gross investment to be $500,402.53. Its engineer, applying the straight line method, found 19 per cent. depreciation. It applied 81 per cent. to gross investment and added 10 per cent. for going value and $10,000 for working capital, producing $455,500. FN2 This may be compared with its final figure, $460,000.

FN2 As to 'e': $365,445.13 represents investment cost less depreciation. The gross investment was found to be $500,402.53, indicating a deduction on account of depreciation of $134,957.40, about 27 per cent., as against 19 per cent. found by the commission's engineer.

As to 'f,' supra: It is necessary briefly to explain how this figure, $452,520.53, was arrived at. Case No. 368 was a proceeding initiated by the application of the company for higher rates, April 24, 1915. The commission made a valuation as of January 1, 1915. There were presented two estimates of reproduction cost less depreciation, one by a valuation engineer engaged by the company, ***687** and the other by a valuation engineer engaged by the city, both 'using the same method.' An inventory made by the company's engineer was accepted as correct by the city and by the commission. The method 'was that generally employed by courts and commissions in arriving at the value of public utility properties under this method.' and in both estimates 'five year average unit prices' were applied. The estimate of the company's engineer was $540,000 and of the city's engineer, $392,000. The principal differences as given by the commission are shown in the margin. FN3 The commission disregarded both estimates and arrived at $360,000. It held that the best basis of valuation was the net investment, i. e., the total cost of the property less depreciation. It said:

FN3

		Company Engineer.	City Engineer.
1.	Preliminary costs.	$14,455	$1,000
2.	Water rights.	50,000	Nothing
3.	Cutting pavements over mains.	27,744	233
4.	Pipe lines from gravity springs.	22,072	15,442
5.	Laying cast iron street mains.	19,252	15,212
6.	Reproducing Ada springs.	18,558	13,027
7.	Superintendence and engineering.	20,515	13,621
8.	General contingent cost.	16,415	5,448
		$189,011	$63,983

'The books of the company show a total gross investment, since its organization, of $407,882, and that there has been charged off for depreciation from year to year the total sum of $83,445, leaving a net investment of

(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)

$324,427. * * * From an examination of the books * * * it appears that the records of the company have been remarkably well kept and preserved. It therefore seems that, when a plant is developed under these conditions, the net investment, which, of course, means the total gross investment less depreciation, is the very best basis of valuation for rate making purposes and that the other methods above referred to should ***688** be used only when it is impossible to arrive at the true investment. Therefore, after making due allowance for capital necessary for the conduct of the business and considering the plant as a going concern, it is the opinion of the commission that the fair value for the purpose of determining reasonable and just rates in this case of the property of the applicant company, used by it in the public service of supplying water to the city of Bluefield and its citizens, is the sum of $360,000, which sum is hereby fixed and determined by the commission to be the fair present value for the said purpose of determining the reasonable and just rates in this case.'

In its report in No. 368, the commission did not indicate the amounts respectively allowed for going value or working capital. If 10 per cent. be added for the former, and $10,000 for the latter (as fixed by the commission in the present case), there is produced $366,870, to be compared with $360,000, found by the commission in its valuation as of January 1, 1915. To this it added $92,520.53, expended since, producing $452,520.53. This may be compared with its final figure, $460,000.

The state Supreme Court of Appeals holds that the valuing of the property of a public utility corporation and prescribing rates are purely legislative acts, not subject to judicial review, except in so far as may be necessary to determine whether such rates are void on constitutional or other grounds, and that findings of fact by the commission based on evidence to support them will not be reviewed by the court. City of Bluefield v. Waterworks, 81 W. Va. 201, 204, 94 S. E. 121; Coal & Coke Co. v. Public Service Commission, 84 W. Va. 662, 678, 100 S. E. 557, 7 A. L. R. 108; Charleston v. Public Service Commission, 86 W. Va. 536, 103 S. E. 673.

In this case (89 W. Va. 736, 738, 110 S. E. 205, 206) it said:
'From the written opinion of the commission we find that it ascertained the value of the petitioner's property for rate making [then quoting the commission] 'after ***689** maturely and carefully considering the various methods presented for the ascertainment of fair value and giving such weight as seems proper to every element involved and all the facts and circumstances disclosed by the record.''

[2] [3] The record clearly shows that the commission, in arriving at its final figure, did not accord proper, if any, weight to the greatly enhanced costs of construction in 1920 over those prevailing about 1915 and before the war, as established by uncontradicted ****678** evidence; and the company's detailed estimated cost of reproduction new, less depreciation, at 1920 prices, appears to have been wholly disregarded. This was erroneous. Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri, 262 U. S. 276, 43 Sup. Ct. 544, 67 L. Ed. 981, decided May 21, 1923. Plaintiff in error is entitled under the due process clause of the Fourteenth Amendment to the independent judgment of the court as to both law and facts. Ohio Valley Co. v. Ben Avon Borough, 253 U. S. 287, 289, 40 Sup. Ct. 527, 64 L. Ed. 908, and cases cited.

We quote further from the court's opinion (89 W. Va. 739, 740, 110 S. E. 206):
'In our opinion the commission was justified by the law and by the facts in finding as a basis for rate making the sum of $460,000.00. * * * In our case of Coal & Coke Ry. Co. v. Conley, 67 W. Va. 129, it is said: 'It seems to be generally held that, in the absence of peculiar and extraordinary conditions, such as a more costly plant than the public service of the community requires, or the erection of a plant at an actual, though extravagant, cost, or the purchase of one at an exorbitant or inflated price, the actual amount of money invested is to be taken as the basis, and upon this a return must be allowed equivalent to that which is ordinarily received in the locality in which the business is done, upon capital invested in similar enterprises. In addition to this, consideration must be given to the nature of the investment, a higher rate ***690** being regarded as justified by the risk incident to a hazardous investment.'
'That the original cost considered in connection with the history and growth of the utility and the value of the services rendered constitute the principal elements to be considered in connection with rate making, seems to be supported by nearly all the authorities.'

[4] The question in the case is whether the rates prescribed in the commission's order are confiscatory and therefore beyond legislative power. Rates which are not sufficient to yield a reasonable return on the value of the property used at the time it is being used to render the service are unjust, unreasonable and confiscatory, and their enforcement deprives the public utility company of its property in violation of the Fourteenth Amendment. This is so well settled by numerous decisions of this court that citation of the cases is scarcely necessary:

(Cite as: P.U.R. 1923D 11, 43 S.Ct. 675)

'What the company is entitled to ask is a fair return upon the value of that which it employs for the public convenience.' Smyth v. Ames (1898) 169 U. S. 467, 547, 18 Sup. Ct. 418, 434 (42 L. Ed. 819).
'There must be a fair return upon the reasonable value of the property at the time it is being used for the public. * * * And we concur with the court below in holding that the value of the property is to be determined as of the time when the inquiry is made regarding the rates. If the property, which legally enters into the consideration of the question of rates, has increased in value since it was acquired, the company is entitled to the benefit of such increase.' Willcox v. Consolidated Gas Co. (1909) 212 U. S. 19, 41, 52, 29 Sup. Ct. 192, 200 (53 L. Ed. 382, 15 Ann. Cas. 1034, 48 L. R. A. [N. S.] 1134).
'The ascertainment of that value is not controlled by artificial rules. It is not a matter of formulas, but there must be a reasonable judgment having its basis in a proper consideration of all relevant facts.' Minnesota Rate Cases (1913) 230 U. S. 352, 434, 33 Sup. Ct. 729, 754 (57 L. Ed. 1511, 48 L. R. A. [N. S.] 1151, Ann. Cas. 1916A, 18).
***691** 'And in order to ascertain that value, the original cost of construction, the amount expended in permanent improvements, the amount and market value of its bonds and stock, the present as compared with the original cost of construction, the probable earning capacity of the property under particular rates prescribed by statute, and the sum required to meet operating expenses, are all matters for consideration, and are to be given such weight as may be just and right in each case. We do not say that there may not be other matters to be regarded in estimating the value of the property.' Smyth v. Ames, 169 U. S., 546, 547, 18 Sup. Ct. 434, 42 L. Ed. 819.
'* * * The making of a just return for the use of the property involves the recognition of its fair value if it be more than its cost. The property is held in private ownership and it is that property, and not the original cost of it, of which the owner may not be deprived without due process of law.'

Minnesota Rate Cases, 230 U. S. 454, 33 Sup. Ct. 762, 57 L. Ed. 1511, 48 L. R. A. (N. S.) 1151, Ann. Cas. 1916A, 18.

In Missouri ex rel. Southwestern Bell Telephone Co., v. Public Service Commission of Missouri, supra, applying the principles of the cases above cited and others, this court said:
'Obviously, the commission undertook to value the property without according any weight to the greatly enhanced costs of material, labor, supplies, etc., over those prevailing in 1913, 1914, and 1916. As matter of common knowledge, these increases were large. Competent witnesses estimated them as 45 to 50 per centum. * * * It is impossible to ascertain what will amount to a fair return upon properties devoted to public service, without giving consideration to the cost of labor, supplies, etc., at the time the investigation is made. An honest and intelligent forecast of probable future values, made upon a view of all the relevant circumstances, is essential. If the highly important element of present costs is wholly disregarded, such a forecast becomes impossible. Estimates for to-morrow cannot ignore prices of to-day.'

[5] ***692** It is clear that the court also failed to give proper consideration to the higher cost of construction in 1920 over that in 1915 and before the war, and failed to give weight to cost of reproduction less depreciation on the basis of 1920 prices, or to the testimony of the company's valuation engineer, based on present and past costs of construction, that the property in his opinion, was worth $900,000. The final figure, $460,000, was arrived ****679** at substantially on the basis of actual cost, less depreciation, plus 10 per cent. for going value and $10,000 for working capital. This resulted in a valuation considerably and materially less than would have been reached by a fair and just consideration of all the facts. The valuation cannot be sustained. Other objections to the valuation need not be considered.

3. Rate of return: The state commission found that the company's net annual income should be approximately $37,000, in order to enable it to earn 8 per cent. for return and depreciation upon the value of its property as fixed by it. Deducting 2 per cent. for depreciation, there remains 6 per cent. on $460,000, amounting to $27,600 for return. This was approved by the state court.

[6] The company contends that the rate of return is too low and confiscatory. What annual rate will constitute just compensation depeds upon many circumstances, and must be determined by the exercise of a fair and enlightened judgment, having regard to all relevant facts. A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding, risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in ***693** highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A

rate of return may be reasonable at one time and become too high or too low by changes affecting opportunities for investment, the money market and business conditions generally.

In 1909, this court, in Willcox v. Consolidated Gas Co., 212 U. S. 19, 48-50, 29 Sup. Ct. 192, 53 L. Ed. 382, 15 Ann. Cas. 1034, 48 L. R. A. (N. S.) 1134, held that the question whether a rate yields such a return as not to be confiscatory depends upon circumstances, locality and risk, and that no proper rate can be established for all cases; and that, under the circumstances of that case, 6 per cent. was a fair return on the value of the property employed in supplying gas to the city of New York, and that a rate yielding that return was not confiscatory. In that case the investment was held to be safe, returns certain and risk reduced almost to a minimum-as nearly a safe and secure investment as could be imagined in regard to any private manufacturing enterprise.

In 1912, in Cedar Rapids Gas Co. v. Cedar Rapids, 223 U. S. 655, 670, 32 Sup. Ct. 389, 56 L. Ed. 594, this court declined to reverse the state court where the value of the plant considerably exceeded its cost, and the estimated return was over 6 per cent.

In 1915, in Des Moines Gas Co. v. Des Moines, 238 U. S. 153, 172, 35 Sup. Ct. 811, 59 L. Ed. 1244, this court declined to reverse the United States District Court in refusing an injunction upon the conclusion reached that a return of 6 per cent. per annum upon the value would not be confiscatory.

In 1919, this court in Lincoln Gas Co. v. Lincoln, 250 U. S. 256, 268, 39 Sup. Ct. 454, 458 (63 L. Ed. 968), declined on the facts of that case to approve a finding that no rate yielding as much as 6 per cent. ***694** on the invested capital could be regarded as confiscatory. Speaking for the court, Mr. Justice Pitney said:
'It is a matter of common knowledge that, owing principally to the World War, the costs of labor and supplies of every kind have greatly advanced since the ordinance was adopted, and largely since this cause was last heard in the court below. And it is equally well known that annual returns upon capital and enterprise the world over have materially increased, so that what would have been a proper rate of return for capital invested in gas plants and similar public utilities a few years ago furnishes no safe criterion for the present or for the future.'

In 1921, in Brush Electric Co. v. Galveston, the United States District Court held 8 per cent. a fair rate of return. [FN4]

FN4 This case was affirmed by this court June 4, 1923, 262 U. S. 443, 43 Sup. Ct. 606, 67 L. Ed. 1076.

In January, 1923, in City of Minneapolis v. Rand, the Circuit Court of Appeals of the Eighth Circuit (285 Fed. 818, 830) sustained, as against the attack of the city on the ground that it was excessive, 7 1/2 per cent., found by a special master and approved by the District Court as a fair and reasonable return on the capital investment-the value of the property.

[7] Investors take into account the result of past operations, especially in recent years, when determining the terms upon which they will invest in such an undertaking. Low, uncertain, or irregular income makes for low prices for the securities of the utility and higher rates of interest to be demanded by investors. The fact that the company may not insist as a matter of constitutional right that past losses be made up by rates to be applied in the present and future tends to weaken credit, and the fact that the utility is protected against being compelled to serve for confiscatory rates tends to support it. In ***695** this case the record shows that the rate of return has been low through a long period up to the time of the inquiry by the commission here involved. For example, the average rate of return on the total cost of the property from 1895 to 1915, inclusive, was less than 5 per cent.; from 1911 to 1915, inclusive, about 4.4 per cent., without allowance for depreciation. In 1919 the net operating income was approximately $24,700, leaving $15,500, approximately, or 3.4 per cent. on $460,000 fixed by the commission, after deducting 2 per cent. for depreciation. In 1920, the net operating income was approximately $25,465, leaving $16,265 for return, after allowing for depreciation. Under the facts and circumstances indicated by the record, we think that a rate of return of 6 per cent. upon the value of the property is substantially too low to constitute just compensation for the use of the property employed to render the service.

The judgment of the Supreme Court of Appeals of West Virginia is reversed.

Mr. Justice BRANDEIS concurs in the judgment of reversal, for the reasons stated by him in Missouri ex rel. Southwestern Bell Telephone Co. v. Public Service Commission of Missouri, supra.
U.S. 1923
Bluefield Waterworks & Imp. Co. v. Public Service Commission of W. Va.

END OF DOCUMENT

Supreme Court of the United States
FEDERAL POWER COMMISSION et al.
v.
HOPE NATURAL GAS CO.
CITY OF CLEVELAND
v.
SAME.
Nos. 34 and 35.

Argued Oct. 20, 21, 1943.
Decided Jan. 3, 1944.

Separate proceedings before the Federal Power Commission by such Commission, by the City of Cleveland and the City of Akron, and by Pennsylvania Public Utility Commission wherein the State of West Virginia and its Public Service Commission were permitted to intervene concerning rates charged by Hope Natural Gas Company which were consolidated for hearing. An order fixing rates was reversed and remanded with directions by the Circuit Court of Appeals, 134 F.2d 287, and Federal Power Commission, City of Akron and Pennsylvania Public Utility Commission in one case and the City of Cleveland in another bring certiorari.

Reversed.

Mr. Justice REED, Mr. Justice FRANKFURTER and Mr. Justice JACKSON, dissenting.

On Writs of Certiorari to the United States Circuit Court of Appeals for the Fourth Circuit.

As respects rates for natural gas, from the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business, which includes service on the debt and dividends on stock, and by such standard the return to the equity owner should be commensurate with the terms on investments in other enterprises having corresponding risks, and such returns should be sufficient to assure confidence in the financial integrity of the enterprise so as to maintain its credit and to attract capital. Natural Gas Act, § § 4(a), 5(a), 15 U.S.C.A. § § 717c(a), 717d(a).

***593** Mr. Spencer W. Reeder, of Cleveland, Ohio, for petitioner City of cleveland.
Mr. William B. Cockley, of Cleveland, Ohio, for respondent.
Mr. M. M. Neeley, of Charleston, W. Va., for State of West Virginia, as amicus curiae by special leave of Court.

Mr. Justice DOUGLAS delivered the opinion of the Court.

The primary issue in these cases concerns the validity under the Natural Gas Act of 1938, 52 Stat. 821, 15 U.S.C. s 717 et seq., 15 U.S.C.A. s 717 et seq., of a rate order issued by the Federal Power Commission reducing the rates chargeable by Hope Natural Gas Co., 44 P.U.R.,N.S., 1. On a petition for review of the order made pursuant to s 19(b) of the Act, the ***594** Circuit Court of Appeals set it aside, one judge dissenting. 4 Cir., 134 F.2d 287. The cases ****284** are here on petitions for writs of certiorari which we granted because of the public importance of the questions presented. City of Cleveland v. Hope Natural Gas Co., 319 U.S. 735, 63 S.Ct. 1165.

Hope is a West Virginia corporation organized in 1898. It is a wholly owned subsidiary of Standard Oil Co. (N.J.). Since the date of its organization, it has been in the business of producing, purchasing and marketing natural gas in that state. [FN1] It sells some of that gas to local consumers in West Virginia. But the great bulk of it goes to five customer companies which receive it at the West Virginia line and distribute it in Ohio and in Pennsylvania. [FN2] In July, 1938, the cities of Cleveland and Akron filed complaints with the Commission charging that the rates collected by Hope from East Ohio Gas Co. (an affiliate of Hope which distributes gas in Ohio) were excessive and unreasonable. Later in 1938 the Commission on its own motion instituted an investigation to determine the reasonableness of all of Hope's interstate rates. In March ***595** 1939 the Public Utility Commission of Pennsylvania filed a complaint with the Commission charging that the rates collected by Hope from Peoples Natural Gas Co. (an affiliate of Hope distributing gas in Pennsylvania) and two non-affiliated companies were unreasonable. The City of Cleveland asked that the challenged rates be declared unlawful and that just and reasonable rates be determined from June 30, 1939 to the date of the Commission's order. The latter finding was requested in aid of state regulation and to afford the Public Utilities Commission of Ohio a proper basic for disposition of a fund collected by East Ohio under bond from Ohio consumers since June 30, 1939. The cases were consolidated and hearings were held.

FN1 Hope produces about one-third of its annual gas requirements and purchases the rest under some 300 contracts.

FN2 These five companies are the East Ohio Gas Co., the Peoples Natural Gas Co., the

River Gas Co., the Fayette County Gas Co., and the Manufacturers Light & Heat Co. The first three of these companies are, like Hope, subsidiaries of Standard Oil Co. (N.J.). East Ohio and River distribute gas in Ohio, the other three in Pennsylvania. Hope's approximate sales in m.c.f. for 1940 may be classified as follows:

Local West Virginia. sales.	11,000,000
East Ohio.	40,000,000
Peoples.	10,000,000
River.	400,000
Fayette.	860,000
Manufacturers.	2,000,000

Local West Virginia

Hope's natural gas is processed by Hope Construction & Refining Co., an affiliate, for the extraction of gasoline and butane. Domestic Coke Corp., another affiliate, sells coke-oven gas to Hope for boiler fuel.

On May 26, 1942, the Commission entered its order and made its findings. Its order required Hope to decrease its future interstate rates so as to reflect a reduction, on an annual basis of not less than $3,609,857 in operating revenues. And it established 'just and reasonable' average rates per m.c.f. for each of the five customer companies. FN3 In response to the prayer of the City of Cleveland the Commission also made findings as to the lawfulness of past rates, although concededly it had no authority under the Act to fix past rates or to award reparations. 44 P.U.R.,U.S., at page 34. It found that the rates collected by Hope from East Ohio were unjust, unreasonable, excessive and therefore unlawful, by $830,892 during 1939, $3,219,551 during 1940, and $2,815,789 on an annual basis since 1940. It further found that just, reasonable, and lawful rates for gas sold by Hope to East Ohio for resale for ultimate public consumption were those required ***596** to produce $11,528,608 for 1939, $11,507,185 for 1940 and $11.910,947 annually since 1940.

FN3 These required minimum reductions of 7¢ per m.c.f. from the 36.5¢ and 35.5¢ rates previously charged East Ohio and Peoples, respectively, and 3¢ per m.c.f. from the 31.5¢ rate previously charged Fayette and Manufacturers.

The Commission established an interstate rate base of $33,712,526 which, it found, represented the 'actual legitimate cost' of the company's interstate property less depletion and depreciation and plus unoperated acreage, working capital and future net capital additions. The Commission, beginning with book cost, made ****285** certain adjustments not necessary to relate here and found the 'actual legitimate cost' of the plant in interstate service to be $51,957,416, as of December 31, 1940. It deducted accrued depletion and depreciation, which it found to be $22,328,016 on an 'economic-service-life' basis. And it added $1,392,021 for future net capital additions, $566,105 for useful unoperated acreage, and $2,125,000 for working capital. It used 1940 as a test year to estimate future revenues and expenses. It allowed over $16,000,000 as annual operating expenses-about $1,300,000 for taxes, $1,460,000 for depletion and depreciation, $600,000 for exploration and development costs, $8,500,000 for gas purchased. The Commission allowed a net increase of $421,160 over 1940 operating expenses, which amount was to take care of future increase in wages, in West Virginia property taxes, and in exploration and development costs. The total amount of deductions allowed from interstate revenues was $13,495,584.

Hope introduced evidence from which it estimated reproduction cost of the property at $97,000,000. It also presented a so-called trended 'original cost' estimate which exceeded $105,000,000. The latter was designed 'to indicate what the original cost of the property would have been if 1938 material and labor prices had prevailed throughout the whole period of the piece-meal construction of the company's property since 1898.' 44 P.U.R.,N.S., at pages 8, 9. Hope estimated by the 'percent condition' method accrued depreciation at about 35% of ***597** reproduction cost new. On that basis Hope contended for a rate base of $66,000,000. The Commission refused to place any reliance on reproduction cost new, saying that it was 'not predicated upon facts' and was 'too conjectural and illusory to be given any weight in these proceedings.' Id., 44 P.U.R.,U.S., at page 8. It likewise refused to give any 'probative value' to trended 'original cost' since it was 'not founded in fact' but was 'basically erroneous' and produced 'irrational results.' Id., 44 P.U.R., N.S., at page 9. In determining the amount of accrued depletion and depreciation the Commission, following Lindheimer v. Illinois Bell

Telephone Co., 292 U.S. 151, 167-169, 54 S.Ct. 658, 664-666, 78 L.Ed. 1182; Federal Power Commission v. Natural Gas Pipeline Co., 315 U.S. 575, 592, 593, 62 S.Ct. 736, 745, 746, 86 L.Ed. 1037, based its computation on 'actual legitimate cost'. It found that Hope during the years when its business was not under regulation did not observe 'sound depreciation and depletion practices' but 'actually accumulated an excessive reserve' FN4 of about $46,000,000. Id., 44 P.U.R.,N.S., at page 18. One member of the Commission thought that the entire amount of the reserve should be deducted from 'actual legitimate cost' in determining the rate base. FN5 The majority of the ***598** Commission concluded, however, that where, as here, a business is brought under regulation for the first time and where incorrect depreciation and depletion practices have prevailed, the deduction of the reserve requirement (actual existing depreciation and depletion) rather than the excessive reserve should be made so as to ****286** lay 'a sound basis for future regulation and control of rates.' Id., 44 P.U.R.,N.S., at page 18. As we have pointed out, it determined accrued depletion and depreciation to be $22,328,016; and it allowed approximately $1,460,000 as the annual operating expense for depletion and depreciation. FN6

FN4 The book reserve for interstate plant amounted at the end of 1938 to about $18,000,000 more than the amount determined by the Commission as the proper reserve requirement. The Commission also noted that 'twice in the past the company has transferred amounts aggregating $7,500,000 from the depreciation and depletion reserve to surplus. When these latter adjustments are taken into account, the excess becomes $25,500,000, which has been exacted from the ratepayers over and above the amount required to cover the consumption of property in the service rendered and thus to keep the investment unimpaired.' 44 P.U.R.,N.S., at page 22.

FN5 That contention was based on the fact that 'every single dollar in the depreciation and depletion reserves' was taken 'from gross operating revenues whose only source was the amounts charged customers in the past for natural gas. It is, therefore, a fact that the depreciation and depletion reserves have been contributed by the customers and do not represent any investment by Hope.' Id., 44 P.U.R.,N.S., at page 40. And see Railroad Commission v. Cumberland Tel. & T. Co., 212 U.S. 414, 424, 425, 29 S.Ct. 357, 361, 362, 53 L.Ed. 577; 2 Bonbright, Valuation of Property (1937), p. 1139.

FN6 The Commission noted that the case was 'free from the usual complexities involved in the estimate of gas reserves because the geologists for the company and the Commission presented estimates of the remaining recoverable gas reserves which were about one per cent apart.' 44 P.U.R.,N.S., at pages 19, 20.

The Commission utilized the 'straight-line-basis' for determining the depreciation and depletion reserve requirements. It used estimates of the average service lives of the property by classes based in part on an inspection of the physical condition of the property. And studies were made of Hope's retirement experience and maintenance policies over the years. The average service lives of the various classes of property were converted into depreciation rates and then applied to the cost of the property to ascertain the portion of the cost which had expired in rendering the service.

The record in the present case shows that Hope is on the lookout for new sources of supply of natural gas and is contemplating an extension of its pipe line into Louisiana for that purpose. The Commission recognized in fixing the rates of depreciation that much material may be used again when various present sources of gas supply are exhausted, thus giving that property more than scrap value at the end of its present use.

Hope's estimate of original cost was about $69,735,000-approximately $17,000,000 more than the amount found by the Commission. The item of $17,000,000 was made up largely of expenditures which prior to December 31, 1938, were charged to operating expenses. Chief among those expenditures was some $12,600,000 expended ***599** in well-drilling prior to 1923. Most of that sum was expended by Hope for labor, use of drilling-rigs, hauling, and similar costs of well-drilling. Prior to 1923 Hope followed the general practice of the natural gas industry and charged the cost of drilling wells to operating expenses. Hope continued that practice until the Public Service Commission of West Virginia in 1923 required it to capitalize such expenditures, as does the Commission under its present Uniform System of Accounts. FN7 The Commission refused to add such items to the rate base stating that 'No greater injustice to consumers could be done than to allow items as operating expenses and at a later date include them in the rate base, thereby placing multiple charges upon the consumers.' Id., 44 P.U.R.,N.S., at page 12. For the same reason the Commission excluded from the rate base about $1,600,000 of expenditures on properties which Hope acquired from other utilities, the latter having charged those payments to operating expenses. The Commission disallowed certain other overhead items amounting to over $3,000,000 which also had been previously charged to operating expenses. And it refused to add some $632,000 as interest during construction since no interest was in fact paid.

FN7 See Uniform System of Accounts prescribed for Natural Gas Companies effective January 1, 1940, Account No. 332.1.

Hope contended that it should be allowed a return of not less than 8%. The Commission found that an 8% return would be unreasonable but that 6 1/2% was a fair rate of return. That rate of return, applied to the rate base of $33,712,526, would produce $2,191,314 annually, as compared with the present income of not less than $5,801,171.

The Circuit Court of Appeals set aside the order of the Commission for the following reasons. (1) It held that the rate base should reflect the 'present fair value' of the ***600** property, that the Commission in determining the 'value' should have considered reproduction cost and trended original cost, and that 'actual legitimate cost' (prudent investment) was not the proper measure of 'fair value' where price levels had changed since the investment. (2) It concluded that the well-drilling costs and overhead items in the amount of some $17,000,000 should have been included in the rate base. (3) It held that accrued depletion and depreciation and the annual allowance for that expense should be computed on the basis of 'present fair value' of the property not on the basis of 'actual legitimate cost'.

****287** The Circuit Court of Appeals also held that the Commission had no power to make findings as to past rates in aid of state regulation. But it concluded that those findings were proper as a step in the process of fixing future rates. Viewed in that light, however, the findings were deemed to be invalidated by the same errors which vitiated the findings on which the rate order was based.

Order Reducing Rates. Congress has provided in s 4(a) of the Natural Gas Act that all natural gas rates subject to the jurisdiction of the Commission 'shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful.' Sec. 5(a) gives the Commission the power, after hearing, to determine the 'just and reasonable rate' to be thereafter observed and to fix the rate by order. Sec. 5(a) also empowers the Commission to order a 'decrease where existing rates are unjust * * * unlawful, or are not the lowest reasonable rates.' And Congress has provided in s 19(b) that on review of these rate orders the 'finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive.' Congress, however, has provided no formula by which the 'just and reasonable' rate is to be determined. It has not filled in the ***601** details of the general prescription [FN8] of s 4(a) and s 5(a). It has not expressed in a specific rule the fixed principle of 'just and reasonable'.

FN8. Sec. 6 of the Act comes the closest to supplying any definite criteria for rate making. It provides in subsection (a) that, 'The Commission may investigate the ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.' Subsection (b) provides that every natural-gas company on request shall file with the Commission a statement of the 'original cost' of its property and shall keep the Commission informed regarding the 'cost' of all additions, etc.

[1] [2] When we sustained the constitutionality of the Natural Gas Act in the Natural Gas Pipeline Co. case, we stated that the 'authority of Congress to regulate the prices of commodities in interstate commerce is at least as great under the Fifth Amendment as is that of the states under the Fourteenth to regulate the prices of commodities in intrastate commerce.' 315 U.S. at page 582, 62 S.Ct. at page 741, 86 L.Ed. 1037. Rate-making is indeed but one species of price-fixing. Munn v. Illinois, 94 U.S. 113, 134, 24 L.Ed. 77. The fixing of prices, like other applications of the police power, may reduce the value of the property which is being regulated. But the fact that the value is reduced does not mean that the regulation is invalid. Block v. Hirsh, 256 U.S. 135, 155-157, 41 S.Ct. 458, 459, 460, 65 L.Ed. 865, 16 A.L.R. 165; Nebbia v. New York, 291 U.S. 502, 523-539, 54 S.Ct. 505, 509-517, 78 L.Ed. 940, 89 A.L.R. 1469, and cases cited. It does, however, indicate that 'fair value' is the end product of the process of rate-making not the starting point as the Circuit Court of Appeals held. The heart of the matter is that rates cannot be made to depend upon 'fair value' when the value of the going enterprise depends on earnings under whatever rates may be anticipated. [FN9]

FN9 We recently stated that the meaning of the word 'value' is to be gathered 'from the purpose for which a valuation is being made. Thus the question in a valuation for rate making is how much a utility will be allowed to earn. The basic question in a valuation for reorganization purposes is how much the enterprise in all probability can earn.' Institutional Investors v. Chicago, M., St. P. & P.R. Co., 318 U.S. 523, 540, 63 S.Ct. 727, 738.

***602** [3] [4] [5] [6] [7] We held in Federal Power Commission v. Natural Gas Pipeline Co., supra, that the Commission was not bound to the use of any single formula or combination of formulae in determining rates. Its rate-making function, moreover, involves the making of 'pragmatic adjustments.' Id., 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. And when the Commission's order is challenged in the courts, the question is whether that order 'viewed in its entirety' meets the requirements of the Act. Id., 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. Under the statutory standard of 'just and reasonable' it is the result reached not the method employed which is controlling. Cf. ****288**Los Angeles Gas & Electric Corp. v. Railroad Commission, 289 U.S. 287, 304, 305, 314, 53 S.Ct. 637, 643, 644, 647, 77 L.Ed. 1180; West Ohio Gas Co. v. Public Utilities Commission (No. 1), 294 U.S. 63, 70, 55 S.Ct. 316, 320, 79 L.Ed. 761; West v. Chesapeake & Potomac Tel. Co., 295 U.S. 662, 692, 693, 55 S.Ct. 894, 906, 907, 79 L.Ed. 1640 (dissenting opinion). It is not theory but the impact of the rate order which counts. If the total effect of the rate order cannot be said to be unjust and unreasonable, judicial inquiry under the Act is at an end. The fact that the method employed to reach that result may contain infirmities is not then important. Moreover, the Commission's order does not become suspect by reason of the fact that it is challenged. It is the product of expert judgment which carries a presumption of validity. And he who would upset the rate order under the Act carries the heavy burden of making a convincing showing that it is invalid because it is unjust and unreasonable in its consequences. Cf. Railroad Commission v. Cumberland Tel. & T. Co., 212 U.S. 414, 29 S.Ct. 357, 53 L.Ed. 577; Lindheimer v. Illinois Bell Tel. Co., supra, 292 U.S. at pages 164, 169, 54 S.Ct. at pages 663, 665, 78 L.Ed. 1182; Railroad Commission v. Pacific Gas & E. Co., 302 U.S. 388, 401, 58 S.Ct. 334, 341, 82 L.Ed. 319.

***603** [8] [9] The rate-making process under the Act, i.e., the fixing of 'just and reasonable' rates, involves a balancing of the investor and the consumer interests. Thus we stated in the Natural Gas Pipeline Co. case that 'regulation does not insure that the business shall produce net revenues.' 315 U.S. at page 590, 62 S.Ct. at page 745, 86 L.Ed. 1037. But such considerations aside, the investor interest has a legitimate concern with the financial integrity of the company whose rates are being regulated. From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. Cf. Chicago & Grand Trunk R. Co. v. Wellman, 143 U.S. 339, 345, 346, 12 S.Ct. 400, 402, 36 L.Ed. 176. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital. See State of Missouri ex rel. South-western Bell Tel. Co. v. Public Service Commission, 262 U.S. 276, 291, 43 S.Ct. 544, 547, 67 L.Ed. 981, 31 A.L.R. 807 (Mr. Justice Brandeis concurring). The conditions under which more or less might be allowed are not important here. Nor is it important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at. For we are of the view that the end result in this case cannot be condemned under the Act as unjust and unreasonable from the investor or company viewpoint.

We have already noted that Hope is a wholly owned subsidiary of the Standard Oil Co. (N.J.). It has no securities outstanding except stock. All of that stock has been owned by Standard since 1908. The par amount presently outstanding is approximately $28,000,000 as compared with the rate base of $33,712,526 established by ***604** the Commission. Of the total outstanding stock $11,000,000 was issued in stock dividends. The balance, or about $17,000,000, was issued for cash or other assets. During the four decades of its operations Hope has paid over $97,000,000 in cash dividends. It had, moreover, accumulated by 1940 an earned surplus of about $8,000,000. It had thus earned the total investment in the company nearly seven times. Down to 1940 it earned over 20% per year on the average annual amount of its capital stock issued for cash or other assets. On an average invested capital of some $23,000,000 Hope's average earnings have been about 12% a year. And during this period it had accumulated in addition reserves for depletion and depreciation of about $46,000,000. Furthermore, during 1939, 1940 and 1941, Hope paid dividends of 10% on its stock. And in the year 1942, during about half of which the lower rates were in effect, it paid dividends of 7 1/2%. From 1939-1942 its earned surplus increased from $5,250,000 to about $13,700,000, i.e., to almost half the par value of its outstanding stock.

As we have noted, the Commission fixed a rate of return which permits Hope to earn $2,191,314 annually. In determining that amount it stressed the importance of maintaining the financial integrity of the ****289** company. It considered the financial history of Hope and a vast array of data bearing on the natural gas industry, related businesses, and general economic conditions. It noted that the yields on better issues of bonds of natural gas companies sold in the last few years were 'close to 3 per cent', 44 P.U.R.,N.S., at page 33. It stated that the company was a 'seasoned enterprise whose risks have been minimized' by adequate provisions for depletion and depreciation (past and present) with 'concurrent high profits', by 'protected established markets, through affiliated distribution companies, in populous and industralized areas', and by a supply of gas locally to meet all requirements,***605** 'except on certain peak days in the winter, which it is feasible to supplement in the future with gas from other sources.' Id., 44 P.U.R.,N.S., at page 33. The Commission concluded, 'The company's efficient management, established markets, financial record, affiliations, and its prospective business place it in a strong position to attract capital upon favorable terms when it is required.' Id., 44 P.U.R.,N.S., at page 33.

[10] [11] [12] In view of these various considerations we cannot say that an annual return of $2,191,314 is not 'just and reasonable' within the meaning of the Act. Rates which enable the company to operate successfully, to maintain its financial integrity, to attract capital, and to compensate its investors for the risks assumed certainly cannot be condemned as invalid, even though they might produce only a meager return on the so-called 'fair value' rate base. In that connection it will be recalled that Hope contended for a rate base of $66,000,000 computed on reproduction cost new. The Commission points out that if that rate base were accepted, Hope's average rate of return for the four-year period from 1937-1940 would amount to 3.27%. During that period Hope earned an annual average return of about 9% on the average investment. It asked for no rate increases. Its properties were well maintained and operated. As the Commission says such a modest rate of 3.27% suggests an 'inflation of the base on which the rate has been computed.' Dayton Power & Light Co. v. Public Utilities Commission, 292 U.S. 290, 312, 54 S.Ct. 647, 657, 78 L.Ed. 1267. Cf. Lindheimer v. Illinois Bell Tel. Co., supra, 292 U.S. at page 164, 54 S.Ct. at page 663, 78 L.Ed. 1182. The incongruity between the actual operations and the return computed on the basis of reproduction cost suggests that the Commission was wholly justified in rejecting the latter as the measure of the rate base.

In view of this disposition of the controversy we need not stop to inquire whether the failure of the Commission to add the $17,000,000 of well-drilling and other costs to ***606** the rate base was consistent with the prudent investment theory as developed and applied in particular cases.

[13] [14] [15] Only a word need be added respecting depletion and depreciation. We held in the Natural Gas Pipeline Co. case that there was no constitutional requirement 'that the owner who embarks in a wasting-asset business of limited life shall receive at the end more than he has put into it.' 315 U.S. at page 593, 62 S.C. at page 746, 86 L.Ed. 1037. The Circuit Court of Appeals did not think that that rule was applicable here because Hope was a utility required to continue its service to the public and not scheduled to end its business on a day certain as was stipulated to be true of the Natural Gas Pipeline Co. But that distinction is quite immaterial. The ultimate exhaustion of the supply is inevitable in the case of all natural gas companies. Moreover, this Court recognized in Lindheimer v. Illinois Bell Tel. Co., supra, the propriety of basing annual depreciation on cost. [FN10] By such a procedure the ****290** utility is made whole and the integrity of its investment maintained. [FN11] No more is required. [FN12] We cannot approve the contrary holding ***607** of United Railways & Electric Co. v. West, 280 U.S. 234, 253, 254, 50 S.Ct. 123, 126, 127, 74 L.Ed. 390. Since there are no constitutional requirements more exacting than the standards of the Act, a rate order which conforms to the latter does not run afoul of the former.

FN10 Chief Justice Hughes said in that case (292 U.S. at pages 168, 169, 54 S.Ct. at page 665, 78 L.Ed. 1182): 'If the predictions of service life were entirely accurate and retirements were made when and as these predictions were precisely fulfilled, the depreciation reserve would represent the consumption of capital, on a cost basis, according to the method which spreads that loss over the respective service periods. But if the amounts charged to operating expenses and credited to the account for depreciation reserve are excessive, to that extent subscribers for the telephone service are required to provide, in effect, capital contributions, not to make good losses incurred by the utility in the service rendered and thus to keep its investment unimpaired, but to secure additional plant and equipment upon which the utility expects a return.'

FN11 See Mr. Justice Brandeis (dissenting) in United Railways & Electric Co. v. West, 280 U.S. 234, 259-288, 50 S.Ct. 123, 128-138, 74 L.Ed. 390, for an extended analysis of the problem.

FN12 It should be noted that the Act provides no specific rule governing depletion and depreciation. Sec. 9(a) merely states that the

Commission 'may from time to time ascertain and determine, and by order fix, the proper and adequate rates of depreciation and amortization of the several classes of property of each natural-gas company used or useful in the production, transportation, or sale of natural gas.'

The Position of West Virginia. The State of West Virginia, as well as its Public Service Commission, intervened in the proceedings before the Commission and participated in the hearings before it. They have also filed a brief amicus curiae here and have participated in the argument at the bar. Their contention is that the result achieved by the rate order 'brings consequences which are unjust to West Virginia and its citizens' and which 'unfairly depress the value of gas, gas lands and gas leaseholds, unduly restrict development of their natural resources, and arbitrarily transfer their properties to the residents of other states without just compensation therefor.'

West Virginia points out that the Hope Natural Gas Co. holds a large number of leases on both producing and unoperated properties. The owner or grantor receives from the operator or grantee delay rentals as compensation for postponed drilling. When a producing well is successfully brought in, the gas lease customarily continues indefinitely for the life of the field. In that case the operator pays a stipulated gas-well rental or in some cases a gas royalty equivalent to one-eighth of the gas marketed. [FN13] Both the owner and operator have valuable property interests in the gas which are separately taxable under West Virginia law. The contention is that the reversionary interests in the leaseholds should be represented in the rate proceedings since it is their gas which is being sold in interstate ***608** commerce. It is argued, moreover, that the owners of the reversionary interests should have the benefit of the 'discovery value' of the gas leaseholds, not the interstate consumers. Furthermore, West Virginia contends that the Commission in fixing a rate for natural gas produced in that State should consider the effect of the rate order on the economy of West Virginia. It is pointed out that gas is a wasting asset with a rapidly diminishing supply. As a result West Virginia's gas deposits are becoming increasingly valuable. Nevertheless the rate fixed by the Commission reduces that value. And that reduction, it is said, has severe repercussions on the economy of the State. It is argued in the first place that as a result of this rate reduction Hope's West Virginia property taxes may be decreased in view of the relevance which earnings have under West Virginia law in the assessment of property for tax purposes. [FN14] Secondly, it is pointed out that West Virginia has a production tax [FN15] on the 'value' of the gas exported from the State. And we are told that for purposes of that tax 'value' becomes under West Virginia law 'practically the substantial equivalent of market value.' Thus West Virginia argues that undervaluation of Hope's gas leaseholds will cost the State many thousands of dollars in taxes. The effect, it is urged, is to impair West Virginia's tax structure for the benefit of Ohio and Pennsylvania consumers. West Virginia emphasizes, moreover, its deep interest in the conservation of its natural resources including its natural gas. It says that a reduction of the value of these leasehold values will jeopardize these conservation policies in three respects: (1) ****291** exploratory development of new fields will be discouraged; (2) abandonment of lowyield high-cost marginal wells will be hastened; and (3) secondary recovery of oil will be hampered. ***609** Furthermore, West Virginia contends that the reduced valuation will harm one of the great industries of the State and that harm to that industry must inevitably affect the welfare of the citizens of the State. It is also pointed out that West Virginia has a large interest in coal and oil as well as in gas and that these forms of fuel are competitive. When the price of gas is materially cheapened, consumers turn to that fuel in preference to the others. As a result this lowering of the price of natural gas will have the effect of depreciating the price of West Virginia coal and oil.

FN13 See Simonton, The Nature of the Interest of the Grantee Under an Oil and Gas Lease (1918), 25 W.Va.L.Quar. 295.

FN14 West Penn Power Co. v. Board of Review, 112 W.Va. 442, 164 S.E. 862.

FN15 W.Va.Rev.Code of 1943, ch. 11. Art. 13, ss 2a, 3a.

West Virginia insists that in neglecting this aspect of the problem the Commission failed to perform the function which Congress entrusted to it and that the case should be remanded to the Commission for a modification of its order. [FN16]

FN16 West Virginia suggests as a possible solution (1) that a 'going concern value' of the company's tangible assets be included in the rate base and (2) that the fair market value of gas delivered to customers be added to the outlay for operating expenses and taxes.

We have considered these contentions at length in view of the earnestness with which they have been urged upon us. We have searched the legislative history of the Natural

Gas Act for any indication that Congress entrusted to the Commission the various considerations which West Virginia has advanced here. And our conclusion is that Congress did not.

[16] [17] We pointed out in Illinois Natural Gas Co. v. Central Illinois Public Service Co., 314 U.S. 498, 506, 62 S.Ct. 384, 387, 86 L.Ed. 371, that the purpose of the Natural Gas Act was to provide, 'through the exercise of the national power over interstate commerce, an agency for regulating the wholesale distribution to public service companies of natural gas moving interstate, which this Court had declared to be interstate commerce not subject to certain types of state regulation.' As stated in the House Report the 'basic purpose' of this legislation was 'to occupy' the field in which such cases as ***610**State of Missouri v. Kansas Natural Gas Co., 265 U.S. 298, 44 S.Ct. 544, 68 L.Ed. 1027, and Public Utilities Commission v. Attleboro Steam & Electric Co., 273 U.S. 83, 47 S.Ct. 294, 71 L.Ed. 549, had held the States might not act. H.Rep. No. 709, 75th Cong., 1st Sess., p. 2. In accomplishing that purpose the bill was designed to take 'no authority from State commissions' and was 'so drawn as to complement and in no manner usurp State regulatory authority.' Id., p. 2. And the Federal Power Commission was given no authority over the 'production or gathering of natural gas.' s 1(b).

[18] The primary aim of this legislation was to protect consumers against exploitation at the lands of natural gas companies. Due to the hiatus in regulation which resulted from the Kansas Natural Gas Co. case and related decisions state commissions found it difficult or impossible to discover what it cost interstate pipe-line companies to deliver gas within the consuming states; and thus they were thwarted in local regulation. H.Rep., No. 709, supra, p. 3. Moreover, the investigations of the Federal Trade Commission had disclosed that the majority of the pipe-line mileage in the country used to transport natural gas, together with an increasing percentage of the natural gas supply for pipe-line transportation, had been acquired by a handful of holding companies. [FN17] State commissions, independent producers, and communities having or seeking the service were growing quite helpless against these combinations. [FN18] These were the types of problems with which those participating in the hearings were pre-occupied. [FN19] Congress addressed itself to those specific evils.

FN17 S.Doc. 92, Pt. 84-A, ch. XII, Final Report, Federal Trade Commission to the Senate pursuant to S.Res.No. 83, 70th Cong., 1st Sess.

FN18 S.Doc. 92, Pt. 84-A, chs. XII, XIII, op. cit., supra, note 17.

FN19 See Hearings on H.R. 11662, Subcommittee of House Committee on Interstate & Foreign Commerce, 74th Cong., 2d Sess.; Hearings on H.R. 4008, House Committee on Interstate & Foreign Commerce, 75th Cong., 1st Sess.

611** The Federal Power Commission was given*292** broad powers of regulation. The fixing of 'just and reasonable' rates (s 4) with the powers attendant thereto [FN20] was the heart of the new regulatory system. Moreover, the Commission was given certain authority by s 7(a), on a finding that the action was necessary or desirable 'in the public interest,' to require natural gas companies to extend or improve their transportation facilities and to sell gas to any authorized local distributor. By s 7(b) it was given control over the abandonment of facilities or of service. And by s 7(c), as originally enacted, no natural gas company could undertake the construction or extension of any facilities for the transportation of natural gas to a market in which natural gas was already being served by another company, or sell any natural gas in such a market, without obtaining a certificate of public convenience and necessity from the Commission. In passing on such applications for certificates of convenience and necessity the Commission was told by s 7(c), as originally enacted, that it was 'the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.' The latter provision was deleted from s 7(c) when that subsection was amended by the Act of February 7, 1942, 56 Stat. 83. By that amendment limited grandfather rights were granted companies desiring to extend their facilities and services over the routes or within the area which they were already serving. Moreover, s 7(c) was broadened so as to require certificates***612** of public convenience and necessity not only where the extensions were being made to markets in which natural gas was already being sold by another company but in other situations as well.

FN20 The power to investigate and ascertain the 'actual legitimate cost' of property (s 6), the requirement as to books and records (s 8), control over rates of depreciation (s 9), the requirements for periodic and special reports (s 10), the broad powers of investigation (s 14) are among the chief powers supporting the rate making function.

[19] These provisions were plainly designed to protect the consumer interests against exploitation at the hands of private natural gas companies. When it comes to cases of abandonment or of extensions of facilities or service, we may assume that, apart from the express exemptions FN21 contained in s 7, considerations of conservation are material to the issuance of certificates of public convenience and necessity. But the Commission was not asked here for a certificate of public convenience and necessity under s 7 for any proposed construction or extension. It was faced with a determination of the amount which a private operator should be allowed to earn from the sale of natural gas across state lines through an established distribution system. Secs. 4 and 5, not s 7, provide the standards for that determination. We cannot find in the words of the Act or in its history the slightest intimation or suggestion that the exploitation of consumers by private operators through the maintenance of high rates should be allowed to continue provided the producing states obtain indirect benefits from it. That apparently was the Commission's view of the matter, for the same arguments advanced here were presented to the Commission and not adopted by it.

FN21 Apart from the grandfather clause contained in s 7(c), there is the provision of s 7(f) that a natural gas company may enlarge or extend its facilities with the 'service area' determined by the Commission without any further authorization.

We do not mean to suggest that Congress was unmindful of the interests of the producing states in their natural gas supplies when it drafted the Natural Gas Act. As we have said, the Act does not intrude on the domain traditionally reserved for control by state commissions; and the Federal Power Commission was given no authority over***613** 'the production or gathering of natural gas.' s 1(b). In addition, Congress recognized the legitimate interests of the States in the conservation of natural gas. By s 11 Congress instructed the Commission to make reports on compacts between two or more States dealing with the conservation, production and transportation of natural gas. FN22 The Commission was also ****293** directed to recommend further legislation appropriate or necessary to carry out any proposed compact and 'to aid in the conservation of natural-gas resources within the United States and in the orderly, equitable, and economic production, transportation, and distribution of natural gas.' s 11(a). Thus Congress was quite aware of the interests of the producing states in their natural gas supplies. FN23 But it left the protection of ***614** those interests to measures other than the maintenance of high rates to private companies. If the Commission is to be compelled to let the stockholders of natural gas companies have a feast so that the producing states may receive crumbs from that table, the present Act must be redesigned. Such a project raises questions of policy which go beyond our province.

FN22 See P.L. 117, approved July 7, 1943, 57 Stat. 383 containing an 'Interstate Compact to Conserve Oil and Gas' between Oklahoma, Texas, New Mexico, Illinois, Colorado, and Kansas.

FN23 As we have pointed out, s 7(c) was amended by the Act of February 7, 1942, 56 Stat. 83, so as to require certificates of public convenience and necessity not only where the extensions were being made to markets in which natural gas was already being sold by another company but to other situations as well. Considerations of conservation entered into the proposal to give the Act that broader scope. H.Rep.No. 1290, 77th Cong. 1st Sess., pp. 2, 3. And see Annual Report, Federal Power Commission (1940) pp. 79, 80; Baum, The Federal Power Commission and State Utility Regulation (1942), p. 261.

The bill amending s 7(c) originally contained a subsection (h) reading as follows: 'Nothing contained in this section shall be construed to affect the authority of a State within which natural gas is produced to authorize or require the construction or extension of facilities for the transportation and sale of such gas within such State: Provided, however, That the Commission, after a hearing upon complaint or upon its own motion, may by order forbid any intrastate construction or extension by any natural-gas company which it shall find will prevent such company from rendering adequate service to its customers in interstate or foreign commerce in territory already being served.' See Hearings on H.R. 5249, House Committee on Interstate & Foreign Commerce, 77th Cong., 1st Sess., pp. 7, 11, 21, 29, 32, 33. In explanation of its deletion the House Committee Report stated, pp. 4, 5: 'The increasingly important problems raised by the desire of several States to regulate the use of the natural gas produced therein in the interest of consumers within such States, as against the Federal power to regulate interstate commerce in the interest of both interstate and intrastate consumers, are deemed by the committee to warrant further intensive study and probably a more retailed and comprehensive plan for the handling thereof than that which would have been provided by the stricken subsection.'

[20] It is hardly necessary to add that a limitation on the net earnings of a natural gas company from its interstate business is not a limitation on the power of the producing state either to safeguard its tax revenues from that industry FN24 or to protect the interests of those who sell their gas to the interstate operator. FN25 The return which **294 the Commission*615 allowed was the net return after all such charges.

FN24 We have noted that in the annual operating expenses of some $16,000.000 the Commission included West Virginia and federal taxes. And in the net increase of $421,160 over 1940 operating expenses allowed by the Commission was some $80,000 for increased West Virginia property taxes. The adequacy of these amounts has not been challenged here.

FN25 The Commission included in the aggregate annual operating expenses which it allowed some $8,500,000 for gas purchased. It also allowed about $1,400,000 for natural gas production and about $600,000 for exploration and development.

It is suggested, however, that the Commission in ascertaining the cost of Hope's natural gas production plant proceeded contrary to s 1(b) which provides that the Act shall not apply to 'the production or gathering of natural gas'. But such valuation, like the provisions for operating expenses, is essential to the rate-making function as customarily performed in this country. Cf. Smith, The Control of Power Rates in the United States and England (1932), 159 The Annals 101. Indeed s 14(b) of the Act gives the Commission the power to 'determine the propriety and reasonableness of the inclusion in operating expenses, capital, or surplus of all delay rentals or other forms of rental or compensation for unoperated lands and leases.'

It is suggested that the Commission has failed to perform its duty under the Act in that it has not allowed a return for gas production that will be enough to induce private enterprise to perform completely and efficiently its functions for the public. The Commission, however, was not oblivious of those matters. It considered them. It allowed, for example, delay rentals and exploration and development costs in operating expenses. FN26 No serious attempt has been made here to show that they are inadequate. We certainly cannot say that they are, unless we are to substitute our opinions for the expert judgment of the administrators to whom Congress entrusted the decision. Moreover, if in light of experience they turn out to be inadequate for development of new sources of supply, the doors of the Commission are open for increased allowances. This is not an order for all time. The Act contains machinery for obtaining rate adjustments. s 4.

FN26 See note 25, supra.

[21] [22] But it is said that the Commission placed too low a rate on gas for industrial purposes as compared with gas for domestic purposes and that industrial uses should be discouraged. It should be noted in the first place that the rates which the Commission has fixed are Hope's interstate wholesale rates to distributors not interstate rates to industrial users FN27 and domestic consumers. We hardly *616 can assume, in view of the history of the Act and its provisions, that the resales intrastate by the customer companies which distribute the gas to ultimate consumers in Ohio and Pennsylvania are subject to the rate-making powers of the Commission. FN28 But in any event those rates are not in issue here. Moreover, we fail to find in the power to fix 'just and reasonable' rates the power to fix rates which will disallow or discourage resales for industrial use. The Committee Report stated that the Act provided 'for regulation along recognized and more or less standardized lines' and that there was 'nothing novel in its provisions'. H.Rep.No.709, supra, p. 3. Yet if we are now to tell the Commission to fix the rates so as to discourage particular uses, we would indeed be injecting into a rate case a 'novel' doctrine which has no express statutory sanction. The same would be true if we were to hold that the wasting-asset nature of the industry required the maintenance of the level of rates so that natural gas companies could make a greater profit on each unit of gas sold. Such theories of rate-making for this industry may or may not be desirable. The difficulty is that s 4(a) and s 5(a) contain only the conventional standards of rate-making for natural gas companies. FN29 The *617 Act of February 7, 1942, by broadening s 7 gave the Commission some additional authority to deal with the conservation aspects of the problem. FN30 But s 4(a) and s 5(a) were not changed. If the standard**295 of 'just and reasonable' is to sanction the maintenance of high rates by a natural gas company because they restrict the use of natural gas for certain purposes, the Act must be further amended.

FN27 The Commission has expressed doubts over its power to fix rates on 'direct sales to industries' from interstate pipelines as distinguished from 'sales for resale to the industrial customers of distributing companies.' Annual Report, Federal Power Commission (1940), p. 11.

FN28. Sec. 1(b) of the Act provides: 'The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.' And see s 2(6), defining a 'natural-gas company', and H.Rep.No. 709, supra, pp. 2, 3.

FN29 The wasting-asset characteristic of the industry was recognized prior to the Act as requiring the inclusion of a depletion allowance among operating expenses. See Columbus Gas & Fuel Co. v. Public Utilities Commission, 292 U.S. 398, 404, 405, 54 S.Ct. 763, 766, 767, 78 L.Ed. 1327, 91 A.L.R. 1403. But no such theory of rate-making for natural gas companies as is now suggested emerged from the cases arising during the earlier period of regulation.

FN30 The Commission has been alert to the problems of conservation in its administration of the Act. It has indeed suggested that it might be wise to restrict the use of natural gas 'by functions rather than by areas.' Annual Report (1940) p. 79.

The Commission stated in that connection that natural gas was particularly adapted to certain industrial uses. But it added that the general use of such gas 'under boilers for the production of steam' is 'under most circumstances of very questionable social economy.' Ibid.

[23] [24] It is finally suggested that the rates charged by Hope are discriminatory as against domestic users and in favor of industrial users. That charge is apparently based on s 4(b) of the Act which forbids natural gas companies from maintaining 'any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.' The power of the Commission to eliminate any such unreasonable differences or discriminations is plain. s 5(a). The Commission, however, made no findings under s 4(b). Its failure in that regard was not challenged in the petition to review. And it has not been raised or argued here by any party. Hence the problem of discrimination has no proper place in the present decision. It will be time enough to pass on that issue when it is presented to us. Congress has entrusted the administration of the Act to the Commission not to the courts. Apart from the requirements of judicial review it is not ***618** for us to advise the Commission how to discharge its functions.

Findings as to the Lawfulness of Past Rates. As we have noted, the Commission made certain findings as to the lawfulness of past rates which Hope had charged its interstate customers. Those findings were made on the complaint of the City of Cleveland and in aid of state regulation. It is conceded that under the Act the Commission has no power to make reparation orders. And its power to fix rates admittedly is limited to those 'to be thereafter observed and in force.' s 5(a). But the Commission maintains that it has the power to make findings as to the lawfulness of past rates even though it has no power to fix those rates. [FN31] However that may be, we do not think that these findings were reviewable under s 19(b) of the Act. That section gives any party 'aggrieved by an order' of the Commission a review 'of such order' in the circuit court of appeals for the circuit where the natural gas company is located or has its principal place of business or in the United States Court of Appeals for the District of Columbia. We do not think that the findings in question fall within that category.

FN31 The argument is that s 4(a) makes 'unlawful' the charging of any rate that is not just and reasonable. And s 14(a) gives the Commission power to investigate any matter 'which it may find necessary or proper in order to determine whether any person has violated' any provision of the Act. Moreover, s 5(b) gives the Commission power to investigate and determine the cost of production or transportation of natural gas in cases where it has 'no authority to establish a rate governing the transportation or sale of such natural gas.' And s 17(c) directs the Commission to 'make available to the several State commissions such information and reports as may be of assistance in State regulation of natural-gas companies.' For a discussion of these points by the Commission see 44 P.U.R.,N.S., at pages 34, 35.

[25] [26] The Court recently summarized the various types of administrative action or determination reviewable as orders under the Urgent Deficiencies Act of October 22, ***619** 1913, 28 U.S.C. ss 45, 47a, 28 U.S.C.A. ss 45, 47a, and kindred statutory provisions. Rochester Tel. Corp. v. United States, 307 U.S. 125, 59 S.Ct. 754, 83 L.Ed. 1147. It was there pointed out that where 'the order sought to be reviewed does not of itself adversely affect complainant but only affects his rights adversely on the contingency of future administrative action', it is not

reviewable. Id., 307 U.S. at page 130, 59 S.Ct. at page 757, 83 L.Ed. 1147. The Court said, 'In view of traditional conceptions of federal judicial power, resort to the courts in these situations is either premature or wholly beyond their province.' **296Id., 307 U.S. at page 130, 59 S.Ct. at page 757, 83 L.Ed. 1147. And see United States v. Los Angeles s.l.r. c/o., 273 U.S. 299, 309, 310, 47 S.Ct. 413, 414, 415, 71 L.Ed. 651; Shannahan v. United States, 303 U.S. 596, 58 S.Ct. 732, 82 L.Ed. 1039. These considerations are apposite here. The Commission has no authority to enforce these findings. They are 'the exercise solely of the function of investigation.' United States v. Los Angeles & S.L.R. Co., supra, 273 U.S. at page 310, 47 S.Ct. at page 414, 71 L.Ed. 651. They are only a preliminary, interim step towards possible future action-action not by the Commission but by wholly independent agencies. The outcome of those proceedings may turn on factors other than these findings. These findings may never result in the respondent feeling the pinch of administrative action.

Reversed.

Mr. Justice ROBERTS took no part in the consideration or decision of this case.

Opinion of Mr. Justice BLACK and Mr. Justice MURPHY.

We agree with the Court's opinion and would add nothing to what has been said but for what is patently a wholly gratuitous assertion as to Constitutional law in the dissent of Mr. Justice FRANKFURTER. We refer to the statement that 'Congressional acquiescence to date in the doctrine of Chicago, etc., R. Co. v. Minnesota, supra (134 U.S. 418, 10 S.Ct. 462, 702, 33 L.Ed. 970), may fairly be claimed.' That was the case in which a majority of this Court was finally induced to expand the meaning ***620** of 'due process' so as to give courts power to block efforts of the state and national governments to regulate economic affairs. The present case does not afford a proper occasion to discuss the soundness of that doctrine because, as stated in Mr. Justice FRANKFURTER'S dissent, 'That issue is not here in controversy.' The salutary practice whereby courts do not discuss issues in the abstract applies with peculiar force to Constitutional questions. Since, however, the dissent adverts to a highly controversial due process doctrine and implies its acceptance by Congress, we feel compelled to say that we do not understand that Congress voluntarily has acquiesced in a Constitutional principle of government that courts, rather than legislative bodies, possess final authority over regulation of economic affairs. Even this Court has not always fully embraced that principle, and we wish to repeat that we have never acquiesced in it, and do not now. See Federal Power Commission v. Natural Gas Pipeline Co., 315 U.S. 575, 599-601, 62 S.Ct. 736, 749, 750, 86 L.Ed. 1037.

Mr. Justice REED, dissenting.

This case involves the problem of rate making under the Natural Gas Act. Added importance arises from the obvious fact that the principles stated are generally applicable to all federal agencies which are entrusted with the determination of rates for utilities. Because my views differ somewhat from those of my brethren, it may be of some value to set them out in a summary form.

The Congress may fix utility rates in situations subject to federal control without regard to any standard except the constitutional standards of due process and for taking private property for public use without just compensation. Wilson v. New, 243 U.S. 332, 350, 37 S.Ct. 298, 302, 61 L.Ed. 755, L.R.A.1917E, 938, Ann.Cas.1918A, 1024. A Commission, however, does not have this freedom of action. Its powers are limited not only by the constitutional standards but also by the standards of the delegation. Here the standard added by the Natural Gas Act is that the rate be 'just ***621** and reasonable.' [FN1] Section 6 [FN2] **297 throws additional light on the meaning of these words.

FN1 Natural Gas Act, s 4(a), 52 Stat. 821, 822, 15 U.S.C. s 717c(a), 15 U.S.C.A. s 717c(a).

FN2 52 Stat. 821, 824, 15 U.S.C. s 717e, 15 U.S.C.A. s 717e:

'(a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

'(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction.'

When the phrase was used by Congress to describe allowable rates, it had relation to something ascertainable. The rates were not left to the whim of the Commission. The rates fixed would produce an annual return and that annual return was to be compared with a theoretical just and reasonable return, all risks considered, on the fair value of the property used and useful in the public service at the time of the determination.

Such an abstract test is not precise. The agency charged with its determination has a wide range before it could properly be said by a court that the agency had disregarded statutory standards or had confiscated the property of the utility for public use. Cf. Chicago, M. & St. P.R. Co. v. Minnesota, 134 U.S. 418, 461-466, 10 S.Ct. 462, 702, 703-705, 33 L.Ed. 970, dissent. This is as Congress intends. Rates are left to an experienced agency particularly competent by training to appraise the amount required.

The decision as to a reasonable return had not been a source of great difficulty, for borrowers and lenders reached such agreements daily in a multitude of situations; and although the determination of fair value had been troublesome, its essentials had been worked out in fairness to investor and consumer by the time of the enactment***622** of this Act. Cf. Los Angeles G. & E. Corp. v. Railroad Comm., 289 U.S. 287, 304 et seq., 53 S.Ct. 637, 643 et seq., 77 L.Ed. 1180. The results were well known to Congress and had that body desired to depart from the traditional concepts of fair value and earnings, it would have stated its intention plainly. Helvering v. Griffiths, 318 U.S. 371, 63 S.Ct. 636.

It was already clear that when rates are in dispute, 'earnings produced by rates do not afford a standard for decision.' 289 U.S. at page 305, 53 S.Ct. at page 644, 77 L.Ed. 1180. Historical cost, prudent investment and reproduction cost [FN3] were all relevant factors in determining fair value. Indeed, disregarding the pioneer investor's risk, if prudent investment and reproduction cost were not distorted by changes in price levels or technology, each of them would produce the same result. The realization from the risk of an investment in a speculative field, such as natural gas utilities, should be reflected in the present fair value. [FN4] The amount of evidence to be admitted on any point was of course in the agency's reasonable discretion, and it was free to give its own weight to these or other factors and to determine from all the evidence its own judgment as to the necessary rates.

FN3 'Reproduction cost' has been variously defined, but for rate making purposes the most useful sense seems to be, the minimum amount necessary to create at the time of the inquiry a modern plant capable of rendering equivalent service. See I Bonbright, Valuation of Property (1937) 152. Reproduction cost as the cost of building a replica of an obsolescent plant is not of real significance.

'Prudent investment' is not defined by the Court. It may mean the sum originally put in the enterprise, either with or without additional amounts from excess earnings reinvested in the business.

FN4 It is of no more than bookkeeping significance whether the Commission allows a rate of return commensurate with the risk of the original investment or the lower rate based on current risk and a capitalization reflecting the established earning power of a successful company and the probable cost of duplicating its services. Cf. American T. & T. Co. v. United States, 299 U.S. 232, 57 S.Ct. 170, 81 L.Ed. 142. But the latter is the traditional method.

***623** I agree with the Court in not imposing a rule of prudent investment alone in determining the rate base. This leaves the Commission free, as I understand it, to use any available evidence for its finding of fair value, including both prudent investment and the cost of installing at the present time an efficient system for furnishing the needed utility service.

My disagreement with the Court arises primarily from its view that it makes no ****298** difference how the Commission reached the rate fixed so long as the result is fair and reasonable. For me the statutory command to the Commission is more explicit. Entirely aside from the constitutional problem of whether the Congress could validly delegate its rate making power to the Commission, in toto and without standards, it did legislate in the light of the relation of fair and reasonable to fair value and reasonable return. The Commission must therefore make its findings in observance of that relationship.

The Federal Power Commission did not, as I construe their action, disregard its statutory duty. They heard the evidence relating to historical and reproduction cost and to the reasonable rate of return and they appraised its weight. The evidence of reproduction cost was rejected as unpersuasive, but from the other evidence they found a rate base, which is to me a determination of fair value. On that base the earnings allowed seem fair and reasonable. So far as the Commission went in appraising the property employed in the service, I find nothing in the result which indicates confiscation, unfairness or unreasonableness. Good administration of rate making agencies under this method would avoid undue delay and render revaluations unnecessary except after violent fluctuations of price levels. Rate making under this method has been subjected to criticism. But until Congress changes the standards for the agencies, these rate making bodies should continue the conventional theory of rate ***624** making. It will probably be simpler to improve present methods than to devise new ones.

But a major error, I think was committed in the disregard by the Commission of the investment in exploratory operations and other recognized capital costs. These were not considered by the Commission because they were charged to operating expenses by the company at a time when it was unregulated. Congress did not direct the Commission in rate making to deduct from the rate base capital investment which had been recovered during the unregulated period through excess earnings. In my view this part of the investment should no more have been disregarded in the rate base than any other capital investment which previously had been recovered and paid out in dividends or placed to surplus. Even if prudent investment throughout the life of the property is accepted as the formula for figuring the rate base, it seems to me illogical to throw out the admittedly prudent cost of part of the property because the earnings in the unregulated period had been sufficient to return the prudent cost to the investors over and above a reasonable return. What would the answer be under the theory of the Commission and the Court, if the only prudent investment in this utility had been the seventeen million capital charges which are now disallowed?

For the reasons heretofore stated, I should affirm the action of the Circuit Court of Appeals in returning the proceeding to the Commission for further consideration and should direct the Commission to accept the disallowed capital investment in determining the fair value for rate making purposes.

Mr. Justice FRANKFURTER, dissenting.
My brother JACKSON has analyzed with particularity the economic and social aspects of natural gas as well as ***625** the difficulties which led to the enactment of the Natural Gas Act, especially those arising out of the abortive attempts of States to regulate natural gas utilities. The Natural Gas Act of 1938 should receive application in the light of this analysis, and Mr. Justice JACKSON has, I believe, drawn relevant inferences regarding the duty of the Federal Power Commission in fixing natural gas rates. His exposition seems to me unanswered, and I shall say only a few words to emphasize my basic agreement with him.

For our society the needs that are met by public utilities are as truly public services as the traditional governmental functions of police and justice. They are not less so when these services are rendered by private enterprise under governmental regulation. Who ultimately determines the ways of regulation, is the decisive aspect in the public supervision of privately-owned utilities. Foreshadowed nearly sixty years ago, Railroad Commission Cases (Stone v. Farmers' Loan & Trust Co.), 116 U.S. 307, 331, 6 S.Ct. 334, 344, 388, 1191, 29 L.Ed. 636, it was decided more than fifty ****299** years ago that the final say under the Constitution lies with the judiciary and not the legislature. Chicago, etc., R. Co. v. Minnesota , 134 U.S. 418, 10 S.Ct. 462, 702, 33 L.Ed. 970.

While legal issues touching the proper distribution of governmental powers under the Constitution may always be raised, Congressional acquiescence to date in the doctrine of Chicago, etc., R. Co. v. Minnesota, supra, may fairly be claimed. But in any event that issue is not here in controversy. As pointed out in the opinions of my brethren, Congress has given only limited authority to the Federal Power Commission and made the exercise of that authority subject to judicial review. The Commission is authorized to fix rates chargeable for natural gas. But the rates that it can fix must be 'just and reasonable'. s 5 of the Natural Gas Act, 15 U.S.C. s 717d, 15 U.S.C.A. s 717d. Instead of making the Commission's rate determinations final, Congress***626** specifically provided for court review of such orders. To be sure, 'the finding of the Commission as to the facts, if supported by substantial evidence' was made 'conclusive', s 19 of the Act, 15 U.S.C. s 717r; 15 U.S.C.A. s 717r. But obedience of the requirement of Congress that rates be 'just and reasonable' is not an issue of fact of which the Commission's own determination is conclusive. Otherwise, there would be nothing for a court to review except questions of compliance with the procedural provisions of the Natural Gas Act. Congress might have seen fit so to cast its legislation. But it has not done so. It has committed to the administration of the Federal Power Commission the duty of applying standards of fair dealing and of reasonableness relevant to the purposes expressed by the Natural Gas Act. The requirement that rates must be 'just and reasonable' means just and reasonable in relation to appropriate standards. Otherwise Congress would have directed the Commission to fix such rates as in the judgment of the Commission are just and reasonable; it would not have also provided that such determinations by the Commission are subject to court review.

To what sources then are the Commission and the courts to go for ascertaining the standards relevant to the regulation of natural gas rates? It is at this point that Mr. Justice JACKSON'S analysis seems to me pertinent. There appear to be two alternatives. Either the fixing of natural gas rates must be left to the unguided discretion of the Commission so long as the rates it fixes do not reveal a glaringly had prophecy of the ability of a regulated utility to continue its service in the future. Or the Commission's rate orders must be founded on due consideration of all the elements of the public interest which the production and distribution of natural gas involve just because it is natural gas. These elements are reflected in the Natural Gas Act, if that Act be applied as an entirety. See, for ***627** instance, ss 4(a)(b)(c)(d), 6, and 11, 15 U.S.C. ss 717c(a)(b)(c)(d), 717e, and 717j, 15 U.S.C.A. ss 717c(a-d), 717e, 717j. Of course the statute is not concerned with abstract theories of ratemaking. But its very foundation is the 'public interest', and the public interest is a texture of multiple strands. It includes more than contemporary investors and contemporary consumers. The needs to be served are not restricted to immediacy, and social as well as economic costs must be counted.

It will not do to say that it must all be left to the skill of experts. Expertise is a rational process and a rational process implies expressed reasons for judgment. It will little advance the public interest to substitute for the hodge-podge of the rule in Smyth v. Ames, 169 U.S. 466, 18 S.Ct. 418, 42 L.Ed. 819, an encouragement of conscious obscurity or confusion in reaching a result, on the assumption that so long as the result appears harmless its basis is irrelevant. That may be an appropriate attitude when state action is challenged as unconstitutional. Cf. Driscoll v. Edison Light & Power Co., 307 U.S. 104, 59 S.Ct. 715, 83 L.Ed. 1134. But it is not to be assumed that it was the design of Congress to make the accommodation of the conflicting interests exposed in Mr. Justice JACKSON'S opinion the occasion for a blind clash of forces or a partial assessment of relevant factors, either before the Commission or here.

The objection to the Commission's action is not that the rates it granted were too low but that the range of its vision was too narrow. And since the issues before the Commission involved no less than the ****300** total public interest, the proceedings before it should not be judged by narrow conceptions of common law pleading. And so I conclude that the case should be returned to the Commission. In order to enable this Court to discharge its duty of reviewing the Commission's order, the Commission should set forth with explicitness the criteria by which it is guided ***628** in determining that rates are 'just and reasonable', and it should determine the public interest that is in its keeping in the perspective of the considerations set forth by Mr. Justice JACKSON.

By Mr. Justice JACKSON.

Certainly the theory of the court below that ties rate-making to the fair-value-reproduction-cost formula should be overruled as in conflict with Federal Power Commission v. Natural Gas Pipeline Co. [FN1] But the case should, I think, be the occasion for reconsideration of our rate-making doctrine as applied to natural gas and should be returned to the Commission for further consideration in the light thereof.

FN1 315 U.S. 575, 62 S.Ct. 736, 86 L.Ed. 1037.

The Commission appears to have understood the effect of the two opinions in the Pipeline case to be at least authority and perhaps direction to fix natural gas rates by exclusive application of the 'prudent investment' rate base theory. This has no warrant in the opinion of the Chief Justice for the Court, however, which released the Commission from subservience to 'any single formula or combination of formulas' provided its order, 'viewed in its entirety, produces no arbitrary result.' 315 U.S. at page 586, 62 S.Ct. at page 743, 86 L.Ed. 1037. The minority opinion I understood to advocate the 'prudent investment' theory as a sufficient guide in a natural gas case. The view was expressed in the court below that since this opinion was not expressly controverted it must have been approved. [FN2] I disclaim this imputed***629** approval with some particularity, because I attach importance at the very beginning of federal regulation of the natural gas industry to approaching it as the performance of economic functions, not as the performance of legalistic rituals.

FN2 Judge Dobie, dissenting below, pointed out that the majority opinion in the Pipeline case 'contains no express discussion of the Prudent Investment Theory' and that the concurring opinion contained a clear one, and said, 'It is difficult for me to believe that the majority of the Supreme Court, believing otherwise, would leave such a statement unchallenged.' (134 F.2d 287, 312.) The fact that two other Justices had as matter of record in our books long opposed the reproduction cost theory of rate bases and had commented favorably on the prudent investment theory may have influenced that conclusion. See opinion of Mr. Justice Frankfurter in Driscoll v. Edison Light & Power Co., 307 U.S. 104, 122, 59 S.Ct. 715, 724, 83 L.Ed. 1134, and my brief as Solicitor General in that case. It should be noted, however, that these statements were made, not in a natural gas case, but in an electric power case-a very important distinction, as I shall try to make plain.

I.

Solutions of these cases must consider eccentricities of the industry which gives rise to them and also to the Act of Congress by which they are governed.

The heart of this problem is the elusive, exhaustible, and irreplaceable nature of natural gas itself. Given sufficient money, we can produce any desired amount of railroad, bus, or steamship transportation, or communications facilities, or capacity for generation of electric energy, or for the manufacture of gas of a kind. In the service of such utilities one customer has little concern with the amount taken by another, one's waste will not deprive another, a volume of service and be created equal to demand, and today's demands will not exhaust or lessen capacity to serve tomorrow. But the wealth of Midas and the wit of man cannot produce or reproduce a natural gas field. We cannot even reproduce the gas, for our manufactured product has only about half the heating value per unit of nature's own. [FN3]

FN3 Natural gas from the Appalachian field averages about 1050 to 1150 B.T.U. content, while by-product manufactured gas is about 530 to 540. Moody's Manual of Public Utilities (1943) 1350; Youngberg, Natural Gas (1930) 7.

****301** Natural gas in some quantity is produced in twenty-four states. It is consumed in only thirty-five states, and is ***630** available only to about 7,600,000 consumers. [FN4] Its availability has been more localized than that of any other utility service because it has depended more on the caprice of nature.

FN4 Sen.Rep. No. 1162, 75th Cong., 1st Sess., 2.

The supply of the Hope Company is drawn from that old and rich and vanishing field that flanks the Appalachian mountains. Its center of production is Pennsylvania and West Virginia, with a fringe of lesser production in New York, Ohio, Kentucky, Tennessee, and the north end of Alabama. Oil was discovered in commercial quantities at a depth of only 69 1/2 feet near Titusville, Pennsylvania, in 1859. Its value then was about $16 per barrel. [FN5] The oil branch of the petroleum industry went forward at once, and with unprecedented speed. The area productive of oil and gas was roughed out by the drilling of over 19,000 ‘wildcat’ wells, estimated to have cost over $222,000,000. Of these, over 18,000 or 94.9 per cent, were ‘dry holes.’ About five per cent, or 990 wells, made discoveries of commercial importance, 767 of them resulting chiefly in oil and 223 in gas only. [FN6] Prospecting for many years was a search for oil, and to strike gas was a misfortune. Waste during this period and even later is appalling. Gas was regarded as having no commercial value until about 1882, in which year the total yield was valued only at about $75,000. [FN7] Since then, contrary to oil, which has become cheaper gas in this field has pretty steadily advanced in price.

FN5 Arnold and Kemnitzer, Petroleum in the United States and Possessions (1931) 78.

FN6. Id. at 62-63.

FN7. Id. at 61.

While for many years natural gas had been distributed on a small scale for lighting, [FN8] its acceptance was slow, ***631** facilities for its utilization were primitive, and not until 1885 did it take on the appearance of a substantial industry. [FN9] Soon monopoly of production or markets developed. [FN10] To get gas from the mountain country, where it was largely found, to centers of population, where it was in demand, required very large investment. By ownership of such facilities a few corporate systems, each including several companies, controlled access to markets. Their purchases became the dominating factor in giving a market value to gas produced by many small operators. Hope is the market for over 300 such operators. By 1928 natural gas in the Appalachian field commanded an average price of 21.1 cents per m.c.f. at points of production and was bringing 45.7 cents at points of consumption. [FN11] The companies which controlled markets, however, did not rely on gas purchases alone. They acquired and held in fee or leasehold great acreage in territory proved by ‘wildcat’ drilling. These large marketing system companies as well as many small independent owners and operators have carried on the commercial development of proved territory. The development risks appear from the estimate that up to 1928, 312,318 proved area wells had been sunk in the Appalachian field of which 48,962, or 15.7 per cent, failed to produce oil or gas in commercial quantity. [FN12]

FN8 At Fredonia, New York, in 1821, natural gas was conveyed from a shallow well to some thirty people. The lighthouse at Barcelona Harbor, near what is now Westfield, New York, was at about that time and for many years afterward lighted by gas that issued from a crevice. Report on Utility Corporations by Federal Trade Commission, Sen.Doc. 92, Pt. 84-A, 70th Cong., 1st Sess., 8-9.

FN9 In that year Pennsylvania enacted ‘An Act to provide for the incorporation and regulation of natural gas companies.’ Penn.Laws 1885, No. 32, 15 P.S. s 1981 et seq.

FN12. Id. at 63.

***632** With the source of supply thus tapped to serve centers of large demand, like Pittsburgh, Buffalo, Cleveland, Youngstown, Akron, and other industrial communities, the distribution of natural gas fast became big business. Its advantages as a ****302** fuel and its price commended it, and the business yielded a handsome return. All was merry and the goose hung high for consumers and gas companies alike until about the time of the first. World War. Almost unnoticed by the consuming public, the whole Appalachian field passed its peak of production and started to decline. Pennsylvania, which to 1928 had given off about 38 per cent of the natural gas from this field, had its peak in 1905; Ohio, which had produced 14 per cent, had its peak in 1915; and West Virginia, greatest producer of all, with 45 per cent to its credit, reached its peak in 1917. [FN13]

FN13. Id. at 64.

Western New York and Eastern Ohio, on the fringe of the field, had some production but relied heavily on imports from Pennsylvania and West Virginia. Pennsylvania, a producing and exporting state, was a heavy consumer and supplemented her production with imports from West Virginia. West Virginia was a consuming state, but the lion's share of her production was exported. Thus the interest of the states in the North Appalachian supply was in conflict.

Competition among localities to share in the failing supply and the helplessness of state and local authorities in the presence of state lines and corporate complexities is a part of the background of federal intervention in the industry. [FN14] West Virginia took the boldest measure. It legislated a priority in its entire production in favor of its own inhabitants. That was frustrated by an injunction***633** from this Court. [FN15] Throughout the region clashes in the courts and conflicting decisions evidenced public anxiety and confusion. It was held that the New York Public Service Commission did not have power to classify consumers and restrict their use of gas. [FN16] That Commission held that a company could not abandon a part of its territory and still serve the rest. [FN17] Some courts admonished the companies to take action to protect consumers. [FN18] Several courts held that companies, regardless of failing supply, must continue to take on customers, but such compulsory additions were finally held to be within the Public Service Commission's discretion. [FN19] There were attempts to throw up franchises and quit the service, and municipalities resorted to the courts with conflicting results. [FN20] Public service commissions of consuming states were handicapped, for they had no control of the supply. [FN21]

Railroad Commission, 278 U.S. 300, 308, 49 S.Ct. 150, 152, 73 L.Ed. 390.

FN21 The New York Public Service Commission said: 'While the transportation of natural gas through pipe lines from one state to another state is interstate commerce * * *, Congress has not taken over the regulation of that particular industry. Indeed, it has expressly excepted it from the operation of the Interstate Commerce Commissions Law (Interstate Commerce Commissions Law, section 1). It is quite clear, therefore, that this Commission can not require a Pennsylvania corporation producing gas in Pennsylvania to transport it and deliver it in the State of New York, and that the Interstate Commerce Commission is likewise powerless. If there exists such a power, and it seems that there does, it is a power vested in Congress and by it not yet exercised. There is no available source of supply for the Crystal City Company at present except through purchasing from the Porter Gas Company. It is possible that this Commission might fix a price at which the Potter Gas Company should sell if it sold at all, but as the Commission can not require it to supply gas in the State of New York, the exercise of such a power to fix the price, if such power exists, would merely say, sell at this price or keep out of the State.' Lane v. Crystal City Gas Co., 8 New York Public Service Comm.Reports, Second District, 210, 212.

****303 *634** Shortages during World War I occasioned the first intervention in the natural gas industry by the Federal Government. Under Proclamation of President Wilson the United States Fuel Administrator took control, stopped extensions, classified consumers and established a priority for domestic over industrial use. [FN22] After the war federal control was abandoned. Some cities once served with natural gas became dependent upon mixed gas of reduced heating value and relatively higher price. [FN23]

FN22 Proclamation by the President of September 16, 1918; Rules and Regulations of H. A. Garfield, Fuel Administrator, September 24, 1918.

FN23 For example, the Iroquois Gas Corporation which formerly served Buffalo, New York, with natural gas ranging from 1050 to 1150 b.t.u. per cu. ft., now mixes a by-product gas of between 530 and 540 b.t.u. in proportions to provide a mixed gas of about 900 b.t.u. per cu. ft. For space heating or water heating its charges range from 65 cents for the first m.c.f. per month to 55 cents for all above 25 m.c.f. per month. Moody's Manual of Public Utilities (1943) 1350.

Utilization of natural gas of highest social as well as economic return is domestic use for cooking and water ***635** heating, followed closely by use for space heating in homes. This is the true public utility aspect of the enterprise, and its preservation should be the first concern of regulation. Gas does the family cooking cheaper than any other fuel. [FN24] But its advantages do not end with dollars and cents cost. It is delivered without interruption at the meter as needed and is paid for after it is used. No money is tied up in a supply, and no space is used for storage. It requires no handling, creates no dust, and leaves no ash. It responds to thermostatic control. It ignites easily and immediately develops its maximum heating capacity. These incidental advantages make domestic life more liveable.

FN24 The United States Fuel Administration made the following cooking value comparisons, based on tests made in the Department of Home Economics of Ohio State University:

Natural gas at 1.12 per M. is equivalent to coal at $6.50 per ton.
Natural gas at 2.00 per M. is equivalent to gasoline at 27¢ per gal.
Natural gas at 2.20 per M. is equivalent to electricity at 3¢ per k.w.h.
Natural gas at 2.40 per M. is equivalent to coal oil at 15¢ per gal.
Use and Conservation of Natural Gas, issued by U.S. Fuel Administration (1918) 5.

Industrial use is induced less by these qualities than by low cost in competition with other fuels. Of the gas exported from West Virginia by the Hope Company a very substantial part is used by industries. This wholesale use speeds exhaustion of supply and displaces other fuels. Coal miners and the coal industry, a large part of whose costs are wages, have complained of unfair competition from low-priced industrial gas produced with relatively little labor cost. [FN25]

FN25 See Brief on Behalf jof Legislation Imposing an Excise Tax on Natural Gas, submitted to N.R.A. by the United Mine Workers of America and the National Coal Association.

Gas rate structures generally have favored industrial users. In 1932, in Ohio, the average yield on gas for domestic consumption was 62.1 cents per m.c.f. and on industrial,***636** 38.7. In Pennsylvania, the figures were 62.9 against 31.7. West Virginia showed the least spread, domestic consumers paying 36.6 cents; and industrial, 27.7. [FN26] Although this spread is less than ****304** in other parts of the United States, [FN27] it can hardly be said to be self-justifying. It certainly is a very great factor in hastening decline of the natural gas supply.

FN26 Brief of National Gas Association and United Mine Workers, supra, note 26, pp. 35, 36, compiled from Bureau of Mines Reports.

FN27 From the source quoted in the preceding note the spread elsewhere is shown to be:

State.	Industrial	Domestic
Illinois.	29.2	1.678
Louisiana.	10.4	59.7
Oklahoma.	11.2	41.5
Texas.	13.1	59.7
Alabama.	17.8	1.227
Georgia.	22.9	1.043

About the time of World War I there were occasional and short-lived efforts by some hard-pressed companies to reverse this discrimination and adopt graduated rates, giving a low rate to quantities adequate for domestic use and graduating it upward to discourage industrial use. FN28 ***637** These rates met opposition from industrial sources, of course, and since diminished revenues from industrial sources tended to increase the domestic price, they met little popular or commission favor. The fact is that neither the gas companies nor the consumers nor local regulatory bodies can be depended upon to conserve gas. Unless federal regulation will take account of conservation, its efforts seem, as in this case, actually to constitute a new threat to the life of the Appalachian supply.

FN28 In Corning, New York, rates were initiated by the Crystal City Gas Company as follows: 70¢ for the first 5,000 cu. ft. per month; 80¢ from 5,000 to 12,000; $1 for all over 12,000. The Public Service Commission rejected these rates and fixed a flat rate of 58¢ per m.c.f. Lane v. Crystal City Gas Co., 8 New York Public Service Comm. Reports, Second District, 210.
The Pennsylvania Gas Company (National Fuel Gas Company group) also attempted a sliding scale rate for New York consumers, net per month as follows: First 5,000 feet, 35¢ ; second 5,000 feet, 45¢ ; third 5,000 feet, 50¢ ; all above 15,000, 55¢ . This was eventually abandoned, however. The company's present scale in Pennsylvania appears to be reversed to the following net monthly rate; first 3 m.c.f., 75¢ ; next 4 m.c.f., 60¢ ; next 8 m.c.f., 55¢ ; over 15 m.c.f., 50¢ . Moody's Manual of Public Utilities (1943) 1350. In New York it now serves a mixed gas.
For a study of effect of sliding scale rates in reducing consumption see 11 Proceedings of Natural Gas Association of America (1919) 287.

II.

Congress in 1938 decided upon federal regulation of the industry. It did so after an exhaustive investigation of all aspects including failing supply and competition for the use of natural gas intensified by growing scarcity. FN29 Pipelines from the Appalachian area to markets were in the control of a handful of holding company systems. FN30 This created a highly concentrated control of the producers' market and of the consumers' supplies. While holding companies dominated both production and distribution they segregated those activities in separate ***638** subsidiaries, FN31 the effect of which, if not the purpose, was to isolate ****305** some end of the business from the reach of any one state commission. The cost of natural gas to consumers moved steadily upwards over the years, out of proportion to prices of oil, which, except for the element of competition, is produced under somewhat comparable conditions. The public came to feel that the companies were exploiting the growing scarcity of local gas. The problems of this region had much to do with creating the demand for federal regulation.

FN29 See Report on Utility Corporations by Federal Trade Commission, Sen. Doc. 92, Pt. 84-A, 70th Cong., 1st Sess.

FN30 Four holding company systems control over 55 per cent of all natural gas transmission lines in the United States. They are Columbia Gas and Electric Corporation, Cities Service Co., Electric Bond and Share Co., and Standard Oil Co. of New Jersey. Columbia alone controls nearly 25 per cent, and fifteen companies account for over 80 per cent of the total. Report on Utility Corporations by Federal Trade Commission, Sen. Doc. 92, Pt. 84-A, 70th Cong., 1st Sess., 28.

In 1915, so it was reported to the Governor of West

Virginia, 87 per cent of the total gas production of that state was under control of eight companies. Steptoe and Hoffheimer, Legislative Regulation of Natural Gas Supply in West Virginia, 17 West Virginia Law Quarterly 257, 260. Of these, three were subsidiaries of the Columbia system and others were subsidiaries of larger systems. In view of inter-system sales and interlocking interests it may be doubted whether there is much real competition among these companies.

FN31 This pattern with its effects on local regulatory efforts will be observed in our decisions. See United Fuel Gas Co. v. Railroad Commission, 278 U.S. 300, 49 S.Ct. 150, 73 L.Ed. 390; United Fuel Gas Co. v. Public Service Commission, 278 U.S. 322, 49 S.Ct. 157, 73 L.Ed. 402; Dayton Power & Light v. Public Utilities Commission, 292 U.S. 290, 54 S.Ct. 647, 78 L.Ed. 1267; Columbus Gas & Fuel Co. v. Public Utilities Commission, 292 U.S. 398, 54 S.Ct. 763, 78 L.Ed. 1327, 91 A.L.R. 1403, and the present case.

The Natural Gas Act declared the natural gas business to be 'affected with a public interest,' and its regulation 'necessary in the public interest.' [FN32] Originally, and at the time this proceeding was commenced and tried, it also declared 'the intention of Congress that natural gas shall be sold in interstate commerce for resale for ultimate public consumption for domestic, commercial, industrial, or any other use at the lowest possible reasonable rate consistent with the maintenance of adequate service in the public interest.' [FN33] While this was later dropped, there is nothing to indicate that it was not and is not still an accurate statement of purpose of the Act. Extension or improvement of facilities may be ordered when 'necessary or desirable in the public interest,' abandonment of facilities may be ordered when the supply is 'depleted to the extent that the continuance of service is unwarranted, or that the present or future public convenience or necessity ***639** permit' abandonment and certain extensions can only be made on finding of 'the present or future public convenience and necessity.' [FN34] The Commission is required to take account of the ultimate use of the gas. Thus it is given power to suspend new schedules as to rates, charges, and classification of services except where the schedules are for the sale of gas 'for resale for industrial use only,' [FN35] which gives the companies greater freedom to increase rates on industrial gas than on domestic gas. More particularly, the Act expressly forbids any undue preference or advantage to any person or 'any unreasonable difference in rates * * * either as between localities or as between classes of service.' [FN36] And the power of the Commission expressly includes that to determine the 'just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force.' [FN37]

FN33 s 7(c), 52 Stat. 825, 15 U.S.C.A. s 717f(c).

FN34 15 U.S.C. s 717f, 15 U.S.C.A. s 717f.

FN35 Id., s 717c(e).

FN36 Id., s 717c(b).

FN37 Id., s 717d(a).

In view of the Court's opinion that the Commission in administering the Act may ignore discrimination, it is interesting that in reporting this Bill both the Senate and the House Committees on Interstate Commerce pointed out that in 1934, on a nationwide average the price of natural gas per m.c.f. was 74.6 cents for domestic use, 49.6 cents for commercial use, and 16.9 for industrial use. [FN38] I am not ready to think that supporters of a bill called attention to the striking fact that householders were being charged five times as much for their gas as industrial users only as a situation which the Bill would do nothing to remedy. On the other hand the Act gave to the Commission what the Court aptly describes as 'broad powers of regulation.'

FN38 Sen. Rep. No. 1162, 75th Cong., 1st Sess. 2.

***640** III.

This proceeding was initiated by the Cities of Cleveland and Akron. They alleged that the price charged by Hope for natural gas 'for resale to domestic, commercial and small industrial consumers in Cleveland and elsewhere is excessive, unjust, unreasonable, greatly in excess of the price charged by Hope to nonaffiliated companies at wholesale for resale to domestic, commercial and small industrial consumers, and greatly in excess of the price charged by Hope to East Ohio for resale to certain favored industrial consumers in Ohio, and therefore is further unduly discriminatory between consumers and between classes of service' (italics supplied). The company answered admitting differences in prices to affiliated and nonaffiliated companies and justifying them by differences in conditions of delivery.****306** As to the allegation that the contract price is 'greatly in excess of the price charged by Hope to East Ohio for resale to certain favored industrial consumers in Ohio,' Hope did not deny a price differential, but alleged that industrial gas was not sold to 'favored consumers' but was sold under contract and schedules filed with and approved by the Public Utilities Commission of Ohio, and that certain conditions of delivery made it not 'unduly discriminatory.'

The record shows that in 1940 Hope delivered for industrial consumption 36,523,792 m.c.f. and for domestic and commercial consumption, 50,343,652 m.c.f. I find no separate figure for domestic consumption. It served 43,767 domestic consumers directly, 511,521 through the East Ohio Gas Company, and 154,043 through the Peoples Natural Gas Company, both affiliates owned by the same parent. Its special contracts for industrial consumption, so far as appear, are confined to about a dozen big industries.

***641** Hope is responsible for discrimination as exists in favor of these few industrial consumers. It controls both the resale price and use of industrial gas by virtue of the very interstate sales contracts over which the Commission is exercising its jurisdiction.

Hope's contract with East Ohio Company is an example. Hope agrees to deliver, and the Ohio Company to take, '(a) all natural gas requisite for the supply of the domestic consumers of the Ohio Company; (b) such amounts of natural gas as may be requisite to fulfill contracts made with the consent and approval of the Hope Company by the Ohio Company, or companies which it supplies with natural gas, for the sale of gas upon special terms and conditions for manufacturing purposes.' The Ohio company is required to read domestic customers' meters once a month and meters of industrial customers daily and to furnish all meter readings to Hope. The Hope Company is to have access to meters of all consumers and to all of the Ohio Company's accounts. The domestic consumers of the Ohio Company are to be fully supplied in preference to consumers purchasing for manufacturing purposes and 'Hope Company can be required to supply gas to be used for manufacturing purposes only where the same is sold under special contracts which have first been submitted to and approved in writing by the Hope Company and which expressly provide that natural gas will be supplied thereunder only in so far as the same is not necessary to meet the requirements of domestic consumers supplied through pipe lines of the Ohio Company.' This basic contract was supplemented from time to time, chiefly as to price. The last amendment was in a letter from Hope to East Ohio in 1937. It contained a special discount on industrial gas and a schedule of special industrial contracts, Hope reserving the right to make eliminations therefrom and agreeing that others might be added from time to ***642** time with its approval in writing. It said, 'It is believed that the price concessions contained in this letter, while not based on our costs, are under certain conditions, to our mutual advantage in maintaining and building up the volumes of gas sold by us (italics supplied).' FN39

FN39 The list of East Ohio Gas Company's special industrial contracts thus expressly under Hope's control and their demands are as follows:

****307** The Commission took no note of the charges of discrimination and made no disposition of the issue tendered on this point. It ordered a flat reduction in the price per m.c.f. of all gas delivered by Hope in interstate commerce. It made no limitation, condition, or provision as to what classes of consumers should get the benefit of the reduction. While the cities have accepted and are defending the reduction, it is my view that the discrimination of which they have complained is perpetuated and increased by the order of the Commission and that it violates the Act in so doing.

The Commission's opinion aptly characterizes its entire objective by saying that 'bona fide investment figures now become all-important in the regulation of rates.' It should be noted that the all-importance of this theory is not the result of any instruction from Congress. When the Bill to regulate gas was first before Congress it contained***643** the following: 'In determining just and reasonable rates the Commission shall fix such rate as will allow a fair return upon the actual legitimate prudent cost of the property used and useful for the service in question.' H.R. 5423, 74th Cong., 1st Sess. Title III, s 312(c). Congress rejected this language. See H.R. 5423, s 213 (211(c)), and H.R. Rep. No. 1318, 74th Cong., 1st Sess. 30.

The Commission contends nevertheless that the 'all important' formula for finding a rate base is that of prudent investment. But it excluded from the investment base an amount actually and admittedly invested of some $17,000,000. It did so because it says that the Company recouped these expenditures from customers before the days of regulation from earnings above a fair return. But it would not apply all of such 'excess earnings' to reduce the rate base as one of the Commissioners suggested. The reason for applying excess earnings to reduce the investment base roughly from $69,000,000 to $52,000,000 but refusing to apply them to reduce it from that to some $18,000,000 is not found in a difference in the character of the earnings or in their reinvestment. The reason assigned is a difference in bookkeeping treatment many years before the Company was subject to regulation. The $17,000,000, reinvested chiefly in well drilling, was treated on the books as expense. (The Commission now requires that drilling costs be carried to capital account.) The allowed rate base thus actually was determined by the Company's bookkeeping, not its investment. This attributes a significance to formal classification in account keeping that seems inconsistent with rational rate regulation. FN40 Of ***644** course, the ****308** Commission would not and should not allow a rate base to be inflated by bookkeeping which had improperly capitalized expenses. I have doubts about resting public regulation upon any rule that is to be used or not depending on which side it favors.

FN40 To make a fetish of mere accounting is to shield from examination the deeper causes, forces, movements, and conditions which should govern rates. Even as a recording of current transactions, bookkeeping is hardly an exact science. As a representation of the condition and trend of a business, it uses symbols of certainty to express values that actually are in constant flux. It may be said that in commercial or investment banking or any business extending credit success depends on knowing what not to believe in accounting. Few concerns go into bankruptcy or reorganization whose books do not show them solvent and often even profitable. If one cannot rely on accountancy accurately to disclose past or current conditions of a business, the fallacy of using it as a sole guide to future price policy ought to be apparent. However, our quest for certitude is so ardent that we pay an irrational reverence to a technique which uses symbols of certainty, even though experience again and again warns us that they are delusive. Few writers have ventured to challenge this American idolatry, but see Hamilton, Cost as a standard for Price, 4 Law and Contemporary Problems 321, 323-25. He observes that ‘As the apostle would put it, accountancy is all things to all men. * * * Its purpose determines the character of a system of accounts.’ He analyzes the hypothetical character of accounting and says ‘It was no eternal mold for pecuniary verities handed down from on high. It was-like logic or algebra, or the device of analogy in the law-an ingenious contrivance of the human mind to serve a limited and practical purpose.’ ‘Accountancy is far from being a pecuniary expression of all that is industrial reality. It is an instrument, highly selective in its application, in the service of the institution of money making.’ As to capital account he observes ‘In an enterprise in lusty competition with others of its kind, survival is the thing and the system of accounts has its focus in solvency. * * * Accordingly depreciation, obsolescence, and other factors which carry no immediate threat are matters of lesser concern and the capital account is likely to be regarded as a secondary phenomenon. * * * But in an enterprise, such as a public utility, where continued survival seems assured, solvency is likely to be taken for granted. * * * A persistent and ingenious attention is likely to be directed not so much to securing the upkeep of the physical property as to making it certain that capitalization fails in not one whit to give full recognition to every item that should go into the account.'

***645** The Company on the other hand, has not put its gas fields into its calculations on the present-value basis, although that, it contends, is the only lawful rule for finding a rate base. To do so would result in a rate higher than it has charged or proposes as a matter of good business to charge.

The case before us demonstrates the lack of rational relationship between conventional rate-base formulas and natural gas production and the extremities to which regulating bodies are brought by the effort to rationalize them. The Commission and the Company each stands on a different theory, and neither ventures to carry its theory to logical conclusion as applied to gas fields.

IV.

This order is under judicial review not because we interpose constitutional theories between a State and the business it seeks to regulate, but because Congress put upon the federal courts a duty toward administration of a new federal regulatory Act. If we are to hold that a given rate is reasonable just because the Commission has said it was reasonable, review becomes a costly, time-consuming pageant of no practical value to anyone. If on the other hand we are to bring judgment of our own to the task, we should for the guidance of the regulators and the regulated reveal something of the philosophy, be it legal or economic or social, which guides us. We need not be slaves to a formula but unless we can point out a rational way of reaching our conclusions they can only be accepted as resting on intuition or predilection. I must admit that I possess no instinct jby which to know the ‘reasonable’ from the ‘unreasonable’ in prices and must seek some conscious design for decision.

The Court sustains this order as reasonable, but what makes it so or what could possibly make it otherwise,

***646** I cannot learn. It holds that: 'it is the result reached not the method employed which is controlling'; 'the fact that the method employed to reach that result may contain infirmities is not then important' and it is not 'important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at.' The Court does lean somewhat on considerations of capitalization and dividend history and requirements for dividends on outstanding stock. But I can give no real weight to that for it is generally and I think deservedly in discredit as any guide in rate cases. FN41

FN41 See 2 Bonbright, Valuation of Property (1937) 1112.

Our books already contain so much talk of methods of rationalizing rates that we must appear ambiguous if we announce results without our working methods. We are confronted with regulation of a unique type of enterprise which I think requires considered rejection of much conventional utility doctrine and adoption of concepts of 'just and reasonable' rates and practices and of the 'public interest' that will take account of the peculiarities of the business.

The Court rejects the suggestions of this opinion. It says that the Committees in reporting the bill which became the Act said it provided 'for regulation along recognized and more or less standardized lines' and that there was 'nothing novel in its provisions.' So saying it sustains a rate calculated on a novel variation of a rate base theory which itself had at the time of enactment of the legislation been recognized only in dissenting opinions. Our difference seems to be between unconscious innovation, FN42 and the purposeful ****309** and deliberate innovation I ***647** would make to meet the necessities of regulating the industry before us.

FN42 Bonbright says, '* * * the vice of traditional law lies, not in its adoption of excessively rigid concepts of value and rules of valuation, but rather in its tendency to permit shifts in meaning that are inept, or else that are ill-defined because the judges that make them will not openly admit that they are doing so.' Id., 1170.

Hope's business has two components of quite divergent character. One, while not a conventional common-carrier undertaking, is essentially a transportation enterprise consisting of conveying gas from where it is produced to point of delivery to the buyer. This is a relatively routine operation not differing substantially from many other utility operations. The service is produced by an investment in compression and transmission facilities. Its risks are those of investing in a tested means of conveying a discovered supply of gas to a known market. A rate base calculated on the prudent investment formula would seem a reasonably satisfactory measure for fixing a return from that branch of the business whose service is roughly proportionate to the capital invested. But it has other consequences which must not be overlooked. It gives marketability and hence 'value' to gas owned by the company and gives the pipeline company a large power over the marketability and hence 'value' of the production of others.

The other part of the business-to reduce to possession an adequate supply of natural gas-is of opposite character, being more erratic and irregular and unpredictable in relation to investment than any phase of any other utility business. A thousand feet of gas captured and severed from real estate for delivery to consumers is recognized under our law as property of much the same nature as a ton of coal, a barrel of oil, or a yard of sand. The value to be allowed for it is the real battleground between the investor and consumer. It is from this part of the business that the chief difference between the parties as to a proper rate base arises.

It is necessary to a 'reasonable' price for gas that it be anchored to a rate base of any kind? Why did courts in the first place begin valuing 'rate bases' in order to 'value' something else? The method came into vogue ***648** in fixing rates for transportation service which the public obtained from common carriers. The public received none of the carriers' physical property but did make some use of it. The carriage was often a monopoly so there were no open market criteria as to reasonableness. The 'value' or 'cost' of what was put to use in the service by the carrier was not a remote or irrelevant consideration in making such rates. Moreover the difficulty of appraising an intangible service was thought to be simplified if it could be related to physical property which was visible and measurable and the items of which might have market value. The court hoped to reason from the known to the unknown. But gas fields turn this method topsy turvy. Gas itself is tangible, possessible, and does have a market and a price in the field. The value of the rate base is more elusive than that of gas. It consists of intangibles-leaseholds and freeholds-operated and unoperated-of little use in themselves except as rights to reach and capture gas. Their value lies almost wholly in predictions of discovery, and of price of gas when captured, and bears little relation to cost of tools and supplies and labor to develop it. Gas is what Hope sells and it can be directly priced more reasonably and easily and accurately than the components of a rate base can be valued. Hence the reason for resort to a roundabout way of rate base price fixing does not exist in the case of gas in the field.

But if found, and by whatever method found, a rate base is little help in determining reasonableness of the price of gas. Appraisal of present value of these intangible rights to pursue fugitive gas depends on the value assigned to the gas when captured. The 'present fair value' rate base, generally in ill repute, FN43 is not even ****310** urged by the gas company for valuing its fields.

FN43 'The attempt to regulate rates by reference to a periodic or occasional reappraisal of the properties has now been tested long enough to confirm the worst fears of its critics. Unless its place is taken by some more promising scheme of rate control, the days of private ownership under government regulation may be numbered.' 2 Bonbright, Valuation of Property (1937) 1190.

***649** The prudent investment theory has relative merits in fixing rates for a utility which creates its service merely by its investment. The amount and quality of service rendered by the usual utility will, at least roughly, be measured by the amount of capital it puts into the enterprise. But it has no rational application where there is no such relationship between investment and capacity to serve. There is no such relationship between investment and amount of gas produced. Let us assume that Doe and Roe each produces in West Virginia for delivery to Cleveland the same quantity of natural gas per day. Doe, however, through luck or foresight or whatever it takes, gets his gas from investing $50,000 in leases and drilling. Roe drilled poorer territory, got smaller wells, and has invested $250,000. Does anybody imagine that Roe can get or ought to get for his gas five times as much as Doe because he has spent five times as much? The service one renders to society in the gas business is measured by what he gets out of the ground, not by what he puts into it, and there is little more relation between the investment and the results than in a game of poker.

Two-thirds of the gas Hope handles it buys from about 340 independent producers. It is obvious that the principle of rate-making applied to Hope's own gas cannot be applied, and has not been applied, to the bulk of the gas Hope delivers. It is not probable that the investment of any two of these producers will bear the same ratio to their investments. The gas, however, all goes to the same use, has the same utilization value and the same ultimate price.

To regulate such an enterprise by undiscriminatingly transplanting any body of rate doctrine conceived and ***650** adapted to the ordinary utility business can serve the 'public interest' as the Natural Gas Act requires, if at all, only by accident. Mr. Justice Brandeis, the pioneer juristic advocate of the prudent investment theory for man-made utilities, never, so far as I am able to discover, proposed its application to a natural gas case. On the other hand, dissenting in Commonwealth of Pennsylvania v. West Virginia, he reviewed the problems of gas supply and said, 'In no other field of public service regulation is the controlling body confronted with factors so baffling as in the natural gas industry, and in none is continuous supervision and control required in so high a degree.' 262 U.S. 553, 621, 43 S.Ct. 658, 674, 67 L.Ed. 1117, 32 A.L.R. 300. If natural gas rates are intelligently to be regulated we must fit our legal principles to the economy of the industry and not try to fit the industry to our books.

As our decisions stand the Commission was justified in believing that it was required to proceed by the rate base method even as to gas in the field. For this reason the Court may not merely wash its hands of the method and rationale of rate making. The fact is that this Court, with no discussion of its fitness, simply transferred the rate base method to the natural gas industry. It happened in Newark Natural Gas & Fuel Co. v. City of Newark, Ohio, 1917, 242 U.S. 405, 37 S.Ct. 156, 157, 61 L.Ed. 393, Ann.Cas.1917B, 1025, in which the company wanted 25 cents per m.c.f., and under the Fourteenth Amendment challenged the reduction to 18 cents by ordinance. This Court sustained the reduction because the court below 'gave careful consideration to the questions of the value of the property * * * at the time of the inquiry,' and whether the rate 'would be sufficient to provide a fair return on the value of the property.' The Court said this method was 'based upon principles thoroughly established by repeated secisions of this court,' citing many cases, not one of which involved natural gas or a comparable wasting natural resource. Then came issues as to state power to ***651** regulate as affected by the commerce clause. Public Utilities Commission v. Landon, 1919, 249 U.S. 236, 39 S.Ct. 268, 63 L.Ed. 577; Pennsylvania Gas Co. v. Public Service Commission, 1920, 252 U.S. 23, 40 S.Ct. 279, 64 L.Ed. 434. These questions settled, the Court again was called upon in natural gas cases to consider state rate-making claimed to be invalid under the Fourteenth Amendment. United Fuel Gas Co. v. Railroad Commission of Kentucky, 1929, 278 U.S. 300, 49 S.Ct. 150, 73 L.Ed. 390; United Fuel Gas Company v. Public Service Commission of West Virginia, 1929, 278 U.S. 322, 49 S.Ct. 157, 73 L.Ed. 402. Then, as now, the differences were 'due ****311** chiefly to the difference in value ascribed by each to the gas rights and leaseholds.' 278 U.S. 300, 311, 49 S.Ct. 150, 153, 73 L.Ed. 390. No one seems to have questioned that the rate base method must be pursued and the controversy was at what rate base must be used. Later the 'value' of gas in the field was questioned in determining the amount a regulated company should be allowed to pay an affiliate therefor-a state determination also reviewed under the Fourteenth Amendment. Dayton Power & Light Co. v. Public Utilities Commission of Ohio, 1934, 292 U.S. 290, 54 S.Ct. 647, 78 L.Ed. 1267; Columbus Gas & Fuel Co. v. Public Utilities Commission of Ohio, 1934, 292 U.S. 398, 54 S.Ct. 763, 78 L.Ed. 1327, 91 A.L.R. 1403. In both cases, one of which sustained, and one of which struck down a fixed rate the Court assumed the rate base method, as the legal way of testing reasonableness of natural gas prices fixed by public authority, without examining its real relevancy to the inquiry.

Under the weight of such precedents we cannot expect the Commission to initiate economically intelligent methods of fixing gas prices. But the Court now faces a new plan of federal regulation based on the power to fix the price at which gas shall be allowed to move in interstate commerce. I should now consider whether these rules devised under the Fourteenth Amendment are the exclusive tests of a just and reasonable rate under the federal statute, inviting reargument directed to that point ***652** if necessary. As I see it now I would be prepared to hold that these rules do not apply to a natural gas case arising under the Natural Gas Act.

Such a holding would leave the Commission to fix the price of gas in the field as one would fix maximum prices of oil or milk or coal, or any other commodity. Such a price is not calculated to produce a fair return on the synthetic value of a rate base of any individual producer, and would not undertake to assure a fair return to any producer. The emphasis would shift from the producer to the product, which would be regulated with an eye to average or typical producing conditions in the field.

Such a price fixing process on economic lines would offer little temptation to the judiciary to become back seat drivers of the price fixing machine. The unfortunate effect of judicial intervention in this field is to divert the attention of those engaged in the process from what is economically wise to what is legally permissible. It is probable that price reductions would reach economically unwise and self-defeating limits before they would reach constitutional ones. Any constitutional problems growing out of price fixing are quite different than those that have heretofore been considered to inhere in rate making. A producer would have difficulty showing the invalidity of such a fixed price so long as he voluntarily continued to sell his product in interstate commerce. Should he withdraw and other authority be invoked to compel him to part with his property, a different problem would be presented.

Allowance in a rate to compensate for gas removed from gas lands, whether fixed as of point of production or as of point of delivery, probably best can be measured by a functional test applied to the whole industry. For good or ill we depend upon private enterprise to exploit these natural resources for public consumption. The function which an allowance for gas in the field should perform ***653** for society in such circumstances is to be enough and no more than enough to induce private enterprise completely and efficiently to utilize gas resources, to acquire for public service any available gas or gas rights and to deliver gas at a rate and for uses which will be in the future as well as in the present public interest.

The Court fears that 'if we are now to tell the Commission to fix the rates so as to discourage particular uses, we would indeed be injecting into a rate case a 'novel' doctrine * * *.' With due deference I suggest that there is nothing novel in the idea that any change in price of a service or commodity reacts to encourage or discourage its use. The question is not whether such consequences will or will not follow; the question is whether effects must be suffered blindly or may be intelligently selected, whether price control shall have targets at which it deliberately aims or shall be handled like a gun in the hands of one who does not know it is loaded.

We should recognize 'price' for what it is-a tool, a means, an expedient. In public****312** hands it has much the same economic effects as in private hands. Hope knew that a concession in industrial price would tend to build up its volume of sales. It used price as an expedient to that end. The Commission makes another cut in that same price but the Court thinks we should ignore the effect that it will have on exhaustion of supply. The fact is that in natural gas regulation price must be used to reconcile the private property right society has permitted to vest in an important natural resource with the claims of society upon it-price must draw a balance between wealth and welfare.

To carry this into techniques of inquiry is the task of the Commissioner rather than of the judge, and it certainly is no task to be solved by mere bookkeeping but requires the best economic talent available. There would doubtless be inquiry into the price gas is bringing in the ***654** field, how far that price is established by arms' length bargaining and how far it may be influenced by agreements in restraint of trade or monopolistic influences. What must Hope really pay to get and to replace gas it delivers under this order? If it should get more or less than that for its own, how much and why? How far are such prices influenced by pipe line access to markets and if the consumers pay returns on the pipe lines how far should the increment they cause go to gas producers? East Ohio is itself a producer in Ohio. FN44 What do Ohio authorities require Ohio consumers to pay for gas in the field? Perhaps these are reasons why the Federal Government should put West Virginia gas at lower or at higher rates. If so what are they? Should East Ohio be required to exploit its half million acres of unoperated reserve in Ohio before West Virginia resources shall be supplied on a devalued basis of which that State complains and for which she threatens measures of self keep? What is gas worth in terms of other fuels it displaces?

FN44 East Ohio itself owns natural gas rights in 550,600 acres, 518,526 of which are reserved and 32,074 operated, by 375 wells. Moody's Manual of Public Utilities (1943) 5.

A price cannot be fixed without considering its effect on the production of gas. Is it an incentive to continue to exploit vast unoperated reserves? Is it conducive to deep drilling tests the result of which we may know only after trial? Will it induce bringing gas from afar to supplement or even to substitute for Appalachian gas? FN45 Can it be had from distant fields as cheap or cheaper? If so, that competitive potentiality is certainly a relevant consideration. Wise regulation must also consider, as a private buyer would, what alternatives the producer has ***655** if the price is not acceptable. Hope has intrastate business and domestic and industrial customers. What can it do by way of diverting its supply to intrastate sales? What can it do by way of disposing of its operated or reserve acreage to industrial concerns or other buyers? What can West Virginia do by way of conservation laws, severance or other taxation, if the regulated rate offends? It must be borne in mind that while West Virginia was prohibited from giving her own inhabitants a priority that discriminated against interstate commerce, we have never yet held that a good faith conservation act, applicable to her own, as well as to others, is not valid. In considering alternatives, it must be noted that federal regulation is very incomplete, expressly excluding regulation of 'production or gathering of natural gas,' and that the only present way to get the gas seems to be to call it forth by price inducements. It is plain that there is a downward economic limit on a safe and wise price.

FN45 Hope has asked a certificate of convenience and necessity to lay 1140 miles of 22-inch pipeline from Hugoton gas fields in southwest Kansas to West Virginia to carry 285 million cu. ft. of natural gas per day. The cost was estimated at $51,000,000. Moody's Manual of Public Utilities (1943) 1760.

But there is nothing in the law which compels a commission to fix a price at that 'value' which a company might give to its product by taking advantage of scarcity, or monopoly of supply. The very purpose of fixing maximum prices is to take away from the seller his opportunity to get all that otherwise the market would award him for his goods. This is a constitutional use of the power to fix maximum prices, ****313**Block v. Hirsh, 256 U.S. 135, 41 S.Ct. 458, 65 L.Ed. 865, 16 A.L.R. 165; Marcus Brown Holding Co. v. Feldman, 256 U.S. 170, 41 S.Ct. 465, 65 L.Ed. 877; International Harvester Co. v. Kentucky, 234 U.S. 216, 34 S.Ct. 853, 58 L.Ed. 1284; Highland v. Russell Car & Snow Plow Co., 279 U.S. 253, 49 S.Ct. 314, 73 L.Ed. 688, just as the fixing of minimum prices of goods in interstate commerce is constitutional although it takes away from the buyer the advantage in bargaining which market conditions would give him. United States v. Darby, 312 U.S. 100, 657, 61 S.Ct. 451, 85 L.Ed. 609, 132 A.L.R. 1430; Mulford v. Smith, 307 U.S. 38, 59 S.Ct. 648, 83 L.Ed. 1092; United States v. Rock Royal Co-operative, Inc., 307 U.S. 533, 59 S.Ct. 993, 83 L.Ed. 1446; Sunshine Anthracite Coal Co. v. Adkins, 310 U.S. 381, 60 S.Ct. 907, 84 L.Ed. 1263. The Commission has power to fix ***656** a price that will be both maximum and minimum and it has the incidental right, and I think the duty, to choose the economic consequences it will promote or retard in production and also more importantly in consumption, to which I now turn.

If we assume that the reduction in company revenues is warranted we then come to the question of translating the allowed return into rates for consumers or classes of consumers. Here the Commission fixed a single rate for all gas delivered irrespective of its use despite the fact that Hope has established what amounts to two rates-a high one for domestic use and a lower one for industrial contracts. FN46 The Commission can fix two prices for interstate gas as readily as one-a price for resale to domestic users and another for resale to industrial users. This is the pattern Hope itself has established in the very contracts over which the Commission is expressly given jurisdiction. Certainly the Act is broad enough to permit two prices to be fixed instead of one, if the concept of the 'public interest' is not unduly narrowed.

FN46 I find little information as to the rates for industries in the record and none at all in such usual sources as Moody's Manual.

The Commission's concept of the public interest in natural gas cases which is carried today into the Court's opinion was first announced in the opinion of the minority in the Pipeline case. It enumerated only two 'phases of the public interest: (1) the investor interest; (2) the consumer interest,' which it emphasized to the exclusion of all others. 315 U.S. 575, 606, 62 S.Ct. 736, 753, 86 L.Ed. 1037. This will do well enough in dealing with railroads or utilities supplying manufactured gas, electric, power, a communications service or transportation, where utilization of facilities does not impair their future usefulness. Limitation of supply, however, brings into a natural gas case another phase of the public interest that to my mind overrides both the owner ***657** and the consumer of that interest. Both producers and industrial consumers have served their immediate private interests at the expense of the long-range public interest. The public interest, of course, requires stopping unjust enrichment of the owner. But it also requires stopping unjust impoverishment of future generations. The public interest in the use by Hope's half million domestic consumers is quite a different one from the public interest in use by a baker's dozen of industries.

Prudent price fixing it seems to me must at the very threshold determine whether any part of an allowed return shall be permitted to be realized from sales of gas for resale for industrial use. Such use does tend to level out daily and seasonal peaks of domestic demand and to some extent permits a lower charge for domestic service. But is that a wise way of making gas cheaper when, in comparison with any substitute, gas is already a cheap fuel? The interstate sales contracts provide that at times when demand is so great that there is not enough gas to go around domestic users shall first be served. Should the operation of this preference await the day of actual shortage? Since the propriety of a preference seems conceded, should it not operate to prevent the coming of a shortage as well as to mitigate its effects? Should industrial use jeopardize tomorrow's service to householders any more than today's? If, however, it is decided to cheapen domestic use by resort to industrial sales, should they be limited to the few uses ****314** for which gas has special values or extend also to those who use it only because it is cheaper than competitive fuels? [FN47] And how much cheaper should industrial***658** gas sell than domestic gas, and how much advantage should it have over competitive fuels? If industrial gas is to contribute at all to lowering domestic rates, should it not be made to contribute the very maximum of which it is capable, that is, should not its price be the highest at which the desired volume of sales can be realized?

FN47 The Federal Power Commission has touched upon the problem of conservation in connection with an application for a certificate permitting construction of a 1500-mile pipeline from southern Texas to New York City and says: 'The Natural Gas Act as presently drafted does not enable the Commission to treat fully the serious implications of such a problem. The question should be raised as to whether the proposed use of natural gas would not result in displacing a less valuable fuel and create hardships in the industry already supplying the market, while at the same time rapidly depleting the country's natural-gas reserves. Although, for a period of perhaps 20 years, the natural gas could be so priced as to appear to offer an apparent saving in fuel costs, this would mean simply that social costs which must eventually be paid had been ignored.

'Careful study of the entire problem may lead to the conclusion that use of natural gas should be restricted by functions rather than by areas. Thus, it is especially adapted to space and water heating in urban homes and other buildings and to the various industrial heat processes which require concentration of heat, flexibility of control, and uniformity of results. Industrial uses to which it appears particularly adapted include the treating and annealing of metals, the operation of kilns in the ceramic, cement, and lime industries, the manufacture of glass in its various forms, and use as a raw material in the chemical industry. General use of natural gas under boilers for the production of steam is, however, under most circumstances of very questionable social economy.' Twentieth Annual Report of the Federal Power Commission (1940) 79.

If I were to answer I should say that the household rate should be the lowest that can be fixed under commercial conditions that will conserve the supply for that use. The lowest probable rate for that purpose is not likely to speed exhaustion much, for it still will be high enough to induce economy, and use for that purpose has more nearly reached the saturation point. On the other hand the demand for industrial gas at present rates already appears to be increasing. To lower further the industrial rate is merely further to subsidize industrial consumption and speed depletion. The impact of the flat reduction ***659** of rates ordered here admittedly will be to increase the industrial advantages of gas over competing fuels and to increase its use. I think this is not, and there is no finding by the Commission that it is, in the public interest.

There is no justification in this record for the present discrimination against domestic users of gas in favor of industrial users. It is one of the evils against which the Natural Gas Act was aimed by Congress and one of the evils complained of here by Cleveland and Akron. If

Hope's revenues should be cut by some $3,600,000 the whole reduction is owing to domestic users. If it be considered wise to raise part of Hope's revenues by industrial purpose sales, the utmost possible revenue should be raised from the least consumption of gas. If competitive relationships to other fuels will permit, the industrial price should be substantially advanced, not for the benefit of the Company, but the increased revenues from the advance should be applied to reduce domestic rates. For in my opinion the 'public interest' requires that the great volume of gas now being put to uneconomic industrial use should either be saved for its more important future domestic use or the present domestic user should have the full benefit of its exchange value in reducing his present rates.

Of course the Commission's power directly to regulate does not extend to the fixing of rates at which the local company shall sell to consumers. Nor is such power required to accomplish the purpose. As already pointed out, the very contract the Commission is altering classifies the gas according to the purposes for which it is to be resold and provides differentials between the two classifications. It would only be necessary for the Commission to order ****315** that all gas supplied under paragraph (a) of Hope's contract with the East Ohio Company shall be ***660** at a stated price fixed to give to domestic service the entire reduction herein and any further reductions that may prove possible by increasing industrial rates. It might further provide that gas delivered under paragraph (b) of the contract for industrial purposes to those industrial customers Hope has approved in writing shall be at such other figure as might be found consistent with the public interest as herein defined. It is too late in the day to contend that the authority of a regulatory commission does not extend to a consideration of public interests which it may not directly regulate and a conditioning of its orders for their protection. Interstate Commerce Commission v. Railway Labor Executives Ass'n, 315 U.S. 373, 62 S.Ct. 717, 86 L.Ed. 904; United States v. Lowden, 308 U.S. 225, 60 S.Ct. 248, 84 L.Ed. 208.

Whether the Commission will assert its apparently broad statutory authorization over prices and discriminations is, of course, its own affair, not ours. It is entitled to its own notion of the 'public interest' and its judgment of policy must prevail. However, where there is ground for thinking that views of this Court may have constrained the Commission to accept the rate-base method of decision and a particular single formula as 'all important' for a rate base, it is appropriate to make clear the reasons why I, at least, would not be so understood. The Commission is free to face up realistically to the nature and peculiarity of the resources in its control, to foster their duration in fixing price, and to consider future interests in addition to those of investors and present consumers. If we return this case it may accept or decline the proffered freedom. This problem presents the Commission an unprecedented opportunity if it will boldly make sound economic considerations, instead of legal and accounting theories, the foundation of federal policy. I would return the case to the Commission and thereby be clearly quit of what now may appear to be some responsibility for perpetrating a shortsighted pattern of natural gas regulation.

U.S. 1944.
Federal Power Commission v. Hope Natural Gas Co.
51 P.U.R.(NS) 193, 320 U.S. 591, 64 S.Ct. 281, 88 L.Ed. 333

Job Market Starts 2024 With a Bang

U.S. employers added 353,000 jobs in January, far exceeding forecasts, and revised figures showed last year was even stronger than previously reported.

Monthly change in jobs

By Lydia DePillis

Feb. 2, 2024

The United States produced an unexpectedly sizable batch of jobs last month, a boon for American workers that shows the labor market retains remarkable strength after three years of expansion.

Employers added 353,000 jobs in January on a seasonally adjusted basis, the Labor Department reported on Friday, and the unemployment rate remained at 3.7 percent.

The report also put an even shinier gloss on job growth for 2023, including revisions that added more than 100,000 to the figure previously tallied for December. All told, employers added 3.1 million jobs last year, more than the 2.7 million initially reported.

After the loss of 14 percent of the nation's jobs early in the Covid-19 pandemic, the labor market's endurance despite aggressive interest rate increases has caught economists off guard.

"I think everyone is surprised at the strength," said Sara Rutledge, an independent economics consultant. "It's almost like a 'pinch me' scenario."

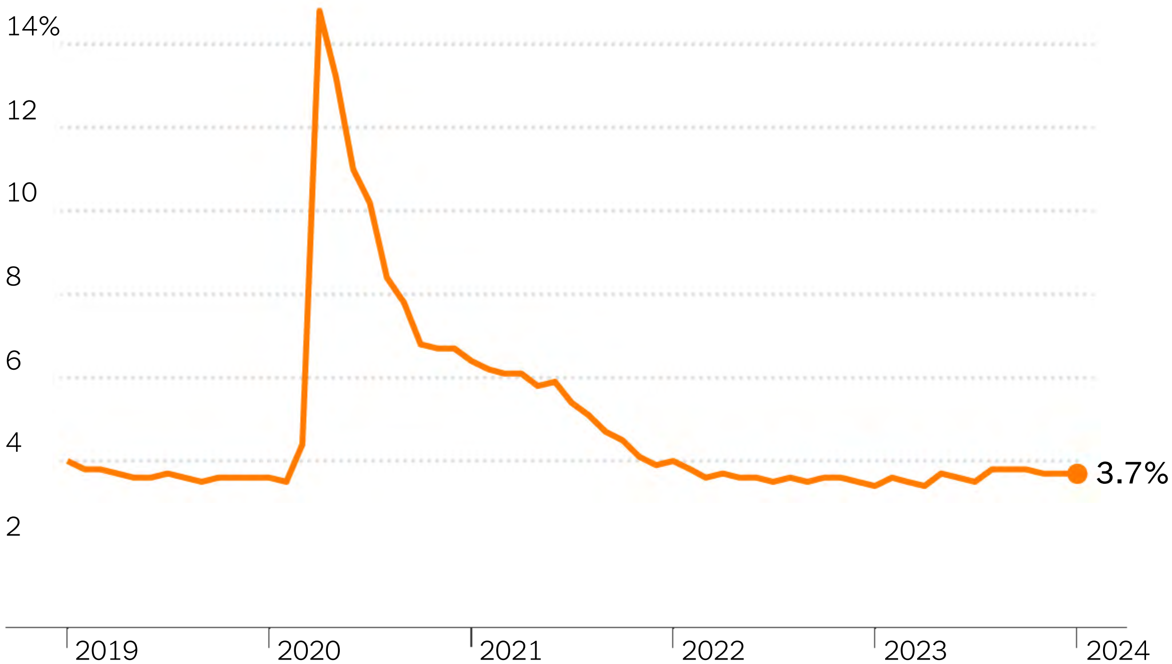
Ms. Rutledge helped tabulate the National Association for Business Economics' latest member survey, which found rising optimism that the country would avoid a recession — matching a turnaround in measures of consumer sentiment as inflation has eased.

January's crop of added jobs, nearly twice what forecasters had expected, mirrors the similarly surprising strength in gross domestic product measurements for the fourth quarter of 2023. It is also likely to reinforce the Federal Reserve's patient approach on interest rates, given the risk that increased wages might push prices up faster.

Jerome H. Powell, the Fed chair, signaled this week that rate cuts would not begin until at least May, citing a desire to see more evidence that inflation is falling back to its target.

Unemployment has been under 4 percent for 24 months

Unemployment rate



Note: Data is seasonally adjusted. • Source: Bureau of Labor Statistics • By Ella Koeze

The latest job data prompted a victory lap from Biden administration officials, who highlighted an unemployment rate only a few ticks above a 70-year low.

“The fact that that’s been below 4 percent for two years running now is just a very clear and reliable signal that this is not just a tight labor market, but a reliably and persistently tight labor market,” said Jared Bernstein, chair of the White House Council of Economic Advisers.

January's gains were also broader than has been the case in other recent reports: Professional and business services accelerated to pile on 74,000 jobs, while health care added 70,000. The only major sector to cut workers was mining and logging.

Average hourly earnings also grew swiftly, at 0.6 percent from December.

Still, analysts cautioned against reading too much into the month's overall gain, given recent volatility in initial survey estimates. Last January, for example, was much stronger than the full-year average. And the latest report contains a few oddities, as well.

The survey window was interrupted by bone-chilling cold and snowstorms, possibly shortening the workweek and raising hourly wages. Also, the addition of so many relatively well-paid white-collar workers may have pulled up the average. Hotels and restaurants, where pay is lower, shed a few thousand jobs.

Agron Nicaj, a U.S. economist at the banking and financial services firm MUFG, noted that job postings had been elevated in professional and business services for the past few months. That may mean January's surge will be short-lived, especially given the latest report from outplacement firm Challenger, Gray & Christmas that found layoff announcements surged last month after a quiet quarter.

"I wouldn't expect a reacceleration because of the relationship with the industries that grew this month and the openings," Mr. Nicaj said. "I think this month reflects a refilling of jobs that they couldn't fill."

Wage growth sped up in January

Year-over-year percentage change in earnings vs. inflation

Note: Earnings data is seasonally adjusted. • Source: Bureau of Labor Statistics • By Ella Koeze

And yet it's clear that the new year dawned on what has been an exceptionally good economy for many workers. Wages have been growing faster than their historical rates, and a strong increase in productivity over the last three quarters has helped keep those fatter paychecks from fueling higher prices. The number of open jobs still exceeds the stock of people looking for positions, even as new immigrants and women have joined or rejoined the work force in unexpected numbers.

That trend may continue if higher wages keep bringing people off the sidelines. The number of people not in the labor force who want a job has surged in recent months, to 5.8 million, suggesting that they could jump back in if pay outweighed the cost of child care or a long commute.

Over the past year, most gains have been powered by sectors that either took longer to recover from the pandemic — including hospitality and local governments — or have outsize momentum because of structural factors, such as aging demographics and pent-up demand for housing. Construction firms have kept hiring even in the face of high interest rates, because homeowners with low-rate mortgages are generally staying put, leaving new homes as the only option for would-be buyers.

The education and health sector leads in job gains

Change in jobs in January 2024, by sector

Education and health	+112,000 jobs
Business services	+74,000
Retail	+45,200
Government	+36,000
Manufacturing	+23,000
Leisure and hospitality	+11,000
Construction	+11,000

Note: Data is seasonally adjusted. • Source: Bureau of Labor Statistics • By Ella Koeze

Other categories that experienced supersize growth during 2021 and 2022, including transportation, warehousing and information technology, have been falling back to their prepandemic trends. Another handful of sectors, such as retail, have been largely flat.

One of those who jumped from a shrinking sector into a more stable one is Galvin Moore, 33, who worked in information technology for a freight broker until last fall, when he noticed the trucking sector contracting around him.

“It’s not just job security — it’s also the fear that you own career growth becomes limited by the industry,” said Mr. Moore, who is married with three children in a Houston suburb. He left for a position at an oil and gas services firm that is moving into technologies like geothermal energy and carbon capture. “They’re in growth mode, too,” Mr. Moore added, “It’s just a different phase of the cycle.”

The new gig also came with a 40 percent pay increase, which has allowed him to start paying down debt and think about buying a new house. “It’s like night and day,” Mr. Moore said.

Despite the prominent announcements of layoffs at companies like UPS, Google and Microsoft, most employers have been loath to part with workers, worried about being short-staffed if business picks up again. Although the share of workers quitting their jobs has fallen back to normal levels after a surge in 2022, Americans seem comfortable enough with their financial futures to keep spending money.

That has led to splurges on services like travel agencies, which saw their revenues sink almost to zero during the worst of the pandemic. While still a few thousand employees shy of 2019 levels, the American Society of Travel Advisors says the Bureau of Labor Statistics data does not reflect a surge of workers who have joined the industry as independent contractors, often working part time to supplement other jobs.

Kareem George, who runs a 10-person agency near Detroit that designs custom vacations, said his bookings were 20 percent above 2019 levels, with clients increasingly asking for luxury experiences like high-end dinners and private tours.

“I think there’s more confidence that they can plan longer term,” said Mr. George, who expects to hire two more people in the year ahead. “So they’re not thinking so much of, ‘I deserve it, I need to do it now,’ but also

'I can also think about next year and the year after.'"

In the coming months, economists had expected the labor market to become more like its prepandemic self, without the giant job growth that followed the pandemic lockdowns. The latest numbers may call that assessment into question.

Even manufacturing, which has been in a mild recession for about a year, added 23,000 positions. That reflects optimism in the latest purchasing managers index for manufacturing, which jumped unexpectedly last month. Timothy Fiore, the chair of the Institute for Supply Management committee that oversees the survey, said it seemed like the beginning of a turnaround, even if a slow one.

"Now we're starting to gain altitude," Mr. Fiore said. "It's not a fighter pilot gain; it's a cargo plane gain."

Jim Tankersley contributed reporting.

Economic Surprises Continue

Full of surprises. The US economy surprised forecasters yet again in last year's fourth quarter with stronger-than-expected growth and lower-than-expected inflation. The last BCFF Q4 real GDP forecast (from the survey taken at the end of November) was for growth of 1.2% q/q saar. Just prior to the release on January 25, the market consensus expected a 2.0% increase. The actual figure was 3.3%. To be sure, some of the Q4 strength will likely be ephemeral, notably the increase in inventory investment. The inventory investment in Q4 was a little faster than needed to keep pace with trend demand growth. So, some slowdown ahead is likely.

However, demand was also solid in Q4. Personal consumption expenditures rose a solid 2.8% as continued robust labor market conditions boosted disposable income. Nonresidential investment, government spending and exports also made meaningful contributions in Q4. All in all, private domestic demand (final sales to private domestic purchasers) increased a respectable 2.6% q/q saar in Q4 2023 and 2.7% Q4/Q4.

Even as growth has remained above trend, inflation has continued to surprise on the downside. The GDP price index increased only 1.5% q/q saar in Q4, more than one percentage point below expectations. The PCE price index, the one on which the Fed places the most emphasis, increased just 1.7%, nearly one percentage point below expectations. The combination of above-trend growth and falling inflation has brightened the BCFF outlook considerably. In this month's survey, 81% of respondents think the US economy will achieve a "soft landing," that is a return of inflation to around the Fed's 2% target without the economy experiencing a recession, up markedly from 63% last month.

Expected slowdown. Still, the BCFF consensus expects much slower growth in 2024 than in 2023. It looks for real GDP growth to slow to 1.4% in Q1, and 0.9% in both Q2 and Q3. For the four quarters of 2024, the consensus looks for real GDP to advance just 1.2%, in stark contrast to the 3.1% increase in the four quarters of 2023 but up from 0.8% expected in last month's survey. Even though the consensus expects anemic growth throughout much of this year, it does not foresee a recession. The panel thinks there is only a 39% probability of a US recession occurring over the next 12 months versus 45% last month and a recent peak of 63% last February.

While the BCFF panel is not queried about the source of the expected slowdown, inferences can be made from the answers given to several special questions. First and foremost, the panel considers the current stance of monetary policy to be quite restrictive. The consensus estimate of the neutral fed funds rate (FFR) (the rate that is neither restrictive nor stimulative) is 2.86%, more than 250bps lower than the current FFR target of 5.375%, indicating a meaningfully tight policy. Furthermore, the panel accepts that changes in monetary policy impact the economy with a lag, with 80% thinking that the economy has yet to feel the full impact of previous tightening.

Less fiscal accommodation and weak growth abroad also appear to factor into the consensus US outlook. 93% of respondents think that accommodative fiscal policy played a key role in the resilience of the economy in 2023. 77% expect less accommodation this year with 52% thinking that the reduced fiscal boost will meaningfully slow the economy. Also, the consensus does not expect much help from abroad. The euro area economy contracted slightly in the second half of last year, and respondents place a 54% probability of a recession emerging within the next 12 months. The UK economy has also been struggling. Real GDP declined in the three months to November with respondents assigning a 56% probability of a recession ahead.

Fed prepares for rate cuts. The FOMC met at the end of January and as almost universally expected, left its FFR target unchanged at 5.375%, where it has been since last July. In the announcement following the meeting, it moved to a more neutral position concerning the likely direction of future policy actions and noted explicitly that it would keep policy sufficiently restrictive until the committee is confident that inflation is on a path to the 2% target. Message to financial markets: the next move in the FFR will be down but it might not occur as soon as you expect. With the Fed expected to reduce the FFR, economic growth expected to slow, and inflation anticipated to remain near target, the BCFF consensus expects market interest rates across all maturities to decline throughout the six-quarter forecast horizon.

BCFF panelists were queried about several aspects of the near-term course for monetary policy. First was the timing of the first FFR cut. A plurality of respondents (41%) looks for the first cut to occur at the May FOMC meeting with 16% expecting one in March and 25% anticipating the first cut in June. All respondents except one expect the first cut to have occurred by July. On average, the group anticipates the FFR target to be reduced by 112bps during 2024. This stands in contrast to the FOMC which expects only 75bps of rate cuts this year. And while the fed funds futures market has recently priced out some of the rate cuts it had previously priced in, it still envisages a much larger 125bps of FFR cuts in 2024.

What about QT? A component of the recent tightening of monetary policy that has received less attention is the decline in the Fed's security holdings on its balance sheet. In support of its tightening of monetary policy via increases in the FFR target that began in March 2022, the Fed has also been allowing its security holdings to decline since June 2022 at a pace of $80 billion per month. This is known as quantitative tightening (QT) as it reduces the reserves held by the banking system. Since June 2022, the Fed's security holdings have declined by more than $1.3 trillion but are still more than 80% larger than they were prior to the pandemic. A question that has arisen in financial markets as they anticipate the first FFR cut is whether the Fed would stop the reduction in its balance sheet when it began to cut the FFR. BCFF panelists mostly think it won't, with only 23% expecting that QT will be halted when the Fed begins to lower interest rates.

Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally-adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. All interest rate data are sourced from Haver Analytics. Historical data for Fed's Major Currency Index are from FRSR H.10. Historical data for Real GDP, GDP Price Index and PCE Price Index are from the Bureau of Economic Analysis (BEA). Consumer Price Index history is from the Department of Labor's Bureau of Labor Statistics (BLS).

Forecasts of panel members are on pages 10 and 11. Definitions of variables are as follows: [1]Monetary policy rates. [2]Government bonds are yields to maturity. [3]Foreign exchange rate forecasts for U.K., Australia and the Euro are U.S. dollars per currency unit. For the U.S dollar, forecasts are of the U.S. Federal Reserve Board's AFE Dollar Index.

International. Global bond yields have generally been climbing in the early weeks of this year as investors have been re-evaluating the scope for central banks to swiftly pivot toward looser monetary policy. This reassessment has, in turn, been reinforced by some hawkish remarks from some policymakers coupled with evidence suggesting that US and European labor markets remain tight. In the meantime, escalating tensions in the Middle East have also been choking off key shipping routes and raising concerns about the resilience of global supply chains. Despite these setbacks, global equity markets have recovered some poise in recent days and, on the whole, remain resilient. This can partly be traced to some stronger-than-expected US growth data and upbeat news on the corporate earnings front, particularly from the technology sector

How central banks now respond to these crosscurrents remains to be seen. The recent disruption of Red Sea shipping routes has arguably shifted global growth risks to the downside. It was certainly of note that January's flash PMI data showed that manufacturers are now reporting growing issues with supply chains. Across the four largest developed economies, the US, Euro area, Japan and the UK, average supplier delivery times lengthened in January for the first time in 12 months. Still, some economies were more affected than others. The UK, for example, was worst hit, with lead times lengthening to a degree not seen since September 2022. But longer deliveries were also reported in the US, Euro area and Japan. It was notable too, however, in these surveys that this lengthening of supplier lead times was accompanied by a broadly-based rise in manufacturers' input costs.

Against that backdrop, the responses to one of our special questions this month reveals heightened optimism among our panelists about the US economic outlook, presumably, in part, due to stronger-than-expected growth momentum in Q4 2023. Specifically, our panelists now assign only a 39% probability to the likelihood of a US recession within the next 12 months, a decrease from 45% in last month's survey. However, this optimism contrasts with persistent pessimism about the European economic outlook. The probability of a recession in the Euro area is specifically placed at 54%, and 56% for the UK, with both figures little changed from last month's survey.

Our panelists' forecasts for the calibration of monetary policy in the Euro area and UK are also little-changed compared with last month with their respective policy rates expected to decline modestly within the next 3 to 6 months. When specifically asked about the timing of rate cuts by central banks, 9% of our panelists foresee the ECB starting to reduce rates in Q1 2024, 61% predict a cut in Q2, and 26% in Q3. Regarding the BoE, 4% of our panelists expect a rate cut in Q1, while 39% anticipate a move in Q2, and 48% anticipate Q3.

As for the BoJ, our panelists continue to expect a monetary policy normalization phase to proceed in the coming months. But there is now a little more unanimity about when exactly this process will commence. For example, in this month's survey 57% of panelists expect a first policy rate hike from the BoJ in Q2 2024. That contrasts with just 5% expecting a hike in Q1, a further 14% expecting a hike in Q3 with a further 24% opting for Q4 or later. These expectations also differ from last month's survey, where 16% predicted a Q1 hike, 37% a Q2 hike, 16% a Q3 hike, and 31% a hike in Q4 or later. The emerging consensus for a first rate hike in Q2 2024 could be influenced by the BoJ's recent statements emphasizing the upcoming Spring wage negotiations and the general importance of wage inflation in shaping monetary policy.

Finally, amid much uncertainty about China's economic prospects, the PBoC has recently announced that it will cut the reserve requirement ratio (RRR) for banks by 50 bps, effective February 5. Whether this latest easing initiative can alleviate the challenges China currently faces is open to much debate, however, not least given the structural roots of its many economic problems.

Let's Get Real about GDP

US' real private-sector spending lagged real GDP ....

Real GDP outran real private sector spending on final products by 7/10th of a percentage point in 2023. The annual growth rate for real private-sector spending on final goods and services slowed from yearlong 2022's 2.3% to yearlong 2023's 1.8%. By contrast, real GDP growth quickened from 2022's 1.9% to 2023's 2.5%. (Real GDP adds government spending, the trade deficit and the change inventories to real private sector spending on final products.)

Remember real GDP's great head fake of 2022's first half. That was when real GDP's back-to-back annualized quarterly setbacks of -2.0% for Q1-2022 and -0.6% for Q2-2022 were incorrectly viewed by some as evidence of a recession. One of the principal reasons why the unemployment rate did not rise in a manner that would confirm a recession was because real private sector spending on final products posted back-to-back annualized quarterly increases of 1.5% for both the first and second quarters of 2022.

In terms of annualized quarterly growth rates, real private sector purchases of final products slowed from Q3-2023's 3.0% to Q4-2023's 2.6%, which differed considerably from real GDP's accompanying deceleration from 4.9% to 3.3%.

Also, in terms of year-to-year increases, real private sector spending on final products quickened from Q4-2022's 0.8% to Q4-2023's 2.7%, which was more muted than the comparably measured jump by yearly real GDP growth from 0.7% to 3.1%.

Real private sector spending shows highest correlation with US equity market performance ...

In terms of year-on-year growth rates, the market value of US common stock shows a slightly higher correlation of 0.49 with real US private sector purchases of final products compared to the common equity market's 0.45 correlation with real GDP.

Real private sector spending on final products approximates real GDP less real net exports less the change in real inventories less real government spending.

The nominal version of US private sector purchases of final products generates a correlation of 0.42 with the market value of US common stock, where the latter generates a lower correlation of 0.35 with nominal GDP.

Unexpected surge by government spending amplified real GDP's upside surprise …

Though real GDP's annualized quarter-to-quarter growth rate slowed from Q3-2023's 4.9% to Q4-2023's 3.3%, the latter was well above the consensus projection of 2.0% growth. Calendar year 2023's 2.5% annual advance by real GDP far outpaced the consensus' year earlier prediction that called for a 0.5% rise by 2023's US economy.

At the start of 2023, the consensus was looking for a further deceleration of US real GDP following a plunge by real GDP's annual growth rate from 2021's post-COVID surge of 5.8% to 2022's 1.9%. Few expected the US economy would accelerate given monetary tightening that both ratcheted up the federal funds rate from 0.13% to its current 5.38% and the Fed's reduced holdings of US Treasury bonds and mortgage-backed securities.

The upside growth surprise of 2023 owes something not only to the unexpected continuation of massive government stimulus, but also to the overhang of highly liquid assets stemming from 2020-2021's most rapid expansion of the money supply since World War II.

Of special importance to 2023's US economy was the rapid growth of government spending. Yearlong 2023's 4.0% annual advance by real government spending towered over the 2.5% rate of real GDP growth. Real government spending's 4.0% increase for 2023 consisted of gains of 4.2% for real federal spending and 3.8% for real spending by state and local governments.

Without the surge in real government spending, calendar year 2023's 2.5% increase by real GDP slows to an estimated 1.9% matching its 1.9% gain for 2022.

GDP's estimate of government spending excludes social security, Medicare, and Medicaid ...

Worth noting is how real government spending does not include government transfer payments such as social security, Medicare, and Medicaid. Transfer payments enter into GDP via personal spending. For example, while the sum of spending by federal, state, and local governments included in the GDP accounts approximated 17.4% of 2023's GDP, total gross federal outlays for calendar-year 2023 approached 23.0% of GDP.

Calendar-year (CY) 2023's 7.8% annual increase by the sum of outlays for social security, Medicare, and Medicaid was faster than CY 2023's 5.6% annual increase by nominal private sector spending on final goods and services. CY 2023's nominal government spending contained in the GDP accounts that excludes transfer payments grew by a much faster 6.6% annually compared to private sector spending on final products.

Among major categories of GDP's estimate of consumer spending, government support stands out in health care spending. CY 2023's 7.7% annual increase by nominal consumer spending on health care easily outran the 5.7% increase by the rest of consumer spending.

Moreover, government subsidies and tax breaks for green energy projects and electric vehicles explained why CY 2023's 19.4% annual increase by nominal business investment spending on structures was so much faster than the comparably measured gains of 4.2% for business purchases of equipment and 6.2% for business investment in intellectual property products (including software).

Unlike the switch in real government spending's annual percent change from 2022's -0.9% drop to 2023's 4.0% advance, the calendar year growth rates for each of real GDP's broad private-sector categories slowed from 2022 to 2023.

By private sector category, the growth of real consumer spending eased from CY 2022's 2.5% to CY 2023's 2.2%, real business investment spending in capital products slowed from 5.2% to 4.4%, and the annual contraction by real residential investment spending deepened from -9.0% to -10.7%.

Spending on recreational goods led real consumer spending growth in 2023 ...

I doubt if anyone can guess the fastest growing category for CY 2023's real consumer spending? The winner was the 7.6% annual advance by real spending on recreational goods and vehicles. This category has been hot for some time. After surging by 10.3% annually, on average, during the four years ended 2019, real outlays on recreational goods and vehicles accelerated to the 14.3% average annual advance of the four years ended 2023.

But some may view 2023's 7.6% annual advance by real spending on recreational goods and vehicles to be very misleading. Investors may view the 7.6% real increase to be useless information given how nominal, or actual, consumer spending on recreational goods and vehicles rose by a much slower 4.2% annually in 2023. Inflation adjusted, or real, data must be viewed with caution.

Dollar value of consumer spending slows appreciably year-to-year ...

From the perspective of the real world, nominal consumer spending has slowed noticeably from its unsustainably rapid pace of a year ago. The annual increase of nominal consumer spending slowed from CY 2022's 9.2% to CY 2023's 6.0%. In addition, the year-on-year growth rate for nominal consumer spending dropped from Q4-2022's 7.2% to Q4-2023's 5.4%. I think the deceleration by consumer spending is far from over given (i) rising consumer loan delinquency rates, (ii) a historically low personal savings rate, and (iii) the likelihood of slower growth rates for payrolls and employment-derived income.

The annualized quarterly growth rate for real consumer spending eased from Q3-2023's 3.1% to Q4-2023's 2.8%. The latter was slightly above the latest consensus projection of 2.5%. However, not that long ago, the consensus believed Q4-2023's annualized sequential growth rate for real consumer spending would be less than 2%.

Inventory build and thinner trade gap pushes Q4-2023's real GDP growth above 3%

The contribution to GDP from changes in unsold inventories supplied an unexpected lift to Q4-2023's real GDP. Early January's Blue Chip consensus expected the increase in real inventories would drop to $33.2 billion in 2023's final quarter following a jump from Q2-2023's $14.9 billion to Q3-2023's $77.8 billion.

Much to the contrary, Q4-2023 showed an advance by real inventory accumulation to $82.7 billion. So instead of conforming to the consensus forecast and reducing real GDP by -$44.6 billion, the change in inventories added $4.9 billion to Q4-2023's real GDP.

Moreover, the consensus was looking for a widening of Q4-2023's real trade deficit that would have subtracted nearly -$10 billion from real GDP. Instead, the real trade deficit narrowed from Q3-2023's -$930.7 billion to Q4-2023's -$908.2 billion and, thereby, added +$22.5 billion to GDP.

After excluding the volatile additions to real GDP stemming from changes in inventories and changes in the real trade deficit, the remainder of Q4-2023's real GDP grew by a slower 2.7% annualized from Q3-2023's pace. The latter was down from Q3-2023's 3.5% comparably measured gain.

In terms of calendar year growth rates, real GDP excluding the change in inventories and the trade deficit rose from 2022's 1.7% to 2023's 2.2%, where the latter was slower than the 2.5% rise for the entirety of 2023's real GDP.

Furthermore, if we exclude only the 0.6 percentage points of growth supplied CY 2023's US real GDP by a narrower trade deficit, the annual rate of real GDP growth slows to 1.9%, which represents a slowdown from the hybrid metric's 2.3% increase of CY 2022.

John Lonski (The Lonski Group)

U.S. Job Openings Up, Quits Down ...and Jobs are "Plentiful"

Between the two surveys released at the same time.... one on confidence (and jobs) and job availability... these days, I'll go with the job survey as being more important. The two big items to focus on: 1) jobs and 2) inflation expectations

Job openings actually rose in December (Side note: Anyone remember how exciting it was when the number of openings cracked 10 mln? And they stayed there for nearly two years!) We're back over the 9 million mark, which is a 3-month high... and the bulk of the gains were in the private sector. So the good news is that there are options out there... if one is still unemployed or is looking for extra work. The bad news is that it means that the consumer could spend more and that's not what the Fed wants right now.

Firms increased their hires (so they're finding the right person), while the number of people who quit (either for those options noted above or for other personal reasons) fell for the fourth month in a row, which is noteworthy as it suggests that there is less pressure to boost wages. So that is good news.

And, yes, the Conference Board's headline index of consumer confidence showed a bigger-than-expected 6.8 pt jump in January to a 7-month high of 114.8 (lots of excitement around the 'present situation' .... was it the potential for rate cuts?), but check out the jobs section of the survey. Inflation expectations for the next 12 months dropped for the third month in a row to a 46-month low.

"Show of hands! Anyone still finding jobs plentiful these days? How about hard to get?" More respondents found jobs plentiful and fewer found those jobs difficult to come by. Let's go back to the opening segment here .... the good news is that Americans are confident about their job situation; but, the bad news is that means the U.S. economy could stay resilient for longer. Not a bad thing in the grand scheme of things, but bad for Fed Chair Powell. Also, note this suggest that the January jobless rate could fall (we will find out on Friday).

Separately.... House prices are still rising but at a more modest pace.... the S&P CoreLogic Case-Shiller Home Price Index (say that quickly 3x) edged up just 0.2% in November (still sizeable gains in Vegas.... maybe the New Edition reunion is bringing more buyers into town... but they were offset by sizeable declines in San Francisco and Seattle), while the FHFA House Price Index continued to rise at a more sedate rate of 0.3% for the second month in a row.

Bottom Line: It will be challenging to push for earlier rate cuts in this environment.

Jennifer Lee (BMO Capital Markets)

Special Questions:

1. a. At what FOMC meeting will the first FFR cut occur?

Mar 2024	16%	May 2024	41%	Jun 2024	25%	Jul 2024	16%
Sep 2024	0%	Nov 2024	3%	Dec 2024	0%	Later	0%

   b. How much will the FFR target decline in 2024? 112 bps

2. a. What is your estimate of the long-term neutral fed funds rate? 2.86%

   b. Since before the pandemic, has it: increased 79% decreased 7% remained the same 14%

3. The Fed has been reducing its security holdings since the middle of 2022, known as quantitative tightening. Will it halt this reduction once it begins to lower the fed funds rate target? Yes 23% No 77%

4. Changes in monetary policy affect the economy with a lag, possibly long. Is there further meaningful restraint from earlier tightening that the US economy has yet to feel? Yes 80% No 20%

5. Is the US economy headed for a "soft landing," that is a return of inflation to around the Fed's 2% target without the economy experiencing a recession? Yes 81% No 19%

6. a. Did accommodative US fiscal policy play a key role in the resilience of the economy in 2023? Yes 93% No 7%

   b. Do you expect less accommodation in 2024? Yes 77% No 23%

   c. If so, will this slow the economy meaningfully? Yes 52% No 48%

7. What is your US unemployment rate forecast for: Jun 2024 4.1% Dec 2024 4.3%

8. What probability do you attach to a recession beginning over the next 12 months in the:

	US	euro area	UK
Consensus	**39%**	**54%**	**56%**
Top 10	53%	66%	69%
Bot 10	27%	42%	44%

9. a. When will the ECB begin cutting its policy rates?

Q1 2024	Q2 2024	Q3 2024	Q2 2024	Later
9%	61%	26%	4%	0%

   b. When will the BoE begin cutting its Bank rate?

Q1 2024	Q2 2024	Q3 2024	Q2 2024	Later
4%	39%	48%	9%	0%

   c. When will the first hike in the Bank of Japan's short-term policy interest rate occur?

Q1 2024	Q2 2024	Q3 2024	Q2 2024	Later
5%	57%	14%	5%	19%

Wall Street Is Rethinking the Treasury Threat to Big Tech Stocks

By Justina Lee
March 11, 2021, 10:08 AM EST

- Investors fear sector has morphed into a big bet on low rates
- Yet history shows tech's link with bonds is far more complex

Don't fear Treasury yields killing off the stock market's golden goose just yet.

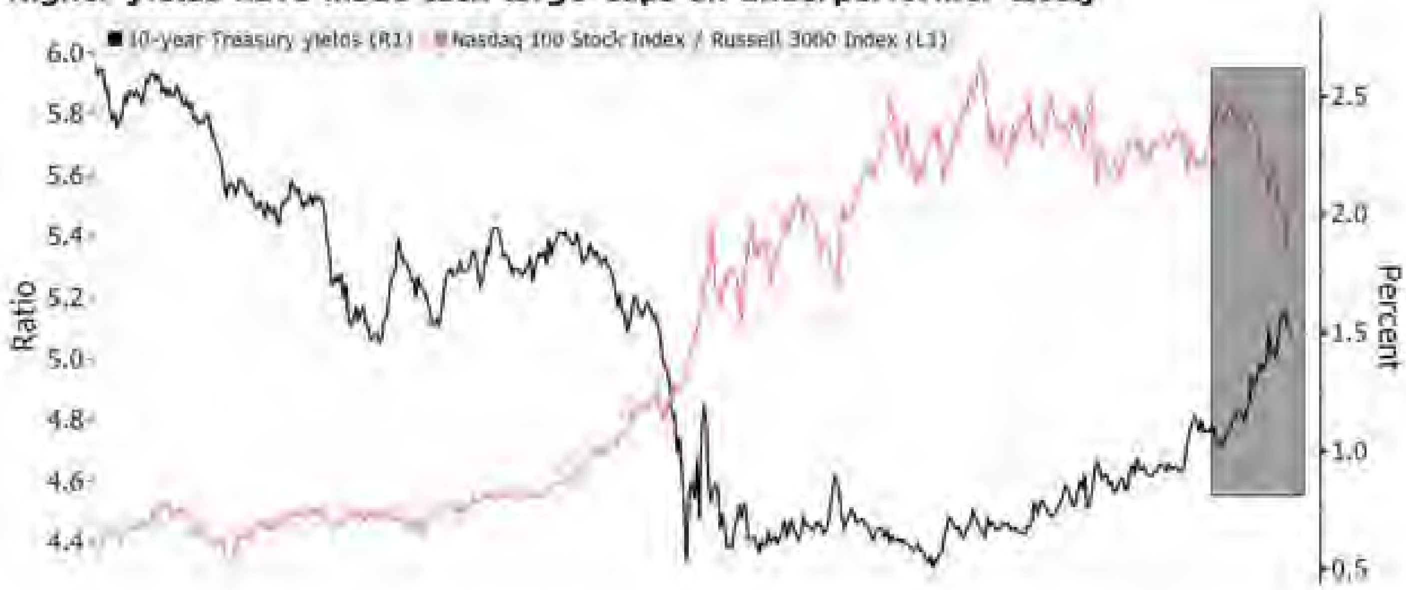
As the Nasdaq 100 Index recovers from a $1.5 trillion rout, there's good reason to think technology shares can defy machinations in U.S. bonds.

Studies from Deutsche Bank AG and Goldman Sachs Group Inc. show the world's biggest equity sector has a fickle relationship with Treasuries, if it has one at all. Quant powerhouse AQR Capital Management has found little evidence that yields drive how expensive megacaps trade relative to their cheaper counterparts.

And of course, secular economic trends have been powering the likes of Facebook Inc. and Amazon.com Inc. for years now -- when benchmark rates were far higher than current levels.

All that makes the Treasury-stock link more complex than it seems.

Low-Rate Trade?
Higher yields have made tech large-caps an underperformer lately



Source: Bloomberg

Put another way, while the recent Treasury selloff has pummeled Big Tech, that doesn't mean bonds are a natural foe for a sector hitched to secular trends from 5G to automation.

"Many tech companies will continue to benefit for many years from very strong themes that will result in outsized earnings growth," said Terry Ewing, head of equities at Mediolanum International Funds, which oversees about $54 billion. "The dilemma for portfolio managers running a balanced mandate is that actually the de-rating we've seen in growth stocks has put them at a much more attractive level."

Ewing's funds began offloading a handful of tech stocks for cyclical names from the third quarter, just as rising expectations for an economic re-opening pushed yields higher in the world's biggest bond market.

As the U.S. yield curve steepened last month, $1.5 trillion of value was wiped off tech shares, while assets deemed less sensitive to duration risk like value stocks -- banks, oil drillers and commodity producers -- surged.

The Nasdaq 100 jumped nearly 2% on Thursday morning in New York, as 10-year Treasury yields traded little changed around 1.5%.

Quant Perspective

From the perspective of quants who dissect equities by their factors, there are a few ways to explain the last month's rotation.

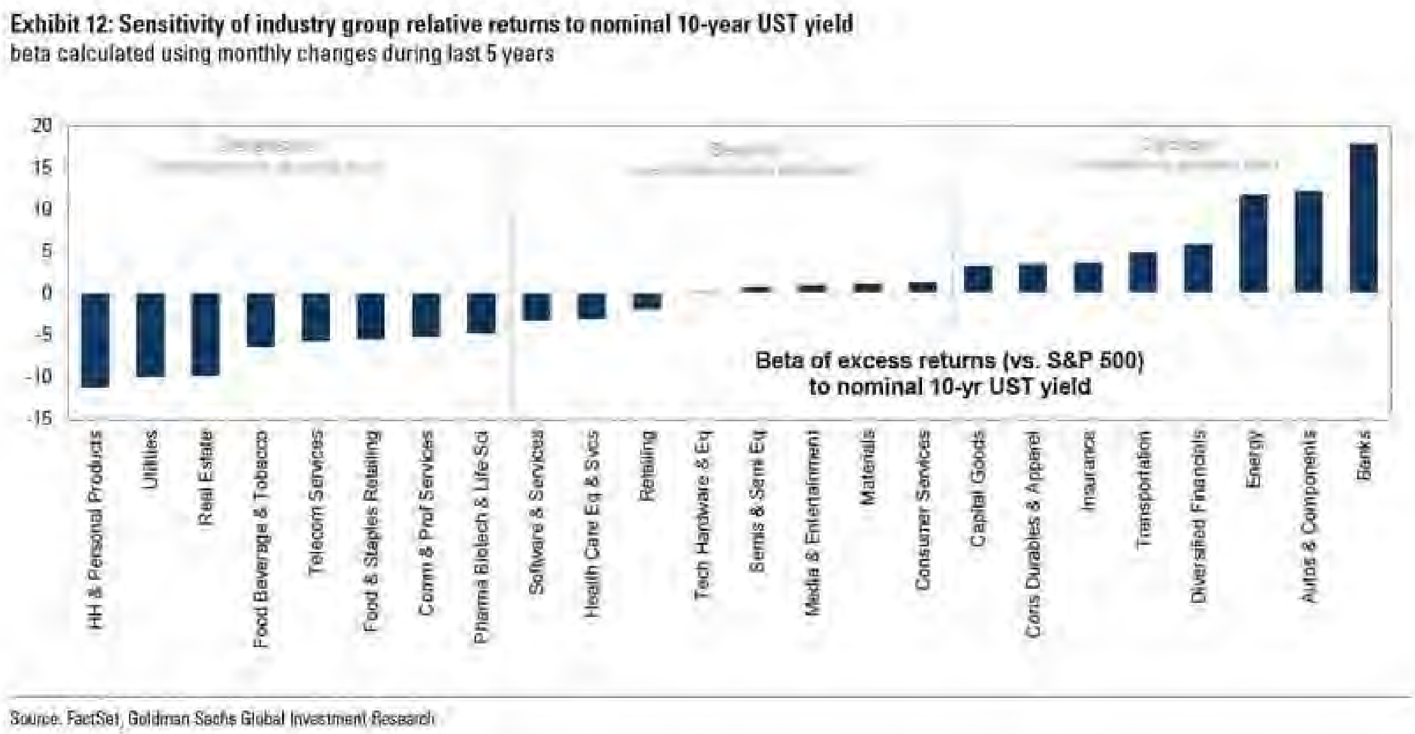
Technology companies are typically dubbed growth stocks thanks to their strong expected profit expansion, often far into the future. That's in contrast to value shares, which trade with lower multiples due to their riskier businesses.

When rates fall, economic growth is typically muted. That makes a company like Netflix Inc. look like a a safer bet since it's riding the secular trend of streaming rather than ups and downs of the business cycle. Meanwhile the likes of Exxon Mobil Corp., tied to oil demand, look riskier.

In the post-crisis era of monetary easing, that's how the valuation dynamic played out: Netflix's long-term earnings were discounted at lower rates -- making it more expensive.

Now, opposing forces are in play. Rising yields are making the near-term cash flows of cheaper equities like Exxon Mobil more attractive.

"Sooner or later we will see pretty decent economic growth," said Georg Elsaesser, a quant portfolio manager at Invesco. "I would be more than surprised if that wouldn't be favorable for high-risk factors like value."



Source: Goldman Sachs

Yet all these relationships are volatile -- and have far less explanatory power than commonly asserted.

Interest-rate changes only explain 19% of the returns posted by the growth factor versus value since 2018, Goldman Sachs strategists wrote in a note last month. That compares with 54% for cyclicals versus defensive.

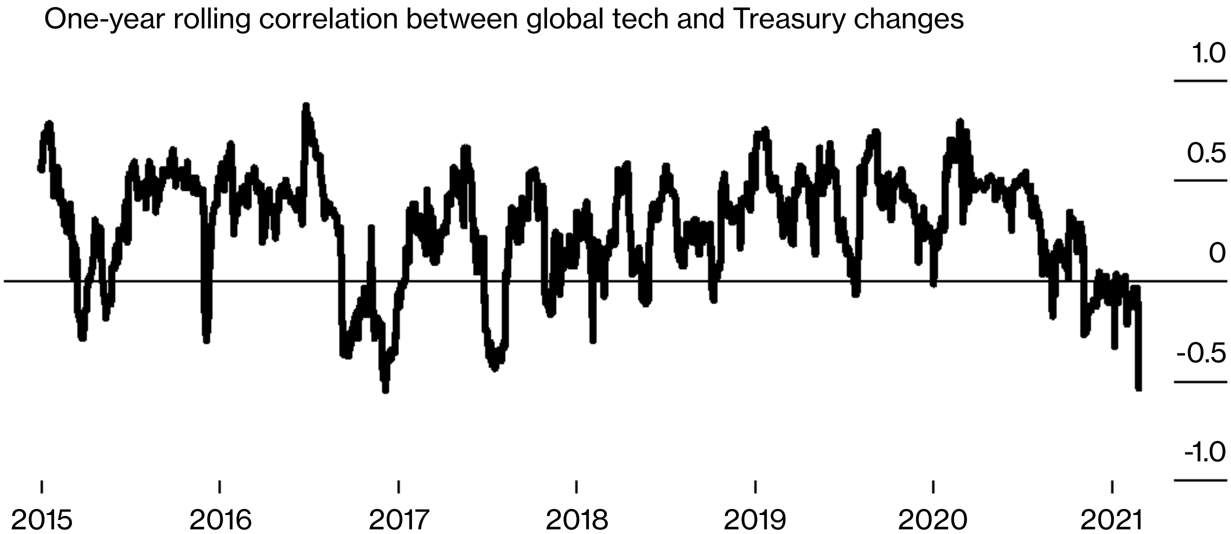
In other words, industry-specific trends, not bonds, seem to be driving this tech-heavy part of the market.

Similarly Deutsche Bank's quants find a zero beta, or sensitivity, between bonds and tech since 2015. In contrast, financials and energy had the most positive links with yields, and utilities and real estate the most negative.

According to Andreas Farmakas, a quantitative strategist at Deutsche Bank, this shows how the tech sector and Treasuries lack a direct and consistent link. In fact, these stocks in the past often rose with rates, with the latter seen as a sign of economic strength that could benefit corporate earnings.

It's Complicated

Tech stocks' relationship with Treasuries has been volatile in the short run



Source: Deutsche Bank
Data show one-year rolling correlation between daily moves in global tech and in 10-year Treasury yields

That's not to say there isn't reason to fret recent co-movements.

"Given the ties between technology, the overbought Covid trade and ultimately equity indices -- they take up a large chunk -- the correlation flipped," Farmakas said.

In other words, bonds have lately turned from friend to foe -- and that's why quants like Invesco's Elsaesser are so reluctant to time markets.

For its part, AQR last year called the link between interest rates and value -- which involves a bet against growth -- "suspect" since it varies greatly depending on the period, the markets and measurements studied.

All this suggests that once the initial reflation frenzy settles, there's no reason to fear bond yields will necessarily doom the tech trade. In fact Ewing at Mediolanum is eyeing some bargains in the months ahead.

"Somewhere along the second-half of this year going into next year it'll be prudent for investors to start considering moving to higher-quality names rather than cyclical recovery," he said.

UBS prefers info tech, consumer staples and energy in 2024

Dec. 12, 2023 11:19 AM ET | **S&P 500 Index (SP500)** | XLU, XLE, XLV... | By: Jason Capul, SA News Editor

Fabrice Cabaud

UBS predicted Tuesday that info tech, consumer staples and energy would be the most preferred sectors for 2024. The firm added that a soft landing is being priced into the market, with the recent market rally being fueled by the idea that the Federal Reserve is done hiking.

Furthermore, UBS noted that cooling inflation data and labor market conditions have also been driving catalysts. Turning to 2024, the firm said: "We think earnings growth can accelerate in 2024 despite slowing GDP growth due to base effects in healthcare and energy as well as a moderate improvement in the goods side of the economy."

"Although earnings revision breadth is weakening, the forward S&P 500 EPS estimate continues to climb," UBS added.

See the highlighted sectors of the economy below that the investment bank views as most preferred, least preferred, and neutral.

Most Preferred

Consumer Staples (XLP)

Energy (XLE)

Information Technology (XLK)

Neutral

Communication Services (XLC)

Consumer Discretionary (XLY)

Financials (XLF)

Healthcare (XLV)

- Industrials (XLI)

Least Preferred

- Materials (XLB)
- Real Estate (XLRE)
- Utilities (XLU)

Moreover, the financial institution also provided its investors with some S&P 500 (SP500) targets. The financial institution provided a target of 4,500 for June of 2024 and 4,700 for the benchmark index as of December 2024.

EXCLUSIVE

Big Money Pros Are Split on the Outlook for Stocks. But They Are Fans of Bonds.

Nearly half of poll respondents consider the U.S. stock market overvalued at current levels.

By Nicholas Jasinski Follow

Updated October 27, 2023 / Original October 27, 2023

This year has posed an unusual array of challenges for investors, and more could be in store. The major stock market indexes are still up in 2023, powered by a narrow slice of technology stocks, but have been losing ground rapidly. Bond yields have risen sharply, topping 5% on some government debt. The economic outlook is uncertain, the U.S. government has been in turmoil, and wars and conflict are spreading across the globe.

"Rarely have I seen such disarray in the world, with financial markets, politically, and otherwise," says William Priest, executive chairman and co-chief investment officer at Epoch Investment Partners in New York, and a respondent to our fall 2023 Big Money poll.

This fall, there is no predominant mood among the professional money managers surveyed by Barron's. Some 38% of Big Money respondents say they are bullish about the prospects for equities in the next 12 months. That compares with 38% in the neutral camp, and 24% who call themselves bears.

The bulls see a 14% rise for the S&P 500 index by the end of 2024, and a 12% gain by the Dow Jones Industrial Average. The bears forecast losses of 3% for the S&P 500 and 2% for the Dow.

Based on their mean forecasts, the bulls project a 15% gain by the end of 2024 for the Nasdaq Composite, while the bears expect the tech-heavy Nasdaq to decline 4%.

The latest Big Money Poll closed on Oct. 13 and elicited responses from more than 100 professional investors from across the country. Barron's conducted the poll with the help of Erdos Media Research in Ramsey, N.J. (Complete results are at the bottom of this article.)

High-quality bonds and value stocks have the most fans in our survey. Investors expect a tough year ahead for the more growth-oriented areas of the stock market. Nearly half of poll respondents consider the U.S. stock market overvalued at current levels.

One reason is the recent ramp-up in bond yields, which raises the competition for equities. The Federal Reserve's policy committee has increased its interest-rate target by more than five percentage points in the past 19 months to cool the economy and bring down inflation, while market forces have pushed up yields on long-term bonds. The yield on the benchmark 10-year U.S. Treasury note approached 5% this month, up from a paltry 0.5% at its pandemic-era low.

Yields along the Treasury curve are at their highest levels since before the global financial crisis of 2008-09. It's a return to the pre-2008 world as far as investors are concerned—not the low-growth, low-interest-rate, low-inflation, growth-stock-dominated decade that ended in 2022, two years after the start of the Covid-19 pandemic.

"The single most important variable in investing is interest rates," says Priest, a member of the Barron's Roundtable, whose firm manages about $28 billion. "Earnings may be fine next year and beyond, but it's the present value of those numbers that's going to be the problem."

Two-thirds of Big Money respondents say value investing will outperform growth-stock investing in the next 12 months.

And a majority of Big Money investors predict bonds will provide a higher return than stocks in the coming 12 months. While bonds have become cheaper this year (prices move inversely to yields), stocks remain relatively expensive: The S&P 500 trades for 17 times analysts'

2024 consensus earnings estimate.

On average, Big Money respondents have allocated about 20% of their portfolios to fixed income today. “We like bonds, especially when looking at equities that are trading at above-average [valuation] multiples,” says Matt Dmytryszyn, chief investment officer at Telemus Capital, with $3.5 billion in assets under management. “It has been a while since we’ve been able to get this excited about bonds.”

Fixed income might be in greater favor now, but few money managers expect a lost half-decade for U.S. stocks. Indeed, 95% expect to reap a higher return from stocks than bonds in the next five years.

Among fixed-income categories, 40% of managers prefer U.S. Treasuries. They have little credit risk, and yields are at 16-year highs. Another 24% like U.S. investment-grade corporate bonds. Spreads—or the premium yield on riskier bonds over Treasuries or another benchmark—are narrow, given the potential for a recession in 2024, which argues for favoring higher credit quality.

Big Money managers don’t have much duration risk in their portfolios, or sensitivity to changing interest rates. An average of 61% of their fixed-income exposure is in short-term securities maturing in less than three years, and just 8% is in bonds maturing in more than 10 years.

“We’re not sticking our neck out too much on a duration basis,” says Zach Jonson, CIO at Stack Financial Management in Whitefish, Mont. “An inflation spike or some kind of stagflation can happen, and you just have to be more careful than you normally would with duration.”

It’s hard to argue with yields pushing 5.6% on T-bills or 5.1% on the two-year U.S. Treasury note. As for where to park cash, short-term U.S. government bonds and money-market funds are best, according to the survey results.

Nearly two-thirds of Big Money respondents expect the 10-year Treasury note to yield at least 4.5% a year from now, versus a recent 4.8%. The yield still might rise a bit more before trending lower, some respondents say, while noting that it is at, or close to, levels at which locking in yields for the longer term makes sense.

“If we can get a Treasury yielding 5% or above for a decade, that’s pretty darn attractive,” says Jack DeGan, CIO at Harbor Advisory in Portsmouth, N.H. “We haven’t seen that opportunity in portfolios for a long time.”

There is also value in longer-term bonds as a hedge against broader market declines. A broad flight to safety among investors would push bond prices up and yields down.

Investors are split on the odds of a recession in 2024. Some give the

Federal Reserve ample credit for managing inflation down without sacrificing the economy, and see a so-called soft landing next year. Others are less sanguine, however, arguing that the impact of higher interest rates has yet to fully hit the real economy and that a recession is a question of when, not if.

Forty-six percent of respondents expect the economy to enter a recession in the next 12 months. But it needn't be a crisis-level downturn: Just 6% of investors expect U.S. real gross domestic product to contract by 2% or more next year.

"It's really hard to generate a big recession when there's that much money flowing into the economy," says Harbor's DeGan, pointing to pandemic-era stimulus spending and newer government programs such as the Infrastructure Investment and Jobs Act. "The Fed has raised interest rates dramatically, but our economy is less interest-rate sensitive than it has been in my 40 years in business."

Both consumers' and businesses' balance sheets are in good shape, he says, supporting spending but adding to the upward pressure on inflation. Only 15% of Big Money respondents expect inflation, as measured by the consumer price index, to come in at or below the Fed's 2% target in 2024. Most see the CPI hanging around 4% this year and slipping to 3% in 2024.

David Poarch, of Native American Fund Advisors in Tulsa, Okla., is concerned about sticky or potentially reaccelerating inflation, noting the trillions of dollars of monetary and fiscal stimulus pumped into the economy during and since the Covid pandemic. That flood of money is still working its way through the real economy, he says, despite the Fed's rate hikes over the past year and a half. "It's like the python that ate the pig—the economy needs some time to digest it," Poarch says.

Stack Financial's Jonson points to several long-term trends that are inherently inflationary, including the so-called reshoring of supply chains, the costly transition to renewable energy, and aging demographics that are leading to a shortage of labor in many developed markets.

What is the biggest risk facing the stock market? Twenty-eight percent of managers worry most about a potential recession, 26% point to the possibility of higher interest rates, and 16% cite resurgent inflation. This highlights the delicacy of the Federal Reserve's balancing act. The central bank must tap the brakes on the economy enough to ease the upward pressure on inflation, but not so much as to break things and cause a significant recession.

"The Fed is right to be proactive and [keep rates] higher for longer, so that inflation doesn't come back," says Dmytryszyn of Telemus

Capital, headquartered in Southfield, Mich.

Most Big Money managers approve of the Fed's moves to date, with 62% saying its current policy stance is just right. But half that percentage thinks the Fed has tightened too much and risks pushing the economy into a recession.

Nearly all survey respondents think the Fed is just about done raising interest rates, and that rate cuts could be coming next year. More than 80% predict that Fed officials will lower the current federal-funds target range of 5.25% to 5.50% next year by at least a quarter of a percentage point, while 35% expect rate cuts of more than half a point.

Joe Frohna, founding principal and portfolio manager at 1492 Capital Management, based in Milwaukee, notes that the Fed's first rate decrease of a cycle historically has followed the central bank's last hike by an average of 7.5 months. That pattern implies a rate cut sometime around the middle of next year.

"For the stock and bond markets to work in 2024, you're going to need the Fed to step out of the way," says Frohna. "At a minimum, that means they say they're pausing, if not [cutting] outright."

Broader participation in the market beyond the largest stocks would help to extend any rally. The S&P 500's 9% gain year to date is almost entirely due to advances in a handful of megacap tech stocks including Apple (ticker: AAPL), Nvidia (NVDA), Microsoft (MSFT), and Alphabet (GOOGL).

“It’s hard to get excited about a rally when it’s being led by such a narrow group,” says Todd Jones, CIO of Gratus Capital in Atlanta, with about $3 billion in assets. “The valuations of the top 10 companies in the S&P 500 are super-elevated versus bottom 490.”

About 60% of Big Money respondents expect small- or mid-cap stocks to outperform large-caps over the next 12 months. The iShares Core S&P Small-Cap exchange-traded fund (IJR) and the SPDR S&P MidCap 400 ETF (MDY) are ways to play the market’s smaller stocks.

Weatherly Asset Management’s Carolyn Taylor is sticking with Big Tech stocks for now, and waiting for better opportunities to present themselves. These companies have pristine balance sheets and wide competitive moats, and generate a ton of free cash flow, she notes. Should rates fall, however, more-speculative areas in the technology sector could become more attractive, namely shares of the fast-growing but richly valued companies expected to generate the bulk of their profits far in the future.

“We have dry powder in the form of cash and short-term fixed income and are a bit lighter than usual on equities,” says Taylor, whose Del

Mar, Calif.–based firm manages about $1.2 billion. “So, if we do have a recession and the Fed starts to cut interest rates, we have the ability to shift.”

Epoch’s Priest is also bullish on Microsoft and Alphabet, both plays on 2023’s hottest investing theme: artificial intelligence. “They’re going to win with AI,” he says. “From a long-term investment perspective, you want to be exposed to those.”

Nvidia stock has rallied more than 175% this year, also fueled by enthusiasm for AI. But the stock isn’t so popular with the Big Money crowd: 29% of managers call it the market’s most overvalued stock. Nvidia sports a price/earnings ratio of 27 times the next year’s estimated earnings.

Energy stocks are Big Money investors’ favorite sector for the year ahead, designated as such by 33% of respondents. They like the sector for its relatively discounted valuation, high cash-flow yields, and generous dividend and share-buyback policies. Exposure to a potential spike in oil and gas prices also makes energy a defensive play.

Poll respondents see West Texas Intermediate, the U.S. benchmark oil price, rising to $91 a barrel in a year from the mid-$80s today. “Energy is both cheap and attractive as a hedge,” says Jonson, whose firm has about $1.8 billion in assets under management.

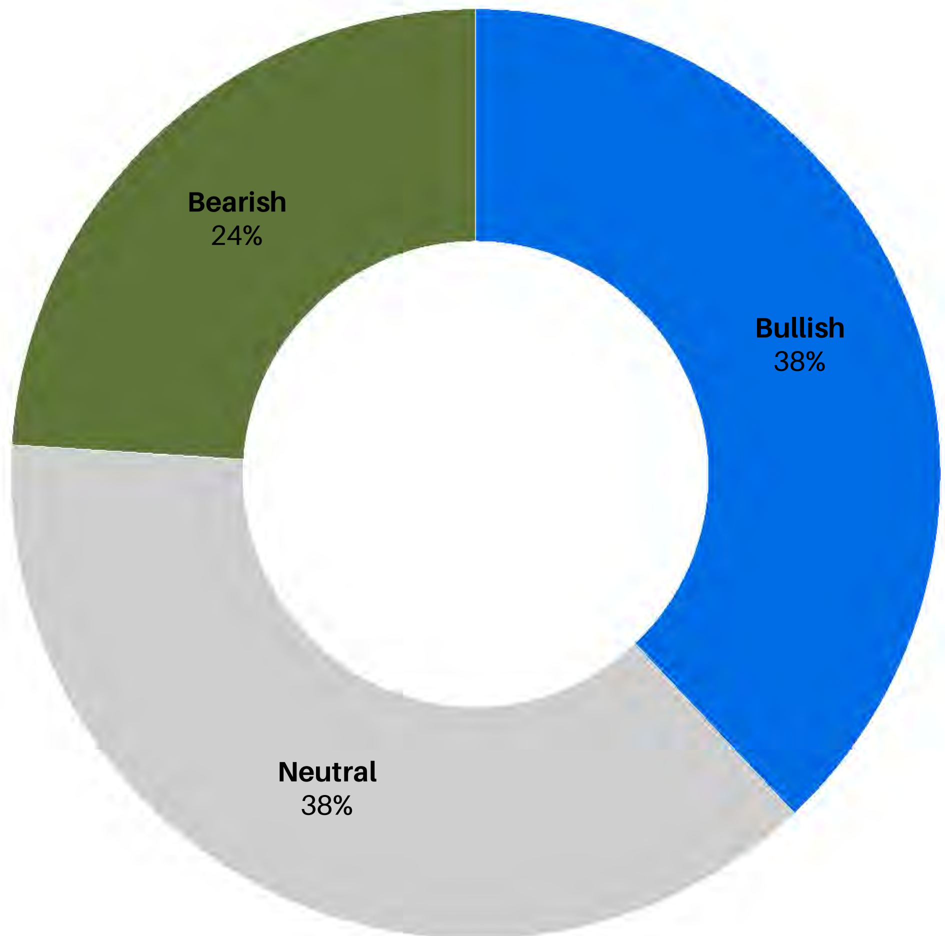
Gratus' Jones also likes midstream energy companies for their dividends and contractual cash flows tied to the volume of oil and natural gas that flows through their pipelines. Midstream companies include Williams Cos. (WMB), which yields 5.2%; Oneok (OKE), yielding 5.7%; and Kinder Morgan (KMI), yielding 6.7%.

Higher interest rates and bond yields have weighed on other income-generating assets, including dividend stocks. DeGan sees opportunities in the shares of quality companies with durable businesses that have seen their valuations fall and dividend yields rise this year. He points to Brookfield Infrastructure Partners (BIP), with a 6.7% yield; Pfizer (PFE), paying 5.4%; and NextEra Energy (NEE), yielding 3.4%.

Plenty could go wrong for the markets and world in the next year. For investors in stocks and bonds, a focus on attractive yields and undervalued assets seems like a sensible game plan.

The Markets

Describe your investment outlook for U.S. equities in the next 12 months.



Where do you expect the following market measures to trade as of June 30, 2024, and Dec. 31, 2024?

BULLISH	6/30/2024	12/31/2024

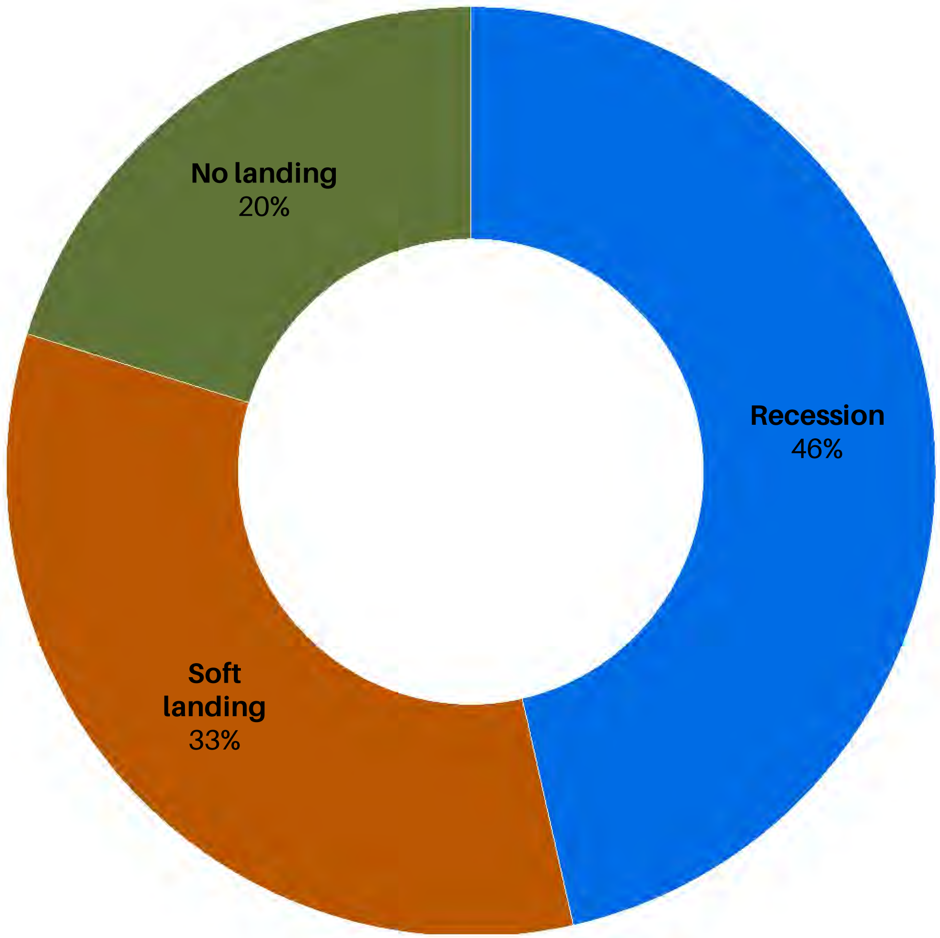
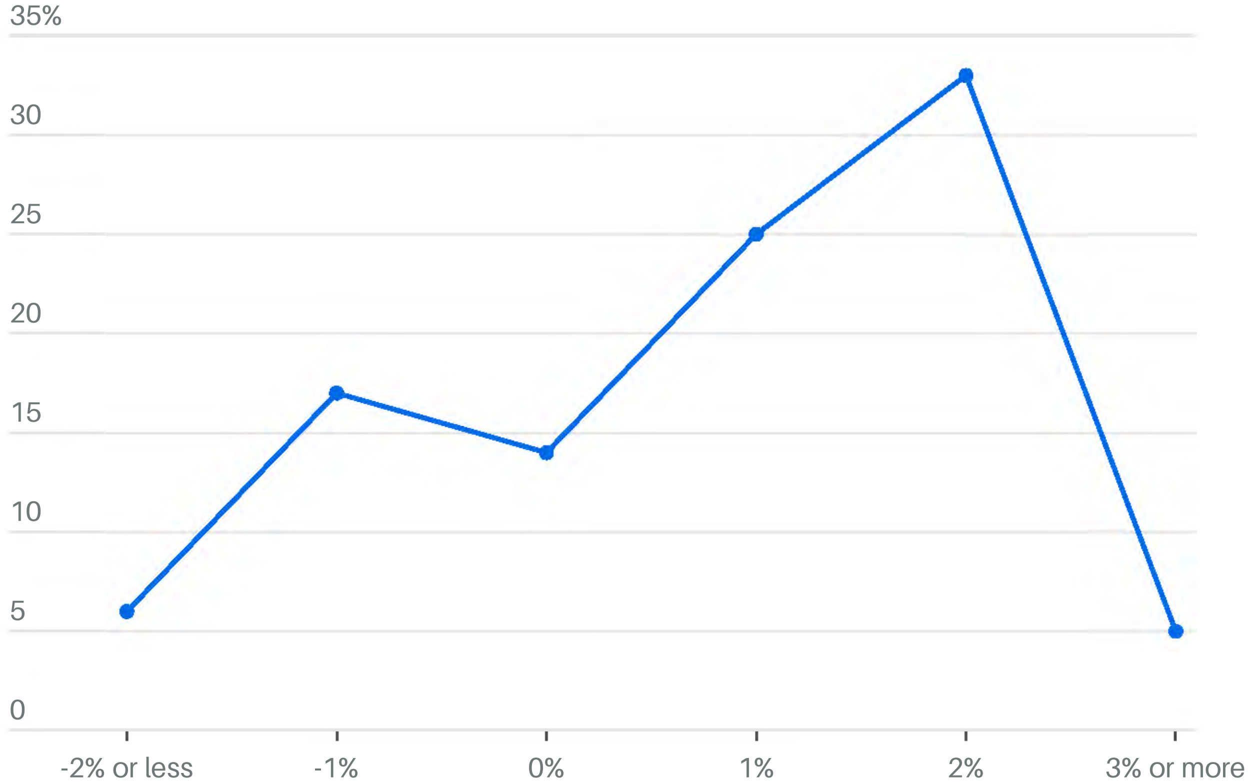
The Economy

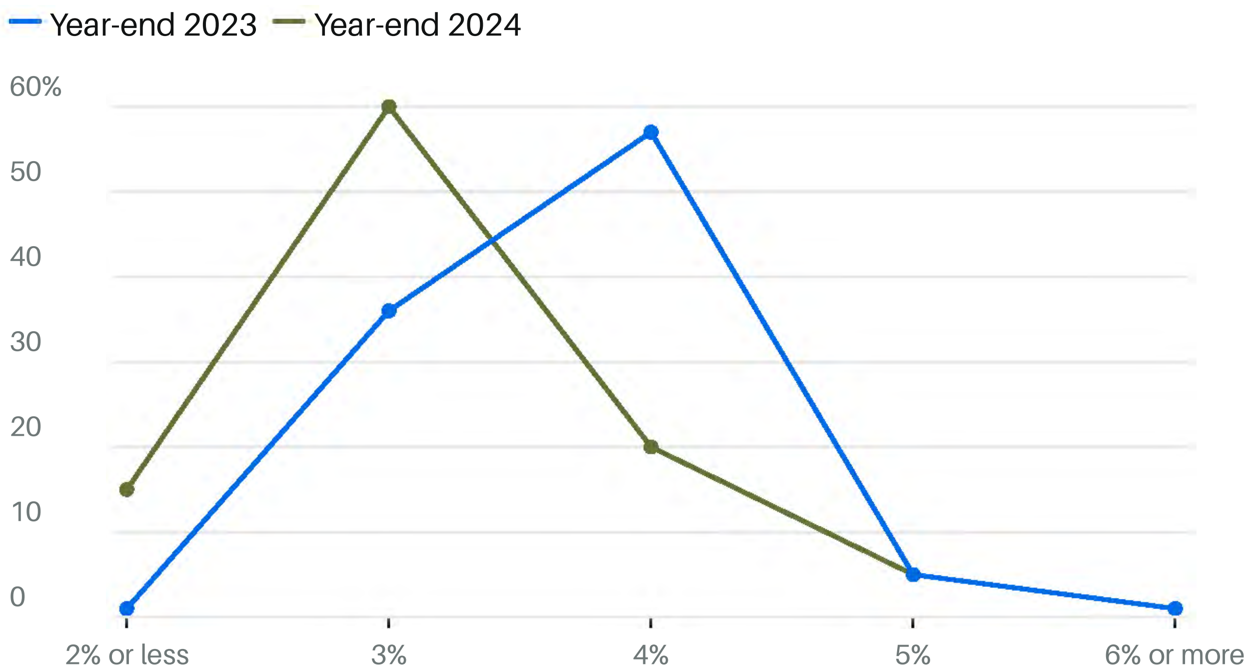
Which best describes your outlook for the U.S. economy in the next 12 months?



Predict the growth rate of real U.S. GDP in 2024.



Predict the year-over-year U.S. inflation rate (consumer price index) at the end of 2023 and 2024.



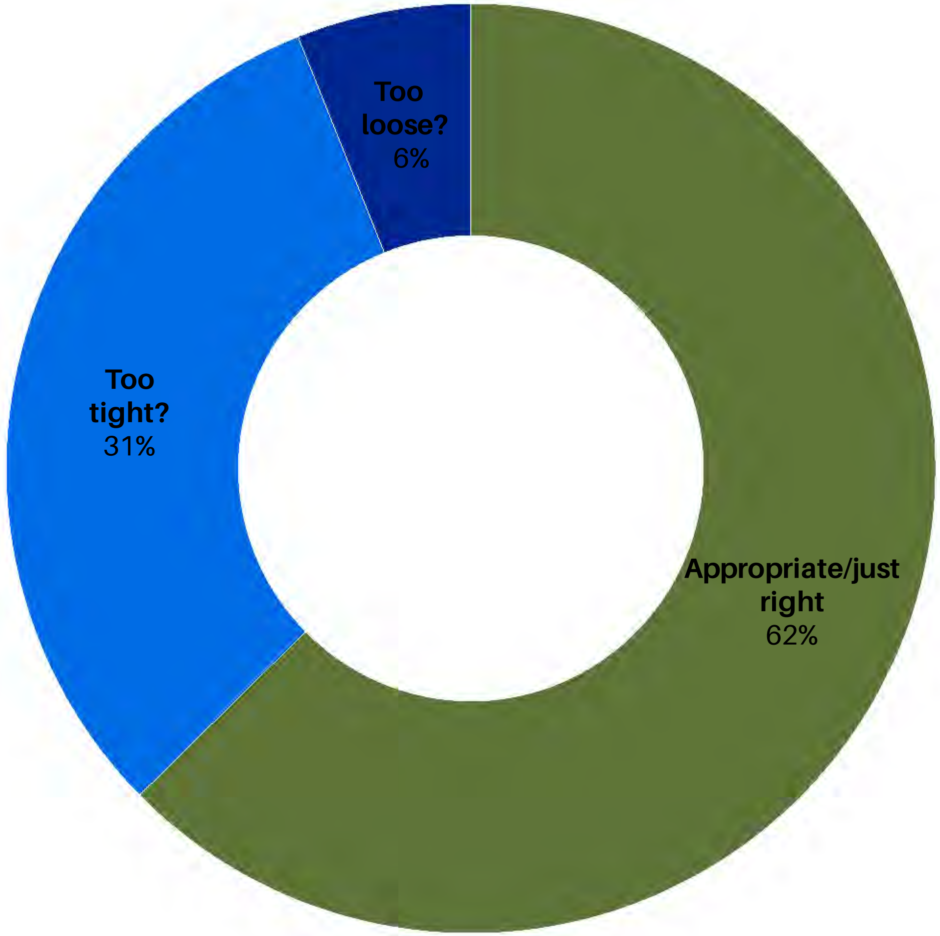
Where will the federal-funds rate be at the end of 2023 and the end of 2024?

Federal-funds rate target range

	2023*	2024
Below 4.25%	0%	8%
4.25%-4.50%	2%	10%
4.50%-4.75%	2%	16%
4.75%-5.00%	5%	28%
5.00%-5.25%	17%	21%
5.25%-5.50%	47%	8%
5.50%-5.75%	26%	8%
5.75%-6.00%	2%	1%

*Percentage doesn't total 100 due to rounding.

Is the Federal Reserve's policy stance...

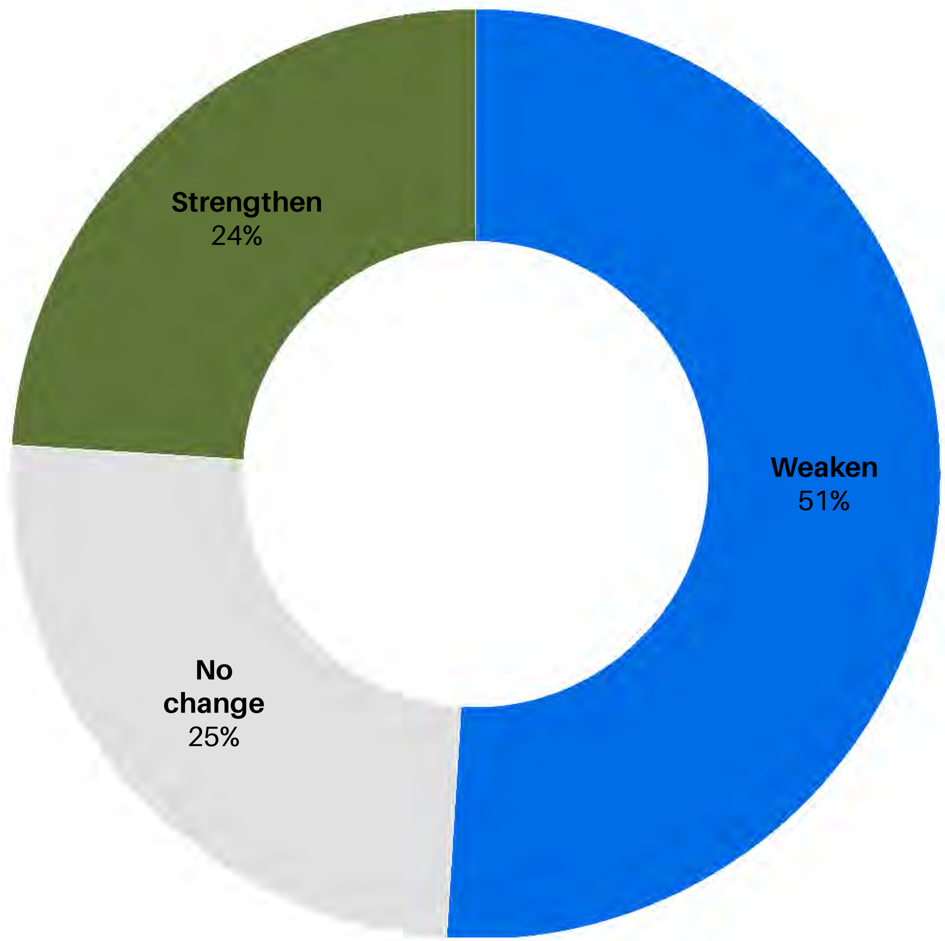


Percentage doesn't total 100 due to rounding.

What will the two-year Treasury note and the 10-year Treasury note yield a year from now?

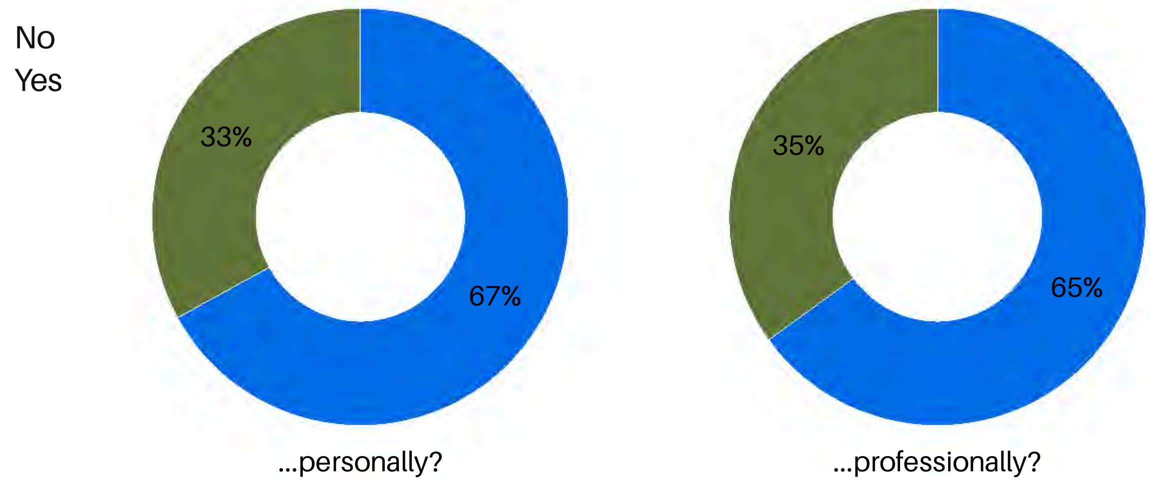
	Two-Year	10-Year
3.00% or less	1%	1%
3.25%	6%	0%
3.50%	4%	6%
3.75%	9%	4%
4.00%	15%	14%
4.25%	13%	10%
4.50%	20%	26%
4.75%	14%	14%
5.00%	13%	14%
5.25%	4%	6%

Will the U.S. Dollar Index (DXY) strengthen, weaken, or stay the same in the next 12 months?



Report Card

Are you beating on the S&P 500 this year...



NDR
NED DAVIS RESEARCH

NDR Sector Views

JANUARY 4, 2024

Risk-on leadership closes out 2023

The S&P 500 rose 4.4%, with all sectors except Energy registering gains in December. Leadership was **cyclical over defensive**, and several oversold Value sectors, including Real Estate, Industrials, and Financials, bounced back to close out the year. Utilities, Consumer Staples, and Health Care all underperformed in December, capping off a dismal 2023 campaign for the defensive sectors.

Historically bad

Consumer Staples and Utilities trailed the S&P 500 in 2023 by their second-widest margins on record for a calendar year since 1973. For Health Care, it was the fifth-worst year. As a group, our defensive SHUT Index has rarely been more oversold.

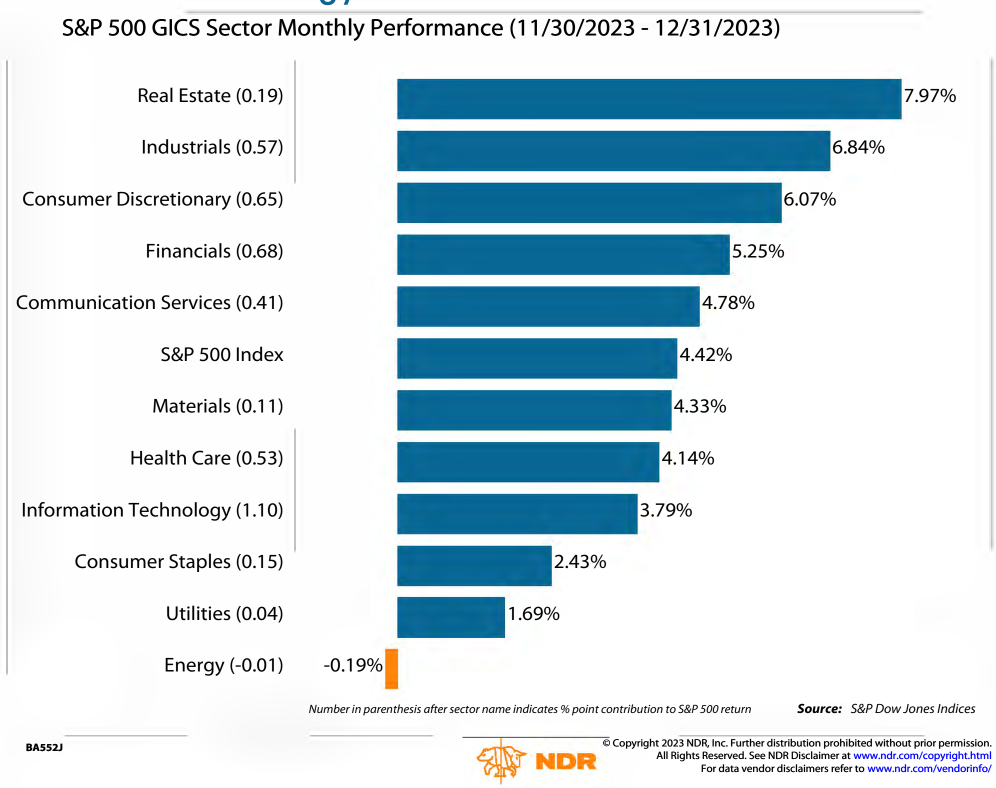
But better times could be ahead. We noted on November 30 that defensive sectors have tended to bounce back in the year following severe underperformances. The defensive group has also outperformed in the months after tightening cycles, in the runup to presidential elections, and after major interest rate peaks, on average.

CURRENT RECOMMENDATIONS

Sector	Position	Recommended	Benchmark
Communication Services	Overweight	12%	8.7%
Industrials	Overweight	12%	8.4%
Consumer Discretionary	Marketweight	10%	10.9%
Energy	Marketweight	4%	4.4%
Financials	Marketweight	12%	12.1%
Materials	Marketweight	2%	2.5%
Real Estate	Marketweight	3%	2.4%
Technology	Marketweight	27%	27.4%
Utilities	Marketweight	3%	2.5%
Consumer Staples	Underweight	3%	7.3%
Health Care	Underweight	12%	13.4%

● Overweight ● Marketweight ● Underweight

All sectors but Energy rose in December



Growth stretched

Despite Growth momentum slowing amid broadening participation since the October 27 S&P 500 low, Technology, Communication Services, and Consumer Discretionary finished 2023 with returns head and shoulders above all other sectors. The tech mega-caps were most responsible for Growth's dominance and **begin the new year with high expectations**.

The nine Tech Titans now make up 28.3% of S&P 500 market cap but only 19.3% of the index's earnings, near its widest gap on record. At the same time, Nasdaq sentiment begins the year at **extreme levels of optimism**.

Model update

The sector model made three position changes at its December month-end

VALUATION

MEASURING AND MANAGING THE VALUE OF COMPANIES

THIRD EDITION

UNIVERSITY EDITION

McKinsey & Company, Inc.
Tom Copeland • Tim Koller • Jack Murrin

$$k_p = \frac{\text{div}}{P}$$

where k_p = The cost of preferred stock
div = The promised dividend on the preferred stock
P = The market price of the preferred stock

If the current market price is not available, use yields on similar-quality issues as an estimate. For a fixed-life or callable preferred stock issue, estimate the opportunity cost by using the same approach as for a comparable debt instrument. In other words, estimate the yield that equates the expected stream of payments with the market value. For convertible preferred issues, option-pricing approaches are necessary.

STEP 3: ESTIMATE THE COST OF EQUITY FINANCING

The opportunity cost of equity financing is the most difficult to estimate because we can't directly observe it in the market. We recommend using the capital asset pricing model (CAPM) or the arbitrage pricing model (APM). Both approaches have problems associated with their application, including measurement difficulty. Many other approaches to estimating the cost of equity are conceptually flawed. The dividend yield model (defined as the dividend per share divided by the stock price) and the earnings-to-price ratio model substantially understate the cost of equity by ignoring expected growth.

The Capital Asset Pricing Model

The CAPM is discussed at length in all modern finance texts (for example, see Brealey and Myers, 1999, or Copeland and Weston, 1992).[6] These detailed discussions will not be reproduced here. (In this section, we assume that you are generally familiar with the principles that underlie the approach.) The CAPM postulates that the opportunity cost of equity is equal to the return on risk-free securities plus the company's systematic risk (beta) multiplied by the market price of risk (market risk premium). The equation for the cost of equity (k_s) is as follows:

[6] T. Copeland and J. Weston, *Financial Theory and Corporate Policy*, 3rd ed. (Reading, MA: Addison-Wesley, 1992); and R. Brealey and S. Myers, *Principles of Corporate Finance*, 5th ed. (New York: McGraw-Hill, 1999).

by interest payments; preferred stockholders are compensated by fixed dividend payments; and the firm's remaining income belongs to its common stockholders and serves to "pay the rent" on stockholders' capital. Management may either pay out earnings in the form of dividends or retain earnings for reinvestment in the business. If part of the earnings is retained, an *opportunity cost* is incurred: Stockholders could have received those earnings as dividends and then invested that money in stocks, bonds, real estate, and so on. *Thus, the firm should earn on its retained earnings at least as much as its stockholders themselves could earn on alternative investments of equivalent risk.*

What rate of return can stockholders expect to earn on other investments of equivalent risk? The answer is k_s, because they can earn that return simply by buying the stock of the firm in question or that of a similar firm. Therefore, if our firm cannot invest retained earnings and earn at least k_s, then it should pay those earnings to its stockholders so that they can invest the money themselves in assets that do provide a return of k_s.

Whereas debt and preferred stocks are contractual obligations which have easily determined costs, it is not at all easy to estimate k_s. However, three methods can be used: (1) the Capital Asset Pricing Model (CAPM), (2) the discounted cash flow (DCF) model, and (3) the bond-yield-plus-risk-premium approach. These methods should not be regarded as mutually exclusive—no one dominates the others, and all are subject to error when used in practice. Therefore, when faced with the task of estimating a company's cost of equity, we generally use all three methods and then choose among them on the basis of our confidence in the data used for each in the specific case at hand.

SELF-TEST QUESTIONS

What are the two types of common equity whose costs must be estimated?

Explain why there is a cost for retained earnings.

THE CAPM APPROACH

As we saw in Chapter 5, the Capital Asset Pricing Model is based on some unrealistic assumptions, and it cannot be empirically verified. Still, because of its logical appeal, the CAPM is often used in the cost of capital estimation process.

Under the CAPM we assume that the cost of equity is equal to the risk-free rate plus a risk premium that is based on the stock's beta coefficient and the market risk premium as set forth in the Security Market Line (SML) equation:

$$\begin{aligned} k_s &= \text{Risk-free rate} + \text{Risk premium} \\ &= \quad k_{RF} \quad + (k_M - k_{RF})b_i. \end{aligned}$$

Given estimates of (1) the risk-free rate, k_{RF}, (2) the firm's beta, b_i, and (3) the required rate of return on the market, k_M, we can estimate the required rate of return of return on the firm's stock, k_s. This required return can then be used as an estimate of the cost of retained earnings.

Estimating the Risk-Free Rate

The starting point for the CAPM cost of equity estimate is k_{RF}, the risk-free rate. There is really no such thing as a truly riskless asset in the U.S. economy. Treasury securities are free of default risk, but long-term T-bonds will suffer capital losses if interest rates rise, and a portfolio invested in short-term T-bills will provide a volatile earnings stream because the rate paid on T-bills varies over time.

Since we cannot in practice find a truly riskless rate upon which to base the CAPM, what rate should we use? Our preference—and this preference is shared by most practitioners—is to use the rate on long-term Treasury bonds. Here are our reasons:

1. Capital market rates include a real, riskless rate (generally thought to vary from 2 to 4 percent) plus a premium for inflation which reflects the expected inflation rate over the life of the security, be it 30 days or 30 years. The expected rate of inflation is likely to be relatively high during booms and low during recessions. Therefore, during booms T-bill rates tend to be high to reflect the high current inflation rate, whereas in recessions T-bill rates are generally low. T-bond rates, on the other hand, reflect expected inflation rates over a long period, so they are far less volatile than T-bill rates.

2. Common stocks are long-term securities, and although a particular stockholder may not have a long investment horizon, most stockholders do invest on a long-term basis. Therefore, it is reasonable to think that stock returns embody long-term inflation expectations similar to those embodied in bonds rather than the short-term expectations in bills. Therefore, the cost of equity should be more highly correlated with T-bond rates than with T-bill rates.

3. Treasury bill rates are subject to more random disturbances than are Treasury bond rates. For example, bills are used by the Federal Reserve System to control the money supply, and bills are also used by foreign governments, firms, and individuals as a temporary safe haven for money. Thus, if the Fed decides to stimulate the economy, it drives down the bill rate, and the same thing happens if trouble erupts somewhere in the world and money flows into U.S. dollars seeking safety. T-bond rates are also influenced by Fed actions and by international money flows, but not to the same extent as T-bill rates. This is another reason why T-bill rates are more volatile than T-bond rates and, most experts agree, more volatile than k_s.

4. T-bills are essentially free of price risk, but they are exposed to a relatively high degree of reinvestment rate risk. Long-term investors such as pension funds and life insurance companies are as concerned about reinvestment rate risk as price risk. Therefore, most long-term investors would feel equally exposed to risk if they held bills or bonds.

5. When the CAPM is used to estimate a particular firm's cost of equity over time, bond rates produce more reasonable results. When T-bill rates were low in 1977

BY THE COMMISSION:

Before the Pennsylvania Public Utility Commission (Commission) for consideration and disposition are the Exceptions of Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc. (collectively, Aqua, or the Company), the Commission's Bureau of Investigation and Enforcement (I&E), the Office of Consumer Advocate (OCA), the Office of Small Business Advocate (OSBA), the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania (CAUSE-PA), Aqua Large Users Group (Aqua LUG), and Masthope Mountain Community Association (Masthope), filed on February 28, 2022, and the Exceptions of Mr. Donald C. Osinski (Mr. Osinski), filed on February 21, 2022, to the Recommended Decision (R.D.) of Administrative Law Judge (ALJ) Mary D. Long, issued on February 18, 2022, in the above-captioned proceeding. Aqua, I&E, the OCA, the OSBA, and CAUSE-PA filed Replies to Exceptions on March 7, 2022.[1]

For the reasons discussed below, we shall: (1) grant, in part, and deny, in part, the Exceptions filed by Aqua, I&E, and the OCA; and (2) deny the Exceptions filed by the OSBA, CAUSE-PA, Aqua LUG, Masthope, and Mr. Osinski.

Additionally, as discussed below, Aqua proposed rate changes that would have increased its total annual operating revenues for its water service by approximately $86,118,612, or approximately 16.9%, and its total operating revenues for its wastewater service by approximately $11,566,212, or approximately 31.2%, based on a fully projected future test year (FPFTY) ending March 31, 2023.[2] In this Opinion and Order, we shall approve an annual revenue increase of $50,510,192 to the Company's *pro forma*

---

[1] Aqua LUG and Masthope each submitted a letter on March 7, 2022 indicating that they would not be filing Replies to Exceptions.

[2] As noted below, Appendix F of Aqua's Main Brief indicates an actual proposed revenue increase of $85,489,328 for its water service and $11,500,997 for its wastewater service.

revenue at present rates of $510,006,687, or approximately 9.88%, for its water service and an annual revenue increase of $18,740,978 to the Company's *pro forma* revenue at present rates of $37,076,494, or approximately 50.55%, for its wastewater service.

I. Background

Aqua provides water and wastewater public utility service to approximately 450,000 water customers and 40,000 wastewater customers in a certificated service territory that spans thirty-two counties across the Commonwealth of Pennsylvania. Aqua is a subsidiary of Essential Utilities, Inc. (Essential Utilities). Aqua last filed for an increase in water and wastewater base rates in 2018, which the Commission addressed at *Pa. PUC, et. al v. Aqua Pennsylvania, Inc. and Aqua Pennsylvania Wastewater, Inc.*, Docket Nos. R-2018-3003558 and R-2018-3003561, *et al*. (Order entered May 9, 2019) (*Aqua 2018 Rate Case*).

The Company made its current combined water and wastewater rate increase filing in accordance with the provisions of Section 1311(c) of the Pennsylvania Public Utility Code (Code), 66 Pa. C.S. § 1311(c).[3] Aqua's requested increase was based

---

[3] Aqua submitted separate revenue requirement studies for its water and wastewater operations. Further, the Company provided separate wastewater revenue requirement studies for its individual wastewater systems. This included a revenue requirement study for the individual wastewater systems that were presented in the *2018 Aqua Rate Case,* which it referred to as "Wastewater Base," and separate studies for each of the wastewater systems acquired since the *2018 Aqua Rate Case* as part of the Section 1329 Fair Market Value (FMV) acquisition process authorized under 66 Pa. C.S. § 1329. Aqua M.B. at 2. Therefore, the rate tables set forth in the Commission Tables Calculating Allowed Revenue Increase that are attached to this Opinion and Order contain separate sets of rate tables for Aqua's Water Division, as well as separate rate tables for each of the following wastewater systems: Wastewater Base, Wastewater Limerick, Wastewater East Bradford, Wastewater Cheltenham, Wastewater East Norriton, and Wastewater New Garden. Additionally, we have included Table Act 11 – Water and Wastewater Revenue Requirement – Summary and Table RevSum – Water and Wastewater Revenue Requirement – Summary.

upon the FPFTY ending March 31, 2023.[4] The Company sought an increase in water revenues of approximately $85,489,328, or 16.76% of its total Pennsylvania jurisdictional water operating revenues, and an increase in wastewater revenues of approximately $11,500,997, or 31.02% of its total Pennsylvania jurisdictional wastewater operating revenues. These proposed increases reflected the allocation of a portion of the Company's wastewater revenue requirement to its water operations.[5] Aqua M.B. at 1, Appendix F, Water and Wastewater Revenue Requirement - Summary.

Aqua stated that its principal reason for filing its rate increase request is the Company's continuing need to invest in utility infrastructure replacement. Aqua represented that since March 31, 2020, which was the end of the FPFTY used in the *Aqua 2018 Rate Case*, the Company has invested nearly $330 million in utility infrastructure for its water and wastewater operations through the HTY ended March 31, 2021, which is the HTY the Company utilized in this current rate case. Aqua stated that it projects to invest another $800 million through March 31, 2023, including making a meaningful investment in a new financial reporting system, SAP, which will replace the Company's legacy financial reporting system that has been in use for nearly twenty-five years. Aqua noted that increases to its operating and maintenance (O&M) expenses are also a contributing factor in making its rate case filing. Aqua M.B. at 1-2.

---

[4] The future test year (FTY) ended March 31, 2022, and the historical test year (HTY) ended March 31, 2021. Aqua M.B. at 15.

[5] In its Main Brief, Aqua stated that it sought an increase in water revenues of approximately $86.118 million and an increase in wastewater revenues of approximately $11.566 million. Aqua M.B. at 1. However, Appendix F, Water and Wastewater Revenue Requirement – Summary shows a final proposed water revenue increase of $85,489,328 and a final proposed wastewater increase of $11,500,997.

II. History of the Proceeding

On August 20, 2021, Aqua filed proposed Tariff Water-Pa P.U.C. No. 3 (Tariff Water No. 3) to become effective October 19, 2021. Under Tariff Water No. 3, the Company proposed to increase Aqua's total annual operating revenues for its water service by approximately $86,118,612, or 16.9%. Also on August 20, 2021, Aqua filed proposed Tariff Sewer-Pa P.U.C. No. 3 (Tariff Sewer No. 3) to become effective October 19, 2021. Under Tariff Sewer No. 3, the Company proposed to increase Aqua's total annual operating revenues for its wastewater service by approximately $11,566,212, or 31.2%.

On September 3, 2021, I&E filed a notice of appearance in both the water and wastewater rate filings. On September 8, 2021, the OSBA filed formal complaints at Docket Nos. C-2021-3028509 (water) and C-2021-3028511 (wastewater). On September 13, 2021, the OCA filed formal complaints at Docket Nos. C-2021-3028466 (water) and C-2021-3028467 (wastewater). Additionally, numerous ratepayers filed complaints. The names of these ratepayers and the Docket Numbers of their Complaints appear on the cover page of this Opinion and Order. CAUSE-PA filed a petition to intervene on September 20, 2021. Masthope filed a petition to intervene, and formal complaints on October 5, 2021 at Docket Nos. at C-2021-3028992 (Water) and C-2021-3028996 (Wastewater).

On September 16, 2021, Commissioner Ralph V. Yanora posed ten Directed Questions to be examined by the Parties as part of these proceedings.

By order entered on October 7, 2021, the Commission suspended the rate filings, pursuant to 66 Pa. C.S. § 1308(d), until May 19, 2022, and directed an investigation to determine the lawfulness, justness, and reasonableness of the rates, rules, and regulations contained in the rate filings.

Forty-five customer complaints by individuals and property owner associations were filed opposing the proposed increase for water. Sixty-seven customer complaints were filed opposing the proposed wastewater rate increases. Three individual complainants requested to become a fully participating party of record: John Day (C-2021-3028734 (wastewater)); Francine Weiner (C-2021-3928639 (wastewater)); and Richard Gage (C-2021-3029393 (water)).

On October 15, 2021, ALJ Long conducted a prehearing conference. Counsel for Aqua, I&E, the OCA and the OSBA appeared. Additionally, counsel representing intervenor CAUSE-PA and complainants Aqua LUG (C-2021-3029089), East Norriton Township (C-2021-3029019), and Masthope, appeared and participated.[6]

At the prehearing conference, the petition to intervene of CAUSE-PA was granted without objection. Following a discussion, the Parties agreed to a schedule for the filing of written testimony, public input hearings, and evidentiary hearings which were scheduled to begin on December 20, 2021.

On October 14, 2021, Aqua filed a motion for a protective order. By interim order entered October 22, 2021, the motion was granted.

Six public input hearings were held November 8, 2021 through November 12, 2021. These public input hearings convened by telephone. A total of fifty-eight witnesses testified.

The active Parties engaged in discovery and served written direct, rebuttal, surrebuttal, and rejoinder testimony. The evidentiary hearing convened as scheduled on

[6] The participants at the prehearing conference constitute the active Parties to this proceeding.

December 20, 2021. The Parties notified the ALJ that they had waived cross-examination of witnesses and requested to move their written testimony into the record. These testimony, exhibits, and hearing exhibits were admitted into the record without objection. All testimony was accompanied with written verification by the corresponding witness.

By interim order entered December 20, 2021, the Parties were provided with briefing instructions. As directed, each Party filed a main brief on January 11, 2022. Complainant John Day filed a letter in lieu of a brief on January 10, 2022. Reply briefs were filed on January 21, 2022. On January 20, 2022, Aqua filed a motion for the admission of a late filed exhibit. Aqua Post-Hearing Exhibit No. 1 was admitted by interim order entered January 24, 2022, and the record was closed.

In the Recommended Decision, issued on February 18, 2022, ALJ Long recommended that Aqua's Tariff Water No. 3 and Tariff Sewer No. 3, and the associated proposed revenue increases, be denied because the Company did not meet its burden of proving by a preponderance of the evidence the justness and reasonableness of every element of its requested increase. Instead, the ALJ recommended the approval of an increase in annual water operating revenue in the amount of approximately $15.2 million, or approximately 2.97% over present rates, and an increase in annual wastewater operating revenue in the amount of approximately $16.7 million, or approximately 45% over present rates. The ALJ also recommended that the Commission approve Aqua's universal service plan and universal service rider, proposed in its filings. Additionally, the ALJ made recommendations regarding pressure valve inspections and fire hydrants and recommended that the Commission approve Aqua's proposal for continued deferral of COVID-19 uncollectible expenses. R.D. at 1-2.

As previously noted, Mr. Osinski filed Exceptions to the Recommended Decision on February 21, 2022, and Aqua, I&E, the OCA, the OSBA, CAUSE-PA, Aqua LUG, and Masthope filed Exceptions on February 28, 2022.

On March 7, 2021, Aqua, I&E, the OCA, the OSBA, and CAUSE-PA filed Replies to Exceptions.

III. Public Input Hearings

As noted above, in the History of Proceeding, six public hearings were convened between November 8, 2021 and November 12, 2021 to hear from Aqua's customers regarding its proposed water and wastewater rate increases. Each of the public input hearings were conducted by telephone using a toll-free telephone number and a PIN. A total of 58 witnesses testified. For a summary of the public input hearings, see pages 4 to 15 of the Recommended Decision.

IV. Legal Standards

At issue here is the Company's request for a general base rate increase, which is governed by Section 1308(d) of the Code, 66 Pa. C.S. § 1308(d). Section 1308(d) of the Code provides the procedures for changing base rates, the time limitations for the suspension of the new rates, and the time limitations on the

Commission's actions. 66 Pa. C.S. § 1308(d).[7] "Under traditional ratemaking, utilities may not change rates charged to customers outside of a base rate case." *McCloskey v. Pa. PUC*, 127 A.3d 860, 863 n.2 (Pa. Cmwlth. 2015).

Section 1301(a) of the Code mandates that "[e]very rate made, demanded, or received by any public utility . . . shall be just and reasonable, and in conformity with [the] regulations or orders of the [C]ommission." 66 Pa. C.S. § 1301(a). Pursuant to the just and reasonable standard, a utility may obtain "a rate that allows it to recover those expenses that are reasonably necessary to provide service to its customers[,] as well as a reasonable rate of return on its investment." *City of Lancaster Sewer Fund v. Pa. PUC*, 793 A.2d 978, 982 (Pa. Cmwlth. 2002) (*City of Lancaster*). There is no single way to arrive at just and reasonable rates, and "[t]he [Commission] has broad discretion in determining whether rates are reasonable" and "is vested with discretion to decide what factors it will consider in setting or evaluating a utility's rates." *Popowsky v. Pa. PUC*, 683 A.2d 958, 961 (Pa. Cmwlth. 1996) (*Popowsky II*).

A public utility is entitled to an opportunity to earn a fair rate of return on the value of the property dedicated to public service. *Pennsylvania Gas and Water Co. v. Pa. PUC*, 341 A.2d 239, 251 (Pa. Cmwlth. 1975) (citations omitted). In determining a fair rate of return, the Commission must adhere to the constitutional standards established by the United States Supreme Court in the seminal cases *Bluefield Water Works and Improvement Co. v. Public Service Comm'n of West Virginia*, 262 U.S. 679,

---

[7] Among other things, Section 1308(d) of the Code requires the Commission to render a final decision granting or denying, in whole or in part, the general rate increase requested by a public utility, within a general time frame not to exceed seven months from the proposed effective date of the utility's proposed tariff supplement. *See* 66 Pa. C.S. § 1308(d); *see also* 52 Pa. Code § 53.31 (requiring a tariff proposing a rate increase to be effective upon sixty days' advance notice). Unless the utility voluntarily extends the suspension period, the Commission's non-action within this timeframe means, by operation of law, the utility's proposed general rate increase will go into effect, as proposed, at the end of such period. *See* 66 Pa. C.S. § 1308(d).

692-93 (1923) (*Bluefield*) and *Federal Power Commission v. Hope Natural Gas Co.*, 320 U.S. 591, 603 (1944) (*Hope Natural Gas*). In *Bluefield*, the Supreme Court stated:

> A public utility is entitled to such rates as will permit it to earn a return on the value of the property which it employs for the convenience of the public equal to that generally being made at the same time and in the same general part of the country on investments in other business undertakings which are attended by corresponding risks and uncertainties; but it has no constitutional right to profits such as are realized or anticipated in highly profitable enterprises or speculative ventures. The return should be reasonably sufficient to assure confidence in the financial soundness of the utility and should be adequate, under efficient and economical management, to maintain and support its credit and enable it to raise the money necessary for the proper discharge of its public duties. A rate of return may be too high or too low by changes affecting opportunities for investment, the money market and business conditions generally.

Bluefield, 262 U.S. at 692-93. Twenty years later, in *Hope Natural Gas*, the Supreme Court reiterated:

> From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. By that standard the return to equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital.

Hope Natural Gas, 320 U.S. at 603.

The Commission is required to investigate all general rate increase filings. *Popowsky II*, 683 A.2d at 961. The burden of proof to establish the justness and reasonableness of every element of a public utility's rate increase request rests solely upon the public utility in all proceedings filed under Section 1308(d) of the Code. 66 Pa. C.S. § 315(a); s*ee also, Lower Frederick Twp. Water Co. v. Pa. PUC*, 409 A.2d 505, 507 (Pa. Cmwlth. 1980) (*Lower Frederick*); *see also*, *Brockway Glass Co. v. Pa. PUC*, 437 A.2d 1067 (Pa. Cmwlth. 1981). Section 315(a) of the Code provides as follows:

> **Reasonableness of rates.** – In any proceeding upon the motion of the commission, involving any proposed or existing rate of any public utility, or in any proceedings upon complaint involving any proposed increase in rates, the burden of proof to show that the rate involved is just and reasonable shall be upon the public utility.

66 Pa. C.S. § 315(a). The evidence necessary to meet that burden must be substantial. *Lower Frederick* at 507.

In general rate increase proceedings, the burden of proof does not shift to parties challenging a requested rate increase. Rather, the utility's burden of establishing the justness and reasonableness of every component of its rate request is an affirmative one, and that burden remains with the public utility throughout the course of the rate proceeding. There is no similar burden placed on parties to justify a proposed adjustment to the Company's filing. The Pennsylvania Supreme Court has held:

> [T]he appellants did not have the burden of proving that the plant additions were improper, unnecessary or too costly; on the contrary, that burden is, by statute, on the utility to demonstrate the reasonable necessity and cost of the installations, and that is the burden which the utility patently failed to carry.

Berner v. Pa. PUC, 116 A.2d 738, 744 (Pa. 1955).

However, in proving that its proposed rates are just and reasonable, a public utility need not affirmatively defend every claim it has made in its filing, even those which no other party has questioned. As the Pennsylvania Commonwealth Court has held:

> While it is axiomatic that a utility has the burden of proving the justness and reasonableness of its proposed rates, it cannot be called upon to account for every action absent prior notice that such action is to be challenged.

Allegheny Center Assocs. v. Pa. PUC, 570 A.2d 149, 153 (Pa. Cmwlth. 1990) (citation omitted); *see also Pa. PUC v. Equitable Gas Co.*, 73 Pa. P.U.C. 301, 359-360 (1990).

Additionally, Section 315(a) of the Code cannot reasonably be read to place the burden of proof on the utility with respect to an issue the utility did not include in its general rate case filing and which, frequently, the utility would oppose. 66 Pa. C.S. § 315(a). The burden of proof must be on the party who proposes a rate increase beyond that sought by the utility. *Pa. PUC v. Metropolitan Edison Company*, Docket No. R-00061366, 2007 Pa. PUC LEXIS 5 (Order entered January 11, 2007). The mere rejection of evidence contrary to that presented by the public utility is not an impermissible shifting of the evidentiary burden. *United States Steel Corp. v. Pa. PUC*, 456 A.2d 686 (Pa. Cmwlth. 1983).

In her Recommended Decision, ALJ Long made 117 Findings of Fact and reached 13 Conclusions of Law. R.D. at 15-30, 137-39. The Findings of Fact and Conclusions of Law are incorporated herein by reference and are adopted without comment unless they are either expressly or by necessary implication rejected or modified by this Opinion and Order.

Finally, any issue or Exception that we do not specifically address shall be deemed to have been duly considered and denied without further discussion. The Commission is not required to consider expressly or at length each contention or argument raised by the parties. *Consolidated Rail Corp. v. Pa. PUC*, 625 A.2d 741 (Pa. Cmwlth. 1993); *also see, generally, University of Pennsylvania v. Pa. PUC*, 485 A.2d 1217 (Pa. Cmwlth. 1984).

V. Impact of the Pandemic

A. Positions of the Parties

The OCA urged the Commission to consider the economic repercussions of the COVID-19 pandemic and the hardships this ongoing reality continues to create for Aqua's ratepayers. In support, the OCA presented statistics on the effects of the pandemic in Pennsylvania and asserted that the Commission should consider these impacts when determining what constitutes a just and reasonable rate for the Company's customers. OCA M.B. at 5-15.

The OCA cited, in part, to job loss data and evidence specific to Pennsylvania residents showing that the lower the household's income the greater the impact the pandemic has on income loss. In addition, the OCA cited to data at the time of briefing showing a significant increase in active COVID-19 cases and deaths in Pennsylvania and rising unemployment rates in Aqua's service territory. The OCA also alleged that the Company charged significant levels of late fee payments during the pandemic, and during the moratorium on terminations. Thus, the OCA requested that the Commission take these factors into consideration when determining the appropriate return on equity (ROE) and the OCA's other recommendations related to the pandemic to keep the rate increase to the lowest possible cost for Aqua's customers. OCA R.B. at 3-4.

Aqua alleged that the OCA has taken an extreme position on a variety of issues, including rate of return, to propose that the Company be ordered to decrease its rates. According to the Company, rejecting any increase, in the face of overwhelming evidence that a rate increase is justified under traditional ratemaking principles, is not a balancing of customers' and investors' interests. Aqua argued that the OCA is attempting to establish a new ratemaking standard that rate increases can be granted or denied based upon subjective assessments of whether a sufficient number of customers will have trouble paying increased rates. The Company submitted that such a standard imperils the execution of needed safety investments in the short term and does long-term harm as investors assess whether to continue to invest in Pennsylvania utilities or shift investment to other states or other enterprises. Aqua R.B. at 2-3 (citing *Pa. PUC v. Columbia Gas of Pennsylvania, Inc.*, Docket Nos. R-2020-3018835, *et al.* (Order entered February 19, 2021) (*Columbia Gas*)).

The Company also cited to a drop in the unemployment rate since the *Columbia Gas* decision and a fall in the number of Aqua's customer accounts at risk for termination falling below pre-pandemic levels. Aqua asserted that it understands the difficulties faced by customers with an inability to pay. According to the Company, it implemented programs and practices during 2020 and 2021 to help customers who struggled to pay their bills and will provide further assistance with its new Customer Assistance Program (CAP) going forward. However, Aqua argued that it will not be able to meet its obligation to provide safe and reliable service, while also providing for the health and safety of its employees, without appropriate rate relief. Aqua R.B. at 3-4.

B. Recommended Decision

In the Recommended Decision, the ALJ indicated that neither she nor the Commissioners are unmindful of the important concerns raised by the OCA and CAUSE-PA regarding the affordability challenges faced by low-income customers. However, the

ALJ explained that the Commission has repeatedly taken the position that the existence of the pandemic does not suspend the consideration of utility rate increases. R.D. at 35 (citing *Columbia Gas* at 47-52).

The ALJ stated that utilities are expected to continue to provide reasonable service and safe and reliable facilities. Here, the ALJ noted that no Party has challenged Aqua's infrastructure improvement spending or the value of its proposal to continue that spending in this proceeding. Rather, the ALJ continued, some Parties have recommended Aqua put into place additional universal service programming and customer service improvements, which require financial investment to implement. Thus, the ALJ reasoned that her recommendations are an attempt to balance the many competing concerns of the ratepayers with the Company's ongoing challenge to consider the affordability of service while also meeting the increasing environmental and infrastructure obligations in pursuit of safe and reliable service. R.D. at 35

C. OCA Exception No. 28 and Replies

In its Exception No. 28, the OCA argues that the ALJ did not adequately account for the impact of the pandemic on Aqua's ratepayers when setting rates in this proceeding. In support, the OCA submits that it provided unrefuted testimony showing that the economic crisis is ongoing and continues to severely impact the lives of Aqua's ratepayers. The OCA also contends that portions of Aqua's service territory in Northumberland and Columbia counties have the highest hospitalization rates for COVID-19 in the United States. OCA Exc. at 39.

Although the OCA acknowledges that the existence of the pandemic should not suspend the consideration of utility rate increases, the OCA argues that the continued impact of the COVID-19 pandemic should be taken into account in the Commission's consideration of the appropriate return on equity and the OCA's other recommendations related to the pandemic. Further, the OCA asserts that the ALJ's reliance on the Parties' lack of opposition to Aqua's infrastructure spending and the Parties' recommendations regarding improvements to universal service programming and customer service, which require financial investment, inappropriately shifts the burden of proof in this proceeding. The OCA argues that it is not required to challenge the Company's infrastructure spending in order to offer recommendations regarding universal service programming or customer service. OCA Exc. at 39-40.

The OCA notes that additional universal service programming and customer service improvements require financial investment to implement but contends that those financial investments are meant to mitigate the impact of unaffordable rates for Aqua's most vulnerable customers. According to the OCA, the costs of these programs would be fully recovered through surcharges or base rates and the OCA's witnesses took these additional costs into account in their analyses as appropriate means of addressing Aqua's proposed rate increase in this proceeding. *Id*. at 40.

In its reply, Aqua argues that the OCA's Exception No. 28 identifies no specific adjustments to be made. Aqua reiterates that the proper, and constitutional, approach to deal with lingering effects of the pandemic is to implement programs that support those with payment difficulties. According to the Company, this focuses the solution on the problem, rather than hampering Aqua's ability to continue to provide safe, exceptional service by denying adequate rate relief that is supported by the evidence and prior rulings. Aqua submits that its comprehensive, new CAP, including arrearage forgiveness, and its Hardship Fund, along with new federal assistance programs for water customers, will provide that support to payment-troubled customers. The Company contends that the OCA's Exception No. 28, to the extent it seeks to encourage the Commission to rule adversely on issues simply to produce a lower result, should be rejected. Aqua R. Exc. at 23.

D. Disposition

Upon review, we consider the OCA's Exception No. 28 to be a global, generalized objection to the overall recommendations set forth in the Recommended Decision. Here, the OCA does not identify any specific adjustments that should be made. Essentially, the OCA contends that the ALJ failed at a conceptual level to consider the impact of the pandemic when setting rates. However, in the context of this Exception, it is unclear what specific measures or calculations the ALJ should have applied to address the financial impact related to COVID-19.

The Parties' arguments pertaining to each particular issue in the rate proceeding are addressed in detail in this Opinion and Order. Our disposition related to each issue and the resulting calculations are more properly addressed within the context of those issues below. Thus, we decline here to apply an undefined and potentially subjective reductive factor to the following determinations and calculations based on the impact of COVID-19. Overall, we find no error in the ALJ's conclusion that she attempted to balance the competing interests of the ratepayers, the affordability of service, and the increasing environmental and infrastructure obligations to provide safe and reliable water and wastewater utility service.

The Commission has repeatedly determined that the existence of the pandemic does not suspend the consideration of rate cases. *See e.g.*, *Pa. PUC v. Philadelphia Gas Works*, Docket No. R-2020-3017206 (Order entered November 19, 2020), *Pa. PUC v. UGI Utilities, Inc. - Gas Division*, Docket No. R-2019-3015162 (Order entered October 8, 2020) (*UGI Gas*), and *Pittsburgh Water and Sewer Authority*, Docket Nos. R-2020-3017951, R-2020-3017970 (Order entered December 3, 2020). Further, in *Columbia Gas*, we explained that under the traditional set of ratemaking norms there is a consideration and weighing of important factors or principles in setting just and reasonable rates, such as quality of service, gradualism, and rate affordability.

> This is true in normal circumstances as well as extraordinary circumstances, such as this pandemic. Indeed, in our opinion, the applicable legal standards that require the Commission to balance between the interests of the utility's customers, investors, and the public interest, require the Commission, by necessary implication, to weigh evidence or unique considerations related to changes in service, market forces, and the economy. Thus, it is our responsibility under the applicable legal and constitutional standards to weigh evidence and unique considerations related to the COVID-19 pandemic in setting just and reasonable rates, and our continued use of traditional ratemaking methodologies permit our consideration of important ratemaking principles, like gradualism and rate affordability, in relation to this pandemic. Moreover, the traditional ratemaking methodologies permit consideration of evidence presented regarding the risks, uncertainties, and impact of the COVID-19 global pandemic in determining various components of a utility's cost of service, or revenue requirement.

Columbia Gas at 48.

We have and will continue to apply traditional ratemaking methodologies which include the consideration of unique circumstances such as the risks, uncertainties, and impact of the COVID-19 pandemic. Thus, to the extent that the OCA is requesting such action by the Commission in this proceeding, we find the Exception to be unnecessary.

As a final matter, we find the OCA's contention that the ALJ improperly shifted the burden of proof by noting the lack of opposition to infrastructure spending and improvements to universal service programming and customer service as lacking merit. The ALJ's statement did not – nor could it – operate to shift the burden of proof with respect to Aqua's burden to establish the justness and reasonableness of every component of its rate request. There is no indication in the Recommended Decision that this burden somehow shifted to the OCA with respect to its proposed adjustments to the universal service or customer assistance programs.

Accordingly, we shall deny OCA Exception No. 28.

VI. Rate Base

Rate base, also known as measure of value, is the depreciated original cost of a utility's investment in plant a utility has in place to serve customers plus other additions and deductions that the Commission determines to be necessary in order to keep the utility operating and providing safe and reliable service to its customers. Rate base is one part of the financial equation used by the Commission to determine the appropriate revenue that a utility is granted in a rate proceeding. I&E M.B. at 17.

Aqua's rate base claim calculation includes depreciated original cost plant in service plus additions of Materials and Supplies (M&S) and Cash Working Capital (CWC) as well as deductions of contributions in aid of construction (CIAC) and customer advances for construction (CAC), deferred income taxes, and Investment Tax Credit as shown on Schedule G-1 on Aqua Exh. 1-A through 1-G. *Id.*

Additionally, the depreciated original cost is determined by subtracting the book reserve, which is the accumulation of all prior annual depreciation expense, and other items such as salvage value, from the original cost of the plant in service that is projected to be used and useful in the public service. The depreciated original cost of the plant in service is determined by taking a "snapshot" look at the depreciated original cost value of used and useful utility plant in service at the end of the FPFTY. I&E M.B. at 17-18.

Further, for a utility plant to be included in rates, the plant must be used and useful in the provision of utility service to the customers. Therefore, by definition, only plant currently providing or capable of providing utility service to customers or plant projected to be completed and in service by the end of the FPFTY is eligible to be reflected in rates. I&E M.B. at 18.

A. Plant in Service

1. Positions of the Parties

No Party to this proceeding challenged the Company's claim for water or wastewater utility plant in service at the end of the FPFTY, except for the challenge regarding the Company's $2,437,305 positive acquisition adjustment associated with the Borough of Phoenixville Water System, which we shall discuss in the next section, below. R.D. at 36; Aqua M.B. at 18.

The Company's claim for both water and wastewater utility plant in service begins with the actual HTY ending balance for each segment of its operations. Aqua St. 2 at 14. As shown in Table 1, below, the HTY ending balance for water was $4,909,729,427 and the HTY ending balance for wastewater was $500,221,311. Aqua M.B. at 16; Aqua St. 2 at 14; see also Aqua Exh. 1-A, Sch. G-2; Aqua Exhs. 1-B through 1-G, Sch. G-2.

The HTY figures for water and wastewater were then increased to reflect FTY and FPFTY plant additions, net of retirements, and utility plant acquisition adjustments (UPAA)[8] associated with certain acquired systems. Aqua M.B. at 16; Aqua St. 2 at 14-15; Aqua St. 2, Attachment 1.

For the FTY for its water operations, the Company projected additions totaling $402,940,579 and retirements totaling ($36,896,955). Aqua St. 2, Attachment 1 at 1. For the FPFTY for its water operations, the Company projected additions totaling $314,771,304 and retirements totaling ($28,466,740). Aqua M.B. at 16-17; Aqua St. 2, Attachment 1 at 2.

For the FTY for its wastewater operations, the Company projected additions totaling $34,134,821 and retirements totaling ($3,416,157). Aqua St. 2, Attachment 2 at 1. For the FPFTY, the Company projected additions totaling $38,897,468 and retirements totaling ($3,014,299). Aqua M.B. at 18; Aqua St. 2, Attachment 2 at 2.

Aqua Proposed Plant In Service						
Operations	HTY	FTY Additions/Retirements		FPFTY Additions/Retirements		FPFTY
	Plant In Service	Additions	Retirements	Additions	Retirements	Plant In Service
Water	$4,909,729,427	$402,940,579	($36,896,955)	$314,771,304	($28,466,740)	$5,562,077,614
Wastewater	$500,221,311	$34,134,821	($3,416,157)	$38,897,468	($3,014,299)	$566,823,145

Table 1: Aqua-Proposed Plant In Service for Water and Wastewater Operations.

Accordingly, the Company's FPFTY claim for its water utility plant in service is $5,562,077,614 (Aqua Exhibit 1-A, Schedule G-2) and the FPFTY claim for its wastewater utility plant in service is $566,823,145. Aqua M.B. at 18; Aqua Exhs. 1-B through 1-G, Sch. G-2.

8 The Company's HTY figures presented on Schedule G-2 do not reflect the Company's proposed UPAA. Adjustments related to proposed UPAA are reflected in Schedule G-3 of Aqua Exhibits 1-A and 1-G through 1-G. All UPAA shown have been previously approved by the Commission, with the exception of the Borough of Phoenixville acquisition. Aqua M.B. at 16, n. 4.

I&E recommended that the Company provide the Commission's Bureaus of Technical Utility Services (TUS) and I&E with an update to Schedule G-2 of Aqua Exhibits 1-A, 1-B, 1-C, 1-D, 1-E, 1-F, and 1-G, no later than July 1, 2022 which should include actual capital expenditures, plant additions, and retirements by month for the twelve months ending March 31, 2022 and an additional update for actuals for the year ending March 31, 2023, no later than July 1, 2023. I&E reasoned that, through the use of an FPFTY, a utility is allowed to require ratepayers, in essence, to pre-pay a return on a utility's projected investment in future facilities that are not in place and providing service at the time the new rates take effect and are not subject to any guarantee of being completed and placed into service. According to I&E, while the FPFTY provides for such projections, there should be some timely verification of the projections. I&E further submitted that the use of a FPFTY has become common practice by Pennsylvania utilities, including Aqua, and the Company agreed to provide such projections as part of its previous base rate case in which it made use of the FPFTY. I&E further noted that the Company did not challenge I&E's recommendation to continue to provide the requested updates. I&E M.B. at 21-22.

2. Recommended Decision

Except for the Company's proposed positive acquisition adjustment of $2,437,305 to its water rate base associated with the Phoenixville System (addressed in Section VI.B, below), the ALJ recommended that the remainder of the Company's proposed adjustments to its water utility plant in service and all of the Company's adjustments to its wastewater utility plant in service at the end of the FPFTY be adopted. R.D. at 36.

The ALJ also recommend that I&E's reporting request be approved. In making this recommendation, the ALJ noted that this is a reporting requirement consistent with Section 315(e) of the Code, 66 Pa. C.S. § 315(e), which requires that when a utility utilizes a FPFTY in any rate proceeding and such FPFTY forms a substantive basis for the Commission's final rate determination, the utility shall provide, as specified by the Commission in its Final Order, appropriate data evidencing the accuracy of the estimates contained in the FPFTY. R.D. at 39.

3. Disposition

Aside from the positive acquisition adjustment proposed by the Company with regard to its Phoenixville Water System (addressed immediately below), no other Party filed Exceptions on the Company's remaining proposed adjustments to its plant in service. Finding the ALJ's recommendation to be reasonable, we adopt it without further comment.

B. Water Rate Base – Borough of Phoenixville

In 2019, the Commission approved Aqua's acquisition of the water system assets of the Borough of Phoenixville, Chester County, PA (Borough) that included all of Phoenixville's water service territories located outside of its municipal borough boundaries (*i.e.*, extraterritorial water system) (hereinafter, Phoenixville Water System).[9] In this proceeding, the primary adjustment to rate base is related to the Company's

---

[9] *Joint Application of Aqua Pennsylvania, Inc. and the Borough of Phoenixville for approval of (1) the acquisition by Aqua of the water system assets of Phoenixville used in connection with the water service provided by Phoenixville in East Pikeland and Schuylkill Townships, Chester County, and Upper Providence Township, Montgomery County, PA; (2) the right of Aqua to begin to supply water service to the public in portions of East Pikeland Township, Chester County, and Upper Providence Township, Montgomery County, PA; and (3) the abandonment of Phoenixville of public water service in East Pikeland Township, Chester County, and Upper Providence Township, Montgomery County, and certain locations in Schuylkill Township, Chester County, PA*, Docket Nos. A-2018-2642837, A-2018-2642839, *et al*. (Recommended Decision dated September 13, 2019), adopted as final (Order entered October 24, 2019) (*Aqua-Phoenixville Order*).

proposal to include recovery of the acquisition premium that Aqua paid for the Phoenixville Water System. The depreciated cost of the Phoenixville Water System was $1,026,724, and Aqua paid $2,437,305 more for the assets than the depreciated original cost, creating a total purchase price of $3,464,029. R.D. at 18, FOF No. 20.

The OCA and I&E opposed this recovery, as well as the Company's related amortization expense claim. They argued that because the Company failed to provide sufficient evidence that the Borough was failing to render reasonable and adequate service at the time the Phoenixville Water System was acquired by Aqua pursuant to Section 1327(a) of the Code, the Company should not be permitted to recover the acquisition premium in rate base. R.D. at 43. The ALJ agreed with the OCA and recommended that $2,437,305 be removed from Aqua's rate base, and the concomitant adjustments be made to the accrued depreciation reserve and annual amortization expense. R.D. at 44. The details concerning this issue are more fully discussed immediately below.

1. Positions of the Parties

The Company requested that the Commission permit it to include an acquisition adjustment[10] of $2,437,305 in water rate base (see Aqua Exh. 1-A, Sch. C-5.1, line 3) for the price it paid beyond the depreciated original cost to acquire a portion of the Phoenixville Water System consistent with Section 1327 of the Code, 66 Pa. C.S.

[10] Section 1327 (a) provides that "If a public utility acquires property from another public utility, a municipal corporation or a person at a cost which is in excess of the original cost of the property when first devoted to the public service less the applicable accrued depreciation, it shall be a rebuttable presumption that the excess is reasonable and that excess shall be included in the rate base of the acquiring public utility, provided that the acquiring public utility proves that [it has met the requirements of included in Section 1327(a)(1)-(9)]."

§ 1327(a).[11] The Company further proposed that the acquisition adjustment be amortized over a period of twenty years. Aqua M.B. at 15. Aqua reflected $2,315,440 in the positive acquisition adjustment as of the end of the FPFTY as set forth in Aqua Exh. 1-A, Schedule G-3. *Id.* at 19.

Aqua based its acquisition adjustment claim on the fact that it paid more than the depreciated original cost for the assets, and it is therefore allegedly entitled to include the excess in rate base, because it meets the nine criteria set forth in Section 1327(a) of the Code to show that the Phoenixville Water System was a troubled water system on the date it was acquired. Aqua M.B. at 24-26; Aqua St. 2 at 16.

Aqua explained that the genesis of its purchase of the assets of the Phoenixville Water System that previously served the water customers located outside of the Borough's municipal boundaries was the result of the Borough's 2013 Petition and the Commission's 2015 Order on same. The Borough had requested that the Commission declare that the Phoenixville Water System is not subject to the Commission's jurisdiction so that it could better economize and manage its limited resources by reducing regulatory compliance costs and administrative costs.[12] R.D. at 42; *Phoenixville Petition Order* at 4. In its petition, the Borough explained that it was deterred from seeking rate relief for service to the extraterritorial customers because the cost and manpower required to prepare and defend a rate filing posed a strain on Borough resources. R.D. at 42. As a result, the Borough's territorial customers were subsidizing

[11] R.D. at 39-44; Aqua St. 2 at 16; Aqua Exh. 3-A; Aqua M.B. at 16-19; I&E M.B. at 6-7, 18, 21-22; OCA M.B. at 17; Aqua R.B. at 9-10; I&E M.B. at 6-7, 18, 21-22; Aqua R.B. at 9-10; I&E RB at 3, 16; OCA R.B. at 6.

[12] *Petition of the Borough of Phoenixville for a Declaratory Order that the Provision of Water and Wastewater Service to Isolated Customers in Adjoining Townships Does Not Constitute the Provision of Public Utility Service Under 66 Pa. C.S. § 102*, Docket No. P-2013-2389321 (Order entered May 19, 2015) (*Phoenixville Petition Order*).

service to the Borough's extraterritorial customers. *Id.* In denying the petition, the Commission acknowledged that seeking rate relief could be perceived as "burdensome," but observed that the Borough had the option to seek relief from regulatory burdens by approaching nearby systems owned by Aqua Pennsylvania and Pennsylvania-American Water Company. *Id.*; *Phoenixville Petition Order* at 7-8. Thereafter, the Borough reached an agreement with Aqua for the transfer of the system. As noted, the Joint Petition for Settlement of the acquisition was approved by the Commission in 2019. *Id.*

Aqua argued that the Phoenixville Water System was a troubled water system on the date it was acquired because it was not being maintained to provide adequate, efficient, safe, and reasonable service and facilities to customers outside the Borough limits. This was allegedly due to the following factors: (1) the Borough was manually reading residential and commercial meters; (2) non-revenue (unaccounted for) water was estimated to be 68%; and (3) 30%, or 32 out of the 105 system fire hydrants, needed to be repaired or replaced. Accordingly, Aqua argued, pursuant to Section 1327(a) of the Code, it is entitled to "a rebuttable presumption that the excess [it paid beyond the depreciated original cost] is reasonable, and that excess shall be included in the rate base of the acquiring utility." Aqua M.B. at 22 (citing Aqua St. at 16 and Aqua Exh. 3-A).

Aqua also argued that the high level of 68% for non-revenue or unaccounted-for water is extremely poor and indicates substantial leaks and metering issues. Aqua M.B. at 25. Aqua cited the Commission's Statement of Policy in Section 65.20(4) of the Commission's Regulations, 52 Pa. Code § 65.20(4), on water conservation which notes that unaccounted-for water levels above 20% have been considered by the Commission to be excessive. *Id.* Thus, Aqua opined that the high level of non-revenue or unaccounted-for water, estimated at 68%, is extremely poor and indicates substantial leaks and metering issues and that "[h]aving non-revenue water of approximating 68%, and having to replace 30% of all hydrants in the system is a clear indication that this was a troubled system." Aqua M. B. at 25; Aqua St. 2-R at 8.

The Company also submitted that after it purchased the Phoenixville Water System, it proactively performed leak surveys, verified hydrant pressures, and checked valve operations and then placed the system on its ongoing maintenance program. Aqua M.B. at 28 (citing Aqua St. 2-R at 8-9). According to Aqua, in view of the fact that it investigated significant unaccounted-for water issues and targeted the resolution of these issues via its maintenance program makes clear that the Borough had failed to maintain its fire hydrants and repair leaking water lines during its ownership. *Id.* Aqua contended that "fire protection is a significant safety and reliability issue which the Company addressed by inspecting 105 fire hydrants, replacing 13 hydrants, and repairing 19 hydrants." Aqua M.B. at 28 (citing Aqua St. 2-R at 8). In addition, the Company contended that its meter replacement efforts addressed issues related to meter reading and billing of customers. Aqua M.B. at 29 (citing Aqua St. 2-R at 9). For all of the above reasons, Aqua believed it has adequately satisfied the requirement of Section 1327(a)(3)(v) that the Borough's water system was troubled at the time it was acquired.

Both I&E and the OCA argued that the $2,437,305 acquisition adjustment should not be permitted because the reasons provided by Aqua are not sufficient to satisfy the extensive Section 1327(a)(3) criteria. I&E St. 3-SR at 2-7; I&E M.B. at 18-21; OCA St. 2 at 11; OCA M.B. at 17-21. I&E and the OCA contended that there is no evidence that Aqua's Phoenixville Water System acquisition was necessitated by the inability of the Borough to render reasonable and appropriate service to customers. *Id.* I&E and the OCA argued that Aqua's rate base claim for its water operations should be denied, and the total annual amortization expense claimed by the Company should be reduced to $409,015 ($530,879 - $121,865). R.D. at 39; I&E M.B. at 18-21; I&E St. 3-SR at 3-7; OCA M.B. at 17-21.

Regarding the Company's citation to the Commission's Statement of Policy on water conservation measures in 52 Pa. Code § 65.20 in support of its position that any water provider with unaccounted-for water above 20% is considered a troubled water system, I&E acknowledged that Section 65.20(4) does mention that unaccounted-for water levels should be kept within reasonable amounts, noting that levels above 20% have been considered by the Commission to be excessive. I&E M.B. at 14-15. However, I&E asserted that Section 65.20(4) does not stand for the presumption that a system experiencing above 20% unaccounted-for water is a *de-facto* troubled water system. I&E M.B. at 15. I&E noted there are various other end-of-service plant issues that were known or knowable that could be the cause, and Section 65.20 merely advises that water conservation measures may be necessary. *Id.*

Specifically, I&E argued: (1) hydrants are utility plant that require periodic replacement based on known and knowable service life; (2) Aqua provided no detail to indicate that there were substantial service issues or failed systems causing the 68% non-revenue water; and much of this non-revenue water could be due to other end-of-service plant issues that were known or knowable; (3) the motivation of an owner to sell is not listed in the Section 1327(a) criteria; and (4) small, private water and wastewater systems do not have the ability to increase taxes and issue bonds that a municipality such as the Borough has, so not every troubled system has the capability of funding necessary repairs. I&E M.B. at 19-20.

The OCA agreed with I&E and added that: (1) the Company did not provide any evidence that the Borough was in violation of statutory or regulatory requirements of the Pennsylvania Department of Environmental Protection or the Commission when the Company acquired the Phoenixville Water System assets; (2) in approving the acquisition, the Commission itself made no findings of inadequate financial, managerial, or technical ability of the Borough; (3) the Commission found no deficiencies concerning the availability of water, the palatability of water, or the provision of water at adequate volume and pressure when the assets were owned by the Borough; and (4) the Commission found no issues with the acquired assets that would require necessary improvements to the plant or distribution system. OCA St. 2 at 11-12. In addition, the OCA argued that the acquisition was only for a portion of the Borough's system (*i.e.*, the portion located outside its municipal boundaries), and that the Borough continues to operate a system serving water and wastewater customers, as well as providing wholesale water supply to Aqua, which is evidence that the Borough was not providing inadequate service at the time of the acquisition. OCA St. 2 at 13-14.

With regard to Aqua's argument that the Commission's encouragement for the Company to sell the Phoenixville assets provides further support that the Company has satisfied the requirements of Section 1327, the OCA responded that while this may be true, it is not dispositive of the issue of whether the system was failing. OCA R.B. at 7. The OCA asserted that the Commission encouraged the sale of the Phoenixville assets to Aqua, in part, to resolve the Borough's inability to fund rate cases before the Commission, since as the Borough described, the costs of rate filings are significant and disproportionate to the "minimal revenues recovered from the Borough's small extraterritorial customer base." Aqua M.B. at 20 (citing *Phoenixville Petition Order* at 3-4). However, the OCA noted that the Commission has found that if a system does not have the financial resources to supply service outside of its service territory, or to remedy water quality problems near its territory, this does not indicate that the system was failing to maintain adequate, efficient, safe, and reasonable service and facilities at the time of the acquisition. OCA R.B. at 7 (citing *Pa. PUC v. Citizens Util. Water Co.*, 1996 Pa. P.U.C. LEXIS 167 at *20, *27-28).

2. Recommended Decision

The ALJ agreed with I&E and the OCA that they have successfully rebutted the presumption of the reasonableness of the excess paid for the Phoenixville

Water System. The ALJ found that there is no evidence that the Borough was failing to render reasonable and adequate service to its extraterritorial customers at the time it was acquired by Aqua. In addition, the ALJ explained that the Commission expects Class A public utilities, such as Aqua, to have completed a thorough analysis of the system's condition as part of any acquisition prior to making an offer, reaching an acquisition price, and closing on a transaction. R.D. at 43.

The ALJ further stated that all systems need ongoing maintenance and investment, and Aqua's meter replacement activity and routine maintenance only indicates that the Company is fulfilling its role as the new owner of the system. The ALJ noted that, while it is true that the estimated lost and unaccounted-for water is a concern and should be addressed, there may be a number of factors other than the failure of the facilities which contributed to the unaccounted-for water. However, the ALJ concluded that those factors alone do not support a conclusion that the service rendered by the Borough was inadequate within the meaning of Section 1327. R.D. at 43.

For the above reasons, the ALJ recommended that $2,437,305 be removed from Aqua's rate base, and the concomitant adjustments be made to the accrued depreciation reserve[13] and annual amortization expense which is expressed as a depreciation expense in this filing.[14] R.D. at 44.

---

[13] *See* Aqua M.B. at 18.

[14] These adjustments are reflected in the Appendix to the Recommended Decision in Table II - Water, Rows "Acquis. Adj. – Phoenixville" and "Amort. Phoenixville Acquis. Adj."

3. Aqua Exception No. 2 and Replies

In its Exception No. 2, Aqua disagrees with the ALJ's decision to adopt I&E's and the OCA's positions to disallow the proposed acquisition adjustment in rate base and its amortization over a twenty-year period. Aqua Exc. at 15.

First, the Company argues that the Recommended Decision ignores the regulatory requirements imposed by the Commission in its *Phoenixville Petition Order* which prompted the acquisition. R.D. at 16. In this regard, Aqua contends:

> [T]he RD fails to analyze, or even acknowledge, the Commission's prior findings that (a) recognized Phoenixville's inside-the-borough customers were subsidizing the service provided to outside-the-borough customers, and the defense of a base rate filing had deterred it from seeking rate relief to invest in its system, (b) the Commission had previously directed Phoenixville to avail itself of an acquisition to alleviate these burdens, and (c) Aqua PA's acquisition of the system is consistent with the regulatory requirement established in the *Phoenixville Petition Order*.

Aqua Exc. at 16 (footnotes omitted). In addition, the Company notes that the Commission also previously concluded, as a matter of law, that through the *Phoenixville Petition Order*, the Commission "encouraged the Borough to pursue a sale of its water system assets." Aqua Exc. at 16 (citing *Aqua-Phoenixville Order* at 19, Conclusion of Law ¶ 14).

Next, Aqua submits that the ALJ's recommendation is also incorrect that there is no evidence that the Borough was failing to render reasonable and adequate service at the time of the acquisition. Aqua maintains its argument that the Borough was failing to render reasonable and adequate service when it was acquired because the Borough was still manually reading meters, the system experienced 68% of unaccounted-for water, and 30% of the system fire hydrants required repair or replacement. Aqua Exc. at 16.

Aqua asserts that the ALJ attempted to sidestep the above facts by arguing that those conditions are matters that reflect ongoing maintenance and investment requirements and that high levels of unaccounted-for water were not indicative of system failure. Aqua contends that the sidestepping of these issues divorces the existence of the conditions from the reasons the Borough was unable to address them during its ownership. Aqua cites to the following excerpt from the *Phoenixville Petition Order* in support of its argument that the Borough was not able to address the conditions prior to the acquisition:

> In past years, the disproportionate cost of rate filings compared to the minimal revenues recovered from the Borough's small extraterritorial customer base has deterred the Borough from seeking rate relief and created cost subsidies flowing from inside-borough customers to outside-borough customers.

Aqua M.B. at 17 (citing *Phoenixville Petition Order* at 3 (quoting Borough Petition); Aqua M.B. at 29-30).

Aqua also submits that the ALJ's conclusion that the Company completed a thorough analysis of the system prior to making an offer and closing on the acquisition similarly misses the point. Aqua notes that it addressed this very argument, raised by I&E, in its Reply Brief:

> First, the fact that poor conditions are known or knowable at the time of the acquisition is not the test; and if it was, it would completely undermine the purpose of Section 1327. Second, the assertion that the conditions were "known or knowable" actually supports the fact that the system was troubled at the time it was acquired, and that Aqua PA has

> satisfied the requirements of Section 1327(a)(3), which is to encourage acquisition of troubled systems.

Aqua Exc. at 17 (citing Aqua R.B. at 13). Aqua argues that Section 1327 would be a "legal nullity" if the public utility's showing under Section 1327 could be successfully rebutted by the claim that the poor conditions of the system were "known or knowable" at the time of the acquisition, or that the public utility conducted a thorough investigation of the system prior to acquiring it. Aqua contends that this would make it impossible to identify a troubled system for acquisition consistent with Section 1327 and Commission policy, because the identification of the poor conditions that would satisfy Section 1327 would also render it ineligible for the rebuttable presumption established by this section. Aqua Exc. at 17-18.

Lastly, the Company avers that the ALJ ignored the Commission's policy statement in Section 69.711 of its Regulations, 52 Pa. Code § 69.711, which encourages regionalization and the acquisition of smaller troubled systems by larger capable public utilities. Aqua Exc. at 18. Aqua maintains that it presented credible testimony that the Phoenixville Water System was a prime candidate for using this policy and that the acquisition here is consistent with the Commission's policy. *Id*. at 18 (citing Aqua St. 2-R at 8, Aqua M.B. at 30; and Aqua R.B. at 13).

In reply to Aqua's Exceptions, I&E asserts that Aqua's arguments do not accurately reflect the ALJ's recommendation. First, I&E submits that Aqua erroneously argues that the ALJ failed to recognize that the Borough's water customers within the Borough's boundaries were subsidizing the water service provided to the extraterritorial borough customers. I&E R. Exc. at 6 (citing Aqua Exc. at 16). According to I&E, Aqua's argument is irrelevant in that such subsidization is a rate structure concern internal to the Borough. I&E points to the testimony it provided that the Borough (unlike a small private system) had many funding options to alleviate this problem. I&E R. Exc. at 7 (citing I&E St. 3-SR at 6; I&E St. 3 at 7-9).

I&E also asserts that Aqua's decision to pay in excess of the depreciated original cost for the subject assets does not guarantee recovery. I&E R. Exc. at 7. I&E cites the ALJ's observation that the excess Aqua chose to pay for the Phoenixville Water System created a rebuttable presumption and the ALJ determined that the presumption was successfully rebutted by I&E and the OCA. I&E R. Exc. at 7 (citing R.D. at 43). I&E further avers that the Commission's notation in the *Phoenixville Petition Order* that the Borough could explore a possible acquisition does not justify Aqua's decision to pay more than book value. *Id.*

I&E disagrees that the ALJ sidestepped Aqua's argument about the conditions of the Borough's water system prior to its acquisition (*i.e.*, manually reading meters, 68% of unaccounted-for water, and 30% of the system fire hydrants requiring repair or replacement) and, thus, the acquired Phoenixville Water System was non-viable at the time of acquisition. I&E asserts that the ALJ considered the factors raised by Aqua and rebutted by I&E and the OCA and clearly concluded that those factors alone do not support a conclusion that the service rendered by the Borough was inadequate within the meaning of Section 1327. I&E R. Exc. at 7.

I&E also contends that Aqua's regionalization argument is irrelevant to Aqua's choice to pay more than book value for the system and further notes that the regionalization concept also would have applied if Aqua had paid less than book value. I&E R. Exc. at 7. In closing, I&E explains that "the Commission expects Class A public utilities, such as Aqua, to have completed a thorough analysis as part of any acquisition to factor the condition of a system prior to making an offer and closing on a transaction." *Id*. at 7 (citing R.D. at 43).

The OCA's replies on this issue comport generally with those of I&E. OCA R. Exc. at 1. In addition, the OCA submits that the Company incorrectly claimed that the Commission, in its *Phoenixville Petition Order,* "directed" the Borough to consider selling its extraterritorial assets, thereby allegedly indicating that the Borough was not providing adequate service. OCA R. Exc. at 2 (citing Aqua Exc. at 16). The OCA clarifies that the Commission did not "direct" the Borough to consider selling. *Id*. The OCA notes the ALJ's finding that the Commission simply "observed" that the Borough had the "option to seek relief from regulatory burdens" by transferring its systems to an investor-owned utility like Aqua. OCA R. Exc. at 2 (citing R.D. at 42). Because there is no evidence in the record that the Borough was providing inadequate service at the time of the Company's acquisition, the OCA avers that the ALJ properly rejected the Company's proposal for a positive acquisition adjustment for the Phoenixville Water System, along with its associated $121,865 amortization expense, which is expressed as a depreciation expense in this filing. OCA R. Exc. at 2 (citing OCA M.B. at 21; OCA Table II (Water)).

4. Disposition

Aqua based its acquisition adjustment claim on the fact that it paid more than the depreciated original cost for the assets, and it is therefore entitled to include the acquired facilities in rate base because it meets the nine criteria set forth in Section 1327(a) of the Code. Aqua M.B. at 24-26; Aqua St. 2 at 16. For convenience, Section 1327(a) is stated in its entirety below:

> **(a) Acquisition cost greater than depreciated original cost.--**If a public utility acquires property from another public utility, a municipal corporation or a person at a cost which is in excess of the original cost of the property when first devoted to the public service less the applicable accrued depreciation, it shall be a rebuttable presumption that the excess is reasonable and that excess

shall be included in the rate base of the acquiring public utility, provided that the acquiring public utility proves that:

(1) the property is used and useful in providing water or sewer service;

(2) the public utility acquired the property from another public utility, a municipal corporation or a person which had 3,300 or fewer customer connections or which was nonviable in the absence of the acquisition;

(3) the public utility, municipal corporation or person from which the property was acquired was not, at the time of acquisition, furnishing and maintaining adequate, efficient, safe and reasonable service and facilities, evidence of which shall include, but not be limited to, any one or more of the following:

(i) violation of statutory or regulatory requirements of the Department of Environmental Resources [[15]] or the commission concerning the safety, adequacy, efficiency or reasonableness of service and facilities;

(ii) a finding by the commission of inadequate financial, managerial or technical ability of the small water or sewer utility;

(iii) a finding by the commission that there is a present deficiency concerning the availability of water, the palatability of water or the provision of water at adequate volume and pressure;

(iv) a finding by the commission that the small water or sewer utility, because of necessary

---

[15] The Department of Environmental Resources, referred to in Section 1327(a)(3)(i), was abolished by Act 18 of 1995. Its functions were transferred to the Department of Conservation and Natural Resources (DCNR) and the Pennsylvania Department of Environmental Protection (PADEP). R.D. at 42, n.24.

> > improvements to its plant or distribution system, cannot reasonably be expected to furnish and maintain adequate service to its customers in the future at rates equal to or less than those of the acquiring public utility; or
> >
> > (v) any other facts, as the commission may determine, that evidence the inability of the small water or sewer utility to furnish or maintain adequate, efficient, safe and reasonable service and facilities;
>
> (4) reasonable and prudent investments will be made to assure that the customers served by the property will receive adequate, efficient, safe and reasonable service;
>
> (5) the public utility, municipal corporation or person whose property is being acquired is in agreement with the acquisition and the negotiations which led to the acquisition were conducted at arm's length;
>
> (6) the actual purchase price is reasonable;
>
> (7) neither the acquiring nor the selling public utility, municipal corporation or person is an affiliated interest of the other;
>
> (8) the rates charged by the acquiring public utility to its preacquisition customers will not increase unreasonably because of the acquisition; and
>
> (9) the excess of the acquisition cost over the depreciated original cost will be added to the rate base to be amortized as an addition to expense over a reasonable period of time with corresponding reductions in the rate base.

66 Pa. C.S. § 1327(a).

For the reasons detailed below, we agree with the ALJ's recommendation to deny the Company's request to include $2,437,305 in rate base to reflect the amount beyond the depreciated original cost that it paid the Borough to acquire the Phoenixville Water System, that is, that portion of the Borough's extraterritorial water system. R.D. at 43-44.

Our review of the record leads us to conclude that Aqua failed to demonstrate that the proposed acquisition adjustment related to the Phoenixville Water System satisfies the requirements of Section 1327(a). As noted, none of the Parties have disputed that Aqua has satisfied Section 1327(a)(1)-(2) and (4)-(8).[16] Thus, the contention among the Parties centers on Section 1327(a)(3) and (9), and particularly on Section 1327(a)(3)(v), which requires a finding by the Commission that "evidenc[es] the inability of the small water or sewer utility to furnish or maintain adequate, efficient, safe and reasonable service and facilities" at the time it was acquired by the acquiring utility. For the reasons discussed in more detail below, we find that the Company failed to meet its burden of proof of providing sufficient unrebutted evidence to demonstrate that the proposed positive acquisition adjustment should be included in rate base.

I&E and the OCA disputed the facts presented by the Company in response to Section 1327(a)(3), and particularly, Section 1327(a)(3)(iv). Section 1327(a)(3) specifically requires that Aqua must first provide sufficient evidence showing that "the

[16] We disagree with the Company's statement that none of the Parties disputed that the Company has satisfied Section 1327(a)(9). The Company's statement implies that no one objected to the requirement that "the excess of the acquisition cost over the depreciated original cost will be added to the rate base to be amortized as an addition to expense over a reasonable period of time with corresponding reductions in the rate base." However, because I&E and the OCA are of the opinion that the Company has not met its burden of proving that the Borough's water system was a troubled system prior to its acquisition pursuant to Section 1327(a)(3) requirement, it stands to reason that I&E and the OCA also dispute that Aqua has satisfied the requirement of Section 1327(a)(9).

public utility, municipal corporation or person from which the property was acquired was not, at the time of acquisition, furnishing and maintaining adequate, efficient, safe and reasonable service and facilities." Section 1327(a)(3) further requires that the evidence presented to illustrate that the Borough was a troubled water system must "include, but not be limited to, any one or more" of the following:

> (i) violation of statutory or regulatory requirements of the Department of Environmental Resources or the commission concerning the safety, adequacy, efficiency or reasonableness of service and facilities;
>
> (ii) a finding by the commission of inadequate financial, managerial or technical ability of the small water or sewer utility;
>
> (iii) a finding by the commission that there is a present deficiency concerning the availability of water, the palatability of water or the provision of water at adequate volume and pressure;
>
> (iv) a finding by the commission that the small water or sewer utility, because of necessary improvements to its plant or distribution system, cannot reasonably be expected to furnish and maintain adequate service to its customers in the future at rates equal to or less than those of the acquiring public utility; or
>
> (v) any other facts, as the commission may determine, that evidence the inability of the small water or sewer utility to furnish or maintain adequate, efficient, safe and reasonable service and facilities;

66 Pa. C.S. § 1327(a)(3).

As noted, *supra*, Aqua provided responses to Items (i) – (v) in its checklist in Aqua Exhibit 3-A. With regard to Item (i), the Company indicated that the Borough did not have any statutory or regulatory violations of the Department of Environmental

Resources (now the DCNR and the PADEP) at the time of acquisition. With regard to Item (ii), the Company indicated that there were no Commission findings to show that the financial, managerial, or technical ability of the Borough was inadequate. With regard to Item (iii), the Company indicated that there are no Commission findings to show that there is a present deficiency concerning the availability of water, the palatability of water or the provision of water at adequate volume and pressure. With regard to Item (iv), the Company indicated that there were no findings by the Commission to show that, because of necessary improvements to its plant or distribution system, the Borough cannot reasonably be expected to furnish and maintain adequate service to its customers in the future at rates equal to or less than those of the acquiring public utility. And with respect to Item (v), which is the contested item here, the Company indicated, as discussed above, that at the time of acquisition, the Borough was unable to furnish or maintain adequate, efficient, safe and reasonable service and facilities because: (a) the Borough was manually reading residential and commercial meters; (b) non-revenue water was estimated to be at 68%; and (c) 30% (32/105) of the Borough of Phoenixville's system hydrants needed to be repaired or replaced.

In the Recommended Decision, the ALJ stated that the only evidence proffered by the Company to demonstrate the acquired water system was troubled at the time of acquisition involved: (1) manually reading meters; (2) 68% unaccounted-for water; and (3) a need to repair or replace 32 out of 105 fire hydrants. R.D. at 42. The ALJ agreed with I&E and the OCA in finding that the evidence submitted by the Company was vague and does not provide sufficient evidence that the Borough was failing to render reasonable and adequate service to its extraterritorial customers at the time it was acquired by Aqua. The ALJ determined that the manual meter readings and hydrant replacement primarily are routine maintenance matters not related to troubled water companies that indicate simply that Aqua is fulfilling its role as the new owner of the system. With regard to the estimated 68% unaccounted-for water, the ALJ stated that, while the amount of unaccounted-for water is a concern and should be addressed, there may be a number of factors that contribute to the loss of water, but those factors alone, also do not support a conclusion that the service rendered by the Borough was inadequate within the meaning of Section 1327.

In its Exceptions, the Company maintains its argument that the manual meter readings, the need to replace 32 out of 105 hydrants, and the high level of unaccounted-for water are sufficient reasons to prove that the Borough was failing to render reasonable and adequate service at the time of the acquisition, and that the ALJ attempted to sidestep these facts in her Recommended Decision. We disagree with the Company. In our opinion, the ALJ appropriately ruled that the Company has not presented sufficient evidence to demonstrate that the Phoenixville Water System acquisition was necessary because the Borough was unable to render reasonable and appropriate service to customers at the time it was acquired by Aqua. We agree with the ALJ that the three items proffered by the Company in response to Section 1327(a)(3)(iv) are vague and not convincing. In our view, the Company failed to present substantial evidence pursuant to Section 1327(a) that the Borough was not maintaining reasonable service and thus, Aqua was not entitled to an acquisition adjustment presumption. In addition, the evidence presented by I&E and the OCA was sufficient to rebut the evidence presented by the Company.

The simple fact that the Borough's territorial customers were subsidizing service to the Borough's extraterritorial customers is not tantamount to the provision of unreasonable or inadequate service. Furthermore, the Company offered no convincing record evidence such as the number and type of customer complaints that were filed prior to or at the time of the acquisition or any proof to indicate whether the quality of the water or other services performed by the Borough were inferior and similar to those issues normally experienced by a troubled water company.

The Company also argues in its Exceptions that the ALJ did not "analyze or even acknowledge" that Phoenixville's territorial customers were subsidizing the service provided to extraterritorial customers, and the defense of a base rate filing had deterred it from seeking rate relief to invest in its system. We disagree with the Company that the ALJ did not acknowledge this issue. Our review of the Recommended Decision indicates that the ALJ acknowledged the subsidization of water service to the Borough's extraterritorial customers by the Borough's territorial customers on page 41 of the Recommended Decision. The ALJ reasoned, however, that the issue was not pertinent to the relevant inquiry. In this regard, we agree with I&E's position in its Reply Exceptions that, in this particular proceeding, the subsidization issue is irrelevant for the purpose of casting the Borough as a troubled water company. Rather, the subsidization issue is a rate structure concern internal to the Borough.

The Commission has handled numerous troubled water system acquisitions. Stated plainly, it generally is known at the time of the acquisition whether the water system to be purchased is a troubled system and it is often stated to be such and acquired pursuant to relevant statutory provisions. In this instance, nothing in the record demonstrates that the Borough was operating a troubled water system. The record reflects that the primary reason for the acquisition in this case was the Borough's desire to be relieved of Commission jurisdiction so that it could avoid the high costs the Borough would incur in filing rate cases with the Commission for its extraterritorial water system. The important matter here is whether the customers in the acquired portion of the Borough's system were receiving inferior service or whether the Company was not able to properly maintain the system facilities. The fact that the Borough chose to subsidize its extraterritorial customers with its territorial customer revenues rather than to file a rate case with the Commission to increase the rates for its extraterritorial customers, is not convincing evidence of the acquired water system being troubled.

We determine that the Company's arguments regarding manual meter reading, relatively high unaccounted-for water levels, and hydrant repair/replacement issues do not rise to the level of rendering the Phoenixville Water System "troubled at the time of acquisition." *See* Aqua R.B. at 13. The Company discusses at length its examination of the acquired assets post-acquisition and its findings of inadequacies. Aqua also vehemently argues against the I&E position that a "known or knowable" system flaw would render an acquisition adjustment claim under Section 1327 unavailable – making the statutory provision effectively a nullity. Aqua Exc. at 17.

We observe that recent orders of this Commission have directed acquiring utilities to present evidence supporting the inclusion of acquired assets in rate base and any claims of a Section 1327 acquisition adjustment be made in the first base rate case following application approval. *See e.g.*, *Application of Columbia Water Company* Docket Nos. A-2021-3027134 and S-2021-3027145 (Order entered February 3, 2022). Thus, an acquiring utility is not prohibited from seeking an acquisition adjustment and enjoying the rebuttable presumption that such an adjustment should be made, should it: (1) discover system deficiencies; and (2) present sufficient evidence that establishes sufficiently that the acquired system was troubled at the time of acquisition. Section 1327 allows for this. In our view, an adequate measure of evidence simply was not presented by Aqua in the instant matter, when the underlying history of the sale is considered, and the discovered system inadequacies are evaluated.

The Company also filed Exceptions arguing that the Commission should approve its acquisition adjustment because "the Commission had previously ***directed*** Phoenixville to avail itself of an acquisition to alleviate these burdens."[17] Aqua Exc.

---

[17] In its Main Brief, Aqua also incorrectly submitted that "the Commission imposed a regulatory requirement that Phoenixville sell the assets used to serve the extraterritorial customers, if it wanted to avoid the regulatory burdens associated with the Commission's jurisdiction." Aqua M.B. at 20 (emphasis provided).

at 16. It appears that Aqua filed this Exception in support of its position that the Borough was not providing adequate service. However, as the OCA noted in its Replies to Exceptions, it is important to note that this Commission never "*directed*" the Borough to sell its extraterritorial assets. OCA R. Exc. at 2. In the *Phoenixville Petition Order*, it is clear that we only suggested that the sale of the extraterritorial water system was a viable option for the Borough to consider:

> Finally, the Commission would be remiss if we did not acknowledge Phoenixville's concern regarding the regulatory "burden" related to Commission jurisdiction. However, the Commission believes these so-called "burdens" are justifiable and if reasonable, recoverable from ratepayers. Commission oversight provides voiceless extraterritorial customers with service protections and it ensures reasonable rates that will provide for safe and reliable service over the long term. Similarly, the Commission would also be remiss if we did not acknowledge that unlike in the prior municipal corporation cases, there are viable options for the Borough, namely, PAWC's provision of public utility service in Upper Providence Township and Aqua Pennsylvania's provision of public utility service in Schuylkill Township. In conclusion, Phoenixville clearly has options to these perceived regulatory "burdens" which may prove beneficial to explore.

Phoenixville Petition Order at 7-8. Notwithstanding Aqua's mischaracterization of the Commission's Order, we are of the opinion that even if the Commission had "directed" the Borough to sell its unwanted assets, the Company's argument does not support its position that the Borough was not providing adequate water service and, thus, the acquisition cost beyond the depreciated original cost should be included in rate base. We agree with the ALJ that the Commission's comment to the Borough regarding a possible acquisition does not justify Aqua's decision to pay more than book value for the Phoenixville Water System. R.D. at 43.

In accordance with the above discussion, we shall deny the Company's Exception No. 2 and adopt the ALJ's recommendation that removes $2,437,305 from Aqua's rate base and makes the concomitant adjustments to the accrued depreciation reserve and annual amortization expense, which is expressed as a depreciation expense in this filing. Thus, the Company's claimed depreciation expense will be reduced by $121,865. These adjustments are reflected in Table II – Water, which is included in the rate tables that outline the Commission Tables Calculating Allowed Revenue Increase, which are attached to this Opinion and Order.

C. Additions to Rate Base – Cash Working Capital and Material & Supplies

1. Positions of the Parties

CWC is the capital requirement arising from the difference between: (1) the lag in the receipt of revenue for rendering service; and (2) the lag in the payment of cash expenses incurred to provide that service. R.D. at 44.

The Company's CWC claims for its water and wastewater operations include the working capital that is necessary for its O&M expense, taxes, and interest.[18] *Id.* The Company claimed a CWC amount of $1,736,000 for its water operations[19] and a CWC amount of $550,000 for its wastewater base operations.[20] *Id.*

---

[18] *See* Aqua Exhibit 1-A(a), Schedule G-5; *see, e.g.*, Aqua Exhibit 1-B(b), Schedule G-5. Schedule G-5 in Exhibits 1-C through 1-G reflect the CWC amounts claimed for each of the individual wastewater operations claimed in this proceeding.

[19] Aqua Exh. 1-A(a), Schedule G-5.

[20] Aqua Exh. 1-B(b), Schedule G-5.

No Party challenged the Company's lead/lag study[21] or its calculation of: (a) the average lag days in payment of expenses, taxes, or interest; (b) the average lag day in receipt of revenues; or (c) the average lag days between payment of expenses and receipt of revenue.[22] *Id.*

However, I&E recommended an adjustment to the CWC only for the water operations based on its recommended adjustments to revenue, O&M expenses, and taxes.[23] *Id.* I&E did not recommend any adjustments to wastewater base operations, or any individual wastewater operations because the proposed adjustments did not result in material changes to the respective CWC claims. R.D. at 44-45 (citing I&E St. 1 at 30).

The OCA's proposed adjustments to CWC were initially limited to the interest component of CWC. R.D. at 45 (citing OCA St. 1 at 24-25). However, the OCA subsequently revised its recommendations to reflect updates of operating expenses based on the OCA's proposed adjustments to operating expenses. *Id.* (citing OCA St. 1-SR at 12).

Aqua adjusted its claims for CWC based on the OCA's recommended adjustments to rate base, O&M expenses and taxes. The pertinent tables in the Appendix of the Recommended Decision reflect those adjustments. R.D. at 45.

Aqua also included an addition of $7,672,303 for materials and supplies to its water operations rate base. R.D. at 45 (citing Aqua St. 1 at 27; Aqua Exh. 1-A, Sch. G-4). This amount was developed by averaging the monthly balances in the M&S

---

[21] *See* Aqua St. 1 at 27 (describing the results of the lead/lag study).

[22] *See, i.e.*, I&E St. 1 at 30 (agreeing with the Company's use of the lead/lag study method).

[23] I&E St. 1 at 30-31; *see also* Aqua St. 1-R at 10.

account for water operations for the thirteen months ended March 31, 2021.[24] Aqua's wastewater filing includes a Schedule G-4, but "Aqua PA does not maintain a significant amount of standby materials and supplies for wastewater operations and, therefore, material and supplies [for wastewater operations] are expensed as they are purchased." Aqua St. 1 at 27.

No Parties challenged the Company's claim for an addition to rate base for materials and supplies.

2. Recommended Decision

The ALJ recommended that the Company's claim for CWC be adopted, as adjusted by the Company, to reflect the recommended adjustments by I&E and the OCA to rate base, O&M expenses, and taxes. The ALJ also adopted the Company's claim for an addition to rate base for M&S. R.D. at 45. The claims and pertinent adjustments recommended by the ALJ are reflected in the rate tables included in the Appendix to the Recommended Decision. A description of each of the tables is included on the first three pages of the Appendix.

3. Disposition

None of the Parties filed Exceptions regarding the ALJ's recommendation on the Company's remaining proposed adjustments to its plant in service. We find the ALJ's recommendation to be reasonable and shall adopt it. As will be discussed in more detail in Section VIII.M of this Opinion and Order, *infra,* regarding the Company's expense claims, a net increase of $275,473 will be applied to the CWC component of

---

[24] Aqua St. 1 at 27.

Aqua's water rate base. This figure reflects, in part, our downward adjustment to O&M expenses of $1,900,892.

Additionally, a net increase of $362,667 will be applied to the CWC component of Aqua's wastewater rate base, which reflects, in part, our downward adjustment to wastewater O&M expenses of $232,643. This is broken down as follows: (1) a net increase to the CWC component for Wastewater-Base of $216,340, which reflects, in part, our downward adjustment to O&M expenses of $150,101; (2) a net increase to the CWC component for Wastewater-Limerick of $76,673, which reflects, in part, our downward adjustment to O&M expenses of $27,778; (3) a net increase to the CWC component for Wastewater-East Bradford of $9,669, which reflects, in part, our downward adjustment to O&M expenses of $7,802; (4) a net increase to the CWC component for Wastewater-Cheltenham of $54,249, which reflects, in part, our downward adjustment to O&M expenses of $16,469; (5) a net increase to the CWC component for Wastewater-East Norriton of $24,706, which reflects, in part, our downward adjustment to O&M expenses of $14,318; and (6) a reduction to the CWC component for Wastewater-New Garden of $18,970, which reflects, in part, our downward adjustment to O&M expenses of $16,175.

In making the above adjustments, we have applied the same methodology utilized by Aqua and the ALJ and agreed upon by I&E and the OCA. Additionally, these adjustments are reflected in Table II-Adjustments in each of the sets of Commission Tables Calculating Allowed Revenue Increase that are attached in the Appendix to this Opinion and Order.

D. Deductions from Rate Base – Customer Advance for Construction, Contributions in Aid of Construction and Accumulated Deferred Income Tax (ADIT)

1. Positions of the Parties

"A customer advance for construction or 'CAC' is funds paid to a utility for an extension of service that is refunded over time to the applicant for service." Aqua St. 2-R at 9. Similarly, "[c]ontributions in aid of construction or 'CIAC' are amounts furnished by applicants for facilities that may not be subject to a refund." Aqua M.B. at 33; Aqua St. 2-R at 9. Both CAC and CIAC are treated as a reduction to a utility's rate base.

With respect to its water operations, the Company's claim for CAC and CIAC[25] reduced rate base by ($178,784,735). R.D. at 45; Aqua Exh. 1-A, Sch. G-6. With respect to wastewater base operations, the Company's claim reduced rate base by ($20,965,154). Aqua Exh. 1-B, Sch, G-6.[26] Although the OCA initially proposed adjustments to CAC and CIAC, those proposals were subsequently withdrawn. OCA M.B. at 23; OCA R.B. at 9.

Additionally, Aqua claimed a total of $392,515,121 for water and $9,356,312 for wastewater in ADIT.[27] R.D. at 46. These amounts included normalized ADIT and the unamortized balance of excess ADIT resulting from various federal income tax rate reductions. Aqua St. 8 at 14. In rejoinder testimony, Aqua identified an

---

[25] Schedule G-6 of Aqua Exhibits 1-A and 1-B contain the Company's proposed reductions to rate base for CAC and CIAC.

[26] No adjustments for CAC and CIAC were included in Exhibits 1-C through 1-G.

[27] *See* Aqua St. 8 at 14; *see also* Aqua Exh. Nos. 1-A(a) through 1-G(g), Sch. G-7.

additional $6.1 million to be deducted from water rate base associated with the Company's claim regarding the treatment of uncertain tax positions in computing the flow-through deduction for tax repairs (FIN 48 adjustment). R.D. at 46; Aqua St. 8-R at 7; Aqua St. 8-RJ at 3. This adjustment was reflected by Aqua in its rate case tables attached to its Main Brief.[28]

The OCA accepted the additional rate base deduction associated with uncertain tax positions, even though the OCA continued to oppose the Company's treatment of uncertain tax positions in computing the flow-through deduction for tax repairs. R.D. at 46; OCA St. 1-SR at 13-15.

2. Recommended Decision

The ALJ accepted Aqua's treatment of uncertain tax positions in computing the flow-through deduction for tax repairs. The ALJ noted that any other adjustments to ADIT as a result of other rulings are accounted for in the rate tables included in the Appendix to the Recommended Decision. R.D. at 46.

3. Disposition

No Party filed Exceptions on this issue. Finding the ALJ's recommendation to be reasonable, we adopt it without further comment.

---

28 *See* Aqua Table I Water, Column "Company Adjustments."

VII. Revenues and Revenue Requirement

A. Revenue Requirement

A utility's revenue requirement represents the total revenue that the utility needs to collect through the rates charged to the public to cover its cost of service. *See* https://www.puc.pa.gov/General/publications_reports/pdf/Ratemaking_Guide2018.pdf, accessed on March 18, 2022, (*PUC Rate Case Handbook*) at 102. The formula to calculate the utility's revenue requirement is set forth, as follows:

RR=T+E+D+(RB x ROR)

Where: RR=Revenue Requirement
T=Taxes
E=Operating Expense
D=Depreciation Expense
RB=Rate Base
ROR=Overall Rate of Return

I&E M.B. at 42, n.169. The central issue in a base rate case involves identifying the appropriate cost of service, or revenue requirement, for the company, in this case Aqua.[29] *PUC Rate Case Handbook* at 102.

1. Positions of the Parties

Aqua's final proposed revenue requirement on a total Company basis was approximately $644,073,506, representing a proposed revenue increase of $96,990,325 over *pro forma* revenues at present rates of $547,083,180. After allocating a portion of

[29] We have discussed the Company's rate base, *supra,* and will discuss the remaining components of the Company's Revenue Requirement formula in the sections that follow.

the wastewater revenue requirement to water customers, this consisted of a proposed water revenue requirement of $595,496,015, representing a proposed revenue increase of $85,489,328 over water revenues at present rates of $510,006,687; and a proposed wastewater revenue requirement of $48,577,490, representing a proposed revenue increase of $11,500,997 over wastewater revenues at present rates of $37,076,493. Aqua M.B. at Appendix F, Water and Wastewater Revenue Requirement – Summary.[30]

I&E recommended a revenue requirement of $584,241,297 for Aqua, on a total company basis. I&E's proposal would result in a total revenue increase of approximately $33.9 million over revenues at present rates of $550,331,987. After allocating a portion of the wastewater revenue requirement to water customers, this consisted of a water revenue requirement of $530,478,098, representing an increase of approximately $17.223 million to the Company's water revenues of $513,225,494 at present rates; and a wastewater revenue requirement of $53,763,149, representing an increase of approximately $16.687 million to the Company's wastewater revenues of $37,076,443 at present rates. I&E M.B. at 5; M.B., Appendix A, Table VII-Water-Act 11 Allocation.

The OCA proposed a final revenue requirement of $549,967,611 on a total Company basis, representing a revenue reduction of approximately $12.142 million. OCA M.B. at 16; Appendix A, Summary Table.

---

[30] As previously noted, the Company stated in the body of its Main Briefs that its final revenue increase request was approximately $97.6 million, which consisted of a claimed increase in water revenues of $86.118 million and a claimed increase in wastewaters revenues of approximately $11.566 million. Aqua M.B. at 2. However, Appendix F, Water and Wastewater Revenue Requirement – Summary, which is set forth in the Company's Main Briefs, shows a final proposed increase of $85,489,328 in water revenues and $11,500,997 in wastewater revenues, representing a total combined requested revenue increase of approximately $96,990,325.

Although CAUSE-PA did not propose a specific revenue requirement in this proceeding, it stated that it supported and adopted the position of the OCA. CAUSE-PA M.B. at 12.

2. Recommended Decision

The ALJ recommended an overall revenue requirement of approximately $582.2 million for Aqua on a total Company basis, based on the various adjustments she adopted in her Recommended Decision, resulting in an overall distribution revenue increase of approximately $31.9 million. After allocating a portion of the wastewater revenue requirement to water customers, the ALJ's recommendation consisted of: (1) a revenue requirement of $528.4 million for Aqua's water service, representing an increase of approximately $15.2 million over *pro forma* present rate water revenues; and (2) a revenue requirement of $53.8 million for Aqua's wastewater service, representing an increase of approximately $16.7 million over *pro forma* present rate wastewater revenues. The ALJ's recommendation represented an increase of approximately 2.97% in water operating revenue and an increase of approximately 45% in wastewater operating revenue. R.D. at 1, 140, Appendix Table Act 11 – Water and Wastewater Revenue Requirement - Summary.

3. Disposition

Based upon our findings regarding certain inputs to Aqua's rate base, *supra,* and to Aqua's revenues, expenses, cost of common equity, and overall rate of return, discussed, *infra,* we shall approve an overall revenue requirement of $617,476,255, on a total company basis, which will result in a maximum allowed overall distribution revenue increase of $69,251,169, on an annual basis. After allocating a portion of the wastewater revenue requirement to Aqua's water customers, we shall approve: (1) a revenue requirement of $561,658,784 for Aqua's water service, representing a revenue increase of $50,510,192, on an annual basis; and (2) a revenue requirement of $55,817,471[31] for Aqua's wastewater service, representing a revenue increase of $18,740,978,[32] on an annual basis. These amounts are depicted on Table Act 11 Water and Wastewater Revenue Requirement – Summary, which is part of the Commission Tables Calculating Allowed Revenue Increase that are attached to this Opinion and Order.

B. Rider DRS Contracts

1. Positions of the Parties

Aqua proposed updated FPFTY *pro forma* revenues at present rates as set forth in Schedule B-1 of Aqua Exhibits 1-A(a) through 1-G(g). As a part of its direct case on revenue requirement, Aqua included an explanation of the basis for a number of water resale contracts charging discounted rates pursuant to Aqua's tariff Rider DRS – Demand Based Resale Service (Rider DRS). *See* Tariff Water No. 3, Original Page 20. Aqua noted that "Rider DRS is available to existing or new customers that intend to purchase water from the Company for resale and have a viable competitive alternative to service from the Company." Aqua St. 2-R at 11. Customers that can satisfy the requirements of Rider DRS may qualify for customer-specific contracts at

---

[31] As set forth in Table Act 11 – Water and Wastewater Revenue Requirement – Summary, which is included in the Commission Tables Calculating Allowed Revenue Increase, attached to this Opinion and Order, this amount consists of the following individual wastewater revenue requirements: $25,849,065 for Wastewater-Base Operations, $7,249,205 for Wastewater-Limerick, $1,663,639 for Wastewater-East Bradford; $12,044,410 for Wastewater-Cheltenham, $4,582,750 for Wastewater-East Norriton, and $4,428,399 for Wastewater-New Garden.

[32] This amount consists of the following individual allowed annual revenue increases: $6,837,304 for Wastewater-Base Operations, $3,270,632 for Wastewater-Limerick, $649,070 for Wastewater-East Bradford; $4,785,671 for Wastewater-Cheltenham, $1,658,983 for Wastewater-East Norriton, and $1,539,319 for Wastewater-New Garden. *See Id.*

discounted rates designed to maintain sales that would otherwise be lost to water service alternatives. *Id.*

Rider DRS further provides that, in order to qualify for discounted rates, a customer must have a competitive alternative:

> The Company shall require documentation to establish, to the Company's satisfaction, the existence of a competitive alternative. Such documentation may include, but is not limited to, an affidavit of the customer or, if the customer is a corporation, an affidavit of one or more of its officers.

Tariff Water No. 3, Original Page 20.

In the Joint Petition for Settlement (2018 Settlement) approved by the Commission in the *Aqua 2018 Rate Case*, the Company agreed to provide "documentation of the existence of a viable competitive alternative to water service provided by the Company for the following Rider DRS customers and any new Rider DRS customers added after the date of this [2018 Settlement]":

Rider DRS Customers

Chemung County Industrial Development Agency [(Chemung)]
New Wilmington Municipal Authority [(New Wilmington)]
Warwick Township Water and Sewer Authority [(Warwick)]
Borough of Sharpsville [(Sharpsville)]
City of Hubbard [(Hubbard)]
Horsham Water Authority [(Horsham)]
Schwenksville Borough Authority [(Schwenksville)]

2018 Settlement at ¶ 24.

Aqua also agreed in the 2018 Settlement "to date each competitive alternative analysis that is submitted regarding the above Rider DRS customers or new Rider DRS customers, and provide dates for when the competitive alternative analysis was last considered, if applicable." 2018 Settlement at ¶ 25. In addition, Aqua agreed to provide "a competitive alternative for the rates charged to [Aqua Ohio's Masury Division (Masury)] area customers in its next water base rate filing." 2018 Settlement at ¶ 26. Finally, it was noted in ¶ 27 of the Joint Petition that any party to same "reserves the right to review and challenge any contract and/or rate in future Aqua base rate filings, or in subsequent litigation related to this proceeding."

I&E reviewed the updated information provided by Aqua regarding the Rider DRS customers and found that the documentation was inadequate to demonstrate a competitive alternative for certain customers. Thus, I&E proposed adjustments related to the "cancellation" of certain negotiated contracts that provide for sales for resale of water.[33] *See* I&E St. 4-SR at 17-18, I&E M.B. at 25-29.

I&E argued that several of the contracts do not qualify for the tariff discount and that these customers should pay full tariff rates when the rates resulting from this base rate case become effective. Specifically, I&E contended that resale customers are only eligible for discounted rates in a negotiated contract upon demonstration of the existence of a "viable competitive alternative" to service by the Company, and that the customer or prospective customer intends to select that alternative. In addition, I&E argued that unless and until the contract between Aqua and Masury – which was filed with the Commission as an affiliated interest agreement in November 2021 – is approved, Masury should be billed at full tariffed rates. I&E St. 4-SR at 20, I&E M.B. at 28.

[33] I&E originally sought to have additional discount contract customers moved to full tariff rates but withdrew its requests in surrebuttal testimony based upon the Company's demonstrated evidence of available competitive alternatives.

2. Recommended Decision

The ALJ agreed with I&E that the documentation supplied by many of the discount rate customers was insufficient to demonstrate the existence of a competitive alternative. R.D. at 47. The ALJ reasoned that while an analysis of a competitive alternative need not be complex, more is required than simply a self-serving statement that competitive alternatives exist. The ALJ concluded that it is not burdensome to require the customer to include at least some description of the available alternatives and that it is not reasonable for Aqua to be satisfied by a dearth of information. The ALJ thus recommended that the Chemung and Horsham customers should be subject to Aqua's full tariffed rates. R.D. at 48.

The ALJ also agreed with I&E that the contract with New Wilmington does not comply with the terms of Rider DRS, and likewise should be subject to full tariff rates. *Id.* The ALJ determined that the only competitive alternative identified in the documentation supporting the discounted sale rate for the Borough of Sharpsville was the potential construction of an expensive new water treatment plant. The ALJ found that there was no evidence that this alternative is financially viable or that Sharpsville could purchase water from other sources and, accordingly, found that the contract with the Borough of Sharpsville does not qualify for Rider DRS. *Id*. at 48-49.

In contrast, the ALJ found that the documentation provided by the Executive Director of Schwenksville Borough is sufficient to demonstrate that the competitive contract satisfies the language of Rider DRS regarding the availability of competitive alternatives. Although not in the form of an affidavit, the ALJ determined that the letter is sufficiently reliable for the purpose of determining Schwenksville's qualification for Rider DRS. The ALJ concluded that it is reasonable for the Company to be satisfied by this description of a competitive alternative for the purpose of offering discounted service. *Id*. at 49.

In addition, the ALJ noted that Aqua provides water to Masury under a special tariff rate, that Aqua and Masury have negotiated a new contract under Rider DRS, but that the contract is an affiliated interest agreement that must be approved by the Commission pursuant to 66 Pa. C.S. § 2101, *et. seq*. R.D. at 49. Explaining that the agreement was filed with the Commission on November 30, 2021, and is pending a decision, the ALJ reasoned that, until the Commission makes a determination regarding the agreement, Masury should be charged full tariff rates, because doing otherwise would be premature. The ALJ recommended that Aqua's present rate revenues should be increased accordingly. R.D. at 49-50.

In summary, the ALJ recommended that the Commission direct Aqua to charge Sharpsville, Chemung, Horsham, and New Wilmington the full tariffed rates specified in Aqua's rate schedules upon the effective date of new base rates in this proceeding. She noted that this was without prejudice to the affected customers' ability to provide specific supporting documentation to Aqua that would satisfy the requirements of Rider DRS, including evidence that the affected customer has a viable competitive alternative and intends to select that alternative in the absence of a discounted rate. R.D. at 49. The ALJ also recommended that Masury be charged full tariff rates pending Commission consideration of the filed affiliated agreement. *Id*. at 46-50.

3. Aqua Exception No. 3, I&E Exception No. 1, and Replies

In its Exception No. 3, Aqua claims that the ALJ erroneously directed the Company to cancel certain Rider DRS contracts and charge those customers full tariff rates. The Company notes that the contracts were negotiated in good faith, in some cases, many years ago, and that cancellation of these arrangements could likely negatively impact current Aqua customers, create unnecessary litigation, and force local governments to build infrastructure, which they previously relied upon as being unnecessary. Aqua Exc. at 18-20.

Aqua claims that Rider DRS permits Aqua to enter into customer specific contracts at prices designed to maintain sales that would otherwise be lost to water service alternatives for customers that can satisfy the requirements of the rider. Aqua M.B. at 38-40. Aqua submits that the ALJ erred by agreeing with I&E's focus on the requirement that such customers must have a "competitive alternative" to qualify for the rate discount. Aqua notes that the contracts at issue include those between Aqua and Sharpsville, Schwenksville, Chemung, Horsham, and New Wilmington. Aqua Exc. at 18-21 (citing I&E St. 4-SR at 18). Aqua also disagrees with the ALJ's conclusion that charging Masury discounted rates is "premature." Aqua Exc. at 19 and 21-22.

Aqua claims that the ALJ's recommendations ignore the specific language of Rider DRS, which provides that:

> The Company shall require documentation to establish, to the Company's satisfaction, the existence of a competitive alternative. Such documentation <u>may include, but is not limited to</u>, an affidavit of the customer or, if the customer is a corporation, an affidavit of one or more of its officers.

Tariff Water No. 3, Original Page 20 (emphasis added). Aqua Exc. at 19.

Emphasizing that the Company is required to adhere to its tariff pursuant to 66 Pa. C.S. § 1303, Aqua asserts that the ALJ's conclusions undermine the Company's ability to essentially exercise its judgment in evaluating the information supplied by potential contracting parties, and thus, adhere to its tariff as it is obligated to do under the Code. Aqua Exc. at 19. Additionally, Aqua argues that the ALJ disregarded the basis upon which the parties entered into these contracts and that her recommendation undermines the benefits these contracts provide to other customers. Aqua Exc. at 19-20 (citing Aqua M.B. at 41-42). Aqua claims that, by recommending that the Commission adopt the position of I&E, the ALJ supports I&E's "second guessing of documentation, contracts and decisions made by entities in the past." Aqua Exc. at 20. Aqua avers that the ALJ's recommendation is erroneous because it "ignores the realities of these long-term contracts and seeks to analyze them in a vacuum, divorced from the specific facts and circumstances that existed at the time the contracts were entered into." *Id.* Aqua further claims that the Recommended Decision fundamentally alters the good faith, arms-length negotiations of the parties when they entered into the contracts over a decade ago. Aqua Exc. at 20 (citing Aqua M.B. at 42). Aqua submits that this ultimately eliminates approximately $974,405 in benefits to other existing Aqua customers.[34] *Id.* (citing Aqua M.B. at 38-39).

Aqua next addresses the recommendations specific to each of its contracts with Chemung, Horsham, Sharpsville, New Wilmington, and Masury. Taking the Chemung, Horsham, and New Wilmington contracts together, Aqua claims that the ALJ erroneously concludes that the documentation provided by Chemung and Horsham is only "a self-serving statement that competitive alternatives exist" and that "[i]t is not reasonable for Aqua to be satisfied by so little information." Aqua Exc. at 20. Aqua submits that the statement in the Chemung contract is not "self-serving," but rather, it is a legally binding representation by this municipality, that forms the basis for the contract itself. *Id.* (citing Aqua M.B. at 47). Aqua argues that effectively, the ALJ appears to insinuate that the representations of a municipal entity that binds itself to a long-term contract based thereon is not to be trusted. Aqua asserts that there is no support for such a finding in the record. Aqua Exc. at 20.

Aqua insists that it demonstrated that Horsham has existing interconnections with the Company and another water provider, in addition to wells located throughout its own system. Aqua Exc. at 20-21 (citing Aqua M.B. at 48). Aqua argues that the Recommended Decision ignores these alternative supplies, and further

---

[34] Aqua claims that this is the sum of the benefits of the contracts associated with the applicable entities. Aqua Exc. at 20.

disregards the undisputed fact that Horsham could supply 100% of its water through sources other than the Company. Aqua Exc. at 20-21 (citing Aqua M.B. at 48).

With regard to New Wilmington, Aqua claims that the ALJ is in error by concluding that Aqua's contract with New Wilmington does not comply with Rider DRS. Aqua Exc. at 21. The Company claims that it demonstrated that the wheeling agreement[35] with New Wilmington provides important benefits, including enabling Aqua to provide service to a noncontiguous area of its service territory at low cost. According to Aqua, these factors make it reasonable for the Company to conclude that such a wheeling agreement does not require a competitive alternative. *Id.* (citing Aqua M.B. at 48-49).

Aqua next addresses the Sharpsville contract and asserts that the ALJ erred by retroactively concluding that the alternative identified by Sharpsville at the time it entered into the contract is not viable. Aqua Exc. at 21. Aqua asserts that the ALJ ignores other representations in the original contract by concluding that "the only competitive alternative identified in the documentation supporting the discounted sale rate was the potential construction of an expensive new water treatment plant. There is no evidence that this alternative is financially viable or that Sharpsville could purchase water from other sources." *Id*. at 21 (citing R.D. at 48-49). Aqua claims that Sharpsville also made representations at the time the contract was entered into regarding the then-existing source of supply. Aqua Exc. at 21 (citing Aqua M.B. at 44-45). Aqua asserts that this evidence conclusively demonstrates that Sharpsville was not only contemplating a new alternative to obtaining water service from Aqua, but also had an existing alternative at the time it entered into the contract. Aqua Exc. at 21 (citing Aqua

[35] Under a wheeling agreement, the Company "wheels" water to a proposed service area that is not contiguous with its distribution system. To transport the water to the proposed service area, Aqua provides water at a designated point of interconnection and then withdraws water elsewhere to serve the new service area. Aqua St. 2-R at 24.

M.B. at 44-45). Aqua adds that Sharpsville subsequently provided an affidavit that satisfies Rider DRS. Aqua Exc. at 21 (citing Aqua M.B. at 45-46). As a result, Aqua claims that the Commission should not cancel its long-term DRS contract with Sharpsville mid-term where the stated alternative at the time of contracting does not now exist precisely because of the Aqua DRS contract. *Id.* In sum, Aqua avers that Sharpsville has provided the documentation required by Aqua's tariff, and Aqua is obligated to adhere to its tariff. Aqua Exc. at 21.

Finally, Aqua asserts that the ALJ erred by concluding that the pendency of a Commission decision on the Masury contract dictates that the full tariff rate be applied to this customer unless and until the contract is approved. Aqua Exc. at 21-22. According to Aqua, the ALJ misunderstood the facts. Specifically, Aqua claims that the Recommended Decision disregards the fact that Aqua currently provides water to Masury under a special tariff rate.[36] In addition, Aqua points out that this specific agreement contains a competitive alternative analysis, as well as a sworn affidavit from Masury that it would select the alternative in the absence of the new contract. Aqua Exc. at 22 (citing Aqua M.B. at 49-50). Aqua contends that, if it is to be concluded that the Masury contract is not approved, then, rather than impute over $1 million in additional revenues from Masury as proposed by the ALJ, the Commission should remove $258,000 in revenues that will not be received from Masury. Aqua Exc. at 21 (citing Aqua M.B. at 50).

I&E replies to Aqua's assertions of error by stating that the ALJ correctly reasoned that customers who are able to satisfy the requirements of Rider DRS can enter into customer specific contracts at prices designed to maintain sales that would otherwise be lost to water service alternatives. I&E R. Exc.at 8 (citing R.D. at 47-50). I&E stresses that the key consideration under Aqua's tariff is the existence of a competitive

---

[36] *See* Tariff Water – Pa. P.U.C. No. 2, Third Revised Page 12.4.

alternative. According to I&E, the ALJ correctly analyzed the evidence presented regarding each of the Rider DRS contracts and reached well-reasoned conclusions. *Id.* I&E asserts that, while Aqua had the opportunity to provide substantial record evidence to support each of the Rider DRS contracts, it failed to meet its burden regarding those contracts identified by the ALJ. Therefore, I&E submits that the Commission should reject Aqua's Exception No. 3. I&E R. Exc. at 8.

In its Exception No. 1, I&E finds fault with the ALJ's conclusion that Aqua supplied sufficient evidence to support the DRS contract between Aqua and Schwenksville. I&E Exc. at 3-4 (citing R.D. at 49). I&E submits that the ALJ erroneously found that "the documentation provided by the Executive Director of Schwenksville Borough is sufficient to demonstrate that the competitive contract satisfies the language of Rider DRS regarding the availability of competitive alternatives." I&E Exc. at 3 (citing R.D. at 49). I&E specifically disagrees with the ALJ's conclusion that, "[a]lthough not in the form of an affidavit, the letter is sufficiently reliable for the purpose of determining Schwenksville's qualification for Rider DRS." I&E Exc. at 3-4 (citing R.D. at 49). I&E also disagrees that "it is reasonable for the Company to be satisfied by this description of a competitive alternative for the purpose of offering discounted service." I&E Exc. at 4 (citing R.D. at 49). I&E asserts that the letter provided by Schwenksville does not rise to the level of an affidavit and, therefore, is not sufficiently reliable for the purpose of determining Schwenksville's qualification for a Rider DRS. I&E Exc. at 4.

I&E argues that the document provided by Aqua is merely a cover letter with no oath or affirmation, and not an affidavit or the legal equivalent of one and thus, does not meet the standard required to be considered valid documentation supporting a competitive alternative under the plain language in Aqua's tariff. I&E Exc. at 4. Therefore, according to I&E, the Commission should overturn the ALJ's recommendation, cancel the Schwenksville contract, and require Schwenksville to begin paying full tariff rates when they go into effect pursuant to this base rate proceeding. *Id.*

Aqua replies that I&E's argument disregards the plain language of Rider DRS, which permits Aqua to accept "documentation [that] <u>may include, but is not limited to,</u> an affidavit." Tariff Water No. 3, Original Page 20 (emphasis added). Aqua R. Exc. at 1-2. Aqua submits that it fully addressed I&E's claims and demonstrated that it satisfies the requirements of its tariff. Aqua R. Exc. at 1-2 (citing Aqua M.B. at 46-47, Aqua R.B. at 17-18). Aqua also argues that adopting I&E's assertion would violate the requirements of 66 Pa. C.S. § 1303, which requires Aqua's adherence to its effective tariff. For these reasons Aqua requests that I&E's exception be denied. Aqua R. Exc. at 2.

4. Disposition

At the outset, we note that adherence to tariff provisions is a statutory obligation of the utilities we regulate. 66 Pa. C.S. § 1303. We further note that when analyzing a tariff provision, like the law, we will not ignore its plain language under the pretext of pursuing its spirit. Finally, we study carefully the agreements reached by parties and commitments made in settlements brought to the Commission for its consideration and the evidence submitted in purported compliance with those settlement terms. With these governing principles in mind, we adopt, in part, and reject, in part, the recommendations of the ALJ on the DRS contract issues, as discussed more fully below.

It is useful first to repeat Aqua's obligations agreed to in the 2018 Settlement. The Company agreed to provide "documentation of the existence of a viable competitive alternative to water service provided by the Company for the following Rider DRS customers and any new Rider DRS customers added after the date of this Joint Petition" for Chemung, New Wilmington, Warwick, Sharpsville, Hubbard, Horsham, and Schwenksville. 2018 Settlement at ¶ 24.

Aqua also agreed as follows:

> 25. Aqua agrees to date each competitive alternative analysis that is submitted regarding the above Rider DRS customers or new Rider DRS customers, and provide dates for when the competitive alternative analysis was last considered, if applicable.
>
> 26. Additionally, Aqua agrees to provide a competitive alternative for the rates charged to Masury area customers in its next water base rate filing.
>
> 27. Any party to this Joint Petition reserves the right to review and challenge any contract and/or rate in future Aqua base rate filings, or in subsequent litigation related to this proceeding.

2018 Settlement at ¶¶ 25-27.

These settlement commitments by Aqua were approved as a part of the Commission's Opinion and Order in the *Aqua 2018 Rate Case*. We analyze each part of these settlement terms as context for the direct case that Aqua was to present in this, its next, base rate case.

Reviewing the 2018 Settlement language carefully, it is patently evident that under Paragraph 25, Aqua agreed to undertake a competitive alternative analysis for each existing and new Rider DRS contract, date those analyses, and indicate when the competitive alternative analysis "was last considered, if applicable." This language seems to contemplate that consideration of the competitive alternative offered by a contracting party could be undertaken periodically during the course of the contract. This concept is contrary to Aqua's claim now, in this present case, that the original validation of the availability of a competitive alternative is undertaken only at the time of contracting and it is not reviewed until the term of the contract expires.

With regard to the Masury contract, the 2018 Settlement contemplated that Aqua would "provide a competitive alternative for the rates charged to Masury area customers" in its next base rate case. This language is inartful, at best, and confusing when viewed in the context of our consideration of the Recommended Decision on the pending Masury contract and Aqua's Exceptions regarding the same. Nevertheless, we examine the evidence of record and the ALJ's recommendation on the Masury contract issue as we find it and rule on that basis.

Finally, we note that we do not have before us a recommendation or dispute regarding Aqua's contracts with Hubbard, Warwick, Downingtown Municipal Water Authority, and Bucks County Water and Sewer Authority - Bristol. I&E withdrew its opposition to these contracts based upon information supplied by the Company. *See* I&E M.B. at 25-29. I&E indicated that it did not address Aqua's contract with United Water because it was previously approved by the Commission. Our review of the record regarding these contracts indicates that even though they may provide some mutual benefit to the parties and are not detrimental to Aqua's other customers, some of them potentially do not fit strictly within the applicability standards for Rider DRS. We strongly encourage Aqua to consider the development of an appropriate tariff provision governing the unique circumstances of these contracts.

With regard to the Chemung, Horsham and Sharpsville rate discounts, we agree with Aqua that it has presented sufficient record evidence to support the discounted rates based upon the availability of competitive alternatives. Aqua's decisions to grant the discounted rates to these entities were validly based on official representations made by responsible municipal officials. For these reasons, we shall grant Aqua's Exception No. 3 with respect to its arguments regarding the Chemung, Horsham, and Sharpsville discounts and reject the ALJ's recommendations that these customers be charged full tariff rates. Based on our granting this portion of Aqua's Exceptions, the ALJ's upward adjustment of $2,983,780 to the Company's revenues, as set forth on Table II - Water in the Attachment to the Recommended Decision, will be reduced by $1,847,694.[37] Therefore, our total upward adjustment to the Company's Revenues as a result of water contract revenue is $1,136,086 (*i.e.*, $2,983,780 - $1,847,694 = $1,136,086].[38]

As for New Wilmington, however, we agree with Aqua that it must adhere to its tariff language and the applicable DRS Rider does not contain any provision for the type of "wheeling" arrangement that Aqua entered into here. Aqua's claim of "important benefits" justifying its departure from the competitive alternative requirement in Rider DRS simply does not hold water.[39] For these reasons, we deny Aqua's Exception No. 3 with respect to its arguments regarding the New Wilmington contract and adopt the ALJ's recommendation that Aqua charge New Wilmington full tariff rates. Accordingly, we shall impute $348,904 in revenues, representing the difference between $677,550 in revenues at New Wilmington's full tariff rate and $328,646 in revenues at contract rates. *See* I&E Exh. 4-SR, Sch. 1.

With regard to Masury, we acknowledge Aqua's observation that it provides service to Masury under a special tariff rate.[40] In addition, Aqua also has demonstrated that the agreement contains a competitive alternative analysis and a sworn

---

[37] As we are permitting the Company to grant discounted rates to Chemung, Horsham, and Sharpsville, the associated imputed revenues added back by the ALJ of $30,944, $123,779, and $1,692,971, respectively, will be removed from the ALJ's total upward adjustment for water contract revenues.
[$30,944 + $123,779 + $1,692,971] = $1,847,694. *See* I&E Exh. 4-SR, Sch 1.

[38] Accordingly, this $1,136,086 is comprised of imputed general service revenues of $348,904 for New Wilmington and $787,182 for Masury, discussed, *infra*.

[39] We also note that consideration of the existence of competitive alternatives during the course of the contract is not explicitly prohibited by the language of Rider DRS. While it requires Aqua to consider evidence of competitive alternatives at the time of original contracting, it does not preclude Aqua from re-evaluating the contract in the event of changed circumstances.

[40] *See* Tariff Water – Pa. P.U.C. No. 2, Third Revised Page 12.4.

affidavit from Masury that it would select an alternative provider in the absence of the new contract. Aqua M.B. at 49-50. Nonetheless, we note that the new contract is pending approval by the Commission. Thus, because the new contract has not yet been ruled upon by the Commission, we deny this portion of Aqua's Exception No. 3 and include in Aqua's revenues those anticipated to be received from Masury under its special tariff rates that are currently in effect. Accordingly, we shall impute $787,182 in revenues, representing the difference between $1,045,216 in revenues at Masury's special tariff rate and $258,034 in revenues at contract rates.[41] *See* Aqua RS2 Attachment at 8; I&E Exh. 4-SR, Sch. 1.

We shall also deny I&E's Exception No. 1. The ALJ's conclusion that Aqua has met its burden to establish competitive alternatives available to Schwenksville is correct. Simply put, the language of Rider DRS does not command an affidavit from a contracting party. Aqua's acceptance of the documentation submitted by this duly formed municipal entity as sufficient and reliable is reasonable. We thus adopt the ALJ's recommendation to uphold the Schwenksville contract discount due to competitive alternatives being demonstrated as available to the customer.

C. Late Payment Charges

1. Positions of the Parties

I&E recommended an adjustment to the Company's forfeited discount revenues (*i.e.* revenues received from late payment charges). More specifically, I&E

[41] We note that although the ALJ stated that the Company should bill Masury at full tariff rates, the ALJ properly used the revenues at Masury's special tariff rate in making her upward adjustment to Aqua's water contract revenues. Therefore, our only financial modification to the ALJ's recommended adjustment for water contract revenues is our adjustment to remove the imputed general service revenues associated with Rider DRS contracts for Chemung, Horsham and Sharpsville, discussed, *supra.*

recommended that the Company's water revenues under present rates be increased to reflect $1,373,542 in late payment revenue. I&E St. 4 at 7. Additionally, I&E recommended that the Company's wastewater revenues for its New Garden system under present rates be increased to reflect $17,832 in late payment revenues. I&E St. 5 at 60.

Aqua argued that I&E's proposed recommendation for water revenues at present rates should be rejected because, in its response to filing requirement "OR6 for Water," the Company recorded "other miscellaneous revenues" totaling $1,301,938 on its books for the HTY ended March 31, 2021, which were, therefore, included in the FPFTY claim. Of this amount, the Company explained that $735,710 was attributable to late payment revenues in the HTY. Thus, Aqua submitted that I&E's claim that the Company did not include late payment revenues for the FTY and the FPFTY was incorrect. However, in reviewing I&E's proposed recommendation, the Company agreed to make an upward adjustment to increase FPFTY miscellaneous revenues by $150,172 to normalize the impact of COVID-19 on miscellaneous revenues. Aqua M.B. at 56; Aqua R.B. at 20.

I&E accepted the Company's adjustment and withdrew its recommended adjustment of $1.3 million to water revenues at present rates. I&E St. 4-SR at 3-4. Additionally, the Company agreed with I&E's recommendation to increase wastewater revenues by $17,382 for Aqua's New Garden system under present rates. Aqua M.B. at 56-57.

At the same time, I&E recommended that the Company's water revenues at proposed rates be increased by the same percent increase as the overall base rate increase granted by the Commission in this proceeding. I&E M.B. at 22-23.

Aqua countered that such an adjustment is not necessary because the Company has already reflected late payment revenues at proposed rates in its present rate adjustment. Therefore, Aqua took the position that I&E's recommended adjustment would result in the improper double counting of late payment revenues. Aqua M.B. at 56; Aqua R.B. at 21.

I&E rejoined that the Company's late payment claim under revenues at present rates is designed to project the amount of revenue the Company would receive in the FPFTY if its rates were not increased. As such, I&E insisted that Aqua's claim that it already made an adjustment for the increase in late payment revenue that would be generated under proposed rates in its present rate claim is illogical and should be rejected.

Aqua and I&E also applied their above respective positions to the Company's wastewater revenues at proposed rates. Namely, the Company asserted that it will receive the same $93,816 in late payment revenues under proposed rates for the FPFTY that it reflected under revenues at present rates, such that no adjustment to its revenues at proposed rates is necessary. Aqua St. 2-R at 30-31; I&E M.B. at 23-24.

However, I&E asserted that because late payment revenues are generally a percentage of a customer's bill, it is reasonable to expect that increasing revenue through a base rate increase will cause revenues from late payments to increase over time. Thus, I&E maintained that the Company's wastewater revenues at proposed rates should also be increased by the same percent increase as the overall base rate increase granted by the Commission in this proceeding. I&E M.B. at 24-25; I&E R.B. at 17-18.

2. Recommended Decision

The ALJ found I&E's position to be persuasive. Therefore, the ALJ recommended that the Company's late payment revenues at proposed rates, projected for the FPFTY, be adjusted for both water and wastewater accordingly. According to the ALJ, the total permitted operating revenue in this matter is inclusive of general service, forfeited discount, and other miscellaneous revenues. Thus, the ALJ further concluded that Aqua should be directed to increase general service and forfeited discount revenues by the same percentage amounts such that these revenues, when combined with other miscellaneous revenues that are not increasing, equal the total permitted operating revenue. The ALJ also recommended that Aqua be instructed to demonstrate compliance with this directive through its proof of revenues, consistent with the Commission's Regulations at 52 Pa. Code §5.592(a) regarding compliance with orders prescribing rates. The ALJ attached, as Table RevSum, an illustration of the recommended increase in forfeited discount revenues that would result from the recommended increase in general service revenues. R.D. at 51; Appendix Table RevSum.

The ALJ also explained that the revenue adjustments included in Table II - Water, as discussed in the Recommended Decision and in the Appendix thereto, resulted in a concomitant adjustment to forfeited discount revenues. The ALJ stated that if it is reasonable to assume that additional revenues result in an incremental bad debt expense, as assumed by the increase in O&M Expense indicated in Table I, Column "ALJ Revenue Increase" of each rate case table, then it also must be reasonable to assume that the Company will receive corresponding forfeited discount revenues from those customers that are causing the incremental bad debt expense by not making timely payments on their bills. The ALJ continued that concomitant forfeited discount revenue is determined by applying Aqua's proposed uncollectible account rate to the sum of other revenue adjustments. The ALJ explained that this adjustment is reflected in each rate case table in the Attachment to the Recommended Decision under Table II, Row "Concomitant Forfeited Discounts."[42] R.D. at 51-52, Appendix Table II.

---

[42] However, as the ALJ did not recommend any additional adjustments to the Company's wastewater revenues, no adjustment for "Concomitant Forfeited Discounts" appears on Table II of any of the wastewater rate tables that were attached to the Appendix of the R.D.

3. Disposition

No Party filed Exceptions on this issue with regard to the ALJ's recommendation. Finding the ALJ's recommendation to be reasonable and based soundly on record evidence, we shall adopt it. Accordingly, we shall adopt the ALJ's recommendation that Aqua's claim for late payment revenues under proposed rates, for both water and wastewater, be increased by the same percentage as the overall base rate increase authorized under this Opinion and Order. In addition, we shall instruct Aqua to demonstrate compliance through its proof of revenues that will be included with the detailed calculations that accompany its tariff filing, described in Ordering Paragraph 16 of this Opinion and Order, *infra.* Similar to the ALJ in her Recommended Decision, Table RevSum, which is attached to the Appendix of this Opinion and Order, outlines the increase in forfeited discount revenues that would result from the final increase in general service revenues authorized under this Opinion and Order.

We further note that the final adjustments that we make to the Company's water revenues are included on Table II-Water-Summary of Adjustments in the Commission Tables Calculating Allowed Revenue Increase, attached to this Opinion and Order, along with the adjustments we have made to rate base, expenses, and taxes, as discussed elsewhere in those sections of this Opinion and Order. This table likewise includes an adjustment amount for "Concomitant Forfeited Discounts" based upon the uncollectible accounts factor outlined in Table IB-Water-Revenue Factor.

D. Escalation Provisions of Negotiated Water Contracts

1. Positions of the Parties

The OCA proposed that, to reflect revenue adjustments for the sale and resale contracts for the end-user negotiated rate contracts, the Company's water utility revenue for the FPFTY should be increased by $236,777 for special contract revenue.[43] OCA M.B. at 26 (citing OCA St. 1SR at 16; OCA Exh. LA-6, Sch. C-2; OCA St. 4SR at 11). The OCA noted that the escalation provisions in Aqua's contracts are tied to changes in the Consumer Price Index (CPI). The OCA argued that Aqua forecasted considerably lower inflation rates without providing a basis for their use. The OCA submitted that its recommended escalation rates using the average of the United States Office of Management and Budget's (US OMB) and the Federal Reserve's forecasted inflation rates for 2021, 2022, and 2023 were the appropriate rates to be applied in this case. OCA M.B. at 26 (citing OCA St. 4SR at 9-10; Aqua St. 2-R at 28). Thus, the OCA submitted that its inflation calculation is a more accurate and realistic depiction of what inflation levels will be in the FPFTY. OCA M.B. at 26; OCA R.B. at 12-13.

Aqua disagreed with the OCA's proposed upward adjustment, arguing that the adjustment uses different inflation factors that are inconsistent with the inflation escalation clauses in the respective contracts. Aqua R.B. at 19 (citing Aqua St. 2-R at 28). Aqua further argued that, although this rate case is based upon a FPFTY ending March 31, 2023, the OCA included forecasted inflation rates for 2023 that will not affect most of the contract rates. Aqua M.B. at 52.

[43] Initially, the OCA submitted that Aqua's negotiated contract revenue adjustment be increased $301,307. OCA St. 4SR at 11.

Aqua submitted that, contrary to the OCA's claim that the Company did not provide a basis for its adjustment factors, the escalation factors used are the same factors used to determine the General Price Level Adjustment for expense purposes. Aqua R.B. at 19 (citing Aqua M.B. at 53). Aqua explained that the Company's projection of inflation adjustments is based upon "the [Gross Domestic Product] GDP Chained Price Index" at the time the instant case was filed, which was used to calculate the General Price Level Adjustment for expense purposes. Aqua M.B. at 53. Thus, Aqua posited that for consistency, the inflation factor used to adjust certain revenues should be the same as the inflation factor used to adjust certain expenses. *Id.* Aqua added that using different escalation factors should not be permitted because it "would undermine the parties' good-faith bargain." Aqua R.B. at 19 (citing Aqua M.B. at 53).

2. Recommended Decision

The ALJ disagreed with the Company's argument that the escalation factor reasonably represents projected revenue resulting from negotiated contracts. Accordingly, the ALJ recommended that the Company's special contract revenue be increased in the FPFTY to reflect the escalation rate calculated by the OCA. R.D. at 53.

The ALJ found that the purpose of calculating the revenue requirement in a rate filing is to project revenues and expenses that can be expected in the FPFTY, which ultimately results in a reasonable and fair opportunity to earn a fair rate of return. The ALJ further found that, where such revenue is tied to a contractual escalation factor, revenue should be increased based upon a reasonable estimate of the amount of that escalation factor. The ALJ reasoned that the OCA's adjustment values are reliable and impartial because they are determined by government agencies (*i.e.*, the US OMB's and the Federal Reserve's forecasted inflation rates for 2021, 2022, and 2023). R.D. at 53 (citing OCA M.B. at 26). The ALJ observed that the OCA determined its projected CPI by averaging the forecasted CPIs for 2021, 2022, and 2023 for the Office of Management

& Budget (OMB) and the Federal Reserve. Additionally, the ALJ noted that the OCA supported higher inflation for 2021 through a November 2021 government publication containing information up to October 2021 from the Bureau of Labor Statistics. R.D. at 53.

Accordingly, the ALJ recommended that Aqua's special contract revenue be increased in the FPFTY based on the escalation rate calculated by the OCA, as reflected in Table II - Water in the Appendix of the Recommended Decision. Additionally, the ALJ noted that she did not include adjustments for the Rider DRS contracts because she recommended that Rider DRS contracts be charged the full tariff rates and "full tariff rates are not subject to an additional escalation rate." R.D. at 53. Thus, the actual upward adjustment to the Company's revenues as a result of the ALJ's recommendation was $181,350. R.D. at Appendix, Table II - Water.

3. Aqua Exception No. 4 and Replies

In its Exception No. 4, Aqua disagrees with the ALJ's conclusion to increase the Company's special contract revenue associated with the OCA's calculated negotiated water rate contracts by $236,777, to reflect the OCA's recommended escalation rates. Aqua Exc. at 22-23 (citing R.D. at 53-54; Aqua M.B. at 51-53; Aqua R.B. at 19).

Aqua argues that as a part of its contract terms, each of the contracts that would be subject to this adjustment contain an escalation provision that specifies how the rate of inflation is to be calculated for determining the annual escalation. Aqua Exc. at 23 (citing Aqua M.B. at 51). Therefore, Aqua argues that the OCA's recommendation is unreasonable and inappropriate because it effectively substitutes an escalation rate into each contract that is different from the agreed-upon escalation rate. Moreover, Aqua argues that it demonstrated that the OCA's calculated inflation rates are overstated. Aqua

Exc. at 23 (citing Aqua M.B. at 52-53). Aqua explains that the OCA includes inflation rates for 2023, which ignores that the instant rate case "is based upon a FPFTY ending March 31, 2023, and 2023 inflation rates will not affect most of the contract rates." *Id.* (citing Aqua M.B. at 52). Thus, Aqua contends that the adjustment calculation recommended by the ALJ is based upon inflation rates that will not affect the Company's revenues during the FPFTY. *Id.*

Aqua also submits that to the extent that the Commission determines that the OCA's adjustment is appropriate due to the OCA's use of more current inflation rates, the Commission should consider such inflation rates with respect to the Company's proposed General Price Level Adjustment. Aqua cites to its Exception No. 7 in which it provides detailed arguments on why "existing macroeconomic conditions demonstrate that increases in inflation are subjecting the Company to increased expenses." Aqua Exc. at 23 (citing Aqua Exc. at 26-29).[44] Moreover, Aqua argues that the ALJ's approach to reflect inflation by increasing the revenues the Company obtains under its negotiated water rate contracts is inconsistent and arbitrary given the effects of inflation on other aspects of the Company's revenue requirement that would entail a larger increase in revenue than what was recommended. *Id.*

In its Replies, the OCA disagrees with Aqua's position. The OCA notes that in its calculation, the 2023 inflation factor was only applied to January 2023, February 2023, and March 2023, because those three months are within the FPFTY ending March 31, 2023. The OCA, therefore, asserts that it reflected the contract rates at the end of the FPFTY, just as the Company has calculated its estimated revenues, customers served, operating expenses, and rate base as of March 31, 2023. OCA R. Exc. at 11 (citing OCA R.B. at 67; OCA St. 4 SR at 9).

---

[44] We shall address Aqua Exception No. 7 separately, in Section VIII.J of this Opinion and Order, *infra*.

The OCA also disagrees with Aqua's argument that it would be inconsistent for the Commission to use higher inflation rates to calculate higher revenues if the impact of higher inflation rates on the Company's expenses is not recognized. OCA R. Exc. at 11 (citing Aqua Exc. at 23). According to the OCA, Aqua's general inflation adjustment was properly rejected because it was speculative and the Company did not provide specific evidence demonstrating that it would actually experience cost increases in those areas. Further, the OCA contends that the ALJ properly accepted the OCA's special contract revenue adjustment because the terms of the contract were specific about the adjustments that would occur in the FPFTY. *Id.* (citing R.D. at 52, 70-71).

Finally, the OCA acknowledged that the ALJ did not include adjustments for the Rider DRS contracts that she recommended should be charged full tariff rates. R.D. at 53. The OCA asserts that, to the extent the Commission does not adopt the ALJ's recommendation to move Chemung, Horsham, New Wilmington and Sharpsville from discounted contract rates to full tariff rates, special contract revenues for those contracts should be adjusted upward to reflect the escalation provisions (*i.e.*, the ALJ's recommended adjustment of $181,350 should be increased accordingly). OCA R. Exc. at 11-12 (citing R.D. at 53).

4. Disposition

Upon our review, we disagree with the ALJ's reliance on the escalation rate calculation utilized by the OCA in its proposed adjustment to special contract revenue. In support of her recommendation, the ALJ asserted that the OCA's adjustment to special contract revenue, which is based on an escalation rate calculation that uses the average of the US OMB's and Federal Reserve's forecasted inflation rates for 2021, 2022, and 2023, has "an apparent reliability and degree of impartiality because they are determined by government agencies." R.D. at 53. Although we agree that the sources for the OCA's adjustment values are reliable and fair, we are of the view that the Company provided a sufficient basis for justifying the reliability of the escalation provisions in the contracts.

As noted by Aqua, the escalation provisions in the relevant contracts specify how the inflation rate is to be calculated for annual escalation, and the OCA's recommendation would effectively substitute the agreed-upon escalation rate with a different rate. We find Aqua's argument here persuasive. Indeed, as noted by the Company, substituting the contractual escalation rate at this juncture would ultimately undermine the good-faith efforts of the related parties to negotiate an agreed-upon escalation rate. To the extent that the OCA argues that Aqua's inflation calculation does not sufficiently depict what inflation levels will be in the FPFTY, we are of the opinion that the inflation rates in the Company's negotiated rate contracts are substantiated, reliable, and do not require or necessitate an adjustment.

Therefore, we shall grant Aqua Exception No. 4 and modify the Recommended Decision by removing the ALJ's recommended upward adjustment of $181,350 to the Company's revenues associated with negotiated water contracts.

E. Metered Residential Sale Adjustment

1. Positions of the Parties

The Company proposed an adjustment to water consumption related to the COVID-19 pandemic. In making this adjustment, Aqua asserted that it would not assume that consumption by class in the future will be similar to usage patterns during the pandemic (*i.e.*, the HTY). Rather, the Company contended that projected consumption by class will be similar to usage patterns in its prior base rate case, *i.e.*, the *Aqua 2018 Rate Case*. As such, it proposed an adjustment to residential, commercial, and public customer classes based on the average usage presented in the *pro forma* FPFTY used in the *Aqua 2018 Rate Case*. The adjustment reduced residential water usage, and sales revenue by $11.03 million, and increased Commercial and Public Authority water usage, and sales revenue by $10.96 million. Aqua's proposed total overall change in revenue under present rates using this adjustment results in a decrease in total water revenues of $64,639. Aqua M.B. at 53; Aqua St. 5 at 17.

The OCA accepted Aqua's adjustments for Commercial and Public Authority water sales revenues to reflect pre-pandemic water sales revenue. However, the OCA recommended an adjustment that reflected 75% of the Company's proposed reduction for residential customers. In support, the OCA emphasized that the Company's metered residential water sales in 2020 were 1,181,614,000 gallons higher than in 2019, a pre-pandemic period. With increased residential water usage in 2020, the OCA argued that it would be unreasonable for Aqua to reduce HTY metered residential water sales by such a significant quantity for the purpose of deriving sales levels for the FPFTY. The OCA submitted that many residential consumers will continue to work from home and spend more time in their houses. According to the OCA, its recommendation would increase residential water sales by $2.757 million. OCA M.B. at 24-25.

In opposing the OCA's proposed adjustment to residential metered water sales, the Company cited substantial downward trends in residential usage for the months of September 2021 and October 2021 when compared with the pandemic months of September 2020 and October 2020. Aqua also argued that it was inconsistent for the OCA to accept the Company's revenue adjustments for commercial and public customers, but not residential customers. Aqua M.B. at 53-54; Aqua R.B. at 20.

In response, the OCA contended that Aqua's presumption that none of the 6.4% year-over-year increase in residential metered water sales is likely to continue beyond 2020 and into the FPFTY does not seem realistic. OCA St. 1 at 37. Rather, the OCA asserted that the record evidence supports a finding that the pandemic is ongoing and residential water usage is not reasonably likely to return to pre-pandemic levels in the FPFTY. OCA R.B. at 10-11.

2. Recommended Decision

The ALJ accepted Aqua's reduction to revenues to reflect removing the impact of COVID-19 on metered customer water sales. Initially, the ALJ found that the OCA's proposed acceptance of this adjustment for commercial and public customers, but not for residential customers, was inconsistent. Citing the testimony of Aqua's witness, Ms. Constance E. Heppenstall, the ALJ reasoned that if individuals are staying home and using more water than pre-pandemic, it should follow that usage for commercial and public classes should also be lower than pre-pandemic levels. R.D. at 54 (citing Aqua St. 5-R at 18).

Next, the ALJ determined that Aqua's position that usage trends support its proposed adjustment to water consumption due to the COVID-19 pandemic is reasonable and that the projection of a return of consumption toward pre-pandemic levels is credible. Additionally, the ALJ stated that the Company's approach to treat trends on the residential class consistently with trends in the commercial and public classes for the purposes of projections for the FPFTY is reasonable and supported by the record. R.D. at 54-55 (citing Aqua St. 5-R at 19).

3. OCA Exception No. 1 and Replies

In its Exception No. 1, the OCA argues that the ALJ erred in adopting Aqua's residential metered water sales when the pandemic continues to keep people using more water at home. In support, the OCA reiterates that the Company's residential metered water sales in 2020 were over one billion gallons higher than the pre-pandemic level in 2019. Given this significant increase, the OCA contends that it is unlikely that residential usage will decrease as quickly as Aqua predicts, such that usage would be back to "normal" for the purpose of deriving sales levels for the FPFTY. OCA Exc. at 1 (citing OCA St. 1 at 36).

Responding to the ALJ's finding that the OCA's adjustment to residential metered water sales is inconsistent with the acceptance of Aqua's prediction for commercial and industrial sales, the OCA submits that its recommendation reflects the unpredictability surrounding how and when the pandemic will come to an end. According to the OCA, recent data about residential water usage indicates that it is still up from pre-pandemic levels by as much as 9.1%. OCA Exc. at 1 (citing OCA St. 1-SR at 27-28).

The OCA adds that although commercial and industrial institutions are slowly re-opening, many workers are still spending more time at home. The OCA proffers that its recommended increase to residential revenues of $2.757 million addresses this slow return to pre-pandemic levels by reflecting 75% of Aqua's proposed reduction to residential revenues, in order to account for the decrease to residential water usage, but recognizing that it is not likely to return to pre-pandemic levels in the FPFTY. OCA Exc. at 2 (citing OCA St. 1, Exh. LA-2, Sch. C-6).

The OCA argues that its projections are more consistent with the data which recognizes a gradual return to consumption more closely aligning to pre-pandemic levels, while Aqua's assumptions assert, without basis, an immediate return. Based on its proposed revenue adjustment, the OCA recommends: (1) a related negative adjustment of $66,787 to the Company's claimed Chemicals Expense for water operations; (2) a negative adjustment to Purchased Power expense of $96,312; and (3) an adjustment to CWC to reflect this recommended revenue adjustment and based on the OCA's other expense adjustments. OCA Exc. at 2 (citing OCA M.B. at 22 and 30; OCA Table II (Water); and OCA Table II (Wastewater)).

In its reply, Aqua contends that the ALJ correctly accepted the Company's adjustments to water consumption for residential, commercial, and public customers associated with the pandemic and properly rejected the OCA's proposal that only 75% of the residential sales adjustment be applied. Aqua R. Exc. at 2.

In support, the Company emphasizes the ALJ's finding that the OCA's arguments are inconsistent because the OCA accepts the commercial and public customer adjustments but rejects the residential customer adjustments. Additionally, Aqua reiterates its contention that it presented credible evidence demonstrating the movement of usage for all classes toward pre-pandemic levels and requests denial of OCA Exception No. 1. Aqua R. Exc. at 2 (citing Aqua St. 5-R at 18-19).

4. Disposition

Upon review of the evidentiary record, pleadings, and arguments related thereto, we find that Aqua has demonstrated the reasonableness of its proposed adjustments to water consumption due to the COVID-19 pandemic.

The OCA emphasizes that Aqua reported metered residential water sales for 2020 of 19.552 billion gallons versus 18.370 billion gallons in 2019, a pre-pandemic period. The reported increase in residential water sales for this overall period between 2019 and 2020 was approximately 6.4%. OCA St. 1 at 37. Additionally, the OCA cites a specific percentage increase in residential water usage between October 2019 and October 2021 of 9.1%. OCA R.B. at 11; OCA St. 1-SR at 28.

In response, Aqua asserts that the specific increase in residential usage between October 2019 and October 2020 was accompanied by a decrease in residential usage between October 2020 and October 2021 – periods within the pandemic – of 5.6%. Additionally, the Company cites to a decrease in residential usage in the pandemic periods of September 2020 and September 2021 of 4.1%. The Company also showed increases in both commercial and public usage during these periods. Aqua shows the trends of usage within the pandemic periods in the following, which is reproduced in Table 2, below:

	Oct-20	Oct-21	Change	Percentage Change
Residential	1,636,326	1,545,471	(90,855)	-5.6%
Commercial	805,189	877,755	72,566	9.0%
Public	43,714	58,915	15,201	34.8%
	2,485,230	2,482,141	(3,089)	-0.1%

	Sep-20	Sep-21	Change	Percentage Change
Residential	1,706,364	1,636,859	(69,505)	-4.1%
Commercial	870,301	935,491	65,190	7.5%
Public	54,027	59,981	5,954	11.0%
	2,630,691	2,632,331	1,639	0.1%

Table 2: Aqua trends of usage within the pandemic periods

Aqua M.B. at 54; Aqua St. 5-R at 19.

We note that it would have been helpful to have had additional data comparing pandemic periods incorporating a comparison of more recent time periods (*i.e.*, showing trends in usage following recent COVID-19 variant surges). However, the Parties were limited to the presentation of evidence as of the evidentiary hearing and prior to the close of the record and that data appears to represent the most recent available information at the time. Under the circumstances, we find that the Company has submitted sufficient evidence to show a trend of declining residential usage which, when extrapolated over the FPFTY period, supports its proposal that residential usage will likely decline to the pre-pandemic period. Additionally, Aqua provides sufficient support to show a concomitant increase in commercial and public water usage.

Although the OCA correctly indicates that there was a large increase in overall residential water usage when comparing a pre-pandemic and a pandemic period, we find that the more helpful barometer is the trend of usage data within the pandemic periods as asserted by the Company. Moreover, it is unclear what data supports the OCA's calculation of including only 75% of Aqua's proposed reduction to residential revenues thereby resulting in an increase to residential revenues of $2.757 million. As to this proposed adjustment, the OCA states that it acknowledges a declining residential water usage but that it will not likely decline to the pre-pandemic level and that its proposal is more realistic than the Company's.

We recognize that the OCA does not bear the burden of proof in this proceeding.[45] However, there must be some evidence or analysis tending to show the reasonableness of the OCA's adjustment. In this regard, there is no apparent evidentiary support for a finding that residential usage will essentially remain high enough to result in a 25% increase in residential water sales when compared with a pre-pandemic period. Moreover, the OCA's proposed acceptance of the Company's adjustment for commercial and public customers, but not for residential customers, shows an inconsistency in the OCA's overall proposal. If individuals are staying home and using more water than prior to the pandemic, it would be reasonable to surmise that usage for commercial and public

[45] As the Commonwealth Court has explained: "While it is axiomatic that a utility has the burden of proving the justness and reasonableness of its proposed rates, it cannot be called upon to account for every action absent prior notice that such action is to be challenged." *See Allegheny Center Assocs. v. Pa. PUC,* 570 A.2d 149, 153 (Pa. Cmwlth. 1990) (*citing Central Maine Power Co. v. Public Utilities Commission*, 405 A.2d 153, 185 (Me. 1979)). Therefore, while the statutory burden of proof does not shift from the public utility in a general rate proceeding, a party proposing an adjustment to a ratemaking claim bears the burden of presenting some evidence or analysis, during the reception of evidence in the proceeding, tending to demonstrate the reasonableness of the adjustment. *See Id.*; *see*, *e.g.*, *Pa. PUC v. PECO,* Docket No. R-891364 *et al.*, 1990 Pa. PUC Lexis 155 (Order entered May 16, 1990); *see also Pa. PUC v. Breezewood Telephone Company*, Docket No. 901666, 74 Pa. P.U.C. 431 (Order entered February 15, 1991).

classes should also be lower than pre-pandemic levels. However, the available overall data shows that the Company is experiencing between a 4 to 5% decrease in residential usage and increases in both commercial and public usage. *See* Aqua St. 5-R at 19.

Accordingly, we shall deny OCA Exception No. 1 and thereby decline to make the OCA's requested adjustments to both residential water revenue and the expense categories that would have been impacted by its proposal.

F. Third Party Sales

1. Positions of the Parties

Aqua has eight third-party sales customers, from which it derives revenue at present rates of $1,095,381. The Company proposed to increase rates for all of its third-party customers except for its Southdown Homes and East Brandywine customers. Aqua R.B. at 18; I&E M.B. at 29. I&E recommended that the usage rate for Southdown Homes be increased from $0.749 per hundred gallons to $0.9535 per hundred gallons, which would result in an increase of $0.2045 per hundred gallons, or approximately 27.3%. I&E M.B. at 29. In its rebuttal testimony, Aqua revised its proposed revenue for Southdown Homes and provided a proof of revenue that shows Southdown Homes paying a usage rate of $1.35 per hundred gallons. I&E accepted this proposed usage rate. I&E M.B at 30; Aqua R.B. at 18; Aqua Exh. 5R-B, Sch. WW-5 at 17.

I&E also recommended an increase to the customer charge for the Company's East Brandywine customers from $351.00 per month to $446.75 per month. This equates to an increase of $95.75 per month, or approximately 27.3%. I&E based this recommendation on the average percentage increase for the Company's third-party customers. According to I&E, this percentage increase is reasonable given the higher percentage increase being proposed by Aqua for other third-party customers and the higher percentage increases proposed by Aqua for other wastewater customers. I&E further recommended that this flat rate should be increased and applied to the Company's revenues independent of any base rate increase granted by the Commission. I&E M.B. at 29, 30; I&E R.B. at 23.

Aqua found no reason to increase its East Brandywine rates. Therefore, Aqua opposed I&E's proposal to increase the customer charge for East Brandywine. Accordingly, Aqua submitted that its claimed revenues should not be modified to reflect I&E's recommendation. Aqua R.B. at 18-19.

2. Recommended Decision

The ALJ observed that Aqua did not offer any explanation as to why it was appropriate to retain the current rates for its East Brandywine customers when the Company: (1) originally proposed an increase to the rates for all of its third-party customers except for Southdown Homes and East Brandywine; and (2) subsequently accepted I&E's proposed increase for the Company's Southdown Homes customers. In contrast, the ALJ found that I&E's proposal would treat the Company's third-party customers consistently. As such, the ALJ found I&E's proposal to be more appropriate and recommended that it be adopted. The ALJ added that this is a rate design issue that does not require an adjustment to the Company's revenue requirement under present or proposed rates. R.D. at 56.

3. Disposition

No Party filed Exceptions on this issue with regard to the ALJ's recommendation. Finding the ALJ's recommendation to be based soundly on record evidence and reasonable, we shall adopt it. Accordingly, we shall adopt the ALJ's recommendation that approves I&E's proposal to increase the East Brandywine customer charge by $95.75 per month, or from $351.00 per month to $446.75 per month.

VIII. Expenses

A. Rate Case Expense

1. Positions of the Parties

Aqua provided that its rate case expense is $2,200,000, of which 91.51% is allocated to water cost of service and 8.49% is allocated to the wastewater cost of service based on the ratio of customers served to total customers. Aqua M.B. at 77 (citing Aqua St. 3 at 3). Aqua proposed to normalize the cost of the rate case expense over a thirty-six month period, which is the anticipated interval between this rate case and the Company's next base rate case. Aqua St. 3 at 3.

I&E recommended the rate case expense be normalized over thirty-six months. I&E M.B. at 31, 32.

The OCA recommended a reduction of $124,932 to the rate case expense by removing $59,932 not incurred from the "Other Consultants" costs and removing the $65,000 that Aqua has requested for "miscellaneous" costs. The OCA argued that the rate case expense should be normalized for thirty-nine months based on the actual historic frequency of Aqua's filings. OCA M.B. at 45.

2. Recommended Decision

The ALJ found Aqua's $2.2 million rate case expense to be reasonable. The ALJ opined that Aqua provided sufficient justification for including forecasted expenses for consultants. Additionally, the ALJ determined that Aqua's 36-month normalization period was reasonable. The ALJ stated that it was reasonable to exclude the "anomalous rate stay-out that was agreed to as part of a complex settlement negotiation" and rejected the OCA's longer normalization period of 3.3 years. R.D. at 57-58.

3. OCA Exception No. 6 and Replies

In its Exception No. 6, the OCA provides that the ALJ accepted Aqua's proposed thirty-six-month normalization period for rate case expense because the ALJ believed that to accept the OCA's proposed thirty-nine-month adjustment, which included the seven-year gap between Aqua's 2011 and 2018 rates, would discourage the negotiation of settlement stay-outs in the future. OCA Exc. at 7 (citing R.D. at 57-58). Additionally, the OCA notes the ALJ's statement that the reason Aqua did not file a rate case between 2011 and 2018 is that during that time Aqua was "constrained" by the stay-out it agreed to in the 2011 rate case. OCA Exc. at 7 (citing R.D. at 58). The OCA argues that Aqua was not "constrained" from filing a rate case between 2011 and 2018. Rather, the OCA continues, the stay-out negotiated in the 2011 settlement was for a term of only two years. OCA Exc. at 8 (citing *Pa. PUC v. Aqua Pa., Inc.*, Docket No. R-2011-2267958 (Order entered June 7, 2012) (*2011 Settlement*) at 18). According to the OCA, Aqua was free to file a rate case after the two-year time frame but chose not to do so for its own reasons. The OCA contends that including the time period between 2011 and 2018 in calculating the appropriate normalization period is reasonable. OCA Exc. at 8.

In its reply to the OCA Exception No. 6, Aqua avers that the OCA has misread the Recommended Decision. Aqua provides that it did not argue that it was "constrained" from making a base rate filing. Aqua explains that the "OCA's calculated average is distorted by the time period between Aqua's 2011 and 2018 rate case, based upon a circumstance specific to the settlement of the 2011 rate case that will not occur in the future." Aqua R. Exc. at 5 (citing Aqua M.B. at 79; Aqua St. 3-R at 9). Aqua provides that the circumstance was the initial adoption of the tax repairs election. Aqua R. Exc. at 5, n.2. Aqua avers that this distortion is why the Commission has noted that the normalization period for rate case filings may require consideration of future circumstances. Aqua R. Exc. at 5-6 (citing Aqua M.B. at 9). According to Aqua, this is consistent with prior precedent. Aqua R. Exc. at 6 (citing *Emporium Water Company*, Docket No. R-2014-2402324 (Order entered Jan. 18, 2015) at 48-49; *Pa. PUC v. PPL Electric Utilities Corp.*, Docket No. R-2012-2290597 (Order entered December 28, 2012) (*2012 PPL Order*); R.D. at 57; Aqua M.B. at 77-80; Aqua R.B. at 31-32).

I&E did not offer a reply to the OCA Exception No. 6 beyond stating that it agreed with the Company's recommendation of a thirty-six month normalization period. I&E R. Exc. at 14 (citing R.D. at 57-58).

4. Disposition

Aqua agreed to a two-year stay-out period in the *2011 Settlement* as follows:

> 9.a. The Company's agreement to a two-year stay-out from the filing date of this rate increase request, subject to the limited exceptions set forth in Paragraph No. 7.c., assures that, if [Aqua's] next general base rate water case were filed at the earliest permitted date and were fully litigated, the Settlement Rates would remain in effect for at least 26 months.

2011 Settlement at 18.

The OCA calculated the thirty-nine month normalization period by including the 2011 to 2018 gap in rate case filings. The ALJ rejected the OCA's thirty-nine month normalization period based on the *2011 Settlement* and the associated stay-out period in that Settlement. Aqua provides that the stay-out period was not the cause of the time lapse between Aqua's 2011 and 2018 base rate case filings, rather it was caused by the initial adoption of the tax repairs election. Aqua R. Exc. at 5, n.2.

While the OCA is correct that a two-year stay-out would not have "constrained" Aqua from filing a base rate case two years after the *2011 Settlement* and before the 2018 rate case filing, we do not recommend a thirty-nine month normalization period.

Aqua provided that the lapse between base rate case filings such as that between the 2011 and 2018 filings is not related to a stay-out or likely to recur as follows:

> The Company was able to avoid filing a rate case for an extended period after the 2011 rate case due to a provision in that settlement regarding the use of the tax repair deduction for income tax purposes. That situation will not recur in the future.

Aqua St. 3-R at 9.

We find Aqua's thirty-six month normalization period reasonable, and we accept the ALJ's recommendation of the thirty-six month normalization period. However, we will modify the Recommended Decision to remove the potentially confusing language in the paragraph on pages 57 – 58 of the Recommended Decision:

> In this case it is reasonable to exclude an anomalous rate stay-out that was agreed to as part of a complex settlement negotiation. The settlement stay-out does not generally reflect the Company's rate filing interval. This settlement

> term constrained Aqua's ability to file a rate case when it otherwise might have chosen to do so. To include the negotiated stay-out term in setting the normalization period for rate case expense might chill negotiations in future utility rate proceedings.

R.D. at 57-58.

Accordingly, the OCA's Exception No. 6 is granted, in part, and denied, in part.

B. General Liability Insurance Expense

1. Positions of the Parties

Aqua proposed a claim for general liability insurance based on a five-year average year-over-year increase of 5.97%. Aqua revised its claim based on opposition from I&E and the OCA. I&E proposed a "year-over-year three-year average" of 4.38%. I&E argued that the three-year average considers "more recent experience" and was consistent with the Company's method for calculating other categories of expenses (*i.e.*, uncollectibles expense and legal expense). Aqua M.B. at 75 (citing I&E St. 1 at 15-16). Aqua noted that the OCA's witness, Mr. Ralph C. Smith, accepted the Company's claimed FTY insurance expense but applied a 4.38% increase to the FTY to calculate his recommended FPFTY amount. Aqua M.B. at 75 (citing OCA St. 1 at 53-54). Aqua updated its claim for general liability insurance based on actual information that became available after the case had been filed. Aqua applied the three-year average increase of 4.38% to updated actual amounts accrued for Fiscal Year (FY) 2022. Aqua M.B. at 75 (citing Aqua St. 4-R at 6-7).

I&E and the OCA continued to disagree with Aqua's proposed claim. I&E "questioned the reliability of the amounts stated." Aqua M.B. at 77 (citing I&E St. 1-SR at 15). I&E's witness, Ms. Christine Wilson, explained that Aqua's revised claims for all the wastewater revenue requirements decreased from direct testimony to rebuttal testimony with no explanation for that directional change. I&E stated that Aqua did not provide documentation for the recent 2022 accruals to support the proposed changes in general liability expense. R.D. at 59. The OCA argued that Aqua's calculation "inconsistently mixes calculation elements." Aqua M.B. at 77 (citing OCA St. 1-SR at 40).

2. Recommended Decision

The ALJ recommended that the Commission adopt I&E's adjustments to the Company's general liability insurance expense. The ALJ reasoned that Aqua failed to provide adequate documentation in support of its treatment of insurance expense, nor is the mixing of calculation elements justified for the purposes of projecting expense increases. The ALJ recommended that Aqua's claim for insurance expense should be decreased by $340,945 for water and increased by $29,967 for wastewater. The ALJ explained that the wastewater adjustments are comprised of increases for Wastewater Base, Limerick, East Bradford, and Cheltenham of $18,640, $3,533, $789, and $6,299, respectively, and a decrease for New Garden of $676.[46] R.D. at 59.

3. Aqua Exception No. 5 and Replies

In its Exception No. 5, Aqua contends that it fully explained how it calculated its projection of general liability insurance expense for the FPFTY. Aqua Exc.

---

[46] We note that in her explanation, the ALJ inadvertently omitted an increase of $1,382 for East Norriton Wastewater. See I&E St. 1-SR at 16.

at 24 (citing Aqua M.B. at 74-75). Aqua explains that it updated its insurance claim to reflect actual general liability expense information for the Year 2022 that became available after the case had been filed. Aqua Exc. at 24 (citing Aqua M.B. at 75). Aqua further submits that it then used I&E's proposed three-year average percentage increase to this expense to adjust the final quarter of the FPFTY. Aqua Exc. at 24 (citing Aqua M.B. at 75-76; Aqua St. 4-R at 6-7).

Aqua provides that although the ALJ concluded that the Company improperly mixed calculation elements, there is nothing unusual or improper in updating the claim to reflect known, actual information for FY 2022, or in developing the FPFTY claim using three quarters of that actual data and one quarter of projected data using the same adjustment factor (4.38%) proposed by both the OCA and I&E. According to Aqua, there is no evidence of record to support I&E's concerns regarding the reliability of this information. Aqua Exc. at 24 (citing Aqua R.B. at 30).

Aqua avers that the Recommended Decision inconsistently accepts I&E's calculation as credible but rejects Aqua's calculation which uses the same method updated with the most recent data available. Aqua Exc. at 25.

In its reply to Aqua Exception No. 5, I&E notes that after reviewing the record evidence presented by all parties, the ALJ correctly concluded that Aqua failed to provide adequate documentation in support of its treatment of insurance expense and the mixing of calculation elements is not justified for the purposes of projecting expense increases. I&E R. Exc. at 8-9 (citing R.D. at 59).

4. Disposition

I&E notes that the Company has recorded its calendar year 2022 insurance expense for accounting purposes, similarly updating the claim for ratemaking purposes, and on a consolidated basis the accrual produces a year-over-year increase of 8.49% between calendar year 2021 and 2022 based on premiums the Company will pay in 2022. I&E St. 1-SR at 14 (citing Aqua St. 4-R at 6). I&E explains that the Company has updated its entire FTY claim for insurance and the first nine months of the FPFTY (April 1, 2022 through December 31, 2022) based on the recently determined accruals. I&E explains further that the final three months of the FPFTY (January 1, 2023 through March 31, 2023) were inflated using a 4.38% increase to the FTY result. *Id.*

I&E provided the updated expense portion of the insurance claims, noting that the revised claims for all the wastewater revenue requirements have decreased from direct testimony to rebuttal testimony with no explanation for the directional change. I&E St. 1-SR at 15. We agree with I&E, that Aqua has not provided an explanation for these updated insurance claims and provided no documentation for the recent 2022 accruals to support the changes in rebuttal testimony.

Therefore, we shall deny Aqua's Exception No. 5, and adopt the ALJ's recommendation that Aqua's claim for insurance expense should be decreased by $340,945, or from $4,915,277 to $4,574,332 for water and increased by $29,967, or from $39,853 to $69,820 for wastewater. The wastewater adjustments are comprised of: (1) an increase for Wastewater Base of $18,640, or from $16,327 to $34,967; (2) an increase for Limerick of $3,533, or from $5,613 to $9,146; (3) an increase for East Bradford of $789, or from $1,232 to $2,021; (4) an increase for Cheltenham of $6,299, or from $9,814 to $16,113; (5) an increase for East Norriton of $1,382, or from $4,915 to $6,297; and (6) a decrease for New Garden of $676, or from $1,952 to $1,276. R.D. at 59; I&E St. 1-SR at 16. These adjustments are outlined in Table II-Adjustments in each of the groups of rate tables in the Commission Tables Calculating Allowed Revenue Increase, attached to this Opinion and Order.

C. Payroll

1. Positions of the Parties

Both I&E and the OCA proposed adjustments to Aqua's claim for payroll expense. I&E proposed a vacancy rate of 6.83%. The OCA proposed a vacancy rate of 2.88%, rather than the Company's 2.50%. Aqua opposed I&E's vacancy rate but accepted the OCA's 2.88% full time vacancy rate. Aqua M.B. at 66. Aqua's witness, Ms. Erin M. Feeney, explained that I&E's adjustment double counts the adjustment already built into the Company's claim as a part of the gross payroll amounts. Aqua M.B. at 66 (citing Aqua St. 2-R at 37; Aqua St. 2 at 11). Subsequently, I&E withdrew its adjustment for payroll expense. Aqua M.B. at 66 (citing I&E St. 1-SR at 25).

The OCA calculated its vacancy rate of 2.88% based on information provided in response to I&E-RE-22-D. According to the OCA, the 2.88% vacancy rate is based on the difference between actual regular hours and authorized regular hours during the HTY, and more accurately reflects Aqua's expense. OCA M.B. at 33-34 (citing OCA St. 1 at 41-42). The OCA proposed an adjustment decreasing payroll expense by $119,358 for the Company's water operations and $6,855 for wastewater operations. The OCA provided that in aggregate, this calculation decreases payroll expense by $126,213. OCA M.B. at 34 (citing OCA St. 1 at 44-45; OCA Exh. LA-2, Sch. C-11 at 2).

The OCA proposed an additional adjustment to payroll expense by reducing the number of seasonal positions included in the Company's claim to reflect the level of seasonal employees as of June 30, 2021. Aqua M.B. at 67 (citing OCA St. 1 at 43-44).

2. Recommended Decision

The ALJ recommended that the Company's payroll expense as updated with the OCA's 2.88% vacancy rate should be accepted. R.D. at 60 (citing Aqua Exh. 1-A(a) and 1-B(b) through 1-G(g)). The ALJ reasoned that Aqua had supported its projection for seasonal positions with the testimony of Ms. Feeney. Specifically, the ALJ stated that the 2020 and 2021 number of seasonal positions filled were impacted by the COVID-19 pandemic and should be considered outliers. The ALJ noted that Aqua anticipates filling all thirty-three seasonal positions during the FPFTY. R.D. at 60 (citing Aqua St. 2-R at 39).

3. OCA Exception No. 5 and Replies

In its Exception No. 5, the OCA disagrees with the ALJ's finding that Aqua has adequately supported its claim for thirty-three seasonal employees. The OCA submits that while Aqua may believe that it will fill all thirty-three of its budgeted-for seasonal positions in the FPFTY, the Company has failed to provide evidence that this is likely. According to the OCA, the record indicates that Aqua has not consistently filled all of its seasonal positions even before the COVID-19 pandemic began. OCA Exc. at 6-7 (citing OCA M.B. at 34-35). The OCA provides that in 2019, Aqua filled only thirty-one of the budgeted thirty-three positions. During the pandemic, the OCA continues, Aqua filled only eleven out of thirty-three budgeted positions. OCA Exc. at 7 (citing OCA St. 1SR at 32-33). The OCA avers that it is not reasonable to assume that Aqua's hiring will be more robust than before the pandemic. The OCA recommends an adjustment of $286,373 to remove payroll expense for twenty-two of the authorized seasonal positions. OCA Exc. at 7.

In its reply to OCA Exception No. 5, Aqua argues that the ALJ correctly reasons that the payroll expense claim, including the seasonal positions, is "based upon anticipated normal operating conditions" during the FPFTY. Aqua R. Exc. at 5 (citing R.D. at 61). Aqua contends that the seasonal employee counts for 2020 and 2019 were impacted by the COVID-19 pandemic and are not reflective of normal operating conditions. Aqua R. Exc. at 5.

4. Disposition

The seasonal employment period runs from mid-May to mid-September. I&E Exh. 1, Sch. 5 at 2. The OCA contends that the seasonal employee count should reflect the level as of June 30, 2021 when eleven positions were filled. We disagree with the OCA's recommendation. The record does not clearly indicate that the number of seasonal employee positions as of June 30, 2021 reflects the total number employed through the seasonal employment period for 2021, or going forward. The Company filled thirty-one seasonal positions in 2019. The Company has noted that it expects to return to more normal operations. We agree with the ALJ that the Company's assertion that it will be able to fill thirty-three seasonal positions going forward in the FPFTY is reasonable. The OCA Exception No. 5 is denied.

D. Stock-based Incentive Compensation

1. Positions of the Parties

Aqua has included expenses related to its stock-based incentive compensation program. Aqua maintained that this is an important part of its overall compensation program. R.D. at 61. Aqua averred that it is entitled to recover, in rates, all expenses reasonably necessary to provide service to customers. According to Aqua, the OCA has not claimed that the total stock reward expenses were unreasonable, imprudent, or excessive. Aqua noted that the OCA objected to the expenses on the basis that shareholders benefit from increases in stock prices, without consideration for the customer benefits derived from achievement of the customer performance metrics applied to stock rewards. Aqua M.B. at 69.

Aqua stated that the Commission has established a bright line test for incentive compensation expense. According to Aqua, if the incentive compensation programs of the utility are reasonable and provide a benefit to ratepayers, then they may be recovered in their entirety. Aqua M.B. at 69 (citing *2012 PPL Order* at 26). Aqua noted that the Commission recently applied this standard in approving the recovery of stock-based incentive compensation in *Pa. PUC v. UGI Utilities, Inc. – Electric Division*, Docket No. R-2017-2640058 (Order entered October 25, 2018) (*UGI Electric*).

Aqua averred that it demonstrated that its stock reward plans include both financial and operating metrics and goals. Aqua provided that it further demonstrated that its incentive compensation package is reasonable, prudently incurred and not excessive in amount. Aqua's witness, Mr. William C. Packer, explained:

> [A] key component of the incentive compensation plan is employee objectives that provide benefits to customers. Many of the employee objectives focus on cost containment, quality service, productivity enhancements and compliance initiatives to ensure reasonable cost and high-quality service to our customers.

Aqua M.B. at 70 (citing Aqua St. 1-R at 17-18).

I&E did not object to the Company's proposed incentive compensation plan expense.

The OCA acknowledged that where an incentive compensation plan is reasonable, prudently incurred, not excessive, and there is a benefit to ratepayers, a company may recover the expense of that program. The OCA noted that the Commission has approved recovery for incentive compensation programs when they are focused on improving operational effectiveness. OCA M.B. at 36 (citing *2012 PPL Order*).

The OCA averred that Aqua's stock-based compensation program provides Aqua and Essential Utilities executives with compensation based on the performance of the Company's or parent company's stock price. According to the OCA, absent a clear tie to ratepayer benefit or operational effectiveness, it is unreasonable to burden ratepayers with the costs of the stock compensation program. OCA M.B. at 37.

2. Recommended Decision

The ALJ accepted Aqua's position that the stock-based compensation program benefits ratepayers. The ALJ explained that the Company described how the purpose of the plan is to tie compensation to employees accomplishing the Company's main objectives, which benefits consumers. R.D. at 62 (citing Aqua St. 1-R at 15-16). The ALJ further explained that Aqua stated that compensation from the program is both "competitive" and "appropriate." The ALJ noted that the Company has been using the program since 1999,[47] and thus claims that the program is a key element of its overall payment package in attracting and keeping a skilled workforce. R.D. at 62 (citing Aqua St. 1-R at 17). The ALJ reasoned that the OCA's argument that the program also benefits stockholders is not sufficient to demonstrate that the program is unreasonable or excessive. R.D. at 63.

---

[47] We note that the Company states that the Incentive Compensation Plan was started in 1990. Aqua St. 1-R at 16.

3. OCA Exception No. 4 and Replies

In its Exception No. 4, the OCA disagrees with the ALJ's findings regarding Aqua's stock-based incentive compensation program. The OCA recommends an adjustment of $846,493 to remove these costs. OCA Exc. at 4-5 (citing OCA M.B. at 36-39; OCA Table II (Water); Table II (Wastewater)). According to the OCA, the ALJ noted that since the purpose of the plan is to tie compensation to employees accomplishing the Company's objectives, the program must ultimately benefit consumers. OCA Exc. at 5 (citing R.D. at 62). The OCA contends that Aqua has failed to demonstrate that the key component of the program is to establish employee eligibility based on performance duties and metrics that are "*directly related to the provision of service*." OCA Exc. at 5 (citing *Pa. PUC v. Pennsylvania American Water Co.*, 2021 Pa. PUC LEXIS 55 (*PAWC 2021*) at *59-60).

The OCA provides that although, in theory, a payment program which benefits stockholders might also benefit consumers, in this case, the payment program has no clear relationship to ratepayer benefits or operational effectiveness. OCA Exc. at 5 (citing OCA St. 1 at 48). The OCA avers that the stock-based incentive compensation program appears to have the primary purpose of benefitting executives and high-level managers. However, the OCA argues that no evidence has been provided to show the benefits of the payment program to ratepayers. OCA Exc. at 5 (citing OCA St. 1SR at 36).

The OCA highlights the ALJ's statement that Aqua has established that compensation from the program is both "competitive" and "appropriate." OCA Exc. at 5 (citing R.D. at 62). While this may be true, the OCA argues, it is irrelevant to whether the program is benefitting ratepayers and whether it should be funded by ratepayers. OCA Exc. at 5.

The OCA avers that Aqua's incentive compensation program is not reasonable or prudently incurred. In addition, the OCA insists that there is no evidence that it provides any benefit to ratepayers and, accordingly, Aqua should not be able to recover the plan expenses from ratepayers. The OCA remains of the opinion that its $846,493 adjustment to remove these costs for ratemaking should be adopted. OCA Exc. at 6 (citing OCA M.B. at 36-39; OCA Table II (Water) and (Wastewater)).

In its reply to the OCA Exception No. 5, Aqua avers that the incentive compensation has been paid each year since 1990, demonstrating that the plan is successful in encouraging the accomplishment of Aqua's key objectives and the ongoing control over operating costs. Aqua R. Exc. at 4 (citing Aqua St. 1-R at 16-17).

I&E did not offer a reply to OCA Exception No. 5.

4. Disposition

We find that Aqua has provided evidence linking the stock-based incentive compensation program with benefits to customers and improved operational efficiency. Aqua's witness Mr. Packer explained that with the implementation of the Incentive Compensation Plan in 1990, a portion of an employee's total cash compensation was placed "at risk" pending the achievement of key performance objectives. The employee's progress toward these performance objectives was used to determine the employee's resulting percentage of a target bonus. Aqua St. 1-R at 15.

Mr. Packer explained further the rationale of the Company's incentive compensation plan as follows:

> The purpose of the Plan is to tie employee compensation to the accomplishment of the Company's key operating objectives, thereby ensuring that the entire workforce is

> working toward the same end. Customers benefit from the participant's individual objectives being met, as improvements in performance are accomplished by controlling costs, improving efficiencies and enhancing customer service. As a result, the need for rate relief is mitigated.

Aqua St. 1-R at 15-16.

Mr. Packer stated that "[m]any of the employee objectives focus on cost containment, quality service, productivity enhancements and compliance initiatives to ensure reasonable cost and high-quality service to our customers." Aqua St. 1-R at 17-18. Mr. Packer provided that "[s]tock compensation is an equally important form of compensation at risk, promotes retention, and emphasizes an investment interest in the business at the employee level that promotes efforts to provide safe, adequate, and reliable utility service." Aqua St. 1-R at 19.

We agree with the ALJ that the stock-based compensation benefits ratepayers. We find that the stock-based compensation is linked to performance objectives that benefit consumers, including controlling costs and compliance initiatives. Accordingly, the OCA Exception No. 5 is denied.

E. Supplemental Executive Retirement Plan (SERP)

1. Positions of the Parties

Aqua explained that the SERP is a legacy retirement program for highly compensated individuals who did not qualify under the Company's former pension plan due to Internal Revenue Service (IRS) limitations. Aqua M.B. at 72 (citing Aqua St. 1-SR at 11-12). In April 2003, the Company closed both the pension plan and its SERP to employees hired after that date. Aqua averred that the SERP provides replacement retirement benefits for a limited number of past and present employees and their spouses who are not eligible for the Company's former pension plan. Aqua M.B. at 72 (footnote omitted).

The OCA provided that the Company's claim unreasonably imposes an expense for SERP for Essential Utilities and Aqua top executives on consumers when that expense is not affiliated with the provision of public utility service. The OCA noted that the SERP provides retirement benefits for select highly compensated executives that goes beyond what employees with qualified pension plans receive and beyond IRS limitations for qualified plans. The OCA explained that without the expense of SERP, the Company's executives would still receive retirement benefits available to any other Aqua employee. According to the OCA, an expense that exists for the purpose of providing additional compensation to executives that are already the highest paid in the Company is both excessive and unnecessary to the provision of water service.
OCA M.B. at 49 (citing *Pa. PUC v. Pennsylvania American Water Co*., 1993 Pa. PUC LEXIS 79 (*PAWC 1993*) at *121-123, 136-139 (holding that unnecessary expenditures that do not relate to the provision of utility service should not be borne by ratepayers)). The OCA argued that while the Company is free to provide these additional retirement benefits to its executives, it should do so at the expense of shareholders rather than ratepayers. The OCA recommended removing the requested FPFTY expenses of $695,612 for the water utility and $57,050 for the wastewater utility. OCA M.B. at 49 (citing OCA St. 1 at 62; OCA Exh. LA-2, Sch. C-18; Table II (Water); Table II (Wastewater Base)).

2. Recommended Decision

The ALJ noted that the SERP is not associated with retaining or recruiting executive talent. R.D. at 63. The ALJ provided that Aqua did not demonstrate that the SERP is connected to employee performance metrics that relate to the provision of utility service. The ALJ recommended the SERP expenses be excluded and that $695,612 for the water utility and $57,050 for the wastewater utility be removed from the requested FPFTY expenses. For wastewater, the ALJ recommended that the $57,050 adjustment be allocated to each rate zone based on the relative percentage of management fees assigned to each rate zone per Aqua Exhibits 1-B to 1-G at Sch. C-1. The ALJ recommendations are as follows:

> The wastewater adjustments are comprised of decreases for Wastewater Base, Limerick, East Bradford, Cheltenham, East Norriton, and New Garden of $23,373; $8,035; $1,763; $14,049; $7,036; and $2,794; respectively. These adjustments are reflected in each rate case under [Recommended Decision, Appendix] Table II, row "Supp. Exec. Retire Program." As noted in [Recommended Decision, Appendix] Table VI for each rate zone, the cash working capital resulting from this SERP adjustment is recommended to be assigned to the management fee expense account for each rate zone.

R.D. at 63-64.

3. Aqua Exception No. 6 and Replies

In its Exception No. 6, Aqua avers that the Recommended Decision improperly applies incentive compensation recovery criteria to a post-employment retirement benefit to reach an incorrect recommendation. Aqua explains that the SERP is a legacy retirement program, similar to the Company's pension plan but limited to certain senior level employees who did not qualify under the Company's former pension plan due to Internal Revenue Code limitations. Aqua Exc. at 25 (citing R.D. at 63). Aqua notes that the SERP provides replacement retirement benefits for the limited number of present and retired employees and their spouses who are not eligible for the Company's qualified pension plan. Aqua Exc. at 25.

Aqua maintains that eligibility for benefits each year under the SERP is not based upon performance criteria, but upon employment. When the program closed to new employees after April 2003, the pre-April 2003 employees continued to receive their promised benefits upon retirement. Aqua replaced the SERP and the pension plan with a defined contribution 401(k) program to control costs. Aqua Exc. at 26, n.15. Aqua notes that like the pension plan, the Company continues to incur costs under this legacy plan. Aqua expects the cost of the program to decline over time. Aqua Exc. at 25-26.

Aqua avers that as a post-employment benefit, recovery of the costs of the program in rates should not be measured by whether it serves as a current recruiting tool, or whether the recipient retirees have met an incentive target. Aqua Exc. at 26.

In its reply to Aqua Exc. No. 6, the OCA submits that the Company acknowledges that the SERP has no connection to the provision of utility service, to customer service, or to attracting and retaining new employees. OCA R. Exc. at 3 (citing OCA M.B. at 47-50; OCA R.B. at 23-24).

The OCA disagrees with Aqua's argument that the SERP should be included in rate recovery because excluding the program would "disincentivize utilities from changing or eliminating post-employment benefits, if the ongoing costs of a discontinued program may no longer be recoverable." OCA R. Exc. at 3 (citing Aqua Exc. at 26). The OCA contends that Aqua's argument has no basis in Commission precedent because it ignores that compensation programs wholly disconnected from utility service should never be funded, whether those programs are discontinued or current. OCA R. Exc. at 3 (citing OCA M.B. at 47-48; OCA R.B. at 23-24).

4. Disposition

We agree with the OCA, that not all costs incurred by Aqua are recoverable. While Aqua continues to incur costs from the SERP, Aqua's customers who receive no benefit from and have no ties to the SERP, should not be required to fund these costs. We agree with the ALJ's recommendation to remove the Company's FPFTY expenses of $695,612 for water and $57,050 for wastewater, in the manner outlined by the ALJ, *supra*. Accordingly, Aqua Exception No. 6 is denied.

F. Non-Rate Case Legal Expense

1. Positions of the Parties

Aqua proposed a three-year average of non-rate case legal expenses to reflect the costs incurred in a normal year, including the costs of union contract negotiations that occur on a two-year or more interval. Aqua M.B. at 80-81. Aqua's claim includes a request to recover $644,4475 in non-rate case legal expense. Aqua M.B. at 80.

The OCA recommended a reduction of $24,981 in Aqua's non-rate case legal expense to more accurately reflect the average amounts recorded by Aqua for the twelve month periods ending March 31, 2020 and March 31, 2021. OCA R.B. at 22 (citing OCA M.B. at 47). The OCA provided that its suggested two-year time frame excludes the 2019 year because the expense that year was unusual and is not representative of current or future levels of non-rate case legal expense. *Id.*

2. Recommended Decision

The ALJ reasoned that the use of a two-year average, as the OCA recommended, would fail to include expenses that occur on a two-year or more interval, such as union negotiations. The ALJ noted that according to Aqua, its proposal is consistent with its claim in prior rate cases and other expense categories that exhibit similar ebbs and flows as in this case. The ALJ found Aqua's claim based on a three-year average of non-rate case legal expenses to be reasonable. R.D. at 64-65 (citing Aqua St. 3-R at 10).

3. OCA Exception No. 3 and Replies

In its Exception No. 3, the OCA contends that the ALJ erred by accepting Aqua's claim for $644,475 for non-rate case legal expense. OCA Exc. at 3 (citing R.D. at 65). The OCA avers that this amount of non-rate case legal expense was derived from a three-year average of non-rate case legal expense. The OCA notes that it proposed averaging two years of non-rate case legal expense instead of three, to exclude the year ending March 31, 2019, in which Aqua had unusually high legal expenses. OCA Exc. at 3 (citing OCA M.B. at 47). The OCA avers that Aqua's non-rate case legal expense in the year ending March 31, 2019 was unusually high and it does not provide an accurate representation of what that expense will be in the future. OCA Exc. at 4 (citing OCA M.B. at 47). According to the OCA, Aqua's non-rate case legal expense has decreased in each of the two years following 2019. OCA Exc. at 4 (citing OCA St. 1 at 58). Additionally, the OCA contends that Aqua has failed to establish that any expenses from the 2019 year are recurring. The OCA argues that Aqua's non-rate case legal expense should be reduced by $24,981 to more closely reflect what the Company's expenses will be in the future. OCA Exc. at 4 (citing OCA M.B. at 47; OCA Exh. LA-2, Sch. C-17 at 2, Table II (Water)).

In its reply to the OCA Exception No. 3, Aqua provides that a three-year average for non-rate case legal expense accounts for the fluctuation of this expense that occurs in the normal course of business. In addition, the Company claims, that the two-year average proposed by the OCA may not capture regular cyclical legal expenses such as union contract negotiations. Aqua R. Exc. at 3 (citing Aqua M.B. at 81).

4. Disposition

We agree with the ALJ that a three-year average for non rate case legal expense is reasonable. In our view, a three-year average is more appropriate to include costs that a two-year average would not capture. Aqua's union contract negotiations are scheduled to occur during the FTY. Aqua St. 3-R at 10. As Aqua pointed out, the Company has used a three-year average for this expense in its prior rate case. Aqua M.B. at 81.[48] The OCA Exception No. 3 is denied.

G. Purchased Water Expense

1. Positions of the Parties

Aqua has included a claim for $4,135,311 for Purchased Water Expense during the FPFTY. Aqua M.B. at 81 (citing Aqua Exh. 1-A, Sch. C-7.1). The amount includes $297,839 of purchased water from Aqua Ohio. Aqua M.B. at 82 (citing Aqua Exh. 1-A, Sch. C-7.1.i, Line1).

---

[48] We note that Aqua used a three-year average to calculate its Legal Expense Claim in the *Aqua 2018 Rate Case*. *Aqua 2018 Rate Case*, Aqua Exh. 1-A(a), Sched. C-9.1. <u>This claim was included within the Settlement approved by the Commission in the *Aqua 2018 Rate Case*.</u>

I&E proposed a decrease of $166,975, reflecting water purchases from Aqua Ohio at $0.3449 per hundred gallons. I&E St. 1-SR at 19 (citing I&E St. 1 at 19). I&E argued that the cost of purchased water (Aqua Ohio Struthers Division) should be the same as the rate Aqua Pennsylvania receives when it sells water to that same affiliate (Aqua Ohio Masury Division) for ratemaking purposes so that Pennsylvania customers are not harmed. According to I&E, the Ohio rate is not guaranteed full recovery when that tariff rate is being claimed by a Pennsylvania affiliate in a Pennsylvania rate filing. I&E M.B. at 34-35 (citing St. 1-SR at 20).

Aqua's witness, Ms. Feeney, explained that I&E's recommendation ignores the fact that Aqua's sales to the Masury Division and Aqua's purchases from the Struthers Division of Aqua Ohio are not comparable. R.D. at 66 (citing Aqua St. 2-R at 33). Aqua explained further that these sales and purchases take place in different geographic locations. Additionally, Aqua highlighted that the Masury and Struthers Divisions of Aqua Ohio are separate – each division has a separately determined cost of service, separate tariffs, and different rates. *Id.*

2. Recommended Decision

The ALJ recommended that I&E's proposed adjustment be rejected. The ALJ reasoned that there is no evidence that the purchase of water from Aqua Ohio Struthers Division at tariffed rates is imprudent or excessive. The ALJ noted that in considering the Masury contract, the Commission will determine whether the sale of water to Masury at discounted rates is appropriate. The ALJ stated that as the purchase of water from Aqua Ohio Struthers division is made pursuant to tariff rates that have been approved by the applicable authorities with jurisdiction to regulate those utility rates, Aqua's claimed purchased water expense should not be adjusted. The ALJ further reasoned this rate is unaffected by the rate to be charged by Aqua to the Masury Division, which Aqua based upon a contract rate established in relation to the cost of a competitive alternative available to the Masury Division. R.D. at 66.

3. Disposition

No Party filed Exceptions on this issue. Finding the ALJ's recommendation to be reasonable, we adopt it without further comment.

H. Dredging Expense

1. Positions of the Parties

Aqua proposed to change its dredging process and to accrue a reserve exclusively for dredging costs at a rate of $400,000 per year and charge actual costs against that reserve as they are incurred. Aqua M.B. at 85 (citing Aqua St. 3 at 5). Aqua proposed that the reserve be recorded as a regulatory liability. Aqua stated that this proposed adjustment would reduce dredging expense by approximately $300,000 over three years. Aqua would change its past practice of mobilizing and demobilizing equipment (with fixed costs of approximately $150,000 per occurrence) three times over a three-year span, to only one time over a three-year span. *Id.*

I&E recommended no adjustment to the claimed dollar amount, but recommended that Aqua's dredging expense be normalized and that the Company's proposed use of a reserve account and regulatory liability be rejected. I&E M.B. at 36 (citing I&E St. 1 at 21; I&E St. 1-SR at 21). I&E argued that dredging is a routine expense and should be normalized for ratemaking purposes. *Id.*

2. Recommended Decision

The ALJ recommended that the dredging expense be normalized and that the requested approval for deferred accounting treatment should be rejected. The ALJ reasoned that while the claimed expense may be substantial, it is not extraordinary, non-recurring, or within the scope of the type of items that the Commission has allowed as an exception to the general rule against retroactive recovery. R.D. at 67.

3. Disposition

No Party filed Exceptions on this issue. Finding the ALJ's recommendation to be reasonable, we adopt it without further comment.

I. Advertising

1. Positions of the Parties

Included in Aqua's claim for advertising expense is $75,000 for water operations and $7,500 for wastewater operations related to the advertising for the Company's proposed Universal Service Program (USP). Aqua M.B. at 86 (citing Aqua St. 2-R at 34-35; OCA Exh. LA-3, 17-18).

The OCA recommended that the Company only be permitted to recover $25,000 for water operations and $2,500 for wastewater operations for this category of advertising. Aqua M.B. at 86 (citing OCA St. 1 at 40). The OCA considered this a new expense, since it was not incurred in the HTY and FTY. The OCA proposed to normalize the FPFTY amounts claimed by Aqua for this expense over three years. Aqua M.B. at 86 (citing OCA St. 1 at 41).

Aqua provided that the program was not in effect in the HTY and will not be in effect during the FTY. Aqua proposed the new program to be in effect in the FPFTY and averred that to normalize this expense with prior years when the program did not exist is unfair. Aqua M.B. at 87.

2. Recommended Decision

The ALJ recommended that Aqua's claimed expense to advertise the proposed new USP should be accepted. The ALJ reasoned that the program is proposed to be in effect during the FPFTY and, therefore, Aqua's advertising expense reasonably projects the new amounts associated with ensuring customers are informed about the new program. R.D. at 69 (citing 66 Pa. C.S. § 1316).[49]

3. OCA Exception No. 2 and Replies

The OCA avers that normalizing this cost for customer outreach for the new USP over three years is consistent with an understanding that advertising priorities change over time. The OCA provides that normalization of a new expense being introduced for the first time in the FPFTY that may fluctuate in future rate cases is required under Commission precedent. OCA Exc. at 3 (citing *Pa. PUC v. Pennsylvania American Water Co*., Docket Nos. R-00038304, *et al.*, 2003 Pa. PUC LEXIS 498 (Recommended Decision issued December 2, 2003) (*PAWC 2003*) at *101-102, *adopted as modified*, Order entered January 29, 2004).

[49] *See* 66 Pa. C.S. § 1316 (permitting utilities to recover advertising expenses that "(4) Provides important information to the public regarding safety, rate changes, means of reducing usage or bills, load management or energy conservation" or "(5) Provides a direct benefit to ratepayers.").

The OCA argues that normalization would reduce the impact for rate payers, and that Aqua has failed to explain why doing so prevents it from accomplishing its goal of customer outreach. OCA Exc. at 3 (citing OCA M.B. at 32).

In its reply to the OCA Exception No. 2, Aqua contends that the ALJ correctly concluded that Aqua is permitted to recover the expense under 66 Pa. C.S. § 1316 and that to require Aqua to normalize an expense to be incurred in the FPFTY for a program to be implemented in the FPFTY is unfair. Aqua R. Exc. at 2-3 (citing R.D. at 68-69; Aqua M.B. at 86-87). Aqua avers that, as the ALJ noted, the OCA proposed increased outreach efforts for the proposed USP. Aqua R. Exc. at 3 (citing R.D. at 69). Aqua argues that the OCA offered no evidence to indicate Aqua's existing level of advertising expense, exclusive of the new CAP spending, is excessive. Aqua contends that the OCA is relying on an inapposite case that dealt with the specific variability of uncollectibles expense and not a new expense associated with a new program. Aqua R. Exc. at 3 (citing Aqua R.B. at 35; *PAWC 2003* at *101-102).

4. Disposition

We find the advertising expense for the proposed USP to be reasonable. We agree with the ALJ that to normalize the expense over three years is not fair. We do not agree with the OCA's argument that Commission precedent requires the normalization. The *PAWC 2003* citation is related to an expense that varied over three years, not an expense for a new program occurring for the first time in the FPFTY. Accordingly, the OCA Exception No. 2 is denied.

J. General Price Level Adjustment

1. Positions of the Parties

Aqua provides that its "General Price Level Adjustment" reflects the anticipated effect of inflation on operating expenses that were not specifically adjusted. Aqua M.B. at 59 (citing Aqua St. 3 at 2, Aqua Exhs. 1-A; 1-B through 1-G; Sch. C-4.1). Aqua explains that it derived its inflation factors based on the quarterly Consumer Price Index (CPI) percentage change from the same quarter in the prior year set forth in the October 10, 2020, Blue Chip Economic Indicators. Aqua explains further that "[s]ince the forecast is not available for the quarters in the FPFTY, the Company uses the last available forecasted quarterly percentage change and uses that as the annual rate to multiply inflation eligible expenses." Aqua M.B. at 59 (citing Aqua St. 3 at 3).

The OCA argued that the adjustment is a blanket inflation adjustment which does not utilize a targeted approach. Aqua M.B. at 60 (citing OCA St. 1 at 34-35). The OCA provided that Aqua's adjustments for estimated blanket inflation are inconsistent with the law and should be removed, reducing FPFTY expenses by $1.07 million. OCA M.B. at 28 (citing OCA St. 1 at 34-25; OCA Exh. LA-2, Sch. C-5; Table II (Water, Wastewater Base, Limerick, East Bradford, Cheltenham, East Norriton, New Garden)). The OCA stated that Aqua did not adequately justify the purpose behind its inflation adjustments. The OCA argued that Aqua is speculating regarding what increase, if any, is appropriate for those expenses. OCA M.B. at 28-29.

2. Recommended Decision

The ALJ agreed with the OCA that Aqua has not justified the use of a general price level adjustment to expenses. The ALJ noted that according to Aqua's witness, Mr. Christopher E. Manning, the general inflation factor would be applied to

22% of Aqua's total operating expenses. R.D. at 70 (citing Aqua St. 3-R at 3). The ALJ reasoned that while it may be simpler for Aqua to use a general inflation factor for a block of expenses, its simplicity belies the fact that Commission precedent requires specificity if an inflation factor is utilized. The ALJ explained that to permit a large, sophisticated utility like Aqua to use a general inflation factor on a group of expenses as proposed here would incentivize less accurate tracking of expenses and would disincentivize Aqua from controlling its costs. In the ALJ's view, Aqua has not demonstrated that tracking the changes in these expenses individually is unduly burdensome. R.D. at 70.

The ALJ recommended that the Company's full inflation adjustment should be removed as it is not supported by record evidence and contradicts precedent to approve inflation adjustments only when the proposed adjustments are specific and not too general. The ALJ recommended an adjustment of $864,335 for water operations and $205,560 for wastewater operations. The wastewater adjustments are comprised of decreases for Wastewater Base, Limerick, East Bradford, Cheltenham, East Norriton, and New Garden of $145,368, $23,275, $6,828, $8,719, $8,665, and $12,705, respectively. These adjustments are reflected in each rate case table under Table II, Row "General Inflation" of the Recommended Decision Appendix. As noted in Table VI of the Recommended Decision Appendix for each rate zone, the cash working capital adjustment resulting from this general inflation adjustment is recommended to be assigned to a general expense account for each rate zone that uses a number of lag days that is equal to the weighted average O&M Expense lag days for each rate zone after all other adjustments are applied. R.D. at 70-71, R.D. Appendix, Table II, Table VI.

3. Aqua Exception No. 7 and Replies

In its Exception No. 7, Aqua provides that the Commission has repeatedly held that general price adjustment factors may be applied to expenses not separately adjusted, where the utility has demonstrated the adjustments are adequately supported and relatively conservative. Aqua Exc. at 27 (citing Aqua M.B. at 61-62). Aqua states that the Commission "has consistently accepted inflation adjustments where supported by historic data demonstrating that the utility has experienced cost increases that exceed the claimed inflation increases." Aqua Exc. at 27 (citing Aqua M.B. at 62 (quoting *Pa. PUC v. Philadelphia Suburban Water Company*, Docket Nos. R-00016750, 2002 Pa. PUC LEXIS 55 (Order entered July 8, 2002) (*Philadelphia Suburban Water 2002*) at *55).

Aqua avers that the ALJ incorrectly stated that the adjustment lacked specificity. Aqua Exc. at 27 (citing R.D. at 70). Aqua notes that its Main Brief provided details on the proposed adjustment and demonstrated that it uses an inflation factor well below the historical cost increases the Company has faced. Aqua Exc. at 28 (citing Aqua M.B. at 63).

In its reply to Aqua Exc. No. 7, the OCA contends that the ALJ correctly disallowed the Company's proposed general price level adjustment. The OCA avers that Aqua's argument that the Commission has approved similar inflation adjustments by the Company ignores that the Commission has historically required utilities to provide greater specificity about these adjustments. OCA R. Exc. at 4 (citing OCA M.B. at 28-30; OCA R.B. at 14).

According to the OCA, Aqua's claim that the ALJ "ignores" precedent by disallowing this general inflation adjustment is incorrect. OCA R. Exc. at 4 (citing Aqua Exc. at 27). The OCA provides that the Commission has historically disallowed speculative inflation factors. OCA R. Exc. at 4 (citing *Pa. PUC v. Philadelphia Elec. Co.*, 58 Pa. P.U.C. 7 (1983) (*PECO 1983*); *National Fuel Gas Dist. Corp. v. Pa. PUC*, 677 A.2d 861 (Pa. Cmwlth. 1986) (*NFG 1986*)). The OCA notes that Aqua provided only three examples of expenses that have grown at rates which exceed the Company's proposed inflation factor. OCA R. Exc. at 4 (citing Aqua St. 3 R at 3-4). The OCA argues that the proposed inflation adjustment should not be approved because Aqua has provided no evidence about the other operating expenses to which the inflation factor would be applied. OCA R. Exc. at 4 (citing R.D. at 70; OCA M.B. at 30; OCA R.B. at 15).

The OCA finds ALJ Long's concern about setting a precedent which would allow large utilities such as Aqua to apply a general inflation factor to unspecified expenses is well-founded. OCA R. Exc. at 4 (citing R.D. at 70). The OCA agrees with the ALJ that if the Commission were to approve Aqua's entire proposed inflation adjustment based solely on three expense examples provided by Aqua, it would open the door for other large utilities to propose unjustified blanket inflation expense adjustments in future rate cases. The OCA concludes that ALJ Long correctly disallowed Aqua's proposed inflation adjustment, reducing FPFTY expenses by $1.07 million. OCA R. Exc. at 4 (citing R.D. at 70-71; OCA M.B. at 28-30; OCA R.B. at 15; OCA Table II (Water, Wastewater Base, Limerick, East Bradford, Cheltenham, East Norriton, New Garden)).

4. Disposition

Aqua's proposed General Price Adjustment applies to approximately 22% of Aqua's O&M expenses. The OCA acknowledged that in our recent decision in *Pa. PUC v. PECO Energy Co. – Gas Division*, Docket No. R-2020-3018929, Order entered June 22, 2021 (*PECO Gas 2021*), we approved an inflation adjustment. However, as the OCA correctly notes, the company in that proceeding used a more targeted approach to an inflation adjustment than Aqua proposed. OCA St. 1 at 35. More specifically, the Commission approved an inflation adjustment for regulatory Commission expenses but denied an inflation adjustment in that same case that the Commission found less specific. *See PECO Gas 2021* at 88, 95-96.

The Commission recently denied a blanket increase by Wellsboro Electric Company[50] of 3% inflation applied to FTY expenses to estimate FPFTY expenses.

In *Wellsboro 2020* the Commission stated:

> [T]he Company did not demonstrate that making this blanket adjustment to each expense claim directly relates to the actual costs expected to be incurred in each expense account in the FPFTY.

Wellsboro 2020 at 40.

In both its briefs and its Exceptions, Aqua also cited to *Philadelphia Suburban Water 2002*, to justify the use of an inflation factor for 22% of expenses. *See* Aqua M.B. at 62; Aqua Exc. at 27. However, we note in that case, the inflation adjustment was more closely targeted to the inflation adjustment and "was applied only to those miscellaneous employee expenses not otherwise specifically adjusted." *Philadelphia Suburban 2002* at *51 (citing R.D. at 37-38). We agree with the ALJ that Aqua has not justified the use of a general price level adjustment to expenses "not specifically adjusted in this case or not subject to inflation." R.D. at 70. We also agree that allowing Aqua to apply a general inflation adjustment to a block of expenses could incentivize less accurate tracking of expenses and a less rigorous approach to controlling costs for those expenses. The application of a General Price Adjustment to 22% of expenses is neither targeted nor specific. We find the ALJ's recommendation to deny Aqua's use of a General Price Adjustment to be reasonable. Therefore, we shall adopt the ALJ's recommendation to remove the Company's entire claimed amount of $864,335 for water operations and $205,560 for wastewater operations. As noted by the ALJ, the wastewater adjustments are comprised of decreases for Wastewater Base, Limerick, East

[50] *Pa. PUC, OCA, OSBA v. Wellsboro Electric Company*, Docket No. R-2019-3008208 (Order entered April 29, 2020) (*Wellsboro 2020*).

Bradford, Cheltenham, East Norriton, and New Garden of $145,368, $23,275, $6,828, $8,719, $8,665, and $12,705, respectively. These are outlined in Table II-Adjustments in each of the rate tables that are attached to Commission Tables Calculating Allowed Revenue Increase at the end of this Opinion and Order.

Based on the above discussion, Aqua Exception No. 7 is denied.

K. Chemicals and Purchased Power (Water) Expenses

1. Positions of the Parties

The OCA proposed to increase the Company's claimed Chemicals Expense for water operations by $66,787. R.D. at 71 (citing OCA St. 1 at 38). This adjustment is based on the OCA's proposed adjustment to Metered Residential Water sales, which estimates the Company's progress towards the return to pre-pandemic residential usage levels as slower than the Company predicts.

The OCA recommended a related negative adjustment of $96,312 to the Purchased Power expense. OCA M.B. at 30 (citing OCA St. 1 at 38; OCA Exh. LA-2, Sch. C-7; Table II (Water)).

I&E did not recommend adjustments to gas and electric O&M expenses. I&E M.B. at 39.

2. Recommended Decision

The ALJ did not recommend any adjustments to Aqua's claim for chemicals expense consistent with the ALJ's recommendations related to Metered Residential Water Sales revenue. R.D. at 71.

3. OCA Exception No. 1

In its Exception No. 1, the OCA recommends an increase to residential revenues of $2.757 million based on a slower return of residential revenues than Aqua predicted. Associated with that more gradual revenue increase, the OCA recommends a negative adjustment of $66,787 to the Chemicals Expense for water operations and a negative adjustment to Purchased Power expense of $96,312. OCA Exc. at 1-2 (citing OCA M.B. at 30; OCA Table II (Water)). The OCA also recommends that the Company's CWC be adjusted to reflect this revenue adjustment and based on the expense adjustments it recommended. OCA Exc. at 2 (citing OCA M.B. at 22; OCA Table II (Water), OCA Table II (Wastewater)).

4. Disposition

As provided in our disposition of the OCA's Exception No. 1 in Section VII. D. of this Opinion and Order, *supra*, we denied the OCA Exception No. 1. Therefore, we shall also decline to make the OCA's requested adjustments to the Chemicals Expense and the Purchased Power Expense for water operations.

L. Depreciation - Amortization Expense Adjustment – Water – Phoenixville Acquisition

1. Positions of the Parties

Aqua has requested a positive acquisition adjustment of $2,315,440 to its rate base for the Phoenixville water system as of the end of the FPFTY. Aqua M.B. at 19 (citing Aqua Exh. 1-A, Sch. G-3). Aqua has provided a claim of $121,865 for amortization expense associated with the positive acquisition adjustment to rate base. Aqua M.B. at 58.

Both I&E and the OCA contended that the amortization expense associated with the Phoenixville acquisition should be disallowed. Aqua M.B. at 58 (citing I&E St. 3 at 11, OCA St. 1 at 30). I&E recommended that the Phoenixville acquisition adjustment be denied, which reduces rate base by $2,315,440 and also reduces the annual amortization expense by $121,865, which is expressed as a depreciation expense. I&E M.B. At 20 (citing I&E St. 3 at 10-11; I&E St. 3-SR at 7). I&E recommended that the Company's total annual amortization expense be reduced by $121,865. I&E M.B. at 21 (citing I&S St. 3-SR at 3-7).

2. Recommended Decision

The ALJ recommended that $2,437,305 be removed from Aqua's rate base, and the concomitant adjustments should be made to the accrued depreciation reserve and annual amortization expense which is expressed as a depreciation expense. R.D. at 44 (citing Aqua M.B. at 18). *See* also R.D. at 44, n. 27.

3. Aqua Exception No. 2

In its Exception No. 2, Aqua avers that the ALJ erred by disallowing Aqua's water rate base claim related to the acquisition of the Phoenixville Water system. Aqua Exc. at 15-18.

4. Disposition

As provided in our disposition of Aqua's Exception No. 2 in Section VI.B., *supra*, we denied the Company's Exception No. 2 and found the ALJ's recommended negative adjustment to rate base of $2,437,305 to be reasonable. Accordingly, we find that the concomitant adjustments as recommended by the ALJ should be made to the accrued depreciation reserve and the annual amortization expense, which is expressed as a depreciation expense in this filing. The adjustments are reflected in our Commission Tables Calculating Allowed Revenue Increase, attached to this Opinion and Order at Table II-Water, Rows “Acquis. Adj. – Phoenixville” and “Amort. Phoenixville Acquis. Adj.”

M. Cash Working Capital

1. Positions of the Parties

Aqua explained that CWC is the capital requirement arising from the difference between: (1) the lag in the receipt of revenue for rendering service; and (2) the lag in the payment of cash expenses incurred to provide that service. Aqua explained further that its CWC claims for water and wastewater operations include the necessary working capital associated with O&M expense, taxes, and interest. Aqua M.B. at 32 (citing Aqua Exh. 1-A(a), Sch. G-5; Aqua Exh. 1-B(b), Sch. G-5). For water operations, its CWC amount claimed is $1,736,000. Aqua M.B. at 32 (citing Aqua Exh. 1-A(a), Sch. G-5). For wastewater base operations, its CWC amount claimed is $550,000. Aqua M.B. at 31 (citing Aqua Exh. 1-B(b), Sch. G-5).

Aqua stated that no parties challenged the Company’s lead/lag study or its calculation of: (a) the average lag days in payment of expenses, taxes or interest, (b) the average lag day in receipt of revenues, or (c) the average lag days between payment of expenses and receipt of revenue. Aqua M.B. at 31 (citing Aqua St. 1 at 27 (describing the results of the lead/lag study)).

I&E provided that it agrees with the Company’s use of a lead/lag study to measure how many days exist on average between the midpoint of the service period and the date the payment is received. I&E M.B. at 38 (citing I&E St. 1 at 30). Based on I&E’s recommended expense adjustments, I&E recommended a cash working capital allowance for Water of $1,679,000 or a reduction of $57,000 from the Company's claimed $1,736,000. I&E did not recommend an adjustment for cash working capital for Wastewater Base or the other wastewater acquisitions. I&E M.B. at 38 (citing I&E St. 1-SR at 31).

The OCA averred that there should be a negative adjustment of $9.433 million for Interest for Water Operations, and the proposed rate base amount for CWC should be reduced by $0.718 million. OCA M.B. at 22 (citing OCA St. 1 at 24). The OCA explained that this adjustment is based on negative adjustments to Long Term Debt-Interest and Pennvest Interest. OCA M.B. at 22 (citing OCA St. 1 at 24; OCA Exh. LA-2, Sch. B-3). The OCA stated that, excluding the Section 1329 acquisitions by the Company, there should be an approximate negative $440,000 adjustment for Interest for Aqua's wastewater rate base and recommended a CWC requirement that is $28,000 lower than Aqua's proposed CWC allowance for Wastewater base operations. The OCA stated that this adjustment is made based on a negative adjustment to Long Term Debt-Interest, and both adjustments are made at the recommendation of the OCA's witness, Mr. Smith. OCA M.B. a 22 (citing OCA St. 1 at 25; OCA Exh. LA-2, Sch. B-3).

The OCA also recommended an adjustment to CWC based on its recommended adjustment to residential water sales revenue. OCA Exc. at 2.

2. Recommended Decision

The ALJ recommended adjustments to CWC related to the General Price Level Adjustment made as detailed in that discussion *supra.* R.D. at 71.

Overall, the ALJ noted that Aqua's claims for CWC have been adjusted based on the recommended adjustments to rate base, O&M expenses and taxes in the tables attached as appendices to the Recommended Decision. R.D. at 45.

3. OCA Exception No. 1 and Replies

In its Exception No. 1, the OCA insists that CWC should be adjusted to reflect the OCA's recommended residential revenue adjustment and its expense adjustments. OCA Exc. at 2 (citing OCA M.B. at 22; OCA Table II (Water); OCA Table II (Wastewater)).

In its reply to the OCA Exception No. 1, Aqua contends that OCA's recommended residential revenue adjustment was correctly rejected by the ALJ. Aqua R. Exc. at 1-2.

4. Disposition

As provided in our disposition for OCA Exception No. 1 in Section VII.E., *supra,* we denied OCA Exception No. 1. We decline to make the OCA's related requested adjustments to CWC. Accordingly, we shall also decline to make the OCA's requested changes to CWC related to Long Term Debt-Interest and Pennvest Interest.

Based on the above discussion of the adjustments to Aqua's individual expense claims, we have approved a total downward adjustment to the Company's water

O&M expenses of $1,900,892.[51] The cash working capital components related to interest and dividends, taxes, and O&M expense result in a net overall increase of $199,948 to the Company's water CWC.[52]

Additionally, we have approved a total downward adjustment to the Company's wastewater O&M expenses of $232,643. The cash working capital components related to interest and dividends, taxes, and O&M expense result in a net overall increase of $362,667 to the Company's wastewater CWC. As stated in Section VI.C, *supra,* this is broken down as follows: (1) a net increase to the CWC component for Wastewater-Base of $216,340,[53] which reflects, in part our downward adjustment to O&M expenses of $150,101; (2) a net increase to the CWC component for Wastewater-Limerick of $76,673,[54] which reflects, in part our downward adjustment to

[51] As set forth in Table II-Water in the Commission Tables Calculating Allowed Revenue Increase, attached to this Opinion and Order, our net total reduction to the Company's water expenses claim is $1,894,043. This figure includes a total reduction of $1,900,892 related to our downward adjustments to the Company's water expense claims for general liability insurance expense, general price level adjustment, and SERP expense, as discussed in this Expenses section. This is netted against a total increase to expenses of $5,849 related to water contract revenues and concomitant forfeited discounts, as discussed in Section VII of this Opinion and Order, *supra.* [(-$1,900,892+$5,849=$-$1,895,043]. It is our $1,900,892 reduction to the Company's expenses that flows to our downward adjustment to Cash Working Capital – O&M Expense that is described in the next footnote.

[52] As set forth in Table II-Water, the $275,473 addition is the net of: (1) an increase of $4,950 to Cash Working Capital – Interest and Dividends; (2) an increase of $431,945 to Cash Working Capital – Taxes; and (3) a decrease of $161,422 to Cash Working Capital – O&M Expense. [($4,950 + $431,945 - $161,422) = $275,473].

[53] As set forth in Table II-Wastewater-Base, the $216,340 addition is the net of: (1) a decrease of $945 to Cash Working Capital – Interest and Dividends; (2) an increase of $226,646 to Cash Working Capital – Taxes; and (3) a decrease of $9,361 to Cash Working Capital – O&M Expense. [(-$945 + $226,646 - $9,361) = $216,340].

[54] As set forth in Table II-Wastewater-Limerick, the $76,673 addition is the net of: (1) a decrease of $389 to Cash Working Capital – Interest and Dividends; (2) an increase of $78,550 to Cash Working Capital – Taxes; and (3) a decrease of $1,488 to Cash Working Capital – O&M Expense. [(-$389 + $78,550 - $1488) = $76,673].

O&M expenses of $27,778; (3) a net increase to the CWC component for Wastewater-East Bradford of $9,669,[55] which reflects, in part our downward adjustment to O&M expenses of $7,802; (4) a net increase to the CWC component for Wastewater-Cheltenham of $54,249,[56] which reflects, in part, our downward adjustment to O&M expenses of $16,469; (5) a net increase to the CWC component for Wastewater-East Norriton of $24,706,[57] which reflects, in part our downward adjustment to O&M expenses of $14,318; and (6) a reduction to the CWC component for Wastewater-New Garden of $18,970,[58] which reflects, in part our downward adjustment to O&M expenses of $16,175.

---

55 As set forth in Table II-Wastewater-East Bradford, the $9,669 addition is the net of: (1) an increase of $250 to Cash Working Capital – Interest and Dividends; (2) an increase of $9,729 to Cash Working Capital – Taxes; and (3) a decrease of $310 to Cash Working Capital – O&M Expense. [($250 + $9,729 - $310) = $9,536].

56 As set forth in Table II-Wastewater-Cheltenham, the $54,249 addition is the net of: (1) a decrease of $431 to Cash Working Capital – Interest and Dividends; (2) an increase of $56,325 to Cash Working Capital – Taxes; and (3) a decrease of $1,645 to Cash Working Capital – O&M Expense. [(-$431 + $56,325 - $1,645) = $54,249].

57 As set forth in Table II-Wastewater-East Norriton, the $24,706 addition is the net of: (1) a decrease of $369 to Cash Working Capital – Interest and Dividends; (2) an increase of $25,827 to Cash Working Capital – Taxes; and (3) a decrease of $752 to Cash Working Capital – O&M Expense. [(-$369 + $25,827 - $752) = $24,706].

58 As set forth in Table II-Wastewater-New Garden, the $18,970 reduction consists of: (1) a decrease of $378 to Cash Working Capital – Interest and Dividends; (2) a decrease of $18,230 to Cash Working Capital – Taxes; and (3) a decrease of $362 to Cash Working Capital – O&M Expense. [(-$378 - $18,230 - $362) = – $18,535].

IX. Taxes

A. Payroll Tax Expense

1. Positions of the Parties

Aqua's initial payroll tax claim included a payroll tax expense of $3,163,655, based on its vacancy rate of 2.50%. Aqua Exh. 1-A, Sch. D-2.5. The OCA submitted that a more accurate vacancy rate would be 2.88%. OCA M.B. at 33. Aqua and I&E accepted the OCA recommended 2.88% vacancy rate. Aqua M.B. at 88, I&E M.B. at 37. Accordingly, the Company updated its claim for payroll tax expense to $3,151,838. Aqua Exh. 1-A(a), Sch. D-2.5.

2. Recommended Decision

The ALJ remarked that Aqua's payroll tax claim was updated in rebuttal testimony to reflect the Company's acceptance of a revised vacancy rate of 2.88%. As a result, it was not necessary for the ALJ to make further adjustments to the payroll taxes. R.D. at 71-72.

3. Disposition

No Exceptions were filed objecting to the ALJ's recommendation on this issue. We find that the ALJ's recommendation is supported by ample record evidence and is just and reasonable. Therefore, we shall adopt Aqua's payroll tax claim based on a 2.88% vacancy rate.

B. Income Taxes

1. Positions of the Parties

Aqua stated its interest expense deduction claimed for ratemaking purposes was calculated using the interest synchronization method, which multiplies the weighted cost of debt in the Company's capital structure by the Company's rate base. Aqua Exh. 1-A, Sch. E-1 at 1. The OCA calculated Aqua's interest synchronization using the OCA's recommended hypothetical capital structure, *infra*. OCA R.B. at 39. As Aqua disagrees with the OCA's proposed hypothetical capital structure, it also opposes the OCA's proposed adjustment to the interest expense deduction. Aqua R.B. at 36.

2. Recommended Decision

As will be discussed more fully in Section X.B, *infra,* the ALJ rejected the OCA's use of a hypothetical capital structure for Aqua. Thus, the ALJ denied the OCA's claim regarding interest synchronization as it relates to income taxes. R.D. at 71-72.

3. Disposition

No Exceptions were filed objecting to the ALJ's recommendation on this issue. We find that the ALJ's recommendation is supported by ample record evidence and is just and reasonable. Therefore, we shall adopt the ALJ's recommendation that Aqua's interest synchronization method be employed, using the Company's capital structure, to calculate its interest expense deduction.

C. Tax Repair Deduction

1. Positions of the Parties

Aqua has proposed to carve-out $4 million per year for its repair deductions, in the calculation of income tax expense, on the basis that it has identified a portion of its annual repair deductions as being uncertain of passing an IRS audit. To account for the "uncertain" repair deductions, Aqua has established a reserve to reduce rate base. Aqua M.B. at 90-92. Any IRS disallowance would be offset against the reserve. Aqua explained that FIN 48 is related to the Company's practice of claiming the greatest tax-repair deductions it believes are reasonable, it recognizes that the IRS may ultimately disallow certain claims. Aqua M.B. at 91; Aqua St. 8-R at 6. Aqua's witness, Ms. Christine L. Saball, noted the IRS has yet to issue guidance regarding what capital additions will qualify as repairs, and thus there is uncertainty regarding the actual tax repair deductions that will be allowed. *Id.*

The OCA contended that Aqua's "flow through" treatment for its tax repair deductions is "unusual" and can result in large amounts of excess earnings between rate cases. OCA M.B. at 77; OCA R.B. at 37. The OCA also proposed to eliminate the Company's $4 million adjustment for FIN 48 uncertain tax positions. According to the OCA, Aqua's FIN 48 adjustment for uncertain tax positions should reflect the amount expected to be deducted for repairs without any offset for uncertain tax positions, relying on guidance provided by the Federal Energy Regulatory Commission (FERC) for energy utilities. OCA M.B. at 81; OCA St. 1 at 34-35.

2. Recommended Decision

The ALJ was not convinced that removal of the FIN 48 adjustment from the tax repair deduction is required. R.D. at 73. The ALJ noted that the OCA contended that this treatment of the tax repair deduction "may" result in excess earnings. However, the ALJ was persuaded by Aqua's explanation that "including the FIN 48 adjustment protects customers because they will not be required to return to the Company disallowed deductions, because those deductions will not have been reflected in rates." R.D. at 74 (citing Aqua St. 8-R at 7). The ALJ was also persuaded by how the Company handles the FIN 48 exclusion with regard to its rate base. In this regard, the ALJ noted the Company's statement that "[t]o compensate customers for the time value of money benefits of the FIN 48 exclusion, the Company deducts from rate base the reserve balance established for all years in which the challenged deductions are claimed." *Id*.

The ALJ was further persuaded to recommend that the Company's tax repair deduction be approved, based on the following Company arguments that: (1) shareholders will not receive income for the tax effect of the FIN 48 adjustment, and the rate base deduction ensures that customers receive the time value of money benefit related to the deferral of the uncertain tax position; (2) if, in the future, the IRS allows the full tax repair deduction, then the reserve balance will be returned to customers in rates; (3) if the full deduction is disallowed, as the Company assesses is likely, the reserve will be debited for the disallowed amount; and (4) customers will receive the benefit of the reserve balance amortized as a deduction to tax expense in future rate cases. R.D. at 74 (citing Aqua St. 8-R at 6-7).

Thus, the ALJ recommended that the Commission permit Aqua to continue utilizing the flow-through treatment of tax repair deductions which were approved in the settlement of Aqua's 2018 base rate case. Similarly, the ALJ recommended the Commission reject the OCA's objection to Aqua's "collar mechanism."[59] The ALJ

[59] The ALJ noted that the OCA did not address its witness' argument in surrebuttal testimony opposing the collar mechanism in its Main Brief. R.D. at 74, n.120.

concluded that there is no convincing evidence that this tax treatment has resulted in excess earnings or has otherwise harmed ratepayers. R.D. at 74.

3. OCA Exception No. 10 and Replies

In its Exception No. 10, the OCA excepts to the ALJ's recommendation and states that the tax repair deduction should only include those repairs that Aqua expects to claim for tax purposes and that the proposed carve-out is inappropriate for ratemaking purposes. The OCA also states that it does not take issue with the "collar mechanism" recommended by the ALJ. However, the OCA opines that if any "collar" amount around the repairs deduction amount that is used to compute income tax expense were to be used going-forward, the "collar" should be no wider than $4 million per year. OCA Exc. at 14-15.

In its Replies, the Company asserts that the ALJ correctly concluded the FIN 48 adjustment appropriately accounts for a portion of Aqua's claimed repairs expense deduction that will likely be disallowed by the IRS. Aqua notes the "collar" was established to address concerns that the claimed deduction could substantially vary from the actual deduction. Aqua R. Exc. at 8-9.

4. Disposition

We find that the ALJ's recommendation allowing Aqua to implement the FIN 48 adjustment as well as the "collar" up to $4 million, is supported by ample record evidence and is just and reasonable. Accordingly, we shall adopt the ALJ's recommendation on this issue and deny the OCA's Exception No. 10.

X. Rate of Return

Rate of Return is one of the components of the utility's Revenue Requirement formula, outlined, *supra.* Specifically, a utility's rate of return is the amount of revenue an investment generates in the form of net income and is usually expressed as a percentage of the amount of capital invested over a given period of time. A fair and reasonable overall rate of return is one that will allow the utility an opportunity to recover those costs prudently incurred by all classes of capital used to finance the rate base during the prospective period in which its rates will be in effect. I&E M.B. at 42.

A. Proxy Groups

To estimate a utility's cost of equity,[60] or return on equity, a proxy group of similar companies is used. This group of companies acts as a benchmark to satisfy the long-established guideline of utility regulation that seeks to provide the subject utility the opportunity to earn a return similar to that of enterprises with corresponding risks and uncertainties. A proxy group is generally preferred over the use of data exclusively from any one company, because it has the effect of smoothing out potential anomalies associated with a similar company and, therefore, is a more reliable measure. I&E St. 2 at 7.

1. Description of the Parties' Proxy Groups

Aqua used a proxy group of eight companies, which it referred to as the "Water Group." In arriving at its Water Group, the Company applied the following criteria:

---

[60] The Parties' positions regarding the cost of common equity will be discussed in more detail in Section X.D of this Opinion and Order, *infra.*

1. Each company was listed in the "Water Utility Industry" section (basic and expanded) of The Value Line Investment Survey (*Value Line*); and

2. The company's stock was publicly traded.

Aqua submitted that its size and financial risk are similar to the companies in its Water Group and, therefore, the Water Group provides a reasonable basis for measuring the Company's cost of equity. Aqua St. 7 at 13, 18.

I&E's proxy group consisted of seven companies. In selecting a proxy group of companies that are similar to Aqua, I&E applied the following criteria to *Value Line*'s "Water Utility" Company group:

1. Fifty percent or more of the company's revenue were generated from the water utility industry;

2. The company's stock was publicly traded;

3. Investment information for the company was available from more than one source, including *Value Line*;

4. The company must not be currently involved in an announced merger or the target of an announced acquisition; and

5. The company must have four consecutive years of historic earnings data.

I&E St. 2 at 8-9.

I&E explained that Aqua's Water Group contains all seven companies in its own proxy group. However, I&E excluded Artesian Resources Corporation from its own proxy group because it violates I&E's third proxy group criterion, *supra.* In this regard, I&E explained that Artesian Resources Corporation does not have a *Value Line* report, and therefore, does not have projected dividends per share or projected earnings growth rate information. I&E St. 2 at 10-11; I&E St. 2-SR at 2-3.

The OCA chose to use the same proxy group as selected by the Company. According to the OCA, while different arguments could be raised for the inclusion or exclusion of a particular utility within the proxy group, by using the same proxy group as the Company, the OCA has removed the selection of the proxy group as a variable in analyzing the appropriate rate of return. In the OCA's view, utilizing the Company's proxy group is valuable in focusing on the primary factors driving the cost of equity estimate and in demonstrating why Aqua's conclusions regarding its proposed rate of return are unreasonable. OCA M.B. at 60-61.

Aqua claimed that I&E's decision to exclude Artesian Resources Corporation from its proxy group was erroneous. Aqua submitted that the composition of a proxy group should not be dependent upon whether relevant data is available from a specific source. Rather, Aqua argued, there is other source data available for Artesian Resources Corporation, as set forth in Aqua Exhibit 4-A, such that it should be included in the proxy group used in this proceeding. Aqua M.B. at 110.

Table 3, below, provides a summary of the companies each party proposed to be used in their respective water proxy groups:

Aqua	OCA	I&E
American States Water	American States Water	American States Water
American Water Works Company	American Water Works Company	American Water Works Company
Artesian Resources Corporation	Artesian Resources Corporation	California Water Serv. Group
California Water Serv. Group	California Water Serv. Group	Essential Utilities, Inc.
Essential Utilities, Inc.	Essential Utilities, Inc.	Middlesex Water Company
Middlesex Water Company	Middlesex Water Company	SJW Corporation
SJW Corporation	SJW Corporation	York Water Company
York Water Company	York Water Company	

Table 3: Summary of the Proposed Water Proxy Groups in this Proceeding

Aqua St. 1 at 13; I&E St. 2 at 9; OCA St. 3 at 17.

As discussed below, the ALJ recommended that the Commission adopt the proposals set forth by I&E in setting a cost of equity for Aqua in this proceeding, including the use of I&E's proxy group. R.D. at 77-81. No Party specifically challenged the use of I&E's proxy group in the Exceptions phase of this proceeding. Finding I&E's proxy group criteria to be reasonable, and finding the companies contained therein to be representative of Aqua, we shall adopt I&E's proposed proxy group.

B. Capital Structure Ratios

A utility's capital structure represents how the utility has financed its rate base with different sources of funds. Determining the appropriate capital structure is crucial in developing the weighted cost of capital, which, in turn, determines the overall rate of return in the revenue requirement equation, *supra*. The primary funding sources for the utility are long-term debt and common equity. Additionally, a capital structure may include preferred stock and/or short-term debt. However, the Company is financed only with long-term debt and common equity. I&E St. 2 at 11.

1. Positions of the Parties

Aqua proposed a capital structure of 53.95% common equity and 46.05% long-term debt, which represents its projected capital structure as of the end of the FPFTY ending March 31, 2023. Aqua explained that it based its FPFTY capital structure upon its actual capital structure at the HTY ended March 31, 2021 and made adjustments to reflect events that will occur during the FTY and FPFTY. Aqua continued that these changes are to finance the Company's net rate base additions of approximately $557 million in the FTY and FPFTY. Specifically, Aqua included additional debt of $190 million to be issued in the FPFTY. In addition, Aqua projected the retention of approximately $269.7 million in earnings over the period, and the infusion of an additional $100 million in equity. Aqua M.B. at 102.

Aqua argued that the Commission has determined in previous proceedings that a utility's actual capital structure should be utilized unless there is a finding that it is atypical or too heavily weighted to either the debt or equity side. Aqua M.B. at 103-04 (citing *2012 PPL Order*). According to Aqua, this policy was recently affirmed in *Columbia Gas*. Aqua insisted that its common equity ratio falls within the ranges of the common equity ratios in its Water Group and in the proxy groups employed by both the OCA and I&E, and cannot be deemed "atypical." Accordingly, Aqua submitted that it is appropriate to use the Company's actual capital structure for ratemaking purposes. Aqua M.B. at 102, 103-07; Aqua R.B. at 42-45.

I&E recommended that the Commission adopt Aqua's proposed capital structure. According to I&E, the Company's claimed capital structure falls within the range of the 2020 capital structures for the companies in I&E's proxy group. I&E explained that the 2020 capital structures represented the most recent information available at the time of I&E's analysis. I&E further noted that the most recent five-year average range contains individual company capital structure ratios ranging from 39.93%

to 56.33% debt and 43.67% to 59.54% common equity, with an overall five-year average of 46.88% debt and 53.05% common equity. According to I&E, this five-year average capital structure is almost identical to the Company's claimed capital structure. I&E M.B. at 44; I&E St. 2 at 12.

In contrast, the OCA submitted that the Commission has the discretion to employ a hypothetical capital structure if the utility's actual capital structure is unreasonable or uneconomical. OCA M.B. at 57 (citing *Big Run Tel. Co. v. Pa. PUC*, 449 A.2d 86, 89 (Pa. Cmwlth. 1982) (*Big Run*)). Applying this to the instant proceeding, the OCA explained that it opposed the Company's proposed capital structure because the common equity ratio of nearly 54% that Aqua seeks to employ is significantly higher than the average of the eight regulated water utilities in its Water Group. According to the OCA, because this results in an unreasonably high cost of capital estimate, the Commission must impose a capital structure upon the Company that will not unfairly penalize its ratepayers and that is more reflective of one that might exist in a competitive environment. In the OCA's view, the use of a hypothetical capital structure will reduce costs to ratepayers, as opposed to increasing costs. OCA M.B. at 56, 58-59.

Specifically, the OCA sought to use a hypothetical capital structure of 50% common equity and 50% long-term debt to set rates for Aqua. The OCA explained that such a capital structure is reflective of the average capital structures of the companies in the Water Group used by Aqua. In addition, the OCA pointed out that the average debt ratio of the Company's Water Group is 50%, based on 2020 data. OCA R.B. at 28-29; OCA St. 3-SR at 3-4.

2. Recommended Decision

The ALJ recommended that Aqua's proposed capital structure of 53.95% common equity and 46.05% long-term debt be adopted. The ALJ acknowledged the

OCA's observation that the Commission has the discretion to employ a hypothetical capital structure where a company's actual capital structure is unreasonable or uneconomical. However, the ALJ concurred with Aqua that the legal standard in Pennsylvania for deciding whether to use a hypothetical capital structure is not whether the utility's capital structure deviates from the "average" capital structure of the proxy group, but whether the capital structure is outside the range of the capital structures of the companies in the proxy group. The ALJ echoed I&E that Aqua's claimed capital structure is within the range of the capital structures in I&E's proxy group and is, therefore, reasonable. R.D. at 77.

3. OCA Exception No. 8 and Replies

In its Exception No. 8, the OCA remains of the opinion that a hypothetical capital structure consisting of 50% common equity and 50% long-term debt should be utilized in setting just and reasonable rates for Aqua. The OCA reasons that Aqua's proposed capital structure is inappropriate because the equity component is 400 basis points (*i.e.,* 4.00%) higher than the average of the companies in Aqua's Water Group. Thus, the OCA submits that if the Commission were to adopt the ALJ's recommendation, then this would result in a return on equity and a revenue requirement that are too favorable to Aqua's investors because they would impose an unfair cost burden to the Company's ratepayers. The OCA reiterates its argument that the Commission has exercised its discretion to direct a utility to use a hypothetical capital structure where the utility's management adopts an actual capital structure that imposes an unfair cost burden on ratepayers. As such, the OCA claims that the Commission should reverse the recommendation of the ALJ and exercise its discretion in this current proceeding. The OCA insists that its proposed hypothetical capital structure will adequately balance the interests of both the Company's ratepayers and investors and will reflect a capital structure that might exist in a competitive environment. OCA Exc. at 10-11.

In its Replies to Exceptions, Aqua rebuts that the ALJ correctly recommended that the OCA's proposed hypothetical capital structure should be rejected. Aqua submits that the OCA's position disregards long-established Commission precedent for deciding whether to use a hypothetical capital structure in setting rates. Namely, Aqua restates its position that the Commission has consistently held that if a utility's actual capital structure is within the range of a similarly situated proxy group of companies, then rates are set based on the utility's actual capital structure. Aqua maintains that its capital structure falls within the range of the companies in its Water Group and should be adopted. Aqua R. Exc. at 7.

In its Replies to Exceptions, I&E declines to offer a specific reply to the OCA's Exception No. 8. Rather, I&E simply reinforces its position that the Company's claimed capital structure should be adopted. I&E R. Exc. at 15.

4. Disposition

We shall deny the OCA's Exception No. 8 and adopt the ALJ's recommendation to use Aqua's actual capital structure, consistent with the following discussion.

Like the ALJ, we note the veracity of the OCA's statement that the Commission has the discretion to employ a hypothetical capital structure where a company's actual capital structure is unreasonable or uneconomical. However, because we find no merit in the OCA's arguments that the Company's actual capital structure is either unreasonable or uneconomical, we shall decline to exercise this discretion in the instant proceeding.

The use of an actual capital structure represents the Company's decision, in which it has full discretion, on how to capitalize its rate base. This actual capitalization forms the basis upon which Aqua attracts capital. *See 2012 PPL Order* at 68; *Columbia Gas* at 116; *PECO Gas* at 144. For example, Aqua's long-term debt cost rate of 4.00%, discussed, *infra,* which all Parties have accepted for ratemaking purposes, fully reflects the capitalization determined by the Company to be appropriate.

In both *Columbia Gas* and *PECO Gas,* we reaffirmed the legal standard in Pennsylvania for deciding whether to use a party's proposed hypothetical capital structure in setting rates, *i.e.*, we stated that if a utility's actual capital structure is within the range of a similarly situated proxy group of companies, rates are set based on the utility's actual capital structure. *Columbia Gas* at 116; *PECO Gas* at 144. More specifically, we reaffirmed this standard, which we articulated in the *2012 PPL Order,* as follows:

> Absent a finding by the Commission that a utility's actual capital structure is atypical or too heavily weighted on either the debt or equity side, we would not normally exercise our discretion with regard to implementing a hypothetical capital structure.

Columbia Gas at 116-17; *PECO Gas* at 144-45 (citing *2012 PPL Order* at 68).

We find that the record developed in this proceeding lends support to the same conclusion that we reached in the *2012 PPL Order*, *Columbia Gas*, and *PECO Gas.* First, we note the testimony of I&E that Aqua's claimed capital structure falls within the range of the 2020 capital structures for the companies in I&E's proxy group, which we have determined to be the companies that are most representative of Aqua. The 2020 range consists of long-term debt ratios ranging from 39.93% to 56.33% and equity ratios ranging from 43.67% to 59.54%, with a five-year average of 46.88% for long-term debt and 53.05% for common equity. As I&E observed, the five-year average capital structure of the proxy group is nearly identical to the Company's claimed capital structure. *See* I&E St. 2 at 12.

Next, we note that using I&E's proposed proxy group, Aqua's witness, Mr. Paul R. Moul, provided the below chart in his rebuttal testimony, which we have set forth in Table 4. Namely, this chart details the forecasted common equity ratios for 2024 through 2026 for each of the companies in I&E's proposed proxy group, as outlined in *Value Line* as of October 8, 2021.

Company	**Projected Common Equity Ratio for 2024-2026**
American States Water	46.50%
American Water Works	39.00%
California Water Serv. Group	59.00%
Essential Utilities, Inc.	45.00%
Middlesex Water Company	60.00%
SJW Corporation	62.00%
York Water Company	62.50%
Average	**53.43%**

Table 4: Forecasted Common Equity Ratios for 2024 through 2026 for I&E's Water Proxy Group Companies

Aqua St. 7-R at 9-10. In comparing the Company's proposed common equity ratio to the forecasted common equity ratios of I&E's proxy group, we find that the above table lends support to Aqua's argument that its proposed actual common equity ratio falls well within the range of the forecasted common equity ratios of similarly situated water companies. In this regard, the data in this table demonstrates that Aqua's proposed common equity ratio of 53.95% is very close to the forecasted average common equity ratio for the entire proxy group of 53.43%. Furthermore, Aqua's proposed common equity ratio is below four of the companies in the I&E proxy group (*i.e.,* California Water Serv. Group, Middlesex Water Company, SJW Corporation, and York Water Company), whose forecasted common equity ratios range from 59.00% to 62.50%.

Based on the forgoing, we find that the record underscores that Aqua's proposed actual capital structure is not atypical and is within the range of reasonableness.

Therefore, we find no basis upon which to impose the OCA's hypothetical capital structure on the Company. Therefore, we shall deny the OCA's Exception No. 8 and adopt the ALJ's recommendation to use Aqua's proposed actual capital structure of 53.95% common equity and 46.05% long-term debt in this proceeding.

C. Cost of Debt

1. Positions of the Parties

Aqua proposed a cost of long-term debt of 4.00%. Aqua submitted that because no Party has challenged this debt cost rate, it should be adopted in the context of Aqua's actual capital structure ratios for debt, *infra*. Aqua M.B. at 107.

I&E noted that given Aqua's proposed capital structure ratios, *supra,* Aqua's proposal results in a weighted cost of debt of 1.84%. I&E submitted that Aqua's claimed cost rate of long-term debt is reasonable because it is representative of the industry, and it falls within I&E's proxy group's implied long-term debt cost range of 2.69% to 5.67% with an average implied long-term debt cost of 4.04%. I&E M.B. at 44-45.

2. Recommended Decision

The ALJ observed that no Party disagreed with Aqua's proposal to use its actual cost of long-term debt of 4.00%. Therefore, the ALJ recommended that the Company's proposal be adopted. R.D. at 77.

3. Disposition

No Party filed Exceptions on this issue with regard to the ALJ's recommendation. Finding the ALJ's recommendation to be reasonable, we shall adopt it without further comment. Accordingly, we shall approve a long-term debt cost rate of 4.00% for Aqua in this proceeding.

D. Cost of Common Equity

In the instant proceeding, Aqua, I&E, and the OCA presented a position on a reasonable ROE. The Parties' positions were generally developed through comparison groups' market data, costing models, reflection or rejection of risk and leverage adjustments, and a management performance adjustment, as will be further addressed, *infra*. Table 5, below, summarizes the cost of common equity claims made and the methodologies[61] used by the Parties in this proceeding:

Party	DCF	CAPM	RP	CE	ROE
Aqua	11.78%	13.40%	10.50%	12.80%	10.75%
I&E	8.90%	9.89%			8.90%
OCA	8.00%	6.40%			8.00%

Table 5: Summary of Each Party's proposed ROE

[61] As will be discussed below, in the following chart, DCF refers to the Discounted Cash Flow Method, CAPM refers to the Capital Asset Pricing Model, RP refers to the Risk Premium Method, and CE refers to the Comparable Earnings Method.

1. Methods for Determining the Cost of Common Equity

a. Discounted Cash Flow Method (DCF)

The DCF method applied to a proxy group of similar utilities, has historically been the primary determinant utilized by the Commission in determining the cost of common equity. *Pa. PUC v. City of Lancaster – Bureau of Water*, Docket No. R-2010-2179103 (Order entered July 14, 2011) at 56; *Pa. PUC v. PPL Electric Utilities Corp*., Docket No. R-00049255 (Order entered December 22, 2004) (*2004 PPL Order*) at 59. The DCF model assumes that the market price of a stock is the present value of the future benefits of holding that stock. These benefits are the future cash flows of holding the stock, *i.e.*, the dividends paid and the proceeds from the ultimate sale of the stock. Because dollars received in the future are worth less than dollars received today, the cash flow must be "discounted" back to the present value at the investor's rate of return.

(1) Positions of the Parties

Aqua's DCF model consists of a dividend yield plus a growth rate plus a leverage adjustment. The Company's DCF cost of common equity is 11.78%, which is calculated as follows:

	Dividend +	Growth +	Leverage =	DCF Cost Rate
Aqua DCF	1.94%	7.50%	2.34%	**11.78%**

Aqua's dividend yield calculation used six-month average dividend yields for the Water Group resulting in a dividend yield of 1.87%. The Company then adjusted this dividend yield for expected growth in dividends to produce a final dividend yield of 1.94%. Aqua St. 7 at 24.

Aqua principally relied upon five-year forecasts of earnings per share growth, as earnings growth appropriately measures the growth in price over time. The Company used three separate sources of projected earnings growth: IBES/First Call, Zacks, and *Value Line*. From this data, and applying judgment, the Company recommended a growth rate of 7.50%. Aqua St. 7 at 30.

As will be discussed in more detail below, in Section X.D.2, Aqua also argued that a leverage adjustment should be added to its DCF cost rate. The Company explained that a leverage adjustment is designed to adjust the DCF cost rate for the different percentage of debt in the capital structure calculated at market values of equity and long-term debt (the values used by investors) as compared to the percentage of debt in the capital structure at book value (the values used in the ratemaking process) to account for the greater financial risk created by a higher debt ratio when that cost rate is applied to a book value capitalization in utility proceedings. The Company argued that an unadjusted DCF greatly understates the cost of common equity because the proportion of market value common equity in the Water Group's capitalization was significantly higher than its proportion measure at book value. Aqua calculated an 11.78% return on equity using market value weighting. The Company calculated its leverage adjustment by subtracting the DCF return of 9.44% from the market value cost of equity of 11.78%. Accordingly, Aqua proposed to add a leverage adjustment of 234 basis points (*i.e.*, 2.34%) to its DCF cost of common equity calculation. Aqua St. 7 at 30-34, Sch. 10.

At the outset, I&E claimed the DCF method is in accordance with the Commission's historical use of the DCF as the primary methodology to determine a utility's cost of equity. I&E noted its recommendation is consistent with the methodology historically used by the Commission in base rate proceedings, most recently acknowledged in *Columbia Gas*. In I&E's view, it is now well settled that the Commission prefers the use of the DCF as the primary methodology in setting a utility's ROE in a rate case. Through the methodologies outlined in its testimony, I&E calculated that the DCF methodology produces a cost of common equity of 8.90%. I&E M.B. at 45-46.

I&E employed the standard DCF model, $k = D_1/P_0 + g$, where k is the cost of common equity, D_1 is the dividend expected during the year, P_0 is the current price of the stock, and g is the expected growth rate of dividends. I&E argued that a representative dividend yield must be calculated over a time frame that avoids problems of both short-term anomalies and stale data. I&E's dividend yield calculation placed equal emphasis on the most recent spot and the 52-week average dividend yields, resulting in an average dividend yield of 1.75%. I&E St. 2 at 21-22.

I&E used earnings growth forecasts to calculate its expected growth rate. I&E's earnings forecasts are developed from projected growth rates using five-year estimates from established forecasting entities for its proxy group of companies, yielding an average five-year growth forecast of 7.15%. I&E St. 2 at 23.

I&E submitted that Aqua's proposed leverage adjustment should be rejected because investors base their decisions on book value debt and equity ratios for regulated utilities, and not on market values, rendering any adjustment unnecessary. I&E also submitted that recent Commission precedent supports rejecting a utility's request for a leverage adjustment. I&E St. 2 at 42-44.

The OCA proposed an 8.00% DCF cost of equity. The OCA utilized a Quarterly Approximation DCF model that accounts for quarterly growth of dividends, instead of annual growth. OCA St. 3 at 25; OCA Exh. DJG-6. To obtain the stock price (P_0), the OCA selected a 30-day average for each company in the proxy group. OCA St. 3 at 27. The dividend term used by the OCA in the Quarterly Approximation DCF Model is the current quarterly dividend per share (d_0). The OCA states the model assumes that each quarterly dividend is greater than the previous one by $(1 + g)^{0.25}$. OCA St. 3 at 28.

Like I&E, the OCA submitted that Aqua's proposed leverage adjustment should be rejected. The OCA reasoned that Aqua based the leverage adjustment on its inaccurate and incorrect use of the Hamada formula. OCA St. 3 at 35-37.

b. Capital Asset Pricing Model (CAPM)

The CAPM uses the yield on a risk-free interest-bearing obligation (such as those issued by the U.S. Treasury) plus a rate of return premium that is proportional to the systematic risk of an investment. To compute the cost of equity with the CAPM, three components are necessary: a risk-free rate of return (Rf), the beta measure of systematic risk (β), and the market risk premium (Rm-Rf) derived from the total return on the market of equities reduced by the risk-free rate of return. The CAPM specifically accounts for differences in systematic risk (*i.e.*, market risk as measured by the beta) between an individual firm or group of firms and the entire market of equities.

Aqua, I&E, and the OCA each used the following standard CAPM formula:

$$k = R_f + \beta(R_m - R_f)$$

Where: k = the cost of equity and the remaining terms are as defined above.

(1) Positions of the Parties

Aqua determined the CAPM cost of equity as follows:

	R_f +	β x	$(R_m - R_f)$+	Size =	CAPM Cost Rate
Aqua CAPM	2.75%	1.07	9.00%	1.02%	**13.40%**

Aqua determined the risk-free rate to be 2.75% based on current and forecasted long-term Treasury Bond yields. Aqua also calculated a 9.00% premium for the risk/market premium component of the CAPM analysis, based upon the average historical data and forecasted returns. The Company used a leverage adjusted beta of 1.07, to reflect the financial risk associated with the rate setting capital structure that is measured at book value. Additionally, Aqua included a 1.02% size adjustment to its CAPM analysis. Therefore, Aqua calculated a CAPM cost of common equity of 13.40% for its Water Group. Aqua St. 7 at 41-43.

In calculating the CAPM cost of common equity, I&E chose the risk-free rate of return (Rf) of 1.98% from the projected yield on ten-year Treasury bonds as the most stable risk-free measure. I&E explained that its decision to use ten-year Treasury bonds balanced out issues related to the use of thirty-year long-term bonds and short-term T-Bills. I&E used the average of its proxy group betas from *Value Line* of 0.78. To arrive at a representative expected return on the overall stock market, I&E stated that it reviewed *Value Line*'s 1700 stocks and the S&P 500. I&E explained that the result of the overall stock market returns based on its CAPM analysis is 12.14%, which yields a cost of equity result of 9.89%. I&E St. 2 at 24-27. According to I&E, the 9.89% cost of equity from its CAPM should only be used as a point of comparison to its 8.90% DCF cost of capital. I&E St. 2 at 28.

In response to Aqua's CAPM analysis, I&E submitted that the Company used the same leverage adjustment for inflating its CAPM betas from 0.78 to 1.07 that was used for its DCF calculation. I&E asserted that such enhancements are unwarranted for beta in a CAPM analysis for the same reasons that enhancements are unwarranted for DCF results. In addition, I&E disagreed with Aqua's 102-basis point size adjustment applied to its CAPM analysis. I&E St. 2 at 47-49.

In its CAPM analyses, the OCA used a thirty-day average of thirty-year Treasury Bond yields to calculate a risk-free rate of 2.02%. OCA St. 3 at 40. The OCA found an average beta of 0.79 for its proxy group. OCA Exh. DJG-8. To find the equity risk premium, the OCA relied on expert surveys and an implied equity risk premium. The OCA calculated the implied equity risk premium by subtracting the risk-free rate from an implied expected market return. Using this data, the OCA concluded the proper CAPM return on equity is 6.4%. OCA St. 3 at 44-48.

c. Risk Premium (RP) Model and Comparable Earnings (CE) Model

Under the Risk Premium approach, the cost of equity capital is determined by corporate bond yields plus a premium to account for the fact that common equity is exposed to greater investment risk than debt capital. The RP method determines the cost of equity by summing the expected public utility bond yield and the return of equities over bond returns (*i.e.*, the "equity premium") over a historical period, as adjusted to reflect lower risk of utilities compared to the common equity of all corporations. Aqua M.B. at 117-118; Aqua St. 7 at 35-36.

The CE method estimates a fair return on equity by comparing returns realized by non-regulated companies to the returns that a public utility with similar risk characteristics would need to realize in order to compete for capital. According to Aqua, because regulation is a substitute for competitively determined prices, the returns realized by non-regulated firms with comparable risks to a public utility provide useful insight into investor expectations for public utility returns. The firms selected for the CE method should be companies whose prices are not subject to cost-based price ceilings (*i.e.*, non-regulated firms) so that circularity is avoided. The CE method utilizes the concept of opportunity cost, wherein investors will likely dedicate their capital to the investment offering the highest return with similar risk to alternative investments. Aqua M.B. at 121; Aqua St. 7 at 43-44.

(1) Positions of the Parties

The Company determined the RP cost of common equity to be 10.50% as follows:

	Interest Rate +	Risk Premium =	RP Cost Rate
Aqua RP	3.75%	6.75%	**10.50%**

Aqua explained that the interest rate in its calculation is an estimated interest rate for A-rated public utility bonds, while the risk premium in its calculation is the average of historical risk premiums of long-term corporate bonds.

Aqua also performed a comparable earnings analysis based on the principle set forth by the United States Supreme Court that a utility should be afforded an opportunity to earn a return on its property equal to that being earned on investments in other businesses with corresponding risks and uncertainties. *See Bluefield, supra.* The Company's analysis identified non-regulated companies with comparable risk and produced a cost rate of 12.80%. Aqua M.B. at 121; Aqua St. 7 at 46.

I&E submitted that neither the RP method nor the CE method should be used in determining an appropriate cost of equity in a base rate proceeding. I&E pointed out that the RP method is a simplified version of the CAPM model. However, I&E noted that while the CAPM directly measures the systematic risk of the company through the use of beta, the RP method does not measure the specific risk of the company. As to the CE method, I&E charged that it is not market-based and relies upon historic accounting data. Further, I&E contended that under the CE method, the most problematic issue is determining what constitutes comparable companies. I&E St. 2 at 15, 19-20.

The OCA claimed that the Commission should disregard Aqua's RP and CE analyses. The OCA argued that Aqua's RP and CE analyses are flawed by the Company's choice of inputs and inclusion of adjustments. OCA M.B. at 73-75.

Therefore, I&E and the OCA recommended using the DCF method as the primary method to determine the cost of common equity and using the CAPM method as a comparison to the DCF results. Both I&E and the OCA pointed out that the DCF method has historically been the Commission's preferred method of setting common equity cost rates. I&E M.B. at 45; OCA M.B. at 59-60.

d. Recommended Decision

The ALJ agreed with I&E's proposal to calculate the recommended return on equity pursuant to the DCF methodology, using the CAPM as an alternate means to verify the reasonableness of the return on equity. The ALJ recommended the Commission approve the use of the DCF method as the primary method to determine the cost of common equity, consistent with the methodology commonly endorsed by the Commission in base rate proceedings. R.D. at 77-78.

e. Aqua Exception Nos. 1.1 and 1.4; OCA Exception No. 9 and Replies

In its Exception No. 1.1, Aqua contends that the ALJ erred by not analyzing the dividend yield and growth rate components of I&E's DCF methodology. Aqua claims I&E's use of spot prices, which were near the 52-week high of the proxy group, lowered its dividend yield. Aqua states that using only I&E's 52-week average dividend yield of 1.87% is very close to its own six-month average dividend yield of 1.94%. According to Aqua, I&E's growth rate is unreasonable because it improperly includes an extremely low growth rate of 3.6% for Middlesex Water. Citing *Columbia Gas*, Aqua notes that I&E excluded a high data point from its growth rate calculation on the basis that it was outside the norm and distorted the DCF results. If high growth rates can be excluded, as I&E has done in the past, then Aqua argues that low growth rates must also be excluded from I&E's DCF calculation. Aqua determines that removing the 3.6% growth rate for Middlesex Water from I&E's growth rate calculation results in a 7.74% growth rate. By adopting Aqua's dividend yield and calculating I&E's growth rate without Middlesex Water, the Company claims a DCF result of 9.68%. Aqua Exc. at 5-7.

In its Exception No. 1.4, Aqua maintains the ALJ inaccurately asserts that I&E used the DCF method and the CAPM method to arrive at its recommended ROE of 8.9%. Although I&E did prepare a CAPM analysis, Aqua states I&E ignored its 9.89% CAPM return on equity result. Aqua insists the Commission also recognizes the importance of informed judgment and information provided by other models. For example, Aqua submits that in the *2012 PPL Order,* the Commission considered the CAPM and RP methods instead of DCF-only results. Aqua claims one of the flaws of the DCF in a rising interest rate environment is that it lags in responding to interest rate changes. Therefore, Aqua proposes the CAPM and RP methods are necessary to consider in a time of rising interest rates because both methods directly reflect forecasts of interest rates and bond yields. In conclusion, Aqua argues that the ALJ's reliance upon I&E's DCF result should be rejected and the Commission should consider and reflect in its ROE determination the results of other methods more attuned to rising interest rates. Aqua Exc. at 10-12.

In its Replies to Aqua's Exceptions, I&E asserts that the ALJ correctly recognized that Commission precedent favors the use of the DCF methodology, as applied by I&E, and that Aqua's DCF calculation included the use of an inflated growth rate and an unnecessary leverage adjustment. According to I&E, Aqua has erroneously argued that I&E ignored its CAPM result in deriving the I&E ROE recommendation. I&E expresses that it uses the DCF method as the primary methodology to calculate its recommended return on equity while also using the CAPM as a check on the reasonableness of its DCF results. I&E R. Exc. at 2-4.

In its Replies to Aqua's Exceptions, the OCA submits that contrary to Aqua's assertion, the DCF growth rate recommended by the ALJ is not understated. The OCA avers Aqua's argument for increasing the Growth Rate to 7.5% based on excluding the Middlesex Water IBES/First Call growth rate should be denied. OCA R. Exc. at 5-10.

In its Exception No. 9, the OCA claims the ALJ erred by adopting I&E's DCF model. The OCA maintains its Quarterly Approximation DCF model is more reasonable than Aqua's and I&E's DCF calculations because it accounts for quarterly growth of dividends rather than annual growth. Additionally, the OCA argues its Quarterly Approximation DCF model produces higher cost of equity estimates compared with the other DCF Model variations because dividends are compounded quarterly. In estimating the growth rate, the OCA insists it is prudent for U.S. GDP to be a limiting factor for the long-term growth rate input of the DCF model. OCA Exc. at 12-14.

In its reply to the OCA's Exception No. 9, Aqua maintains the ALJ correctly rejected the OCA's DCF method. Aqua insists the OCA uses an arbitrary growth rate and its DCF method should be rejected. Aqua R. Exc. at 8.

In its reply to the OCA's Exception No. 9, I&E supports the ALJ's adoption of its methodology, resulting in an 8.90% ROE. I&E R. Exc. at 15.

f. Disposition

Upon our consideration of the record evidence, we agree with the ALJ's determination that Commission precedent prefers the DCF methodology as applied by I&E. We also are persuaded by the arguments of Aqua that the Commission recognizes the importance of informed judgment and information provided by other ROE models. Therefore, we shall deny Aqua's Exception No. 1.1 and the OCA's Exception No. 9, and grant Aqua's Exception No. 1.4, consistent with the following discussion.

Aqua suggests I&E's use of spot stock prices skewed its dividend yield lower, thus reducing the DCF ROE. However, the record does not include any testimony specifying how I&E may have erred by including spot stock prices when calculating the proxy group dividend yield. The Commission affirmed I&E's DCF methodology in *Columbia Gas* and *PECO Gas*, thereby verifying I&E's use of spot stock prices. We find that I&E's DCF proxy group dividend yield calculation appropriately includes spot stock prices.

Next, Aqua claims I&E's growth rate is low because it includes an unreasonable growth rate for Middlesex Water. Aqua submits that I&E excluded an unreasonable growth rate from a proxy group it used in *Columbia Gas* and should do the same in the instant case. As the OCA points out, the growth rate excluded in *Columbia Gas* was 26.5%, 3.5 times greater than I&E's *Columbia Gas* proxy group average growth rate. OCA R. Exc. 5-6. In the instant case, Middlesex Water's growth rate is 3.6% compared to I&E's proxy group average of 7.15%, less than half of the proxy group average. We do not find Middlesex Water's growth rate to be unreasonably low and, as such, it was appropriately included in I&E's DCF growth rate calculation.

The OCA claims the ALJ erred by not adopting its Quarterly Approximation DCF model. Like Aqua, we find the OCA's Quarterly Approximation DCF methodology to be unconventional and that it includes flaws with both its dividend yield and growth rate calculations. Aqua M.B. 126-128. Additionally, we find the OCA's Quarterly Approximation DCF methodology to be inconsistent with the DCF methodology affirmed in both *Columbia Gas* and *PECO Gas*. Therefore, we find the ALJ did not err by rejecting the OCA's Quarterly Approximation DCF methodology.

We are persuaded by the arguments of Aqua that the ALJ erred by concluding I&E used its DCF *and* CAPM results to determine Aqua's ROE. In this regard, we note that although I&E did use its CAPM as a comparison to its DCF result, it made no CAPM based adjustment to its final ROE recommendation. I&E M.B. at 47. As Aqua points out, *infra,* the U.S. economy is currently in a period of high inflation. To help control rising inflation, the Federal Open Market Committee has signaled that it is ending its policies designed to maintain low interest rates. Aqua Exc. at 9. Because the DCF model does not directly account for interest rates, consequently, it is slow to respond to interest rate changes. However, I&E's CAPM model uses forecasted yields on ten-year Treasury bonds, and accordingly, its methodology captures forward looking changes in interest rates.

Therefore, our methodology for determining Aqua's ROE shall utilize both I&E's DCF and CAPM methodologies. As noted above, the Commission recognizes the importance of informed judgment and information provided by other ROE models. In the *2012 PPL Order*, the Commission considered PPL's CAPM and RP methods, tempered by informed judgment, instead of DCF-only results. We conclude that methodologies other than the DCF can be used as a check upon the reasonableness of the DCF derived ROE calculation. Historically, we have relied primarily upon the DCF methodology in arriving at ROE determinations and have utilized the results of the CAPM as a check upon the reasonableness of the DCF derived equity return. As such, where evidence based on other methods suggests that the DCF-only results may understate the utility's ROE, we will consider those other methods, to some degree, in determining the appropriate range of reasonableness for our equity return determination. In light of the above, we shall determine an appropriate ROE for Aqua using informed judgement based on I&E's DCF and CAPM methodologies.

Accordingly, we shall deny Aqua's Exception No. 1.1 and the OCA's Exception No. 9, and shall grant Aqua's Exception No. 1.4

2. Leverage Adjustment and Management Performance

a. Positions of the Parties

As previously noted, Aqua argued that a leverage adjustment should be added to its DCF cost rate. In addition, Aqua proposed to add a management effectiveness adjustment to its ROE claim. Both I&E and the OCA opposed the addition of a leverage adjustment or any allowance for management effectiveness.

As noted above, Aqua claimed that a utility that has a stock price above its book value and has an embedded cost of debt that is different from its marginal cost of debt has a market value or capitalization of its equity that is greater than the book value of its equity. Thus, Aqua explained, when an investor purchases equity at the market price (*i.e.,* the price used in the DCF model), the percentage of equity in the market capitalization is greater than the percentage of equity at book value. According to the

Company, under such circumstances, the DCF cost rate based on market prices must be adjusted upward to reflect the greater financial risk created by a higher debt ratio when that cost rate is applied to a book value capitalization in utility rate proceedings. Aqua M.B. at 113.

Aqua noted that the Commission has applied a leverage adjustment in cases in which it believes market conditions have resulted in an understated DCF cost rate. In support of this argument, Aqua cited to several previous rate cases before the Commission, including the *2004 PPL Order*, in which the Commission applied a leverage adjustment of forty-five basis points. Aqua M.B. at 112-13. Aqua further claimed that the Commonwealth Court has held that the decision of whether to adopt a leverage adjustment is within the Commission's discretion. *Id.* (citing *Popowsky v. Pa. PUC*, 868 A.2d 606, 612-13 (Pa. Cmwlth. 2004) (*2004 PA American*)).

According to Aqua, the market conditions that were present in the above rate cases also exist in this current proceeding. Aqua pointed to, *inter alia,* the high inflation rate that is currently present in the economy. Aqua reasoned that higher inflation expectations point to higher interest rates, which will contribute to higher capital costs prospectively, given that higher inflation results in greater risk of recovery of operating costs and greater volatility of earnings. In turn, Aqua insisted that the resulting increased capital costs warrant its requested leverage adjustment of 234 basis points. Aqua M.B. at 111, 117; Aqua St. 7 at 35.

As noted above, the Company also proffered that it demonstrated strong performance in the area of management effectiveness, such that it should be recognized by the Commission. Thus, Aqua sought an upward adjustment to its cost of equity for management effectiveness. Although the Company did not quantify what it believes to be an appropriate level of additional basis points for management performance,[62] it nonetheless claimed that in accordance with Section 523 of the Code, 66 Pa. C.S. § 523, the Commission is required to consider management effectiveness in setting a utility's rates. According to Aqua, nothing in Section 523 of the Code requires a finding that a utility must outperform all other utilities in the Commonwealth or that a utility's programs not be funded by customers before it is eligible for an increment to the rate of return for management performance. Aqua M.B. at 121, 128-29.

Aqua argued that it is committed to providing safe and reasonable service for the benefit of its communities and the environment. Aqua stated that it continues to assist the Commonwealth in dealing with the problems created by small, troubled, or non-viable water and wastewater systems. Aqua submitted that it provides high quality service and has implemented numerous programs designed to enhance the service it provides to customers. In support of these claims, Aqua highlighted that: (1) it maintains a strong, constant focus on water quality by providing filtration for all surface water sources and disinfection for all ground water sources, and by maintaining a central water quality laboratory in which it regularly takes water samples from its systems and responds promptly to water quality issues; (2) has acquired various water and wastewater systems that are in need of substantial improvement, has made larger scale plant upgrades that were beyond the capability of prior owners and/or operators, and has agreed to be a receiver for other troubled water systems under the provisions of Section 529 of the Code, 66 Pa. C.S. § 529; (3) has taken proactive measures to achieve its goal of providing twenty-four hour per day uninterrupted service to customers including undertaking extraordinary remediation and reconstruction efforts of the systems it has undertaken as a

[62] While Aqua did not quantify what it believes to be an appropriate amount of additional basis points for management effectiveness, it did highlight that the Commission awarded the Company an upward adjustment of twenty-two basis points for management effectiveness in *Pa. PUC v. Aqua Pa., Inc.*, Docket No. R-00072711 (Order entered July 31, 2008) (*2008 Aqua Order*). Aqua M.B. at 115.

receiver; (4) seeks to contain operating costs by reviewing staffing needs and operating procedures to reduce operating expenses and by proactively taking advantage of refinancing opportunities and lowered interest rates on long-term debt; (5) has leveraged its size and operational abilities to develop rates that are just and reasonable, while also prudently investing in needed capital in the utility infrastructure serving its customers; (6) has successfully provided its water and wastewater services during the COVID-19 pandemic without any interruption, while furnishing a safe workplace for its essential employees; (7) has proactively implemented changes to its low-income program, and policies to help customers who have been impacted by the pandemic, including providing credits to its low-income customers; (8) has assisted other water and wastewater systems during the pandemic; (9) has provided its customers with a high level of customer service, including rolling out technology designed to improve customers' ability to be advised of, and track service disruptions; (10) has maintained its "A Helping Hand" low-income customer assistance program to help facilitate the payment of water bills by its low-income residential customers; (11) continues to embark on substantial capital programs intended to ensure long-term viability by rehabilitating its underground piping infrastructure; (12) has taken advantage of key tax programs to ensure the lowest possible cost of service for its customers; and (13) has taken environmental initiatives, including seeking to minimize its purchased power costs and to improve its carbon footprint to ensure that it is being a good steward of the environment. Aqua M.B. at 129-37.

In contrast, I&E recommended that the Commission reject both the Company's request for a leverage adjustment and its request for a management performance adjustment. With regard to the Company's proposed leverage adjustment, I&E took the position that the Company's proposal was inappropriate for several reasons. First, I&E claimed that the Company's proposal is not supported by academic journals, textbooks, or other literature, and that rating agencies assess financial risk based upon a company's financial statements, and not its market capital structure. Second, I&E cited to several recent rate cases to illustrate that Commission precedent favors rejecting a utility's request for a leverage adjustment. Third, I&E posited that a leverage adjustment would unduly burden the Company's ratepayers. In this regard, I&E claimed that awarding the Company a leverage adjustment of 234 basis points would cause Aqua's ratepayers to fund an additional amount of $68,578,855 annually to cover the increase of an inflated rate of return along with the associated impact resulting from increases to income taxes, gross receipts tax, uncollectibles, and assessments. I&E M.B. at 51-54.

As to the Company's request for an upward adjustment in recognition of management effectiveness, I&E likewise contended that no such adjustment is warranted. In this regard, I&E provided that the true measure of whether a utility has exhibited strong management performance is whether the utility earns a higher return through the efficient use of resources and cost cutting measures. I&E continued that the increased income resulting from cost savings and true efficiency in management and operations is to be passed on to shareholders. I&E opined that the initiatives the Company cited to in support of its request for a management effectiveness adjustment demonstrate nothing more than the Company meeting the requirements outlined in Section 1501 of the Code, 66 Pa. C.S. § 1501, that it must provide adequate, efficient, safe, and reasonable service. In I&E's view, neither Aqua, nor any other utility should be awarded additional basis points to their ROE for simply meeting the requirements set forth in Section 1501. I&E M.B. at 47-48.

I&E also submitted that if the Company is as effective at controlling operating and maintenance costs as it argues, those savings should flow through to its ratepayers and/or investors. At the same time, I&E contended that Aqua's claimed savings to its ratepayers would likely be offset by the addition of basis points for management performance, as ratepayers would have to fund the additional costs. I&E reasoned that this would defeat the purpose of cutting expenses to benefit ratepayers. I&E M.B. at 49-50. Further, I&E cited to *Columbia Gas* wherein the Commission upheld the finding of ALJ Katrina L. Dunderdale that Columbia's management performance adjustment should be denied in light of the ongoing COVID-19 pandemic, noting that Columbia's proposal would defeat the purpose of cutting expenses to benefit ratepayers, particularly during a period in which many ratepayers have experienced reduced income from job loss or reduction in hours. *Id.* at 50 (citing *Columbia Gas* at 134). I&E posits that the Commission should reach a similar conclusion in this current proceeding. I&E M.B. at 50.

The OCA echoed the position of I&E that neither the Company's proposed leverage adjustment nor its proposed management effectiveness adjustment should be granted. The OCA acknowledged Aqua's statement that, as set forth in the Commonwealth Court's decision in *2004 PA American*, the decision of whether to adopt a leverage adjustment is within the Commission's discretion and is made on a case-by-case basis. OCA M.B. at 66. However, the OCA averred, *inter alia,* that the Commission typically only applies a leverage adjustment in cases in which market conditions have resulted in a DCF cost rate that is understated. *Id.* (citing *2012 PPL Order* at 120). The OCA opined that the opposite conditions exist in this current proceeding such that any leverage adjustment would be unnecessary and would be contrary to the public interest. OCA M.B. at 66-67.

According to the OCA, the primary reason for Aqua's inclusion of a leverage adjustment is that it seeks a higher return on equity than what the record supports. The OCA submits that although the Company cited the prospect of risks to investors, the Company failed to note that as a public utility operating in a monopoly environment, it faces less risk than the average company, which operates in a competitive marketplace. In addition, the OCA argued that in citing the potential risks to its investors, Aqua failed to acknowledge the additional risks that would be imposed on its ratepayers if it were awarded a leverage adjustment. Thus, the OCA claimed that the Company's request should be disregarded by the Commission. OCA M.B. at 67-68; OCA R.B. at 31-33.

Likewise, the OCA argued that the Company's request for an upward adjustment to its ROE for management performance is wholly unsupported. According to the OCA, Aqua has not conducted any comparative analyses to determine if the Company's management performance is superior to that of other regulated utilities, including those in its proxy group. To the contrary, the OCA claimed that the record thoroughly demonstrates that Aqua's management has not performed effectively in a variety of metrics, including but not limited to water quality, wastewater treatment compliance, system reliability, cost containment, rates, COVID-19 response, customer service, low-income customer assistance programs, infrastructure rehabilitation, tax programs, and environmental initiatives. As such, the OCA claimed that there is no basis for awarding a rate of return higher than Aqua's estimated cost of equity. OCA M.B. at 75-76; OCA R.B. at 34-35.

b. Recommended Decision

The ALJ concluded that Aqua has failed to justify that the addition of a leverage adjustment to its DCF cost calculation would be appropriate. Thus, the ALJ recommended that the Company's proposed leverage adjustment of 234 basis points be denied. R.D. at 78-79.

The ALJ also concurred with the positions of I&E and the OCA that Aqua should not be awarded any upward adjustment for strong management performance. First, the ALJ found that although it is true that the Company has been a strong partner with the Commission in acquiring troubled water systems, it has also acquired water and wastewater systems that were not troubled and has asked its existing customer base to help finance the costs to serve its newly acquired customers through base rates, reconcilable surcharge mechanisms, and/or its Distribution System Improvement Charge (DSIC). Thus, the ALJ concluded that the Company's claimed savings to ratepayers would likely be offset by the addition of basis points for management performance, as ratepayers would need to fund the additional costs. In the ALJ's view, this would defeat the purpose of cutting expenses to benefit ratepayers. R.D. at 79-80.

Next, the ALJ concluded that although the Commission has rejected the notion that no rate increases are appropriate during the COVID-19 pandemic, it is also not appropriate to demand more from ratepayers than necessary to meet the utility's basic needs. The ALJ pointed out that at the public input hearings many of Aqua's customers described the additional economic burdens caused by job loss, elevated family care responsibilities and other hardships resulting from the ongoing effects of the pandemic. According to the ALJ, to permit the Company to seek an additional premium from ratepayers during a pandemic would be inequitable and "tone deaf" given the high level of unemployment experienced by residential customers and the detrimental effect the pandemic has had on small businesses. Thus, the ALJ concurred with I&E that the Commission should apply the same reasoning set forth in *Columbia Gas, supra,* and should deny the Company's request to add basis points to its ROE for strong management performance. R.D. at 80-81.

c. Aqua Exception Nos. 1.2 and 1.6 and Replies

In its Exception No. 1.2, Aqua finds fault with the ALJ's recommendation that the Company's proposed leverage adjustment should be rejected. The Company contends that the ALJ has failed to consider that the Commission has included an adjustment for leverage in instances where the DCF understates the cost of common equity. Aqua insists that such conditions are present in this instant proceeding. Aqua restates its arguments, *supra,* that a leverage adjustment is designed to adjust the DCF cost rate for the different percentage of debt in the capital structure calculated at market values of equity and long-term debt, as compared to the percentage of debt in the capital structure at book value, and to align those risks. Aqua Exc. at 7.

Next, Aqua acknowledges that the Commission has been selective in awarding a leverage adjustment to the DCF cost calculation in rate cases. However, Aqua submits that what is most apparent from the decisions in which the Commission has not adopted a leverage adjustment is that the Commission has concluded that the unadjusted DCF results in such cases do not underestimate the cost of common equity. According to the Company, there is substantial evidence in this instant proceeding to demonstrate that the unadjusted DCF results understate the cost of common equity in the current environment. Thus, Aqua submits that the Commission should reverse the ALJ's recommendation and should award the company a leverage adjustment of 234 basis points, or 2.34%. Aqua Exc. at 7-8.

In its Exception No. 1.6, Aqua claims that in recommending that the Commission reject the Company's request for an upward adjustment to its ROE for strong management performance, the ALJ has disregarded the requirements of Section 523 of the Code, 66 Pa. C.S § 523. Aqua notes that Section 523 directs the Commission to consider the efficiency, effectiveness, and adequacy of service of each utility when determining just and reasonable rates. Aqua argues that while the ALJ concluded that providing additional basis points for effective management may offset cost savings such that it would defeat the purpose of cutting expenses to benefit ratepayers, the Commission has rejected contentions that utilities should not be provided additional basis points for quality utility service in light of Section 523. Aqua insists that the Commission should similarly reject such contentions in this proceeding. Aqua Exc. at 13-14.

Aqua also objects to the ALJ's finding that while the Company has been a strong partner with the Commission in acquiring troubled water systems, it has also acquired systems that were not troubled and has asked existing customers to pay for those acquisitions. Aqua claims that such acquisitions are mutually exclusive. The Company avers that it includes in rate base only those amounts permitted by law. In addition, Aqua insists that cost savings for its ratepayers have been realized through economies of scale associated with its acquisitions. Thus, Aqua submits that incentives to encourage acquisitions and regionalization to reduce the number of troubled water systems in the Commonwealth should not be denied simply because the Company also undertakes acquisitions of some entities that may not be classified as "troubled." Aqua Exc. at 14.

In its Replies to the Exceptions, I&E counters that the ALJ correctly rejected Aqua's proposed leverage adjustment. I&E maintains that Aqua has erroneously argued that there is substantial evidence to demonstrate that the unadjusted DCF results understate the cost of common equity in the current economic environment and that the ALJ appropriately rejected these arguments. I&E R. Exc. at 2.

In a similar fashion, I&E submits that the ALJ properly denied the Company's request for an upward adjustment to its ROE for strong management performance. I&E refutes Aqua's contention that the ALJ disregarded the requirements of Section 523 of the Code. To the contrary, I&E asserts that the ALJ properly considered the record evidence and the arguments presented by all of the Parties and then concluded that awarding the Company a management effectiveness adjustment is not warranted in this proceeding. I&E remains of the opinion that the Commission should reject the Company's request, consistent with its reasoning for rejecting a management performance adjustment in *Columbia Gas.* I&E R. Exc. at 5-6.

The OCA's arguments in its Replies to Exceptions mirror those of I&E with regard to both the leverage adjustment and the management performance adjustment. As to the leverage adjustment, the OCA also adds that the unadjusted DCF results of Aqua, I&E, and the OCA all fall between 8% and 9.07%, indicating a relatively small range resulting from the application of DCF models employed by the Parties' respective expert witnesses. Thus, the OCA submits that the Company's 234 basis point adjustment is unreasonable and creates substantial burdens for consumer ratepayers as subsidizers of investors. In addition, the OCA claims that the Company incorrectly posited that the market-derived cost of equity needs to be adjusted to compensate for the difference in financial risk. The OCA restates its argument that because Aqua is a regulated public utility, it does not have greater financial risk when compared to the average company in the competitive marketplace. OCA R. Exc. at 6-8.

Furthermore, the OCA highlights that the Commission has routinely denied proposed leverage adjustments in rate case proceedings. In the OCA's view, the record evidence in this current proceeding does not support Aqua's request for a leverage adjustment and the ALJ appropriately rejected the Company's request. OCA R. Exc. at 7-8.

As to the Company's Exception No. 1.6, the OCA restates its position that Aqua has been *deficient* in many areas of management performance.[63] The OCA submits that even absent these deficiencies, the provision of safe, adequate, and reliable water and wastewater service is required under Section 1501 of the Code, 66 Pa. C.S. § 1501. As a result, the OCA asseverates that simply meeting these required standards does not constitute exemplary management performance. Otherwise, the OCA reasons, the Commission would be awarding unwarranted additional basis points for management effectiveness to nearly every utility under its jurisdiction. OCA R. Exc. at 8-9.

The OCA also refutes the Company's claim that its acquisition of small, troubled, or non-viable wastewater systems warrants consideration for additional basis points for strong management performance. The OCA points to the ALJ's finding that

[63] As discussed in Section XII.A, *infra,* the OCA, in its Exception No. 23, argues that Aqua's customer satisfaction survey, which indicates that only seventy-three percent of its customers rated their satisfaction as "excellent" or "very good" lends further support for rejecting the Company's request for a management effectiveness adjustment. *See* OCA Exc. at 34-35.

the costs of rehabilitating these systems is passed along to the Company's other ratepayers. According to the OCA, even if the Company's reference to economies of scale proves true, this is not an indicator of effective management performance. Instead, the OCA maintains that such economies are a function of the Company's system. Thus, the OCA asserts that the ALJ properly rejected the Company's request for an upward adjustment to its ROE for management performance. OCA R. Exc. at 9-10.

d. Disposition

As Aqua correctly notes in its Exception No 1.2, the Commission has been selective in adding a leverage adjustment to the DCF cost calculation in rate cases. We reinforced this in *UGI Electric*, stating that "the fact that we have granted leverage adjustments in a few select cases in the past does not mean that such adjustments are warranted in all cases. Rather, the award of such an adjustment is not precedential but discretionary with the Commission." *UGI Electric* at 93; *see also 2012 PPL Order* at 91.

In examining the record in this proceeding, we are not persuaded by Aqua's arguments that we should reach a different conclusion from that reached in *UGI Electric* and other recent base rate proceedings and award the Company an artificial leverage adjustment to its ROE. In its briefs, Aqua cited to the high inflation rate that is currently present in the economy in support of its argument for a leverage adjustment. Aqua M.B. at 117. However, the crux of the Company's request for a leverage adjustment to its ROE centers on its belief that the difference between its book value capital structure and its market value capital structure poses a financial risk. Thus, the Company seeks a leverage adjustment to account for applying the market value cost rate of equity to the book value of its equity.

We find I&E's arguments in opposition to the Company's position to be persuasive. For example, as I&E observed, credit rating agencies assess financial risk based upon a company's booked debt obligations and the ability of its cash flow to cover the interest payments on those obligations. The agencies use a company's financial statements, and not the company's market capital structure, in conducting their analysis. It is a company's financial statements that affect the market value of the stock, and, therefore, the financial statements and the book value capital structure are relied upon in an analysis such as that done by rating agencies. I&E St. 2 at 40; I&E St. 2-SR at 10. Accordingly, we find that the record in this proceeding supports rejecting the Company's requested leverage adjustment.

Additionally, we note that PPL, in its 2012 rate case, sought a leverage adjustment in the range of 70 to 118 basis points based upon similar arguments regarding a perceived risk related to its market to book ratio. Likewise, UGI Electric, in its 2018 rate case, sought a leverage adjustment on this same basis. We found no merit in these arguments. *2012 PPL Order* at 91; *UGI Electric* at 93. We likewise find no merit in Aqua's arguments in which it seeks to support a leverage adjustment that is more than 100 basis points higher than that requested by either PPL or UGI Electric. Rather, we find, as we did in those base rate proceedings, that awarding the Company a leverage adjustment would run contrary to the public interest. Therefore, we shall deny the Company's Exception No. 1.2.

As to the Company's requested management performance adjustment, we note that pursuant to the Code, the Commission may reward utilities through rates for their performance. In pertinent part, Section 523 of the Code, 66 Pa. C.S. § 523, provides:

> **§ 523. Performance factor consideration.**
>
> (a) **Considerations.** – The Commission shall consider, in addition to all other relevant evidence of record, the efficiency, effectiveness and adequacy of service of each utility when determining just and reasonable rates under this

title. On the basis of the commission's consideration of such evidence, it shall give effect to this section by making such adjustments to specific components of the utility's claimed cost of service as it may determine to be proper and appropriate. Any adjustment made under this section shall be made on the basis of specific findings upon evidence of record, which findings shall be set forth explicitly, together with their underlying rationale, in the final order of the commission.

(b) **Fixed utilities.** – As part of its duties pursuant to subsection (a), the commission shall set forth criteria by which it will evaluate future fixed utility performance and in assessing the performance of a fixed utility pursuant to subsection (a), the commission shall consider specifically the following:

(1) Management effectiveness and operating efficiency as measured by an audit pursuant to Section 516 (relating to audits of certain utilities) to the extent that the audit or portions of the audit have been properly introduced by a party into the record of the proceeding in accordance with applicable rules of evidence and procedure.

* * *

(4) Action or failure to act to encourage development of cost-effective energy supply alternatives such as conservation or load management, cogeneration or small power production for electric and gas utilities.

* * *

(7) Any other relevant and material evidence of efficiency, effectiveness and adequacy of service.

On consideration of the record evidence in this proceeding, we shall award Aqua an upward adjustment of twenty-five basis points to its ROE for management effectiveness, consistent with the following discussion.

We specifically recognize Aqua's efforts and willingness to quickly provide emergency aid to various water and wastewater systems that needed substantial improvement. Aqua has often provided this emergency aid on short notice and at the request of the Commission or other parties to protect the public from egregious health and safety threats and to protect the Commonwealth's drinking water resources from catastrophic damage. The competence and reliability of Aqua's management effectiveness in this regard is unparalleled. Aqua's management has earned this reputation by consistently and successfully working to protect the public and the environment under emergency situations presenting highly difficult operational, financial, and legal issues over many years. For example, we note the aid rendered by Aqua in Emlenton, Pennsylvania where the Commission fielded approximately ninety-three simultaneously filed formal complaints against the Emlenton Water Company alleging unsafe and inadequate water service and water-born illness. *See Bradley Louise, et al. v. Emlenton Water Company*, Docket No. C-2008-2058411 (Complaint filed July 24, 2008); *Joint Application of Aqua Pennsylvania, Inc. and Emlenton Water Company*, Docket No. A-2008-2074746 (Order entered December 29, 2008).

Aqua's management performance in recent emergency situations reinforces that the Company has been, and continues to be, a trusted and reliable corporate citizen on which the public can rely. Specifically, Aqua is currently operating three troubled utility systems under emergency receiverships throughout the Commonwealth, including one wastewater and two water systems. These respectively include North Heidelberg Sewer Company (NHSC), Twin Lakes Utilities, Inc. (Twin Lakes), and James Black Water Service Company (James Black). *See* Aqua St. 1 at 40; Aqua M.B. at 133-34.

Regarding NHSC, on March 21, 2017, I&E requested that the Commission issue an *Ex Parte* Emergency Order to avoid "a tidal wave of adverse consequences, including the potential discharge of untreated wastewater into the Commonwealth's waterways, which could result in irreparable harm to the environment, the health of NHSC's customers, and the safety of the public at large." *See Pa. PUC v. Metropolitan Edison Company and North Heidelberg Sewer Company*, Docket No. P-2017-2594688, (Petition for *Ex Parte* Emergency Order filed March 21, 2017) at 11.[64] At that time, NHSC served approximately 273 residential and one commercial wastewater customer. *May 2017 Order* at 5. I&E added that should NHSC fail to immediately take corrective action, the Commission should appoint a receiver pursuant to 66 Pa. C.S. § 529 because it appeared that NHSC was "consciously and intentionally placing in jeopardy its ability to provide safe, reliable and reasonable wastewater service to its customers." Petition for *Ex Parte* Emergency Order at 12. In the *Ex Parte* Order, Chairman Dutrieuille directed Aqua to assume this receiver role, which Aqua immediately and willingly did.

This past autumn, Hurricane Ida substantially destroyed NHSC's wastewater treatment plant and Aqua immediately responded to avert what could have been yet another disaster to the environment and to downstream drinking water supplies. Aqua M.B. at 131. Aqua's reconstruction efforts have gone beyond the normal expectations of a receiver. *Id.* On May 2, 2022, Aqua filed its 17th quarterly status report regarding its successful and ongoing five-year effort to rehabilitate the NHSC system, both operationally and financially, for the safety and benefit of the families served by that system and all Commonwealth residents downstream of its wastewater discharge. In our view, Aqua's reconstruction efforts have gone beyond the normal expectations of a receiver.

---

[64] On March 22, 2017, Chairman Gladys Brown Dutrieuille signed an *Ex Parte* Emergency Order (*Ex Parte* Order) granting the Petition for *Ex Parte* Emergency Order as modified to ensure continued wastewater service from NHSC to its customers, subject to ratification by the full Commission. On April 6, 2017, the Commission issued a Ratification Order of the *Ex Parte* Order. Subsequently, the Commission modified the *Ex Parte* Emergency Order. *Pa. PUC v. Metropolitan Edison Company and North Heidelberg Sewer Company*, Docket No. P-2017-2594688 (Order entered May 4, 2017) (*May 2017 Order*).

Regarding Twin Lakes, on October 23, 2018, Twin Lakes petitioned the Commission to approve an abandonment of water service to its approximately 114 residential customers no later than March 31, 2019. *Twin Lakes Utilities, Inc. Application to Abandon Service to its customers in Sagamore Estates in Shohola Township, Pike County Pennsylvania*, Docket No. A-2018-3005590 (filed October 23, 2018). Twin Lakes claimed it could no longer provide service to its customers because of significant quality of service and financial issues. *Id.*; *see also*, *Office of Consumer Advocate's Answer in Support of the Petition of Twin Lakes Utilities*, Docket No. P-2020-3020914 (filed August 5, 2020) (also containing a reiteration of the history and issues behind the Twin Lakes Section 529 forced acquisition petition supported by the OCA).

On June 10, 2020, Twin Lakes provided notice to the Commission that on September 1, 2020, it would cease providing water service to its customers. *Twin Lakes Utilities, Inc. – Notice of Termination of Service Agreement Between Middlesex Water Company and Twin Lakes Utilities, Inc.*, Docket No. M-2020-3020390 (served June 10, 2020). The practical effect of such abandonment would be the loss of potable water service and, for many customers, the loss of water for in-home sanitation as well. On July 13, 2020, the Commission directed that Twin Lakes "shall not abandon or surrender water service to its customers, in whole or in part, without Commission authorization." *Twin Lakes Utilities, Inc. – Notice of Termination of Service Agreement Between Middlesex Water Company and Twin Lakes Utilities, Inc.*, Docket No. M-2020-3020390 (*Secretarial Letter* issued July 13, 2020.)

Nevertheless, on August 3, 2020, Twin Lakes provided public notice to its customers that "to protect the public health, Twin Lakes will cease water service at 12:01 am on September 1, 2020." *Twin Lakes Utilities, Inc. Section 529 Petition*, Docket No. P-2020-3020914 (filed August 3, 2020.) Shortly thereafter, the OCA petitioned the

Commission stating that the "OCA respectfully requests the Commission direct Aqua Pennsylvania to act as a receiver to operate Twin Lakes until the resolution of the Section 529 proceeding." *Office of Consumer Advocate Petition for Issuance of an Interim Emergency Order on an Expedited Basis*, Docket No. P-2020-3020914 (filed August 18, 2020) at ¶ 18. The OCA opined that "Aqua Pennsylvania appears to be financially, managerially, and technically capable to serve Twin Lakes' customers. It is a capable PUC jurisdictional water utility and a proximate public utility as required under Section 529." *Id*. at ¶ 17 (*citations omitted*). We note that Aqua willingly took on this request and the Company continues to make significant investments into the Twin Lakes system to ensure its customers receive safe water service.

Simultaneous with its work with NHSC and Twin Lakes, Aqua is also serving as a receiver to James Black, a typical small, troubled water system with approximately nineteen customers. *See In re James Black Water Service Company*, Docket No. M-2019-3012563 (*Ex Parte* Emergency Order issued September 3, 2019; Order ratified September 19, 2019). We include a description of this typical small troubled water system only to provide perspective on the difference in scale required to rehabilitate NHSC and Twin Lakes, and to comment on the depth of resources, expertise, and employee commitment required to simultaneously manage all these emergency efforts, as the Company has done.

In view of the above, it is clear that Aqua has answered the call to provide emergency assistance at the request of the public, public advocates, and government agencies. Given the nature and frequency of these emergencies, we are of the opinion that the Company should be recognized for its efforts to serve as a ready and willing ally in water and wastewater emergencies. In our view, affording Aqua a modest upward adjustment to its ROE to recognize its exemplary emergency service is a just, reasonable, and affordable approach to addressing its ongoing emergency aid efforts. It would be inequitable to proceed otherwise, as there is no provision of the Code that demands utilities exhaust employees or financial resources because of emergencies occasioned by others.

Section 523 of Code, *supra,* permits the Commission to award a management performance adjustment based on "[a]ny other relevant and material evidence of efficiency, effectiveness and adequacy of service." 66 Pa. C.S. § 523(b)(7). Aqua's consistent willingness to answer calls for aid to other water and wastewater providers shows it is doing more than required under Section 1501 of the Code. The examples discussed above indicate that Aqua carries a roster of large and complex emergency aid matters unlike any other Pennsylvania utility. As stated in its direct testimony, operating troubled systems requires significant time, commitment, and involvement from many departments within Aqua. Aqua St. 1 at 20. As such, Aqua management is exceeding the expectations placed upon it not only by its existing customers, but also the Commonwealth. For this reason, we find that Aqua should receive a management efficiency award commensurate with the emergency service described herein. Therefore, to reflect the extraordinary effort exhibited by Aqua to aid and protect Pennsylvania water and wastewater customers and the environment, we shall award Aqua an additional twenty-five basis points to its ROE for management performance. As discussed in Section X.D.3, *infra,* this will result in a total ROE for the Company of 10.00%.[65] Accordingly, we shall grant Aqua's Exception No. 1.6.

---

[65] As previously noted, in the *2008 Aqua Order,* the Commission awarded Aqua a management performance adjustment of twenty-two basis points for a total ROE of 11.00%.

3. Rate of Return on Common Equity

a. Positions of the Parties

As noted above, four methods of determining the cost of equity were presented for inclusion in the record in this proceeding: (1) DCF; (2) CAPM; (3) RP; and (4) CE. Aqua relied on each of these methodologies in presenting its recommended rate of return on common equity of 10.75%. Aqua St. 7 at 7.

As previously discussed, both I&E and the OCA took issue with the Company's analysis in arriving at the proposed cost of equity and argued that equal weight should not be given to the four different methodologies as Aqua did in its evaluation. Additionally, both I&E and the OCA submitted that the Commission has indicated a preference for using the DCF method to establish reasonable common equity costs.

As a result of its DCF analysis, I&E recommended a cost of common equity of 8.90%. St. 2 at 21.

The OCA recommended a cost of common equity of 8.00% based on its DCF model. OCA St. 3 at 3.

b. Recommended Decision

The ALJ rejected Aqua's proposed rate of return on common equity of 10.75%. Namely, the ALJ agreed with I&E's proposal to calculate the recommended cost of equity pursuant to the DCF methodology and using the CAPM to verify the reasonableness of the DCF ROE. According to the ALJ, I&E's analysis is consistent with the methodology commonly endorsed by the Commission and most recently accepted in *Columbia Gas*. Therefore, the ALJ recommended that the Commission adopt the 8.90% cost of equity as determined by I&E. R.D. at 78.

c. Exceptions and Replies

(1) Aqua Exc. Nos. 1.3, 1.5, and 1.7 and Replies

In its Exception Nos. 1.3 and 1.7, Aqua disagrees with the ALJ's cost of equity recommendation of 8.90%, based on I&E's methodology recently approved in *Columbia Gas*. Aqua takes the position that

> "[i]f adopted, this ROE will represent a watershed moment for the end of the Commission's longstanding commitment to supporting infrastructure investment, made doubly worse in a period of rising capital costs. The RD ROE would signal to the utilities and the credit rating agencies that Pennsylvania regulation has ceased to support investment in the state at a time of critical capital investment needs."

Aqua claims the ALJ erred by using a formulaic application of I&E's DCF method. In selecting I&E's recommended ROE, Aqua asserts the ALJ is implicitly endorsing an approach that rejects the application of informed judgment. In further support of its position, Aqua argues that the ALJ completely failed to address the substantial increases to the rate of inflation that have been experienced subsequent to the preparation of rate of return recommendations by the Parties. Aqua highlights that the inflation rate reported in December of 2021 was a thirty-nine year high of 6.8%. Aqua adds this current period of significant inflation "shows no signs of abating." Aqua Exc. at 2-4, 9-10, 13.

In its Exception No. 1.5, Aqua stresses that the ALJ's recommendation of an 8.90% ROE is below recent Commission determinations of a 9.86% ROE for

Columbia Gas, and a 10.24% ROE for *PECO*. In addition, Aqua argues that the allowed DSIC ROE of 9.80% is further evidence that the ALJ's recommended 8.90% ROE is deficient and will not provide Aqua with the opportunity to earn its investor-required cost of capital for the FPFTY. Aqua reinforces its position that the Commission should not be reducing a utility's ROE when there is a continuing, compelling need for capital investment to rehabilitate aging infrastructure. Aqua Exc. at 12-13.

In its reply to Aqua's Exceptions, I&E disputes Aqua's argument that the ALJ's rate of return recommendation in this proceeding should have been based on the allowable DSIC rate of return and the rate of return awarded to other dissimilar public utilities in other base rate proceedings. Rather, I&E avers that the ALJ correctly considered the substantial record evidence presented by all Parties in this base rate proceeding and properly recommended the Commission adopt the I&E recommended 8.90% ROE. Aqua R. Exc. at 11-12.

In its reply to Aqua's Exceptions, the OCA submits that the ALJ correctly rejected Aqua's cost of equity recommendation of 10.75%. The OCA avers Aqua's proposed 10.75% ROE relies on flawed empirical analyses and unsupported upward adjustments. OCA R. Exc. at 5.

(2) OCA Exception No. 9 and Replies

In its Exception No. 9., the OCA claims the ALJ erred by adopting I&E's proposed ROE of 8.90%. The OCA believes that adoption of I&E's cost of equity recommendation, albeit more reasonable than Aqua's ROE calculation, still overstates the cost of common equity. The OCA remains of the opinion that a ROE of 8.0% should be awarded to the Company, based on its Quarterly Approximation DCF model. OCA Exc. at 12.

In its reply to the OCA's Exception No. 9, Aqua submits the OCA's proposed ROE should be rejected because it would signal to Pennsylvania utilities and the investment community that Pennsylvania regulation no longer is supportive of capital investment, made doubly bad given the clear rise in inflation and capital costs that are occurring. Aqua R. Exc. at 7-8.

In its reply to the OCA's Exception No. 9, I&E supports the ALJ's recommendation to adopt the methodology employed by I&E, which resulted in an 8.90% ROE, as the most reasonable. I&E R. Exc. at 15.

d. Disposition

As determined in our disposition of Sections X.D.1 and X.D.2, *supra*, we will rely upon I&E's DCF and CAPM methodology and informed judgment, in addition to awarding an upward adjustment of twenty-five basis points for management effectiveness, in arriving at our determination of the proper ROE to award to Aqua in this proceeding. In particular, we note that the evidence presented in this case based on I&E's CAPM methodology produced a ROE higher than the results produced by its DCF. This suggests that, while properly computed in the abstract, I&E's DCF results understate the current cost of equity for Aqua and that consideration should be given to the CAPM in determining the appropriate range of reasonableness.

We agree with Aqua that the setting of the proper return on equity is necessary in this environment of increasing inflation, leading to an increase in interest rates and capital costs. Aqua Exc. at 2-4, 9-10, 13. However, we disagree with Aqua benchmarking recent Commission ROE determinations for *Columbia Gas* and *PECO Gas*, in addition to the most recent DSIC ROE, as further evidence that the ALJ's recommended 8.90% ROE is deficient. We agree with I&E that *Columbia Gas* and *PECO Gas* are dissimilar public utilities to Aqua, and each had a company specific ROE determined by evidence presented at the time of its individual base rate case. Further, we note the DSIC ROE is unlike a ROE set in a base rate proceeding. The DSIC ROE is determined by the Commission on a quarterly basis and is set per industry. As such, it is not company specific. Therefore, we shall grant Aqua Exception Nos. 1.3 and 1.7 and deny Aqua Exception No. 1.5.

As also explained in our disposition of Section X.D.1, we found the ALJ did not err by rejecting the OCA's Quarterly Approximation DCF methodology. Consequently, we do not agree with the OCA's resultant 8.0% ROE for Aqua. Consistent with these determinations, we shall deny OCA Exception No. 9.

We have previously determined, above, that we shall utilize I&E's DCF and CAPM methodologies. I&E's DCF and CAPM produce a range of reasonableness for the ROE in this proceeding from 8.90% to 9.89%. Based upon our informed judgment, which includes consideration of a variety of factors, including increasing inflation leading to increases in interest rates and capital costs since the rate filing, we determine that a base ROE of 9.75% is reasonable and appropriate for Aqua. When combined with our upward adjustment of 25 basis points to the Company's ROE for management effectiveness, this will produce a final authorized ROE for Aqua of 10.00% (*i.e.*, 9.75% + 0.25% = 10.00%). Accordingly, we shall modify the ALJ's ruling as to the ROE to award Aqua in this proceeding.

E. Overall Rate of Return

1. Positions of the Parties

In this proceeding, Aqua claimed that it should be permitted to earn an overall rate of return of 7.64%. Aqua's proposed overall rate of return is comprised of a weighted average of a 4.00% rate of return on long-term debt, and a 10.75% rate of return on common equity, inclusive of an upward adjustment for management effectiveness. This is, in turn, based on a capital structure of 53.95% common equity and 46.05% long-term debt. Aqua Exh. 4-A at 1, Sch. 1.

I&E recommended that Aqua should be afforded the opportunity to earn an overall rate of return of 6.64%. This recommended overall rate of return is comprised of a weighted average of a 4.00% rate of return on long-term debt and an 8.90% rate of return on common equity and is based off of the Company's proposed capital structure. I&E M.B. at 42.

The OCA proffered that the Commission should allow Aqua the opportunity to earn a 6.00% overall rate of return on its rate base. The OCA's recommendation is comprised of a weighted average of a 4.00% rate of return on long-term debt and an 8.00% rate of return on equity and is based on a hypothetical capital structure of 50% common equity and 50% long-term debt. OCA M.B. at 53.

Although CAUSE-PA did not propose a specific rate of return for the Company in this proceeding, it stated that it supported and adopted the position of the OCA. CAUSE-PA M.B. at 12.

2. Recommended Decision

The ALJ recommended that the Commission adopt I&E's proposed overall rate of return of 6.64%. This is based upon the ALJ's recommendations, *supra*,: (1) approving the Company's proposed capital structure of 53.95% common equity and 46.05% long-term debt; (2) approving the Company's claimed cost rate of 4.00% for long-term debt; (3) utilizing I&E's methodology for determining a rate of return on common equity; and (4) denying the Company's claimed 234-basis point leverage adjustment and its upward adjustment for superior management performance. The ALJ's recommended rate of return is outlined in Table 6, as follows:

Type of Capital	Ratio	Cost Rate	Weighted Cost
Long-Term Debt	46.05%	4.00%	1.84%
Common Equity	53.95%	8.90%	4.80%
Total	100.00%		6.64%

Table 6: The ALJ's Recommended Capital Structure and Overall Rate of Return for Aqua

The ALJ applied this rate of return to Table IA of each of the rate tables set forth in the Appendix to the Recommended Decision. According to the ALJ, an overall rate of return of approximately 6.64% fairly balances the requirement that a utility be permitted an opportunity to recover those costs prudently incurred by all classes of capital used to finance the rate base during the prospective period in which its rates will be in effect, while also mitigating the revenue increases that will impact ratepayers who continue to struggle in the aftermath of the COVID-19 pandemic. R.D. at 81, Appendix Tables IA.

3. Exceptions and Replies

Only Aqua and the OCA filed exceptions to the ALJ's recommendations on a fair rate of return for the Company. Aqua and the OCA's Exceptions and Replies to Exceptions on the overall rate of return are based on their respective Exceptions and Replies to Exceptions regarding the ALJ's recommended capital structure, proxy group, and the cost of common equity, *supra.*

4. Disposition

For the reasons discussed above, we have adopted the ALJ's recommendation as to the appropriate capital structure and cost of debt for Aqua.

Additionally, based on the use of informed judgment and the addition of an upward adjustment for management effectiveness, we have modified the ALJ's recommendation as to the appropriate cost of common equity for the Company. This will, in turn, modify the ALJ's recommended overall rate of return. The table below summarizes our final determinations regarding Aqua's capital structure, cost of debt, and cost of common equity, as well as the resulting weighted costs. As Table 7 indicates, we shall set an authorized overall rate of return for Aqua at 7.24%.[66] We shall apply this rate of return, as set forth in Table IA to each of the rate tables that are attached to the Commission Tables Calculating Allowed Revenue Increase at the end of this Opinion and Order.

Type of Capital	Ratio	Cost Rate	Weighted Cost
Long-Term Debt	46.05%	4.00%	1.84%
Common Equity	53.95%	10.00%	5.40%
Total	100.00%		7.24%

Table 7: Aqua Capital Structure – Authorized Overall Rate of Return

XI. Rate Structure

A. Cost of Service

1. Positions of the Parties

Cost allocation studies are used to allocate the total water and wastewater cost of service to the various customer classifications based on established principles of cost-causation with the fundamental purpose of aiding in the accurate and reasonable design of rates. *See* R.D. at 82.

[66] We note that there are additional rate issues pertaining to the elements in the proposed base rate increase addressed later in this Opinion and Order and not included here simply because the Order follows the structure of the Recommended Decision for ease of reference by the reader.

In this proceeding, none of the Parties disputed the method used by Aqua to calculate the cost of service for its water operations and its wastewater operations. In each of the studies prepared, the total costs of service are allocated to the various customer classifications in accordance with generally accepted cost of service principles and procedures. Aqua St. 5 at 3, 19.

Aqua's cost allocation study for its water operations is included in Aqua Exh. 5-A, Part I. The method used for the allocation water cost of service was based on the Base-Extra Capacity Method for allocating costs to customer classifications. This method is described in the 2017 and prior editions of the *Water Rates Manual*, published by the American Water Works Association (AWWA). Aqua Exh. 5-A, Part I at 3. The four basic categories of cost responsibility that are considered using this method are base, extra capacity, customer, and fire protection costs. *Id.*

Aqua's cost allocation study for its wastewater operations is included in Aqua Exh. 5-B, Part I. The method used for the allocation of wastewater cost of service incorporates the functional cost allocation methodology described in the text "Financing and Charges for Wastewater Systems," Manual of Practice No. 27, published by the Water Environment Federation. Aqua Exh. 5-B, Part I at 2-3. This method is recognized for allocating the cost of providing wastewater service to customer classifications in proportion to the classifications' use of the commodity, facilities, and services. *Id.* Aqua prepared separate cost allocation studies for its wastewater Base Operations and the separate operating divisions for Limerick, East Bradford, Cheltenham, East Norriton and New Garden. *See* Aqua St. 5 at 18-19. The separate operating cost allocation studies from the Base Operations are wastewater systems acquired since the *Aqua 2018 Rate Case*. Aqua St. 1 at 7.

2. Recommended Decision

The ALJ recommended that the cost of service study methods used by Aqua for its water and wastewater operation be approved because they are reasonable and consistent with past practice. R.D. at 83.

3. Disposition

No Party filed Exceptions on this issue. Finding the ALJ's recommendation to be reasonable, we adopt it without further comment.

B. Cost of Service – Wastewater

1. Positions of the Parties

Both I&E and the OCA recommended that Aqua be required to prepare ongoing cost allocation studies for the wastewater systems acquired by the Company under Section 1329 of the Code, 66 Pa. C.S. § 1329, in future base rate cases. Additionally, I&E and the OCA argued that the Company should be required to file two separate revenue requirements going forward. These recommendations would require Aqua to prepare a cost of service study (COSS) and revenue requirement for (a) combined Wastewater Zones 1 through 6 (consisting of the Company's legacy systems), (b) combined Wastewater Zones 7-11 (representing the systems acquired under Section 1329 of the Code prior to this base rate proceeding),[67] and (c) each additional

[67] Specifically, these Wastewater Zones are as follows: Zone 7-Limerick, Zone 8-East Bradford, Zone 9-Cheltenham, Zone 10-East Norriton, and Zone 11-New Garden. *See* Aqua Volume 5, Exh. 5-B, Part II, Schs. LMK, EB, CH, EN and NG.

system acquired after this proceeding under Section 1329. I&E M.B. at 65-66; OCA M.B. at 84-86.

I&E argued that combining Wastewater Zones 7 through 11 into one COSS in Aqua's next base rate case is important because these zones include systems acquired under Section 1329 and represent a unique group of zones and cost recovery requirements. Therefore, I&E recommended that these zones should continue to be grouped into one COSS in future cases. I&E also reasoned that it is important to distinguish the difference between these systems and systems not acquired under Section 1329 because of the generally higher cost of providing service to customers in these systems acquired under Section 1329. I&E M.B. at 65-66 (citing I&E St. 5 at 66).

The Company opposed the recommendations of I&E and the OCA stating that the decision to require separate cost allocation studies for future wastewater acquisitions should not be pre-determined but should be evaluated in such future proceedings. Aqua further noted that it has never been required to carve out water and wastewater acquisitions in this manner, after the initial rate case post-acquisition. Additionally, the Company asserted that because the acquired systems are similarly operated as the legacy systems, no advantage could be gained on a cost of service basis by separating these systems. Aqua also contended that the Commission should not dictate how the Company will file its next base rate proceeding absent its agreement, citing the general principle that the Commission should refrain from acting as a super board of directors. Moreover, Aqua argued, the recommendations frustrate the goal of single tariff pricing and consolidation of rate zones. Aqua M.B. at 219-20; Aqua R.B. at 93.

2. Recommended Decision

The ALJ recommended that the Commission adopt the positions advanced by I&E and the OCA that Aqua be required to prepare separate COSS and revenue requirements in its next base rate proceeding. R.D. at 82-83.

The ALJ reasoned that this base rate filing emphasizes the importance of tracking the implications of the acquisition of water and wastewater systems and the effect of those acquisitions on rates and cost of service. In acknowledging that consolidating rate zones is important, the ALJ emphasized the importance of appropriately tracking the cost to serve the acquired systems – and the steps taken to move rates in these systems closer to the cost of service – while ensuring that other ratepayers are not subsidizing service to these customers indefinitely. The ALJ considered the proposals to be reasonable and sensible and well within the Commission's mandate to ensure that a utility's rates are just and reasonable and meet the public interest. *Id*. at 83.

3. Exceptions and Replies

In its Exception No. 8, Aqua argues that the ALJ erred by ordering the Company to prepare a separate COSS for each system acquired under Section 1329 of the Code that is included in the next base rate proceeding following such acquisition. Aqua Exc. at 29-31.

Initially, Aqua contends that the Recommended Decision ignores applicable appellate precedent, citing *City of Pittsburgh v. Pa. PUC*, 526 A.2d 1243 (Pa. Cmwlth. 1987), *appeal denied*, 517 Pa. 628, 538 A.2d 880 (1988) (*City of Pittsburgh*). The Company asserts that in *City of Pittsburgh* the Commonwealth Court specifically affirmed a prior Commission order that declined to condition a water utility's proposed consolidation of rate districts upon the maintenance of separate records for each district. Aqua argues that, consistent with this case, it should not be required to maintain and prepare separate studies and revenue requirements in its next base rate proceeding. Aqua Exc. at 30.

The Company further contends that the Recommended Decision disregards the impacts of imposing this requirement on Aqua relative to other water and wastewater utilities in Pennsylvania. According to Aqua, this requirement will result in significant accounting, tracking, operational and rate impacts that would also frustrate the Commission's policy supporting single tariff pricing and consolidation. Likewise, Aqua continues, the increased costs and complications associated with preparing separate cost allocation studies would likely put the Company at a competitive disadvantage from other bidders in future acquisition opportunities. *Id*. (citing Aqua M.B. at 219).

Furthermore, Aqua submits that, for new acquisitions, the recommended requirements should be analyzed in the context of future Section 1329 acquisition proceedings, and not in this base rate case. The Company submits that the Commission should not require Aqua to indefinitely prepare separate costs of service and revenue requirements for future acquired systems, where it is not known whether and when further systems will be acquired. Aqua Exc. at 30-31.

In its reply, I&E argues that the ALJ properly recommended that the Commission adopt its recommendations regarding recently acquired Section 1329 systems and those acquired subsequent to this base rate proceeding. I&E asserts that the ALJ correctly emphasized the importance of tracking the implications of the acquisitions under Section 1329 and the effect of those acquisitions on rates and cost of service. I&E adds that the ALJ noted the importance of consolidating rate zones. However, I&E asserts, the ALJ correctly determined the need to appropriately track the cost to serve Section 1329 acquired systems and the steps to move rates in these systems closer to the cost of service while ensuring that other ratepayers are not subsidizing service indefinitely. I&E R. Exc. at 9-10.

In its reply, the OCA asserts that the ALJ's recommendation is reasonable given the significant impact that Section 1329 acquisitions had on rates for wastewater and water customers in this proceeding. OCA R. Exc. at 12-14.

The OCA argues that Aqua's objections to the recommendations on the basis that it would place an extra burden on Aqua relative to other water and wastewater utilities are misplaced. If other utilities are acquiring systems under Section 1329, the OCA submits, then they will be in the same situation that Aqua was in the current base rate case where it provided one COSS for legacy systems and individual COSSs for the systems acquired prior to the base rate case. According to the OCA, an individual COSS has been adopted by the Commission for every Section 1329 acquisition approved to date and it is reasonable to assume the Commission will continue to apply it uniformly to Aqua's competitors. OCA R. Exc. at 12.

The OCA contends that the main distinction in this proceeding is that Aqua would be preparing only one additional COSS for the combined Section 1329 systems included in this case. Regarding Aqua's concerns of increased costs and complications of preparing one additional COSS for those systems, the OCA asserts that the Company does not quantify such costs. Instead, the OCA cites to the rate case expense claim in the current proceeding – $400,000 on "Engineering, Cost Allocation and Depreciation"– and compares it with the purchase price of the five systems Aqua already acquired under Section 1329, which ranged from $5 million to $75 million, or an average of $34.4 million. OCA R. Exc. at 12-13 (citing Aqua Exh. 1-C, Sch. C-4.4). The OCA argues that even if COSSs and cost allocation represented the entire $400,000 in this case, ignoring that 91.51% of rate case expense is allocated to water operations, the cost would represent only 1% of the average purchase price of the Section 1329 systems in this case. The OCA submits that this cost to Aqua cannot reasonably be considered a meaningful competitive disadvantage. OCA R. Exc. at 13.

The OCA also criticizes Aqua's concerns about imposing future requirements indefinitely in this base rate case because it is not known whether and when further systems will be acquired. Citing to Aqua's three pending Section 1329 applications, the OCA submits that establishing a requirement for a separate COSS for Section 1329 acquisitions in this case would avoid the need for the Parties and the Commission to address it in every Section 1329 proceeding.[68] The OCA proffers that the continuing need for this requirement could be evaluated in the next base rate proceeding. *Id*.

The OCA further objects to Aqua's contention that preparing a separate COSS would frustrate the policy of single tariff pricing. Regarding the citation to *City of Pittsburgh*, which upheld the Commission's decision to not require a water utility to maintain separate records for rate districts after they were consolidated, the OCA contends the Commonwealth Court's decision is distinguishable. Here, the OCA asserts, Aqua has not reached the point of consolidating Section 1329 systems with its legacy systems. Rather, the OCA emphasizes that Aqua has proposed to reduce its legacy rate zones from six to five and for each Section 1329 system to stay in its own, separate rate zone. OCA R. Exc. at 13-14 (citing Aqua St. 5-R at 21; Tariff Sewer No. 3).

---

[68] The OCA notes there are three pending Section 1329 proceedings: *Application of Aqua Pa. Wastewater, Inc.*, Docket No. A-2019-3015173 (Delaware County Regional Water Quality Control Authority Wastewater System Assets); *Application of Aqua Pa. Wastewater, Inc.*, Docket No. A-2021-3026132 (East Whiteland Township Wastewater System Assets); and *Application of Aqua Pa. Wastewater, Inc.*, Docket No. A-2021-3027268 (Williston Township Wastewater System Assets). The OCA also references the recent acquisition approval in the *Application of Aqua Pa. Wastewater, Inc.*, Docket No. A-2021-3024267 (Order entered January 13, 2022) (Lower Makefield Township Wastewater System Assets). OCA R. Exc. at 13, n.8.

Additionally, the OCA argues that in this case Aqua proposes a one-third recovery of its wastewater revenue requirement from water customers, which moves all customers further from paying rates that reflect their indicated cost of service. OCA R. Exc. at 14 (citing OCA St. 4 at 4 (Table I); Aqua Exhs. 5-A, Part I, 5-B, Part I). The OCA submits that the ALJ correctly addressed the concerns about subsidies between water and wastewater and between the legacy and acquired wastewater systems in the Recommended Decision and appropriately adopted the proposal of I&E and the OCA. OCA R. Exc. at 14 (citing R.D. at 83).

4. Disposition

We begin by addressing the contention that an individual COSS has been adopted by the Commission for every Section 1329 acquisition approved to date. *See* OCA R. Exc. at 12. In the recent Section 1329 application by Pennsylvania-American Water Company (PAWC) to acquire the water and wastewater system assets of Valley Township, the parties to that proceeding filed a Joint Petition for Approval of Unanimous Settlement of All Issues (PAWC Settlement) which the Commission approved without modification. *Application of Pennsylvania-American Water Company*, Docket Nos. A-2020-3019859 and A-2020-3020178 (Order entered October 28, 2021) (*PAWC – Valley Township Order*). The PAWC Settlement did not require separate COSSs related to the Valley Township acquisitions in PAWC's next base rate case nor did the Commission modify the Settlement to impose such a requirement. *Id*.

Our decision in the *PAWC – Valley Township Order* is illustrative of the importance of analyzing the necessity of COSSs within the context of individual Section 1329 acquisition proceedings. Although there is a benefit to having COSS data pertaining to Section 1329 acquisitions available in a base rate proceeding subsequent to an application approval, it is apparent from the PAWC Settlement – which included the statutory advocates as signatories – that it need not be mandated within all Section 1329 proceedings. We decline here to pre-judge the issue in all future Section 1329 proceedings when the facts and circumstances of that individual proceeding may not necessarily require a cost of service analysis. Moreover, we shall not impose such a blanket mandate requiring COSSs on all future Section 1329 proceedings involving Aqua when the Commission did not impose such a requirement in an individual application proceeding involving another regulated service provider. However, our decision herein shall not be deemed to limit the authority of the Commission to require the preparation of cost allocation studies for systems acquired in individual Section 1329 proceedings as the circumstances may warrant.

Regarding the proposal to maintain ongoing, separate COSSs for those systems acquired under Section 1329 of the Code prior to this base rate proceeding, we note that the Commission first directed the filing of a cost of service analysis as a condition of approval in Aqua's Section 1329 acquisition of the wastewater system assets of New Garden Township and the New Garden Township Sewer Authority. *Application of Aqua Pennsylvania Wastewater, Inc.*, Docket No. A-2016-2580061 (Order entered June 29, 2017) (*New Garden*).

The intention of the conditions in the *New Garden* proceeding and similar directives in other Section 1329 proceedings was, in part, to inform the Parties and the Commission of the overall rate impact that the acquisition will have on customers within the context of the *next* base rate proceeding. *See New Garden* at 69-70. It was not to impose ongoing conditions indefinitely in all subsequent rate cases.

Thus, we shall grant Aqua Exception No. 8 and modify the Recommended Decision accordingly.

C. Revenue Allocation

1. Positions of the Parties

Aqua noted that under *Lloyd v. Pa. PUC*, 904 A.2d 1010, 1020 (Pa. Cmwlth. 2006) (*Lloyd*), cost of service is the "polestar" of utility rates, and a proposed revenue allocation will only be found to be reasonable where it moves distribution rates for each class closer to the full cost of providing service. Aqua provided that its proposed revenue allocation for both water and wastewater involves a determination of: (1) the allocated cost responsibilities and the percentage of revenue under existing rates; and (2) the percentage of cost responsibilities and percentage of *pro forma* revenues under proposed rates for each customer classification. Aqua M.B. at 211-12 (citing *Lloyd* at 1020). Aqua submitted that, upon making such determinations, the Company: (1) proposed allocating revenues to each customer class that would be required to move that class toward the cost of service; and (2) determined an amount of wastewater revenues to be recovered in water rates, pursuant to Section 1311(c) of the Code (commonly referred to as Act 11).[69] Aqua M.B. at 212 (citing Aqua St. 5 at 10, 21;

---

[69] Section 1311(c) of the Code:

> When any public utility furnishes more than one of the different types of utility service, the commission shall segregate the property used and useful in furnishing each type of such service, and shall not consider the property of such public utility as a unit in determining the value of the rate base of such public utility for the purpose of fixing base rates. A utility that provides water and wastewater service shall be exempt from this subsection upon petition of a utility to combine water and wastewater revenue requirements. The commission, when setting base rates, after notice and an opportunity to be heard, may allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base if in the public interest.

Aqua Exh. 5-A, Part I, Sch. A; Aqua Exh. 5-B, Part I, Sch. WW-A; 66 Pa. C.S. § 1311(c)).

Aqua explained that Act 11 allows a utility that provides both water and wastewater services to allocate a portion of the wastewater revenue requirement to the combined water and wastewater customer base if doing so is in the public interest. Aqua M.B. at 213 (citing *Aqua 2018 Rate Case*, additional citations omitted). Aqua further explained that the public interest is served if properly incurred costs to upgrade a nonviable system can be allocated to the combined wastewater and water customer base. Aqua provided that the Commission noted that one of the benefits of Act 11 is that the costs of necessary upgrades which can be substantial can be spread among the common customer base of water and wastewater utilities. Aqua M.B. at 214-215 (citing Docket No. M-2012-2293611 (Tentative Implementation Order entered May 12, 2012, and Final Implementation Order entered August 2, 2012).

In order to provide a direction for gradualism and avoid substantial rate shock to wastewater customers who will be subject to their first rate increases resulting from a Commission rate case, the Company allocated a portion of the wastewater revenue requirement to its water customers. Aqua M.B. at 215-216 (citing Aqua St. 1-R at 23-25). Aqua determined its Act 11 allocation from wastewater to water rates "by subtracting the proposed level of wastewater revenue after various increases from the *pro forma* cost of wastewater service for the twelve months ended March 31, 2023 from the revenue requirement for each area." Aqua M.B. at 216 (citing Aqua St. 5 at 10; 66 Pa. C.S. § 1311). After increasing and consolidating various wastewater rates to a level that moved each division towards the cost of service while mitigating significant rate impacts, the Company proposed to allocate $20,818,925 of the remaining shortfall

66 Pa. C.S.§ 1311(c).

from wastewater revenues to water customers.[70] Aqua St. 1-R at 2-3; Aqua Exh. 1-A(a). Aqua noted that this allocation represents approximately 30% of the Company's proposed revenue requirement from wastewater to water. Aqua M.B. at 216 (citing Aqua St. 1-R at 24).

Aqua proposed that if the Commission approves a rate increase that is less than that proposed by the Company, that the scale back (or reduction) be applied proportionately based on the Company's proposed revenue allocation. Aqua further proposed that no wastewater scale back occur until the total wastewater Act 11 allocation is eliminated, and any scale back after the Act 11 allocation is eliminated be based on the Company's proposed rates. Aqua M.B. at 265 (citing Aqua St. 5-R at 19-20, 24-25).

I&E's witness, Mr. Joseph Kubas, disagreed with the Company's proposal that its water customers subsidize wastewater customers by approximately $20.8 million because it is large and unreasonable. Mr. Kubas contended that water customers are not wastewater customers, and each utility service should recover as much of the cost to provide that service as possible. I&E M.B. at 70; I&E St. 5 at 7-8. Further, Mr. Kubas contended that the Company did not demonstrate how allocating 30% of the cost of operating wastewater systems to water customers is reasonable. I&E St. 5-SR at 6.

I&E submitted that Mr. Kubas created a rate design that applies an Act 11 subsidy from wastewater to water consistent with cost of service principles and is in the public interest. Accordingly, I&E recommended that the Company's proposed water subsidy be reduced by $5,072,876. I&E St. 5-SR at 4-5; I&E Exh. No. 5, Sch. 1 at 1. Subsequently, in surrebuttal testimony, Mr. Kubas revised his recommended reduction to

[70] Initially, Aqua submitted that wastewater revenues of $20,839,425 be allocated to water customers. Aqua M.B. at 216.

the subsidy necessary for wastewater systems operation by $5,044,324. I&E St. 5-SR at 8; I&E Exh. 5-SR, Sch 1 at 1.

With regard to any scale back that may result if the Commission approves a rate increase that is less than that proposed by the Company, I&E submitted that the Company's proposed rates should be scaled back to produce the revenue requirement allowed by the Commission. I&E further proposed that, to determine the amount of the Act 11 subsidy revenue requirement to be allocated to water operations, the wastewater operations revenue requirements should be determined first, and that the water rates should then be scaled back to recover the resulting water operations' full revenue requirement. Regarding wastewater, I&E recommended that no scale back of wastewater rates should occur until the total Act 11 wastewater subsidy is eliminated. I&E R.B. at 55-56 (citing I&E M.B. at 71).

Similar to I&E, the OCA disagreed with the Company's proposal for its water customers to pay approximately $20.8 million to subsidize its wastewater operations because the wastewater rates would not support a reasonable relationship to the utility's cost of serving the wastewater customers. According to the OCA, it is not in the public interest to use Section 1311(c) and Section 1329 in combination to require that water customers subsidize approximately 75% of the revenue requirement generated by the FMV premiums for the five wastewater systems acquired under Section 1329.[71] OCA R.B. at 46-47 (citing OCA M.B. at 89-91; OCA St. 4 at 7-8).

The OCA submitted that its proposed Act 11 wastewater to water subsidy of $11.774 million is more moderate and in the public interest than that proposed by the other Parties because it recognizes that the Company's water customers do not receive a

---

[71] Acquired systems or customers represent Rate Zones 7 through 11, or systems/customers that were acquired by the Company since its last rate proceeding.

direct or indirect benefit from FMV premiums paid to residents of the seller municipalities and the impact of rate increases will be mitigated on the Company's legacy wastewater customers by shifting a substantial amount of their share of the wastewater increase to water customers.[72] OCA R.B. at 47. The OCA asserted that its proposed Act 11 subsidy recognizes the benefit that customers of the acquired Section 1329 systems receive from the FMV premiums and mitigates the impact of the rate increases by shifting their share of the wastewater increase to water customers. OCA R.B. at 47 (citing OCA St. 4 at 3-4, 7-9; I&E St. 5 at 66). The OCA also proposed that, if the Commission adopts the OCA's recommendation that assigns more revenue requirement to the five wastewater systems acquired under Section 1329, then the revenue requirement calculation should be based on the Company's authorized ROE. In this manner, the OCA explained that if the Commission adopts a different capital structure and/or lower ROE than proposed by the Company, then the scale back should first reduce the revenue requirement associated with the FMV premiums, to the benefit of the acquired customers. The OCA further recommended that if the Commission reduces the revenue requirement for non-ROR reasons, then the benefit should be applied to reduce the subsidy by water operations. OCA R.B. at 53-54 (citing OCA M.B. at 96-98; OCA St. 4 at 11-12).

The OSBA criticized the Company's proposed revenue allocation for water service as being unjust, unreasonable, and in violation of *Lloyd* because it fails to move the Residential, Public, Other Water Utilities and Private Fire Protection customer classes closer to their respective cost of service. OSBA R.B. at 7-8 (citing OSBA M.B. at 9-10; *Pa. PUC v. City of Bethlehem-Water Department*, Docket No. R-2020-3020256 (Order entered April 15, 2021) (*City of Bethlehem*) at 36; *Lloyd*). The OSBA also asserted that the Company's proposal to move each customer classification toward its appropriate

[72] Legacy systems or customers represent Rate Zones 1 through 6, or systems/customers that were under the Company at the time of its last rate case proceeding.

percentage cost of service without isolating the Act 11 allocation has no legal foundation. OSBA R.B. at 9-11 (citing OSBA St. 1-S at 4-8).

The OSBA's witness, Mr. Brian Kalcic, proposed an alternative revenue allocation for water service, exclusive of Act 11 considerations, to move customer classes toward their respective costs of service. OSBA R.B. at 8-9 (citing OSBA Exh. BK-1 W, Schs. BK-4W, BK-5W). The OSBA averred that isolating Aqua's claimed water cost of service from Act 11 subsidies is necessary because Act 11 addresses the recovery of proposed wastewater subsidies and is not related to the water cost of service. The OSBA explained that its proposed revenue allocation approach assigns a greater revenue responsibility to the Residential class than under the Company's proposal because the Company's proposed revenue allocation actually moves the Residential class away from its cost of service. The OSBA notes that in this proceeding, any revenue allocation that moves all classes toward cost of service must assign greater revenue responsibility to the Residential class. OSBA R.B. at 11-12. Regarding wastewater service, the OSBA submitted that the Company's proposed Act 11 revenue requirement be reduced by assigning an additional total increase to Aqua's Base and New Garden wastewater divisions. OSBA R.B. at 15 (citing OSBA St. 1-S at 1-3; OSBA St. 1 at 15-16).

Regarding the Company's proposed scale back of its proposed revenue allocation, the OSBA asserted that: (1) because the Company's proposed revenue allocation is cost based, using it as a starting point for any scale back is not valid; and (2) a separate scale back for reductions in the Company's allowed water service revenue requirement is necessary. OSBA R.B. at 16-17 (citing OSBA St. 1-R at 8-11). The OSBA proposed that if the Commission awards the Company a water service revenue increase that is less than Aqua's requested amount and exclusive of Act 11 considerations, then the OSBA's recommended class increases for water service should be proportionately scaled back. OSBA R.B. at 17 (citing OSBA M.B. at 19; OSBA Exh. BK-1 W, Sch. BK-4W). The OSBA also proposed that, at the conclusion of this proceeding, the Act 11 revenues assigned to water classes should be subject to a separate scale back of Aqua's proposed allocation of Act 11 revenues to water customers. OSBA R.B. at 18 (citing OSBA M.B. at 20).

Aqua LUG submitted that the Company's proposed revenue allocation fails to sufficiently move the customer classes towards cost of service. Therefore, Aqua LUG's witness, Mr. Richard A. Baudino, proposed adjustments to the Company's proposed revenue allocation that would result in most customer classes moving closer to their costs of service, consistent with *Lloyd*. Specifically, Mr. Baudino recommended as follows: (1) move the Residential class Relative Rate of Return (RROR) from 0.96 to 0.98; (2) move the Commercial class RROR from 1.04 to 1.02; (3) move the Industrial class RROR from 0.93 to 0.99; and (4) move the Public class RROR from 1.18 to 1.15. Mr. Baudino also recommended that, in the spirit of gradualism, any excess revenue requirement above the Industrial customer cost of service should be allocated to the Residential customer class. Aqua LUG M.B. at 7, 9-10 (citing Aqua LUG St. 1 at 5-6; Aqua LUG Exh.__(RAB-2)).

Aqua LUG provided that Mr. Baudino supported the adjusted revenue allocation recommended by the OSBA witness, Mr. Kalcic, to achieve additional movement towards cost of service. Aqua LUG M.B. at 10 (citing Aqua LUG St. 1S at 3; OSBA St. 1-R at 11-12). Accordingly, Aqua LUG recommended that the Commission should modify the Company's proposed revenue allocation to reflect the OSBA's proposed adjustments or, alternatively, Aqua LUG's proposed adjustments. Aqua LUG M.B. at 7, 11 (citing OSBA St. 1, Exh. BK-1 W, Sch. BK-4W; Aqua LUG St. 1, Exh.__(RAB-2)). Aqua LUG also recommended that, if the Commission approves a revenue increase lower than the proposed revenue allocation, then the approved revenue allocation should be scaled back proportionately. Aqua LUG M.B. at 11-12 (citing Aqua LUG St. 1 at 6).

Masthope submitted that any revenue allocation pursuant to Act 11 and any rate design or rate structure will result in significant increases in wastewater rates for Masthope ratepayers. Masthope R.B. at 6 (citing Masthope M.B. at 19-24; 66 Pa. C.S. § 1311). Further, Masthope asserted that the Act 11 subsidy adjustments proposed by I&E and the OCA will result in unjust and unreasonable rates that would have an adverse effect on Masthope's wastewater customers. Moreover, Masthope recommended that, if the Commission approves revenues in amounts less than what the Company proposed, any increased revenue requirement for water and wastewater customers and the amount of revenue support to be provided by water customers should be distributed in a manner consistent with the Company's proposal. Masthope M.B. at 20-22 (citing Masthope St. 2-R at 3-5). Additionally, Masthope proposed that, in anticipation that increases in costs and the potential need for cross-subsidies will continue for several years, the Commission should hold Aqua's wastewater revenue increase at the Company's proposed level while reducing the water increase to achieve a reduction in any computed cross subsidies. Masthope M.B. at 22.

2. Recommended Decision

In her Recommended Decision, the ALJ determined that Aqua's allocation of revenues between all water and wastewater customer classifications is reasonable and should be approved. Regarding the Act 11 subsidy allocated to water customers, the ALJ recommended that the Commission adopt I&E's proposed methodology for allocating revenue and designing wastewater rates. R.D. at 91, 93.

The ALJ recommended an additional adjustment for shifting the wastewater revenue requirement to water customers. Specifically, the ALJ provided that the wastewater revenue is based upon the expenses associated with wastewater service, such as bad debt expense, which is determined using an uncollectible accounts factor. The ALJ concluded that because the Company would incur bad debt expenses from water customers at the water uncollectible accounts factor rather than at the wastewater uncollectible accounts factor, it is not reasonable to charge water customers for bad debt expenses at the wastewater uncollectible accounts factor because water customers will ultimately pay the revenue requirement that was shifted to them. Therefore, the ALJ reasoned that, when wastewater revenue requirement is shifted to water customers, the gross wastewater revenue requirement must be reduced to a net basis using the revenue factor for each service, as reflected in Table I(B) for each of the wastewater tables in the Appendix of the Recommended Decision, to determine the water net income that the Company will receive and the wastewater net income that the Company would have received. The ALJ found that the difference between these net values is grossed up using the water revenue factor before being deducted from the gross allocated wastewater revenue requirement, thereby resulting in an adjusted gross water revenue requirement that provides the Company the same net income from water customers that it would have received from wastewater customers. R.D. at 86-87. Table Act 11 in the Appendix of the Recommended Decision provides the detail of the ALJ's adjusted gross water revenue requirement.

The ALJ addressed Mr. Kubas' recommendation to shift some of the revenue increase from the acquired systems (Rate Zones 7 through 11) to the legacy systems (Rate Zones 1 through 6).[73] R.D. at 87-88. Specifically, the ALJ discussed Mr. Kubas' view that, although each type of utility service should recover the cost of providing service as much as possible to the subsidy allocated to water customers, eliminating the subsidy would result in large increases to the monthly charges and rates for residential and commercial wastewater customers. The ALJ continued that

[73] We note that in her Recommended Decision, the ALJ presented a table prepared by Mr. Kubas "which summarized each party's proposed allocation of revenue." R.D. at 87-88 (citing I&E Exh. 5, Sch. 1). As discussed, *infra*, we shall strike the table presented at the top of page 88 in the Recommended Decision, consistent with this Opinion and Order.

Mr. Kubas reduced the subsidy allocated to water customers by recommending that the usage rate increases to the average residential customers be limited. The ALJ also addressed the proposed alternative Act 11 subsidy analyses offered by the OCA and the OSBA. R.D. at 88-89 (citing I&E St. 5 at 7-8, 10, 35-36, 38; OCA St. 4 at 1; OSBA St. 1 at 16-17).

The ALJ explained that in public utility regulation, and particularly in infrastructure improvements, it is not uncommon to approve the socialization of costs which benefit a subset of consumers over a larger group of consumers. The ALJ noted Act 11 permits the costs associated with wastewater system improvements to be shifted to water customers to avoid steep rate hikes to wastewater customers. The ALJ addressed Aqua's statement that the proposed revenue increase for both water and wastewater is primarily driven by investment in infrastructure, noting that it is important to understand that for the Acquired Systems, both the buyer, Aqua, and the selling municipalities should know that at the time of acquisition customers were likely paying rates that were well below the cost of service, either because rates had not been increased or facility improvements had been deferred. R.D. at 90.

Therefore, the ALJ reasoned that to meet the increased costs associated with system improvements, rates will need to be increased, and the increases might be substantial. The ALJ also addressed the responsibility of the community representatives of the acquired systems who sold their systems to avoid increasing taxes or utility rates or both. Specifically, the ALJ reasoned that such communities achieved a benefit from the revenue generated by the sale of their wastewater systems, and, because these communities have already enjoyed some benefit from the sale of the system, it is not equitable to the Company's water customers to mitigate the resulting increases in expenses to care for the acquired systems. R.D. at 90. Moreover, the ALJ reasoned that it is not fair for water customers to take on the burden of filling the gap between the cost of service to serve these wastewater systems because the proceeds Aqua paid municipalities to acquire the wastewater systems are used by those municipal governments to reduce, stabilize, or eliminate municipal costs recovered through taxes to the benefit of the wastewater customers residing within those municipalities. *Id.* (citing Aqua St. 1-R at 25). The ALJ highlighted that the Commission relied on these benefits when it determined that the acquisitions were in the public interest. R.D. at 90.

According to the ALJ, although increasing rates gradually to avoid rate shock is important to consider in setting reasonable rates, such gradualism is only one consideration among many, and some level of rate shock is inevitable. The ALJ reasoned that Aqua's approach of allocating 30% of the proposed wastewater revenue requirement to water customers is arbitrary and will not result in just and reasonable rates. Therefore, the ALJ found that, given the consideration of rate shock in the setting of rates in certain circumstances, Aqua's proposal to shift 30% of the wastewater revenue requirement to water customers is not equitable. *Id.*

Additionally, the ALJ addressed the agreement of both I&E and Aqua that no scale back of the Company's proposed wastewater rates should occur until the total wastewater allocation is eliminated. The ALJ found that any scale back of water rates will first reduce the Act 11 allocation. R.D. at 90-91 (citing Aqua St. 5-R at 25; *Lloyd*).

Ultimately, the ALJ recommended adoption of I&E's proposed methodology for allocating revenue and designing wastewater rates, reasoning that I&E's approach considers the number of water and wastewater customers in each system and balances the goal of moving rates toward alignment with the cost of service while mitigating some of the large rate increases that would result if no allocation of wastewater revenue was approved. The ALJ found that I&E's approach addresses the benefits received by the communities serviced by the acquired systems from the sale of their systems to the Company, adding that I&E's method is less complicated than the method advocated by the OCA. R.D. at 91.

Regarding water allocation, the ALJ reasoned that Aqua and the OCA's approach to revenue increases for water is more reasonable than the proposed modifications of the OSBA and Aqua LUG. *Id.* at 91. The ALJ found that, but for the Act 11 subsidy allocated to water customers, Aqua's allocation of revenues between all water customer classifications and all wastewater customer classifications is reasonable and should otherwise be approved. R.D. at 91, 93 (citing OSBA M.B. at 9-20; Aqua LUG M.B. at 8-11).

The ALJ highlighted the OCA's argument that the results of the OSBA's witness, Mr. Kalcic's, class revenue allocations (before the Act 11 subsidy) are not reasonable. R.D. at 91 (citing OCA St. 4R at 5-7). Specifically, the ALJ observed that, although the Residential and Industrial classes are currently earning close to parity, Mr. Kalcic's proposal would increase their percentage of system average revenue responsibility. *Id.* Similarly, the ALJ observed that concurrently, the Commercial class is also earning close to parity, but Mr. Kalcic recommended that this class receive 74% of the system average percentage increase. R.D. at 92. The ALJ also reasoned that Aqua's proposed allocation of revenues views cost of service as a whole and does not attempt to exclude the Act 11 allocation from its analysis. *Id.* Further, the ALJ reasoned that Aqua moves each customer classification toward its appropriate percentage cost of service, including Act 11 allocation. R.D. at 92.

In reviewing the Company's proposed revenue allocation compared to the OSBA's recommended revenue allocation, the ALJ noted that it appears that the OSBA's recommendations to isolate and remove the Act 11 allocation from its analysis is motivated by its preference to decrease the revenue allocated to non-residential customer classes while increasing the revenue allocated to residential classes. R.D. at 92 (citing Aqua St. 5-R at 5). However, the ALJ emphasized that, from the perspective of customers, the effect of the increase includes both the water increase and the wastewater allocation. Therefore, the ALJ found that Aqua's methodology better reflects the cost of service. R.D. at 92.

The ALJ also addressed Aqua LUG's witness, Mr. Baudino's, proposed reductions to the projected increases to the Commercial and Public classes. R.D. at 93 (citing Aqua LUG St. 1 at 5; Aqua LUG Exh.__(RAB-2)). Specifically, the ALJ agreed with Aqua witness, Ms. Constance E. Heppenstall, that Mr. Baudino's recommendation, which is based on moving a portion of the Industrial class increase to the Residential class due to a larger increase to blocks 5 and 6 of the consumption rates for the Industrial class, would result in RROR between 0.98 and 0.96 and, therefore, should be rejected. R.D. at 93 (citing Aqua St. 5-R at 25). Similarly, the ALJ agreed with the OCA that Aqua LUG does not consider other inherent complexities in this case, including: (1) gradual movement of various divisions to a state-wide rate; (2) the Public Fire revenue subsidy required by statute; and (3) subsidization of wastewater operations by water operations. R.D. at 93 (citing Aqua St. 4R at 12).

3. Exceptions and Replies

a. Aqua Exception No. 9 and Replies

In its Exception No. 9, Aqua submits that the ALJ's recommendation that the Commission accept I&E's methodology for allocating wastewater revenues and wastewater rates under Act 11 should be rejected, and the Company's proposed Act 11 revenue allocation should be adopted. Aqua Exc. at 31, 34 (citing R.D. at 91, 96). Aqua challenges the ALJ's reasoning that the Company's proposed allocation of wastewater revenues is not fair to water customers because the Company and the selling municipalities should know that rates would increase at the time of a wastewater system acquisition as wastewater customers were likely paying rates that were below the cost of service. Aqua Exc. at 31-32 (citing R.D. at 89-90). Aqua counters that the Company demonstrated that justifications advanced by I&E and restated by the ALJ are unreasonable and unsupported by record evidence. Aqua Exc. at 32. Specifically, the Company contends that I&E's testimony: (1) implies that municipal governments believed that the cost of acquiring the subject systems would be carried by existing Aqua customers; and (2) ignores the Company's explanation that, as part of the Section 1329 process, future customer rates will be impacted by the purchase price. Moreover, Aqua notes that, contrary to I&E's arguments, the Company demonstrated that it educates and engages with municipal leaders on the ratemaking process. Aqua Exc. at 32 (citing Aqua M.B. at 218-19).

Aqua also challenges the ALJ's reasoning that: (1) community representatives who decided to sell a system due to increasing taxes and/or utility rates are unable to avoid the consequences of that decision; and (2) the revenue generated by the sale of a community's wastewater system is a benefit to the communities of the acquired systems. Aqua Exc. at 32 (citing R.D. at 90). Specifically, Aqua posits that the ALJ took the testimony of Aqua's witness, Mr. Packer, out of context because Mr. Packer was responding to the proposed Act 11 revenue allocation advanced by the OCA, and although Mr. Packer did not disagree with the benefits to the communities whose systems were acquired by Aqua, he states that, "the principles of gradualism should prevail and be utilized to mitigate these first in rate increases." Aqua Exc. at 32 (citing Aqua M.B. at 217-18; Aqua St. 1-R at 25). Further, Aqua claims that the ALJ ignored Mr. Packer's testimony that over the long-term, the Commission will have sufficient opportunities in subsequent rate cases to adjust the rate design for each of the acquired systems. Aqua Exc. at 32-33 (citing Aqua St. 1-R at 25-26). Aqua asserts that the ALJ, instead, reasoned that each system should be subjected to a large and immediate rate increase in this proceeding because an immediate benefit was obtained by the communities which sold wastewater systems to the Company. Accordingly, Aqua contends that such reasoning highlights that I&E's proposal will result in rate shock. Aqua Exc. at 33.

Aqua also challenges the ALJ's determination that the Company's approach of allocating 30% of the proposed wastewater revenue requirement to water customers is "arbitrary." Aqua Exc. at 33 (citing R.D. at 90). Aqua counters that, although the ALJ cited to *Lloyd*, which rejected the definition of gradualism as limiting a rate increase to 10% of the total bill as "the magic number that will prevent rate shock," the Company explained why its proposal is just and reasonable and does not aver that its proposed 30% allocation is the "magic number." Aqua Exc. at 33 (citing Aqua R.B. at 95-99; Aqua M.B. at 216-225). Further, Aqua notes that given the size and number of the systems acquired since the Company's last base rate case and to mitigate the impacts of the initial rate increase for these systems while still moving each towards the cost of service, it is appropriate for the initial allocation of revenues to be higher. Aqua Exc. at 33 (citing Aqua M.B. at 216; Aqua St. 1-R at 24). Moreover, Aqua notes that the other Parties' alternatives are disruptive to the Company's balanced approach and would subject the customers of the acquired systems to significant and immediate rate increases. Aqua Exc. at 33.

Finally, Aqua argues that I&E's proposed rate zone-specific rate design, and Act 11 revenue allocation proposal, are inappropriate. Aqua posits that the ALJ did not analyze the Company's detailed wastewater rate design proposal beyond determining that I&E's proposed rate design should be adopted as a part of the Act 11 revenue allocation. Aqua Exc. at 34 (citing R.D. at 91; Aqua M.B. at 237-38).

In its Replies, I&E argues that the ALJ considered all of the wastewater revenue allocations presented by the Parties and properly recommended the methodology presented by I&E for allocating revenue and designing the wastewater rates. Further, I&E notes the ALJ's finding that I&E's approach: (1) takes into consideration the number of water and wastewater customers in each system; (2) balances the goal of moving rates toward alignment with the cost of service; and (3) mitigates some of the resulting large rate increases if a wastewater revenue allocation is not approved.

Moreover, I&E avers the ALJ acknowledged that I&E's approach is: (1) more beneficial to the communities served by the systems acquired by the Company pursuant to Section 1329; and (2) less complicated and more logical than the methods advocated by the other Parties. I&E R. Exc. at 10 (citing R.D. at 91).

In its Replies, the OSBA disagrees with the Company's Exception to reverse the ALJ's recommendation that reduces the Company's proposed amount by approximately $10 million. The OSBA avers that it does not oppose the magnitude of the Act 11 subsidy reduction recommended by the ALJ because it argued in this proceeding that the Company's request to recover $20.839 million of the wastewater revenue requirement from water service customers was not supported by the record evidence. The OSBA further notes that, as a result of its proposal to assign additional increases to Aqua's Base and New Garden Divisions, the OSBA's overall proposed wastewater increase and its recommended Act 11 revenue requirement was less than the Company's proposal. Therefore, the OSBA concludes that it supports the ALJ's recommendation to reduce the Act 11 subsidy paid by the Company's water customers. OSBA R. Exc. at 2-3 (citing OSBA St. 1 at 15-17).

In its Replies, the OCA, likewise, submits that the ALJ properly rejected the Company's Act 11 subsidy and rate design, arguing that the subsidy is unreasonable and inconsistent with generally accepted ratemaking principles. The OCA notes that, with regard to the Act 11 subsidy amount, the recommendations of I&E and the OCA are based on the same reasoning that it is not reasonable or in the public interest for water customers, who receive no benefit from wastewater operations or Section 1329 acquisitions, to support a disproportionate share of the revenue requirement driven by those acquisitions. OCA R. Exc. at 16 (citing R.D. at 89-91; 96; OCA St. 4 at 4-5; I&E St. 5 at 66). Further, the OCA contends that establishing a subsidy close to one-third of the wastewater revenue requirement would mean that wastewater rates do not support a reasonable relationship to the utility's cost of serving the customer. OCA R. Exc. at 16 (citing OCA M.B. at 89-91).

The OCA also disagrees with the Company's claims that the subsidy is necessary to mitigate significant rate impacts for the acquired wastewater customers and that the more moderate subsidy recommended by I&E produces wastewater rate increases that are not sufficiently gradual. OCA R. Exc. at 16 (citing Aqua Exc. at 31-33). The OCA posits that the Company neglects the role that FMV ratemaking rate base and the Company's high proposed return on common equity play in worsening the rate impact on the customers of the acquired systems. Therefore, the OCA asserts that it is reasonable to assign more of the revenue requirement generated by the acquired systems. Moreover, the OCA notes that under the ALJ's recommended reduction to the Act 11 subsidy, the acquired wastewater customers and legacy wastewater customers will not pay the full cost of service, and there would still be a $10 million subsidy by water customers. OCA R. Exc. at 16-17 (citing OCA St. 4-SR at 2-3).

b. I&E Exception No. 2 and Replies

In its Exception No. 2, I&E submits that the ALJ erred in using I&E's wastewater increase by class recommendation table that was prepared to support the rebuttal testimony of I&E's witness, Mr. Kubas, instead of I&E's updated wastewater increase by class recommendation table that Mr. Kubas submitted in support of his surrebuttal testimony. I&E explains that Mr. Kubas prepared a table in support of his rebuttal testimony that summarized the proposed revenue allocations set forth in the Parties' direct testimony. However, I&E restates that in the surrebuttal phase of the case, Mr. Kubas revised I&E's proposed wastewater revenue increase by system to reflect revisions to Aqua's original claim, late payment revenues, and proposed revenues, as well as to address the positions of the other Parties. Accordingly, I&E argues that the Commission should rely on the wastewater increases by class which were updated in

Mr. Kubas' surrebuttal testimony. I&E Exc. at 4-5 (citing R.D at 88; I&E St. 5-SR at 4; I&E Exh. 5-SR, Sch. 1 at 1; I&E St. 5-R at 1-23; I&E Exh. 5-R, Sch 1).

In its Replies, Aqua submits that I&E's surrebuttal wastewater revenue allocation should be rejected for the same reasons it argued against adopting I&E's rebuttal proposal. Aqua R. Exc. at 9 (citing I&E Exc. at 4-5).

c. OCA Exception No. 11 and Replies

In its Exception No. 11, the OCA submits that, although it supports the reduction to the subsidy, the OCA's method for allocating the revenue requirement between water and wastewater customers is more reasonable and should be adopted. OCA Exc. at 16 (citing R.D. at 89-91). The OCA asserts that, by allocating a portion of the wastewater revenue requirement to water customers, the OCA's method moves the acquired and legacy system rates closer to their cost of service while mitigating rate increases to all wastewater customers. OCA Exc. at 18 (citing OCA St. 4SR at 1-2; OCA St. 4 at 4-9).

The OCA notes that although I&E's method focuses on the gap generated by each system's revenue requirement, the OCA's method also considers how much of the gap is generated by the FMV premium paid for each acquired system. The OCA argues that, in determining relative burdens, it is not reasonable for the subset of wastewater customers benefiting from the FMV premium to further benefit by having water customers pay the portion of the acquired system's revenue requirement generated by the FMV premium. OCA Exc. at 16-17 (citing OCA R.B. at 46-49; OCA M.B. at 88-89, 91-96; OCA St. 4 at 6-8; OCA St. 4-SR at 2-3).

The OCA also claims that contrary to the ALJ's concerns regarding the complexity of the OCA's recommendation, the additional steps for implementation of the

OCA's method are warranted and not unreasonably complicated. OCA Exc. at 17 (citing R.D. at 91). The OCA explains that the calculated amount of the revenue requirement associated with the FMV premiums is allocated to the five acquired systems such that no system exceeds its cost of service, and the remainder is allocated to the legacy systems. The OCA notes that the Company's proposed class increases for each division are prorated when applied. OCA Exc. at 17 (citing OCA St. 4 at 8-10; OCA Exh. Sch. GAW-4).

Further, the OCA argues that, when compared to the OCA's method, I&E's method recommends that the Cheltenham wastewater system be assigned a larger revenue requirement and, if I&E's method is adopted, then Cheltenham's resulting rates at the Company's revenue requirement would be higher than its cost of service. OCA Exc. at 17 (citing OCA St. 4-SR at 5-6; I&E St. 4-SR at 5, 14). Moreover, the OCA notes that, although it agrees that the wastewater subsidy should be reduced, the revenue allocations should also be guided by cost-causation. Accordingly, the OCA submits that, if the OCA's allocation method is not adopted and if the revenue allocated to the Cheltenham system would otherwise exceed its cost of service, then an adjustment should be made as part of the scale back. OCA Exc. at 17 (citing OCA R.B. at 54).

The OCA also explains that it does not except to the ALJ's recommendation regarding water allocation because, but for the Act 11 subsidy, the ALJ adopted the Company's and the OCA's recommendation. The OCA provides that it is the OCA's understanding that the ALJ accepts the OCA's recommended proportional scale back across the divisions and classes and, other than the Act 11 subsidy, this is consistent with the water revenue increase allocation adopted by the ALJ and supported for the same reasons. OCA Exc. at 18 (citing R.D. at 91-93; OCA R.B. at 55-58; OCA St. 4 at 12-13).

The OCA disagrees with the ALJ's recommendation that adopts I&E's and the Company's scale-back proposal which would not reduce wastewater rates until the Act 11 subsidy is eliminated. OCA Exc. at 18 (citing R.D. at 91; Aqua St. 5-R at 25; I&E St. 5 at 63-64). The OCA recommends a different scale-back approach that would allocate additional wastewater revenue to the acquired systems and legacy systems based on the Company's authorized ROE. Therefore, the OCA maintains that if the Commission adopts a different capital structure and/or a lower ROE than proposed by the Company, then the scale back should first be applied to reduce the revenue requirement associated with the FMV premiums, to the benefit of wastewater customers. Further, the OCA maintains that if the Commission reduces revenue requirement for non-ROR reasons, or the Commission does not adopt the OCA's method for allocating wastewater revenue requirement based on FMV premiums, then the OCA agrees that the benefit should be applied to reduce the subsidy by water operations. OCA Exc. at 18 (citing OCA M.B. at 96-97; OCA St. 4 at 11-12).

In its Replies, Aqua argues that the OCA's proposed allocation of Act 11 revenues was properly rejected because it is neither fair nor reasonable. Aqua counters that the arguments advanced by the OCA in support of its proposed Act 11 revenue allocation are without merit and should be rejected for the same reasons as its revenue allocation proposal. Aqua argues that the OCA's calculation of the revenue requirement associated with FMV premiums: (1) is improper; (2) seeks to mask a large increase to wastewater base customers; and (3) ignores that the Company's proposal already accounts for the premiums which the OCA seeks to undo. Aqua adds that the OCA's scale-back method should be rejected for the same reasons as its proposed revenue allocation. Aqua R. Exc. at 9-10 (citing OCA Exc. 17; Aqua R.B. at 95-98; Aqua M.B. at 220-21, 266).

In its Replies, I&E submits that, upon consideration of all of the proposals set forth by the Parties regarding this issue, it supports the ALJ's recommendation. I&E R. Exc. at 16.

d. OSBA Exception No. 1 and Replies

In its Exception No. 1, the OSBA argues that the ALJ erred in adopting the Company's proposed revenue allocation for its water service customers. OSBA Exc. at 2 (citing R.D. at 93). First, the OSBA disagrees with the ALJ's conclusion that Aqua's methodology better reflects the cost of service compared to those advocated by the other Parties because it is based on "a combined water and wastewater revenue, or 'total bill,' evaluation." OSBA Exc. at 2-3 (citing R.D. at 81, 92). The OSBA argues that the ALJ's conclusion violates the decision in *Lloyd* that ratemaking must be conducted using each specific service's cost of service. OSBA Exc. at 3. The OSBA notes that, when developing a revenue allocation based upon an accepted cost of service study, the ALJ and the Commission must follow the requirements set forth in *Lloyd* because if ratemaking is performed on a combined or total-bill basis, such as Aqua, proposes the true impact of the revenue increases required by the Company's separate water and wastewater cost of service study will be hidden. *Id.* (citing *Lloyd* at 1015, 1020-21).

The OSBA also argues that the Company's proposed water revenue allocation violates the principles of *Lloyd* because it moves each class "toward its appropriate percentage cost of service including the Act 11 allocation." OSBA Exc. at 4 (citing R.D. at 92-93). The OSBA asserts that the plain language of Section 1311(c) of the Code sets the legal standard that must be met in all combined water/wastewater rate cases under Act 11. The OSBA specifically notes that Section 1311(c) provides that "[t]he commission when setting base rates, after notice and an opportunity to be heard, *may allocate a portion of the wastewater revenue requirement* to the combined water and wastewater customer base if in the public interest." OSBA Exc. at 4 (citing 66 Pa. C.S.

§ 1311(c) (emphasis added by the OSBA)). However, the OSBA contends that Section 1311(c) does not provide the legal authority to violate the requirement of *Lloyd* that rates for individual utility services be based on separate cost of service determinations. OSBA Exc. at 4 (citing *Lloyd*). Accordingly, the OSBA contends that the ALJ's approval of Aqua's water revenue allocation on the basis that it moves each class "toward its appropriate percentage costs of service including the Act 11 allocation" must be rejected because the ALJ made her decision without any legal basis set forth in Act 11. OSBA Exc. at 4 (citing R.D. at 92-93).

The OSBA also argues that the Company's revenue allocation violates *City of Bethlehem* where the Commission agreed with the OSBA when it determined that "the proper yardstick for measuring the degree of movement toward cost of service is the change in the absolute level of class subsidies at present and proposed rates." The OSBA asserts that in this case, the ALJ ignored the Commission's standard in *City of Bethlehem* for measuring progress towards cost of service when designing a revenue allocation. OSBA Exc. at 4-5 (citing *City of Bethlehem* at 36). In fact, the OSBA contends that its subsidy analysis demonstrates that the Company's proposed revenue allocation for water service, at the Company's requested revenue requirement level, would result in the Commercial, Industrial, and Public Fire customer classes moving toward cost of service and the Residential, Public, Other Water Utilities and Private Fire customer classes moving away from cost of service. OSBA Exc. at 5-8 (citing OSBA St. 1 at 4, 6-9; OSBA Exh. BK-1 W, Schs. BK-1W, BK-3W). Thus, the OSBA maintains that the Company's proposed revenue allocation for water service, exclusive of Act 11 subsidies, is unjust and unreasonable because it violates *Lloyd* by failing to move all of the customer classes closer to their respective cost-based revenue levels. OSBA Exc. at 8.

Finally, the OSBA further disagrees with the ALJ's finding that Aqua's revenue allocation better reflects cost of service since it moves each customer classification toward its appropriate percentage of cost of service when the Act 11 allocation is included. OSBA Exc. at 8-9. The OSBA argues, however, that the preferred cost metric used by Aqua in support of its revenue allocation is conceptually invalid. In this regard, the OSBA cites the testimony and detailed analysis (see OSBA Exc. at 8-11) of its witness, Mr. Kalcic, in reiterating its position that the Company's proposed class revenue allocation for water service, including Aqua's alternative percentage of cost of service metric, and Aqua's claim that Act 11 revenues should be included in class revenue allocation evaluations, is without legal foundation. OSBA Exc. at 9-11 (citing OSBA St. 1-S at 4-8). Therefore, the OSBA avers that the Company's proposed class revenue allocation for water service must be rejected by the Commission. OSBA Exc. at 11.

In its Replies, Aqua counters that the Company's proposals are consistent with Act 11 and *Lloyd*. Further, Aqua notes that the OSBA essentially is repeating the same arguments it made in its Briefs against the Company's proposed water revenue allocation in favor of its own water revenue allocation. The Company cites to its arguments included in its Briefs against the OSBA's position. Aqua R. Exc. at 10 (citing OSBA Exc. at 11-17; Aqua R.B. at 98-100; Aqua M.B. at 224, 228-29). Additionally, Aqua avers that the OSBA's reliance upon *Lloyd* is misplaced in that the OSBA "treats the allocation of wastewater costs as though they were a separate rate charged to water customers." Aqua R. Exc. at 10.

e. OSBA Exception No. 2 and Replies

In its Exception No. 2, the OSBA submits that the ALJ erred in rejecting the OSBA's proposed water revenue allocation. The OSBA begins its Exception No. 2 by citing to the ALJ's conclusion that "it appears that OSBA's recommendation to isolate and remove the Act 11 allocation from its analysis is motivated by a desire to decrease the revenue allocated to non-residential customer classifications, while increasing the revenue allocated to residential customer classes." OSBA Exc. at 11 (citing R.D. at 92;

Aqua M.B. at 229). In response, the OSBA argues that the ALJ's conclusion with respect to its motivations is baseless. The OSBA submits that its proposed water revenue allocation should be adopted by the Commission because it correctly isolates Act 11 revenues in its proposed revenue allocation. The OSBA explains that its approach of isolating the Company's claimed water cost of service from Act 11 subsidies: (1) is the only revenue allocation sponsored by any Party that follows both the requirements of *Lloyd* and the Commission's decision in *City of Bethlehem*; and (2) is necessary to develop a cost-based water revenue allocation, given that the Company's claimed wastewater cost of service and associated Act 11 subsidies are separate from, and unrelated to, its claimed water revenue requirement. Furthermore, the OSBA maintains that, given that Aqua's proposed revenue allocation moves the Residential class in the wrong direction (*i.e.*, away from the cost of service), the OSBA's revenue allocation assigns greater revenue responsibility to the Residential class because any revenue allocation which corrects the Company's failure to move all classes toward cost of service will assign a greater revenue responsibility to the Residential class. OSBA Exc. at 11-12 (citing OSBA M.B. at 9-14).

The OSBA repeats its argument that the Commission should adopt its alternative water revenue allocation proposal sponsored by its witness, Mr. Kalcic, in this proceeding because it: (1) implements the Company's requested revenue increase; (2) is exclusive of any allocation of Act 11 subsidies; and (3) would move all classes toward their respective cost-based revenue levels without imposing an excessive increase on any class of water customers. OSBA Exc. at 12-15, 17 (citing OSBA St. 1 at 9-11; OSBA Exh. BK-1 W, Schs. BK-4W, BK-5W). Moreover, the OSBA notes that, although it agrees with the Company's method of allocating its Act 11 revenue requirement to its water service classes, the OSBA does not agree with the overall magnitude of the Company's proposed Act 11 revenue requirement. OSBA Exc. at 15-16 (citing OSBA St. 1 at 11, 15, 17; OSBA Exh. BK-1 W, Schs. BK-1W, BK-6W).

In its replies, Aqua counters that the Company's proposals are consistent with Act 11 and *Lloyd*. Further, Aqua notes that the OSBA essentially is repeating the same arguments it made in its Briefs against the Company's proposed water revenue allocation in favor of its own water revenue allocation. The Company cites to its arguments included in its Briefs against the OSBA's position. Aqua R. Exc. at 10 (citing OSBA Exc. at 11-17; Aqua R.B. at 98-100; Aqua M.B. at 224, 228-29).

In its replies, the OCA disagrees with the OSBA's arguments in its Exception No. 2 and opines that the ALJ properly found that the OSBA's recommended total class water increases are unreasonable. The OCA agrees with the ALJ that, from the perspective of the customers, both the water increase and the wastewater allocation are included in the effect of the increases. Further, the OCA states that with the Act 11 subsidy excluded, the results of the OSBA's class revenue allocations are not reasonable. OCA R. Exc. at 18-19 (citing R.D. at 92; OSBA Exc. at 11-17). Moreover, the OCA asserts that, although the Residential, Industrial and Commercial classes are currently earning close to parity, the OSBA's proposal would result in skewed, unreasonable, and inequitable increases because the Residential and Industrial classes would experience a higher percentage of revenue responsibility than that of the Commercial class. OCA R. Exc. at 19 (citing OCA R.B. at 55-58; Aqua M.B. at 228-29; OCA St. 4R at 7, 9-10).

f. OSBA Exception No. 3 and Replies

In its Exception No. 3, the OSBA disagrees with the ALJ's adoption of I&E's recommended wastewater rate design and rate increases because it does not include an analysis of how the Company's Act 11 wastewater subsidies should be allocated to Aqua's customers. OSBA Exc. at 17 (citing R.D. at 91). Thus, the OSBA supports the Company's proposed method of allocating the Act 11 subsidy because, as discussed in more detail below, it is consistent with the OSBA's position that the recovery of Act 11 wastewater subsidies from water customers on a revenue neutral basis by customer class is the only just and reasonable resolution of this issue that is consistent with the requirements of *Lloyd*. OSBA Exc. at 17, 20.

In support of this Exception, the OSBA references its witness, Mr. Kalcic's, review and analysis of the Company's proposed method of allocating its Act 11 revenue requirement to water customers to argue that the Company's proposed wastewater increase would not recover all of the Company's claimed wastewater revenue requirement. OSBA Exc. at 18-19 (citing OSBA St. 1 at 13-14, OSBA Exh. BK-1 WW, Sch. BK-1WW). Further, the OSBA contends that, although Act 11 provides the statutory authority to temporarily recover the costs associated with Aqua's wastewater system from its water customers, Act 11 does not allow for any "cross-subsidization" of customer classes between water and wastewater customers. OSBA Exc. at 19. Moreover, the OSBA argues that Act 11 does not supersede the requirements of *Lloyd*, meaning that the Company's water rates, exclusive of Act 11, must be based primarily on the results of Aqua's water cost of service study. Accordingly, the OSBA requests that the Commission adopt the Company's proposal to recover Act 11 wastewater subsidies from water customers on a revenue neutral basis by customer class because it is just, reasonable, and consistent with the requirements of *Lloyd* and the language of Act 11. OSBA Exc. at 19-20 (citing OSBA St. 1 at 17-18).

In its Replies, the OCA argues that the OSBA's recommended total class water increases are unreasonable and should not be adopted by the Commission. With regard to the OSBA's argument that the ALJ erred in not accepting the OSBA's proposal with regard to the Act 11 allocation subsidy between Residential and non-Residential classes, the OCA retorts that, because the Company has much fewer wastewater customers (63,869) to non-fire water customers (415,059), most water customers do not rely upon the Company's wastewater operations and there is no reasonable basis for a particular class of water customers to have to subsidize the same class of wastewater customers. OCA R. Exc. at 19-20 (citing OSBA Exc. at 17-20; OCA St. 4-R at 10-11).

Further, the OCA counters that the OSBA's proposal results in the Residential class being assigned a larger relative percentage of Act 11 subsidy revenues than the system average, while the Commercial class is assigned significantly less than the system average and the Industrial class is not assigned Act 11 subsidy responsibility. The OCA elaborates that, because the Residential, Commercial, and Industrial class indexed RORs are all reasonably close to unity, when the OSBA's initial class revenue allocations (prior to the Act 11 revenue shift) are combined with the Act 11 revenue increases, the OSBA's recommendation unreasonably favors the Commercial class. OCA R. Exc. at 20 (citing OCA St. 4R at 9-10).

g. OSBA Exception No. 4 and Replies

In its Exception No. 4, the OSBA submits that Aqua's proposal to scale back the Company's proposed revenue allocation must be rejected. The OSBA contends that, although the ALJ acknowledged that the exclusion of wastewater rates from any scale back in this proceeding will reduce Aqua's Act 11 revenue requirement, the ALJ did not discuss how the Company's allocation of its proposed Act 11 revenue requirement of approximately \$20.8 million for water classes should be scaled back to the ALJ's recommended level of approximately \$10.2 million. OSBA Exc. at 20-21 (citing R.D. at 91, Table Act 11; Aqua M.B. at 265; OSBA Exh. BK-1 W, Sch. BK-6W). In order to ensure that the Company's Commission-approved revenue requirement is recovered from water customers on a revenue neutral basis, the OSBA recommends that the Commission: (1) scale back the wastewater class revenue requirements proportionately to reflect the Company's total approved wastewater revenue requirement level; and (2) subtract the Company's approved level of wastewater revenues, by class, from the adjusted wastewater class revenue requirement levels. OSBA Exc. at 25 (citing OSBA St. 1 at 18-19). The OSBA submits that its recommended water service and Act 11 scale-back proposals are consistent with *Lloyd* and Act 11 and would ensure that the Aqua's approved Act 11 revenue requirement would be recovered from water customers on a revenue neutral basis, by customer class. OSBA Exc. at 25.

The OSBA repeats its argument that the Company's proposed scale back of its proposed revenue allocation must be rejected because: (1) the Company's proposed revenue allocation is not cost based and, therefore, using it as a starting point for any scale back is not valid; and (2) a separate scale back is necessary for reductions in the Company's allowed water service revenue requirement and changes in the Company's Act 11 revenue requirement. OSBA Exc. at 21-22 (citing OSBA St. 1-R at 8-11). The OSBA maintains that if the Commission awards the Company a water service revenue increase that is less than Aqua's requested amount and exclusive of Act 11 considerations, then the OSBA's recommended class increases for water service should be proportionately scaled back. OSBA Exc. at 22-23 (citing OSBA M.B. at 19-20; OSBA Exh. BK-1 W, Sch. BK-4W). Thus, the OSBA maintains its position that whatever the Act 11 revenues that the Commission decides to assign to water classes should be subject to a separate scale back, as determined by the level of Aqua's awarded wastewater revenue requirement and the overall level of final wastewater rates. OSBA Exc. at 23-24 (citing OSBA St. 1 at 12, 19; OSBA Exh. 5-B, part 1; OSBA Sch. BK-6WW).

In reply to the OSBA's position that the Commission reject the Company's proposed scale back for water rates for the same reasons that it opposed the Company's water revenue allocation, Aqua contends that the Company has demonstrated that its proposed scale back was reasonable, and therefore, the OSBA's exception regarding this matter should be rejected. Aqua R. Exc. at 10 (citing OSBA Exc. at 20; Aqua R.B. at 107-108; Aqua M.B. at 265-66).

In its Replies, I&E submits that it agrees with the ALJ's recommendation to adopt the I&E methodology for allocating revenue and designing wastewater rates, including I&E's recommended Act 11 subsidy. I&E also agrees that no scale back of Aqua's proposed wastewater rates should be permitted until the entire wastewater Act 11 subsidy allocation is eliminated. I&E R. Exc. at 22 (citing OSBA Exc. at 20-21; R.D. at 88, 91).

h. Aqua LUG Exception No. 1 and Replies

In its Exception No. 1, Aqua LUG disagrees with the ALJ's reliance on the testimony provided by Aqua and the OCA that alleged that Aqua LUG's proposed revenue allocation would result in an unacceptable RROR. According to Aqua LUG, the ALJ never addressed the unfavorable RROR effects that her recommended revenue allocation would have on Commercial customers and the very limited progress that would be made towards cost of service rates for the other classes. Aqua LUG Exc. at 2 (citing R.D. at 93). In this regard, Aqua LUG requests that the Commission adopt its revenue allocation proposal that it developed consistent with *Lloyd,* to determine the reasonableness of the movement towards cost of service. Aqua LUG Exc. at 2-3 (citing *Lloyd*; *Pa. PUC v. Philadelphia Gas Works*, Docket No. R-2008-2073938 (Order entered March 26, 2009)).

More specifically, Aqua LUG asserts that the Company's proposed movement of the Commercial rate class closer to the Company's cost to serve, from a current RROR of 1.07 to 1.05 RROR, would not achieve sufficient movement for the Residential customer class because the resulting RROR under current residential rates would be 0.96 and would not move towards the system average increase in the Company's proposed revenue allocation. Aqua LUG Exc. at 2-3 (citing Aqua M.B. at 9; Aqua LUG St. 1 at 4). Aqua LUG maintains that its recommendation would require the Company to modify its revenue allocation so that: (1) the Residential class RROR would move from 0.96 to 0.98; (2) the Commercial class RROR would move from 1.04 to 1.02; (3) the Industrial class RROR would move from 0.93 to 0.99; and (4) the Public class

RROR would move from 1.18 to 1.15.[74] Aqua LUG Exc. at 3-4 (citing Aqua LUG M.B. at 9-10). Aqua LUG further contends that the basis for its recommendation is the unreasonableness of setting rates that preserve substantial interclass subsidies for the Commercial class (*i.e.*, the Commercial class RROR decreasing from present to proposed rates by 0.02) while not progressing towards cost of service for the Residential class (*i.e.*, the Residential RROR at present and proposed rates remaining at 0.96). Aqua LUG Exc. at 4-5. Moreover, Aqua LUG argues that, given that the Residential class has a RROR of 0.96 under present rates, it is not clear how a reasonable movement towards cost of service justifies a rejection of Aqua LUG's proposed revenue allocation. Aqua LUG adds that, by not immediately moving the Residential customer class to cost of service, Aqua LUG's recommended movement for the Residential class incorporates principles of gradualism. Aqua LUG Exc. at 5 (citing Aqua LUG M.B. at 9-10).

Accordingly, Aqua LUG requests that the Commission reject the ALJ's recommendation and direct the Company to implement the revenue allocation modifications submitted by Aqua LUG because its proposed allocations would move all customer classes closer to their cost to serve. In the alternative, Aqua LUG requests that the Commission adopt the OSBA's recommendation. Aqua LUG Exc. at 2, 6.

Next, Aqua LUG excepts to the ALJ's decision to adopt Aqua's class allocation methodology based on her determination that the Company's proposal does not attempt to exclude the Act 11 allocation from its analysis. More specifically, Aqua LUG takes issue with the discussion in the Recommended Decision where the ALJ accepted the OCA's observation that Aqua LUG's recommendation does not incorporate the subsidization of wastewater operations by water operations. Aqua LUG Exc. at 5 (citing

---

[74] Aqua LUG notes that it remains unopposed to the OSBA's proposed alternative revenue allocation that is also intended to adjust the Company's proposed revenue allocation by advancing various customer classes towards their cost of service. Aqua LUG Exc. at 4 (citing Aqua LUG St. 1-S at 2).

R.D. at 92). Aqua LUG submits that the ALJ's discussion lacks the appropriate context, explaining that the ALJ adopted I&E's scale-back recommendation to eliminate the subsidy to wastewater customers prior to proportionately scaling back the additional rates. Aqua LUG Exc. at 5-6 (citing R.D. at 91). Aqua LUG contends that, to the extent I&E's recommendation is adopted by the Commission, any further accounting consideration of the Act 11 subsidy would be a double count. Aqua LUG Exc. at 6. Therefore, Aqua LUG submits that, if the Commission accepts I&E's scale-back proposal to eliminate the subsidy to water customers first, then the Commission should scale back the additional water rates, consistent with Aqua LUG's proposed revenue allocation. *Id.* at 6.

Finally, Aqua LUG argues that without the I&E scale-back recommendation, the legislative authority to allocate a portion of the wastewater cost of service to water customers should not supersede the Commission's evaluation of the water revenue allocation. Aqua LUG notes the OSBA's observation that Act 11 revenue requirements are assigned on a revenue-neutral basis and do not reflect class cost of service. Aqua LUG Exc. at 6 (citing OSBA St. 1-S at 6-7). Therefore, Aqua LUG contends that pursuant to *Lloyd*, the appropriate Act 11 subsidy should be determined after establishing the appropriate water system revenue allocation on a cost of service basis. Aqua LUG Exc. at 6.

In its Replies, Aqua argues that Aqua LUG's exception should be denied because the ALJ correctly rejected Aqua LUG's proposal to move a portion of the industrial class increase to the Residential class, due to a larger increase to blocks 5 and 6 of the consumption rates for the industrial class. Aqua R. Exc. at 10-11 (citing Aqua LUG Exc. at 2-6; Aqua M.B. at 229-30).

In its Replies, the OCA argues that the Commission should reject Aqua LUG's adjustments because Aqua LUG's proposals would move classes by small percentage increments and do not reflect the lack of accuracy of the underlying cost allocations, among other complexities in this case. Therefore, the OCA contends that the ALJ properly concluded that the Company's proposed allocation of class revenues is more appropriate. OCA R. Exc. at 19 (citing Aqua LUG Exc. at 2-6; R.D. at 93; OCA St. 4-R at 12).

i. Masthope Exception No. 2 and Replies

In its Exception No. 2, Masthope argues that the ALJ's adoption of the Act 11 subsidy adjustments results in unjust and unreasonable rates that disproportionately and negatively affect Masthope wastewater customers, particularly commercial customers. Masthope Exc. at 10-11 (citing R.D. at 84-91). Masthope explains that it expressed its concern throughout this proceeding about allocating water revenues to the Company's wastewater revenue requirement which may result in large rate increases to wastewater rates for Masthope customers and, therefore, urged the ALJ to adopt Aqua's original distribution of the proposed rate increases between and within water and wastewater rate schedules. Masthope Exc. at 10 (citing Masthope M.B. at 19-24). Notwithstanding its concerns, Masthope avers that the ALJ ultimately adopted I&E's proposed Act 11 revenue allocation methodology that would result in large increases in Masthope's wastewater usage rates (147% increase) and monthly service charge (35% increase). Masthope Exc. at 10 (citing R.D. at 84-91; Masthope R.B. at 6-7; Masthope M.B. at 19-24). Thus, Masthope requests that the Commission reverse the ALJ's recommendation to the extent it results in dramatic rate increases for Masthope water customers. Masthope Exc. at 10-11.

Masthope also argues that although Act 11 provides the Commission has broad discretion to allocate wastewater revenue requirements across a utility's combined customer base, the Commission should: (1) assure just and reasonable rates for all classes of customers, pursuant to Section 1301 of the Code, 66 Pa. C.S § 1301; (2) avoid rate shock; and (3) embrace the principles of gradualism. Masthope Exc. at 11 (citing 66 Pa. C.S. § 1311(c); *Implementation of Act 11 of 2012*, Docket No. M-2012-2293611 (Order entered August 2, 2012)). Further, Masthope maintains that the impact on its community would be especially detrimental to the unique mix of part-time/seasonal residents and residential and commercial customers. Moreover, Masthope asserts that, if the Commission approves revenues in amounts less than the Company originally proposed, then the Commission should distribute any increased revenue requirement for water and wastewater customers and the amount of revenue support to be provided by water customers in a manner consistent with the Company's proposal. Furthermore, Masthope avers that the Commission should distribute any increase in rates, both between and within rate schedules, in a manner consistent with the Company's original proposal. Masthope explains that Aqua selectively proposed increases between and within rate schedules to encourage its long-term plan of rate schedule consolidation into a uniform tariff. Masthope details that by contrast, the adjustments adopted by the ALJ are excessive for certain customers in specific schedules, including commercial customers in wastewater Zone 6 who would experience as much as a 147% rate increase. Masthope Exc. at 11-12 (citing Masthope M.B. at 19-23).

In its Replies, Aqua notes that it does not oppose Masthope's Exception, explaining that Masthope supports Aqua's proposed Act 11 revenue allocation and Masthope's Exceptions lend further support to Aqua's proposed allocation of revenues. Aqua R. Exc. at 11 (citing Masthope Exc. at 10-11; Aqua R.B. at 99).

In its Replies, I&E argues that although it understands Masthope's argument, any Act 11 subsidy imposed on Aqua's water customers is for the benefit of Aqua's wastewater customers, including Masthope. I&E explains that absent the Act 11 subsidy from wastewater to water customers, the Masthope wastewater rates would have to be further increased. Further, I&E notes that in similar Commission cases, the ALJ and the Commission must balance the justness and reasonableness of all revenue allocation and rate design components, within the complexities of a cost of service methodology, among all customer classes. Moreover, I&E asserts that as a result of making the required choices, ultimately all customer classes will be adversely affected. Therefore, I&E submits that it supports the ALJ's recommendation that the Commission adopt I&E's methodology for allocating revenue and designing wastewater rates, including I&E's recommended Act 11 subsidy. I&E R. Exc. at 24-25 (citing Masthope Exc. at 10-11; R.D. at 82-91).

In its Replies, the OCA refers to its argument that Aqua's Exception No. 9 regarding the Act 11 subsidy should be rejected, to contend that Masthope's objection to decreasing the subsidy for Masthope (one of the legacy systems) should be rejected for the same reasons. OCA R. Exc. at 17 (citing Masthope Exc. at 10-12; R.D. at 88; OCA R.B. at 51-53).

4. Disposition

At the outset, we will address I&E's Exception No. 2. Based on our review, we agree with I&E that the Commission should rely on the wastewater increases by class which were updated in Mr. Kubas' surrebuttal testimony. *See* I&E Exh. 5-SR, Sch 1 at 1. Therefore, we shall grant I&E's Exception No. 2 and strike the table presented in the Recommended Decision at the top of page 88 and replace it with the table set forth in I&E Exhibit 5-SR, Schedule 1, Page 1 of 3, as reproduced below:

I&E Exhibit No. 5-SR
Schedule 1

* Column D Adjusted to Match Aqua Exhibit 1-A(a) Schedule Act 11
** Column L Adjusted to Match Aqua Exhibit 5B-B

As will be discussed, at length, below, after our review of the Exceptions and Replies, we agree with the ALJ that Aqua's allocations of revenue between all water customer classifications and all wastewater customer classifications are reasonable and should be approved. We also agree that I&E's methodology for allocating the Act 11 wastewater revenue subsidy should be approved. Table Act 11, which is included in the Commission Tables Calculating Allowed Revenue Increase attached to this Opinion and Order, sets forth the water and wastewater revenue requirement summary for Aqua, based on I&E's allocation methodology.

Additionally, we support the ALJ's recommended adjustment to reduce the gross wastewater revenue requirement to a net basis when shifting the wastewater revenue requirement to water customers.[75] Finally, we agree with the ALJ that any scale back of water rates will first reduce the Act 11 allocation.

To recap, the allocation of revenue among a utility's rate classes involves, *inter alia*, consideration of ratemaking policy and the principles of gradualism. Here, Aqua proposed revenues to be allocated to each customer classification that would be required to move that classification toward the cost of providing service (or revenue requirement). R.D. at 84-85 (citing Aqua St. 5 at 10, 21; Aqua Exh. 5-A, Part I, Sch. A; Aqua Exh. 5-B, Part I, Sch. WW-A). Additionally, Aqua proposed to recover a shortfall of approximately 30% of the Company's proposed revenue requirement from wastewater revenues in water rates. R.D. at 85; Aqua M.B. at 216. I&E, the OCA, the OSBA, and Aqua LUG all opposed Aqua's Act 11 subsidy proposal and proposed alternative Act 11 subsidy reduction methodologies. R.D. at 87-89; Aqua LUG M.B. at 7, 9-10. The ALJ recommended I&E's methodology and agreed with I&E and the Company that any scale back of water rates should reduce the Act 11 allocation first. The ALJ reasoned that

[75] We note that, as outlined in Table Act 11, this will result in the Company's overall allowed revenue requirement being reduced by approximately $77,706 after the Act 11 Allocation.

I&E's approach, *inter alia*: (1) considers the number of water and wastewater customers in each system; (2) balances the goal of aligning rates with the cost of service while mitigating some of the large rate increases that would result absent an allocation of wastewater revenue; and (3) acknowledges the benefits received by the communities serviced by the acquired systems. R.D. at 91.

In its Exceptions, Aqua argues that it demonstrated that justifications and arguments advanced by I&E and discussed by the ALJ were unreasonable and unsupported by record evidence, and that the ALJ misrepresented and/or ignored the testimony and exhibits presented by the Company in support of its proposed wastewater rate design. Similarly, in its Exceptions, the OSBA argues that the ALJ adopted the I&E's recommended wastewater rate design and rate increases without providing details regarding the allocation of Act 11 wastewater subsidies to water customers. We disagree with the arguments expressed by Aqua and the OSBA on these matters. In our view, the ALJ appropriately reasoned that the Company did not present sufficient evidence to demonstrate that allocating 30% of the proposed wastewater requirement to water customers is reasonable and in the public interest. Further, the ALJ appropriately found that shifting 30% of the wastewater revenue requirement to water customers is not equitable and will not result in just and reasonable rates. Indeed, we agree with the OCA's position in its Replies to Exceptions that it is not reasonable or in the public interest for those water customers who do not receive a benefit from wastewater operations or Section 1329 acquisitions to support a disproportionate share of the revenue requirement driven by such acquisitions. With regard to Aqua's and the OSBA's arguments that the ALJ did not provide sufficient analysis in her discussion, we disagree. The ALJ was aware of the positions and arguments put forth by the Company and the OSBA, including the testimonies and exhibits submitted in support of their positions. However, the ALJ has the discretion to determine whether, and to what extent, further discussion and analysis is warranted. Here, it appears that the ALJ did not believe that further consideration of these matters was necessary to recommend that I&E's proposed wastewater allocation methodology be approved. Accordingly, we will deny Aqua Exception No. 9 and OSBA Exception No. 3.

The OCA also filed Exceptions arguing that its method for allocating a portion of the wastewater revenue requirement to water customers is more reasonable because it considers the FMV premium paid for each acquired system. We agree that a portion of wastewater customers benefitted from the revenue generated by the 1329 acquisition; however, we also agree with the ALJ's reasoning that I&E's approach for allocating the wastewater revenue requirement and designing wastewater rates is less complex than the method offered by the OCA. Indeed, I&E's approach is more streamlined than the methods advanced by the other Parties, while also addressing the benefits received by the communities serviced by the acquired systems and moving rates toward their respective cost of service. Similarly, with regard to the scale-back approach, both the OCA and the OSBA contest the ALJ's adoption of the scale-back approach; however, we are of the opinion that the scale back agreed upon by Aqua and I&E offers a less complicated method than other alternatives. Therefore, we agree with the ALJ's conclusion that any scale back of water rates will first reduce the Act 11 allocation. Accordingly, we will deny the OCA's Exception No. 11 and the OSBA's Exception No. 4.

The OSBA also filed Exceptions challenging the ALJ's reasoning and submitting that the OSBA's proposed water revenue allocation should be adopted. The OSBA is of the opinion that the ALJ violated *Lloyd*, misapplied Section 1311, and ignored Commission precedent by reasoning that Aqua's methodology better reflects cost of service and concluding that the Company's allocation of revenues is reasonable. We disagree with the OSBA. We are of the opinion that reasons considered by the ALJ upon which she based her recommendation to approve the Company's allocations of revenues between all water and wastewater customer classifications are just, reasonable, and in the public interest, and should be approved. The OSBA's contention is that Aqua's proposed revenue allocation, which views cost of service as a whole and does not exclude the Act 11 allocation, conflicts with the requirement in *Lloyd* that the basis for individual utility service rates is specific to each service's cost of service. We find this argument unpersuasive. As noted by Aqua in its Replies, the OSBA's reliance upon *Lloyd* appears to be misplaced as wastewater costs are not stand-alone, separate rates charged to water customers. Therefore, we do not believe that the principles of *Lloyd* have been violated. The OSBA also argues that its proposed water revenue allocation correctly isolates the Act 11 allocation. We disagree. Rather, we find the ALJ's conclusion, that the Company's methodology better reflects the cost of service because Aqua's proposed allocation views cost of service "as a whole" and moves each customer classification toward its appropriate cost of service, is more persuasive and in the best interest of the public. R.D. at 92. Accordingly, we shall deny the OSBA's Exception Nos. 1 and 2.

In its Exceptions, Aqua LUG argues that the ALJ erred in adopting the Company's revenue allocations rather than the revenue allocations proffered by the OSBA and itself. Aqua LUG opines that the ALJ's recommendation is baseless and will delay progress of the movement of all customer classes towards their cost of service and result in an unfavorable RROR for Commercial customers. As discussed above, we agree with the ALJ's reasoning and basis for recommending that the Company's allocation of revenues between all water and wastewater customer classifications be approved. Accordingly, we will deny Aqua LUG's Exception No. 1.

Finally, in its Exceptions, Masthope disagrees with the ALJ's adoption of the Act 11 subsidy adjustments because they will disproportionately affect Masthope's wastewater customers. As discussed by the ALJ, it is not fair to the Company's water customers to mitigate increases in expenses to repair acquired systems and to take on the shortfall between the cost of service to serve the wastewater systems. I&E's approach for allocating wastewater revenue and designing wastewater rates allows for each service to recover as much of the cost of providing that service as possible without removing the subsidy, which would result in large increases for every customer. R.D. at 88, 90. Indeed, we agree with I&E's position in its Replies to Exceptions that Masthope's rates would have further increased without the Act 11 subsidy from wastewater to water customers and, as a result of balancing the justness and reasonableness of all revenue allocation and rate design components with the inherent complexities of a cost of service methodology, all customers will ultimately be affected. Therefore, although we understand Masthope's point of contention, we will deny Masthope's Exception No. 2.

D. Tariff Structure and Rate Design

A utility's rate structure implements the Commission's approved revenue increase to determine how the overall increase will be allocated among the utility's various customer classes. Once a class revenue allocation is determined, development of a rate design will address how the tariffed rates and rate elements will generate the allocated revenues. I&E noted the following unique rate structure and rate design challenges present in this proceeding: (1) water base rates; (2) an Act 11 subsidy applied to water base rates to subsidize wastewater customers; (3) wastewater base rates; (4) new rate zones for numerous Section 1329 acquisitions; and (5) third-party sales rates. I&E R.B. at 49. Under the Company's proposal, a residential water customer in the Main Division of Rate Zone 1, using 4,000 gallons of water per month,[76] would experience a monthly bill increase from $69.35 to $81.32, or 17.3% per month, and residential customers in other water divisions would experience increases ranging from 17.3% to 51.3%. *See* Aqua Exh. 5-A, Part II, Sch. 8.[77] Wastewater customers would see increases

[76] The Company claimed that the average usage of 4,000 gallons per month is substantiated in the Company's prior rate case as the pre-COVID pandemic average residential usage was 4,068 per month for the residential class. Aqua St. 5-R at 14.

[77] Present Rates include 7.5% DSIC.

ranging from 7.9% to 84.87%, with one division seeing a proposed decrease (Rate Zone 5 – Newlin Green). *See* Aqua Exh. 5-B, Part II, Sch. WW-7.[78]

1. Positions of the Parties

a. Water Rate Design

(1) Aqua's Water Rate Design Proposal

As shown in Table 8, below, the majority of Aqua's water rate divisions are grouped into three rate zones (Rate Zones 1-3) based on the similarity of their rate structure and rate design, while the Bunker Hill, Sun Valley, Phoenixville, and Belle Aire Acres Divisions are displayed separately because they are dissimilar from those divisions grouped into Rate Zones 1-3.

The majority of Aqua's water customers are charged the rates applicable to its Main Division, designated as Rate Zone 1. The Company proposed to continue to move rate divisions closer to each other and to the Rate Zone 1 in order to facilitate further consolidation with the Main Division. Aqua St. 1 at 29. Specifically, Aqua's proposal indicated that it is working to consolidate water rates for Rate Zones 1 and 2 (with the exception of Chalfont, Concord Park and Treasure Lake in Rate Zone 2). Aqua's witness, Ms. Heppenstall, explained that the Company developed the following five guidelines for the design of water rates: (1) maintain separate rate divisions for those areas with year-round usage and those areas with seasonal usage; (2) maintain a low-use block for the residential class at 2,000 gallons per month in each division, and a sixth block for the industrial classification for usage over 10 million gallons per month; (3) continue movement of those areas with year-round usage toward the Main Division

[78] Present Rates include 5.0% DSIC.

rates; (4) increase existing Main Division private fire service line rates 17.5% and private hydrant charges by 20.6%; and (5) increase the existing Public Fire Hydrant rate up to the 25% of cost of service level. *See* Aqua St. 5 at 11.

Water Operations - Rate Zones / Divisions

Rate Zone	Divisions
Rate Zone 1	Main Division Country Club Gardens and Sand Springs Division Beech Mountain Division Bristol Township Division Mifflin Township Division Mount Jewett Division Robin Hood Lakes Division
Rate Zone 2	Superior Division Chalfont Division Concord Park Division Treasure Lake Division
Rate Zone 3	Oakland Beach Division CS Water (Masthope) Division Eagle Rock Division
	Bunker Hill Division Sun Valley Division Phoenixville Division Belle Aire Acres Division (Receivership)*

* The James Black Water Service Company – Belle Aire Acres Development is being operated by Aqua under a Receivership established via Commission Order on September 3, 2019 at Docket No. M-2019-3012563. Aqua began its Receivership on September 11, 2019 and will continue to act as Receiver for the system until a final determination is made by the Commission. Belle Aire Acres customers are flat rate unmetered customers.

Table 8: Aqua's water operations showing its Division by Rate Zone

As explained by the OCA's witness, Mr. Glenn A. Watkins, Aqua's rate design proposal pertaining to its water operations generally consisted of: (1) the continued movement of those areas with year-round usage toward the Main Division rates; (2) the continuation of its inverted-block usage rate structure; and (3) an increase to its monthly fixed customer charges. The Company's present and proposed water rates by class, set forth in Schedule I of Aqua Exhibit 5-A, Part I, reflect its rate structure, rate design and the distribution of the increase in revenue proposals in this proceeding.[79]

Table 9, below, provides a summary of the Company's current and proposed 5/8" meter residential customer charges:

Aqua Water
Current & Proposed Residential 5/8" Customer Charges

Rate Zone	Division	Current	Proposed	Percent Change
1	Main	$18.00	$22.40	24.44%
2	Main	$18.00	$22.40	24.44%
3	Main	$28.00	$32.40	15.71%
BH	Bunker Hill	$8.00	$11.80	47.50%
PH	Phoenixville	$3.33	$4.90	47.15%

Table 9: Summary of Aqua's current and proposed customer charges by Rate Zone for residential 5/8" meter water customers. OCA St. 4 at 13.

79 Ms. Heppenstall provided updates to her revenue allocation and rate design for water service in Aqua Exhibit 5R-A, Part I, as part of her rebuttal testimony. The Company's revised revenue exhibits reflect corrections to: (1) the 6-inch and 8-inch private fire rates in the Superior Division, and (2) Aqua's public fire revenue under proposed rates. *See* Aqua Exh. 5R-A, Part I, Schs. 1 and 7A.

Aqua indicated that its proposal includes increases in consumption charges so that revenues by class move toward cost of service indicators and to recover the total revenue requirement. Aqua St. 5 at 12.

The Company explained its proposed rates for the remaining non-seasonal water divisions as follows:

> Zone 1 – CC Garden, Sand Springs, Mifflin Township, Mount Jewett, and Robin Hood rates will move fully to Rate Zone 1 rates. Beech Mountain and Bristol Township division rates will continue to move toward Zone 1 rates.
>
> Zone 2 – will move fully to rates in Rate Zone 1 by raising the meter charges for ¾-inch to 4-inch to the level of Rate Zone 1 rates. All other rates were previously equal to Zone 1 rates.
>
> Two other areas, Bunker Hill and Phoenixville, rates were increased to move toward Zone 1 rates. The Company capped the rate increases for these two areas to 48%.

Aqua St. 5 at 12.

The Company explained its proposed rate structure for seasonal areas as follows:

> The Zone 3 Division has a significant number of seasonal customers and will continue to be served under the merged seasonal rate design. The customer charge is increased to $32.40 per month, but is offset with a lower first block consumption rate than Main Division for the first 4,000 gallons. The bills for the seasonal rate structure are equalized with Main Division at the 4,000 gallon average per month and greater consumption levels.

Aqua St. 5 at 13.

The Company further explained its use of competitive service riders[80] and summarized the development of its rate proposals regarding public and private fire and those for Industrial Standby Rates, Resale, and Electric Generation Standby Rates. *See* Aqua St. 5 at 13-15; Aqua M.B. at 232-33.

(2) I&E

As previously discussed, Aqua proposed to subsidize its wastewater revenue requirement by approximately $20.8 million with increased water revenues by the same amount under Act 11. Aqua Exh. 1-A(a), Sch. Act 11. Although the actual recommendations differ, I&E, the OCA, and the OSBA[81] each recommended a reduction to the requested subsidy from Aqua water customers, indicating a reflection of that reduced subsidy through a corresponding increase to the wastewater rates proposed by the Company.

Therefore, I&E's recommended water rate design changes are based upon its proposal to reduce the Act 11 subsidy from water customers. Specifically, I&E proposed a 20% increase for water customers as compared to the Company's proposal for water customers. Thus, I&E asserted that the Company's proposed percentage increases to the water customer classes should all be scaled back to 20% of the Company's original proposed percentage increases. I&E M.B. at 73. I&E explained that this scale back of water rates, including customer charges, should be proportional to the percentage increase originally proposed by the Company. I&E St. 4 at 18-20.

---

[80] The Company noted that it has not proposed any changes to its competitive service riders in this proceeding. Aqua M.B. at 232.

[81] "As a result of the OSBA's proposal to assign additional increases, in aggregate, of $2.259 million to the Company's Base and New Garden Divisions, Mr. Kalcic testified that the OSBA's overall proposed wastewater increase is $13.8 million or 37.3%, and its recommended Act 11 revenue requirement is $18.580 million, or $2.259 million less than Aqua's proposal." OSBA St. 1 at 16-17.

(3) OCA

Although the OCA did not agree with I&E's methodology, the OCA did agree that the wastewater subsidy should be reduced. Therefore, the OCA's recommended water rate design changes are also based upon its proposal to reduce the Act 11 subsidy from water customers. Specifically, the OCA recommended to reduce the Company's proposed Act 11 water subsidization of approximately $20.8 million by $9.065 million. Accepting the Company's proposed water increases by division and class, the OCA allocated the $9.065 million to each division and class on a prorated basis. OCA St. 4 at 11.

Additionally, the OCA contended that Aqua's proposed increase to water customer charges was unsupported and that certain overhead costs were improperly included in the Company's customer cost analysis. Specifically, according to the OCA, Aqua included indirect O&M expenses, indirect depreciation expenses and indirect rate base within its customer cost analysis. OCA M.B. at 99-101.

Based on the customer cost analyses performed by its witness, Mr. Watkins, the OCA argued that there is no reasonable basis for Aqua's proposal to increase the existing monthly residential water customer charges in the Main Division of Zone 1 ($18.00), Zone 2 ($18.00) and Zone 3 ($28.00) above current rates.[82] OCA St. 4 at 16. The details of Mr. Watkins' customer cost analyses are presented in OCA Schedule GAW-7. Table 10, below, provides a summary of the OCA's residential customer cost analyses for residential 5/8" meter water customers under the OCA's and Aqua's proposed cost of capital.

---

[82] The OCA accepted Aqua's proposed increases to the customer charges for Bunker Hill and Phoenixville because the current rates and proposed rates are significantly lower than the current Main Division rates. OCA St. 4 at 16.

Aqua Water Residential Customer Costs (5/8" Meter Equivalent)		
	OCA Proposed Cost of Capital	Aqua Proposed Cost of Capital
Direct Costs	$17.07	$19.26
Direct + Indirect Costs	$17.36	$19.55

Table 10: Summary of results of the OCA's residential customer cost analyses (OCA Schedule GAW-7) for residential 5/8" meter water customers under the OCA's and Aqua's proposed cost of capital. *See* OCA St. 4 at 16.

Aqua contended that the OCA's attempt to exclude certain costs from the calculation of the residential water customer charge lacks merit and undermines the support provided by Aqua for its proposed residential water customer charges. Aqua M.B. at 234-35. Aqua specifically noted its reliance on Commission precedent in the *Aqua 2004 Order* in the development of its residential customer charge[83] and further averred that the Commission's determination in the *Aqua 2004 Order* was subsequently affirmed in the *2012 PPL Order*. Aqua M.B. at 234-235.

(4) Aqua LUG

Only Aqua LUG addressed the issue of non-residential water charges. Aqua LUG's Main Brief reiterated the arguments it raised in testimony regarding changes to the design of the customer charges and the rates for consumption blocks for commercial and industrial customers. *See* Aqua LUG M.B. at 10-12. Specifically, Aqua LUG's witness, Mr. Baudino, testified that "Commercial and Industrial customer charges

[83] *Pa. PUC v. Aqua Pennsylvania, Inc.*, Docket No. R-00038805 (Order entered August 5, 2004) (*Aqua 2004 Order).*

and the rates for consumption blocks 1 through 4 are the same for both classes," but noted "Industrial class rates also have 5th and 6th blocks that Commercial customers do not have." Therefore, he recommended that the Company keep charges for blocks 1 through 4 of the Commercial and Industrial classes similar, while avoiding "excessive increases for blocks 5 and 6 of the Industrial class." Aqua LUG St. 1 at 5-6. He further recommended that Aqua could shift some of the revenue allocated to the Industrial class to the Residential class to moderate any increases, if necessary. Aqua LUG St. 1 at 6.

Aqua responded to the arguments posed by Aqua LUG, contending that Aqua LUG's proposals are unreasonable and unnecessary. Aqua M.B. at 229-230, 236-237.

b. Wastewater Rate Design

(1) Aqua's Wastewater Rate Design Proposal

Aqua currently has eleven different wastewater rate zones, with different subsystems and eight different third-party customers. *See* Aqua Exh. 5-B, Part II, Schs. WW-2, LMK-3, EB-3, CH-3, EN-2, and NG-2. Since the Company's last base rate proceeding, it has acquired the Limerick, East Bradford, Cheltenham, East Norriton, and New Garden systems through separate Section 1329 proceedings.[84] These five systems became Rate Zones seven through eleven, as shown in Table 11, below:

---

[84] *See* Aqua Pennsylvania, Inc. Tariff Sewer – PA P.U.C. No. 2, Original Page 5 through Supplement No. 6 to Tariff Sewer – PA P.U.C. No. 2, Third Revised Page 6.

Wastewater Operations - Rate Zones / Divisions

Rate Zone 1 (Main)	Rate Zone 1A	Rate Zone 1B
Media Division	Treasure Lake Division	Penn Township Division

Lake Harmony Division	East Bradford Division	
New Daleville Division	Little Washington Division	
Peddlers View Division	Plumsock Division	
Tobyhanna Township Division	The Greens at Penn Oaks Division	
Twin Hills Division	Newlin Green Division	
	Sage Hill Division	

Zones Recently Acquired Under Act 129, at 66 Pa. C.S. § 1329

Rate Zone 7 - Limerick Division

Rate Zone 8 - East Bradford Township Division

Rate Zone 9 - Cheltenham Township Division

Rate Zone 10 - East Norriton Township Division

Rate Zone 11 - New Garden Township Division

Table 11: Aqua's wastewater operations showing its Divisions by Rate Zone.

As a result of recent and prior acquisitions of wastewater systems, Aqua's wastewater rates are comprised of several varying rate structures, including fixed customer or EDU[85] charges, plus usage charges, unmetered flat rates, and structures with minimum usage allowances. Aqua proposed a similar model to its water operations for its wastewater operations with the intent of gradually grouping and consolidating divisions towards Rate Zones, specifically proposing to begin (or continue) movement to unified customer charges for metered customers.

Aqua's witness, Ms. Heppenstall, explained that the Company developed the following four guidelines for the design of wastewater rates: (1) move toward additional consolidation of rates across rate zones; (2) for metered areas, develop a rate structure that includes a customer charge or EDU charge and a single block usage charge; (3) for unmetered areas, develop a monthly flat rate equal to 4,000 gallons priced-out at the respective zone rates; and (4) where possible, eliminate an allowance. *See* Aqua St. 5 at 21-22. The Company presented a comparison of its present and proposed wastewater rates in Schedule F-WW of Aqua Exhibit 5-B, Part I.[86]

---

[85] The Company's proposed wastewater tariff defines an EDU as follows:

> Equivalent Dwelling Unit or "EDU"**:** The EDU is a measure based upon the estimated average daily wastewater flow for the type of business, as calculated by the Pennsylvania Department of Environmental Protection regulation at 25 Pa. Code § 73.17 divided by the typical estimated average daily wastewater flow from a current single-family unit. In the Company's sole discretion, the Company may assign more than one (1) EDU for a residential Property.

See Tariff Sewer No. 3, Original Page 25.

[86] Ms. Heppenstall provided updates to her revenue allocation and rate design for wastewater service in Aqua Exhibit 5R-B, Part I, as part of her rebuttal testimony. The Company's revised revenue exhibits reflect corrections to: (1) Aqua's proposed unmetered charges for Woodloch Springs, and (2) Aqua's proposed rate for Southdown Homes. *See* Aqua Exh. 5R-B, Part II, Sch. WW-5 at 9 and 17.

In this proceeding, Aqua has proposed the same rates for Zones 1 and 2, and therefore, has merged Zone 2 into Zone 1. The proposed merger of Zone 2 into 1 (with which I&E disagrees) would mean that each subsequent zone could be reclassified up one (*i.e.*, Zone 3 customers would become Zone 2; Zone 4 customers would become Zone 3; Zone 5 customers would become Zone 4; and Zone 6 customers would become Zone 5). *See* Tariff Sewer, Original Page 5 and 6.

Additionally, as part of its consideration of the design of wastewater rates, Aqua performed an analysis of the feasibility of implementing a summer wastewater cap, as required by the settlement of its 2018 base rate proceeding. *See* Aqua Exh. 5-C. Based on this analysis, Aqua witness, Ms. Heppenstall, explained Aqua's contention that it was not appropriate to implement a summer wastewater cap for its wastewater customers:

> [Aqua] performed an analysis based on capping usage at winter water usage levels for the Wastewater Base Operations. This cap would have the affect[sic] of raising the rates for all wastewater customers significantly and benefiting high water users. Our analysis, attached as Exhibit 5-C, shows that, under the cap, billed usage would decline by 38% and the average monthly bill for a residential customer using 4,000 gallons per month would rise to $85.73, a 10.6% increase over the projected bill under proposed filed rates of $77.49. In addition, as the wastewater operations benefit from the shift under Act 11 from wastewater to the water operations, it is conceivable that as wastewater rates rise due to the implementation of the cap, more Act 11 shifting would be needed to mitigate this increase.

Aqua St. 5 at 21-22.

(2) I&E

Consistent with the modifications I&E recommended for the Company's water rate design changes, I&E recommended similar adjustments to Aqua's proposed wastewater rates that are intended to reduce the size of Aqua's proposed Act 11 subsidy of wastewater customers. As such, I&E generally recommended higher rates for wastewater customers than those proposed by the Company, producing a larger increase for each division.[87] I&E provided a comprehensive summary of its proposed wastewater rate structure in its Main Brief that was presented in greater detail by its witness, Mr. Kubas, in his direct and surrebuttal testimony and accompanying exhibits. *See* I&E M.B. at 74-92; I&E St. 5; I&E St. 5-SR. In revising rates in Zones 1 through 6 to reduce the Act 11 contribution related to the wastewater customers in these rate zones, Mr. Kubas proposed the following recommendations shown in Table 12, below.

[87] As previously explained, I&E recommended an increase of $6,097,022 for Rate Zones 1 through 6, as opposed to the Company's $3,544,773 requested increase for those Zones, and an increase of $10,589,684 for Rate Zones 7 through 11, as opposed to the Company's $8,097,608 requested increase for those Zones. *See* I&E Exh. 5-SR, Sch. 1 at 1, Cols. I and L, lns. 7 and 18.

Summary of I&E Recommendation for Rate Zones 1-6

RZ 1:
- Increase the customer charges, unmetered rates and the volumetric charge by 46.8%.
- Increase the Media and Bunker Hill unmetered charge to $90.00/month.
- **39.8% bill increase for an average residential customer.***

RZ 1A and 1B:
- Set these rates equal to Zone 1 rates.
- Eliminate the allowance in Zone 1B.
- **52.2% bill increase for an average residential customer in Zone 1A.***
- **42.5% bill increase for an average residential customer in Zone 1B.***

RZ 2 - Main:
- An across-the-board increase of 46.7% to tariff rates.
- No consolidation of Rate Zone 2 with Rate Zone 1 as proposed by Aqua.
- **39.7% bill increase for an average residential customer.***

RZ 2 - Pinecrest:
- Maintain Aqua's proposed rate design of no increase.

RZ 3 - Main:
- Increase the customer and volumetric charges by 36.6% per month.
- Consolidate the unmetered charges to one charge.
- **29.8% bill increase for an average residential customer.***

RZ 3 - Woodloch Springs (Flat Rate):
- Accepts Aqua's proposed rate structure based upon EDU billing, with no usage charge.
- Increase the monthly unmetered charge to $109.00/month, as opposed to Aqua's proposal of $101.03/month ($109.00 per EDU is the same unmetered charge I&E proposed for Zone 3 - Main customers).
- **52.5% bill increase for an unmeterd commercial customer.**

RZ 4:
- An across-the-board increase of 31.1% to tariff rates.
- **24.9% bill increase for an average residential customer.***

RZ 5:
- Accepts Aqua's proposed rates.
- **20.3% bill increase for an average residential customer in RZ 5 - Main.***
- **4.4% bill decrease for an average residential customer in RZ 5 - Newlin Green.***

RZ 6:
- Increase the customer charge by 41.8%, the usage rate by 160%, and the unmetered rate by 53.5%.
- **44.6% bill increase for an average residential customer.***

* I&E assumed an average 5/8" residential customer using 3,700 gallons per month.

Table 12: Summary of I&E's recommended rate changes for Aqua's wastewater Rate Zones 1 through 6 (*See* I&E Exh. 5, Sch. 2 at 1, Cols. F and L; I&E Exh. 5, Schs. 3-8 at 1, Col. F; *see also*, I&E Exh. 5. Sch. 2 at 2-4, Sch. 3 at 2; Sch. 4 at 2-4: Sch. 5 at 2; I&E Exh. 5-SR, Sch. 2; Aqua Exh. 5-B, Part II, Sch. WW-7 at 11-12; Aqua Exh. 5R-B, Part II, Sch. WW-5 at 9).

As previously indicated, Zones 7 through 11 include the Limerick, East Bradford, Cheltenham, East Norriton,[88] and New Garden systems, which were acquired after the *Aqua 2018 Rate Case*. Some of these systems have rates lower than present rates in Zones 1 through 6, and therefore, I&E argued that it is unfair to keep these rates artificially lower than the rates of existing customers. As delineated in Table 13, below, I&E recommended adjustments to rates in Zones 7 through 11 to reduce the subsidy, simplify the rate structure, and limit the increase to Zone 7 flat-rate customers and certain Zone 11 usage blocks. I&E reasoned that acquiring these systems should not harm existing Aqua customers; therefore, the larger than average increase to rates in Zones 7 through 11, shown on page 3 of I&E Exhibit 5-SR, Schedule 1, balanced out by the benefits to the municipality and/or customers of the acquired systems, will, according to I&E, limit the harm to other Aqua customers by reducing the subsidy paid by other non-Zone 7-11 Aqua customers. I&E noted that it is tempering the proposed increases in order to mitigate the large increases to the monthly customer charges, usage rates, unmetered rates, and average bills for both residential and commercial customers in Zones 7-11. I&E added that it is recommending rates so that the average residential bill increase is limited to generally less than 100%. I&E St. 5 at 35-38.

[88] Aqua acquired the Whitpain system with the East Norriton system on June 19, 2020 at Docket No. A-2019-3009052.

Summary of I&E Recommendation for Rate Zones 7-11

RZ 7 - Limerick:
- Increase the customer charge by 40.6% and the volumetric rate by 33.1%.
- Eliminate the allowance (also proposed by Aqua).
- Increase the unmetered rate to $60.00/month.
- **89.2% bill increase for an average residential customer.***

RZ 8 - East Bradford:
- Monthly customer (EDU) charge of $55.00, as opposed to Aqua's proposal of $39.10.
- Volumetric charge of $1.12/100 gallons.
- Accepts Aqua's proposed monthly commercial customer charge of $39.10.
- **74.2% bill increase for an average Multi-Family Residential customer.***
- **84.3% bill increase for an average commercial customer.**

RZ 9 - Cheltenham:
- Increase the customer charge to $30.00/month (43.6% increase).
- Increase the volumetric charge to $0.68/100 gallons (73.9% increase).
- **56% bill increase for an average residential customer.***

RZ 10 - East Norriton & Whitpain:
- Increase the customer charge to $35.00/month (66.0% increase).
- Increase the volumetric charge to $0.76/100 gallons (16.2% increase).
- Eliminate the allowance (also proposed by Aqua).
- **72.6% bill increase for an average residential customer in RZ 10 - East Norriton.***
- **99.4% bill increase for an average residential customer in RZ 10 - Whitpain.***

RZ 11 - New Garden:
- Increase the customer charge to $43.00/month (14.2% increase).
- Increase the residential volumetric charge to $2.20/100 gallons for usage up to 5,000 gallons/month and $3.1626/100 gallons for usage over 5,000 gallons per month.
- Eliminate the allowance (not proposed by Aqua).
- **81.7% bill increase for an average residential customer.***

* I&E assumed an average 5/8" residential customer using 3,700 gallons per month.

Table 13: Summary of I&E's recommended rate changes for Aqua's wastewater Rate Zones 7 through 11 (*See* I&E Exh. 5, Schs. 6-7 at 1, Cols. F and G; I&E Exh. 5-R, Sch. 2 at 1, Cols. F and G; *see also*, I&E Exh. 5. Sch. 6 at 2, 4, 5, Sch. 7 at 2, 3, 4; I&E Exh. 5-R, Sch. 2 at 2).

With respect to non-residential wastewater charges, only I&E addressed this issue. Specifically, as previously explained, I&E's proposed rate design changes regarding Rate Zone 8 – East Bradford operations were based upon its proposals to reduce the Act 11 wastewater revenue allocation from this Rate Zone to water customers.

Aqua responded to I&E's rate design proposals for wastewater rates, generally opposing the rate design modifications proposed by I&E. In this regard, the Company contended that I&E's proposals would be contrary to the principles of gradualism, resulting in significant percentage increases to an average customer bill, as well as significant dollar-for-dollar increases. *See* Aqua M.B. at 222-23. Aqua particularly noted that I&E's proposed changes to the commercial wastewater customer rates for Rate Zone 8 – East Bradford would increase the average bill by over 84%. Aqua M.B. at 245 (citing I&E Exh. 5, Sch. 6 at 5).

(3) OCA

As he contended with respect to the Company's proposed increase to water customer charges, the OCA's witness, Mr. Watkins, argued that the Company provided no support for its proposed increase to wastewater residential customer charges. OCA St. 4 at 17. Therefore, Mr. Watkins opposed Aqua's proposal to increase the wastewater Rate Zone 1 5/8" monthly residential customer charge by $8.10 per month, from $31.00 to $39.10. OCA St. 4-S at 17. Mr. Watkins argued that similar to Ms. Heppenstall's customer cost analysis for water, her analysis for wastewater also includes numerous overhead costs that cannot be reasonably considered "direct costs" required to connect and maintain a customer's account. OCA St. 4-SR at 7.

Aqua contended that the OCA's arguments it proffered against the approval of the Company's proposed residential wastewater customer charges lack merit and ignore the record evidence provided by Aqua. Aqua M.B. at 238-239. Aqua averred that the OCA's proposal regarding Rate Zone 1 rates should be rejected because, as the Company's witness, Ms. Heppenstall, demonstrated, the weighted average of all wastewater customer charges under proposed rates is lower than the customer charge that the Company can support based upon a customer cost analysis which is summarized in Table 14, below:

Rate Zone	Metered Bills	Customer Charge Revenue*	Average Customer Charge
RZ 1	$ 16,897	$ 660,669	$ 39.10
RZ1A	26,337	1,146,776	43.54
RZ1B	9,833	384,486	39.10
RZ2	11,663	492,629	42.24
RZ3	27,676	1,607,722	58.09
RZ4	8,085	626,580	77.50
RZ5	6,457	607,967	94.15
RZ5 - NG	588	54,957	93.45
RZ6	16,548	829,074	50.10
RZ7	82,876	3,271,931	39.48
RZ8	14,399	562,999	39.10
RZ9	202,241	5,705,208	28.21
RZ10	56,687	1,834,952	32.37
RZ11	25,392	1,361,551	53.62
Total	$ 505,680	$ 19,147,501	$ 37.86

* Under proposed rates.

Table 14: Aqua's summary of its average wastewater customer charge by Rate Zones (Aqua M.B. at 239 (citing Aqua St. 5-R at 11)).

Aqua further asserted that the OCA's rate analysis was "incomplete," and noted that although Mr. Watkins proposed to maintain the existing customer charge of Rate Zone 1, he did not discuss the customer charges for Rate Zones 2 through 6. Aqua St. 5-R at 11, 14.

With regard to Rate Zones 7, 8 and 10, the only area of disagreement between Aqua and the OCA is whether the residential wastewater customer charges should be $31.00, which is the rate recommended by the OCA for residential Rate

Zone 1, rather than the Company's proposed charges of $39.48, $39.10 and $32.37, respectively.[89] Aqua M.B. at 240-41; OCA M.B. at 102-03; OCA St. 4 at 18-19.

With regard to Rate Zone 11, the OCA objected to Aqua's proposal to increase the fixed monthly charge from $37.64 to $51.71 per month and recommended holding it at the current $37.64 level, to avoid moving the charge further from the $31.00 residential customer charge recommended by the OCA for most of the wastewater rate zones. OCA M.B. at 103. Also, similar to I&E, the OCA recommended eliminating the usage allowance. OCA M.B. at 103; OCA St. 4 at 18.

Aqua contended that the OCA's proposals regarding Rate Zones 7 through 11 are similarly meritless. Aqua M.B. at 240-43.

In addition to its recommended modifications to the Company's proposed wastewater rates, the OCA offered further proposals regarding Aqua's unmetered rates. OCA M.B. at 104-108. The OCA's discussion surrounding the rate design of Aqua's metered and unmetered customers centered on its concern that under present rates, the Company's average monthly metered revenue per customer, for all customers, is different than the Company's current unmetered rate. The OCA's witness, Mr. Watkins, identified nine wastewater rate zones that have both metered and unmetered residential rates. He explained that for some zones, the metered and unmetered rates are relatively close; but in others, there is a significant difference between rates for an average metered rate customer and flat rate customer. OCA St. 4 at 20; OCA Sch. GAW-8. For example, compared to metered rates, flat rates are 57% higher in Zone 5 and 30% lower in the

---

[89] The OCA accepted Aqua's proposed customer charge increase for Zone 9 residential customers. *See* OCA M.B. at 241.

Limerick Zone.[90] In this regard, the OCA requested that the Company study the reasonableness of its unmetered rates and provide the results in its next base rate proceeding. OCA St. 4 at 21.

According to Aqua, there are valid reasons for the differences between metered and unmetered rates. Aqua further explained that its unmetered rates assume an average usage of 4,000 gallons per month, which is standard industry practice. Aqua St. 5-R at 14-15. As to customers who pay a flat rate in Lake Harmony and Tobyhanna, Aqua took the position that customers pay to have wastewater service available, whether they are present at the service address for a few days or for longer periods of time; residency status is not a determinative factor. Aqua St. 9-R at 29.

Based on the concerns and testimony of several Lake Harmony wastewater customers regarding flat wastewater rates, as voiced at the public input hearings, the OCA's witness, Mr. Watkins, submitted supplemental direct testimony addressing the issue in Lake Harmony and several other developments where Aqua provides wastewater service, in which the water service is unmetered. OCA St. 4 SUPP. At those locations, wastewater customers either have their own wells or receive unmetered water from a community system. In these situations, the Company will bill wastewater service at a flat rate, where it uses average metered wastewater usage from customers with metered rates to develop a proxy of usage, which is then used to develop the rates. The OCA recommended that Aqua develop a pilot program to install meters for those customers who want them.[91] Under this proposal, Aqua would install water meters on customer-owned wells on an opt-in basis. These opt-in customers would be billed at the applicable

[90] The current average monthly metered rate for the Avon Grove Division in Rate Zone 5 is $113 (before DSIC) compared to $177 for flat-rate customers. The current average monthly metered rate for Rate Zone 7 – Limerick is $40 (before DSIC) compared to $28 for flat rate. OCA St. 4 at 20, Table 8.

[91] Complainant John Day wrote in support of the OCA's proposal. Letter in Lieu of Brief filed January 10, 2022.

metered rate. Mr. Watkins further proposed that the Company install water meters on other customer-owned wells based upon a random sample of 10% to 20% of the unmetered customers. These customers would be billed on a flat-rate basis, but the Company would prepare "shadow" bills based upon consumption. OCA St. 4 SUPP. at 2.

Aqua opposed this recommendation for a variety of reasons including cost and feasibility. Aqua St. 5-R at 17-18; Aqua St. 9-R at 29-30.

The OCA's witness, Mr. Watkins, further testified in response to the result of the Company's analysis of capping non-seasonal wastewater rates. *See* OCA St. 4 at 21-22. As previously indicated, Aqua performed an analysis of the feasibility of implementing a summer wastewater cap, as required by the settlement of its 2018 base rate proceeding. *See* Aqua Exh. 5-C. The basis for the cap is to address potential inaccuracies in the calculation of wastewater volumetric charges during the summer months when irrigation, swimming pool filling, and other outside watering activities are traditionally in use.[92] Mr. Watkins recommended that the Company continue to study the feasibility of: (1) a capping mechanism with a winter multiplier greater than 100%;[93] and (2) the implementation of irrigation water meters on a customer-by-customer request basis. OCA St. 4 at 22.

---

[92] Mr. Watkins testified that "In my experience, I am familiar with two mechanisms to fairly treat those customers whose Summer irrigation use is significant. The first and most prevalent are capping mechanisms similar to the one considered in the study conducted by Aqua. However, more often than not, I have seen capping mechanisms with an admittedly arbitrary multiplier such as 125% of Winter usage or 150% of Winter usage as a cap. This is different from the Company's study wherein they used a multiplier of 100%; *i.e.*, simply capped at average Winter usage." OCA St. 4 at 22.

[93] The OCA acknowledged that Aqua has already conducted an analysis of a capping mechanism with a multiplier of 100% but recommended that Aqua could study a multiplier greater than 100%. OCA St. 4 at 21-22.

Aqua opposed further study of a cap on non-seasonal wastewater rates, noting that it complied with its prior commitment from the 2018 base rate proceeding to provide a study as a part of this proceeding, and the results of the study revealed that a cap only benefits high water users. In addition, the imposition of a cap on non-seasonal wastewater rates could also result in a need to shift more wastewater revenue requirement to water rates. Aqua explained that the further studies proposed by the OCA will produce results similar to the analysis presented by Aqua in this case, and thus further studies are not necessary. Aqua St. 5-R at 15. Aqua also disagreed with the OCA's proposal to install irrigation meters on a customer opt-in basis, noting that such an implementation would increase revenue requirement for the installation and reading of meters and would not reduce revenue requirement recovery. Aqua R.B. at 104.

2. Recommended Decision

In her Recommended Decision, the ALJ recommended that the Commission adopt the overall wastewater rate design advocated by I&E, which was proposed to obtain I&E's Act 11 revenue allocation proposal:

> I recommend that the Commission accept the methodology of I&E for allocating revenue and designing wastewater rates. I&E's approach takes into consideration the number of water and wastewater customers in each system and balances the goal of moving rates toward alignment with the cost of service, while also mitigating some of the large rate increases that would result if no allocation of wastewater revenue was approved. I&E's approach acknowledges the benefits received by the communities serviced by the Acquired Systems from the sale of their systems to Aqua, but is less complicated than the method advocated by OCA.

R.D. at 91.

Although the ALJ recommended adoption of I&E's proposed wastewater rate design, including its recommended customer charges, the ALJ found Aqua's water and wastewater residential customer cost analyses upon which it based its proposed increases to customer charges to be reasonable, stating:

> While the Commission generally disfavors the inclusion of indirect costs into the calculation of customer charges, the Commission has nevertheless permitted the allocated portions of certain indirect costs such as employee benefits, local taxes and other general and administrative costs. I find that Aqua's witness adequately demonstrated that the indirect costs included in her study fall within the ambit of permissible general and administrative costs.

R.D. at 95.

In this regard, the ALJ implicitly rejected the OCA's residential customer charge proposals for water customers, while nonetheless, adopting I&E's recommended water rate design changes, based upon its proposal to reduce the Act 11 subsidy from water customers.[94] R.D. at 91, 95.

Regarding the reasonableness of unmetered rates, the ALJ agreed with the OCA and recommended that Aqua study whether a different method of calculating a flat rate would be more reasonable for some systems than applying a system-wide average and report the results in its next base rate case. R.D. at 98.

---

[94] I&E asserted that the Company's proposed percentage increases to the water customer classes should all be scaled back to 20% of the Company's original proposed percentage increases. I&E M.B. at 73. I&E explained that this scale back of water rates, including customer charges, should be proportional to the percentage increase originally proposed by the Company. I&E St. 4 at 18-20.

Although the ALJ saw the benefits of Aqua studying the reasonableness of its unmetered rates, finding that there may be areas in Aqua's service territory where unique circumstances may suggest that a different method of calculating a flat rate is more reasonable, ALJ Long however, rejected the OCA's proposal for the implementation of a metering pilot for flat-rate customers in the Lake Harmony service area, providing the following reasoning:

> OCA does not include any cost estimates for its recommended pilot program but proposes that the meters be installed at Aqua's cost. No doubt, that cost would be socialized to all of Aqua's wastewater ratepayers. Some customers would "opt-in" for the installation of a meter. Other customers would not opt-in. This adds a layer of administrative complexity and costs, including costs to test and maintain meters and administer this program. While the Commission certainly favors consumption-based utility rates, it is not clear that the cost of OCA's proposed pilot will achieve overall benefits to Aqua's customers that will outweigh the costs. Therefore, I recommend the Commission reject OCA's proposal.

R.D. at 97.

Finally, the ALJ recommended that the Commission reject the OCA's recommendation regarding additional studies of a non-seasonal wastewater capping mechanism. The ALJ agreed with Aqua that further study of a non-seasonal wastewater capping mechanism is unnecessary, reasoning that the OCA did not demonstrate that further study would yield better results. R.D. at 99.

3. Exceptions and Replies

a. Aqua Exception No. 10 and Replies

In its Exception No. 10, Aqua submits that the ALJ erred in recommending that Aqua be required to provide a study in its next base rate case that would determine the reasonableness of unmetered rates. Aqua maintains its position, as argued by its witness, Ms. Heppenstall, that such a study is not needed. Aqua Exc. at 35. Aqua contends that Ms. Heppenstall fully explained the basis for the differences between metered and unmetered rates, as follows:

> The large difference in Limerick and East Norriton is based on the fact that these are new acquisitions with legacy rates. The Company will rectify this disparity when it sets the rates in this case. For the other rate zones, the unmetered rate is based on an assumed average usage of 4,000 gallons per month plus a customer charge. The average usage of <u>4,000 gallons is substantiated in the Company's prior rate case as the pre-COVID pandemic average residential usage was 4,068 per month for the residential class.</u> For example, in Bridlewood, the calculation of the unmetered rate under present rates equals $31.00 plus the usage rate of .7600 per 100 gallons at 4000 gallons ($31.00 + .7600 X 40) or $61.40. <u>This calculation of the unmetered rate based on average usage is standard in the industry and used by other regulated water and wastewater utilities in Pennsylvania.</u> For example, Pennsylvania American Water Company's unmetered wastewater rate for Zone 1 for 2022 is $78.41 per month which was designed to equal the metered customer charge plus the usage rate multiplied by an average usage of 3,458 gallons.

Aqua M.B. at 244 (citing Aqua St. 5-R at 14-15) (emphasis added by Aqua).

Aqua further argues that the ALJ did not find the Company's use of unmetered rates or use of an average monthly usage of 4,000 gallons to be unreasonable, but rather only found "that the use of a 4,000-gallon average monthly usage rate may not result in fair rates, and that there may be areas where a different method of calculating a flat rate is more reasonable." Aqua Exc. at 35 (citing R.D. at 98 (emphasis added by Aqua)). Aqua notes that its witness, Mr. Todd M. Duerr, credibly testified that the average usage of 4,000 gallons was substantiated by the pre-COVID pandemic average residential usage shown in Aqua's last base rate proceeding, and that its average usage amount was consistent with the average usage of other water utilities such as Pennsylvania-American Water Company. Aqua Exc. at 35 (citing Aqua St. 9-R at 14-15).

Additionally, Aqua posits that any results of such a study would be "speculative," since many of the areas without metered water service have individual customer wells, which prevents access to the usage data needed to assess average usage for an area. Aqua Exc. at 35.

In its Replies, the OCA asserts that Aqua misunderstood the ALJ's reasoning based on her concern that the usage amount assumption (derived from the system-wide average) for flat rates may not be reasonable for all areas of Aqua's service territory, particularly in areas where there is a significant mix of types of housing or other unique circumstances. OCA R. Exc. at 15 (citing R.D. at 98; Aqua Exc. at 35). Therefore, the OCA maintains that, where the Company's use of a system-wide average in the derivation of its unmetered rates is causing an unreasonable disparity in the rates charged to metered and unmetered customers, it is reasonable for Aqua to study and propose adjustments to its unmetered rates, which may include an adjustment to the usage assumption applied in a particular territory. OCA R. Exc. at 15.

Moreover, in reply to Aqua's argument that due to customers being served by unmetered individual wells in some areas of its service territory, it lacks access to the usage data needed to perform such an analysis, the OCA notes that Aqua is ignoring the nine individual territories where it charges some customers metered rates. OCA R. Exc. at 15. The OCA continues that Aqua has usage data at the individual system level, which informs its operations and compliance with regulatory requirements for wastewater collection, conveyance, treatment, and discharge. OCA R. Exc. at 15 (citing 25 Pa. Code. Chapters 91, 92a). Other information regarding housing size, occupancy and seasonal usage may be available from property owners' associations, local municipalities, and observation. OCA R. Exc. at 15.

b. OCA Exception No. 12 and Replies

In its Exception No. 12, the OCA disagrees with the ALJ's adoption of what it believes are overly inclusive residential customer cost analyses performed by Aqua, upon which the Company has based its residential customer charges for water and wastewater customers. OCA Exc. at 19-22.

The OCA maintains that a review of the specific indirect costs included in Aqua's studies show they do not fall within the ambit of costs that the Commission has historically permitted but are merely costs related to Aqua's general operation as a utility. The OCA noted its reliance on Commission precedent, which has generally permitted only expenses directly related to meter reading, customer service, accounting and customer records and collection, but has allowed costs associated with direct labor costs, including employee benefits, workers compensation insurance and payroll taxes, where portions of indirect costs have been permitted on a case-by-case basis. OCA Exc. at 20 (citing *Pa. PUC v. Metropolitan Edison Company*, 60 Pa. P.U.C. 349 (1985); *Pa. PUC v. West Penn Power Company*, 59 Pa. P.U.C. 552 (1985); *Pa. PUC v. West Penn Power Company*, 1994 Pa. PUC LEXIS 144, *154; *Pa. PUC v. National Fuel Gas Distribution Corporation*, 83 Pa. P.U.C. 262, 371 (1994); *see also*, *2004 PPL Order* and *Aqua 2004 Order*). The OCA notes that more recently, the Commission has rejected a utility's proposed customer charge increase based on a cost analysis that included indirect costs.

OCA Exc. at 20 (citing *Pa. PUC v. PPL Gas Utilities Corporation*, Docket No. R-00061398 (Order entered February 8, 2007) at 137) (*2007 PPL Gas Order*).

The OCA submits that even when the additional types of costs that the Commission allowed in the *PSWC 2004 Order*[95] are included, the indicated customer costs are below the current Main Division 5/8" residential water customer charge of $18.00 and, thus, there is no reasonable basis to increase the customer charges. OCA Exc. at 21. The OCA also maintains that Aqua's proposal to increase the wastewater Zone 1 5/8" residential customer charge to $39.10 should be rejected because the study that Aqua relies on improperly includes indirect overhead costs that are not reasonably related to connecting and maintaining a customer's account, such as uncollectibles expense and rate case amortization. OCA Exc. at 21.

In addition to not supporting that level of customer charge increases with a direct cost study, the OCA contends that the magnitude of the increases is not supported by the public policy of gradualism and incentivizing conservation. OCA Exc. at 21 (citing *2007 PPL Gas Order*; *Pa. PUC v. Community Utilities of Pennsylvania, Inc.*, R-2021-3025206, *et al.* (Order entered January 13, 2022) at 62-63). The more revenue recovered through customer charges, the lower the volumetric rate, which impacts customers' incentive to conserve. OCA Exc. at 21.

Contrary to the OCA's claims in its Exceptions, Aqua maintains that the items the OCA asserts are "overhead costs" or "indirect expenses" are actually necessary for the support of customer facilities and customer accounting and should be considered direct costs. Aqua R. Exc. at 11 (citing Aqua M.B. at 234-35).

---

[95] *Pa. PUC v. Philadelphia Suburban Water Company*, Docket No. R-00038805 (Order entered August 3, 2004) at 72 (*PSWC 2004 Order*).

Moreover, Aqua counters that its customer cost analysis is consistent with Commission precedent; the ALJ evaluated these costs "on a case-by-case basis" consistent with this precedent. Aqua R. Exc. at 11 (citing Aqua M.B. at 235; R.D. at 95). Aqua further asserts that the OCA's argument that Aqua's proposed customer charges violate gradualism and do not incentivize conservation should be rejected. Aqua R. Exc. at 11 (citing OCA Exc. at 21). Aqua argues that its rates were designed to balance these considerations with the cost of serving its customers and demonstrated that its rate design guidelines were reasonable and appropriate. Aqua R. Exc. at 11-12 (citing Aqua M.B. at 230-33, 237-38).

c. OCA Exception No. 13 and Replies

In its Exception No. 13, the OCA disagrees with the ALJ's adoption of I&E's wastewater rate design methodology. OCA Exc. at 22 (citing R.D. at 88-89, 91, 96; OCA M.B. at 101-04; OCA R.B. at 60-61). Rather, the OCA maintains that its proposed wastewater rate design for the legacy systems and acquired systems is more reasonable and should be adopted. OCA Exc. at 22.

The OCA noted that I&E witness, Mr. Kubas, acknowledged that he normally would not support increasing the customer charges above cost, but he did so in this case because it provided more revenue. OCA Exc. at 22 (citing I&E St. 5 at 10, 38; I&E St. 5-R at 5). The OCA argues the additional revenue is derived from I&E's proposed 46.8% increase to Zone 1 customer charges, from $31.00 to $45.50 per month, which is nearly two times the increase proposed by the Company as well as I&E's proposed increases to all of the 5/8 customer charges that range between 26% and 66% and exceed their costs. OCA Exc. at 22 (citing I&E Exh. 5, Schs. 2-8).

On the other hand, the OCA submits that under its proposal, customer charges are supported by cost analyses and move customer charges toward consolidation with the main wastewater zone customer charges. The OCA posits that under its proposal, customers will: (1) be charged cost-based fixed rates; (2) receive proper price signals; and (3) have more control of their bills. OCA Exc. at 22-23 (citing OCA R.B. at 58-61; OCA M.B. at 102-04; OCA St. 4 at 17-20). Further, the OCA contends that unlike I&E's proposal, the OCA's recommendations flow from its proposed customer charges for Zone 1 and reasonably move other divisions toward consolidation with those charges. OCA Exc. at 22 (citing OCA St. 4 at 17-20).

In its Replies, Aqua submits that the OCA's argument regarding the adoption of I&E's proposed wastewater rate design should be denied for the same reasons that the Company opposes the ALJ's adoption of I&E's proposed wastewater rate design and revenue allocation. Aqua R. Exc. at 12 (citing OCA Exc. at 22-23; Aqua Exc. at 31-34; Aqua R.B. at 102-04; Aqua M.B. at 237-43).

In its Replies, I&E notes that it made revisions in its final schedule that addressed the positions proffered by other Parties, including the OCA. Therefore, I&E asserts that the Commission adopt I&E's final wastewater revenue allocation and rate design, as discussed in I&E Exception No. 2. I&E R. Exc. at 17 (citing I&E Exc. at 4-5; I&E St. 5-SR at 4; I&E Exh. 5-SR, Sch. 1 at 1).

d. OCA Exception No. 14, Mr. Osinski's Exceptions, and Replies

In its Exception No. 14, the OCA submits that the ALJ erred by rejecting its proposal for the implementation of a metering pilot for flat-rate customers in the Lake Harmony service area. OCA Exc. at 23-25.

Referencing Aqua's continuation of deduct metering[96] programs for some of its acquired systems, specifically its Cheltenham service territory, the OCA contends that the cost and operational data from that existing deduct metering program can help to inform how the pilot is structured. Moreover, the OCA argues that the benefits of a pilot program, which assists in moving flat-rate customers to metered rates in an area where a significant number of customers may use less than (or more than) the average usage of 4,000 gallons, outweigh the costs, which, according to the OCA, should be reasonable since the pilot would involve only a few hundred customers. OCA Exc. at 23-24.

As such, the OCA excepts to the ALJ's suggestion to delay a remedy until the next base rate case because it will delay relief to customers who, under the OCA's proposal, could begin participating in a pilot program within a few months of a final order in the current case. The OCA maintains that Aqua should be directed to adopt a program, on a pilot basis, as a reasonable and measured response to the concerns raised by its customers regarding flat rates. OCA Exc. at 24-25.

In its Replies, Aqua maintains its opposition to any requirement to install Company water meters on customer owned (wells) or community owned water supplies, in order to implement metered wastewater rates, reemphasizing the arguments presented in its briefs. Aqua R. Exc. at 12-13 (citing Aqua M.B. at 243-44; Aqua R.B. at 103). Aqua adds that it has no right to enter customers' premises to demand the installation of water meters where Aqua does not provide the water supply and posits that an "opt-in" pilot will only lead to meter installations where customers have decided that their usage is below average, thereby negating the validity of the "pilot." Aqua R. Exc. at 12.

---

[96] Deduct metering is a mechanism which allows individual customers, using a significant amount of outside water, such as for an irrigation system, to have a separate irrigation water meter installed. This second meter, known as a deduct meter, measures the flow of water that does not enter the wastewater system and is used to calculate a reduction in wastewater charges. *See generally*, OCA St. 4 at 21-22, and 25; OCA Exc. at 25; Aqua R. Exc. at 13; and OCA M.B. at 109.

Mr. Osinski also filed exceptions to the Recommended Decision, specifically taking issue with the flat-rate service provided to the Camp Stead Property Owners Association, which is part of Aqua's Tobyhanna Township Division. Mr. Osinski argues that the private development (Camp Stead Property Owners Association) in which he resides is served by a metered community well; however, Aqua does not meter his wastewater. Mr. Osinski contends that Aqua's practice of basing his flat rate on 4,000 gallons of consumption per month is unjustified, and as a result, he is being charged far more than he uses. Osinski Exc. at 1-4.

In its Replies to the Exceptions of Mr. Osinski, Aqua points to its response to OCA Exception No. 14, in which it addresses concerns related to the flat-rate service provided to certain customers. Additionally, Aqua notes that it responded to concerns raised by customers at residences on Camp Stead Circle in its Main Brief. Aqua R. Exc. at 13 (citing Aqua M.B. at 179-180).

Furthermore, Aqua notes that Exhibits A-G, L and Q, attached to Mr. Osinski's Exceptions, appear to be extra record evidence, not permitted to be introduced in his Exceptions, and thus, should be disregarded. Aqua R. Exc. at 13 (citing *Application of Apollo Gas Company*, 1994 Pa. PUC LEXIS 45 (Order entered February 10, 1994) at *8-9 (denying party's attempt to introduce extra-record evidence in its exceptions)).

e. OCA Exception No. 15 and Replies

In its Exception No. 15, the OCA submits that the ALJ erred by not requiring the Company to study the feasibility of affording additional customers the option of deduct metering. OCA Exc. at 25-26 (citing R.D. at 99).

The OCA explains that the ALJ did not distinguish between the studies recommended by its witness, Mr. Watkins, and, as such, did not address the OCA's recommendation for an alternative study, which Mr. Watkins opined may be the fairest for Aqua – installing irrigation water meters on a customer-by-customer request basis. OCA Exc. at 25 (citing OCA M.B. at 109-10; OCA R.B. at 65-66; OCA St. 4 at 22). The OCA notes that, to its knowledge, Aqua has not already conducted any studies on irrigation metering, also referred to as deduct metering. *Id*.

Further, the OCA argues that Aqua's objection to studying the feasibility of opening its deduct metering program to Aqua's non-Cheltenham customers is not reasonable, since the Company already has a deduct metering program in its Cheltenham service territory and two years of cost and operational data from that program. Therefore, the OCA submits that the results of that study, including either a proposal to make deduct metering available to more or all customers or a detailed explanation for why Aqua believes expansion is infeasible in other service territories, should be filed no later than Aqua's next base rate case. OCA Exc. at 25-26.

Contrary to the OCA's arguments, Aqua replies that no such study should be ordered. Aqua maintains its argument that the installation of a second meter to measure usage deductions will only increase the revenue requirement for installing and reading meters and will not reduce the revenue requirement that needs to be recovered. Aqua R. Exc. at 13 (citing Aqua R.B. at 104; Aqua M.B. at 244-45).

4. Disposition

a. Water and Wastewater Rate Design

As previously explained, the allocation of the rate increase among the customer classes of both Aqua's water and wastewater divisions, and ultimately the rate design under each division, was a significant issue in this proceeding.[97] In cases such as the instant one before us, the ALJ and the Commission are faced with the difficult task of balancing the justness and reasonableness of all components of revenue allocation and rate design. The reality is, as a result of the difficult choices that must be made, all customer classes will inevitably experience some degree of an undesired impact. Consistent with our discussion, *supra*, regarding the issue of revenue allocation, and based on our review of the supporting information contained in the record, we find that the ALJ's determinations regarding rate design are sufficiently supported by the evidentiary record. Accordingly, based on our discussion below, we find that the OCA's arguments against the ALJ's recommendation concerning this matter are without merit.

In reaching this determination, we have reviewed the rate designs adopted by the ALJ and found them to be reasonable, affording appropriate primary consideration to cost causation principles per *Lloyd* in tandem with secondary consideration for the value of service, gradualism, and affordability.

There is not a prescribed "ratemaking formula" that the Commission must adhere to when determining just and reasonable rates. Rather, the Commission "has broad discretion in determining whether rates are reasonable" and "is vested with discretion to decide what factors it will consider in setting or evaluating a utility's rates." *Popowsky II*. Included in the Commission's broad ratemaking authority is the authority to approve alternative rates and rate mechanisms, including formula rates as well as decoupling mechanisms, performance-based rates, and multiyear rate plans. 66 Pa. C.S. § 1330(b)(1)(i)-(v).

---

[97] In this proceeding, the Company invoked the Commission's authority under Section 1311(c) of the Code to mitigate the impact of revenue increases on wastewater customers by recovering a portion of the Company's wastewater revenue requirement from its total water and wastewater customer base. *See* 66 C.S. § 1311(c).

With that said, we acknowledge that a set of ratemaking norms have been developed over time and have been consistently utilized by parties in rate cases before the Commission to determine the appropriate level of a utility's requested revenue increase in accordance with all applicable legal and constitutional standards. These norms, or traditional ratemaking methodologies,[98] are used to determine a utility's cost of providing service, or its revenue requirement, and to determine appropriate rate structure, which includes, among other things, the appropriate allocation of the revenue requirement to various customer classes. However, while these ratemaking norms provide a rational and methodical way to analyze and determine the utility's cost of service, they also permit the consideration and weighing of important factors or principles in setting just and reasonable rates, such as quality of service,[99] gradualism,[100] and rate affordability.[101]

We acknowledge that there are several factors that must be considered when designing a rate recovery proposal, including the concepts of gradualism and affordability. We emphasize, however, that while affordability is permitted to be considered, it is but one of many factors to be considered and weighed by the Commission in determining the utility's rates. The rate increase reflects the business challenges the Company currently faces, including required investments in the repair/replacement or improvement of its distribution systems, including newly acquired

[98] *See, e.g., Pa. PUC, et al. v. PPL Electric Utilities Corporation*, Docket Nos. R-2015-2469275 *et al*. (Recommended Decision issued October 5, 2015) at 32-33.

[99] *See* 66 Pa. C.S. §§ 523, 526(a).

[100] *See Lloyd*, 904 A.2d at 1020 (explaining that gradualism is the principle under which utility rates are gradually increased in order to avoid rate shock, as part of what is overall considered a reasonable rate under the circumstances and is permitted in implementing large rate increases).

[101] *See Pa. PUC et. al v. Twin Lakes Utilities, Inc*., Docket No. R-2019-3010958 (Order entered March 26, 2020) at 48, 80 (the ALJ did not err in considering evidence relating to the various quality of service and rate affordability issues in the proceeding and factoring in such evidence as part of her overall determination on which expert witnesses' cost of equity to adopt for setting just and reasonable rates).

water and wastewater distribution systems; and the high costs associated with maintaining a distribution system necessary to provide safe and reliable water and wastewater service within the Commonwealth.

As discussed, *supra*, Aqua's proposal, establishing an Act 11 subsidy close to one-third of the wastewater revenue requirement would result in wastewater rates that do not bear a reasonable relationship to the Company's cost of serving those customers. In consideration of Aqua's recent Section 1329 acquisitions and the consequences of the Company's request to have water customers subsidize rate increases for customers in wastewater Rate Zones 1 through 6, as well as to absorb a significant portion of the revenue shortfalls of the newly acquired wastewater systems, Rate Zones 7 through 11, we find I&E's approach in limiting the Act 11 subsidies[102] and its subsequent rate design proposals, adopted by the ALJ, to be a reasonable compromise between the conflicting objectives of moving towards consolidated rates and maintaining gradualism in customer bill impacts.

Table 15, below, provides a comparison of residential wastewater bills for a typical residential customer under the Company's proposed rates and under I&E's proposal. Under Aqua's proposed rates, residential wastewater customers would see increases ranging from 7.9% to 84.9%, with Rate Zone 5 – Newlin Green experiencing a proposed decrease. Under I&E's proposed rates, residential wastewater customers would see increases ranging from 20.3% to 86.0%, excluding the increase to Rate Zone 10 – Whitpain, where the average residential customer will experience an increase of approximately 106.6%. As I&E noted, this larger than average increase is

---

[102] I&E's approach for allocating wastewater revenue and designing wastewater rates allows for each type of utility service to recover as much of the cost of providing services as possible without removing the Act 11 subsidy, which would result in unreasonably large increases to the monthly customer charges, usage rates, unmetered rates, and average bills for both residential and commercial wastewater customers.

justified for three reasons: (1) the average bill under current rates of $31.66 per month is the lowest average bill for all zones; therefore, to move the average bill closer to other average bills, a larger percentage increase is necessary; (2) the Company's desire to consolidate all Zone 10 rates justifies the higher rates for Zone 10 – Whitpain to match Zone 10 – East Norriton rates; and (3) even with higher rates causing a higher than average increase for Zone 10 – Whitpain, total Rate Zone 10 operations will continue to need $1,378,735 of subsidy from water customers. *See* I&E St. 5 at 52-53.

Wastewater Division

* Average 5/8" residential customer using 4,000 gallons per month.

Table 15: Comparison of residential wastewater bills for a typical residential customer under the Company's proposed rates and under I&E's proposal. *See* Aqua Exh. 5-B, Part II, Sch. WW-7; *see also*, I&E Exh. 5, Sch. 2 at 2-4, Sch. 3 at 2, Sch. 4 at 2 and 4, Sch. 5 at 2, Sch. 6 at 2 and 4, Sch. 7 at 2-3; I&E Exh. 5-R, Sch. 2 at 2.

Furthermore, since the average bill under current rates is lower in Rate Zones 1 and 6 than it is for Rate Zones 2 through 5, it is reasonable that Rate Zones 1 and 6 would experience larger percentage increases compared to Rate Zones 2 through 5. Since the Company presented one cost of service study for Rate Zones 1 through 6, there is no justification for such a wide variety in rates and corresponding average bills.

The overall bill impact to a typical residential water customer bill would be overall less than the Company's proposal,[103] since I&E's recommended water rate design changes are based upon its proposal to reduce the Act 11 subsidy from water customers. In this regard, a bill for a typical residential water customer would reflect I&E's recommendation that the Company's water rates be scaled back to 20% of the Company's original proposed percentage increases, and that the recommended scale back, including customer charges, be proportional to the percentage increase originally proposed by the Company. *See* I&E M.B. at 73; I&E St. 4 at 18-20.

Moreover, the higher percentage increases to a typical residential customer bill recommended by I&E's rate design for Rate Zones 7 through 11 are indicative of the substantial revenue shortfall attributable to these newly acquired systems, even under the Company's proposed rates. Without the, albeit, more moderate Act 11 subsidy proposed by I&E, compared to Aqua's proposal, these wastewater rates would necessarily have to be increased even further. As such, we find I&E's rate design reasonably mitigates the impact of revenue increases onto these wastewater customers by recovering a portion of the Company's wastewater revenue requirement from its total water and wastewater customer base.

The OCA also excepts to the ALJ's recommendation, arguing that Aqua's proposed customer charges are based on its flawed cost of service study results, violate the principle of gradualism, and would result in a disincentive for customers to engage in conservation activities. Therefore, the OCA's wastewater rate design recommendations include its contention that there is no cost justification for increasing the present $31.00

---

[103] Under the Company's proposal, a residential customer in the Main Division of Rate Zone 1, using 4,000 gallons of water per month, would experience a monthly bill increase from $69.35 to $81.32, or 17.3% per month, and residential customers in other water divisions would experience increases ranging from 17.3% to 51.3%. *See* Aqua Exh. 5-A, Part II, Sch. 8.

per month 5/8" residential customer charge in Rate Zone 1. Upon our consideration of the evidence and record herein, we conclude that the ALJ correctly recommended that, consistent with the *Aqua 2004 Order*, and subsequently affirmed in the *2012 PPL Order*, other customer-related costs are properly includable in a customer cost analysis. We find that the OCA proposed limitation of costs excludes customer costs that should be included in a customer charge and is unreasonably narrow.

As previously indicated, although the ALJ accepted Aqua's water and wastewater residential customer cost analyses upon which it based its proposed increases to customer charges, the ALJ adopted I&E's proposed rate design which includes the wastewater customer charges summarized in Table 16, below.

Further, we are persuaded by I&E's reasoning for its increase to the 5/8" residential customer charge for Rate Zone 1:

> While I normally would support not increasing the monthly 5/8th inch residential customer charge based upon cost, there are other factors to consider in this case. First, the present \$31.00 per month customer charge is below the monthly customer charges in Zones 3 through 5. Therefore, in order to move towards consolidation of the customer charges in these zones, the present Zone 1 customer charge of \$31.00 per month should be increased. Customer charges should be consolidated in Zones 1 through 6 for fairness and simplicity. Second, the remaining revenue increase will have to come from increasing the usage charge. Therefore, given this low customer charge, I recommend that the OCA proposal be rejected.

I&E St. 5-R at 5-6. Additionally, as I&E indicated, the OCA did not address the remaining meter sizes in Rate Zone 1, the other classes in Rate Zone 1, or the other customer charges in Rate Zones 2 through 6.

Wastewater Division
Comparison of 5/8" Metered Residential Customer Charges

Table 16: Comparison of 5/8" metered residential wastewater customer charges. *See* I&E Exh. 5, Schs. 2-7 at 1; I&E Exh. 5-R, Sch. 2 at 1.

With regard to the concerns expressed by the OCA that the Company's proposed customer charges will discourage conservation, we note that the customer charges, shown above, in the context of the total monthly bill for a typical 5/8" meter residential wastewater customer, would comprise approximately 47% to 91% of the charges on the bill under the Company's proposal and only approximately 33% [($43.00 ÷ $130.99) x 100=33%] to 84% [($56.20 ÷ $66.60) x 100 = 84%] under I&E's wastewater rate design proposal. This is less than the portion of a typical bill for a 5/8" meter wastewater residential customer under current rates, of which approximately 48% to 87% is attributable to the customer charge, as shown in Table 17 below:

Wastewater Division
Comparison of the Portion of a Customer's Bill Attribuable to the Customer Charge

*Average use customers, using 4,000 gallons per month, are currently billed a flat rate.

Table 17: Comparison of the portion of a customer's wastewater bill attributable to the customer charge.

Regarding the Company's water rate design proposal, the portion of charges attributable to the customer charge on a typical 5/8" meter water residential customer would range from approximately 21.6% [($4.90 ÷ $22.66) x 100 = 21.6%] for customers in the Phoenixville Division to 39.8% [($32.40 ÷ $81.32) x = 39.8%] for customers in Rate Zone 3 – Main. Reflective of I&E's effort to reduce the Act 11 subsidy, with which we agree, I&E's proposal simply scales back the Company's proposed percentage increases for water customers to 20% of the Company's original proposal. Therefore, we find that I&E's proposal reasonably balances the principles of gradualism with the challenges of rate consolidation, especially those that come with newly acquired systems, while preserving adequate opportunity for customer savings due to conservation efforts. As such, we find no basis to reverse the ALJ's recommendation. Accordingly, OCA Exception Nos. 12 and 13 are denied.

b. Unmetered Residential Wastewater Rates

Aqua explained that similar to many wastewater systems throughout the Commonwealth, Aqua does serve a limited number of areas where wastewater customers are billed on a flat rate, meaning that unmetered customers receiving wastewater service from Aqua pay the same amount each month, *i.e.*, their water consumption does not have an effect on their monthly wastewater bills. Unmetered, flat-rate wastewater customers make up the communities of Tobyhanna, Pennsylvania (730 customers) and Lake Harmony, Pennsylvania (995 customers).[104] These communities were billed on a flat rate prior to Aqua's acquisition of these wastewater systems, and the Company has continued to bill the customers on a flat-rate basis. Aqua St. 9-R at 28.

There is no question that volumetric billing is preferable to flat-rate billing, as it provides better price signals and promotes conservation, as well as resulting in a more equitable distribution of the variable costs of wastewater service among ratepayers. However, in situations, such as this, where metered water information is unavailable, we acknowledge the standard industry practice of basing the flat rate on a system-wide average usage per month plus a customer charge. As indicated previously, Aqua assumes an average 5/8" meter residential customer uses 4,000 gallons per month.

---

[104] Customers in Tobyhanna and Lake Harmony obtain their water supplies from individual wells not owned or operated by a utility or a municipality/municipal authority. Aqua St. 9-R at 28.

The flat charge should be reasonable and appropriate, and sufficient to cover the intended costs. The challenge is the development of a reasonable flat-rate charge. In this regard, we cannot ignore the disparity in the rates charged to metered and unmetered customers in certain divisions where Aqua serves both types of customers, as illustrated by the OCA. For these reasons, we agree with the ALJ's recommendation that directs Aqua to study and report the results in the next base rate proceeding, in order to determine whether different methods of calculating a flat rate would be more reasonable for some systems rather than applying a system-wide average to each system. Accordingly, Aqua Exception No. 10 is denied.

The primary concern at the public input hearings voiced by customers receiving wastewater service in the Tobyhanna and Lake Harmony service areas, including Mr. Osinski, was that flat-rate billing is unfair to customers with below average usage, including customers who may be part-time residents that may use less than full-time residents. *See* Tr. at 70-71, 166-68, 175-81, and 323-25. Recognizing that customers in Lake Harmony have private water wells on their property that are not individually metered, the OCA proposed a pilot program in Lake Harmony to install meters: (1) on an opt-in basis for those customers that request metered wastewater service, (2) on other customer-owned wells based upon a random sample of 10% to 20% of the unmetered customers. *See* OCA St. 4 SUPP. at 2.

Although we find merit in the OCA's proposal that Aqua study whether a different method of calculating a flat rate would be more reasonable for some systems than applying a system-wide average, we cannot say the same for its Lake Harmony pilot program proposal. Instead, we find persuasive the testimony of Aqua's witness, Ms. Heppenstall, explaining the impracticability of the OCA's proposal:

> I disagree for two reasons. One, the Company does not have the authority to meter a representative sampling of customer owned private wells. Allowing customers to opt in would

> only incentivize those customers with low water consumption, not the perceived larger users. Second, there are concerns about the ability to access customers' property to properly install a meter on a well. I understand that Company Witness Todd Duerr will explain the operational issues with this pilot program in his rebuttal testimony ([Aqua St. 9-R]). There may be substantial cost involved, and Mr. Watkins' proposal is that the Company bear the cost of such installations. Finally, the lack of authority to meter all privately owned wells means that the "pilot" can never be adopted as a permanent solution. Customers would continually opt for the lesser cost alternative. Mr. Watkins' proposal is unworkable.

Aqua St. 5-R at 17-18. We also find it difficult to ignore the operational issues with the OCA's proposal, highlighted by Aqua's witness, Mr. Duerr:

> First, we reinforce that industrywide flat sewer rates have been utilized to bill for public or private wastewater service in instances where customers have private wells throughout the Commonwealth. While we understand the customer's desire to limit any rate increase, resorting to changing the current methodology on which these customers are billed will not impact that reality, and in fact, some customers could be billed more. For wastewater only customers that receive water from private wells, the Company would be required to enter, traverse, and locate a customer's water well, to a property the Company does not have a right to enter, install a Company owned meter somewhere on a customer's property where a water well is located, and maintain that property going forward. That in and of itself is problematic.

Aqua St. 9-R at 29-30.

Regarding Mr. Osinski's assertion that the well servicing his community is metered, Mr. Duerr explained that "the well, the water meter, and the water distribution system are owned by the community. There are not individual meters measuring usage to each customer's residence. As such, the Company cannot bill these individual customers based on usage from one community water meter." Aqua St. 9-R at 30-31.

Based upon our review of the record evidence, we agree with the recommendation of the ALJ that the OCA's proposal be rejected, as it is not clear that the cost of the OCA's proposed pilot will achieve overall benefits to Aqua's customers that will outweigh the costs. The OCA does not explain: (1) Aqua's authority to place a meter on a person's water line; (2) how higher-usage customers could be "incentivized" to opt-in in the future; nor (3) why wastewater cost of service should be increased to cover the cost of installing, maintaining, and reading water meters for wastewater service. As such, we find no basis to reverse the ALJ's recommendation. Accordingly, OCA Exception No. 14 and Mr. Osinski's Exceptions are denied.

With regard to the OCA's argument that the Company be required to study the feasibility of opening an irrigation or deduct metering program to Aqua's non-Cheltenham customers and file the results of the study no later than the Company's next base rate case, we agree with the ALJ that the OCA has not demonstrated that further study would yield better results. Aqua noted that further studies are not necessary because the results will be similar to the analysis presented by the Company in the instant base rate case. Further, Aqua noted that the installation of a meter to measure usage deductions will increase the revenue requirement and not reduce the revenue requirement subject to recovery. Aqua M.B. at 244-45. Moreover, beyond arguing that it is unaware if the Company has conducted any studies on irrigation metering, the OCA has not sufficiently demonstrated why the Company should be required to conduct an irrigation metering study at this time. Accordingly, we find the OCA's argument that the Commission require the Company to conduct an irrigation metering program study to be unpersuasive.

To the extent that the OCA contends that the ALJ did not sufficiently acknowledge the OCA's irrigation water meter study, we note that the ALJ was aware of the positions and arguments put forth by the OCA, including the studies recommended by the OCA; however, it is up to the ALJ to determine whether, and to what extent, further discussion and analysis is warranted. See 52 Pa. Code §§ 5.403, 5.404. Here, it appears that the ALJ did not believe that further consideration of these matters was necessary to agree with Aqua that no further study is necessary. Accordingly, we will deny OCA Exception No. 15.

E. Tariff Structure - Proposed Reconcilable Rider Mechanisms

1. Energy Cost Adjustment Mechanism (ECAM) and Purchased Water Adjustment Clause (PWAC)

In this proceeding, Aqua proposed two new reconcilable rider mechanisms in its Tariff Water No. 3 to recover the costs associated with its energy and purchased water costs. These riders are the Energy Cost Adjustment Mechanism (ECAM) and the Purchased Water Adjustment Clause (PWAC) which are described in more detail, below. Inasmuch as the Exceptions address the ECAM and PWAC in combination, we shall address the merits of the Exceptions on these two items in a single consolidated disposition at the end of this section.

a. ECAM

(1) Positions of the Parties

Aqua proposed to implement the ECAM in its Tariff Water No. 3 (Tariff Water No. 3, Original Pages 35-36) to ensure that it will recover all of the energy costs it purchases from natural gas and electric providers. Aqua St. 4 at 5; R.D. at 99. According to the Company, the ECAM addresses both increases and decreases in the energy rates charged by energy suppliers from whom the Company purchases natural gas and electricity. *Id.* The Company provided the following explanation on how it proposes to implement the ECAM:

> The mechanism would collect or refund any difference between the energy costs included in base rates from the Company's last rate filing and the actual energy costs incurred in the period of calculation. Within 60 days after the end of each calendar year, the Company would file a reconciliation of its actual costs to the amount recovered in base rates per actual thousand gallons sold as established in the last rate case. Any increase or decrease in these costs would be divided by the projected normalized volumes increased for growth to develop a volumetric surcharge/surcredit applied to metered customers in the following 12-month period. In this way, the Company is protected from uncontrollable increases in costs and customers will receive the benefit of decreases if those costs are less than those included in rates. The ECAM is included as a rider in the proposed tariff submitted with this filing and describes the mechanics of the clause. At the end of a 12-month period, the amount refunded/collected via the mechanism would be compared to the actual costs to be refunded/collected and the difference would be added or subtracted to the difference to be recovered/refunded in the following period.

Aqua St. 4 at 6; Aqua M.B. at 255-256.

The Company is of the opinion that the ECAM and PWAC are authorized under Section 1307 of the Code and, thus, qualify as an exception to the general prohibition of single-issue ratemaking.[105] The Company argued that the ECAM is similar

---

[105] In this case, as discussed below, the statutory advocates argued that the ECAM would constitute "single-issue ratemaking" because, if the ECAM were approved, the Company would be permitted "to automatically change customers' prices (rates) due to changes in single cost components." OCA St. 4 at 24.

to where other utilities are permitted to pass certain costs through a rider or surcharge as authorized by Section 1307 of the Code. Aqua St. 4-R at 2. The Company proposed that the same safeguards it proposed for its PWAC also apply to its ECAM, with the exception of the 3% billing cap. Aqua M.B. at 256, n.93. According to the Company, the Commission has approved similar clauses (*i.e.*, such as the State Tax Adjustment Surcharge (STAS) and the implementation of the reduced tax associated with the federal Tax Cuts and Jobs Act of 2017 (TCJA)) in circumstances where the costs are volatile, unpredictable, or significant. Aqua submitted that, if the PWAC is approved, its incentive to reduce operating costs will remain an important tenant of its regulatory compact with customers and regulators in the delivery of safe, adequate, and reliable utility service. Aqua St. 4 at 6; Aqua St. 4-R at 3. Similarly, the Company submitted that if the PWAC is approved, it would have ample incentive to take advantage of every reasonable opportunity to prevent increases and pursue decreases in its purchased water cost to the benefit of its customers. Aqua St. 4 at 5; Aqua St. 4-R at 3. In response to opponents who believe the ECAM and PWAC would discriminate in favor of competitive rate rider (CRR) customers and against all other customers because the proposed riders would not apply to CRR customers even though these customers are served, at least in part, with purchased water, the Company averred that the exclusion of contract customers from the operation of surcharges is not unduly discriminatory because the Commission has approved various surcharge provisions that exempt negotiated contract rate customers. Aqua St. 4-R at 4. The Company explained that CRR customers' contract prices would not change based on increases/decreases in the cost of purchased water or energy regardless of whether those changes are implemented through the PWAC or the ECAM or through changes in base rates. *Id.*

I&E, the OCA, and the OSBA each opposed the use of the proposed mechanisms for the recovery of energy expenses. R.D. at 100. According to I&E: (1) it is not appropriate to use a reconcilable rider such as the ECAM to recover O&M expenses because the energy expenses to be recovered via the ECAM are a minimal portion of routine O&M expenses for which the Commission must undertake a substantive audit and implementation task if it is approved;[106] (2) contrary to the Company's opinion, the ECAM would reduce the incentive for the Company to minimize its energy usage and minimize costs via shopping/negotiating for lower rates;[107] (3) Aqua failed to clearly explain how its claim for recovery of a routine operating expense through the ECAM mechanism would be appropriate;[108] (4) Aqua ignores the fact that the other utilities, to which it referred in direct testimony, are energy companies and those energy costs are pass-through gas and electric commodity costs, not expenses for energy consumed by those utilities during routine operations;[109] (5) the proposed ECAM is discriminatory because it would only apply to tariff rate customers and not rider rate customers;[110] (6) the Company has not shown that implementing the ECAM will result in the filing of fewer rate cases as it claimed, because the energy cost expense is not significantly volatile; nor is it a large enough expense to represent an extraordinary impact to the Company's operational output;[111] (7) the ECAM will only apply to the Water Tariff, which is problematic because the Company either will inappropriately use the Water Tariff to reconcile wastewater expenses, or the Company will simply treat water and wastewater customers unequally (I&E St. 1 at 53); and (8) the Company's arguments that it reports earnings on a quarterly basis does not negate the single-issue ratemaking nature of the ECAM because the proposed surcharge would benefit Aqua by increasing revenue in lockstep with expense increases for specific individual expenses while circumventing the normal rate case process in which the full examination of all expenses and revenues would be evaluated simultaneously. I&E St. 3-SR at 10-11.

---

106 I&E St. 1 at 52-53; I&E St. 1-SR at 3; I&E St. 1-SR at 67.

107 I&E St. 1 at 51; I&E St. 1-SR at 61.

108 See I&E St. 3-SR at 9-13.

109 I&E St. 1 at 51-52; I&E St. 1-SR at 65.

110 I&E St. 3 at 23-24; I&E St. 3-SR at 11-13.

111 I&E St. 3 at 22-23; I&E St. 3-SR at 9-13.

The OCA echoed I&E's arguments and emphasized that Aqua's ECAM proposal amounts to single-issue ratemaking. OCA St. 4 at 24-25. The OCA submitted that the costs to be recovered through the ECAM do not warrant special recovery separate and apart from other costs recovered through base rates. OCA St. 4 at 25. The OCA notes that Aqua has exercised some control of purchased energy costs through its selection of suppliers (*See* Aqua Exh. 1-A, Schs. C-6.1.i., C-6.1.ii.) and has already captured the potential for future changes in purchased water and energy costs as part of its adjustments to its FPFTY claims. OCA St. 4 at 25; *see* Aqua Exh. 1-A, Schs. 6.1, 7.1.

The OSBA also agreed with I&E and the OCA that since the ECAM would make the Company whole for all energy cost increases between base rate proceedings, the ECAM would constitute single-issue ratemaking. OSBA M.B. at 6. The OSBA submitted that recovery of energy costs through the ECAM is unreasonable because the Company would have no incentive to control its energy usage or costs because they would automatically be passed onto customers. OSBA St. 1 at 22. The OSBA further noted that the ECAM would insulate the Company from fluctuating energy costs, thereby lowering Aqua's business risk, which should result in a lower ROE for Aqua. *Id.* However, the OSBA indicated that the Company made no such proposal, and that by lowering Aqua's business risk, while not lowering the Company's ROE, the Company's shareholders are the entities that would most benefit from the ECAM proposal. OSBA St. 1 at 22. According to the OSBA, the only way ratepayers would benefit from ECAM is if energy costs decrease between base rate proceedings; but given the economic challenges due to rising energy costs as well as the ongoing impact of the COVID-19 pandemic, the OSBA urged the Commission to incentivize Aqua to aggressively control its energy costs by rejecting the ECAM proposal. OSBA M.B. at 6.

Aqua LUG agreed with the statutory advocates' arguments that the ECAM is nothing more than an unjust and unreasonable attempt at single-issue ratemaking that should be rejected by the Commission. In addition, the Aqua LUG argued that Aqua's circumstances with relation to its purchased water and energy expenses simply do not warrant the implementation of an automatic recovery mechanism, as the costs to Aqua for its purchases of water supplies do not constitute significant expenses that require adjustments between base rate cases. Aqua LUG M.B. at 5-6.

(2) Recommended Decision

The ALJ agreed with the statutory advocates and recommended that the ECAM for the recovery of energy costs be rejected. The ALJ found that Aqua is a large company with considerable buying power and there is no reason to believe that it cannot adequately control its energy costs through normal cost control mechanisms. R.D. at 101-02. The ALJ further found that incentivizing cost containment by including energy costs in base rates is more effective than relying on the notion of a "regulatory compact with customers and ratepayers in the delivery of safe, adequate, and reliable utility service." *Id.* (citing Aqua St. 4 at 6). The ALJ noted that in the current economic climate, energy costs are not likely to decline, and this would be the only scenario where ratepayers would benefit from permitting the recovery of costs through a rider rather than through base rates. R.D. at 102.

The ALJ also agreed with the advocates that the ECAM equates to single-issue ratemaking. R.D. at 102. In support of this determination, the ALJ cited to a prior case involving a Collection System Improvement Charge (CSIC) rider in which the Pennsylvania Commonwealth Court declared that "single-issue rate making is prohibited if it impacts on a matter considered in a base rate case."[112] R.D. at 102 (citing *CSIC Order*). In *CSIC Order*, the Court ruled that "[t]he 'cursory' review undertaken for a

[112] *Popowsky v. Pa. PUC*, 869 A.2d 1144, 1152 (Pa. Cmwlth. 2005) (*CSIC Order*), appeal denied, 895 A.2d 552 (Pa. 2006) (citing *Phila. Elec. Co. v. Pa. PUC*, 502 A.2d 722, 727-28 (Pa. Cmwlth. 1985) (*PECO 1985*) and overturning Commission's grant of a wastewater utility's request to implement a CSIC).

surcharge is not a substitute for the review undertaken in a base rate case to determine whether a rate is just and reasonable." R.D. at 102 (quoting *CSIC Order*, 869 A.2d at 1157). Thus, the ALJ ruled that "[i]t is inappropriate to single out this cost for rate recovery without recognizing other possibly offsetting changes in costs and revenues that could ordinarily be thoroughly examined in a base rate proceeding, as Aqua's claims of expenses and offsetting savings and revenues are being examined in the instant case." R.D. at 102. The ALJ explained that to do so would violate the ratemaking principle of matching revenues, expenses, return and rate base. R.D. at 102 (citing OCA St. 3 at 15-16).

The ALJ concluded her recommendation with regard to the ECAM by noting that the financial risk of greater energy bills serves as an incentive to Aqua to seek methods to reduce its energy costs, whether through shopping for competitive suppliers or implementing other cost-saving conservation measures. R.D. at 102.

b. PWAC

(1) Positions of the Parties

Aqua proposed to implement the PWAC in its Tariff Water No. 3 (Tariff Water No. 3, Original Pages 37-38) that would enable the Company to recover the costs of water it purchases for resale from non-affiliated suppliers. Aqua St. 4 at 2. According to the Company, the rider addresses both increases and decreases in the price it pays for purchased water. *Id.* at 2-3. If rates are increased, the Company cannot recover those costs until the next rate case is filed; if rates are decreased, the customer must wait until the next rate case to benefit from that reduced cost. *Id.* at 3. Additionally, the Company proposed to include a 3% cap to its proposed PWAC as well as an audit and reconciliation process to protect its customers from unjust and unreasonable rates. *Id.*

The Company provided the following explanation on how it proposes to implement the PWAC:

> The PWA[C] would adjust customers' bills by adding a charge or credit to reflect increases or decreases, respectively, in the Company's "Baseline Cost." The Baseline Cost is the annual purchased water costs approved as an operating expense in the Company's last base rate case. When one or more of the Company's suppliers change the rates for water purchased by the Company, the Company will re-compute its annual purchased water costs based on the level of consumption and other billing determinants that formed the basis for the Company's calculation of its Baseline Cost. If there is a change in purchased water costs above or below the Baseline Cost, a charge or credit, as applicable, would be added to customers' bills. More precisely, the PWA[C] provides the Company the ability to implement a charge to recover an increase in purchased water costs above the Baseline Cost or a credit to pass back savings from a decrease in purchased water costs below the Baseline Cost.

Aqua St. 4 at 3-4; Aqua M.B. at 248-49.

As noted, Aqua proposed the PWAC to address both increases and decreases in the rates charged by non-affiliated suppliers from whom the Company purchases water. R.D. at 102 (citing Aqua St. 4 at 2); Aqua Tariff Water-PA P.U.C. No. 3 at 37-38. Aqua's PWAC proposal relies, in part, on the Commission's prior approval of a similar recovery mechanism for Newtown Artesian Water Company in 2010.[113] The Company noted that the PWAC for Newtown Artesian Water Company contained safeguards, and that it has proposed those same safeguards for the PWAC in this proceeding. *See* Aqua M.B. at 249, n. 88, which delineates the four safeguards.

---

[113] *Pa. PUC v. Newtown Artesian Water Co.*, Docket No. R-2009-2117550 (Order entered April 15, 2010) (*Newtown Artesian Water*) at 6-17 affirmed by *Popowsky v. Pa. PUC*, 13 A.3d 583 (Pa. Cmwlth. 2011) (*Popowsky 2011*).

The statutory advocates have raised most of the same arguments against the PWAC that they made against the ECAM. R.D. at 103. As with the ECAM, I&E argued that the PWAC is discriminatory and that Aqua has not provided a convincing reason for treating purchased water expenses as anything other than an O&M expense which should be recovered in base rates. *Id.* (citing I&E St. 3 at 14). I&E asserted that the Company's request to use the PWAC to recover future increases in purchased water through a reconcilable surcharge is an unreasonable exception to the normal rate making treatment for purchased water expense and would violate the principle of "single issue ratemaking." *Id.* Aqua M.B. at 250. I&E submitted that in the past, the Commission only granted surcharge treatment when a utility has demonstrated that the expense in question was volatile or unpredictable and the level of the expense is significant when compared to total O&M expenses including depreciation expense. *Id.* However, in this case, I&E asserted that Aqua failed to present sufficient evidence that its purchased water expense is volatile, unpredictable, or significant.[114]

The OCA added that purchased water costs are known and are subject to agreements with the provider. OCA St. 4 at 25. Since Aqua has voluntarily entered into its contracts to purchase water with various entities, the OCA contended that those costs are not entirely beyond its control.[115]

The OSBA observed that like the ECAM, allowing Aqua to use the adjustment clause would not incentivize the Company to control its purchased water costs and the only way that ratepayers would benefit would be if purchased water costs declined between rate cases. OSBA St. 1 at 25. In addition, the OSBA's witness, Mr. Kalcic, argued that the PWAC was biased in favor of shareholders and would

---

[114] *See* I&E St. 3 at 11-19 and I&E St. 3-SR at 7-8 for a full discussion of the PWAC issue.

[115] *See*, *e.g.*, Aqua Exh. 1-A, Sch. C-7.1.i. Also, *see* OCA St. 4 at 24-25 for a full discussion of the OCA's position on the ECAM and PWAC.

insulate Aqua's earnings. OSBA St. 1 at 22-25. Finally, the OSBA asserted that PWAC is unnecessary because the Company's purchased water costs are $4.5 million, whereas Aqua's claimed water cost of service is $575.03 million. Purchased water costs are only 0.7% of the Company's total costs. Any changes in water costs will have a minimal impact on Aqua's earnings. OSBA St. 1 at 24.

(2) Recommended Decision

The ALJ recommended that Aqua's proposed PWAC be rejected because Aqua failed to demonstrate that the PWAC is necessary, just, or reasonable. R.D. at 102-04. In reaching her decision, the ALJ relied on the arguments proffered by the statutory advocates which included many of the same arguments made in opposition to the ECAM.

The ALJ initially found that Aqua did not provide any convincing reasons why purchased water expenses should be treated as anything other than an O&M expense that are recoverable in base rates. R.D. at 103. The ALJ agreed with I&E that the Company's request for an exception to the normal ratemaking treatment for purchased water expense through a reconcilable surcharge is unreasonable based on past policy where the Commission only granted surcharge treatment when it had been demonstrated that the expense in question was volatile or unpredictable, and the level of the expense was significant when compared to total O&M expenses, including depreciation expense. R.D. at 103 (citing I&E St. 3 at 14). The ALJ found that Aqua did not present any such evidence related to its purchased water expense. R.D. at 103 (citing I&E St. 3 at 11-19; I&E St. 3-SR at 7-8).

Next, the ALJ concluded that Aqua's purchased water costs are not entirely beyond its control in that Aqua's purchased water costs are known costs because they are subject to agreements with the provider. R.D. at 103 (citing Aqua Exh. 1-A, Sch. C-7.1.i). The ALJ also concluded that permitting Aqua to use the PWAC would not incentivize the Company to control its purchased water costs and the only way that ratepayers would benefit would be if purchased water costs declined between rate cases. R.D. at 103. The ALJ further found that the PWAC is not necessary because any changes in water costs will have minimal impact on Aqua's earnings since the Company's purchased water cost of $4.5 million is only 0.7% of its total claimed water cost of service of $570.03 million. R.D. at 104 (citing OSBA St. 1 at 24).

Finally, the ALJ ruled that Aqua's reliance on *Newtown Artesian Water* is misplaced. R.D. at 104. In support of her judgment, the ALJ explained:

> At the time of its request, Newtown purchased nearly 60% of its water from other sources. [*Newtown Artesian Water* at 3] Its purchased water expense represented about 25% of its annual revenues and 34% of its O&M expenses for the same period. [*Newtown Artesian Water* at 3; *see also* I&E St. 3 at 18-19; I&E Exh. 3, Sch. 3 at 1-2] In stark contrast, Aqua's projected purchased water costs will amount to only about 0.7% of its total water cost of service. [OCA St. 4 at 25] Aqua is not a small utility where purchased water or energy costs constitute a significant portion of its cost of service. Aqua's costs are not so significant such that they would cause its overall cost of service to vary widely from authorized revenues as a result of suppliers' price changes. Similar to ECAM, the financial risk of greater purchased water bills serves as an incentive to Aqua to seek methods to reduce its purchased water costs, whether through shopping for competitive suppliers, supplying more of its own water, reducing water losses, or implementing other cost-saving conservation measures. Aqua has failed to demonstrate that the PWAC is necessary, just or reasonable.

R.D. at 104 (footnote numbers omitted).

c. Aqua Exception No. 11 and Replies

In its Exception No. 11, Aqua disagrees with the conclusions the ALJ reached in support of her recommendations that the proposed ECAM and PWAC be rejected. Aqua Exc. at 35-36; R.D. at 99-104. Those conclusions include: (1) the ECAM and PWAC constitute impermissible single-issue ratemaking (R.D. at 102); (2) the Company failed to demonstrate that it cannot adequately control its energy and purchased water costs through normal mechanisms (R.D. at 101-102; 104); (3) the Company's energy and purchased water costs each do not constitute a significant amount of Aqua's cost of service (*Id.*); and (4) customers are not likely to benefit from the ECAM because energy costs are not, likely to decline in this climate (R.D. at 102). For the reasons discussed below, the Company requests that the above findings be rejected and each of the reconcilable riders be approved.

First, Aqua maintains its position that the two new reconcilable riders should be approved because it has demonstrated that they satisfy the requirements for approval of reconcilable riders under Pennsylvania law and Section 1307(a) of the Code. Aqua Exc. at 36 (citing Aqua M.B. at 245-249; Aqua R.B. at 105-106). Additionally, Aqua submits that because each rider seeks to recover an expense that is easily identifiable and beyond the Company's control, it has adequately demonstrated that the ECAM satisfies the exception to the prohibition against single-issue ratemaking. Aqua Exc. at 36.

The Company also disagrees with the ALJ's finding that energy costs are not likely to decline. The Company contends that the ALJ's statement is an unsupported assertion used to undermine Aqua's otherwise unrebutted testimony that any energy cost savings would be passed through to customers in a timely manner. *Id.*

In view of the above arguments, the Company requests that, for the reasons more fully explained in its Briefs, the Commission reject the ALJ's findings and approve the proposed ECAM. Aqua Exc. at 36 (citing Aqua M.B. at 235-58; Aqua R.B. at 105-07). We refer to the "Positions of the Parties" sections, above, which address the Company's positions with regard to the issues it raised in its Exceptions here concerning these ECAM and PWAC riders.

In its reply, I&E disagrees with the Company that its ECAM and PWAC riders satisfy the requirements under Pennsylvania law and Section 1307(a) of the Code. I&E also submits that Aqua continues to aver, incorrectly, that the proposed reconcilable riders satisfy the well-recognized exception to the prohibition against single-issue ratemaking, and that each rider seeks to recover an expense that is easily identifiable and beyond the Company's control. I&E R. Exc. at 11.

In regard to the ECAM, I&E avers that the ALJ appropriately considered the counter arguments made by the statutory advocates and correctly recommended that the ECAM for the recovery of energy costs should be rejected. I&E R. Exc. at 11 (citing R.D. at 101). I&E agrees with the ALJ's reasoning that because Aqua is a large company with considerable buying power, there is no reason to believe that it cannot adequately control its energy costs through normal cost control mechanisms. In consideration of the above, and the fact that the ALJ concluded that the ECAM would equate to single-issue ratemaking, I&E believes Aqua's Exception should be denied. I&E R. Exc. at 11.

With regard to the PWAC, I&E opines that the ALJ correctly agreed with the statutory advocates by rejecting the PWAC and recommending that Aqua continue to recover its purchased water costs in base rates rather than through the PWAC. I&E R. Exc. at 11 (citing R.D. at 103). I&E agreed with the ALJ that Aqua's purchased water cost, which amounts to only 0.7% of its total water cost of service, is not a significant portion of its total water cost of service. I&E R. Exc. at 11 (citing R.D. at 104). As such, I&E maintains that Aqua's costs are not so significant that they would cause its overall cost of service to vary widely from authorized revenues due to its suppliers' price changes. *Id.* I&E, therefore, asserts that since Aqua has failed to demonstrate that the PWAC is necessary, just or reasonable, the Commission should reject Aqua's Exception on this matter. I&E R. Exc. at 11-12.

In its reply to Aqua's Exception No. 11, the OCA renders similar arguments to those raised by I&E. OCA R. Exc. at 20-21. The OCA agrees with the ALJ to reject the ECAM because it constitutes single-issue ratemaking, and it is not appropriate to adopt this type of reconcilable rider mechanism because Aqua is adequately able to control its energy costs. OCA R. Exc. at 20 (citing R.D. at 101-02).

The OCA also submits that it supports the ALJ's recommendation to reject the PWAC because the ALJ correctly found that Aqua's reliance on *Newtown Artesian Water* was misplaced. OCA R. Exc. at 20 (citing R.D. at 103 and *Newtown Artesian Water* at 6-17). The OCA references the ALJ's Recommended Decision comparing Newtown with Aqua in which the ALJ stated that Newtown purchased nearly 60% of its water and that Newtown's expense was about 25% of its annual revenues and 34% of its operation and maintenance expenses. In contrast, Aqua's projected purchased water costs are only about 0.7% of its total water cost of service.[116] OCA R. Exc. at 20 (citing R.D. at 104; OCA M.B. at 114).

The OCA also requests that the Commission reject Aqua's continued stance in its Exceptions that Section 1307(a) justifies implementing the ECAM and PWAC because Aqua's energy costs and purchased water costs are outside of its control. In this regard, the OCA submits that Aqua's position is unsupported because, as the ALJ found,

[116] It is noted that the OCA appears to inadvertently state in its reply that Aqua's projected purchased water costs are about "1.4% of its total water cost of service."

due to the large size of Aqua, which has considerable buying power, there is "no reason to believe that it cannot adequately control its energy costs through normal cost control mechanisms." OCA R. Exc. at 21 (citing R.D. at 101). Since Aqua has voluntarily entered into contracts to purchase water with various entities, the OCA contends that those are known costs for which Aqua can exercise some control. *Id.* The OCA also notes that Aqua has exercised some control through its selection of electricity suppliers. OCA R. Exc. at 21 (citing OCA R.B. at 69).

The OCA concludes its reply by asserting that the costs at issue in the ECAM and PWAC do not meet the criteria that the Commission and Courts have applied in approving a Section 1307(a) surcharge. OCA R. Exc. at 21 (citing OCA R.B. at 70-71). In this regard, the OCA argues that the associated costs are not extraordinary, substantial, unexpected, or non-recurring. Instead, the OCA opines that such costs represent the normal, ongoing costs of providing water service that are such a small percentage of Aqua's overall cost of service that any fluctuations will have minimal impact. OCA R. Exc. at 21.

In its reply to Aqua's Exception No. 11, the OSBA makes similar arguments as I&E and the OCA that Aqua's ECAM and PWAC do not satisfy the requirements of Section 1307(a) of the Code. OSBA R. Exc. at 4, 5. The OSBA also disagrees with the Company's argument that the proposed riders qualify as a "well recognized exception to the prohibition against single-issue ratemaking" because each of them would move consideration of a *single* ratemaking expense outside the context of a traditional base rate proceeding. OSBA R. Exc. at 3, 4, 6 (citing Aqua Exc. at 36). The OSBA submits that the ECAM and PWAC are classic examples of single-issue ratemaking and would provide no incentive to control its energy and purchased water costs because the ECAM, in particular, would insulate the Company from fluctuating energy costs, and any energy and purchased water cost increases under the ECAM and PWAC, respectively, would be passed along to customers. OSBA R. Exc. at 4, 5.

The OSBA also reinforces its previous argument that the ECAM would lower Aqua's business risk, which should lower its ROE. The OSBA notes that the Company did not make such a proposal in this rate proceeding. Accordingly, the OSBA remains of the opinion that if the Company's ROE is not lowered in conjunction with the resulting lower business risk, the approval of the ECAM rider would only serve to benefit the Company's shareholders. OSBA R. Exc. at 4 (citing OSBA St. No. 1 at 21-22).

d. Disposition

After thoroughly reviewing the record with respect to the ECAM and the PWAC, we shall deny Aqua's Exception No. 11 and adopt the ALJ's recommendations that reject the two reconcilable rider mechanisms in accordance with the arguments set forth by I&E, the OCA, the OSBA and Aqua LUG in this proceeding.

The primary disagreement between the Company and the opposing Parties centers on whether the tariffed ECAM and PWAC riders satisfy the requirements for approval of reconcilable riders under Pennsylvania law and Section 1307(a) of the Code. I&E, the OCA, the OSBA and Aqua LUG (opposing Parties) were opposed to these riders and argued that approving them would constitute impermissible single-issue ratemaking. I&E M.B. at 91-95; OCA M.B. at 112-15; OSBA M.B. at 5-7; Aqua LUG M.B. at 4-6. Aqua, however, took the position that Section 1307(a) specifically provides an exception to the prohibition against single-issue ratemaking, and that Aqua's proposal to add the riders is almost identical to the rider proposed and approved in *Newtown Artesian Water*. Aqua R.B. at 105. Aqua also submitted that I&E's, the OCA's, and the OSBA's attempts to distinguish this case on the basis that Aqua's cost are not as significant as in *Newtown Artesian Water* also fail.[117] The Company argued that while

---

[117] *See* Aqua R.B. at 105, n.41 OCA M.B. at 114; I&E M.B. at 92, 94; OSBA M.B. at 6-7.

the court in *Popowsky 2011* recognized that *Newtown Artesian Water* purchased a significant portion of its water from other sources, precedent clearly demonstrates that where an automatic adjustment clause is not specifically authorized by statute, a utility must show that the expense is easily identifiable and beyond the utility's control.[118] Thus, Aqua contends that it has made this showing. Aqua R.B. at 105-06, n.41.

Upon our review of the record, we are not persuaded by the Company's arguments that there is a need to implement the ECAM and PWAC in this proceeding. First and foremost, we agree with the ALJ and the opposing Parties that granting Aqua's request to adopt the riders constitutes single-issue ratemaking because the costs that Aqua proposes to recover through the reconcilable surcharges apply to costs that are normal, ongoing costs of providing water service. Therefore, because we find that the costs are not unique, unexpected, or non-recurring, we conclude that it would not be prudent to permit the Company to use the Section 1307(a) statute to justify its requests for the proposed riders because the Company has not persuaded us that it has experienced any extraordinary circumstances with regard to its purchased water and energy costs when compared to the other routine O&M costs it recovers through base rates.

We also disagree with the Company's contention that since the Commission approved a similar rider in *Newton Artesian Water*, the Commission should approve its proposed riders in this proceeding. Our review of the record indicates that there is a major difference between the rider approved for *Newtown Artesian Water* and those proposed here. According to testimony presented by I&E's witness, Mr. Esyan Sakaya, "unlike Aqua's situation, Newtown purchased approximately 52% of the water sold in the first half of 2009 from the Bucks County Water Authority (I&E Exh. No. 3, Sch. 3, p.1)" and "[t]he purchased water expense was over 29% of total O&M and depreciation expense for the same period (I&E Exh. No. 3 Sch. 3, p.2)." I&E St. 3 at 18.

---

118 *See* Aqua M.B. at 245 (citing, in part, *Popowsky 2011*).

Here, the record indicates that Aqua only purchases 2.46% of the total water it sells. Mr. Sakaya further testified:

> The total proposed purchased water expense claim is $4,135,311 (Aqua Ex. No. 3, Sch. C-7 1.i). Subtracting the affiliated purchases of $297,839 leaves $3,837,472 ($4,135,311 - $297,839) of non-affiliated purchase water expense. The total Operating, Maintenance and Depreciation expense for the Company is approximately $272,527,954 (Aqua Ex. 5-A, Sch. C, column 2, line 4, p. 9). Therefore, non-affiliated purchased water expense is only 1.4% ($3,837,472 / $272,527,954) of total operating, maintenance and depreciation expenses. This 1.4% is minimal compared to the 24% - 70% of purchased gas costs that is typical for a natural gas utility with a PGC adjustment.

I&E St. 3 at 16. We note that the OSBA's witness, Mr. Kalcic, testified that based on the $4.15 million in total purchased water expense claim in this proceeding, "[t]he Company's total claimed cost of service for its water operations (excluding Act 11) is $575.03 million. As such, Aqua's claimed purchased water expense amounts to only 0.7% of its total costs." OSBA St. 1 at 24.

With regard to the Company's purchased power expense the Company proposes to recover through the ECAM, Mr. Sakaya testified:

> [T]he total proposed purchased power expense, projected for the FPFTY ending March 31, 2023 is $8,182,196 (AP Ex. No. 1-A, Sch. C-6.1, line 3). The total Operating, Maintenance and Depreciation expense for the Company is approximately $272,527,954 (AP Ex. 5-A, Sch. C, column 2, line 4, p. 9). Therefore, purchased power expense is only 3.0% ($8,182,196 / $272,527,954) of total Operating, Maintenance and Depreciation expenses. This 3.0% is nowhere near the 24% - 70% that is typical for gas utilities with a PGC adjustment. Even large variations in an expense of this size

> would not represent an extraordinary impact to the Company's operational outlook.

I&E St. 3 at 23. Using Mr. Kalcic's comparison that he calculated for the Company's total percentage of purchased water to the Company's total cost, we calculate that the Company's claimed purchased energy costs amounts to only 1.4% of its total costs [($8,182,196 ÷ $575,030,000) x 100 = 1.4%].

In view of the above comparisons, our approval of the reconcilable rider for *Newton Artesian Water* does not justify approving the ECAM and PWAC riders in this proceeding as argued by Aqua. The *Newtown Artesian Water* case is a rare exception where we determined such a rider was absolutely necessary because of the extraordinary circumstances in that case. Such circumstances are not relevant with regard to the Company's purchased water and energy costs in this proceeding. As the ALJ and the opposing Parties appropriately observed, these expenses are routine O&M expenses that are not unique, unexpected, or non-recurring. R.D. at 100-02. Thus, we are of the opinion that granting the Company's request to adopt its ECAM and PWAC reconcilable riders would be akin to single-issue ratemaking. As emphasized by the Commonwealth Court, single-issue ratemaking is similar to retroactive ratemaking and is generally prohibited if it impacts on a matter normally considered in a base rate case such as this proceeding. *See Popowsky 2011*, 13 A.3d at 593. Additionally, we agree with the ALJ that to approve the proposed riders "would violate the ratemaking principle of matching revenues, expenses, return and rate base." R.D. at 102. Accordingly, the Company's *Newtown Artesian Water* argument in its Exceptions is denied.

Regarding the Company's Exception to the ALJ's ruling that Aqua failed to demonstrate that it cannot adequately control its energy and purchased water costs through normal mechanisms, we again are not persuaded by the Company's arguments. The Company has not submitted any convincing historical data demonstrating erratic fluctuations in its water or energy costs between rate cases that would persuade us that such costs are beyond the Company's control. In fact, the record demonstrates otherwise. I&E witness, Mr. Sakaya, testified that historical data submitted by the Company "shows no significant price volatility from municipal water suppliers from 2019 to 2023." I&E St. 3-SR at 13 (citing Aqua Exh. 1-A(a), Sch. C-7.1.1.). Mr. Sakaya also noted that "the cost of purchased water on a cost per unit basis generally increases from rate case to rate case like many other expenses, such as payroll and benefits, but it is not volatile and subject to large unanticipated increases or decreases." I&E St. 3 at 15. The fact that the Company's purchased water and energy expenses are not volatile or unpredictable makes it easier for the Company to control its costs. In this regard, we agree with the OCA's position that because the Company's purchased water costs are known and subject to contractual agreements with various entities, Aqua's costs are not entirely beyond its control.

We also agree with the ALJ's evaluation of this matter when she stated the following with regard to the ECAM:

> As the advocates observe, Aqua is a large company with considerable buying power. There is no reason to believe that it cannot adequately control its energy costs through normal cost control mechanisms. Incentivizing cost containment by including energy costs in base rates is more effective than relying on the notion of a "regulatory compact with customers and ratepayers in the delivery of safe, adequate, and reliable utility service."

R.D. at 102.

In light of the above, we conclude that Aqua has unreasonably requested an exception to the normal rate making treatment for purchased water and energy expenses by requesting that future increases be automatically recovered through a reconcilable surcharge. Accordingly, Aqua's Exception No. 11 is denied and the ALJ's recommendation is adopted in its entirety with regard to the proposed ECAM and PWAC.

2. Federal Tax Adjustment Surcharge

a. Positions of the Parties

Aqua proposed to add a new reconcilable surcharge, entitled the Federal Tax Adjustment Surcharge (FTAS), to its water and wastewater tariffs (Tariff Water No. 3, Original Pages 32-34, and Tariff Sewer No. 3, Original Pages 16-19) which will adjust its water and wastewater base rates when there are changes in federal corporate income tax rates by adding the revenue requirement for the incremental impact of the change in the federal corporate income tax rate. Aqua St. 8 at 14-15.

Aqua explained that the FTAS is analogous to the State Tax Adjustment Surcharge (STAS) that the Company, and other major Pennsylvania utility companies, have had in place for many years, and just as the STAS provides for adjustments to base rates for changes in state taxes (and more specifically for changes under the Pennsylvania Corporate Net Income Tax), so too does the FTAS provide for adjustments to base rates for changes in federal corporate income tax. Aqua St. 8 at 18.

According to the Company, the FTAS was proposed because significant changes in the federal corporate income tax rate can substantially impact the Company's revenue requirement and it is more appropriate to adjust rates quickly to reflect significant federal tax rate changes. Aqua St. 8 at 15, 17. The Company cited the TCJA as an example to describe the difficulty and delays of implementing federal corporate tax rate changes in the current environment. Aqua St. No. 8 at 17. The Company explained that for companies like Aqua that had planned base rate cases in 2018, the lower tax rate was reflected in those decisions prospectively in early 2019, along with refunds for 2018.

Id. The Commission set temporary rates for other companies and implemented surcredits[119] on July 1, 2018, to begin the flow through of the tax rate decrease and required those companies to record regulatory liabilities for the first half of 2018. *Id.* This process delayed receipt of the effects of the tax rate change and required changes to rates previously charged for service. *Id.* The Company expressed its concerns that the White House recently has proposed an increase in the corporate tax rate from 21% to 28% and, if enacted, this will roll back some tax reductions enacted only a few years ago. *Id.* at 15. The Company presented an analysis showing the effect the potential corporate tax increase would have on its revenue requirement. *Id.* at 16-17. The Company opined that any delay in adjusting rates can result in either significant refunds or retroactive collections after the effective date of the tax rate change and may compel Aqua to file another rate case sooner than originally planned at significant cost and time to all parties. *Id.* at 15, 16. The Company averred that the FTAS will avoid these concerns because it is designed to adjust rates as fast as possible to reflect tax rate changes. *Id.* at 18.

I&E opposed the FTAS. According to I&E, the Company's stated need for the surcharge is speculative as the Company cannot say with certainty if or when an increase to the federal corporate income tax rate might be enacted or ever take effect. I&E St. 1-SR at 32-46. Furthermore, the Commission and its advisory staff have appropriately responded to changes in tax law as they have recently dealt with this issue in response to the reduction in the federal corporate income tax rate that took effect starting January 1, 2018, because of the TCJA. *Id.* at 32. I&E is confident that the Commission would provide adequate and timely guidance on a statewide basis to affected regulated utilities if such a tax rate change occurs. Accordingly, I&E opined that there is no need for the proposed FTAS at this time.

---

[119] Generally, a "surcredit" is a surcharge returned to a customer.

I&E also had concerns about allowing rate adjustments in a surcharge mechanism for excess ADIT because deferred taxes require more scrutiny of regulators and statutory parties due to subjectivity in certain circumstances in determining the proper normalization periods, particularly for tax differences associated with non-protected assets that are not subject to the strict requirements of IRS normalization rules. *Id.* at 33-39. In addition, I&E testified in favor of a one-sided interest component for a reconcilable rider where the Company must pay interest to ratepayers for excess tax amounts due to be refunded to ratepayers so that companies would be encouraged to promptly refund its customers. I&E St. 1-SR at 39-40.

The OCA also opposed the implementation of the FTAS. OCA St. 2 at 14-15. The OCA submitted that the Company's proposal to implement the FTAS is premised on Aqua's belief that the federal corporate income tax rate may be increased from 21% to 28%, but it is uncertain when the next change in the corporate federal income tax rate will occur, and whether the legislation enacting the change will include other provisions which affect corporate federal income tax liabilities. *Id.* at 15. Based on the provisions attached to the TCJA (*i.e.*, the tax treatment of net operating loss carryback and caps, and limits on net interest deductions), the OCA asserted that such provisions need to be given consideration before they are allowed. *Id.* According to the OCA, the FTAS is neither necessary nor reasonable because it is unknown when or even if the federal government will make legislative changes to the federal tax rate. *Id.* The OCA concluded that any changes to the federal corporate income tax rate should be addressed by the Commission on a generic basis. *Id.* at 16.

b. Recommended Decision

The ALJ agreed with I&E and the OCA that Aqua's proposed FTAS should be rejected because it is uncertain when the next change in the federal corporate income tax rate will occur, and it is unknown whether any future legislation enacting a change in

the federal corporate tax rate would include other provisions which would affect tax liabilities. The ALJ stated that, at this time, there is no pending legislation proposing an increase to the federal corporate income tax rate, and even if legislation was being considered in Congress, there is no way of knowing if or when and in what form the tax change would be implemented. The ALJ concluded that, while it may be true that changes in tax rates may affect utilities differently, the FTAS proposal is premature and should be rejected because there is no current legislation to actually consider, and Aqua is requesting a surcharge mechanism with no trend or context in which to evaluate it.
R.D. at 106.

c. Aqua Exception No. 12 and Replies

In its Exception No. 12, the Company believes the ALJ erred in rejecting the proposed FTAS. Aqua Exc. at 36. First, Aqua opines neither the ALJ nor any of the other Parties found or concluded that the proposed method of calculation, mechanics, or safeguards contained in the FTAS were unreasonable. Aqua Exc. at 37 (citing Aqua M.B. at 261, noting that no parties contested these aspects of the FTAS).

The Company believes that the ALJ's concern – that a change in the federal corporate income tax rate is uncertain – is irrelevant to the determination of whether the FTAS is just and reasonable, because "if no change occurs, the FTAS has no impact upon customers," and "if/when a change does occur, the FTAS will act as a temporary mechanism if/when a change occurs between a utility's base rates and will more-timely ensure that the impacts of the change are reflected in the utility's rates." Aqua Exc. at 37 (citing Aqua M.B. at 262; Aqua St. 8-R at 9).

Aqua also argues that it has demonstrated that any change in the federal corporate income tax rate would have a significant impact upon tax expense, and the Company's rates. The Company estimates that an increase in the federal corporate income tax rate from 21% to 28% would result in a $14 million increase in its revenue requirement. Aqua Exc. at 37 (citing Aqua St. No. 8 at 1). The Company avers that this calculation is unrebutted; therefore, it is reasonable to infer that any changes in the federal corporate income tax rate, whether an increase or a decrease, will significantly impact the Company's base rates. Aqua Exc. at 37.

Aqua also reiterates its analogy of its proposed FTAS with the existing STAS mechanism in that "[j]ust as the STAS provides for adjustments to base rates for changes in state rates (and more specifically for changes under the Pennsylvania Corporate Net Income Tax), so too does the FTAS provide for adjustments to base rates for changes in federal corporate income tax." Aqua Exc. at 37-38 (citing Aqua St. 8 at 18).

In reply to Aqua Exception No. 12, I&E first disagrees with the Company's representation that the ALJ "did not find or conclude that the proposed method of calculation, mechanics, or safeguards contained in the FTAS were unreasonable." I&E R. Exc. at 12 (citing Aqua Exc. at 37). I&E submits that the ALJ did not have to consider whether the FTAS is reasonable because she concluded that the proposed FTAS is premature when she stated in her Recommended Decision that "at this time there is no pending legislation proposing an increase to the federal corporate income tax rate." I&E R. Exc. at 12 (citing R.D. at 106). I&E notes that the ALJ further concluded that "while it may be true that future changes in tax rates may affect utilities differently, there is no current legislation to actually consider and Aqua is requesting a surcharge mechanism with no trend or context in which to evaluate it." *Id.* In view of the fact that the ALJ made no determinations to find that the terms of the FTAS were reasonable, I&E submits that Aqua's Exception here should be rejected. *Id.*

In its reply, the OCA disagrees with Aqua's arguments in its Exceptions that the lack of evidence of any change in the federal tax liabilities is irrelevant, and that there would be a large impact on Aqua if there is a change in the federal income tax rate. OCA R. Exc. at 22 (citing Aqua Exc. at 36-38). The OCA contends that Aqua's arguments are without merit because, if the issue of tax liabilities is "irrelevant," then there is no reason to implement Aqua's proposed FTAS. *Id.* Thus, the OCA opines that Aqua's position is consistent with the evidence that establishes that the FTAS is not necessary. *Id.* Because Aqua has not presented any evidence that a tax change is imminent and its witness admitted that "no one can say with any certainty if/when an increase to the federal corporate income tax will take effect," the OCA argues that Aqua's proposed FTAS must be rejected. *Id.;* R.D. at 106 (citing Aqua St. 8-R at 10).

The OCA also takes issue with Aqua's argument that the impact of any tax changes would be large. OCA R. Exc. at 22. The OCA asserts that Aqua's statement is pure speculation because the Company has no knowledge or certainty of any upcoming tax changes. The OCA avers that the Company has presented its FTAS as the only way to address a hypothetical tax change. Nevertheless, the OCA stresses that future, unknown changes to the federal corporate income tax rate should be addressed by the Commission on a generic basis for all the public utilities similar to what the Commission did in February 2018, when it initiated a generic proceeding to determine the effects of the TCJA on public utilities' tax liabilities. *Id.* (citing OCA M.B. at 83; OCA St. 2 at 15).

d. Disposition

We agree with the ALJ's recommendation that the Company's proposed FTAS reconcilable rider should be rejected because it is premature, and no trend or context has been established under which it can be evaluated. In reaching our decision on this matter, we share the concerns of the ALJ and the opposing Parties that it is uncertain when the next change in the federal corporate income tax rate will occur, and it is unknown whether any future legislation enacting a change in the federal corporate tax rate would include other provisions which would affect tax liabilities. Thus, we agree with the ALJ that the FTAS proposal is premature because there is no current legislation to actually consider and Aqua is requesting a surcharge mechanism with no trend or context within which to evaluate it. *See* R.D. at 106. We further find that the FTAS is not necessary at this time because this Commission, in conjunction with our advisory staff, recently provided timely guidance on a statewide basis to the affected regulated utilities with regard to the method of calculation, mechanics, or safeguards on the methodology to use in implementing the federal corporate income tax rate that took effect starting January 1, 2018. *See Tax Cuts and Jobs Act of 2017*, Docket No. M-2018-2641242. In our opinion, the Commission may utilize this same process again should changes in the federal tax rate occur in the future. Furthermore, we support the OCA's position that any changes to the federal corporate income tax rate should be addressed by the Commission on a generic basis for all the public utilities under its jurisdiction because "future legislation changing the federal corporate income tax rates may impact other provisions which affect corporate federal tax liabilities." *See* OCA M.B. at 83.

For the reasons above, we shall deny Aqua's Exception No. 12 and adopt the ALJ's recommendation that rejects the Company's FTAS reconcilable rider it proposed in its water and sewer tariffs.

3. Universal Service Rider

a. Positions of the Parties

Aqua proposed to include a Universal Service Rider (USR) in its water and wastewater tariffs[120] that would adjust its residential base rates to recover the costs of its

[120] *See* proposed Tariff Water No. 3, Original Pages 32-34, and proposed Tariff Sewer No. 3, Original Pages 19-21.

proposed customer assistance programs (CAP) from all residential customers, except those enrolled in the Company's CAPs. Aqua explained that its proposed USR is similar to the riders in the tariffs of its affiliated Peoples Companies[121] and other energy utilities throughout the state and that it has filed the USR consistent with the terms of the *Aqua-Peoples Settlement*[122] that was approved by the *Aqua-Peoples Acquisition Order*.[123] R.D. at 107; Aqua M.B. at 264; Aqua St. 10 at 9; Aqua St. 2 at 17-18.

According to the Company, the USR will be used to recover those costs associated with the following low-income offerings: (1) CAP discounts; (2) CAP arrearage forgiveness benefits; (3) CAP administration by a third party (*i.e.*, Dollar Energy Fund); and, (4) the proposed Conservation and Emergency Repair Program ($100,000 per year). Aqua St. 10 at 9. Aqua's calculation of the costs to be recovered through the USR is based on its anticipated enrollment in the CAP, subject to an annual reconciliation and audit by the Commission. Aqua St. 10 at 10. Aqua submitted that approval of the USR will ensure that residential ratepayers are only responsible for actual costs of the program, rather than projected costs that may not come to fruition. *Id.*

---

[121] The Peoples Companies include Peoples Gas Company, Peoples – Equitable Division, and Peoples Natural Gas Company LLC.

[122] *See Joint Petition for Approval of Non-Unanimous, Complete Settlement Among Most Parties*, Docket Nos. A-2018-3006061, A-2018-3006062 and A-2018-3006063; June 26, 2019 (*Aqua-Peoples Settlement*).

[123] *See Joint Application of Aqua America, Inc., Aqua Pennsylvania, Inc., Aqua Pennsylvania Wastewater, Inc., Peoples Natural Gas Company LLC and Peoples Gas Company LLC for All of the Authority and the Necessary Certificates of Public Convenience to Approve a Change in Control of Peoples Natural Gas Company LLC and Peoples Gas Company LLC by Way of the Purchase of All of LDC Funding, LLC's Membership Interests by Aqua America, Inc.*, Docket Nos. A-2018-3006061, A-2018-3006062 and A-2018-3006063 (Order entered Jan. 24, 2020) at 147-150 (*Aqua-Peoples Acquisition Order*).

The Company provided the following explanation on how its proposed USR will operate:

> The USR would adjust customers' bills by adding a charge or credit to reflect increases or decreases, respectively, in the Company's "Baseline Cost." The Baseline Cost is the estimate to administer and provide benefits under the various program components in the proposed CAP. Costs and revenues under the USR will be reconciled each year, and an over or under collection, as applicable, will be included in the "E" factor of the charge.

Aqua M.B. at 264; Aqua St. 2 at 18.

The OCA argued that the USR should not be approved for the following reasons: (1) any recovery of low-income program costs should be recovered in base rates rather than through a reconcilable rider, and the associated costs should be based on net costs, rather than gross costs (R.D. at 107; OCA St. 5 at 42); (2) it is not appropriate for Aqua to use the Peoples Companies' reconcilable riders as models to recover costs for its low-income programs because when the Commission approved the reconcilable riders for Pennsylvania gas and electric utilities, the Commission relied upon specific statutory language from Pennsylvania Energy Competition Acts,[124] which are not applicable to water/wastewater companies (*Id.* at 43-44); (3) the recovery of the low-income program costs should not be subject to a reconcilable recovery rider because CAP costs: (a) are normal operating costs that represent a small portion of Aqua's total operating revenues; (b) will not vary widely based on changes in total consumption as would occur with energy CAPs; and (c) are not variable costs that fluctuate outside of Aqua's control (*Id.* at 45); and (4) the Company proposed to recover the low-income program costs only from the residential customer class (*Id.* at 46).

[124] Electricity Generation Customer Choice and Competition Act, 66 Pa. C.S. § 2804(9); Natural Gas Choice and Competition Act, 66 Pa. C.S. § 2203(8) (collectively, the Energy Competition Acts).

I&E agreed with the Company in opposing the OCA's position that the Company's universal service program (USP) costs be recovered through base rates. I&E argued it is preferable that the Company's costs for a full-scale universal service plan be recovered via a reconcilable surcharge mechanism that tracks dollar-for-dollar net costs similar to what is used by the Peoples Companies. I&E St. 1-R at 3.

I&E also opposed the OCA's suggestion that only net costs[125] of the program be recovered via base rates because the OCA failed to address how the Company would not potentially over or under-recover associated net costs if projections are incorporated as a component of base rates which would not be updated until the Company's next base rate case filing. I&E St. 1-R at 3-4.

I&E made the following three recommendations with regard to the Company' proposed USP: (1) in view of the fact that, for the first time, the Helping Hand program will be funded by involuntary ratepayer funding, the Company should be required to perform income verifications to admit participants into the programs to ensure legitimacy of applicants and reduce misuse of the program. (I&E St. 1 at 45; I&E St. 1-R at 5; I&E St. 1-SR at 53); (2) the Company should be required to perform the appropriate tracking, to be reported in the Company's next base rate case filing, that demonstrates its efforts to encourage participants to take advantage of the Federal Low-Income Household Water Assistance Program funds made available via the American Rescue Plan. (I&E St. 1 at 45; I&E St. 1-R at 5; I&E St. 1-SR at 53); and (3) that Aqua should be required to

---

[125] The OCA noted that the Company indicated that it does not conduct any collectability studies for its water or wastewater operations assessing the rate at which the Company converts billings into collected revenue. However, the Company did state that it has collection contracts which provide contingency fees ranging between 18% to 40% of the amount collected. Thus, the OCA recommended that a 28% offset (the middle of the contingency fee range) to the gross costs of the program be applied to obtain the net program costs that the Company should be permitted to recover. OCA St. 5 at 42.

monitor available federal and state assistance programs and notify customers of all available sources of aid. (I&E St. 1 at 49; I&E St. 1-SR at 54).

b. Recommended Decision

The ALJ recommended that the Commission approve the Company's proposed USR because she found "it is clear from a review of the *Aqua-Peoples Acquisition Order* that the Commission agreed that a 'comparable' funding mechanism as those used by the natural gas and electric distribution companies in Pennsylvania is preferable." R.D. at 108. She further determined that the use of the USR, which will be subject to audit and an annual reconciliation process, will allow actual costs to be maintained and tracked separately, because the costs proposed for inclusion in the Company's USR are easily identifiable, and any adjustments to the costs would be a simple mathematical exercise. R.D. at 108.

In further support of her recommendation to use the USR reconcilable surcharge to recover Aqua's low-income program costs, the ALJ determined: (1) certain costs that the Company will incur under its CAP program are outside of its control; (2) the Company's enrollment projections, which include a substantial ramp-up in projected participation between Years 1 and 3 of the CAP,[126] could be less than or exceed the projections; (3) since there is no limit on the number of customers who could participate in the CAP, costs may vary based on enrollment levels;[127] and (4) the ability to adjust and reconcile the costs associated with such programs via the USR "is particularly important when launching a new program that may not meet or could exceed

[126] Aqua St. 10 at 11.

[127] Aqua St. 10-R at 12; see also Aqua Exhibit RFB-1-R (The OCA's witness, Mr. Colton, admitting no imitation on the number of customers who could participate was proposed).

enrollment expectations."[128] R.D. at 106-109. In view of the above, the ALJ agreed with Aqua that the reconcilable nature of the proposed USR will "ensure ratepayers are only responsible for actual program costs which may be more or less than original projections." R.D. at 109 (citing Aqua St. 10-R at 13).

The ALJ explained that if the projected low-income program costs were included in base rates, as argued by the OCA, the costs would "be subsumed regardless of the potential difference between projected and actual costs." R.D. at 109. The ALJ cited the *Final CAP Investigatory Order*[129] for the proposition that the Commission has recognized that the recovery of universal service costs through a surcharge, rather than in base rates, is a more effective way to ensure robust customer assistance programs. *Id.*

Finally, the ALJ found that the proposed rider is consistent with the general theme of the *Aqua-Peoples Settlement* to share best practices throughout Aqua and the Peoples Companies. The ALJ explained that this is reaffirmed by the plain language of the *Aqua-Peoples Settlement* which required that Aqua will include "a comparable funding mechanism that exists for electric and gas utilities in Pennsylvania." R.D. at 109 (citing *Aqua-Peoples Settlement* at ¶ 108; OCA St. 5 at 42-43). Therefore, the ALJ concluded that Aqua's proposed USR should be approved because it complies with the terms of the *Aqua-Peoples Settlement* that was approved as part of the *Aqua-Peoples Acquisition Order*. R.D. at 109.

128 Aqua St. 10-R at 13.

129 *Customer Assistance Programs: Funding Levels and Cost Recovery Mechanisms*, Docket No. M-00051923 (Final Investigatory Order entered December 18, 2006) (*Final CAP Investigatory Order*) at 15. *See also* testimony of Aqua's witness, Ms. Rita F. Black, Aqua St. 10 at 10.

c. OCA Exception No. 16 and Replies

In its Exception No. 16, the OCA excepts to the ALJ's recommendation to adopt Aqua's proposed USR to recover the costs associated with its CAPs. OCA Exc. at 26 (citing R.D. at 107-09). The OCA maintains its position that it is proper that Aqua recover the costs of the low-income programs through base rates as normal operating expenses, rather than through the reconcilable USR, and that Aqua should only be permitted to recover the *net* costs of the program. OCA Exc. at 26, 28 (citing OCA M.B. at 152-61; 175-78; OCA R.B. at 82-89).

In support of its Exception, the OCA first asserts that, contrary to the ALJ's and the Company's view, the language in the *Aqua-Peoples Settlement* that directed the Company to file "a comparable cost recovery mechanism" to the natural gas and electric utilities' cost recovery mechanism, did not require that a specific cost recovery mechanism be used. OCA Exc. at 26 (citing R.D. at 147-50). The OCA asserts that the ALJ relied on only a portion of the language in the *Aqua-Peoples Settlement*, and thus, erred by interpreting the above language to mean that Aqua *must* propose, in its next base rate proceeding, a cost-recovery mechanism *just* like that used by the natural gas and electric utilities. OCA Exc. at 26. The OCA cites to its Briefs in which it provided detailed arguments on why a reconcilable rider is not required by the *Aqua-Peoples Settlement*. OCA Exc. at 27 (citing OCA M.B. at 152-161; 175-78; OCA R.B. at 82-89).

In reply, Aqua disagrees with the OCA's position that the ALJ erred by relying on only a portion of the *Aqua-Peoples Settlement* and that the OCA is attempting to "walk back" its admission in its Briefs that Aqua was contractually obligated under this settlement to "implement a universal service program with a suite of low-income assistance programs." Aqua R. Exc. (citing Aqua R.B. at 67; OCA M.B. at 120). The Company submits that the OCA's argument is inconsistent because it wants Aqua to implement a universal service plan similar to those in place at other energy utilities, but then proposes that Aqua be required to recover its costs differently than the energy utilities' methodology. Aqua R. Exc. at 14 (citing Aqua R.B. at 68).

I&E also disagrees with the OCA's position and replies that it agrees with the ALJ's recommendation that the *Aqua-Peoples Acquisition Order* that approved the *Aqua-Peoples Settlement* permitted Aqua to use a reconcilable rider. I&E avers that Aqua's proposed USR is consistent with the directives of the Commission in the *Aqua-Peoples Acquisition Order* and Aqua's obligation to comply with the terms of the Settlement. I&E R. Exc. at 17-18.

Next, the OCA excepts to the ALJ's conclusion that the program costs are outside of the Company's control, and that a reconcilable surcharge is necessary to allow for full cost recovery and to ensure robust customer assistance programs. OCA Exc. at 27 (citing R.D. at 107-08). The OCA avers that the ALJ disregarded the fact that there is no statutory basis for the full cost recovery of water low-income program costs as there is for energy low-income program costs. Thus, the OCA asserts that a comparison between energy utilities' mature universal services programs with a statute-defined cost recovery mechanism and Aqua's proposed discount/arrearage forgiveness programs is not appropriate. OCA Exc. at 27.

Aqua replies that it disagrees with the OCA's claims that the costs of the program are within Aqua's control, and there is no statutory basis for the cost recovery of water program costs. The Company retorts that the OCA is ignoring its own admission that no enrollment limitations have been proposed, and that variance in enrollment will drive variances in costs. Aqua R. Exc. at 14 (citing Aqua M.B. at 159; OCA St. 5SR at 29).[130] In addition, the Company argues that the OCA's assertion that there is no

[130] The Company projects that the cost of discounts for the water program alone range from $3 million to $8 million. The OCA projects costs of $4 million to $10 million under its proposal. *See* Aqua R.B. at 69.

statutory basis for this reconcilable rider ignores Section 1307(a) of the Code, 66 Pa. C.S. § 1307(a). Aqua claims that it has demonstrated that the rider satisfies Section 1307(a). Aqua R. Exc. at 14 (citing Aqua M.B. at 264-265; Aqua R.B. at 68-70).

Next, the OCA argues that the ALJ ignored that every other Pennsylvania water utility with low-income discount programs, including Pennsylvania-American Water Company and Pittsburgh Water and Sewer Authority (PWSA), treat their low-income program costs as normal operating costs that are recovered through base rates.[131] OCA Exc. at 27 (citing OCA R.B. at 87; OCA St. 5SR at 28-29). The OCA asserts that the Commission should also require that Aqua continue doing the same in this case. The OCA adds that contrary to the ALJ's conclusion, there is no need for Aqua to use a reconcilable surcharge because Aqua does not anticipate that there will be substantial fluctuations in the costs of the program. OCA Exc. at 27 (OCA R.B. at 88; OCA St. 5 at 45-46).

The Company rejoins that the OCA disregards the fact that other water utilities' programs are not as robust as the programs proposed by Aqua. Aqua R. Exc. at 14 (citing Aqua M.B.at 158).

Finally, the OCA excepts to the ALJ's Recommended Decision because she did not address the OCA recommendations that only net costs, rather than gross costs, of low-income programs should be recovered, and those costs should be included in base rates, including a cost offset to reflect the benefits of the program to Aqua's uncollectible expenses. OCA Exc. at 28 (citing OCA St. 5 at 42). The OCA submits that the ALJ appeared to ignore the need for an offset which the OCA recommended be established to address the impact of the program on Aqua's uncollectible expenses. *Id.* According to the OCA, an offset is needed for the discount and arrearage forgiveness program costs in

[131] *See* OCA R.B. at 87; OCA St. 5SR at 28-29.

order to prevent the double-recovery of costs. *Id.* The OCA cites to its Briefs in which it explained that the Commission previously has concluded that double recovery is possible through a reconcilable surcharge and that an offset is appropriate here. OCA Exc. at 28 (citing OCA M.B. at 153-54; OCA R.B. at 83-85).

The Company replies that it disagrees with the OCA's claims that an offsetting reduction to Aqua's uncollectibles expense associated with the proposed USP is required. The Company asserts that the OCA's Exception should be denied because this recommendation is premature and unnecessary where a reconcilable rider is used. Aqua R. Exc. at 14-15 (citing Aqua M.B. at 155-61, 264-65; Aqua R.B. at 67-71, 107).

I&E also replies that it disagrees with the OCA's arguments in its Exceptions that Aqua's net costs of the program should be recovered in base rates. I&E R. Exc. at 12. I&E further states that it supports the ALJ's determination that the *Aqua-Peoples Settlement* requires that Aqua's proposal include "a comparable funding mechanism that exists for electric and gas utilities in Pennsylvania," which do not net their costs. I&E R. Exc. at 12 (citing R.D. at 109).

d. Disposition

The primary argument in this matter focuses on whether the *Aqua-Peoples Acquisition Order,* through the approved, modified, *Aqua-Peoples Settlement,* requires or permits Aqua to implement a reconcilable rider (*i.e.*, the proposed USR) to recover its low-income program costs in its CAP program. The ALJ, Aqua, and I&E share the opinion that it does. However, the OCA asserts in its Exceptions that the ALJ erred in her reliance on the *Aqua-Peoples Settlement* by incorrectly interpreting that it meant that Aqua was given the clearance to file the reconcilable USR exactly like those used by its Peoples' affiliates to recover the costs associated with its low-income CAP.

Upon our review of the *Aqua-Peoples Merger Order* and the *Aqua-Peoples Settlement*, we disagree with the ALJ's reliance on language in the *Aqua-Peoples Settlement* that the ALJ used as the basis to recommend that the Company's proposed USR be approved. As the OCA noted, the ALJ relied on the testimony of Aqua's witness, Ms. Rita Black, who testified with regard to the Company's implementation of the terms of Paragraph 108 of the *Aqua-Peoples Settlement* as follows:

> [Paragraph 108] notes that, through the Helping Hand Collaborative process, Aqua PA was to consider development of a comprehensive and universal service and conservation program. The items for evaluation included a customer assistance program, hardship fund, water conservation program, low-income service repair program and a comparable funding mechanism as utilized by energy utilities in the Commonwealth. Following this evaluation, Aqua PA would propose a recoverable universal service plan in its next base rate proceeding using input from the Helping Hand Collaborative and best practices from the Peoples Companies.

Aqua St. 10 at 3; *see also Merger Settlement* at 135; OCA M.B. at 117; OCA R.B. at 85-86; OCA St. 5 at 7. In support of her recommendation, the ALJ averred, "[i]t is clear from a review of the *Aqua Peoples Acquisition Order* that the Commission agreed that a 'comparable' funding mechanism as those used by the natural gas and electric distribution companies in Pennsylvania is preferable." R.D. at 107-08 (citing *Aqua-Peoples Acquisition Order* at 147-150).

We disagree. We find that the *Aqua-Peoples Settlement* did not dictate that a specific cost recovery be used. When we adopted the *Aqua-Peoples Settlement,* we never *directed* that Aqua use the same mechanism used by the Peoples' Companies and other energy Companies to recover the costs of its low-income programs. Paragraph 108 of the *Aqua-Peoples Settlement*, which we approved without modification, is stated in its entirety as follows:

> Aqua PA will include in the Helping Hand collaborative agreed to in its recent rate case settlement at Docket No. R-2018-3003558, discussion of the development of a comprehensive universal service and conservation program that will be proposed by Aqua PA. The items to be evaluated for inclusion in Aqua PA's proposal include: (1) a bill payment/customer assistance program; (2) a hardship fund; (3) a water conservation program; (4) a low-income service repair line and replacement program; and (5) *a comparable funding mechanism that exists for electric and gas utilities in Pennsylvania.* Aqua PA will submit *a rate recoverable universal service proposal* in Aqua PA's next base rate case that considers the best practices learned from the Peoples Companies and through conversations from the Helping Hand collaborative.

Aqua-Peoples Settlement ¶ 108 at 23 (emphasis added). We note that Item No. 5 in Paragraph 108 merely states that the Company will include "a *comparable* funding mechanism" for evaluation, and the sentence following Item No. 5 states that Aqua will submit a "*rate recoverable universal service proposal*" in its next base rate case. However, the testimony of Aqua's witness, Ms. Black, quoted above, left out the word "rate" before "recoverable" when she stated, "Aqua PA would propose a *recoverable* universal service plan in its next base rate proceeding." Nothing in Paragraph 108 specifically directed the type of a comparable funding mechanism that must be evaluated. The Settlement stated only that Aqua was allowed to "consider" such a funding mechanism. Furthermore, the text "rate recoverable" implies that the costs of the universal service proposal should be recovered through base rates. In this regard we, agree with the OCA's assertion that "[i]f the parties had intended to mandate use of a funding mechanism akin to the mechanisms used by Pennsylvania's energy utilities, the Settlement would have said so."[132] Similarly, if it were the intent of the Commission to permit the use of a reconcilable rider, we specifically would have modified Paragraph 108 to state that was our intention. Accordingly, we conclude in view of the fact that the

[132] OCA St. 5SR at 36

settlement stated only that Aqua was allowed to "consider" such a funding mechanism, we reject the ALJ's reliance on Paragraph 108 in support of her recommendation that the Company's USR should be approved because it is consistent with the Commission's directive to file a reconcilable rider to recover its low-income CAP expenses.

It is also important to note that the use of a Section 1307(a) reconcilable rider, such as is proposed here, is the exception, rather than the rule, as can be observed during the history of the Commission, how few times the use of this mechanism has been either legislatively mandated (*i.e.*, when the Energy Competition Acts specifically permitted its use for energy companies) or directed by the Commission (*i.e.*, the implementation of the STAS).[133] In this regard we agree with the OCA that Section 1307(a) of the Code does not authorize the Commission to approve surcharges other than in limited circumstances.[134] OCA M.B. at 157. We further note that when we established the reconcilable surcharge recovery mechanism for energy companies pursuant to the Energy Competition Acts, we concluded that, consistent with the direction given in the Energy Competition Acts, we must allow recovery through a surcharge that is either reconciled or adjusted frequently to track changes in the level of CAP costs. *See* OCA St. 5 at 44 (citing *Final CAP Investigatory Order* at 14-15). However, those energy riders that were approved under legislative mandate for the Peoples Companies and other energy companies are not appropriate models upon which to base the cost recovery for

[133] *See* 52 Pa. Code § 69.52, Exh. A (State Tax Adjustment Surcharge Order, entered March 10, 1970). Furthermore, as I&E's witness, Mr. Sakaya, testified, "the PGC [Purchased Gas Cost], STAS and DSIC mechanisms are authorized by statute while the PWA [Purchased Water Adjustment] and ECA [Energy Cost Adjustment] are not, and, furthermore, the establishment of the PGC and STAS were specifically related to historic volatility." I&E St. 3-SR at 12-13.

[134] *See* 66 Pa. C.S. § 1307(a); *CSIC Order*, 869 A.2d at 1160; *see also Pennsylvania Indus. Energy Coal. v. Pa. PUC,* 653 A.2d 1336, 1349 (Pa. Cmwlth. 1995), *aff'd per curiam*, 543 Pa. 307, 670 A.2d 1152 (1996) (*PIEC*). The general rule for expense items is that if the item in question is normally considered in a base rate case, then singling that item out for recovery outside of a base rate case is not appropriate. *CSIC Order*, 869 A.2d at 1157; *PIEC* at 1350.

Aqua's low-income water programs because there has been no legislative carve-out for water companies such as that which exists for energy companies.

We also agree with the OCA's Exceptions in which it argues that a reconcilable rider is not needed here because the Company admitted there will not be substantial fluctuation in its low-income program costs due to changes in bills. OCA St. 5 at 45 (citing OCA-V-29). Aqua disagrees with the OCA's Exception and maintains that the OCA ignores its own witness's admission that no enrollment limitations have been proposed, and that variance in enrollment will drive variances in costs. Aqua R. Exc. at 14 (citing Aqua M.B. at 159). The Company asserts that it has projected that the cost of discounts for the water program alone will range from $3 million to $8 million, while the OCA has projected costs of $4 million to $10 million under its proposal. Aqua R. Exc. at 14 (citing Aqua R.B. at 69). Nevertheless, the OCA avers that unlike natural gas bills, which may vary widely, Aqua's water bills will not experience substantial cost fluctuations due to changes in bills. OCA St. 5 at 45. The OCA explained that the variability in costs, such as those found in energy CAPs, would not be present in Aqua's program because, except for a small portion attributable to discounts on Tier 2 consumption for the lowest income, the vast bulk of discounts provided – whether using Aqua's or the OCA's proposed discounts - are applicable only to the base facility charge and to the first tier of consumption (*i.e.*, the first 2,000 gallons of use). *Id.*

We find the OCA's arguments to be more persuasive. The variability arguments presented by the Company assumes that its and the OCA's projections will vary between $3 million to $8 million or between $4 million and $10 million from month to month. We are of the opinion that such an occurrence is unlikely because the costs associated with Aqua's low-income water assistance offerings will likely start at some point between those ranges and gradually increase over time as participation in the program increases until it eventually levels off at the top of the projected ranges, taking into account the amount of public outreach conducted by the utility and the number of customers who will actually qualify for each offering pursuant to the design of the programs. Notwithstanding the Company's and the OCA's arguments, we note that this is just one consideration to take into account in considering the reasonableness of a reconcilable surcharge; another issue is the appropriateness of implementing a reconcilable rider in this rate case proceeding rather than addressing it pursuant to Section 1307(a) in the context of a generic investigation proceeding where all water utilities would have the opportunity to participate. This is especially relevant here because, as the OCA noted, all Pennsylvania water utilities that offer discount programs, including Pennsylvania-American Water Company and PWSA, currently recover their low-income assistance program costs through base rates. OCA Exc. at 27 (citing OCA R.B. at 87; OCA St. 5SR at 28-29).

The OCA also excepted to the ALJ's adoption of the Company's position that the reconcilable USR should be approved because the program costs are outside of the Company's control and that a reconcilable surcharge is necessary to allow for full cost recovery and to ensure robust customer assistance programs. OCA Exc. at 27 (citing R.D. at 107-08). As noted, the OCA asserts in its Exceptions that the ALJ disregarded that the statutory mandate, which was enacted to permit energy companies to recover their full low-income program costs, does not apply to water utilities. The OCA further contends in its Exceptions that it is not appropriate to compare the energy utilities' mature universal services programs with a statute-defined cost recovery mechanism and Aqua's proposed discount/arrearage forgiveness programs. Aqua Exc. at 27. Aqua disagrees with the OCA's claims that the costs of the program are within Aqua's control because the OCA ignores its own admission that no enrollment limitations have been proposed, and that variance in enrollment will drive variances in costs. Aqua R. Exc. at 14 (citing Aqua M.B. at 159; OCA St. 5SR at 29). The Company also submits that, contrary to the OCA's assertion, Section 1307(a) provides a statutory basis for its proposed reconcilable rider.

Although the Company is correct that Section 1307(a) provides the statutory basis for the use of reconcilable riders, the fact remains that unlike energy companies, the water companies are not statutorily-mandated to implement universal service plans or to use a Section 1307(a) rider to recover the associated costs as are the energy companies.[135] In addition, as we stated, *supra*, use of such riders are the exception rather than the rule, and it is our preference that it is best to consider the development of a policy regarding the use of a Section 1307(a) reconcilable rider to recover water utilities' low-income programs in a generic investigation proceeding. Furthermore, we disagree with the Company that its program costs are beyond its controls; the Company is responsible for establishing the budget and parameters associated with each of its programs. In this regard, the Company has some control over the number of customers who may or may not qualify.

Next, the OCA excepted to the ALJ's Recommended Decision because the ALJ did not address its witness, Mr. Roger D. Colton's, recommendation that only net costs, rather than gross costs, of low-income programs should be recovered in base rates including via a cost offset that reflects the benefits of the program to Aqua's uncollectible expenses. OCA Exc. at 28 (citing OCA St. 5 at 42); OCA M.B. at 151-52. In this regard, the OCA averred in its Main Brief that its witness, Mr. Colton, provided the following testimony why he believed a lost revenue offset to gross low-income program costs for the discount and arrearage forgiveness programs is necessary and should be adopted:

> The "basis" for my recommended lost revenue adjustment is not that Aqua PA has performed no collectability analysis. The basis for my adjustment is that, in the absence of such an adjustment, Aqua PA will recover some parts of low-income rates twice. Aqua PA's proposal to include 100% of its low-income discount through rates assumes that, in the absence of the discount, 100% of the billed revenue to discount

[135] *See* 66 Pa. C.S. § 2804(9) for electric utilities and § 2203(8) for gas utilities.

> participants would have been collected. Only given this assumption is it reasonable to say that the dollar amount of the discount needs to be replaced by separately including that discounted revenue in rates. We know, however, that Aqua PA does not collect 100% of its low-income billings in the absence of the discount.

OCA M.B. at 153 (citing OCA St. 5SR at 30-31). The OCA further submitted in its Main Brief that Mr. Colton argued that the unpaid dollars of its low-income customers are currently reflected in base rates and that Aqua is proposing "to *continue* to reflect those unpaid dollars in rates and, *in addition*, to collect 100% of its discounted revenues *again* as though all of the discounted revenue would have been collected in the absence of the discount program." OCA M.B. at 154 (citing OCA St. 5SR at 31 (emphasis in original)). Thus, the OCA recommended, that since Aqua has collection contracts which provide contingency fees between 18% to 40% of the amount collected (OCA-II-47), that an "offset in the middle of that range (28%)" should be used to reduce the cost of Aqua's bill discount program. OCA R.B. at 83 (citing OCA St. 5 at 42).

Aqua replied that the OCA's recommendation is premature and unnecessary where a reconcilable rider is used. Aqua R. Exc. at 14-15. Aqua's witness, Ms. Black, submitted that the OCA's assertions lack merit because:

> [o]ver time, as participation in the program grows and matures to a stable level, bad debt levels will adjust accordingly, reflecting appropriate levels of collectability for the Company. I would further note that because we do not have a historical study of low income billing collections and its relation to bad debt, any adjustment proposed at this stage would be premature. Use of the reconcilable rider, which limits arrearage forgiveness recovery to those cost which are

> actually incurred due to customers receiving benefits from timely payments, will align recovery with actual collections experience.

Aqua M.B. at 161 (citing Aqua St. 10-R at 14). Aqua averred in its Reply Brief that even if this offset were necessary and appropriate, the OCA's 28% offset is unreasonable and any offset established should be based on actual collections experience gained after implementation of the CAP to ensure the offset reflects the actual collection savings. Aqua R.B. at 70-71.

We agree with the Company. In our opinion, the OCA's proposed 28% offset is arbitrary; and it would not be prudent to adopt it as a realistic offset to reflect actual collections savings. Nevertheless, we agree with the OCA that there is a potential that the Company's CAP may result in a double recovery of low-income rates. Inasmuch as the Company acknowledged that any offset should be based on actual collections experienced gained after the implementation of the CAP to ensure it is an accurate representation of actual collections savings, we shall deny the OCA's Exception concerning its recommended offset and, instead, direct Aqua to take the necessary actions within its Company to monitor and maintain the necessary information that could be used in its next base rate proceeding to determine whether a double-recovery is occurring, and if so, to determine an appropriate offset that should be applied to prevent any double recovery. The Company is further directed to consult with the OCA and I&E to determine the necessary data needed to accomplish this directive.

Accordingly, consistent with the discussion above, we shall reverse the ALJ's recommendation and adopt the OCA's Exception No. 16, in part, by rejecting the Company's proposed reconcilable USR and requiring that the Company continue to recover its low-income program costs through base rates. However, the OCA's Exception No. 16, with regard to its requests that the Company be directed to collect only the net costs of its low-income program in this proceeding is denied because an appropriate offset has not been determined in this proceeding and needs further review.

Therefore, consistent with the above discussion, the Company is directed to begin monitoring and reviewing the appropriate billing data for purposes of determining, in its next base rate proceeding, if, and to what extent, any offset to its low-income program cost recovery is necessary to avoid any double recovery the Company may receive through actual collections after the implementation of its CAP. The Company is further directed to consult with the OCA and I&E to determine the necessary data needed to accomplish this directive.

XII. Miscellaneous Issues

A. Universal Service Issues

1. Consideration of Affordability and CAP Design

a. Positions of the Parties

Aqua explained that before this proceeding, it made certain commitments regarding its existing Helping Hand Program[136] and the evaluation and development of a more comprehensive USP as a part of the Commission's approval of the acquisition of the Peoples Companies by Essential Utilities, Inc., f/k/a Aqua America, Inc. Aqua M.B.

---

[136] Several years ago, Aqua implemented a program called "A Helping Hand" to facilitate the payment of water and wastewater bills by its low-income residential customers. Helping Hand is "a program designed to help limited-income customers with arrearages to reduce the amount they owe through regular monthly payments." Under the program, "[f]or each timely payment made, participants receive a $25 credit towards their prior arrearage." Helping Hand does not provide a discount or Percentage of Income Payment Plan (PIP). Aqua St. 10 at 4.

at 141 (citing *Aqua-Peoples Acquisition Order*). In the settlement agreement the Commission approved in the *Aqua-Peoples Settlement*, the parties agreed as follows:

> 108. Aqua PA will include in the Helping Hand collaborative agreed to in its recent rate case settlement at Docket No. R-2018-3003558, discussion of the development of a comprehensive universal service and conservation program that will be proposed by Aqua PA. The items to be evaluated for inclusion in Aqua PA's proposal include: (1) a bill payment/customer assistance program; (2) a hardship fund; (3) a water conservation program; (4) a low income service repair line and replacement program; and (5) a comparable funding mechanism that exists for electric and gas utilities in Pennsylvania. Aqua PA will submit a rate recoverable universal service proposal in Aqua PA's next base rate case that considers the best practices learned from the Peoples Companies and through conversations from the Helping Hand collaborative.

Aqua M.B. at 141-142 (citing *Aqua-Peoples Settlement* at ¶ 108).

Consistent with its commitments in the *Aqua-Peoples Settlement*, Aqua has proposed to implement a CAP that builds upon the successful aspects of Helping Hand in order to further assist low-income customers throughout its service territory. Aqua M.B. at 143 (citing Aqua St. 10 at 5-8). The proposed CAP adds tiered bill discount benefits, similar to the structure in place at the Peoples Companies, and an Emergency Repair Program to the benefits already afforded under Helping Hand. The proposed three tiers are set at 100% of the Federal Poverty Level (FPL), 150% FPL, and 200% FPL, with the highest level of discounts provided to those in the first tier and gradually reducing the discounts in the other tiers. Aqua M.B. at 145 (citing Aqua St. 10 at 7; Aqua Exh. RFB-2 (setting forth the discounts to the Base Facility Customer Charge and Consumption Charge that an enrollee can obtain based on their income tier)).

The OCA analyzed the affordability of water and wastewater bills and cited to the extensive testimony of its witness, Mr. Colton. OCA M.B. at 120-131. CAUSE-PA similarly argued that existing rates are unaffordable. CAUSE-PA M.B. at 17-18. Therefore, both Parties recommended modifications to Aqua's proposed CAP.

Among other things, the OCA argued that the benefits of the affordability program contemplated by the proposed USP should be modified to increase the level of discounts provided to customers and to adjust the structure of the income tiers. OCA M.B. at 136-39; 141-42. The OCA also recommended that the design of the discount program should evolve toward a PIP[137] similar to the program operated by Aqua's sister utility, Peoples Gas. The OCA stated that Aqua should not immediately move to a PIP design but, rather, that a series of policy decisions by the Commission would first be needed, including what water and wastewater burden should be deemed affordable, and such decisions are best addressed in a statewide proceeding involving all water and wastewater utilities and related stakeholders and would involve additional analysis and data than is available in this rate proceeding. OCA M.B. at 135-136; OCA St. 5 at 31. The OCA proposed that Aqua be required to present a PIP in its next base rate proceeding. OCA M.B. at 144-52.

CAUSE-PA supported the OCA's recommendations regarding discount structure and adjusted income tiers. CAUSE-PA M.B. at 21 (citing OCA St. 5 at 35,

---

[137] The Commission's CAP Policy Statement provides the following:

> Total payment for total electric and natural gas home energy under a percentage of income plan is determined based upon a scheduled percentage of the participant's annual gross income. The participating household's gross income and size place the household at a particular poverty level based on the [Federal Poverty Income Guidelines].

52 Pa. Code § 69.265(2)(i).

Table 9; OCA St. 5 at 39, Table 13; CAUSE-PA St. 1-R at 7). Additionally, CAUSE-PA stated that as its witness, Harry Geller, Esq., recommended in his direct testimony, Aqua should be required to closely monitor and analyze the water and wastewater burdens of CAP participants and should transition its proposed bill discount structure to a PIP structure if participants are not reaching acceptable levels of affordability. CAUSE-PA M.B. at 22 (citing CAUSE-PA St. 1 at 44-45; OCA St. 5 at 31).

Aqua explained in its direct and rebuttal testimony that it performed an affordability analysis and considered bill affordability as a part of the development of the proposed USP. Aqua M.B. at 144-48; Aqua R.B. at 58. The Company averred that the program, as designed, takes affordability into account and also balances the interests of ratepayers who are not low-income, but who bear the costs of universal service programs. Specifically, the Company contended that the OCA and CAUSE-PA fail to consider the effect of their proposed changes upon the rates of non-low-income customers. Aqua R.B. at 59. Aqua also argued that its proposed bill discount program should not be modified. Aqua M.B. at 153-54; Aqua R.B. at 60. Aqua stated that it should not be required to propose a PIP in its next base rate proceeding, particularly when the Company questions the cost/benefit of a PIP for water and wastewater customers at this time. Aqua submitted that once its proposed USP is in place, it can and should be evaluated in the context of a USP proceeding specifically focused on the effectiveness, costs, and benefits of the programs. Aqua R.B. at 63. Aqua further submitted that the OCA and CAUSE-PA's other suggestions regarding discount structure and adjusted income tiers, which would require programmatic changes to the existing system, were unreasonable and not feasible at this time, because Aqua will be converting its billing system to SAP in 2023 and development of the system is in the early stages. *Id*. at 61-62.

b. Recommended Decision

The ALJ agreed with the Company that substantial modification of Aqua's proposed CAP was not appropriate at this time. While the ALJ recognized that the Code permits consideration of a broad range of issues in base rate proceedings, the ALJ concluded that this rate case was not the best forum for considering "the complex social and economic issues related to affordability as it impacts CAP design." R.D. at 113. The ALJ noted the OCA's acknowledgment that the Commission has not established the water and wastewater burden that should be deemed affordable and the OCA's concession that the "policy decision of the appropriate water and wastewater burdens is best addressed in a statewide proceeding involving all water/wastewater utilities and related stakeholders or would involve additional analysis that would require more time and data than is available in this proceeding." *Id*. (citing OCA M.B. at 135-36; OCA St. 5 at 31).

For example, the ALJ pointed out that the OCA and CAUSE-PA proposed that Aqua should be required to implement a PIP in its next base rate case. The ALJ determined that this base rate proceeding was not an adequate venue for consideration of whether implementing a PIP is reasonable, and this complex issue would be better reviewed in the universal service stakeholder process which would allow the parties to review data from the current program and its associated costs through a more flexible discourse. The ALJ similarly found that many of the structural refinements to the CAP design regarding bill discount and arrearage forgiveness benefits should be more fully considered at a later time, reasoning that Aqua explained that many of these recommendations cannot be efficiently implemented until the Company converts its current customer information system (CIS) to SAP in 2023. R.D. at 113. The ALJ agreed with Aqua that consideration of the structural changes proposed by the OCA and CAUSE-PA should be deferred until Aqua's transition to SAP, noting that the Company has committed to providing arrearage forgiveness benefits for each full CAP payment made, regardless of timeliness, when the conversion to SAP is completed. *Id*. at 113-14 (citing Aqua St. 10-R at 10).

The ALJ further reasoned that the OCA and CAUSE-PA have not demonstrated that the costs to make these proposed changes while Aqua is using its current CIS is reasonable. The ALJ stated that such proposed enhancements can be considered during the process of evaluating the effectiveness of the design of Aqua's universal service program in the future. The ALJ noted the OCA's concession that Aqua's proposed bill discount program will improve affordability for low-income customers. R.D. at 114. The ALJ also noted that Aqua's proposed USP was presented to and vetted by stakeholders participating in its Helping Hand Collaborative, including CAUSE-PA and the OCA, before this proceeding. *Id*. (citing Aqua St. 10 at 3). The ALJ further noted that Aqua was able to draw upon the knowledge and expertise of its affiliates, the Peoples Companies, and the Peoples Companies' Director of Community Assistance Program, Ms. Black, to develop the USP. The ALJ concluded that while a robust low-income program is required to offset the rate increases proposed in this case, increasing costs to non-low-income customers should also be mitigated. R.D. at 114.

c. OCA Exception No. 17, CAUSE-PA Exception No. 1, and Replies

In its Exception No. 17, the OCA avers that the ALJ erred in her determination to adopt Aqua's proposed program design without modification. OCA Exc. at 28. The OCA argues that the ALJ disregarded the evidence it presented, including OCA witness Mr. Colton's, extensive analysis of the affordability of Aqua's proposed program design for its water and wastewater discount and arrearage forgiveness proposals. *Id*. (citing OCA M.B. at 117-75; OCA R.B. at 73-82, 91-96). The OCA states that, instead, the ALJ improperly deferred the determination of the OCA's recommended program modifications to a generic proceeding sometime in the future. OCA Exc. at 28.

In so doing, the OCA believes that the ALJ misunderstood the purpose of Mr. Colton's testimony. The OCA explains that the purpose of Mr. Colton's affordability analysis was not to create a final, definitive assistance program for Aqua but, rather, Mr. Colton understood that the program would need to evolve and recommended that the affordability targets be established in a future generic proceeding and that Aqua propose a PIP in its next base rate proceeding. *Id*. at 29. The OCA emphasizes that Mr. Colton's testimony was intended to demonstrate the problems with Aqua's proposed discount and arrearage forgiveness levels, particularly for customers from 0-50% of the FPL and to show that the proposed program design will not achieve the objectives of the *Aqua-Peoples Settlement* to consider a "comprehensive universal services program." *Id*. (citing *Aqua-Peoples Settlement* at 135; OCA M.B. at 133-36; OCA R.B. at 76-77).

The OCA explains that a comprehensive universal services program should be designed to achieve affordability for customers, and the evidence Mr. Colton presented demonstrated that the discount program Aqua proposed for water and wastewater customers will significantly under-serve those customers from 0-50% of the FPL and will not help customers achieve affordability after implementation. *Id*. The OCA additionally states that the ALJ ignored the evidence of the shortcomings of the continuation of the current $25/month arrearage forgiveness program described in Mr. Colton's testimony. OCA Exc. at 29 (citing OCA St. 5 at 59-60, Schs. RDC-1, RDC-2; OCA St. 5-SR at 7-8). As such, the OCA argues that the Commission should approve the OCA's proposed design modifications to Aqua's water and wastewater discount and arrearage forgiveness programs. OCA Exc. at 29 (citing OCA M.B. at 117-75; OCA R.B. at 73-82, 91-96).

In its Exception No. 1, CAUSE-PA avers that the ALJ erred as a matter of law and sound public policy by concluding that issues involving the design of Aqua's rate discount and arrearage forgiveness programs are not properly considered in the context of this rate proceeding. First, CAUSE-PA argues that an evaluation of the justness and reasonableness of any proposed rate increase must necessarily analyze the effect of the rate increase on the ability of residential consumers to afford service and, consequently, the adequacy and design of rate assistance programming. CAUSE-PA Exc. at 4. CAUSE-PA states that the rules, regulations, and practices for Aqua's universal service programs affect the charges to both program participants and non-participants, and, therefore, they fit squarely within the definition of rates that must be just and reasonable and must be evaluated in this rate proceeding. *Id*. at 5 (citing *Pa. PUC v. PGW*, Docket No. R-2020-3017206 (Order on PGW's Motion *in Limine* dated July 8, 2020) at 3). CAUSE-PA notes the testimony of Mr. Geller, who explained that it is not appropriate "to raise rates for water and wastewater service without first ensuring that low and moderate income customers are able to receive affordable service under just and reasonable terms." CAUSE-PA Exc. at 5 (citing CAUSE-PA St. 1 at 10). CAUSE-PA asserts that universal accessibility is a polestar principle of ratemaking for essential, life-sustaining services like water and wastewater. CAUSE-PA Exc. at 5-6.

CAUSE-PA submits that low-income customers represent a significant portion of Aqua's residential customers, as Aqua estimates that nearly one in four households in its service territory have income below 200% of the FPL and has identified approximately 5% of its total residential customers as low-income. CAUSE-PA argues that in order to meaningfully conduct an investigation of proposed and existing rates, it is necessary to examine the lawfulness, justness, and reasonableness of rates for all consumers, including low-income consumers, and such an investigation necessarily includes an examination of the design and delivery of Aqua's universal service programs. CAUSE-PA Exc. at 6.

CAUSE-PA notes the concerns it has raised throughout the proceeding related to rate affordability for low-income customers and the inadequacy of Aqua's proposed CAP to ensure reasonable rate affordability for low-income CAP participants.

CAUSE-PA also notes that based on these concerns, it recommended that Aqua be required to: (1) implement the improved discount levels and adjusted income tiers recommended by the OCA expert witness, Mr. Colton, and supported by Mr. Geller; (2) closely monitor and analyze water/wastewater burdens of CAP participants; and (3) transition to a PIP structure if participants are not reaching acceptable levels of affordability. *Id*. at 7. CAUSE-PA further notes the testimony and evidence its witness presented that Aqua's Helping Hand arrearage forgiveness program is inadequate to address high levels of arrears accrued by low-income customers and further exacerbates rate unaffordability faced by these customers. *Id*. at 7-8. CAUSE-PA states that it has recommended that Aqua should be required to revise the structure of Helping Hand so that: (1) when entering the program, pre-program arrears are frozen and no longer accrue late fees or charges; and (2) for each in-full payment that a customer makes while enrolled in Helping Hand, 1/36th of the customer's frozen arrears, or $25, whichever is greater, should be forgiven. *Id*. at 8.

CAUSE-PA avers that by precluding meaningful consideration of universal service issues in the context of this rate proceeding, the ALJ has disregarded the statutory mandate to ensure that all rates are just and reasonable and contradicted past precedent considering universal service issues. CAUSE-PA requests that the Commission clarify that examination of the structure and affordability of universal service programs is properly addressed in the context of this rate case. CAUSE-PA Exc. at 9-10.

Second, CAUSE-PA argues that the informal universal service stakeholder process is not a substitute for consideration of the impact a rate increase will have on low-income customers in this rate proceeding and the need to make corresponding adjustments to the rates charged through universal service programming. CAUSE-PA supports using universal service stakeholder meetings to provide a forum for parties and stakeholders to discuss issues surrounding the design and delivery of universal service programming and to reach consensus where possible. CAUSE-PA Exc. at 11.

Nevertheless, CAUSE-PA avers that informal stakeholder meetings are not an adequate substitute for a formal examination of rates produced by universal service programming in the context of a rate proceeding, because CAUSE-PA believes that informal stakeholder processes lack the tools necessary to meaningfully investigate universal services, including the use of discovery and evidentiary hearings. *Id*. at 11-12. CAUSE-PA submits that informal processes do not provide for a mechanism to require Aqua to implement, or even consider, parties' proposals and if Aqua fails to implement recommended improvements, parties would not have a clear path to take exception to or appeal Aqua's decisions. *Id*. at 12.

Third, CAUSE-PA argues that the continued need to address water and wastewater affordability on a statewide level does not preclude review of the adequacy of Aqua's low-income programs in the context of this rate proceeding. CAUSE-PA states that all rates must be just and reasonable and that the absence of a statewide affordability standard does not eliminate this requirement. CAUSE-PA Exc. at 12. CAUSE-PA supports the initiation of a statewide proceeding to establish formal Commission policy on water and wastewater affordability and applicable standards and guidelines to help ensure that all Pennsylvanians can afford water and wastewater services. *Id*. at 12-13. However, CAUSE-PA asserts that the absence of formal, statewide policy does not bar consideration of program improvements critical to ensuring low-income customers can reasonably afford to connect to and maintain water and wastewater services in the context of this or other rate proceedings. CAUSE-PA takes issue with the ALJ reaching a conclusion on several aspects of Aqua's universal service programming, such as the verification process and other program rules, while declining to reach conclusions about the overall design and benefits provided through the program. *Id*. at 13.

In its Replies to Exceptions, Aqua avers that both the OCA and CAUSE-PA's Exceptions regarding its proposed USP lack merit. Aqua R. Exc. at 15. Aqua states that the ALJ properly recognized that the Company's proposed USP will improve affordability and benefit customers, while also balancing the implementation of this new program as a part of this base rate case with the fact that Aqua will convert its existing customer information system (CIS) to SAP in 2023. *Id*. (citing R.D. at 113-14). Aqua submits that it demonstrated that the additional income tiers, changes to benefits, and other proposed modifications that the OCA and CAUSE-PA propose are incompatible with the Company's existing CIS and would increase the costs of implementing the USP. Aqua R. Exc. at 15-16 (citing Aqua M.B. at 148-155; Aqua R.B. at 56-67).

Aqua continues that CAUSE-PA's claims regarding the use of the informal stakeholder process misread the Recommended Decision, as the ALJ did not "relegate" the evaluation of the impacts of base rate increases to the informal stakeholder process. Aqua states that, rather, the ALJ recognized that in the context of this base rate case, the informal stakeholder process could be used to further present and discuss possible modifications to the program before Aqua's next base rate case, or another case involving modifications to the USP, is initiated. Aqua R. Exc. at 16. Aqua also states that CAUSE-PA's claim that addressing affordability concerns in a statewide proceeding should not preclude an evaluation of low-income impacts and that the USP in this base rate case misses the point, because the ALJ properly found that an "affordability" determination should be made at the statewide level since it will involve all water and wastewater utilities. *Id*. (citing R.D. at 113).

d. Disposition

Upon review, we agree with the ALJ that certain modifications and determinations regarding Aqua's proposed CAP are not appropriately considered in the context of this base rate proceeding. For instance, we do not have sufficient information in this proceeding to require Aqua to propose a PIP in its next base rate proceeding, as the OCA proposes. It is unclear at this time what the cost, benefits, and overall effectiveness of such a program would be for a water/wastewater public utility. As the ALJ stated, this complex issue would be better reviewed in a universal service stakeholder process that would allow the parties to review data from the current program and its associated costs through a more flexible discussion. The OCA itself acknowledged that before Aqua could move to a PIP design, a series of policy decisions by the Commission would first be needed, including what water and wastewater burden should be deemed affordable, and such decisions are best addressed in a statewide proceeding involving all water and wastewater utilities and related stakeholders and would involve additional analysis and data than is available in this rate proceeding. OCA M.B. at 135-36; OCA St. 5 at 31.[138]

Similarly, we agree with the ALJ that the structural changes the OCA and CAUSE-PA proposed to the CAP design regarding bill discount and arrearage forgiveness benefits should be more fully considered at a later time, particularly because Aqua explained that many of these recommendations cannot be efficiently implemented until the Company converts its current CIS to SAP in 2023. *See* R.D. at 113. Aqua has presented evidence in this proceeding to demonstrate that its proposed CAP, which includes its Helping Hand arrearage forgiveness program and tiered bill discount benefits similar to the structure in place at the Peoples Companies, is reasonable. Aqua explained in its testimony that it performed an affordability analysis and considered bill affordability as part of the development of its proposed USP. Aqua St. 10 at 6-7.

---

[138] The Commission engaged in a holistic review of universal service and energy conservation programs of electric distribution companies (EDCs) and natural gas distribution companies (NGDCs), including a thorough examination of the effects of the Commission's current energy burden thresholds, focusing on whether existing CAP pricing was affordable for low-income customers. The Commission's review and examination resulted in the adoption of CAP policy changes and amendments to the Commission's existing CAP Policy Statement at 52 Pa. Code § 69.261–69.267. *See Amendments to Policy Statement on Customer Assistance Program, Final Policy Statement Order*, Docket No. M-2019-3012599 (Order entered November 5, 2019). The Commission has not engaged in a similar review and examination concerning water and wastewater public utilities operating in Pennsylvania.

Ms. Black testified that consistent with the Aqua-Peoples Settlement, Aqua's proposed USP was presented to and vetted by stakeholders participating in its Helping Hand Collaborative, including CAUSE-PA and the OCA, before this proceeding. The Collaborative discussed aspects of the Company's proposal, including needs analysis, projected enrollment levels, proposed discounts, program designs, and estimated costs, and the participants noted the tiered benefits were an important part of the design by providing the highest amount of benefits to the most vulnerable. Ms. Black noted that the group did not recommend any changes to the proposal at that time. Aqua St. 10 at 13.

Ms. Black further testified that the OCA and CAUSE-PA's suggestions regarding discount structure and adjusted income tiers would require programmatic changes to the existing system, which currently maintains the Company's customer data. Ms. Black explained that changes to the existing system are not recommended, as Aqua will be converting its billing system to SAP in 2023, and development of the system is in the early stages. Aqua St. 10-R at 8. Ms. Black stated that Aqua's proposed CAP is intended to improve affordability while maintaining reasonable program costs for other ratepayers from whom discounts are recovered. Ms. Black testified that the Company's proposal decreases low-income customers' monthly bill responsibilities by offering discounts that are tiered to provide larger discounts to those with lower income. *Id*. at 10.

As proposed, we conclude that Aqua's program is reasonable under the circumstances as it takes affordability into account and balances the interests of low-income customers as well as the interests of ratepayers who are not low-income but bear the costs of universal service programs. Based on the record, we agree with the ALJ that the OCA and CAUSE-PA have not demonstrated that the costs to make their proposed changes while Aqua is using its current CIS are reasonable and that any such proposed enhancements can be considered during the process of evaluating the effectiveness of the design of Aqua's universal service program in the future.

Our decision on this issue is consistent with prior decisions in which we have determined that it was not appropriate to consider proposals relating to a public utility's energy burdens, CAP, and other universal service program issues within the context of a base rate proceeding, finding that such proposals are more properly considered in a public utility's Universal Service and Energy Conservation Plan (USECP) proceeding. *See PECO Gas* at 195; *Columbia Gas* at 160. While water and wastewater public utilities are not required to file USECPs with the Commission, any possible modifications to Aqua's universal service programs, including a move toward a PIP, can be discussed as part of Aqua's Helping Hand Collaborative or a larger, statewide stakeholder proceeding and presented to the Commission in a future proceeding appropriate for addressing Aqua's universal service programs, whether it be Aqua's next base rate case or another proceeding involving modifications to the Company's USP. For these reasons, we deny OCA Exception No. 17 and CAUSE-PA Exception No. 1.

2. Income Verification

a. Positions of the Parties

I&E generally agreed with the Company's proposed USP. However, I&E's witness, Ms. Wilson, recommended that the Company be required to verify enrollees' income for CAP eligibility to ensure the legitimacy of applicants and prevent misuse or abuse of the program. I&E M.B. at 60-62 (citing I&E St. 1 at 45-47).

Aqua currently allows participants to self-attest to their income. Aqua explained that discount water programs "do not typically require income documentation for participation" and that "[p]roviding income documentation can be a barrier to enrollment for eligible households." Aqua stated that the Commission has previously encouraged self-attestation of income. Aqua noted that its witness, Ms. Black testified that during the periods where self-attestation was used, Peoples Companies "did not see a spike in enrollment levels as a result of this flexibility and participation levels, year over year, are relatively flat." Aqua also noted Ms. Black's testimony that as with any income-based programs, there may be individuals that attempt to perpetrate fraud, but customers who are genuinely low-income customers are generally those that seek assistance. Aqua M.B. at 150 (citing Aqua St. 10-R at 3-4).

The OCA agreed that the Company should be permitted to use self-attestation of income and that income verification should not be required for participation in the program. The OCA recommended, however, that the Company review the income qualifications for randomly selected CAP participants and report error rates to the Commission's Bureau of Consumer Services (BCS). The OCA stated that to the extent error rates are not reasonable, BCS and Aqua should develop appropriate remedial action. OCA M.B. at 144.

Similarly, CAUSE-PA opposed the imposition of stringent income documentation requirements for Aqua's universal service programs, including its proposed CAP. CAUSE-PA argued that I&E did not present any evidence to support its contention that such income documentation would prevent fraud or that fraud was occurring in the first instance. CAUSE-PA also argued that restrictive income documentation requirements would be a barrier to low-income customers successfully enrolling in CAP and hinder the success of the proposed CAP at its outset. CAUSE-PA R.B. at 18. CAUSE-PA further argued that I&E's proposal lacked critical details for how income documents will be collected and evaluated, what income documents will be accepted, and how applicants will be informed if the documentation submitted is not received or is deemed unacceptable. *Id*. at 19.

b. Recommended Decision

The ALJ agreed with Aqua that I&E's recommendation regarding income verification should be rejected. The ALJ reasoned that based on Ms. Black's experience, the benefit of removing a barrier to low-income customers outweighs the risk of abuse or harm to paying customers. R.D. at 115.

c. I&E Exception No. 3 and Replies

In its Exception No. 3, I&E argues that the ALJ erred in rejecting I&E's recommended income verification proposal for CAP eligibility. I&E avers that the ALJ erroneously accepted Aqua's position that the benefit of removing a barrier to low-income customers outweighs the risk of harm to paying customers. I&E Exc. at 6. I&E points out that when asked about Peoples' CAP during discovery, Aqua stated that "Peoples' CAP requires income documentation from an interested customer to certify income eligibility for participation" and upon recertification. *Id*. (citing I&E St. 1 at 46). I&E also points out that the ALJ acknowledged its concern that as with other income-based programs, there may be individuals who attempt to perpetrate fraud. I&E Exc. at 6 (citing R.D. at 115).

I&E contends that the Commission should accept its recommendation regarding income verification for CAP eligibility. I&E Exc. at 7. I&E states that it explained that the program Aqua proposed will be a full-scale USP funded by ratepayers. I&E also notes that it argued that the program as proposed is based on a specific level of benefits matched to a specific percentage of the FPL and, as such, logic dictates that incomes must be verified to properly administer and award the graduated program benefits. *Id*. (citing I&E M.B. at 62). I&E believes that if the Company does not perform income verifications, this would subject the USP to potential abuse that would harm responsible customers that pay their bills. I&E Exc. at 7. I&E further argues that support for income verification is set forth in the Code and the Commission's Regulations and that in enacting Chapter 14 of the Code, 66 Pa. C.S. §§ 1401-1419, the Pennsylvania General Assembly intended to protect responsible bill paying customers from rate increases attributable to other customers' delinquencies. I&E Exc. at 7 (citing I&E M.B. at 62). I&E avers that any abuse of the CAP programs through income self-attestation by ineligible customers would have the same negative affect on the responsible, paying customers and may also harm eligible customers. I&E Exc. at 7. Moreover, I&E points out that as stated in Aqua's rejoinder testimony, Aqua's provider of administrative services, Dollar Energy Fund, already has the cost of income verification built into its proposal. *Id*. (citing I&E M.B. at 62).

In its Replies to Exceptions, Aqua avers that the ALJ correctly rejected I&E's recommendation that CAP enrollees be required to verify their income. Aqua states that its proposal is based on experience showing that income documentation can be a barrier to enrollment. Aqua R. Exc. at 17. Aqua notes that this concern must be balanced against the risk of fraud; however, Aqua stresses that when Peoples used self-attestation, it did not experience a rise in enrollment levels that was indicative of a serious effort to defraud the program. *Id*. (citing Aqua M.B. at 150). Aqua submits that the CAP is a new program for its low-income customers, and barriers to participation should be avoided when possible. Aqua R. Exc. at 18 (citing Aqua M.B. at 150; Aqua R.B. at 62).

In its Replies to Exceptions, the OCA avers that the ALJ correctly denied I&E's income verification proposal. OCA R. Exc. at 23. The OCA's position is that Aqua should be permitted to use self-attestation of income for its program. *Id*. (citing OCA M.B. at 143-144). In response to I&E's reliance on Chapter 14 in support of its proposal, the OCA states that Chapter 14 does not specifically address income verification for any CAP. The OCA also argues that the evidence does not support the idea that abuse or fraud will occur without income verification but, instead, supports the opposite conclusion. OCA R. Exc. at 23. The OCA explains that water companies do not typically require income documentation for participation and requiring income documentation can be a barrier to enrollment. *Id*. (citing R.D. at 115; Aqua St. 10-R at 4). The OCA notes that the Commission has also previously supported the use of self-attestation of income. OCA R. Exc. at 23. The OCA further notes that during the pandemic, Peoples allowed customers to enroll using self-attestation of income and did not see a spike in enrollment levels. *Id*. (citing Aqua St. 10-R at 4; OCA R.B. at 80).

In its Replies to Exceptions, CAUSE-PA states that the ALJ properly found that I&E's recommendation to impose additional income verification requirements should be rejected. CAUSE-PA R. Exc. at 3. CAUSE-PA avers that Aqua is, in fact, proposing a verification process for its CAP, which the ALJ approved, as Aqua proposes to use self-declared income to verify CAP eligibility and for recertification purposes. CAUSE-PA points out that Aqua is not, however, proposing to require applicants to submit physical documentation of income because such a requirement would pose burdensome obstacles for low-income customers most in need of assistance. *Id*. at 4 (citing CAUSE-PA R.B. at 17-18).

CAUSE-PA additionally contends that I&E has not presented any evidence to support its contention that failure to impose income documentation requirements will cause universal service application processes to be abused and will ultimately harm other ratepayers and residential customers. CAUSE-PA R. Exc. at 5 (citing CAUSE-PA R.B. at 18). CAUSE-PA states that its witness, Mr. Geller, testified that imposing more restrictive income documentation requirements, as I&E recommends, will act as a barrier to low-income customers successfully enrolling in universal service programs and hinder the success of the proposed CAP. CAUSE-PA R. Exc. at 5 (citing CAUSE-PA R.B. at 18-19). CAUSE-PA submits that Aqua's low-income programs have historically had low enrollment levels, particularly when measured against the number of low-income customers Aqua estimates are eligible for assistance. *Id*.

CAUSE-PA also opposes I&E's proposal to require Aqua to implement income documentation requirements for households to recertify enrollment in Aqua's universal service programs. As discussed in CAUSE-PA's Reply Brief, Mr. Geller extensively described how periodic recertification requirements pose difficulties for vulnerable low-income customers, including seniors or individuals with disabilities, because these households more often lack access to transportation and struggle to gather and submit formal income documentation. CAUSE-PA continues that these vulnerable households are also more likely to rely on fixed income sources that tend not to change from year to year, making recertification requirements unnecessary and administratively burdensome. As Mr. Geller noted, available independent evaluations of USECPs of other regulated Pennsylvania utilities have shown that requiring submission of income documentation through program recertification is a significant cause of high program attrition. CAUSE-PA R. Exc. at 7 (citing CAUSE-PA R.B. at 19).

Further, CAUSE-PA argues that I&E's reliance on Chapter 14 to support its income documentation proposal is misplaced because I&E fails to recognize that Chapter 14's declaration of policy expressly recognizes that Chapter 14 was enacted to improve payments for those "*capable of paying*," rather than to unfairly penalize those who cannot afford services. CAUSE-PA R. Exc. at 8 (citing 66 Pa. C.S. § 1402(2)). CAUSE-PA asserts that ensuring robust access to Aqua's universal service programs is consistent with the intent of Chapter 14 to provide greater equity among all customers. CAUSE-PA R. Exc. at 8.

Moreover, CAUSE-PA is concerned that I&E's proposal continues to lack critical details for how income documents will be collected, what income documents will be accepted, how income documents will be evaluated, and how applicants will be informed if their submitted documentation is not received or is considered unacceptable. CAUSE-PA believes that failing to provide these details has the potential to lead to widespread ambiguities in program requirements that will further impede low-income customers from successfully enrolling in Aqua's universal service programs. Accordingly, CAUSE-PA supports the income verification process Aqua proposes and opposes I&E's recommendations to impose additional income documentation requirements. *Id*. Nevertheless, CAUSE-PA states that if the Commission decides to require additional income verification for Aqua's universal service programs, including the proposed CAP, such process should be implemented on a pilot basis to allow Aqua, the Parties and stakeholders, and the Commission to monitor how CAP enrollment, retention, and costs are impacted and to determine if there is any evidence of abuse of the universal service process. *Id*. at 8-9.

d. Disposition

Upon review, we conclude that Aqua should require income documentation from an interested customer to certify income eligibility for participation in its CAP and upon recertification in a manner similar to that of the Peoples Companies.[139] I&E's witness, Ms. Wilson, testified that while the Helping Hand program has historically been funded through voluntary donations and shareholder contributions, Aqua's proposed program would be funded through the proposed Universal Service Rider and would be fully ratepayer funded. I&E St. 1 at 44; I&E Exh. 1, Sch. 8.[140] While as some of the Parties note, this Commission took some steps in response to the COVID-19 pandemic to reduce barriers to participation, such as encouraging self-attestation of income for enrollment and encouraging utilities to halt the process of removing customers for failure to recertify income (*see, e.g*., Aqua St. 10-R at 4), we are not otherwise aware that this Commission has approved a ratepayer-funded low-income program that does not include

[139] *See* Peoples Natural Gas Company LLC Universal Service and Energy Conservation Plan 2015-2018, Docket No. M-2014-2432515, at 8-10.

[140] As set forth in XI.E.3, *supra*, we are rejecting the Company's proposed reconcilable USR and requiring that the Company continue to recover its low-income program costs through base rates.

some form of documented income-verification. EDC and NGDC's CAPs require participating households to document their income eligibility periodically. Given the size and nature of Aqua's proposed program, which is larger and more robust than most of the other water utilities' programs, it makes sense to implement income eligibility processes similar to those of the EDCs and NGDCs.

We addressed a similar issue in reviewing National Fuel Gas Distribution Corporation's (NFG) 2017-2020 USECP.[141] During that proceeding, NFG disclosed that it did not require its CAP participants to reverify income eligibility after enrollment, and that during recertification, NFG was accepting the household's verbal declaration of income. *NFG* at 34-35. We directed NFG to ensure that CAP households reverify income eligibility at least once every two years, stating:

> Although we recognize accepting a verbal declaration of income is less burdensome for both the customer and the CAP administrator, utilities have the responsibility to ensure that their CAPs – which are primarily funded by non-CAP residential customers – help only those customers that qualify for these programs.

Id. at 36.

Applying similar reasoning in this case, we agree with I&E that program benefits contingent on a poverty level should be based on a verified percentage of income, as the costs of these programs can have a significant impact on ratepayer bills. *See* 2020 Report on Universal Service Programs and Collections Performance of the Pennsylvania Electric Distribution Companies and Natural Gas Distribution Companies, Appendix 7, at 89. We have provided some flexibility to EDCs and NGDCs

---

[141] *See National Fuel Gas Distribution Corporation's Universal Service and Energy Conservation Plan for 2017-2020 Submitted in Compliance with 52 Pa. Code § 62.4*, Docket No. M-2016-2573847 (Order entered March 1, 2018) (NFG).

concerning the manner in which these utilities document income and what forms of documentation are acceptable, and these matters are not necessarily addressed in each utility's USECP. We believe that these issues and other related issues are best addressed in a utility's low-income program committee, and, in this case, may be addressed as part of Aqua's Helping Hand Collaborative. In the meantime, Aqua can use the income documentation standards that the Peoples Companies currently use. For these reasons, we shall grant I&E's Exception No. 3, modify the ALJ's recommendation on this issue, and direct Aqua to require income documentation from an interested customer to certify income eligibility for participation in its CAP and upon recertification in a manner similar to that of the Peoples Companies. Within sixty days of the entry date of this Opinion and Order, Aqua shall submit a written plan describing the process it will use for certification and recertification of income eligibility for participation in its CAP. Such plan shall be filed with the Commission at this base rate proceeding Docket, with a copy served on BCS.

3. Application Process: Transitioning Helping Hand Customers to the New Customer Assistance Program

a. Positions of the Parties

The OCA recommended that current participants in the existing Helping Hand program be automatically enrolled in the new bill discount program. OCA M.B. at 168-73, 173-75. Similarly, CAUSE-PA recommended that Aqua develop a streamlined process for enrolling existing Helping Hand customers in CAP so the existing Helping Hand customers are not required to provide duplicative information to enroll in CAP. CAUSE-PA M.B. at 26 (citing CAUSE-PA St. 1 at 47).

Aqua explained that the lack of an automatic enrollment in CAP for existing Helping Hand customers is necessary to ensure customers are eligible. Aqua also explained that the application process for these customers is simple and does not require additional income documentation and, therefore, does not impose an incremental burden on CAP enrollees. Aqua states that it will notify Helping Hand customers by mail of the replacement and expansion of the existing program, which will detail the benefits of the CAP and encourage the customers to participate. Aqua notes that these customers can confirm their income through self-attestation and enroll over the telephone, online, or through a participating agency. Aqua M.B. at 149 (citing Aqua St. 10-R at 3). The Company believes that while it will encourage participation in the new program, existing Helping Hand customers should have the right to make an affirmative choice about whether to enter the new CAP. Aqua M.B. at 149.

b. Recommended Decision

The ALJ agreed with Aqua that the proposed application process to transition Helping Hand customers who qualify for the new CAP is reasonable and rejected the modification proposed by the OCA and CAUSE-PA. R.D. at 116.

c. OCA Exception No. 18 and Replies

In its Exception No. 18, the OCA argues that the ALJ erred in her decision to adopt Aqua's proposed application process for the new CAP. OCA Exc. at 29. The OCA avers that Aqua's existing Helping Hand customers should be automatically migrated to the new discount program, as the OCA's witness, Mr. Colton, and CAUSE-PA's witness, Mr. Geller, recommended. *Id*. at 30 (citing OCA St. 5 at 62-63; CAUSE-PA St. 1 at 46-48). The OCA states that the ALJ may not have appreciated the fact that the existing Helping Hand customers will lose their existing program benefits if the customers do not apply for the new combined discount/arrearage forgiveness program, because the existing Helping Hand program will no longer exist. OCA Exc. at 30 (citing Aqua St. 10-R at 2). As such, a group of customers that have not had their arrears completely forgiven and who do not apply to the new CAP, will no longer have the program forgiveness to complete reducing their arrearage balance. OCA Exc. at 30 (citing OCA St. 5-SR at 3). The OCA explains that arrearage forgiveness and the discount are designed to work together to address affordability, and separate enrollments and applications mean that not all low-income customers currently enrolled in the arrearage forgiveness program will continue to receive assistance either through the to-be-discontinued arrearage forgiveness program or the new bill discount program. The OCA asserts that this problem can be avoided by automatic migration to the new programs. OCA Exc. at 30.

In its Replies to Exceptions, Aqua avers that contrary to the OCA's claims, the enrollment process involves a single application, is simple, does not require additional income documentation and, therefore, presents no incremental burden. Aqua R. Exc. at 16-17. Aqua explains that existing Helping Hand customers will be asked to submit the application to ensure they are eligible for the new USP. Additionally, Aqua avers that it will actively encourage existing Helping Hand customers to enroll in the new program. *Id*. at 17.

d. Disposition

Given our determination, above, directing Aqua to require income documentation in order to certify income eligibility for participation in its CAP, it would not be feasible for Aqua to automatically migrate its existing Helping Hand customers into its new program. Aqua should implement its proposed application process to transition Helping Hand customers who qualify for the new CAP, subject to the modification that Aqua will now require income documentation for certification purposes rather than permitting potential program participants to confirm their income through self-attestation. Accordingly, we shall deny OCA Exception No. 18 and modify the ALJ's Recommended Decision consistent with this discussion.

4. Community Education and Outreach Plan

a. Positions of the Parties

The OCA witness, Mr. Colton, recommended that Aqua be directed to develop a Community Education and Outreach Plan (CEOP) that is directed toward areas within the Company's service territory with identified concentrations of low-income need. OCA M.B. at 162 (citing OCA St. 5 at 49-50). Mr. Colton specifically proposed that the CEOP incorporate the following elements:

> (1) the outreach should focus on community-based outreach; (2) the outreach is best implemented through "trusted messengers" that are part of the community toward which outreach is directed; (3) the outreach should be focused through boots-on-the-ground grassroots strategies. This boots-on-the-ground grassroots outreach out-performs outreach such as that provided through mass media, social media, utility-sponsored efforts, and top-down sponsored events; and (4) the outreach should be focused on efforts to go to where the community is rather than making the community come to the utility.

OCA M.B. at 162 (citing OCA St. 5 at 49). Mr. Colton stated that Aqua's CEOP should be designed to "identify the community partners with which it proposes to work," "identify the grassroots community organizations that will provide boots-on-the-ground efforts," and identify those times and places Aqua proposes to meet the community members where they "live, work, pray and play." OCA M.B. at 162-163 (citing OCA St. 5 at 49-50).

CAUSE-PA's witness, Mr. Geller, noted the low enrollment rates in Aqua's Helping Hand and Hardship Fund and concluded that as a result, there was a critical need for "enhanced, more concerted efforts to reach and enroll low-income consumers in Aqua's service territories in assistance programs." CAUSE-PA M.B. at 37 (citing

CAUSE-PA St. 1 at 64). Accordingly, CAUSE-PA recommended that Aqua should be required to develop and implement a comprehensive and coordinated consumer outreach and education plan that should:

> (1) be developed with input from the parties and interested stakeholders through Aqua's Helping Hand Collaborative; (2) set forth how Aqua will specifically promote each of its low income assistance programs; (3) be tailored to the demographics of Aqua's service territory; (4) include how Aqua will target outreach to specific communities, including those communities that have faced pervasive utility insecurity such as Black and Latinx communities; (5) specifically identify efforts to educate and enroll eligible customers at or below 50% FPL who represent those customers with the lowest incomes who struggle most profoundly to make ends meet; (6) translate all promotional and education materials into, at minimum, Spanish; and (7) identify resources and translation services for [limited English proficient/proficiency] LEP customers.

CAUSE-PA M.B. at 38 (citing CAUSE-PA St. 1 at 64).

Aqua agreed that a CEOP is an important component of universal service programs. Aqua M.B. at 150 (citing Aqua St. 10-R at 5). Aqua noted that its witness, Ms. Black, explained that Aqua's anticipated outreach and education will be similar to the CEOP that she developed for the Peoples Companies and will use the multiple touchpoints that utilities have with low-income customers and other entities, and that Aqua "plans to seek collaboration with other utilities to cross-promote its low-income programs with the goal of reducing barriers to participation and encouraging customers to avail themselves of all beneficial programs." Aqua M.B. at 151 (citing Aqua St. 10-R at 5-6). Aqua stated that its proposed CAP will include broad outreach and collaboration to ensure customers are made aware of the benefits available to them and are given significant opportunities to take advantage of the available benefits. Aqua M.B. at 151.

b. Recommended Decision

The ALJ recommended that Aqua continue to work to develop a CEOP in the manner that Ms. Black described in her testimony. The ALJ also stated that because Aqua does not appear to oppose CAUSE-PA and the OCA's recommendations for the development of the CEOP, Aqua should consider their input and incorporate their reasonable recommendations into the Company's outreach program. The ALJ reasoned that if Aqua does not adopt the OCA and CAUSE-PA's recommendations, the OCA and CAUSE-PA may seek appropriate relief from the Commission. R.D. at 118.

c. OCA Exception No. 19 and Replies

In its Exception No. 19, the OCA avers that the ALJ erred by not requiring Aqua to adopt the OCA and CAUSE-PA's recommendations for a CEOP. OCA Exc. at 30 (citing R.D. at 118; OCA M.B. at 161-64; OCA R.B. at 90-91). The OCA submits that the ALJ's recommended approach is not sufficient to address the problems that the OCA and CAUSE-PA identified regarding the development of a CEOP, and it is also not clear in what forum either the OCA or CAUSE-PA could seek appropriate relief. OCA Exc. at 30-31.

The OCA posits that while Aqua agrees that a CEOP is an important component of a universal service plan, the Company does not appear to adopt the OCA's recommendations regarding what that outreach should look like. OCA Exc. at 31. The OCA explains that it recommends that the Company incorporate a strategy of reaching low-income customers "where the community lives, works, plays and prays to be present at those locations rather than to sponsor 'events' that community members must attend." *Id*. (citing OCA St. 5 at 47-50). The OCA states that while the ALJ indicated that the OCA and CAUSE-PA may seek appropriate relief from the Commission if their recommendations are not adopted, there is not an appropriate alternative forum in which to seek relief. The OCA submits that unlike with energy utilities, Aqua would not need to submit a plan for approval of its CEOP, and there are not any Commission policy statements, applicable regulations, or statutory requirements specifically regarding what effective outreach and education for Aqua's discount and arrearage forgiveness programs should look like. The OCA avers that the instant proceeding is the forum in which the Company's proposed approach to education and outreach should be addressed. OCA Exc. at 31.

In its Replies, Aqua maintains its position in this proceeding that it has worked, and will continue to work, with the OCA and CAUSE-PA in the development of a CEOP, consistent with the Recommended Decision. As such, Aqua states that the OCA's concern is unfounded and its Exception should be denied. Aqua R. Exc. at 17.

d. Disposition

Upon review, we conclude that Aqua should continue to develop a comprehensive and coordinated CEOP with input from the Parties, including the OCA and CAUSE-PA, and from interested stakeholders through Aqua's Helping Hand Collaborative. Within six months of the entry date of this Opinion and Order, Aqua is required to file its CEOP with the Commission at this base rate proceeding Docket, with a copy served on the Commission's BCS and Office of Communications. As the CEOP is an evolving process, the Company must continue to work collaboratively with its Helping Hand Collaborative and the Commission's Office of Communications on any potential improvements and/or changes to its outreach and education initiatives after filing its first CEOP. We will also require Aqua to file annually, after its first CEOP filing, an updated CEOP at this base rate proceeding Docket until either its next base rate proceeding or another proceeding addressing its universal service programs. This will enable us to ensure that the Company is working with the collaborative to address stakeholder concerns or whether a separate proceeding is necessary to address outstanding matters. As such, we shall grant, in part, OCA Exception No. 19 and modify the ALJ's Recommended Decision consistent with our discussion on this issue.

B. Quality of Service

1. Unaccounted for Water

Unaccounted for water (UFW) is "Total Water Delivered for Distribution & Sale" minus "Total Sales" minus "Non-Revenue Usage and Allowance." R.D. at 119; OCA M.B. at 204; OCA St. 7 at 3-4. "Non-Revenue Usage and Allowance" includes "Main Flushing," "Blow-off Use," "Unavoidable Leakage," "Located & Repaired Breaks in Mains & Services" and "Other." Calculating UFW determines the amount of non-revenue water in a distribution system, helping to identify leaks and inaccurate meter readings. When UFW is measured, non-revenue water can be reduced which reduces chemical and power costs, provides for water conservation, and helps improve operational efficiency. *Id*. Levels of UFW above 20% are considered excessive by the Commission. 52 Pa. Code § 65.20(4).

a. Positions of the Parties

Aqua stated that its UFW is 20%, despite operational challenges of recently acquired water systems, and that no Party challenged its UFW. R.D. at 119; Aqua M.B. at 162. However, the OCA argued that Aqua should modify its reporting of UFW by being required to submit a Section 500 UFW calculation for each of its water systems and that the information submitted should be based on the same data that is required for American Water Works Association (AWWA) Audits and the annual Chapter 110

Reports submitted to the PADEP.[142] OCA M.B. at 206; OCA St. 7 at 6. Aqua opposed the modified reporting of UFW because Aqua's Section 500 Report is prepared on a consolidated basis and contains financial and operating data regarding operating the entire company. Aqua contended that it should not be treated differently by requiring it to prepare separate reports for operating divisions, that Section 500 Reports require different information than Chapter 110 Reports submitted to PADEP, and that AWWA Water Audits are a different measurement from UFW measurements prepared for the Section 500 Reports. In addition, Aqua noted that on November 18, 2021, the Commission issued a Notice of Proposed Rulemaking (NOPR) concerning proposed language for a regulation at 52 Pa. Code § 65.20(a), relating to water conservation measures. Aqua argued that committing to file separate Schedule 500 reports for each operating division while that NOPR is pending is redundant, time consuming and inefficient. R.D. at 120; Aqua M.B. at 162-63.

b. Recommended Decision

The ALJ found that the OCA did not demonstrate that its modification will result in a significant benefit to Aqua's customers. Therefore, the ALJ concluded that the OCA's proposed modification to the reporting of UFW should be rejected. R.D. at 120.

c. OCA Exception No. 24 and Replies

In its Exception No. 24, the OCA argues that the ALJ erred in concluding that Aqua should not be required to submit Section 500 reports for each of its distribution systems. The OCA disagrees that it has not demonstrated that its modification will result in a significant benefit to Aqua's customers and avers that requiring Aqua to submit a

[142] The Section 500 Forms are filed as part of the Company's PUC Annual Reports, and the Chapter 110 Reports are filed pursuant to the Company's requirements in its Annual Department of Environmental Protection (DEP) reports.

Section 500 Report for each of its distribution systems would identify levels of UFW which is a localized issue. The OCA contends that the identification and reduction of UFW benefits all water customers by reducing non-revenue water, which reduces chemical and power costs. OCA Exc. at 35.

In reply, Aqua asserts that Section 500 Reports are filed by utilities on a consolidated basis, and the OCA has offered no reason why Aqua should be singled out to prepare separate reports for operating divisions. Furthermore, Aqua avers that reporting on water loss in the annual Section 500 Report should not be revised while the Commission's NOPR, discussed above, which provides for AWWA water audit reports on an annual basis, remains pending. Aqua R. Exc. at 21.

d. Disposition

Upon review, we agree with the ALJ that the OCA's proposed modification to the reporting of UFW should be rejected. No significant benefits to Aqua's customers have been identified to treat Aqua differently by requiring it to prepare separate reports for operating divisions with different information than the financial and operating data that is currently provided in the Section 500 Report on a consolidated basis for the entire Company. In addition, we agree with Aqua that revising reporting requirements on water loss in the annual Section 500 Report should not be done at this time while the Commission's NOPR on this issue is pending. Therefore, we shall deny the OCA's Exception No. 24.

2. Pressure Measurements

The Commission's Regulations at 52 Pa. Code § 65.6(d) require a water utility to conduct pressure surveys by measuring pressures at "representative" points on its system:

> (d) *Pressure surveys.* At regular intervals, but not less than once each year, each utility shall make a survey of pressures in its distribution system of sufficient magnitude to indicate the pressures maintained at representative points on its system. The surveys should be made at or near periods of maximum and minimum usage. Records of these surveys shall show the date and time of beginning and end of the test and the location at which the test was made. Records of these pressure surveys shall be maintained by the utility for a period of at least three years and shall be made available to representatives, agents, or employees of the Commission upon request.

52 Pa. Code § 65.6(d).

With respect to variations in pressure levels, the Commission's Regulations require that a water utility shall maintain normal operating pressures between 25 pounds per square inch (psi) and 125 psi at the main, except that during periods of peak seasonal loads, the pressures at the time of hourly maximum demand may be between 20 psi and 150 psi, and that during periods of hourly minimum demand the pressure may not be more than 150 psi. 52 Pa. Code § 65.6.

a. Positions of the Parties

With respect to pressure surveys, the OCA argued that Aqua is not in compliance with 52 Pa. Code § 65.6(d) regarding the placement of the measurement point to track water pressure within Aqua's system because appropriately "representative points" means readings taken "at only a low and high pressure point." OCA M.B. at 210.

Aqua disagreed with the OCA's interpretation of 52 Pa. Code § 65.6(d) and maintained that its method of conducting pressure surveys on its system is compliant with the regulation. Aqua noted that it records pressures annually at more than 24,000 hydrants in its systems, and it described its operational procedures to monitor pressures by using local recordings as proxy checks for system performance. If an abnormality from the standard is observed, or if a customer reports a pressure problem, Aqua will conduct a follow-up investigation and address the issue. Aqua M.B. at 166-67; Aqua St. 9-R at 6.

In addition, the OCA recommended that Aqua should reduce pressures to all customers below 125 psi or be responsible for any damages resulting from higher pressures. Further, the OCA argued that Aqua should install pressure reducing valves for customers experiencing high pressures or be responsible for damages if it fails to reduce pressures to all customers below 125 psi. OCA M.B. at 210; OCA St. 7 at 13. The OCA cited an example of a water customer from Chesterbrook who testified at the public input hearing and described that he had experienced extremely high pressures, some as high as 200 psi, which caused damage to his home and neighborhood. Tr. at 230-43.

Aqua argued that the Commission recently considered and rejected a similar argument presented by the OCA in *Pa. PUC v. Pennsylvania-American Water Co.*, Docket No. R-2020-3019371 (Order entered February 25, 2021) (*PAWC*).[143] Aqua M.B. at 169-70. Aqua averred that, like *PAWC*, Aqua provides pressure in excess of 125 psi in situations where it is needed to serve customers in challenging terrain and to flow water between operating districts with different pressures. Aqua contended that the OCA's recommendation should be rejected. *Id*.

[143] In *PAWC*, the OCA recommended that PAWC should either provide a pressure reducer protecting a customer's service line or provide an insurance policy covering repair or replacement of the service as protection to service lines and inside plumbing in situations where PAWC elected to provide service at higher than 125 psi. The Commission concluded that it was not reasonable to "impose the requirement of insuring the customer service line upon the distribution utility." *PAWC* at 127.

b. Recommended Decision

Regarding the pressure surveys, the ALJ concluded that 52 Pa. Code § 65.6 does not define what is meant by "representative points" on a water system, and that if the Commission intended to limit pressure surveys to those taken at "one high and one low pressure point" on a system to be sufficiently "representative," the regulation would include that language. The ALJ found that there is no evidence that Aqua's current system is not reasonable for maintaining generally normal operating pressures between the range of 25 psi and 125 psi or that the points where measurements are taken are not sufficiently "representative." R.D. at 121-22.

The ALJ concluded that Aqua should not be directed to reduce upstream water pressures or install additional pressure valves in this proceeding. Noting that the Commission has repeatedly held that public utilities are not required to render perfect service, the ALJ found that a handful of customer experiences are not sufficient for the Commission to mandate operational changes on Aqua's distribution system at this point in time. However, the ALJ stated that as Aqua tracks pressure complaints more closely, it may be able to target areas that may require system improvements. R.D. at 123-24.

c. OCA Exception No. 25 and Replies

In its Exception No. 25, the OCA argues that the ALJ erred in concluding that Aqua should not be required to conduct pressure surveys at one high and one low pressure point on its system and that Aqua should not be required to reduce upstream water pressures or install additional pressure valves. The OCA contends that the intent of 52 Pa. Code § 65.6 is to ensure that water utilities are providing water service with pressures in reasonable ranges, and it is only logical and consistent with expert opinion that pressures be surveyed at a minimum at one high and one low point to get a fully comprehensive and useful understanding of the pressure reading of a system.

Furthermore, the OCA avers that allowing Aqua to continue providing service to customers at levels above 125 psi is not consistent with Aqua's obligation to provide safe, adequate and reliable service under 66 Pa. C.S. § 1501. OCA Exc. at 35-37.

In reply, Aqua argues that its system of pressure measurements satisfies the requirements of 52 Pa. Code § 65.6(d) and that the ALJ correctly rejected the OCA's arguments that Aqua's processes violate the regulation. In addition, Aqua states that the Recommended Decision recognizes that there are places in its system where higher pressures are necessary to ensure adequate water service to downstream customers. Aqua asserts that in the customer example from Chesterbrook offered by the OCA, this customer's property is located close to one of Aqua's largest treatment plants and pressures in excess of 200 psi are necessary to serve customers at higher elevations. Aqua references the Commission's decision in *PAWC* in arguing that it is not reasonable in certain situations to require Aqua to reduce pressures or to insure the customer against damages if the customer's required reducing valve fails. Aqua R. Exc. at 21-22.

d. Disposition

With respect to the pressure surveys, we agree with the ALJ's conclusion that, in promulgating the regulation at 52 Pa. Code § 65.6(d), if the Commission intended to limit pressure surveys in any way to define the meaning of "representative points," *e.g.*, to those taken at one high and one low pressure point, the regulation would include such language. Without such a requirement, the ALJ found that there is no evidence that Aqua's current system is not reasonable for maintaining generally normal operating pressures or that the points of measurement are not sufficiently representative. Therefore, we agree that Aqua's system of pressure measurement satisfies the requirements of 52 Pa. Code § 65.6(d).

Additionally, we agree with the ALJ that Aqua should not be directed to reduce upstream water pressures or install additional pressure valves based upon this proceeding. While we are sympathetic to the experience of the customer from Chesterbrook of failing pressure valves and property damage, the Commission has repeatedly held that public utilities are not required to render perfect service. *Rounce v. PECO Energy Co.,* Docket No. C-2015-2506941 (Order entered December 9, 2016); *Bertsch v. PPL Elec. Util. Corp.*, Docket No. C-2011-2251784 (Order entered April 2, 2012). Although a few customer experiences are not sufficient for the Commission to mandate operational changes on Aqua's distribution system at this point in time, we encourage Aqua to identify and explore ways to target areas that may benefit from system improvements as it investigates and tracks individual pressure complaints. We shall deny the OCA's Exception No. 25.

3. Isolation Valves

Isolation valves are installed on water mains so that the flow of water can be shut off in sections of the distribution system in case of a water main break or for other main repairs and replacements. Aqua M.B. at 170. Exercising an isolation valve means operating the valve through complete full open and close cycles until it operates with little resistance. Exercising isolation valves prevents them from seizing up and getting stuck due to corrosion or other deposits. An isolation valve that cannot be fully closed will increase water loss during a water main break. Inoperable valves will need to be replaced or repaired. OCA M.B. at 211-12; OCA St. 7 at 14.

a. Positions of the Parties

With respect to critical isolation valves, Aqua stated that all of its 270 such valves have been identified and currently have an exercising schedule within Aqua's work order management system, and that it exercises these valves at least once every four years. Aqua M.B. at 171. The OCA determined that Aqua's exercising schedule for its critical isolation valves is reasonable and recommended that any critical isolation valves that could not be exercised should be repaired or replaced as soon as practicable after they are found to be inoperable. OCA M.B. at 212.

For non-critical isolation valves, Aqua operates according to a twelve-year inspection and exercising program. Aqua averred that it has committed to various non-critical valve inspection measures as part of its 2020 management audit with the Commission. Aqua M.B. at 171-172. The OCA argued that Aqua's schedule to inspect non-critical isolation valves is too long and that they should be inspected on a five-year cycle. OCA M.B. at 213. Aqua contended that the cost of the OCA's recommendation, for which the OCA did not provide any estimates, may exceed any operational benefit due to the amount of time and additional workforce needed to implement it, and that the proposed timeline is inefficient and redundant. Aqua M.B. at 172; Aqua St. 9-R at 13-14.

b. Recommended Decision

The ALJ found that the OCA did not meet its burden of proving that requiring a five-year inspection cycle for non-critical valves is necessary or will derive a benefit to Aqua's system commensurate with the cost of the program. However, the ALJ recommended that the Commission direct Aqua to develop an isolation valve inspection and exercise program, to be implemented no later than 180 days from the effective date of rates resulting from this proceeding, which establishes a defined schedule to exercise each of its non-critical isolation valves within a set inspection cycle and, subsequently, maintain records of its attempts to inspect and exercise its isolation valves noting whether it was successful. R.D. at 125.

c. Aqua Exception No. 13, OCA Exception No. 26, and Replies

In its Exception No. 13, Aqua argues that the ALJ erred by requiring the Company to develop an isolation valve inspection and exercise program, because it has already developed an appropriate inspection and exercise program. Further, Aqua contends that it has made commitments through its 2020 management audit relating to the inspection of non-critical valves, and it committed to ensure the exercising of these valves is completed over a twelve-year period. Aqua asserts that the ALJ's recommendation is duplicative of Aqua's existing program and commitments and should be rejected. Aqua Exc. at 38-39.

In reply, the OCA agrees with the ALJ's recommendation that Aqua must develop an isolation valve inspection and exercise program. The OCA disagrees with Aqua that it has already developed such a program and that the ALJ's recommendation is duplicative of such program. Rather, the OCA contends that certain findings in Aqua's 2020 management audit state that "several aspects of a comprehensive critical valve testing program are missing or in progress, and the company should expand the program to track testing and operation of non-critical valves…" and Aqua's operating procedure "does not include information on valve inspection, scheduling, or valve criticality – all of which would be critical components of a valve inspection manual or program." OCA R. Exc. at 24 (citing *Aqua Pennsylvania, Inc., Peoples Natural Gas Company LLC, Peoples Gas Company LLC, Management and Operations Audit*, Docket Nos. D-2020-3018771, D-2020-3018773, and D-2020-3018774 (issued April 2021) (*Aqua 2020 Management Audit Report*)). Furthermore, the OCA argues that a specific replacement time for non-critical valves has not been approved by the Commission and Aqua has not provided support for the longer twelve-year exercising schedule. The OCA asserts that the Commission should adopt the ALJ's recommendation to direct Aqua to develop an isolation and inspection exercise program to be implemented no later than

180 days from the effective date of rates resulting from this proceeding. OCA R. Exc. at 24-25.

In its Exception No. 26, the OCA argues that the ALJ erred in concluding that Aqua should be required to inspect non-critical isolation valves every twelve years instead of five years. The OCA avers that it demonstrated that a five-year inspection cycle would provide a benefit to Aqua and its customers. OCA Exc. at 37-38.

In reply, Aqua contends that the ALJ correctly denied the OCA's recommendation that Aqua implement the OCA's proposed five-year inspection cycle for non-critical valves. Aqua reiterates that it has made commitments through its 2020 management audit to exercise its non-critical valves over a twelve-year period, and that it has identified all valves in its system and is developing a schedule for exercising the non-critical isolation valves. Also, Aqua avers that the OCA's proposal is not supported by cost estimates for the amount of time and additional workforce that would be needed. Aqua R. Exc. at 22.

d. Disposition

Upon review of the record, we conclude that the OCA did not meet its burden of proving that requiring a five-year inspection cycle for non-critical isolation valves is necessary or will be cost-beneficial to Aqua's system. The OCA did not provide any cost estimates for the implementation of its recommended five-year program. Without any cost estimates, it is not possible to determine whether any benefits from the accelerated program will be commensurate with its costs. The costs associated with any additional time and workforce needed for the program could exceed its operational benefit and render it inefficient and redundant. For these reasons, we will not require Aqua to implement a five-year inspection cycle for non-critical isolation valves. Accordingly, the OCA's Exception No. 26 shall be denied.

We will, however, adopt the ALJ's recommendation and direct Aqua to develop an isolation valve inspection and exercise program, to be implemented no later than 180 days from the effective date of rates resulting from this proceeding, which establishes a defined schedule to exercise each of its non-critical isolation valves within a set inspection cycle and requires Aqua to maintain records of its attempts to inspect and exercise its isolation valves noting whether it was successful. Although Aqua contends that such a directive is duplicative because it has already developed an appropriate inspection and exercise program and made commitments through its 2020 management audit relating to the inspection of non-critical valves, we agree with the ALJ that the development of a non-critical isolation valve inspection and exercise program at this time is reasonable. The findings referenced by the OCA from the Commission's 2020 Aqua management audit that Aqua should expand its valve inspection program to track testing and operation of non-critical valves and that its operating procedure should include information on valve inspection, scheduling, or criticality, along with the fact that a specific replacement time for non-critical valves has not been approved by the Commission, support the ALJ's recommendation to develop a more formal valve inspection program. *See* OCA R. Exc. at 24 (citing *Aqua 2020 Management Audit Report*). Therefore, Aqua's Exception No. 13 will be denied.

4. Fire Hydrants

Aqua has over 21,000 public fire hydrants throughout its systems. In response to discovery, Aqua identified sixteen public fire hydrants on its systems that cannot provide the minimum fire flow of 500 gallons per minute (gpm) at 20 psi. Aqua M.B. at 172.

a. Positions of the Parties

The OCA recommended that each of the sixteen fire hydrants that cannot provide the minimum fire flow should be marked as such so that they will only be used for flushing and blow-offs and Aqua should provide confirmation to the OCA and other parties when this is completed. OCA M.B. at 213; OCA St. 7 at 17. Aqua stated that it has planned main replacement projects to address these hydrants within the next three years and, during this time, Aqua will attempt to either find alternative locations for the hydrants or remove them. Aqua M.B. at 172; Aqua St. 9-R at 15. The OCA agreed with this approach, so long as the hydrants will be marked and only used for flushing and/or blow-offs until they are moved or replaced. OCA M.B. at 213-14; OCA St. 7SR at 8.

b. Recommended Decision

The ALJ stated that the OCA and Aqua largely resolved their disputes regarding Aqua's plan to address the sixteen fire hydrants in its system that cannot provide the minimum fire flow of 500 gpm at 20 psi. Given the limited number of fire hydrants at issue and the importance to fire companies to know that these hydrants are not reliable for fire protection, the ALJ found that the OCA's recommendation that Aqua should mark the hydrants for only flushing and/or blow-offs until they are moved or replaced, and report to the OCA and other Parties when this is completed, is reasonable and should be adopted. R.D. at 125.

c. Disposition

No Party filed Exceptions on this issue. Finding the ALJ's recommendation to be reasonable, we shall adopt it without further comment.

5. Flushing

Flushing addresses sediments that build up in pipes that may affect the taste, clarity, and color of water. There are no Commission or PADEP requirements for main flushing. In a discovery response, Aqua indicated that all systems were flushed in 2020 under its main flushing program, but six systems were not flushed in 2019 due to staffing issues. OCA M.B. at 214; OCA St. 7 at 17.

a. Positions of the Parties

The OCA recommended that Aqua improve its flushing program in its Southeast Pennsylvania (SEPA) division by flushing the system once every three years because there are a substantial number of complaints regarding flushing-related issues which would likely be eliminated under a regular flushing program. OCA M.B. at 214.

Aqua disagreed with the OCA's recommendation. Aqua argued that the OCA offered no evidence, and that there is no industry standard, supporting a three-year flushing schedule. Also, Aqua averred that flushing is labor-intensive, somewhat disruptive and can result in significant non-revenue water volume. Aqua stated that certain factors, including water quality samples, customer issues, system geometry, daily water volume in an area, and proximity to wells and tanks, dictate how and when flushing occurs. Aqua contended that it should retain flexibility regarding flushing its distribution system and a three-year schedule is not warranted. Aqua M.B. at 174-175; Aqua St. 9-R at 17-18.

b. Recommended Decision

The ALJ noted that a three-year flushing program may eliminate customer complaints and the need for Aqua to assess certain factors in determining whether and when to flush the system. However, the ALJ found that, based on Aqua's witness testimony that flushing can be labor intensive and result in UFW, it is not possible to conclude that it is reasonable to impose the costs on ratepayers for a three-year flushing program which may or may not result in the benefits identified by the OCA. R.D. at 126.

c. OCA Exception No. 27 and Replies

In its Exception No. 27, the OCA argues that the ALJ erred in concluding that Aqua should not be required to flush its SEPA system every three years. The OCA asserts that Aqua did not offer support for its position that flushing a system can be labor intensive and result in UFW, and it contends that a three-year flushing program is reasonable and consistent with industry standards. OCA Exc. at 38.

In reply, Aqua contends that the OCA's proposal "is an expensive and a wasteful solution in search of a problem." Aqua avers that the number of customer complaints does not suggest a serious water quality issue requiring a change to its flushing procedures. Furthermore, Aqua argues that the OCA's proposal would result in additional lost water from increased flushing and add to labor and water treatment costs. Aqua R. Exc. at 22-23.

d. Disposition

Upon review of the record, we agree with the ALJ that it is not possible based on the record to determine whether any benefits of a three-year flushing program will outweigh the costs associated with it. While such a program may reduce customer complaints and provide for a pre-determined flushing frequency, as the OCA argues, flushing the system can be labor intensive, disruptive and result in UFW, according to Aqua. Without any additional evidence or a clear industry standard supporting a three-year flushing program, we find that requiring Aqua to flush its SEPA system every three years is not warranted. Therefore, we shall deny the OCA's Exception No. 27.

6. Per- and Polyfluoroalkyl Substances (PFAS)

Aqua maintains a website, www.waterfacts.com, with information about its testing and treatment for PFAS contamination in its water supplies. The most recent test results for some water sources were from 2016, 2017 and 2018, without explanation why more recent test results were not provided. Aqua M.B. at 175; OCA M.B. at 215; OCA St. 7 at 19.

a. Positions of the Parties

The OCA indicated that its understanding that testing was stopped at certain sites was because the test results indicated less than 13 parts per trillion for PFAS, which is Aqua's standard, and that Aqua ceases testing for sources that test below 13 parts per trillion. The OCA recommended that Aqua should add a statement to its website explaining why testing was stopped for water sources that it no longer tests for PFAS. Aqua agreed to implement the OCA's recommendation and stated it will include clarifying comments on its website regarding the reasons testing ceased at certain sites. Aqua M.B. at 175-76; Aqua St. 9-R at 19; OCA M.B. at 215; OCA St. 7 at 19.

b. Recommended Decision

The ALJ found that as no other party presented testimony on this issue, and Aqua agreed to the OCA's recommendation regarding PFAS reporting, Aqua's PFAS procedures should be accepted by the Commission.

c. Disposition

No Party filed Exceptions on this issue. Finding the ALJ's recommendation to be reasonable, we shall adopt it without further comment.

C. Customer Service

Under the *Aqua-Peoples Settlement*, the settling parties agreed that Aqua would commit to the following "Customer Service" improvement metrics:

> 83. Aqua commits to improve Aqua's call center performance to meet or exceed the same performance standards that the Peoples Companies agreed to meet in the 2013 Settlement concerning the acquisition of Equitable Gas Company (Docket No. A-2013-2353647 et al.) for the following three metrics in each of the five calendar years (2020-2024) following closing:
>
> i. percent of calls answered within 30 seconds of at least 82%,
> ii. busy-out rate of no more than 0.25%,
> iii. average call abandonment rate that is no higher than 4% for 2020-2021, no higher than 3% for 2022-2023, and no higher than 2.5% for 2024.

Aqua-Peoples Settlement at 146-147.

In this proceeding, the OCA and CAUSE-PA asserted that Aqua failed to comply with certain of the customer service related commitments made by Aqua in the *Aqua-Peoples Settlement*. R.D. at 127-131. As will be discussed more fully below, the OCA challenged Aqua's compliance with Paragraph No. 83, above, of the settlement commitments. In this regard, the OCA challenged Aqua's compliance with: (1) percent of calls answered within 30 seconds of at least 82%; and (2) average call abandonment rate that is no higher than 4% for 2020-2021, no higher than 3% for 2022-2023, and no higher than 2.5% for 2024. *See* OCA M.B. at 188-193. The OCA stated that Aqua met the busy-out rate standard, but for reasons argued in its OCA St. 6, Aqua had not met the standards for calls answered and average call abandonment rate.

The OCA also challenged Aqua's compliance with Paragraph 85 of the *Aqua-Peoples Settlement, infra,* regarding the Company's commitment to complete a root cause analysis (RCA) of customer complaints. *See* OCA M.B. at 193-94. In addition, the OCA argued that Aqua's failure to comply with customer service related issues, in addition to other considerations, were an additional reason to reject the Company's request for a management performance adjustment to its ROE, discussed, *supra*. *See* OCA MB at 75-77; 181-82; 204.

1. Calls Answered Commitment Under the *Aqua-Peoples Settlement*

a. Positions of the Parties

The OCA asserted that Aqua was not in compliance with the calls answered commitment under the *Aqua-Peoples Settlement*. The OCA proffered its calculation of the utility's percentage of calls in which a customer affirmatively seeks to talk to a live representative. OCA M.B. at 190 (citing OCA St. 6 at 10); *also*, OCA Exh. BA-2 for calculation of annual average results for each of the performance standards using monthly information provided by Aqua. According to the calculations of the OCA witness Ms. Barbara A. Alexander, as measured by the calls in which the customer selects the option to speak with a representative, the annual calls answered average for 2019 was 70.56%, for 2020 was 72.86%, and for 2021 through July was 50.64%. *Id.*

Based on the foregoing, the OCA witness, Ms. Alexander, pointed out that Aqua has never met the 82% call answering standard as measured by the typical measurement of the percentage of calls in which the customer affirmatively seeks to talk to a live representative.

Additionally, the OCA took issue with Aqua's calculation of the percentage of calls answered within 30 seconds based on the Company's use of "aggregated" data. Aqua used data from a combination of the results for customers seeking to speak to a representative with all calls handled without that request through its automated menu, Interactive Voice Response (IVR), system. Use of data from the IVR system was described as an "aggregate" of data. The OCA found use of aggregate data to be objectionable as it would, in its view, skew the data results.[144] OCA St. 6 at 10.

In response to the position of the OCA concerning Aqua's compliance with the percentage of calls answered, Aqua noted that OCA witness Ms. Alexander acknowledged that the Company's percentage exceeded the 82% threshold for both 2019 and 2020. Aqua M.B. at 184. Consequently, the disagreement between Aqua and the OCA regarding this metric centered upon the inclusion of calls handled by Aqua's IVR system in calculating the calls answered percentage. *Id*.

Aqua explained that the IVR is an automated way to service customers that call in with questions or concerns. *See* Aqua St. 10-R at 15-16. Aqua cites to the applicable terms of the *Aqua-Peoples Settlement,* Paragraph No. 83, and argues that the Peoples Companies include IVR contacts in calculating service level performance. Aqua continues that the use of IVR contacts data is a standard calculation in measuring contact

---

[144] In response to discovery, Aqua stated that it utilizes two call centers located in Illinois and North Carolina which handle calls from Pennsylvania customers. OCA St. 6 at 9. The Merger Settlement requires annual average performance standards in the three areas mentioned above [Aqua-Peoples Settlement Paragraph No. 83] that can be measured to reflect the performance provided to Pennsylvania customers. Since both call centers handle calls from all of Aqua's customers in several states, the performance standards reflect the average of all calls at both call centers. *See* OCA St. 6 at 9.

center performance. Based on the foregoing, Aqua submits that the position of the OCA, that the IVR system should not be "aggregated" with the Company's person-to-person telephonic contacts, should be rejected.

b. Recommended Decision

The ALJ agreed with Aqua that the Company met its commitment under the *Aqua-Peoples Settlement* to answer 82% of customer calls within 30 seconds. The ALJ rejected the position of the OCA that use of the IVR data to calculate the Company's performance related to the call center standards metric, made Aqua's data unreliable and, therefore, not in compliance with the terms of the settlement. The ALJ agreed that use of aggregate data was consistent with the settlement and reasonable because it is the standard used by the Peoples Companies. R.D. at 128.

c. OCA Exception No. 20 and Replies

In its Exception No. 20, the OCA disagrees with the ALJ that use of aggregate data is reasonable. The OCA argues that the calls answered standard should be measured only by the number of customers who choose to speak with a representative because use of aggregate data, which also includes customers who use the IVR system (and do not attempt to reach a representative), skews the results. OCA Exc. at 31-32. The OCA notes that these calls are clearly "answered" within less than thirty seconds, but the calls are irrelevant to the issues discussed and agreed to in the *Aqua-Peoples Settlement*. OCA Exc. at 32.

Therefore, based on its position that use of the IVR data (or aggregated data) is not reasonable under the *Aqua-Peoples Settlement*, the OCA argues that the Commission should adopt its recommendation. *See*, *i.e.,* OCA M.B. at 204, pertaining to the directive for Aqua to issue a compliance document. The OCA submits that due,

inter alia, to Aqua's failure to meet the obligations of the *Aqua-Peoples Settlement*, the Commission should reject Aqua's claim for exemplary management performance.
OCA Exc. at 32

In its Replies to Exceptions, Aqua distinguishes the contentions asserted by the OCA about what may be "reasonable." According to Aqua, the OCA's position disregards the clear language of the commitment of the *Aqua-Peoples Settlement*. In this regard, Aqua argues the express language of the settlement commits the Company to improve its call center performance to meet or exceed the same performance standards that the Peoples Companies are under. Aqua continues that this is the result of the metric - – percentage of calls answered within 30 seconds of at least 82%. Because the Peoples Companies include IVR contacts in calculating service level performance, which is a standard calculation in measuring contact center performance, Aqua argues that it should be permitted to do so and that it is reasonable to do so in its calculation. Aqua R. Exc. at 18-20.

d. Disposition

On consideration of the record evidence, we shall deny the OCA's Exception No. 20, consistent with the discussion herein and adopt the recommendation of the ALJ. There is no dispute that the analogue for this metric is the performance metric adopted by the Peoples Companies. Based on the use of aggregated data for the calculation as used to measure the performance of the Peoples Companies, we agree with the recommendation of ALJ Long that use of this data is acceptable for Aqua. When viewed in this light, it appears that Aqua has complied with its commitments.

Based on the foregoing, we will deny the OCA's Exception No. 20 in full recognition that, in any future proceeding, where the metric is shown to inaccurately reflect Pennsylvania-specific conditions, its calculation may be revisited.

2. Calls Abandonment Commitment Under the *Aqua-Peoples Settlement*

a. Positions of the Parties

Under the *Aqua-Peoples Settlement*, Aqua committed to: "[an] average call abandonment rate that is no higher than 4% for 2020-2021, no higher than 3% for 2022-2023, and no higher than 2.5% for 2024." The OCA noted that Aqua's annual call abandonment rate metric had not been met. *See* OCA St. 6 at 10. The OCA, through its witness Ms. Alexander, observed that the call abandonment rates were: 4.56% in 2019, 4.32% in 2020, and 13.15% in 2021, through July. *Id*.

The OCA also, as noted, objected to Aqua's measure of the call abandonment rate by combining the performance when customers affirmatively seek to speak with a customer service representative with all calls handled via the IVR system. The OCA argued that use of the IVR system data results in an inaccurate measurement of customer experience for those attempting to reach a customer service representative. OCA St. 6 at 10.

Aqua conceded that it had not, for the applicable period, met the percentage of average call abandonment metric commitment of the *Aqua-Peoples Settlement*. Aqua explained, however, that unanticipated circumstances outside of its control were substantial factors in preventing the Company from express compliance. *See* Aqua M.B. at 185-86.

Aqua, through its witness, Ms. Black, explained that the failure to meet the metric was primarily attributed to unanticipated United States Postal Service (USPS) delays. Aqua explained that the unanticipated USPS delivery delays caused many customer bills to be delivered late and resulted in higher-than-normal call volumes.

The impact of the postal service delay and severe weather events in meeting this metric was identified in an annual report filed on February 1, 2021.

Aqua noted that the *Aqua-Peoples Settlement* contemplated a situation where the Company may miss a benchmark and such failure would be addressed in collaboratives as contemplated by the terms of the *Aqua-Peoples Settlement*. Under the terms of the settlement, Aqua is required to compile an annual report to apprise stakeholders of its compliance with the settlement terms.

b. Recommended Decision

On consideration of the position of the Parties, the ALJ agreed with Aqua. The ALJ noted that the *Aqua-Peoples Settlement* contemplated a situation where events outside of the Company's control that prevent compliance with the literal terms of the settlement commitments could occur. She found that Aqua transparently explained in the February 1st report the reason for its failure to meet the call abandonment benchmark for 2020-21. The events resulting in Aqua's failure to meet the settlement commitment were viewed as an isolated situation and did not, in her opinion, equate to a failure to comply with the settlement. R.D. at 128.

c. OCA Exception No. 21 and Replies

In its Exception No. 21, the OCA disagrees with and, therefore, excepts to, the ALJ's conclusion that Aqua "[s]hould be excused from its obligation to reduce its average call abandonment rate to 4% or less." OCA Exc. at 32.

The OCA argues that the evidence shows that as of July 2021, the call abandonment rate was 13.15%, compared to a rate of 4.56% in 2019. The OCA argues that, in the year before and in the partial year following the unusual circumstances in late 2020, Aqua never met the "no higher than 4%" metric for its call abandonment rate, even when calculated using the aggregate calls that included IVR data. OCA Exc. at 32-33 (citing OCA St. 6SR at 5; OCA M.B. at 192-93).

The OCA, contrary to the conclusion of the ALJ, takes the position that Aqua's failure to achieve its commitment level was not an isolated event that happened because of unforeseen circumstances. The OCA points out that the Company has not met the 4% abandonment rate in any of the last two and one half years. OCA Exc. at 33.

In its Replies to Exceptions, Aqua stresses two points: (1) the settlement commitment did not become effective until after the merger was approved by the Commission in 2020, and thus prior performance data under this metric is not relevant to assess its compliance with the commitment; and (2) the ALJ concluded that the *Aqua-Peoples Settlement* contemplated that unexpected circumstances could prevent compliance. Based on the foregoing, the Company maintains that the failure to meet this metric is, in fact, an isolated situation which does not equate to a failure to comply with the settlement commitment. Aqua R. Exc. at 19.

d. Disposition

On consideration of the positions of the Parties, we shall deny the Exceptions of the OCA in this matter. We note that there is a substantial disparity in the percentage of calls abandoned for year 2021 (as of July 2021, 13.15 %; *see* OCA Exc. at 32). While we find the substantial difference in the target percentage under the metric and the actual performance of Aqua to be a concern, we accept the reasoning of the presiding ALJ that the Company provided a reasonable basis to account for the disparity. On balance, we agree that the substantial difference in the abandoned call percentage for the calendar year 2021 resulted from unanticipated conditions and is an isolated event. While the OCA notes that the Company has never met its target prior to the periods of time of the 2021 report, the Company notes that the approval of the merger conditions in 2020 renders this data not material to our consideration of the year at issue, 2021.

Based on the foregoing, the OCA's Exception No. 21 is denied consistent with the discussion in this Opinion and Order. We advise the Parties that the annual report will provide a basis for cooperation between interested stakeholders should further concerns arise regarding compliance.

3. Commitment to Complete a Root Cause Analysis (RCA) of Customer Complaints

a. Positions of the Parties

The OCA explained that this area of concern arises pursuant to Paragraph No. 85 of the *Aqua-Peoples Settlement*. Paragraph No. 85 is reprinted below:

> 85. Aqua PA will develop a system to track Aqua PA customer complaints in a live Excel spreadsheet, consistent with Paragraph 47 in the Joint Petition for Settlement submitted in Aqua PA's recent base rate case (Docket Nos. R-2018-3003558 and R-2018-3003561). Aqua PA will review this information and conduct a root cause analysis [(RCA)] of adverse trends at least annually.

Aqua-Peoples Settlement at 147.

The OCA took the position that Aqua failed to comply with the development of a RCA.[145] *See* OCA M.B. at 193-94. The OCA asserted that Aqua has not provided requested information on the methodology and timetable for the completion of the RCA contemplated by the *Aqua-Peoples Settlement*. The OCA further stated that Aqua has not indicated a methodology for tracking whether its responses to customer disputes or complaints were incorrect or improper, which, we are advised, is a key component of any RCA of customer complaints.[146] *Id.*

Aqua, through its witness, Ms. Black, acknowledged that the RCA has not been completed. Aqua referenced a "live spreadsheet" that has not yet been finalized. Aqua M.B. at 187. Aqua attributed the lack of finalization to the fact that it has been working with the OCA to develop the spreadsheet based upon the OCA's requested parameters. *Id*. (citing Aqua St. 10-R at 17).

b. Recommended Decision

The ALJ concluded that Aqua sufficiently demonstrated its good faith efforts to come into compliance with the benchmarks set forth in the *Aqua-Peoples*

---

[145] A RCA requires a fundamental review of the policies and practices that resulted in an informal customer complaint and the internal evaluation of how to prevent the complaint or fix the underlying cause. *See* OCA St. 6 at 12. The OCA acknowledged that Aqua provided a confidential spreadsheet of complaints and their "root cause," but did not provide an actual analysis of the root cause. OCA M.B. at 193-194.

[146] As the OCA witness, Ms. Alexander, noted, "[t]his lack of analysis of customer complaint trends and identification of the root cause for any complaint trends is also troubling in light of the volume of 'justified' complaints and 'notices of infractions' from the Commission's [BCS] after that office's handling of informal complaints submitted by Aqua customers." OCA St. 6 at 13.

Settlement concerning the development of a RCA. R.D. at 129. The ALJ acknowledged that the development of a RCA is an ongoing process.[147]

c. OCA Exception No. 22 and Replies

In its Exception No. 22, the OCA argues that Aqua has not complied with the commitment to conduct a RCA of customer complaint data consistent with the *Aqua-Peoples Settlement*. The OCA stresses that the terms of the settlement required Aqua to develop a system to track Aqua customer complaints in a live Excel spreadsheet and to review this information and conduct a RCA of adverse trends at least annually. The OCA takes the position that Aqua has failed to do this, and it disagrees with the ALJ's conclusion that Aqua's compliance with this settlement obligation should not be determined based upon "good faith efforts." OCA Exc. at 33.

The OCA further argues that, based on a comparison of Aqua's performance compared to other utilities, such comparison shows why it is "critical" for Aqua to comply with this term of the *Aqua-Peoples Settlement* in this regard.[148] The OCA points out that Aqua had a high number of customer complaints and, in order to address Aqua's high percentage of justified complaints, it asserts that the Company should be required to conduct a RCA of customer complaint data to spot issues and concerns that require attention and potential changes in policies or processes as soon as practicable. OCA Exc. at 33.

---

[147] The ALJ further noted that, upon the conversion to SAP, Aqua's witness, Ms. Black, stated that the Company's RCA efforts can be enhanced by increasing the visibility of case trends through enhanced reporting of case types. R.D. at 129.

[148] In 2020, Aqua had the highest number of "justified" complaints compared to other Pennsylvania water utilities; 16% of the closed and evaluated customer complaints were justified compared to 5% for other major water utilities. *See* OCA Exc. at 33 (citing 2020 Utility Consumer Activities Report and Evaluation at 12; OCA M.B. at 180; OCA R.B. at 110). In October 2021, Aqua's justified average complaint percentage was 13%. OCA Exh. BA-5; OCA R.B. at 111. *Id*.

For these reasons, the OCA submits that Aqua is not in compliance with this term of the settlement. Therefore, the Commission should modify the Recommended Decision and adopt the OCA's recommendation. OCA Exc. at 33-34.

In its Replies to Exceptions, Aqua explains that it has been attempting to work collaboratively with the OCA to develop the spreadsheet's parameters. Aqua R. Exc. at 20. With respect to the RCA, Aqua further explains that the RCA occurs on an on-going basis. The Company states that, if an isolated employee error is identified, coaching on compliance is provided. If multiple similar complaints are received, the issue is escalated to the customer contact team for review. *Id*.

Aqua concludes its Replies by noting that it is working to "enhance" and "formalize" the RCA process, which will be facilitated by Aqua's upcoming conversion to the SAP operating system. Based on this representation, Aqua asserts that the OCA's contentions regarding its RCA efforts are without merit and that the OCA's Exception should be denied. Aqua R. Exc. at 20.

d. Disposition

On consideration of the record, we shall grant the OCA's Exception No. 22, in part, and deny it, in part. The Parties appear to have little to no disagreement concerning the "live" spreadsheet data. The controversy appears to surround the use of the spreadsheet data in development of the RCA. We do not, therefore, dismiss, out of hand, the concerns expressed by the OCA in the development of the RCA.

The Company's commitment, as memorialized in Paragraph No. 85 of the *Aqua-Peoples Settlement,* cross-references Paragraph No. 47 of the 2018 Settlement, which was approved by the Commission in the *Aqua 2018 Rate Case*. Paragraph No. 47 of that 2018 Settlement reads as follows:

> 47. The Company shall continue to provide water and wastewater customer complaints in a live Excel spreadsheet that shall be made available in future general rate proceedings. The water and wastewater customer complaint logs shall contain separate searchable columns for date of complaint, street number, street name, city (zip code is preferable), and code for the type of complaint. The Company and OCA agree to continue to discuss how to incorporate into a live Excel spreadsheet the following additional information regarding whether a Company employee made a site visit, if the problem was the responsibility of the Company or the customer, and the date the complaint was resolved. The Company and the OCA agree to have that discussion within 90 days after the entry of a final order in this proceeding. Additionally, the Company agrees to provide a legend explaining the abbreviations used in the complaint logs.

Our review of the cross-referenced language connotes a more collaborative process between the OCA and Aqua was intended for the development of the RCA that goes beyond the submission of live spreadsheet data. Based on our review, we direct Aqua, the OCA and I&E to engage in collective exchanges regarding the spreadsheet data and cooperatively apprise each of how this data will be developed into a RCA that can reflect meaningful trends so as to, potentially, reduce contested issues in future proceedings. Accordingly, we shall grant the OCA's Exception No. 22, in part, and deny it, in part.

4. Management Performance Adjustment to Aqua's ROE Based Upon Asserted Levels of Customer Satisfaction

a. Positions of the Parties

The OCA's overall position was in vigorous opposition to the base rate increase request of Aqua. *See*, *e.g.,* OCA M.B. at 1-16. In addition to its objection to any increase in rates due to the adverse economic impact of the COVID-19 pandemic on the service territory of Aqua, the OCA also took the position that Aqua's customer service performance was below that of comparable utilities. The OCA, through its witnesses, Ms. Alexander and Mr. Colton, addressed areas where Aqua was alleged to have failed to meet basic standards of utility performance pursuant to Sections 526 and 1501 of the Code, 66 Pa. C.S. §§ 526, 1501.

Based on the foregoing, as well as other factors discussed in Section X.D.2 of this Opinion and Order, *supra*, the OCA opposed Aqua's request for a management performance adjustment to its ROE. The OCA noted that the request was not supported but was refuted by the testimony of its witness Mr. David J. Garrett, who provided specific analyses of customer service and customer assistance measures. Namely, as noted in Section X.D.2, *supra,* the OCA, through its witness Mr. Garrett, testified that the Company has not conducted any comparative analyses to determine if Aqua's management performance is any different than other regulated utilities, in or out of its proxy group. OCA M.B. at 75-76.

The OCA, as a remedy for Aqua's alleged failure to implement the commitments agreed to in the *Aqua-Peoples Settlement*, and for other areas in which the OCA contended were inadequate, requested:

> . . . that Aqua be held accountable for these previously agreed-to performance standards. OCA St. 6 at 23. [OCA witness Alexander] recommends that Aqua develop and submit a compliance plan to the stakeholders that, after review, should be submitted to the Commission for approval and implementation. *Id*. The plan should include specific action steps and deadlines for achieving compliance. *Id*.

OCA M.B. at 204.

Accordingly, the OCA reinforced its argument that there was no basis for awarding a rate of return higher than Aqua's estimated cost of equity. *See* OCA St. 3SR at 10.

As discussed, in detail, under Section X.D.2 of this Opinion and Order, Aqua requested an upward adjustment to its ROE for superior management performance. Aqua argued that in accordance with Section 523 of the Code, 66 Pa. C.S. § 523, the Commission is required to consider management effectiveness when setting rates. Aqua insisted that it has provided extensive evidence to demonstrate that it provides high quality service and has implemented numerous programs designed to enhance the service it provides to customers and that this evidence supports an addition to the allowed ROE. Aqua M.B. at 128-37.

b. Recommended Decision

As previously noted, the ALJ recommended that the Commission reject the Company's request for an upward adjustment to its ROE for superior management performance. R.D. at 79-81.

For different reasons, however, the ALJ was not persuaded that in rejecting the Company's request, the Commission should rely on the evidence proffered by the OCA and CAUSE-PA regarding the provision of poor customer service. In particular, the OCA argued for its persuasive evidentiary value, that a customer satisfaction survey indicated that 73% of Aqua customers with recent telephone call center transactions rated satisfaction as "excellent" or "very good." R.D. at 129 (referencing OCA St. 6 at 11; OCA M.B. at 191). The OCA argued that this level of customer satisfaction is low compared to Pennsylvania electric and gas companies where over 80% of customers typically express that they are "very satisfied" with their interaction with the utility's representative. R.D. at 120-30. In considering this testimony, the ALJ agreed with Aqua that its customer satisfaction survey indicating only 73% of customers rated their satisfaction as "excellent" or "very good" is not, in and of itself, indicative of poor customer service, particularly during the COVID-19 pandemic in which certain customer interactions have had to be limited. *Id*.

Accordingly, the ALJ recommended that in rejecting the Company's request for a management performance adjustment the Commission should instead rely on the findings the ALJ made on pages 79-81 of her Recommended Decision, discussed, *supra*.

c. OCA Exception No. 23 and Replies

In its Exception No. 23, the OCA argues that the ALJ properly recommended that the Commission reject Aqua's claim for an upward adjustment to its ROE for superior management performance. Nonetheless, the OCA submits that in recommending that the Commission reach this conclusion, the ALJ erred in finding that the Commission should not rely on the evidence proffered by the OCA and CAUSE-PA that demonstrates that the Company provides less than adequate customer service. The OCA points to the testimony of its witnesses Ms. Alexander and Mr. Colton that Aqua's call center performance level in comparison to other utilities was not a good indicator regarding Aqua's customer satisfaction. OCA Exc. at 34 (citing OCA St. 6 at 9-11; OCA St. 6SR at 5).

For purposes of ensuring that all of the evidence rebutting Aqua's claim for a management performance adder is reviewed, in addition to the evidence adopted by the ALJ, the OCA submits that Aqua's lower customer satisfaction level should be considered as one of many instances of Aqua's lack of evidence to support a management performance adjustment. Therefore, the OCA argues that the Commission should consider Aqua's poor satisfaction ratings, including the fact that Aqua's customer survey indicated that only 73% of customers rated their satisfaction as "excellent" or "very good" as further support for the OCA's recommended ROE and as additional support for rejecting the management performance adder. OCA Exc. at 34-35 (citing OCA St. 6 at 8-22).

In its Replies to Exceptions, the Company refers the Commission to its prior evidence and argument in support of a management performance adder, and discussed in Section X.D.2 of this Opinion and Order, *supra*. Aqua R. Exc. at 20.

In its Replies to Exceptions, I&E explains that although it did not file any testimony regarding the Company's customer service satisfaction levels, it does not oppose the OCA's assertions, as set forth in OCA Exception No. 23. I&E R. Exc. at 19.

d. Disposition

As set forth in our disposition of Section X.D.2, *supra,* we have determined that Aqua has exhibited extraordinary effort in aiding and protecting Pennsylvania water and wastewater customers and the environment. Thus, we have awarded the Company a management performance adjustment of twenty-five basis points to its ROE. For this reason, we shall decline to address the additional arguments of the OCA, as set forth in its Exception No. 23, for rejecting the Company's requested management performance adjustment. Accordingly, the OCA's Exception No. 23 is denied.

D. Masthope Allegations of Inadequate Wastewater Service

1. Positions of the Parties

Masthope contended that the Commission should deny Aqua's requested rate increase for Masthope's water and wastewater customers because the Company has provided unreasonable service. In this regard, Masthope alleged that there have been unreasonable systematic and unresolved instances of hydraulic overload conditions affecting the Masthope Wastewater Treatment Plant (WWTP) dating back to 2018, which resulted in restrictions upon Aqua's ability to make new wastewater connections. Masthope submitted that Aqua's insufficient planning, investment, maintenance, and operation solely caused the hydraulic overload conditions and ensuing building restrictions within Masthope. Masthope contended that any additional rate increase for Masthope's customers would be unjust and unreasonable given Aqua's failure to provide reasonable service over a period of years. Masthope M.B. at 9-24.

Aqua rebutted that it has adequately planned for the capacity needs of Masthope and has taken reasonable and appropriate measures to improve the wastewater system and service facilitates in its provision of service to the Masthope community. . The Company completed an evaluation of the capacity needs at the Masthope community as part of its 2018 Chapter 94 Report. Based on the evaluation, Aqua implemented the project known as the "Treatment Train Project" to address the system's increasing capacity needs and to avoid future hydraulic exceedance. Aqua St. 9-R at 36-37. Aqua asserted that based upon its evaluation of both the capacity and connection needs of the Masthope community, the Company's "Treatment Train Project," as expanded, would address both the system's need for increased capacity to prevent future hydraulic overload, as well as connection needs of the system. The Company noted that the Treatment Train Project was subsequently expanded to a long-term capital upgrade project based on an evaluation of the remaining connection needs of the system. The

Company also asserted it has demonstrated it is taking proactive steps to reduce inflow and infiltration (I&I) in the collection system as described in its 2020 Chapter 94 Report. Aqua M.B. at 195-200; Aqua R.B. at 84-89; Aqua St. 9-R at 36-37; Aqua St. 9-R at 37.

While maintaining it has taken affirmative steps, Aqua asserted that two events beyond its control led to hydraulic overloads on the system. The Company alleged that elevated precipitation levels and shifts to more full-time use of the residences at Masthope, because of the COVID-19 pandemic, caused hydraulic overloads on the system. As a result of the overloads, Aqua explained, PADEP issued a moratorium on new connections to the system. In response to the moratorium, Aqua submitted a Corrective Action Plan to PADEP, which was designed to restore or otherwise make available connection capacity at Masthope. At that time, the Company noted that the Corrective Action Plan was approved by PADEP, and consequently, PADEP also granted a sewer connection allocation of 60 Equivalent Dwelling Units (EDUs) to Aqua, which modified the prior total moratorium on sewer connections. *See* Aqua St. 9-R at 33-36; Aqua St. 9-R at 37; Aqua Post-Hearing Exh. 1.

2. Recommended Decision

As a procedural matter, the ALJ noted that the issues presented by Masthope were in the context of a complaint *against a utility's rate increase based on the unreasonable provision of service*, rather than a complaint based on the unreasonable provision of service. As such, the ALJ noted that the question was not:

> …whether Aqua's wastewater service to Masthope is adequate and reasonable given the persisting hydraulic overload conditions and resulting moratorium on new connections to the Masthope WWTP. Instead, the Commission must determine *whether Aqua's alleged failure to provide reasonable service is so pervasive that the Company should be punished for this failure by refusing to*

> *grant its request for increased revenue, and whether it is necessary and appropriate to direct service changes or the installation of additional facilities.*

R.D. at 133 (citing Masthope R.B. at 4 (quotations omitted, emphasis added)).

The ALJ noted the steps taken by Aqua to rectify the issues related to the Masthope system, including the Company's Treatment Train project, and the Company's Corrective Action Plan submitted to PADEP. Under the Corrective Action Plan, which was recently approved by the PADEP, the ALJ noted that the Company would restore and otherwise make connection capacity available for the Masthope community. *Id*. at 132.

The ALJ acknowledged "[t]he Masthope community is clearly experiencing challenges due to hydraulic overload at the WWTP." *See* R.D. at 133. However, the ALJ concluded that Aqua has taken affirmative steps to address the problem, and "[a]ppears to be working with PADEP to address the sewage planning and regulatory issues within that agency's purview."[149] Accordingly, the ALJ did not recommend that the Commission deny Aqua's request for a rate increase, decline to increase rates attributable to the cost of providing service to Masthope, or direct additional service changes or the installation of additional facilities. *Id*.

3. Masthope Exception No. 1 and Replies

In its Exception No. 1, Masthope challenges the grant of Aqua's requested rate increase based upon, *inter alia*, inadequate provision of service by Aqua where hydraulic overload conditions have persisted at the Masthope WWTP since at least 2018,

---

[149] R.D. at 133. The ALJ also noted that Masthope may file an appeal to the Environmental Hearing Board if it believes that PADEP's response to the sewage planning issues are inadequate. *Id*. (citing, Aqua Post-Hearing Exh. 1).

and the resulting moratorium on new connections imposed by the PADEP in 2020, notwithstanding PADEP's recent modification to allow additional connections. Masthope remains of the opinion that a rate increase under these circumstances is unwarranted. Namely, Masthope emphasizes that the Masthope community experienced a substantial rate increase in 2019. Masthope Exc. at 4 (citing Masthope M.B. at 9-19; Masthope Exc. at 4-10).

Masthope asserts that the ALJ erred by: (1) failing to conclude that Aqua has rendered inadequate and unreasonable wastewater service; (2) concluding that the Commission lacks jurisdiction over the hydraulic overload issues facing the Masthope system; (3) making an unsubstantiated finding that increased precipitation levels and shifts from part-time to full-time residencies during the COVID-19 pandemic caused hydraulic overloads; and (4) failing to consider whether to impose conditions upon any rate increase granted in this proceeding. Masthope Exc. at 5-10.

Masthope reemphasizes its position that Aqua's requested rate increase is unjust and unreasonable for Masthope ratepayers, particularly since Masthope residents experience ongoing and unresolved service issues. Masthope notes that Aqua acknowledges that it may take five years to implement the plans to fully resolve the hydraulic overload conditions at the Masthope WWTP. Masthope Exc. at 4.

Masthope asserts the Commission has jurisdiction, pursuant to its authority under Section 523 of the Code, *supra,* to consider the adequacy of Aqua's service to Masthope customers in determining just and reasonable rates. Masthope argues that the Commission should find that Aqua failed to provide its Masthope customers with adequate, efficient, safe, and reasonable service and facilities, and therefore deny all or part of Aqua's requested rate increase. Masthope Exc. at 5-7 (citing, *e.g.*, *Sutter v. Clean Treatment Sewage Company*, Docket No. C-20078197, (Order entered May 15, 2009) (*Sutter*) at 14).

Masthope notes that while the ALJ acknowledged the Company's failure to provide adequate service, she should have recommended an adjustment to Aqua's requested rate increase to reduce the impact on Masthope wastewater customers. Masthope Exc. at 6-7 (citing R.D. at 29-30, Findings of Fact Nos. 11[2]-1[4][150]). Masthope also argues that it was error for the ALJ to conclude that because PADEP has granted limited approval of Aqua's proposed Corrective Action Plan, the Commission lacks jurisdiction to address those matters as part of the rate proceeding. Masthope Exc. at 6 (citing R.D. at 133). Masthope asserts that the Commission has previously drawn a distinction of PADEP jurisdiction over hydraulic overloads which involve strictly environmental protection issues and the Commission's jurisdiction over adequate service in the context of rate proceedings. Masthope Exc. at 6-7 (citing *Sutter*).

Next, Masthope argues that it was error for the ALJ to acknowledge any factors "beyond Aqua's control" as mitigating Aqua's responsibility for hydraulic overload conditions. Specifically, Masthope asserts that there is no evidence of record to support the impact of the COVID-19 pandemic, including shifts from part-time to full-time residency, and elevated precipitation levels as impacting hydraulic overloads. Masthope Exc. at 8-9 (citing R.D. at 132).

---

[150] These Findings of Fact state, as follows:

> 112. Aqua submitted a Corrective Action Plan to Pennsylvania Department of Environmental Protection (PADEP), which is targeted at restoring or otherwise making available capacity to current and future connections at Masthope Mountain community.
> 113. This Corrective Action Plan was recently approved by PADEP.
> 114. As part of the approved Corrective Action Plan, PADEP also granted a sewer connection allocation of 60 Equivalent Dwelling Units (EDUs) to Aqua, modifying the sewer connection moratorium.

R.D. at 29-30 (citations omitted).

Finally, Masthope asserts that it was error for the ALJ to fail to impose any conditions on Aqua's proposed rate increase to assure the future provision of adequate and reasonable wastewater service for Aqua's Masthope customers, consistent with the Commission's authority to deny a rate increase *in part* where the Commission finds a public utility fails to render adequate service. Masthope Exc. at 9 (citing Masthope M.B. at 9-19; Masthope R.B. at 2-5).

Masthope requests that, if the Commission approves an increase in Masthope rates, the Commission should impose conditions and deadlines on Aqua to assure that the Company timely resolves the hydraulic overload conditions and permanently eliminates building restrictions that detrimentally affect the community. Further, Masthope argues the existence of Aqua's Corrective Action Plan in response to the PADEP does not preclude the Commission's authority to impose further such conditions. Masthope Exc. at 2, 6.

Specifically, Masthope requests that the Commission impose conditions to resolve the hydraulic overload conditions and eliminate building restrictions by directing Aqua to:

- coordinate with Masthope and local officials regarding the Corrective Action Plan;

- report to Masthope and the Commission on the status of corrective actions;

- seek additional requests or an amendment to the Corrective Action Plan to increase the number of connections to the Masthope WWTP pending completion of the Corrective Action Plan;

- assure that Aqua's "Project 15088006258 – Masthope WWTP Add Treatment Train" results in eliminating the building restrictions currently affecting the Masthope WWTP;

- timely complete Act 537 planning and related improvements to eliminate building restrictions in Masthope; and

- at a minimum, in light of PADEP's recent modifications to Aqua's Corrective Action Plan, require that Aqua meet and confer with Masthope and Lackawaxen Township officials to discuss the 60 permitted connections to determine areas of priority and maximize the benefit to the Masthope community.

Masthope Exc. at 9 (citing Masthope M.B. at 9-19; Masthope R.B.at 2-5).

Accordingly, Masthope asserts that the Commission should reject the ALJ's recommendation, grant Masthope's Exception No. 1, impose a reasonable reduction in Aqua's requested rate increase as it pertains to the Masthope community, and otherwise impose reasonable conditions upon Aqua to ensure timely resolution of the hydraulic overload conditions and elimination of building restrictions. Masthope Exc. at 10.

In its replies, Aqua asserts that the ALJ properly recommended that the Commission deny Masthope's claims of poor quality of service as a basis for challenging the Company's requested rate increase. Aqua notes that the ALJ correctly concluded that Aqua has taken affirmative steps to resolve problems facing this system, and proactively identify improvements to address "sewage planning and regulatory issues within…[PADEP's] purview." Aqua asserts that its affirmative steps taken to improve the system, which led to PADEP's lifting of the ban on new housing in Masthope, based upon Aqua's detailed Treatment Train Project, as expanded to a long-term capital upgrade project, and other steps taken by the Company to reduce I&I in the collection system, demonstrate Aqua's reasonable provision of service in the circumstances. Aqua R. Exc. at 23-25 (citing R.D. at 133; Aqua M.B. at 195-96). Aqua concludes that, as found by the ALJ, Aqua has provided reasonable service and taken reasonable steps to address the problems facing this system. Aqua R. Exc. at 25.

Aqua further asserts that Masthope misconstrues the Commission's decision in *Sutter*, which Aqua asserts is distinguishable from the present circumstances. Specifically, Aqua claims that, unlike the utility in *Sutter*, Aqua has taken prompt and significant steps to resolve the hydraulic overloads facing the Masthope system, including the recently approved Corrective Action Plan submitted to PADEP. Aqua Exc. at 24 (citing Aqua R.B. at 85-86).

Aqua asserts that, contrary to Masthope's position, the record fully supports the ALJ's conclusion regarding the impact of circumstances beyond Aqua's control upon the occurrence of hydraulic overloads, including increased precipitation levels and shifts from part-time to full-time residencies during the COVID-19 pandemic. More specifically, Aqua notes that its witness, Mr. Duerr, testified to the steps taken by Aqua beginning in 2018 to address the system's issues, and the intervening events in 2020 that resulted in these overloads. Aqua Exc. at 24-25 (citing Aqua M.B. at 196-97).

Finally, Aqua contends that the Commission should reject Masthope's request that the Commission condition Aqua's requested rate increase. Aqua asserts that Masthope's proposed conditions relate to items identified in Aqua's Chapter 94 Reports and the Corrective Action Plan which was approved under the purview of the PADEP. Aqua Exc. at 25 (citing Aqua R.B. at 87-88).

Accordingly, Aqua asserts that the Commission should deny Masthope's Exception No. 1 and adopt the ALJ's recommendation dismissing Masthope's Complaints at Docket Nos. C-2021-3028992 and C-2021-3028996. Aqua Exc. at 25.

In its replies, I&E asserts its support for what it describes as the ALJ's well-reasoned recommendation as it pertains to Masthope. I&E R. Exc. at 24.

Finally, in its Replies, the OCA asserts that if the Commission grants Masthope's request to reduce the rate increase for Masthope customers, the remedy should not shift or impose corresponding costs on other Aqua water or wastewater customers. The OCA asserts that the revenue requirement associated with the rates set for Masthope should not be reallocated to other Aqua customers, based on Masthope's claim of inadequate service. Rather, if inadequate service is found, the OCA maintains that Aqua should bear the cost by reduction in the return on equity because the revenue requirement for Masthope would not be fully reflected in rates. OCA R. Exc. at 18 (citing OCA R.B. at 50; Masthope Exc. at 4-10).

4. Disposition

Upon review, as discussed more fully, *infra.*, we agree with the ALJ's recommendation to grant Aqua's proposed rate increase as applicable to Masthope, and we decline to impose any additional conditions upon Aqua related to the reduction of hydraulic overload conditions and elimination of building restrictions.

As a preliminary matter, we agree with the ALJ that our disposition of this issue turns on whether Aqua's alleged failure to provide reasonable service is so pervasive that the Company should be punished for this failure by refusing to grant its request for increased revenue, and whether it is necessary and appropriate to direct service changes or the installation of additional facilities.

Further, we agree with the general principles argued by Masthope that it is within the Commission's discretion pursuant to our authority under Section 523 of the Code, to consider the adequacy of Aqua's service to Masthope customers in determining just and reasonable rates. Should we determine that Aqua's provision of service was inadequate *in the circumstances*, it is within our discretion to deny or reduce Aqua's requested rate increase, and/or impose further conditions as deemed reasonable and necessary in the circumstances. However, under the circumstances, we do not conclude that Aqua's provision of service to Masthope may be found to be unreasonable, or so inadequate as to justify a reduction in the proposed rate increase or warrant imposition of additional conditions upon Aqua's provision of service.

In the present circumstances, it is acknowledged that the Masthope community has experienced serious customer service issues regarding hydraulic overloads and the inability to meet the needs for new connections. However, in the context of a requested rate increase, our recognition of the serious allegation of issues regarding the provision of service must also include consideration of the Company's response to those issues. Where the Company's response is untimely and/or inadequate, we may be persuaded that the Company's proposed rate increase should be denied in total or reduced by some measure, and/or that certain conditions should be attached to the rate increase approval. *See Sutter, supra*.

Here, however, we conclude that the facts of the present case reflect that Aqua has taken prompt, reasonable and affirmative steps to rectify the problems associated with hydraulic overloads and the connection needs of the Masthope community. As noted by the Company, Aqua's detailed Treatment Train Project, as expanded to a long-term capital upgrade project, and other steps taken by Aqua to reduce I&I in the collection system, demonstrate Aqua's reasonable provision of service in the circumstances. Aqua R. Exc. at 23-25 (citing, R.D. at 133; Aqua M.B. at 195-96).

Further, we disagree with Masthope's argument that the Commission's prior decision in *Sutter* is applicable in the present circumstances. We note that *Sutter* is an example of the exercise of the Commission's discretion on a case-by-case basis, in the circumstances involving a rate increase which did not establish a mandatory standard or ruling. Although *Sutter* did involve the Commission's exercise of jurisdiction where a utility had matters pending before the PADEP, the facts in *Sutter* are distinguishable in material respect to the facts presently before us. Foremost, the utility in *Sutter* did not demonstrate the prompt and affirmative steps to rectify the service deficiencies at issue in the proceeding. *See*, generally, *Sutter,* at 14. . In contrast here, the record reflects Aqua's prompt, reasonable and affirmative steps to rectify the problems and needs of the Masthope community.

Accordingly, we shall deny Masthope's Exceptions No. 1, and adopt the ALJ's recommendation, dismissing the Complaints at Docket Nos. C-2021-3028992 and C-2021-3028996.

E. COVID-19 Uncollectible Deferral

1. Positions of the Parties

Rather than requesting recovery of its existing COVID-19 deferral amounts in this current rate case, Aqua proposed to continue recording amounts in its COVID-19 deferral account and to seek recovery in a future rate case. In support, Aqua explained that the Commission previously authorized utilities to create regulatory assets for incremental uncollectible expenses related to COVID-19 above those already embedded in base rates. Aqua M.B. at 200 (citing Aqua St. 1 at 22-24).

Aqua noted increased levels of unpaid billings or "bad debt," due to the service termination moratorium, citing *Public Utility Service Termination Moratorium Proclamation of Disaster Emergency – COVID-19*, Docket No. M-2020-3019244 (Emergency Order ratified March 26, 2020) (*Emergency Order*). According to Aqua, this increased the Company's uncollectible accounts expense above the amount currently embedded in its base rates, which were $2,425,823 for water and $217,335 for wastewater base systems during the HTY. Aqua explained that it calculated these expenses by normalizing them to pre-pandemic levels, specifically the rate of bad debt expense implicitly authorized in the *Aqua 2018 Rate Case*. The Company recorded a regulatory asset of $5,695,030 as a result of aging accounts receivable from its customers due to the termination moratorium. Aqua M.B. at 201.

Aqua argued that, although the service termination moratorium has ended, Pennsylvania continued to be impacted by the COVID-19 pandemic at the time of the Company's filing, and that it continues to incur incremental levels of uncollectible expenses beyond the end of the HTY. In response, Aqua sought continued authorization to defer (not recover) these incremental expenses realized over and above its recovery levels for review and recovery in its next base rate case. Aqua M.B. at 201-02 (citing Aqua St. 1 at 23-24).

Aqua asserted that it was not asking for "any time value of the money related to these deferrals" and that the Company and its shareholders were currently funding, and will continue to fund, the delayed cash inflow from aging accounts receivable. Thus, the Company submitted that its customers will not fund this aspect of the incremental costs Aqua has incurred to provide continuous and reliable service in the face of a global pandemic. Aqua M.B. at 203 (citing Aqua St. 1-R at 7).

Moreover, the Company asserted that it has not sought authorization to defer any incremental expenses for safety supplies, masks, hand sanitizers, social distancing signage, which were required in many facilities. According to the Company, Aqua has been and will continue to be conservative in seeking to recover incremental COVID-19 related expense. Aqua M.B. at 203-04.

I&E recommended the Company be required to track further COVID-19 related reductions to uncollectible expenses in its water and individual wastewater revenue requirements; and, that the balances be claimed in the next rate filing, which is anticipated to be filed in 2024. Further, I&E requested that Aqua: (1) be required to propose amortization of the balance at that time, amortized over a period of years, to be claimed in the next rate proceeding; and (2) be allowed to claim no interest or any time value of money component associated with the delay. Also, I&E recommended that the Company be allowed to claim no increases to COVID-19 related uncollectible expenses beyond the effective date of new rates in this proceeding, because Aqua has expressed that its motivation in delaying the amortization of the balance is to mitigate the impact on ratepayers. I&E M.B. at 58-59.

I&E added that any new increases to the COVID-19 related uncollectible expenses should not be recoverable in a future proceeding. According to I&E, the recommended delay is based on Aqua's assertion that the COVID-19 related uncollectible expenses are declining since the Company has been permitted to resume collection activities, and that the Company expects this declining trend to continue which would reduce the impact on ratepayers. I&E submitted that any new increases to the COVID-19 related uncollectible expenses should not be recoverable in a future proceeding. I&E M.B. at 57, 59.

The OCA recommended that Aqua offset any claimed costs with savings that it has recognized during the pandemic. Aqua agreed with this recommendation. However, the OCA contended that indefinite continued deferrals beyond the FPFTY would be unreasonable and should not be permitted. According to the OCA, the end of the FPFTY would be a reasonable point to cut off the Company's ability to continue recording incremental deferred uncollectible expenses related to the pandemic. OCA M.B. at 50.

2. Recommended Decision

The ALJ recommended that the Commission should continue to authorize Aqua to defer its COVID-19 related uncollectible expenses. However, the ALJ agreed with I&E that Aqua should be required to track further COVID-19 related reductions to uncollectible expenses pursuant to its water and the individual wastewater revenue requirements. The ALJ reasoned that the burden is on Aqua to demonstrate that these expenses are "prudently incurred incremental extraordinary, nonrecurring expenses related to COVID-19." R.D. at 136 (citing Secretarial Letter issued by the Commission on May 13, 2020, at Docket No. M-2020-3019775 titled "COVID-19 Cost Tracking and Creation of Regulatory Asset" (*May 2020 Secretarial Letter*)).[151] Agreeing with the OCA, the ALJ also stated that these expenses should be offset by any savings, upon which Aqua indicated agreement. R.D. at 136.

Additionally, the ALJ emphasized that, to date, the Commission has declined to impose a hard cutoff for the accumulation of deferred expenses related to COVID-19. The ALJ noted the provisions of the *May 2020 Secretarial Letter* have not been modified and cited to a recent decision of the Commission indicating that the effects

[151] Subsequent to the *May 2020 Secretarial Letter*, the Commission issued the following Orders: *Public Utility Service Termination Moratorium – Modification of March 13th Emergency Order*, Docket No. M-2020-3019244 (Order entered October 13, 2020) (*October 2020 Order*); *Public Utility Service Termination Moratorium*, Docket No. M-2020-3019244 (Order entered March 18, 2021) (*March 2021 Order*); and *Public Utility Service Termination Moratorium; COVID-19 Cost Tracking and Creation of Regulatory Asset*; Docket Nos. M-2020-3019244 and M-2020-3019775 (Order entered July 15, 2021) (*July 2021 Order*).

of the COVID-19 pandemic are still being felt by utilities.[152] Therefore, the ALJ deemed it premature to establish a hard cut-off date for the accumulation of deferred expenses and savings in this base rate proceeding. Rather, the ALJ was persuaded by Aqua's argument that permitting additional time for economic conditions to stabilize will not harm ratepayers and may perhaps be to their benefit as the Company is able to offset uncollectible expenses with increased collection activities. R.D. at 136 (citing Aqua St. 1-R at 7).

The ALJ acknowledged the Company's contention that it is not seeking any time value of the money related to these deferrals, nor is it seeking authorization to defer any incremental expenses for safety supplies, masks, hand sanitizers, and social distancing signage, that were required in many facilities. The ALJ further reasoned that uncollectible expenses may be mitigated by the enhancements to Aqua's universal service program and from recent federal funding dedicated to reducing unpaid utility bills. R.D. at 136-37.

3. OCA Exception No. 7 and Replies

In its Exception No. 7, the OCA argues that the ALJ erred in accepting Aqua's proposal to continue deferring its COVID-19 uncollectible expenses indefinitely. OCA Exc. at 9-10.

The OCA begins with its agreement that the pandemic is ongoing and its continuing impacts have informed the OCA's other adjustments including those

[152] *See Petition of Pennsylvania-American Water Company for Authorization to Defer, and Record as Regulatory Assets for Future Recovery: (1) Incremental Expenses Incurred Because of the Effects of the COVID-19 Emergency; (2) Revenue Reductions Attributable to the Effects of the COVID-19 Emergency; and (3) Carrying Charges on the Amounts Deferred*, Docket No. P-2020-3022426 (Order entered September 15, 2021) (*PAWC COVID-19 Deferral Order*).

regarding seasonal positions and rate case expense, citing the OCA Exception Nos. 4 and 5. Despite this, the OCA asserts it is unreasonable to continue to allow deferrals indefinitely beyond the FPFTY. OCA Exc. at 9 (citing OCA St. 1 at 63). According to the OCA, the Commission should establish a clear point in time during which Aqua must cease recording costs related to COVID-19 into the existing deferral account, in order to ensure that those costs do not accumulate to unreasonably burden consumers in later rate cases. OCA Exc. 9-10.

The OCA submits that the end of the FPFTY would be a reasonable point to end the current deferral and the Commission should impose such a cut-off for the Company. The OCA adds that if the Company finds it necessary to continue to defer COVID-19 related costs at the end of its FPFTY (*i.e.*, by March 31, 2023), it can ask the Commission to approve a new deferral mechanism at that time. *Id*. at 10.

In its reply, Aqua argues that the ALJ correctly rejected the OCA's arguments. The Company asserts that the OCA still believes it necessary to set an end-date for the calculation of COVID-19 deferrals that increase expenses but wants to capture any future decreases to the balance. Aqua submits that the OCA's approach is unbalanced and should be rejected. The Company contends that its proposal, as modified and adopted by the ALJ, is balanced because it continues to defer the determination of changes to the COVID-19 uncollectible accounts balance, whether higher or lower, until Aqua's next rate case. Aqua R. Exc. at 6.

Emphasizing the ALJ's reference to the *May 2020 Secretarial Letter* and that the Commission has declined to impose a hard cut-off for the accumulation of deferred expenses related to COVID-19, the Company argues that establishing a cut-off date only for Aqua in the context of this rate proceeding would be unfair and premature. Accordingly, Aqua contends that the OCA's Exception No. 7 should be denied. Aqua R. Exc. at 7 (citing Aqua M.B. at 200-06; Aqua R.B. at 89).

In its reply to the OCA's Exception No. 7, I&E asserts that it does not oppose the OCA's argument that the ALJ erred in accepting Aqua's proposal to continue deferring its COVID-19 uncollectible expenses indefinitely. I&E also references the ALJ's conclusion that the Commission has declined to impose a hard cut-off date for the accumulation of such deferred expenses. However, I&E recommends that, until such time as a hard cut-off date is established, the Commission in this proceeding should set the cut-off date for Aqua at the effective date of new rates. I&E R. Exc. at 14-15.

4. Disposition

Aqua seeks Commission approval of its request to continue recording amounts in its COVID-19 deferral account and to seek recovery in a future rate case. As discussed in *PAWC COVID-19 Deferral Order*, the Company must demonstrate that the expense items it requests to defer appear to be within the scope of the type of items that the Commission has allowed as an exception to the general rule against retroactive recovery of past expenses. Commission authorization for deferral accounting is not intended to create a factual record. As such, the burden of proof will remain with Aqua in a future proceeding to demonstrate that each expense item is: (1) extraordinary and substantial, (2) nonrecurring, (3) incremental and, (4) COVID-19 related consistent with the *May 2020 Secretarial Letter*. *See PAWC COVID-19 Deferral Order* at 6-7.

Regarding COVID-19 cost tracking and the creation of regulatory assets, the Commission directed regulated utilities in Pennsylvania:

> [T]o track extraordinary, nonrecurring incremental COVID-19-related expenses and to maintain detailed accounting records of such expenses. Utilities must maintain detailed records of the incremental expenses incurred for the provisioning of utility services used to maintain the health, safety and welfare of Pennsylvania customers during the COVID-19 pandemic. With the exception of the separate

> regulatory authorization afforded uncollectible expenses below, this Secretarial Letter does not grant authorization for utilities to defer any other potential COVID-19-related expenses.

May 2020 Secretarial Letter at 2.

The directives in the *May 2020 Secretarial Letter* were reaffirmed in our *July 2021 Order*, as follows:

> The Commission acknowledged in its [*March 2021 Order*] that its COVID-19 related Orders may benefit customers and increase expenses for utilities. Consistent with our May 13, 2020, Secretarial letter at Docket No. M-2020-3019775, the Commission hereby confirms that utilities shall continue tracking extraordinary, nonrecurring incremental COVID-19 related expenses and shall maintain detailed accounting records of such expenses. Additionally, the Commission hereby confirms that electric, natural gas, water, wastewater, steam, and all rate base/rate of return telecommunications utilities are authorized to create a regulatory asset for any incremental expenses incurred above those embedded in rates resulting from the directives contained in this Order. To be eligible for inclusion in a utility's COVID-19 designated regulatory asset, the utility must maintain detailed records of the incremental extraordinary, nonrecurring expenses incurred as a result of compliance with the Commission's [*Emergency Order*, *March 2021 Order*, *October 2020 Order*] and this Order.

July 2021 Order at 4.

Here, there is no dispute that the incremental uncollectible expenses related to COVID-19 above those already embedded in base rates are within the scope of the type of items which are allowable as an exception to the general rule against retroactive recovery of past expenses. Aqua has elected to defer seeking recovery of these expenses until its next base rate proceeding at which time it will have the burden of proof to demonstrate that each expense satisfies the Commission standards for recovery.

The only question in this proceeding is whether the Commission should impose a cut-off date for the accumulation of deferred expenses related to COVID-19. Aqua seeks to extend the accumulation period until its next base rate proceeding. I&E requests that the Commission stop the accumulation time period beginning with the effective date of new rates established in this proceeding. The OCA proposes a continuation of the deferral of COVID-19 related costs until the end of the Company's FPFTY in this proceeding and thus by March 31, 2023.

Consistent with our determination in *PAWC COVID-19 Deferral Order*, we shall decline to set a hard cut-off date for the accumulation of deferred expenses. It is evident that the effects of COVID-19 are still being felt by utilities and we deem it premature to conclude that the pandemic is over and that no additional related expenses will be incurred beyond the end-dates proposed by I&E and the OCA.

We also agree with the well-reasoned conclusions of the ALJ that permitting additional time for economic conditions to stabilize will not harm ratepayers but may operate to their benefit if the Company is able to offset uncollectible expenses with increased collection activities. *See* Aqua St. 1-R at 7. Further, Aqua provided testimony that it is not seeking the time value of the money related to these deferrals, nor is it seeking authorization to defer any incremental expenses for safety supplies, masks, hand sanitizers, or social distancing signage, that were required in many facilities. *Id*. Moreover, as noted by the ALJ, uncollectible expenses may be further mitigated by the enhancements to the Company's universal service program and from recent federal funding dedicated to reducing unpaid utility bills. *See* R.D. at 137.

In declining to establish a cut-off date for the accumulation of deferred expenses in this proceeding, we emphasize that consideration of the period of recovery for any regulatory asset treatment is being deferred to the subsequent base rate proceeding filed by the Company. Again, such deferred amounts that Aqua may seek to recover in a future proceeding will be subject to detailed review and investigation and the burden of proof will remain with the Company to establish the prudence and reasonableness of its incremental COVID-19 related financial impacts.

Thus, we shall deny the OCA's Exception No. 7 and adopt the recommendation of the ALJ.

F. Directed Questions of Commissioner Yanora

On September 16, 2021, Commissioner Yanora requested that the Parties address certain issues, including questions pertaining to lead service lines, cross-connections, backflow prevention devices, and lost and unaccounted for water. The Company provided responses to these questions in Aqua Exhibit TMD-4-R which were sponsored by Aqua's witness, Mr. Duerr, with his rebuttal testimony. *See* Aqua M.B. at App. D.

The specific inquiries are as follows:

1) The estimated number of company-owned lead service lines and the number of customer-owned lead service lines in the Aqua water distribution system;

2) Compliance of the Aqua tariff cross-connection control requirements with 25 Pa. Code §§ 109.709, 109.609 and any applicable provisions of the International Plumbing Code;

3) Compliance materials of Aqua's operation and maintenance plans required by 25 Pa. Code § 109.702 as they relate to

adequate, safe, and reasonable service for utility customers and employees;

4) The number of Aqua's commercial meters in the system, the number tested, and the number passed or failed for calendar year 2020;

5) The number of Aqua's valves exercised in calendar year 2020 and the frequency of valve maintenance;

6) The number of Aqua's commercial and industrial customers that have testable backflow prevention devices and the number of devices that were tested for calendar year 2020;
7) Aqua's tariff backflow prevention requirements regarding residential fire protection and irrigation and whether Aqua has a plan for inspection and testing of fire hydrants;

8) Whether Aqua has surveyed the number of fire hydrants that do not provide a minimum flow of 500 gallons per minute at 20 pounds per square inch; and

9) Whether Aqua's residential customers have American Society of Sanitary Engineers 1024 backflow assemblies installed at meter locations.

10) Whether Aqua has evaluated its lost and unaccounted water performances since 2018 and any relevant results.

Directed Questions at 1-2.

The following discussion provides a summary of the responses provided by Aqua's witness, Mr. Duerr, in addressing the Directed Questions. Aqua Exh. TMD-4-R.[153] We note that some of the areas of inquiry have already been addressed in the Quality of Service sections, *supra*.

---

[153] There are no page numbers within this exhibit; thus, we shall follow the Company's general citation method to the questions and responses (*i.e.*, Yanora-1, Yanora-2, *etc.*).

Regarding the first inquiry about the estimated number of lead service lines in Aqua's system, the Company responded that on September 3, 2020, Aqua filed a petition for approval of tariff changes authorizing the replacement of customer-owned lead service lines. Aqua asserted that the Commission approved the petition on July 15, 2021, pursuant to a modified settlement.[154] The Company submitted that since receiving approval it has reached out to customers with known lead service lines and is in the process of getting agreements in place with customers to allow replacement of their lead service line under Aqua PA's program. Yanora-1.

The Company added that, as of September 2021, Aqua had seven known Company-side lead service lines and identified 325 customer-owned lead service lines in its system based on the review of tap cards, water sampling data, meter exchange, and service call information. Aqua estimated that in total there are over 100 Company-side lead service lines and over 2,000 customer-owned lead service lines. *Id*.

---

[154] On May 28, 2021, ALJ Marta Guhl granted Aqua's modified Joint Petition for Settlement and approved the Company's Joint Settlement Replacement Plan set forth in the Settlement. *See Petition of Aqua Pennsylvania, Inc. for Tariff Changes Authorizing Replacement of Customer-Owned Lead Service Lines*, Docket No. P-2020-3021766 (Recommended Decision issued May 28, 2021). No Exceptions to the Recommended Decision were filed and the Commission entered a Final Order adopting the Recommended Decision on July 15, 2021 (*Aqua LSL Order*).

As to the second inquiry concerning compliance with tariff cross-connection[155] control requirements, Aqua asserted that it has an established cross-connection control program operated under its Cross-Connection Control Manual (Manual). The Company attached a copy of the Manual (as Yanora-2, Attachment 1) and indicated that as of July 2021, 77% of known backflow devices in Aqua's service areas were tested in accordance with 25 Pa. Code §§ 109.709, 109.608 and applicable provisions of the International Plumbing Code. According to Aqua, all new customers of its systems are required to install backflow devices as identified in the standards and specification outlined in its Manual which meet the requirements of the codes noted above. Yanora-2.

Regarding the third inquiry, Aqua submitted that it has an operation and maintenance plan required by 25 Pa. Code §109.702 as it relates to adequate, safe, and reasonable service for utility customers and employees. The Company stated that this plan was last updated in November 2019 and will be updated again in 2022 after the Company completes its requirements to update emergency response plans required by the American Water Infrastructure Act, which the Company indicated were due on December 31, 2021, for certification of Group 3 systems. In addition to general updates,

---

[155] Cross connections are defined in the PA DEP's regulations as follows:

> Cross-connection—An arrangement allowing either a direct or indirect connection through which backflow, including backsiphonage, can occur between the drinking water in a public water system and a system containing a source or potential source of contamination, or allowing treated water to be removed from any public water system, used for any purpose or routed through any device or pipes outside the public water system, and returned to the public water system. The term does not include connections to devices totally within the control of one or more public water systems and connections between water mains.

25 Pa. Code § 109.1.

Aqua stated that the updated operation and maintenance plan will reflect acquired systems and updates related to other operating plans. Yanora-3.

Regarding the fourth inquiry concerning the number of commercial meters in the system, the number tested, and the number passed or failed for 2020, Aqua responded that at the end of 2020, the Company had 23,139 meters installed at commercial premises within the service area. Aqua added that in 2020, 801 meters installed at commercial premises were removed and tested; 458 (57%) of those meters failed their testing based on flowrates and accuracy defined by the standards of the American National Standards Institute (ANSI) and the AWWA for new meters. Yanora-4 (citing ANSI/AWWA C-700).

The fifth inquiry concerned the number of valves exercised in calendar year 2020 and the frequency of valve maintenance.[156] Aqua responded that it has a critical valve testing program that was reviewed during the Commission's recent Management Audit report. In this report, Aqua noted that it has been credited with developing a strong base for its valve inspection program by focusing on critical valves. Yanora-5.

Additionally, Aqua referenced the Management Audit recommendation that Aqua implement a full-scale valve inspection and exercise program designed to identify what valves have not been operated or inspected in the last ten years. Although Aqua

---

[156] Generally, the exercising of a water main valve means that each valve connected to the water main of the distribution system is tested to ensure it is working properly by operating the valve through a full cycle and returning it to its normal position (*i.e.*, turning the valve completely off, then gradually opening it and closing it, before returning it to its normal open position). *See e.g.*, Zane Satterfield, P. E., *Tech Brief – Valve Exercising*, Summer 2007, Vol. 7, Issue 2, National Environmental Services Center; https://www.nesc.wvu.edu/files/d/1f62b334-8497-403e-bceb-f5116ac2c142/valve-exercising.pdf.

agreed that non-critical valve inspection and exercising program is warranted, it had concerns with the suggested exercising frequency outlined in the report. As part of the implementation plan, Aqua agreed to engage a consultant to evaluate the Company's water systems and develop a non-critical valve inspection and exercising program. According to Aqua, this effort will consider such factors as standard operating procedures for inspection and exercising valves, valve operating frequency, the identification of routinely operated valves, and the resources necessary to complete these procedures. Aqua asserted that this program will ensure that non-critical valves will be inspected and exercised on a level representing good industry practice. The Company added that the exercising frequency will be included in the review by the consultant and Aqua will provide the recommended frequency in its next update report. *Id*.

In further response to the fifth inquiry, Aqua explained that all critical valves have been identified in the Aqua Geographic Information System (GIS) asset registry and will continue to be updated as as-builts are received. These valves currently have exercising schedules created and maintained in Aqua's work order management system or Maintenance Connection. The Company indicated that these schedules will be transferred to SAP Plant Maintenance in January 2022 and maintained at the asset level to ensure compliance with critical valve requirements. Aqua also asserted that all non-critical valves have been identified in the Aqua GIS asset registry. The Company conducted an analysis to ensure the exercising of these valves is completed over a 12-year period. According to Aqua, internal staff used GIS analysis techniques to identify valve proximity to major roadways to determine staffing requirements needed for traffic control measures. The Company stated that operation staff are meeting to determine which non-critical valves are scheduled per year. *Id*.

Additionally, Aqua stated that 129 isolation valves were repaired during calendar year 2020. Although the Company does not at present have a program for operating valves based on frequency, Aqua noted its operation of approximately 6,000 to

8,000 valves during its normal course of business which it estimated as ten percent of the valves in service each year. Aqua stated that the program operates critical valves at least once every four years and there are 270 valves in the program which began in 2017. The Company emphasized the ongoing nature of the program and the potential for occasional changes depending on modifications made in the distribution system. For reference, Aqua asserted that as of October 2021 there were a total of 83,547 valves in its system and provided a breakdown by region. *Id.*[157]

In response to the sixth inquiry, Aqua provided information related to the number of commercial and industrial customers that have testable backflow prevention devices and the number of devices that were tested for calendar year 2020. The Company stated that there are 21,830 testable backflow devices installed on commercial premises, and 920 testable backflow devices installed on industrial premises. In 2020, Aqua recorded passable tests for 15,573 devices installed on commercial premises and 643 devices installed on industrial premises. Yanora-6.

The seventh inquiry pertained to tariff backflow prevention requirements regarding residential fire protection and irrigation and whether Aqua has a plan for inspection and testing of fire hydrants. In response, Aqua cited to the Manual provided in response to the second inquiry, which defines the requirements for residential fire protection and irrigation accounts. According to the Company, all new residential fire protection and irrigation services are required to install testable backflow devices and those devices are required to be tested annually. Yanora-7.

In response to the eighth inquiry – whether Aqua has surveyed the number of fire hydrants that do not provide a minimum flow of 500 gpm at 20 psi – Aqua replied

[157] PA-Southeastern comprised the largest number of valves at 66,033. The remainder of the regions were as follows: PA-Central – 5,374; PA-Northeastern – 6,322; and PA-Western – 5,818. Yanora-5.

that it has approximately 24,500 hydrants in service in Pennsylvania. During its normal course of business, Aqua continued, it receives requests to perform flow testing from various groups outside the Company such as fire companies, sprinkler contractors, township engineers and insurance companies. Aqua also noted it performs flow tests for its own internal purposes to review fire flow in areas of its systems, with 300-500 flow tests performed annually. According to Aqua, all tests assist in decisions in operating the system and for capital planning and tests coming back with less than 500 gpm at 20 psi residual are reviewed more thoroughly. If the hydrant is in good working order and does not need repairs, Aqua explained, the hydrant location area is passed along to the Engineering Department in order for the area to be included as a candidate within Aqua's Main Replacement program. Yanora-8.

Additionally, the Company stated that as a follow up from the last rate case, it provided information regarding all fire hydrants connected to 4-inch mains or smaller that are not capable of providing 500 gpm of water at 20 psi. *Id.*[158]

The ninth inquiry concerns whether Aqua has determined if its residential customers have American Society of Sanitary Engineers (ASSE) 1024 backflow assemblies installed at meter locations. Aqua replied that its Rules and Regulations require all new customer connections to the Company's distribution system be equipped with backflow prevention, cross-connection-control or other special devices approved by the Company and in accordance with the Company's specifications. Further, at the Company's request, existing customers must install backflow prevention, cross-connection-control or other special devices approved by the Company to existing customer connections which must comply with the Company's specifications. Yanora-9.

---

[158] Aqua designated this information as Confidential and submitted it pursuant to the Protective Order issued in this proceeding. Yanora-8.

In support, Aqua submitted its Meter Installation Specifications, revised June 2015, indicating that it defines the requirements for all residential accounts. *See* Yanora-9, Attachment 1. The Company contended that all residential services are required to install an ASSE 1024 backflow device. Aqua asserted that these installations are monitored throughout its new business activities and the device is confirmed as installed before the meter is set. According to the Company, existing residential services are required to meet this standard when improvements are made to those properties requiring plumbing permits due to renovations and retrofits. Yanora-9.

In response to the tenth and final inquiry, Aqua affirmed that it has evaluated lost and unaccounted for water performance since 2018. The Company also emphasized that the Commission's Bureau of Audits recently reviewed this information in Aqua's 2020 Management Audit. Yanora-10.

Aqua explained that a yearly audit is conducted using the AWWA water audit tool which it described as "Version 6.0." *Id*. Aqua submitted that its performance exceeds industry medians for most key performance indexes, noting how Aqua's non-revenue water has held steady since 2018 at 20.2%, plus or minus 0.01%. The Company contended this results in a Real-Loss-Cost-Rate of only $6.39/connection/year which is below the median 30th percentile. *Id*.

As background, Aqua described the leak survey activity conducted in Southeast Pennsylvania by its three full-time leak survey technicians with one in each operating division office. The Company stated that its leak survey technicians normally perform leak surveys fifty-two weeks a year by pipe plate, which systematically performs a survey on the entire system. According to Aqua, the survey focuses on high-risk materials such as cast iron and stove pipe cement pipe and the objective is to survey 100% of the high-risk pipe in the system over a 15-month period. Aqua further described how leak survey technicians are available at any time to assist crews having trouble locating leak sources in the system. Additionally, Aqua noted that leak surveys are performed daily as the Company inspects hydrants, performs meter change outs, or responds to service calls. Specifically, the Company explained that the technician listens on the lines for leaks and any suspected leaks are relayed to maintenance personnel, who then respond. *Id*.

Next, the Company described its contract with Utilis, a remote-sensing data company, to conduct a pilot study survey of select distribution systems in 2019 in Southeast Pennsylvania. Aqua asserted that Utilis uses synthetic aperture radar satellite data along with their proprietary algorithm to specifically identify areas with soil moisture at a depth underground that often signifies drinking water leaks from pipes. The pilot is expected to conclude in 2022. *Id*.

For Greater Pennsylvania, Aqua proffered that it performs a water loss analysis using a form of the AWWA water audit methodology and employs a full-time leak locator who focuses primarily in the Northeastern areas. The Company also asserted that leak detection is outsourced to several contracted professionals throughout Greater Pennsylvania, as needed. Regarding other leak detection efforts, Aqua explained that its distribution field employees are equipped with acoustic leak detection equipment which is utilized each time the employee operates a fire hydrant, flushing device, distribution system valve or customer service valve. *Id*.

Referencing its direct testimony, Aqua noted its capital expenditures program for the years 2018 through 2021 has been weighted toward water main replacement. Yanora-10 (citing Aqua St. 1 at 4). The Company explained that it has approximately 5,800 miles of water main in Pennsylvania, and has been replacing, on average, over 100 miles per year for the last ten years accounting for an average investment of approximately $100 million to $150 million annually. As a result of this investment, the Company contended that it has experienced a reduction in the number of main breaks in cold weather months and an overall tightening up of the system such that recent unaccounted for water levels have been trending downward. In addition, Aqua emphasized that it has acquired many small or troubled systems and made significant improvements in their unaccounted-for-water through main replacement. Specifically, Aqua asserted that it greatly improved the Phoenixville water systems. The Company added that it has also invested in GIS software, which is used to track and monitor main break history and water aesthetic issues due to aging infrastructure. Yanora-10.

In the Recommended Decision, the ALJ referenced the Directed Questions and the Company's responses to them. R.D. at 137. The ALJ also made one specific Finding of Fact pertaining to the Company's responses to the Directed Questions as follows:

> 111. As a matter of the normal course of operations, Aqua operates between 6,000 to 8,000 valves per year, or about 10% of its valves. [Aqua Exh. TMD-4-R]

R.D. at 29. No Party filed Exceptions regarding the Company's Responses to the Directed Questions or to the recommended Finding of Fact.

However, the Parties have developed an evidentiary record pertaining to various quality of service issues that overlap with some of the Directed Question issues, including Unaccounted-for-Water, Pressure Measurements, Isolation Valves, and Fire Hydrants. We have addressed these litigated issues in this Opinion and Order, *supra*. Moreover, we note that the Company's tariff proposal to help remediate customer-owned lead service lines was recently considered and approved in the Commission's *Aqua LSL Order* entered on July 15, 2021.

To the extent that the Directed Questions pertain to additional issues not addressed in the prior litigated issues, we find that Aqua has provided sufficient responses and information which have assisted the Parties and the Commission in evaluating tangential matters which may impact the rate proposals at issue in this proceeding. Upon review, we determine that the Company's responses to the Directed Questions do not alter our ultimate determination herein that the proposed increases in rates, as modified by this Opinion and Order, are just and reasonable.

XIII. Conclusion

Based on our review of the record in this proceeding, we shall: (1) grant, in part, and deny, in part, the Exceptions filed by Aqua, I&E, and the OCA; (2) deny the Exceptions filed by the OSBA, CAUSE-PA, Aqua LUG, Masthope, and Mr. Osinski; and (3) approve an annual revenue increase of $50,510,192 to the Company's *pro forma* revenue at present rates of $510,006,687, or approximately 9.88%, for its water service and an annual revenue increase of $18,740,978 to the Company's *pro forma* revenue at present rates of $37,076,494, or approximately 50.55%, for its wastewater service. **THEREFORE;**

IT IS ORDERED:

1. That the Exceptions filed by Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., on February 28, 2022, are granted, in part, and denied, in part, consistent with this Opinion and Order.

2. That the Exceptions filed by the Commission's Bureau of Investigation and Enforcement on February 28, 2022, are granted, in part, and denied, in part, consistent with this Opinion and Order.

3. That the Exceptions filed by the Office of Consumer Advocate on February 28, 2022, are granted, in part, and denied, in part, consistent with this Opinion and Order.

4. That the Exceptions filed by the Office of Small Business Advocate on February 28, 2022, are denied, consistent with this Opinion and Order.

5. That the Exceptions filed by the Coalition for Affordable Utility Services and Energy Efficiency in Pennsylvania on February 28, 2022, are denied, consistent with this Opinion and Order.

6. That the Exceptions filed by Masthope Mountain Community Association on February 28, 2022, are denied, consistent with this Opinion and Order.

7. That the Exceptions filed by the Aqua Large Users Group on February 28, 2022, are denied, consistent with this Opinion and Order.

8. That the Exceptions filed by Donald C. Osinski on February 21, 2022, are denied, consistent with this Opinion and Order.

9. That the Recommended Decision of Administrative Law Judge Mary D. Long, issued on February 18, 2022, is adopted, as modified, by this Opinion and Order.

10. That Aqua Pennsylvania, Inc., is authorized to grant discounted rates to Chemung County Industrial Development Agency, Horsham Water Authority, and the Borough of Sharpsville consistent with the water resale contracts charging discounted rates pursuant to Aqua Pennsylvania, Inc.'s tariff Rider DRS – Demand Based Resale

Service. The total upward adjustment to Aqua Pennsylvania, Inc.'s revenues as a result of water contract revenue as set forth in Table II – Water shall be $1,136,086.

11. That the corrections and modifications directed by this Opinion and Order reflected in Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., Docket Nos. R-2021-3027385 and R-2021-3027386 (Commission Tables Calculating Allowed Revenue Increase), attached hereto, are adopted as being in the public interest.

12. That Aqua Pennsylvania, Inc., shall not place into effect the rates, rules, and regulations contained in proposed Tariff Water - Pa. P.U.C. No. 3, as filed.

13. That Aqua Pennsylvania Wastewater, Inc., shall not place into effect the rates, rules, and regulations contained in proposed Aqua Original Tariff Sewer - Pa. P.U.C. No. 3, as filed.

14. That Aqua Pennsylvania, Inc., is authorized to file tariffs, tariff supplements and/or tariff revisions, on at least one day's notice, and pursuant to the provisions of 52 Pa. Code §§ 53.1, *et seq.*, and 53.101, designed to produce an annual operating revenue of approximately $561,658,784, representing an annual revenue increase of approximately $50,510,192, to become effective for service rendered on and after May 19, 2022.

15. That Aqua Pennsylvania Wastewater, Inc., is authorized to file tariffs, tariff supplements and/or tariff revisions, on at least one day's notice, and pursuant to the provisions of 52 Pa. Code §§ 53.1, *et seq.*, and 53.101, designed to produce an annual operating revenue of approximately $55,817,471, representing an annual revenue increase of approximately $18,740,978, to become effective for service rendered on and after May 19, 2022.

16. That Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall file detailed calculations with its tariff filings, which shall demonstrate to the Commission's satisfaction that the filed tariff adjustments comply with the provisions of this final Opinion and Order.

17. That Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall allocate the authorized increase in operating revenue to each service, rate schedule, and customer class, and rate schedule within each rate customer class, in the manner prescribed in this Opinion and Order.

18. That Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall file with the Commission's Secretary's Bureau at these dockets and provide the Commission's Bureaus of Technical Utility Services and Investigation and Enforcement with updates to schedule G-2 of Aqua Exhibits 1-A, 1-B, 1- C, 1-D, 1-E, 1-F, and 1-G, no later than July 1, 2022, which should include actual capital expenditures, plant additions, and retirements for the 12 months ending March 31, 2022, and, an additional update for actuals for the 12 months ending March 31, 2023, no later than July 1, 2023.

19. That Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall comply with all directives and conclusions contained in this Opinion and Order that are not the subject of individual ordering paragraphs as if they were the subject of specific ordering paragraphs.

20. That Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall begin monitoring and reviewing the appropriate customer billing data for purposes of determining, in its next base rate proceeding, if, and to what extent, any offset to its low-income program cost recovery is necessary to avoid any double recovery Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., may receive through actual collections after the implementation of its customer assistance programs. Aqua

Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall consult with the Office of Consumer Advocate and the Commission's Bureau of Investigation and Enforcement to determine the necessary data that is needed to accomplish this directive.

21. That Aqua Pennsylvania, Inc., shall develop an isolation valve inspection and exercise program, to be implemented no later than one-hundred and eighty (180) days from the effective date of rates resulting from this base rate proceeding, which establishes a defined schedule for Aqua Pennsylvania, Inc., to inspect and exercise each of its non-critical valves within a set inspection cycle and to maintain records of its attempts to exercise its isolation valves and note whether the operation was successful.

22. That Aqua Pennsylvania, Inc., shall appropriately mark any public fire hydrants in Aqua Pennsylvania, Inc.'s system that cannot provide the minimum fire flow of 500 gallons per minute at 20 pounds per square inch within thirty (30) days of entry of this Opinion and Order.

23. That Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall require income documentation from an interested customer to certify income eligibility for participation in its customer assistance program and upon recertification in a manner similar to that of the Peoples Companies. Within sixty (60) days of the entry date of this Opinion and Order, Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall file a written plan with the Commission's Secretary's Bureau at the Dockets in this proceeding, with a copy to be served on the Bureau of Consumer Services, describing the process it will use for certification and recertification of income eligibility for participation in its customer assistance program.

24. That Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall implement its application process proposed in this proceeding to transition Helping Hand customers who qualify for the new customer assistance program, subject to

the modification that Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall require income documentation for certification purposes rather than permitting potential program participants to confirm their income through self-attestation.

25. That within six (6) months of the entry date of this Opinion and Order, Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall file its Community Education and Outreach Plan with the Commission's Secretary's Bureau at these Dockets with copies to be served on the Commission's Bureaus of Consumer Services and Office of Communications. Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall also file an annual update of its Community Education and Outreach Plan, after the filing of its first Community Education and Outreach Plan at these Dockets until either the filing of its next base rate proceeding or another proceeding addressing its universal service programs.

26. That Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., shall consult with the Office of Consumer Advocate and the Commission's Bureau of Investigation and Enforcement regarding the root cause analysis of customer complaint data and cooperatively discuss how this data will be developed to reflect meaningful trends in customer complaint data and potentially reduce contested issues in future proceedings.

27. That the request of Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., to continue to record COVID-19 uncollectible expenses in their COVID-19 deferral accounts and to seek recovery in the next rate case proceeding filed by Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., is granted. Any deferred amounts that Aqua Pennsylvania, Inc., and Aqua Pennsylvania Wastewater, Inc., seek to recover in their next rate case proceeding shall be subject to detailed review and investigation and the burden of proof will remain with Aqua Pennsylvania, Inc., and

Aqua Pennsylvania Wastewater, Inc., to establish the prudence and reasonableness of their incremental COVID-19 related financial impacts.

28. That the Formal Complaints filed by the Office of the Consumer Advocate at Docket Nos. C-2021-3028466 and C-2021-3028467 are sustained, in part, and dismissed, in part, and shall be marked closed.

29. That the Formal Complaints filed by the Office of Small Business Advocate at Docket Nos. C-2021-3028509 and C-2021-3028511 are dismissed and shall be marked closed.

30. That the Formal Complaints of the Masthope Mount Community Association at Docket Nos. C-2021-3028992 and C-2021-3028996 are dismissed and shall be marked closed.

31. That the Formal Complaint of the Aqua Large Users Group, at Docket No. C-2021-3029089 is dismissed and shall be marked closed.

32. That the following Formal Complaints against Aqua Pennsylvania, Inc., are dismissed and shall be marked closed:

Martha Bronson at Docket No. C-2021-3028132
Neil Kugelman at Docket No. C-2021-3028139

11	Total Rate Increase/(Decrease) - $ For Wastewater Operations			$ 18,740,978					
12	Total Rate Increase/(Decrease) - % For Wastewater Operations			50.55%					

Notes to accompany Table Act 11 – Water and Wastewater Revenue Requirement – Summary

(1) The allocation between wastewater and water operations is achieved by the proposed consolidation of water and wastewater revenue requirements to derive the water and wastewater rates in this case.

(2) See the revenue factors in Table IB for each rate group to determine the gross, unadjusted Act 11 Allocation.

(3) Line No. 3 x Line No. 4.

(4) Reduce the gross water revenue requirement resulting from the Act 11 Allocation by dividing Line No. 5, Column (a) by Line No. 4, Column (b) and assigning this adjustment to water. This provides the Company the same net income from water customers as if the revenue requirement were charged to wastewater customers, since water customers have a lower uncollectible account rate.

(5) Line No. 3 + Line No. 6.

(6) Line No. 1 + Line No. 2 + Line No. 7.

Notes and Sources to Accompany Table RevSum

The Company will need to increase General Service and Forfeited Discount revenues by the same percentage to achieve the total indicated operating revenues, as evidenced by a proof of revenue.

(1) See Aqua Exhibits 1-A to 1-F(f) at Schedule B-1, Line "Total Sales to General Customers". Water general service revenues are adjusted for imputed revenues. *See* Table II - Water, Notes 2 and 6.

(2) See Aqua Exhibits 1-A to 1-F(f) at Schedule B-1, Line "Forfeited Discounts". For water, Aqua indicated that $735,710 was attributable to forfeited discount revenue in the historic test year. *See* Aqua St. 2-R at 29.

(3) For Wastewater - East Bradford, General Service revenues are increased by $15,525 and Miscellaneous revenues are decreased by the same amount. This amount represents charges for General Service described as "Contract Sales for Resale - Unmetered - Single Family - Birmingham Twp.". *See* Aqua's rate filing at Schedule EB-4, Page 1 and Exhibit 1-D(d), Schedule B-1, Line No. 9.

(4) See Aqua Exhibits 1-A to 1-F(f) at Schedule B-1, Lines "Other WW Revenues" and "Miscellaneous WW Service Revenues". Unlike Forfeited Discount revenues, Miscellaneous revenues aren't expected to increase proportionately with General Service revenues. For water, miscellaneous revenues are reduced by forfeited discount revenues. *See* Note 2.

(5) Sum of Line Nos. 2, 6, and 10.

(6) *See* Table Act 11, Line No. 8.

Notes to Accompany Table II - Water

(1) Remove Phoenixville acquisition adjustment and associated amortization expense.

(2) Add imputed general service revenue for Rider DRS contracts for New Wilmington [$348,904] and Masury [$787,182]. [$348,904 + $787,182 = $1,136,086]. *See* I&E Exh. 4-SR, Sch. 1. However, as we are granting Aqua's Exception No. 3, in part, imputed general service revenue for Rider DRS contracts associated with Chemung, Horsham, and Sharpsville are not added back.

(3) Remove Supplemental Executive Retirement Program expenses.

(4) Remove general inflation adjustment.

(5) Adopt I&E's position regarding general liability insurance expense.

(6) Grant Aqua's Exception No. 4, which removes the ALJ's recommended upward adjustment

(7) Revenues increased by the sum of one plus the uncollectible accounts factor in Table IB Water to include additional imputed forfeited discount revenue. Expenses includes additional bad debt expense as the product of additional revenues times the uncollectible accounts factor in Table IB Water. Taxes-Other includes additional assessment expenses as the product of additional revenues times the assessment factor in Table IB Water. Expenses and Taxes-Other are deducted from revenue when determining State and Federal Income Taxes.

(8) Cash working capital is not adjusted for non-cash expenses (*i.e.*, incremental bad debt expense and amortization expense).

Notes and Sources to Accompany Table VI – Water

(1) Company Main Brief

(2) Company claim rounded to nearest thousandth

(3) See Table II- Water, Note 3. Most SERP expenses are under the management fee account. OCA Exhibit LA-3 at Page 63.

(4) See Table II - Water, Note 4. We reject increases Aqua made to all expense accounts included in its general inflation claim. Since Exhibits 1-A to 1-G at Schedules C-4.1 and G-5.2 use different item descriptions, the number of lag days used for this adjustment is equal to the weighted average O & M Expense lag days for this rate zone after all other adjustments are applied.

(5) See Table II - Water, Note 5.

Notes to Accompany Table II – Wastewater - Base

(1) Remove SERP Expenses. The OCA's $57,050 adjustment is allocated to each wastewater rate zone based on the relative percentage of management fees assigned to each rate zone per Aqua Exhibits 1-B to 1-G at Schedule C-1. Since Wastewater - Base is assigned $714,262 of $1,743,416 in total management fees, this adjustment is calculated as follows: [–$57,050 x ($714,262 / $1,743,416)= –$23,373].

(2) Remove general inflation adjustment.

(3) Adopt I&E's position regarding general liability insurance expense.

Notes to Accompany Table II -Wastewater - Limerick

(1) Remove SERP Expenses. The OCA's $57,050 adjustment is allocated to each wastewater rate zone based on the relative percentage of management fees assigned to each rate zone per Aqua Exhibits 1-B to 1-G at Schedule C-1. Since Limerick is assigned $245,560 of $1,743,416 in total management fees, this adjustment is calculated as follows: [–$57,050 x ($245,560 / $1,743,416) = –$8,035].

(2) Remove general inflation adjustment.

(3) Adopt I&E's position regarding general liability insurance expense.

Notes and Sources to Accompany Table II – Wastewater – East Bradford

(1) Remove SERP Expenses. The OCA's $57,050 adjustment is allocated to each wastewater rate zone based on the relative percentage of management fees assigned to each rate zone per Aqua Exhibits 1-B to 1-G at Schedule C-2. Since East Bradford is assigned $53,881 of $1,743,416 in total management fees, this adjustment is calculated as follows: [–$57,050 x ($53,881 / $1,743,416) = –$1,763].

(2) Remove general inflation adjustment.

(3) Adopt I&E's position regarding general liability insurance expense.

Notes and Sources to Accompany Table II – Wastewater - Cheltenham

(1) Remove SERP Expenses. The OCA's $57,050 adjustment is allocated to each wastewater rate zone based on the relative percentage of management fees assigned to each rate zone per Aqua Exhibits 1-B to 1-G at Schedule C-1. Since Cheltenham is assigned $429,319 of $1,743,416 in total management fees, this adjustment is calculated as follows: [–$57,050 x ($429,319 / $1,743,416) = –$14,049].

(2) Remove general inflation adjustment.

(3) Adopt I&E's position regarding general liability insurance expense.

Notes and Sources to Accompany Table VI – Wastewater – Cheltenham

(1) Company Main Brief

(2) See Table II - Wastewater Cheltenham, Note 2. We reject increases Aqua made to all expense accounts included in its general inflation claim. Since Exhibits 1-A to 1-G at Schedules C-4.1 and G-5.2 use different item descriptions, the number of lag days used for this adjustment is equal to the weighted average O & M Expense lag days for this rate zone after all other adjustments are applied.

(3) See Table II - Wastewater Cheltenham, Note 1. SERP expenses are under the management fee account. OCA Exhibit LA-3 at Page 63.

(4) See Table II - Wastewater Cheltenham, Note 3.

Notes and Sources to Accompany Table II – Wastewater – East Norriton

(1) Remove SERP Expenses. The OCA's $57,050 adjustment is allocated to each wastewater rate zone based on the relative percentage of management fees assigned to each rate zone per Aqua Exhibits 1-B to 1-G at Schedule C-1. Since East Norriton is assigned $215,006 of $1,743,416 in total management fees, this adjustment is calculated as follows:
[–$57,050 x ($215,006 / $1,743,416) = –$7,036].

(2) Remove general inflation adjustment.

(3) Adopt I&E's position regarding general liability insurance expense.

Notes and Sources to Accompany Table II – Wastewater – New Garden

(1) Remove SERP Expenses. The OCA's $57,050 adjustment is allocated to each wastewater rate zone based on the relative percentage of management fees assigned to each rate zone per Aqua Exhibits 1-B to 1-G at Schedule C-1. Since New Garden is assigned $85,388 of $1,743,416 in total management fees, this adjustment is calculated as follows: [–$57,050 x ($85,388 / $1,743,416) = –$2,794].

(2) Remove general inflation adjustment.

(3) Adopt I&E's position regarding general liability insurance expense.

Interest Rates Have Peaked Amid Tight Financial Conditions

The Blue Chip Financial Forecasts (BCFF) see an economy that is likely to slow down in coming quarters due to tighter financial conditions. As a result of slowing growth and an accompanying decline in inflation, market yields are likely to continue to fall. The consensus expects that the Fed has completed its tightening cycle and will begin easing in 2024. The economy is expected to avoid a recession as it has shown resilience (especially in the labor market) in the face of policy tightening.

Slowdown ahead. The latest GDP figures for Q3 2023 showed a sizable 5.2% quarter-to-quarter annualized growth rate, but recent data suggest that demand is dwindling. The Atlanta Fed nowcast is currently pointing to a 2.1% pace in Q4. The BCFF consensus looks for an even slower growth rate of 1.2%. Importantly, the consensus expects tepid growth to persist for the entire forecast horizon. The average GDP growth forecast for all of 2024 is 0.7%, with particular weakness in the first three quarters.

In a special question, the median BCFF forecaster puts the odds of recession in the next 12 months at 45%. A significant minority of forecasters (27%) believes that a recession is the most likely path for the economy, and expects two or more consecutive quarterly declines in GDP. The other 73% of panelists expect a slowdown without recession.

Consistent with a soft economic outlook, the consensus projects continued declines in the inflation rate. The PCE inflation rate is expected to slide to 2.2% by midyear 2024, nearly a percentage point lower than the current inflation rate.

Tight financial conditions. Earlier this year, market interest rates had increased to levels not seen since before the 2008 financial crisis. For example, the 10-year Treasury yield nearly reached 5% in October. Rates rose for a variety of reasons including data showing economic resilience, which in turn signaled that the Fed might have to keep rates high for longer than anticipated. High rates have taken a toll on interest-sensitive sectors, such as housing and capital goods expenditures. There is a growing sense that elevated rates have done some of the work for the Fed in slowing the economy. In a special question, BCFF panelists overwhelmingly stated that the rise in rates has tightened financial conditions sufficiently to delay/prevent further interest rate increases.

Indeed, with the funds rate above 5%, inflation subsiding, and Fed asset holdings declining, policy does already seem quite tight. In a special question, panelists estimated that the neutral fed funds rate was 2.9%, which is well below the current funds rate target.

Falling market yields. As a result of tightening financial conditions and the drag on economic activity, the 10-year yield has actually begun to decline, falling by more than 60 basis points in the past month. This decline was aided by better-than-expected inflation news for October, with the CPI posting an unchanged reading for a 3.2% rise year to year. Core CPI rose 0.2% for a 4.0% rise year to year, the lowest reading since August 2021.

The BCFF consensus expectation that both economic growth and inflation will slow significantly in the near term is being reflected in projections for market rates. The slide in rates over the past month is expected to continue over the next six quarters. For example, consensus expectations for the 10-year Treasury yield are for a half-point drop to 4.3% by Q1 2025. At the same time, the 1-year Treasury bill rate is expected to fall by nearly 1.5 percentage points to 4.1%, suggesting a significant steepening of the yield curve and a move away from inversion.

Importantly, the BCFF consensus expects mortgage rates to fall by nearly 1 percentage point over the next six quarters, which could bring much needed relief to the beleaguered housing market. The weakness in the economy is also expected to affect corporate debt somewhat, as panelists look for the spread between corporates and Treasurys to widen slightly.

No more Fed tightening. Policymakers have made a point of leaving the door open to further hikes, even as Fed Chair Powell suggests that the economy may be resistant to higher rates. While supply chains have improved, aiding the decline in inflation, Powell has stated repeatedly that the path to lower inflation involves below-trend growth and softening in the labor market. Conversely, BCFF panelists believe that the Fed is finished hiking rates. In a special question, 100 percent of panelists indicated that the Fed had completed its tightening cycle. Markets agree – the federal funds futures market does not price in any further tightening either.

Funds rate cuts. Against this backdrop, every BCFF panelist expects the Fed to cut the fed funds rate in the forecast horizon. Three-quarters of the panelists believe the Fed will cut rates for the first time either in Q2 or Q3 2024. Respondents seem to be pushing out the timing of the first rate cut – two months ago no panelist thought rate cuts would start after Q3 2024, now 22% do. Still, the BCFF consensus is that the fed funds rate will drop to 4.2% by Q1 2025, with nearly all panelists indicating that Fed easing will be ongoing at that time.

Long-range forecasts. The Blue Chip semi-annual longer-range forecasts show BCFF panelists' views on trend growth, inflation, and interest rates out to 2034. From 2026 on, panelists expect US GDP growth will hover near 2%, which is slightly higher than the CBO estimate of the steady state. They anticipate inflation will subside toward the Fed's target through 2026 and remain there.

Interest rates are expected to fall but remain elevated relative to pre-pandemic norms. The BCFF consensus looks for the funds rate to drop to 3% by 2028 and remain there. Similarly, the 10-year yield is expected to decline to 3.9% in 2025 and stay there. For comparison, in the decade prior to the latest tightening cycle, the funds rate averaged 0.6% and the 10-year yield averaged 2%. The higher rate projections are consistent with panelists' judgments about the neutral fed funds rate, which is substantially higher than before the pandemic.

Peter D'Antonio (Haver Analytics, New York, NY)

Forecasts for interest rates and the Federal Reserve's Advanced Foreign Economies Index represent averages for the quarter. Forecasts for Real GDP, GDP Price Index, CPI and PCE Price Index are seasonally adjusted annual rates of change (saar). Individual panel members' forecasts are on pages 4 through 9. Historical data: Treasury rates from the Federal Reserve Board's H.15; AAA-AA and A-BBB corporate bond yields from Bank of America-Merrill Lynch and are 15+ years, yield to maturity; State and local bond yields from Bank of America-Merrill Lynch, A-rated, yield to maturity; Mortgage rates from Freddie Mac, 30-year, fixed; SOFR from the New York Fed. All interest rate data are sourced from Haver Analytics. Historical data for Fed's Major Currency Index are from FRSR H.10. Historical data for Real GDP, GDP Price Index and PCE Price Index are from the Bureau of Economic Analysis (BEA). Consumer Price Index history is from the Department of Labor's Bureau of Labor Statistics (BLS).

Forecasts of panel members are on pages 10 and 11. Definitions of variables are as follows: [1]Monetary policy rates. [2]Government bonds are yields to maturity. [3]Foreign exchange rate forecasts for U.K., Australia and the Euro are U.S. dollars per currency unit. For the U.S dollar, forecasts are of the U.S. Federal Reserve Board's AFE Dollar Index.

International. Growing conviction that central banks have concluded their tightening cycles has fueled a rally in both bond and equity markets over the past few weeks. That conviction has been bolstered by a number of factors. First, global inflationary pressures have continued to diminish, in large part because of weaker energy prices. And, notwithstanding the recent instability in the Middle East, oil prices have continued to decline over the past two months, which has further eased concerns that this trend toward weaker inflation might stall. Second, there is growing evidence to suggest that higher interest rates are taking a heavier toll on global economic activity, evidence that's particularly compelling in the euro area and the UK. Lastly, the latest policy decisions and accompanying statements from various central banks - including the Fed, the ECB, and the BoE - indicate a growing consensus among policymakers that further tightening may not be necessary.

This month's survey of Blue Chip Financial Forecasters aligns with that narrative. The policy rate projections for the US, Canada, Europe, and Australia, for example, indicate a broadly shared consensus that tightening cycles have reached their conclusion. And that corresponds too with the responses to a special question, where approximately 90% of panelists believe the ECB and BoE have completed their tightening cycles with that proportion rising to 100% for the Fed.

Closer scrutiny of these policy rate projections further reveals that easing cycles are now expected to commence in the euro area, Switzerland, Australia, the UK as well as the US within the next 6 months. Financial futures contracts, moreover, indicate that investors believe that easing campaigns could potentially begin even earlier. Those views do not, however, chime with the messages from central banks in recent weeks. Even the more dovish members of most central banks' policy committees have staunchly opposed these views over the last few weeks.

That dichotomy of views could reflect a more downbeat view from our panelists about the outlook for growth and inflation next year compared with the expectations of central banks. In response to another special question, for example, 55% of our panelists expect a euro area recession over the next 12 months while 58% expect a UK recession. As noted above, moreover, downbeat views about the growth outlook – and euro area growth in particular - have been validated of late by much of the incoming data. The flash PMI surveys for November, for example, reveal ongoing contractions in the manufacturing sector in the euro area, UK, Japan and the US.

Still, those recession odds for Europe and downbeat data points for manufacturing have not been amplified elsewhere. For example, only 44% of our panelists now anticipate a US recession phase over the next 12 months, down a little from 47% in our last survey. Those same flash PMI surveys for November, in the meantime, suggest that activity has held up quite well in the service sector in the US, UK and Japan.

Against this backdrop, investors are likely to be alert to how this dichotomy of views is resolved. Will the incoming data for both growth and inflation disappoint to the downside and thereby validate the consensus view that easing cycles will shortly commence? Alternatively, will growth and hold up and thereby challenge the dovish Blue Chip consensus but at the same time validate the more hawkish central bank consensus?

However, the outlook for the world economy and financial markets will not solely hinge on these considerations. Economic developments in Asia will also be closely watched. In response to another special question, 74% of our panelists believe the situation in China poses significant risks to global growth. Moreover, Japan's economic outlook could wield considerable influence over global financial stability as well. There is ample speculation in particular about if and when the BoJ will start to normalize its monetary policy. In a final special question this month, for example, 62% of our panelists expect that an interest rate normalization campaign could begin before the middle of 2024.

Fourth Quarter 2023

Special Questions:

1. What is your estimate of the long-term neutral fed funds rate?

Consensus	2.90%
Top 10	3.72%
Bottom 10	2.29%

2. Have financial conditions tightened sufficiently to delay/prevent further policy rate increases? Yes 97% No 3%

3. What probability do you attach to a recession beginning over the next 12 months in the:

	US	euro area	UK
Consensus	**44%**	**55%**	**58%**
Top 10	59%	66%	67%
Bot 10	29%	44%	48%

4 a. Does your outlook for China's economy pose meaningful risks to the outlook for global growth? Yes 74% No 26%

b. Do you think recent policy measures in China will boost its growth rate? Yes 37% No 63%

5 a. Has the Federal Reserve completed its tightening cycle? Yes 100% No 0%

b. Has the European Central Bank completed its tightening cycle? Yes 91% No 9%

c. Has the Bank of England completed its tightening cycle? Yes 91% No 9%

6. When will the first hike in the BoJ's short-term policy rate occur?

Q4 2023	0%
Q1 2024	5%
Q2 2024	53%
Q3 2024	21%
Later	21%

Viewpoints:

A Sampling of Views on the Economy, Financial Markets and Government Policy Excerpted from Recent Reports Issued by our Blue Chip Panel Members and Others

FOMC: On Hold in Restrictive Territory
(Lawrence Werther, Daiwa Capital Markets America)

Since the Fed embarked on its aggressive rate hike campaign in March 2022, we have held the view that a restrictive stance of monetary policy would be required to tame rapid inflation and prevent erosion in inflation expectations of businesses and households. For much of the past year, we had anticipated that the current campaign would culminate in a final increase of 25 basis points in the target range for the federal funds rate to 5.50 to 5.75 percent, with the last change occurring in late 2023, before maintaining the policy rate in restrictive territory for several months. In light of more recent developments, we have become less confident in anticipating any further increase. The FOMC last hiked the federal funds rate in July, and comments by various officials since then, in our view, have turned decidedly more cautious. Moreover, while inflation is still well above target and various indicators suggest that supply and demand imbalances persist in the labor market, we see increasing evidence on both fronts that give officials more leeway to wait for restrictive policy to work.

As of now, and despite the constant reminders from Fed officials that more hikes are possible, we suspect that the FOMC is done tightening monetary policy (i.e., a terminal target range of 5.25 to 5.50 percent). However, while this represents a shift in our Fed call, it is not a material one. We still project policymakers holding the federal funds rate at the terminal rate well into 2024-Q2 to ensure that inflation is convincingly on a path back toward 2%. As inflation decelerates further and the economy struggles amid still-tight financial conditions, we expect the FOMC to begin its slow transition to easier policy. That said, rather than projecting a first cut of 25 basis points to come at the April 30/May 1 FOMC meeting, we now look for the change to occur at the June 11-12 gathering. We then look for the Committee to continue easing by 25-basis-point increments at each of the final four meetings of 2024, leading to a year-end target range of 4.00 to 4.25 percent (consistent with our previous forecast).

Messaging is likely to present a key challenge for officials in coming months despite what we view as a sufficiently restrictive monetary policy. Financial conditions are the primary transmission mechanism of monetary policy to the real economy, and while the economy has responded to tight financial conditions, maintenance of the current constraints on economic activity is essential to achieve desired policy outcomes, i.e., stable prices and maximum sustainable employment. Evidence of the challenge awaiting officials emerged as markets repriced to incorporate evolving expectations for monetary policy. The S&P 500 has rallied more than nine percent since its recent low on October 27, erasing much of the easing in the August-to-October period. Moreover, softening data and the perception that the Fed is done hiking interest rates contributed to a 16-basis-point drop in the 2-year yield from last Friday's close to 4.90 percent and a plunge of 21 basis points in the 10-year yield to 4.44 percent. Consequently, additional easing in financial conditions, despite the maintenance of restrictive policy, could jeopardize further progress toward policy objectives.

A near-term catalyst for movements in financial markets, and key contributory factor in the revision of our Fed call, was data this week that pointed more decidedly toward progress in inflation and easing in tight labor market conditions. On the inflation front, the CPI for October printed below expectations. The headline was flat while the core increased 0.2%. Moreover, risks tilted to the upside as many analysts were concerned that changes to the calculation of health insurance costs in the October report could lead to an upswing in a previously subdued area.

Headline CPI inflation has fallen from a peak of 9.1% in June 2022 to 3.2% in Oct, including a slowing of five ticks in the past month. Energy costs have dropped and increases in food prices have decelerated sharply. Improvement in the core component has been measurable, but less dramatic, as prices rose 4.0% in Oct vs 4.2% in Sep. Additionally, Fed officials rightly view core inflation as still well above the two percent target. Core goods inflation has returned to the pre-2020 trend after the unwinding of pandemic-related supply-demand imbalances (year-over-year growth of 0.1 percent as of October), but more improvement is required in core services where year-over-year growth has slowed from a peak of 7.3 percent in February 2023 but is still elevated at 5.5 percent. Housing costs (illustrated by owners' equivalent rent in the chart) is still a key contributor to core service costs and is widely expected to moderate only over time.

A helpful illustration of near-term progress on inflation is the recent month-to-month performance of the trimmed-mean CPI. (We view this measure as offering a better perspective of underlying inflation as it eliminates price changes at the tails of the monthly distribution.) On a year-over-year basis, this measure has remained elevated (growth of 4.1 percent versus 4.3 percent in September), but the far better near-term performance indicates a more forceful easing in underlying inflation (increases of 0.2 percent in five of the past eight months).

Data on unemployment claims also suggest a slowdown in the real economy that should further dull the underlying inflation impulse, while also emphasizing that risks to the outlook have become more two-sided. That is, the risks of doing too little to combat entrenched inflation must now be weighed against the risks of overtightening and doing unnecessary damage to the economy. While initial claims increased by 13,000 to 231,000 in the week of Nov 11, a reading above the pre-pandemic average of 218,000, which suggested a labor market on firm footing, they were still relatively low from a longer-term perspective. More important, and perhaps somewhat concerning, was the jump of 32,000 in continuing unemployment claims to 1.865 million in the week of Nov 4. Over the past eight weeks, continuing claims have risen by a cumulative 207,000 to the highest level in almost two years. On one hand, this development speaks to an ongoing rebalancing in a tight labor market; on the other hand, it may be the beginning of an uptrend that usually presents prior to the onset of a recession. Again, this development speaks to postponing further hikes, both because policy goals appear more attainable with the current level of monetary restraint and because caution is warranted as the economy possibly nears an inflection point.

Long-Range Survey:

The table below contains the results of our twice-annual long-range CONSENSUS survey. There are also Top 10 and Bottom 10 averages for each variable. Shown are consensus estimates for the years 2025 through 2029 and averages for the five-year periods 2025-2029 and 2030-2034. Apply these projections cautiously. Few if any economic, demographic and political forces can be evaluated accurately over such long time spans.

The model is analogous to the standard CAPM, but with the return on a minimum risk portfolio that is unrelated to market returns, R_Z, replacing the risk-free rate, R_F. The model has been empirically tested by Black, Jensen, and Scholes (1972), who find a flatter than predicted SML, consistent with the model and other researchers' findings. An updated version of the Black-Jensen-Scholes study is available in Brealey, Myers, and Allen (2006) and reaches similar conclusions.

The zero-beta CAPM cannot be literally employed to estimate the cost of capital, since the zero-beta portfolio is a statistical construct difficult to replicate. Attempts to estimate the model are formally equivalent to estimating the constants, a and b, in Equation 6-2. A practical alternative is to employ the Empirical CAPM, to which we now turn.

6.3 Empirical CAPM

As discussed in the previous section, several finance scholars have developed refined and expanded versions of the standard CAPM by relaxing the constraints imposed on the CAPM, such as dividend yield, size, and skewness effects. These enhanced CAPMs typically produce a risk-return relationship that is flatter than the CAPM prediction in keeping with the actual observed risk-return relationship. The ECAPM makes use of these empirical findings. The ECAPM estimates the cost of capital with the equation:

$$K = R_F + \acute{\alpha} + \beta \times (MRP - \acute{\alpha}) \qquad (6\text{-}5)$$

where $\acute{\alpha}$ is the "alpha" of the risk-return line, a constant, and the other symbols are defined as before. All the potential vagaries of the CAPM are telescoped into the constant $\acute{\alpha}$, which must be estimated econometrically from market data. Table 6-2 summarizes[10] the empirical evidence on the magnitude of alpha.[11]

[10] The technique is formally applied by Litzenberger, Ramaswamy, and Sosin (1980) to public utilities in order to rectify the CAPM's basic shortcomings. Not only do they summarize the criticisms of the CAPM insofar as they affect public utilities, but they also describe the econometric intricacies involved and the methods of circumventing the statistical problems. Essentially, the average monthly returns over a lengthy time period on a large cross-section of securities grouped into portfolios are related to their corresponding betas by statistical regression techniques; that is, Equation 6-5 is estimated from market data. The utility's beta value is substituted into the equation to produce the cost of equity figure. Their own results demonstrate how the standard CAPM underestimates the cost of equity capital of public utilities because of utilities' high dividend yield and return skewness.

[11] Adapted from Vilbert (2004).

TABLE 6-2
EMPIRICAL EVIDENCE ON THE ALPHA FACTOR

Author	Range of alpha
Fischer (1993)	−3.6% to 3.6%
Fischer, Jensen and Scholes (1972)	−9.61% to 12.24%
Fama and McBeth (1972)	4.08% to 9.36%
Fama and French (1992)	10.08% to 13.56%
Litzenberger and Ramaswamy (1979)	5.32% to 8.17%
Litzenberger, Ramaswamy and Sosin (1980)	1.63% to 5.04%
Pettengill, Sundaram and Mathur (1995)	4.6%
Morin (1989)	2.0%

For an alpha in the range of 1%–2% and for reasonable values of the market risk premium and the risk-free rate, Equation 6-5 reduces to the following more pragmatic form:

$$K = R_F + 0.25\ (R_M - R_F) + 0.75\ \beta(R_M - R_F) \qquad (6\text{-}6)$$

Over reasonable values of the risk-free rate and the market risk premium, Equation 6-6 produces results that are indistinguishable from the ECAPM of Equation 6-5.[12]

An alpha range of 1%–2% is somewhat lower than that estimated empirically. The use of a lower value for alpha leads to a lower estimate of the cost of capital for low-beta stocks such as regulated utilities. This is because the use of a long-term risk-free rate rather than a short-term risk-free rate already incorporates some of the desired effect of using the ECAPM. That is, the

[12] Typical of the empirical evidence on the validity of the CAPM is a study by Morin (1989) who found that the relationship between the expected return on a security and beta over the period 1926–1984 was given by:

$$\text{Return} = 0.0829 + 0.0520\ \beta$$

Given that the risk-free rate over the estimation period was approximately 6% and that the market risk premium was 8% during the period of study, the intercept of the observed relationship between return and beta exceeds the risk-free rate by about 2%, or 1/4 of 8%, and that the slope of the relationship is close to 3/4 of 8%. Therefore, the empirical evidence suggests that the expected return on a security is related to its risk by the following approximation:

$$K = R_F + x(R_M - R_F) + (1 - x)\beta(R_M - R_F)$$

where x is a fraction to be determined empirically. The value of x that best explains the observed relationship Return = 0.0829 + 0.0520 β is between 0.25 and 0.30. If x = 0.25, the equation becomes:

$$K = R_F + 0.25(R_M - R_F) + 0.75\beta(R_M - R_F)$$

long-term risk-free rate version of the CAPM has a higher intercept and a flatter slope than the short-term risk-free version which has been tested. Thus, it is reasonable to apply a conservative alpha adjustment. Moreover, the lowering of the tax burden on capital gains and dividend income enacted in 2002 may have decreased the required return for taxable investors, steepening the slope of the ECAPM risk-return trade-off and bring it closer to the CAPM predicted returns.[13]

To illustrate the application of the ECAPM, assume a risk-free rate of 5%, a market risk premium of 7%, and a beta of 0.80. The Empirical CAPM equation (6-6) above yields a cost of equity estimate of 11.0% as follows:

$$\begin{aligned} K &= 5\% + 0.25\,(12\% - 5\%) + 0.75 \times 0.80\,(12\% - 5\%) \\ &= 5.0\% + 1.8\% + 4.2\% \\ &= 11.0\% \end{aligned}$$

As an alternative to specifying alpha, see Example 6-1.

Some have argued that the use of the ECAPM is inconsistent with the use of adjusted betas, such as those supplied by Value Line and Bloomberg. This is because the reason for using the ECAPM is to allow for the tendency of betas to regress toward the mean value of 1.00 over time, and, since Value Line betas are already adjusted for such trend, an ECAPM analysis results in double-counting. This argument is erroneous. Fundamentally, the ECAPM is not an adjustment, increase or decrease, in beta. This is obvious from the fact that the expected return on high beta securities is actually lower than that produced by the CAPM estimate. The ECAPM is a formal recognition that the observed risk-return tradeoff is flatter than predicted by the CAPM based on myriad empirical evidence. The ECAPM and the use of adjusted betas comprised two separate features of asset pricing. Even if a company's beta is estimated accurately, the CAPM still understates the return for low-beta stocks. Even if the ECAPM is used, the return for low-beta securities is understated if the betas are understated. Referring back to Figure 6-1, the ECAPM is a return (vertical axis) adjustment and not a beta (horizontal axis) adjustment. Both adjustments are necessary. Moreover, recall from Chapter 3 that the use of adjusted betas compensates for interest rate sensitivity of utility stocks not captured by unadjusted betas.

[13] The lowering of the tax burden on capital gains and dividend income has no impact as far as non-taxable institutional investors (pension funds, 401K, and mutual funds) are concerned, and such investors engage in very large amounts of trading on security markets. It is quite plausible that taxable retail investors are relatively inactive traders and that large non-taxable investors have a substantial influence on capital markets.

Interest Rate Risk and Utility Risk Premia During 1982–93

S. Keith Berry*

Department of Economics and Business, Hendrix College, Conway, USA

INTRODUCTION

The risk premium method of calculating a fair return on equity for a regulated utility is frequently used in regulatory proceedings. That method considers the relationship between a utility's bond yield and its required return on equity, and is especially useful when other methods, such as the capital asset pricing model and the discounted cash flow (DCF) model exhibit less reliability.[1] Although the discounted cash flow method is the favored method for estimating a utility's cost of equity in rate proceedings, the risk premium method provides a useful check on the DCF results. This is even more important in today's financial environment because of the difficulty of measuring investor-expected growth rates in the DCF method.

If bond yields and required returns on equity move up and down in lockstep, it is straightforward to calculate the appropriate cost of equity using the risk premium method. However, if they do not, estimation of the cost of equity is much more difficult. One explanation of this variability in risk premia is differences in 'interest rate risk'. In particular, arguments have been made in rate cases that utility bonds are riskier in the 1980s than they were earlier because of the significant increase in interest rate variability that occurred in the early 1980s (primarily caused by increased inflation rate variability).[2] In particular, when capital costs, and interest rates, increase, utility bondholders, who earlier 'locked-in' at lower interest rates, miss out on those higher interest rates. Bondholders who experience this will then prospectively require an 'interest rate risk' premium, and utility bond interest rates will be correspondingly greater. Furthermore, utility bonds of differing overall risk may exhibit differing sensitivities to that 'interest rate risk'.

In contrast, the argument goes, utility common stock returns have some protection from that risk. If capital costs increase, utilities can request a rate increase to increase the allowed return. Consequently, utility common shareholders can earn the higher capital costs, and do not necessarily require an 'interest rate risk' premium.[3] Thus, over time we would not necessarily expect to see utility bond yields and required equity returns move in one-to-one lockstep. Furthermore, to the extent that there is some substitutability between utility common stocks and utility bonds as interest rate risk associated with bonds increases, investors may increase their preferences for utility stocks. This should tend to decrease required returns on utility common stock.

Berry (1995) performed an analysis of the impact of interest rate (and capital cost) risk on interest rates and dividend yields. Those results indicate that interest rates are positively related to interest rate variability, but dividend yields are not affected by dividend yield variability. However, that study focused on *dividend yields*, which are easy to measure, and did not consider required equity returns which are much more difficult to measure. Furthermore, that study did not focus on risk premia, and the relationship between bond yields and required returns on equity, as does this paper. This paper utilizes required returns, as measured by Commission-allowed returns, in the risk premium analysis.

Other studies have shown that there is an inverse relationship between interest rates and risk premia in recent years, but not in earlier years. Carleton *et al.* (1983) found that there was no relationship between electric utility risk premia and interest rates during the 1970s. Brigham *et al.* (1985) estimated a positive relationship between risk premia and interest rates for the 1966–79 period and a negative relationship between the variables during the 1980–84 period. They attributed this to increased inflation risk and its effect on interest rates. Similarly, Harris (1986) showed that there was a negative relationship between utility risk premia and interest rates during the 1982–84 period. Harris and Marston (1992) concluded that there was a negative relationship between the S&P 500 risk premia and interest rates for the 1982–91 period. However, none of these studies used Commission-allowed returns in the calculations of risk premia.

This paper considers two factors not previously considered in the literature. First, allowed returns are used as a proxy for required returns on equity, with appropriate consideration for partial adjustment. Second, explicit usage is made of measures of interest rate risk to gauge their impact on risk premia. Regression analyses is employed to estimate the effects of utility bond yields, interest rate variability, and time trends on required returns on equity and risk premia over the period 1982–93. In the second section, we present a simple regression model, which tests for an inverse relationship between required returns on equity and interest rates. This model, while not very sophisticated, has the inherent advantage that it can be easily used to estimate risk premia. In the third section, we consider a more complex model which explicitly considers various measures of interest rate variability, as well as interest rate levels.

REGRESSION RESULTS WITH INTEREST RATES

A common formulation of the risk premium is:

$$K = YD + RP \tag{1}$$

where K is the required return on common equity, YD is the utility's current cost of long-term debt (yield) and RP is the risk premium. Since YD is directly measurable, and *if* RP can be properly measured, K can then be directly estimated.[4] However, there are two general problems with the implementation of a risk premium methodology:

1. The estimation of RP is often based on historical earned returns, which may or may not be indicative of *required* returns; and
2. The level of RP may not be constant through time. In particular, there may be an inverse relationship between interest rates and risk premia.[5]

To address the first problem we use Commission-allowed returns as a reasonable surrogate for required returns, with a partial adjustment feature, as will be discussed later. Commissions and their staff spend a significant amount of time in rate cases considering the determination of a utility's appropriate return on equity. As discussed earlier, the primary method employed is the DCF method, which, when performed properly, estimates the required return on equity.[6] Furthermore, Commission-allowed returns may represent better estimates of equity costs, than DCF methods using analysts' forecasts, since Commissions comprehend a wide variety of cost of capital methods.

For illustration we have arrayed risk premia by year in Table 1. For comparative purposes we also show the estimated risk premia using the long-term US Treasury bond yield. Note that there is a general upward trend in risk premia associated with Moody's utility bond yields, which occurs during a period of generally decreasing interest rates. Furthermore, the estimated risk premia are less than those reported in Harris and Marston (1992). This can be attributed to two factors. First, utilities are generally less risky than the S&P 500 which were used in the Harris and Marston study, with corresponding lower required returns. Second, Commission-allowed returns may incorporate lower DCF growth rates than the analysts' forecasts used by Harris and Marston.

Finally, risk premia for Treasury bonds, shown in Table 1, appear to be fairly stable, albeit with a slight upward drift over the 1982–93 period. Moody's yields fell by much more (777 basis points) over that period, than did Treasury yields (578 points). An explanation for this is provided in Berry (1995). As shown there, although there is a close one-to-one relationship between Moody's utility bond yields and Treasury yields, interest rate risk had a significant impact on Moody's

Table 1. Equity Risk Premia

Year (1)	US Treasury Bond Yields (2) (%)	Allowed Return on Equity (3) (%)	Equity Risk Premia on Treasury Yields [(3)-(2)] (4) (%)	Moody's Utility Bond Yields (5) (%)	Equity Risk Premia on Moody's Yields [(3)-(5)] (6) (%)
1982	12.23	15.46	3.23	15.33	0.13
1983	10.84	15.18	4.34	13.31	1.87
1984	11.99	15.25	3.26	14.03	1.22
1985	10.75	14.38	3.63	12.29	2.09
1986	8.14	13.2	5.06	9.46	3.74
1987	8.64	12.86	4.22	9.98	2.88
1988	8.98	12.82	3.84	10.45	2.37
1989	8.58	12.92	4.34	9.66	3.26
1990	8.74	12.63	3.89	9.76	2.87
1991	8.16	12.41	4.25	9.21	3.20
1992	7.52	11.84	4.32	8.57	3.27
1993	6.45	11.54	5.09	7.56	3.98
Change 1982–93	−5.78	−3.92	+1.86	−7.77	+3.85

Note: 1993 data are partial year.

yields. The decrease in interest rate risk during the 1980s, consequently, caused an incremental decrease in Moody's yields, in excess of that corresponding to the decrease in Treasury yields.[7] As will be discussed later, although the risk premia associated with Treasury bonds appear to be fairly stable during the 1982–93 period, there are specific reasons for that, which will not necessarily be repeated in the future.

In our regression analysis we use allowed returns and the corresponding bond yields for that utility's Moody's bond rating from 6 months earlier than the date of the Commission rate order.[8] This provides a better matching since the evidentiary record on the required return on equity is usually developed some months before the date of the rate order. The data on allowed returns was obtained from various editions of *Public Utilities Fortnightly* (1983–93).[9] The data on Moody's bond yields was obtained from various editions of *Moody's Public Utility Manual* (1982–93). This yielded a total of 1226 rate case observations over the period 1982–93. For each month we averaged the cross-sectional data to obtain 130 usable time series observations.[10]

Consistent with Equation (1), let K_t^* represent the required return on equity at time t such that

$$K_t^* = RP_t + YD_t \qquad (2)$$

where RP_t and YD_t are the risk premium and current cost of debt at time t, respectively. To allow for a varying risk premium set

$$RP_t = \alpha + \beta YD_t. \qquad (2a)$$

Postulate a regulator adjustment function of the form:

$$K_t - K_{t-1} = \gamma(K_t^* - K_{t-1}), \quad 0 < \gamma < 1 \qquad (3)$$

where K_t is the allowed return at time t and γ is the adjustment factor. This equation implies an inertia on the part of regulators such that with a change in the required return on equity from the prior period's allowed return on equity, $K_t^* - K_{t-1}$, the regulator only moves part way to a new allowed return. The greater the value of γ, the greater the degree of regulator adjustment.[11]

Substitution of Equation (2) into Equation (3) yields

$$K_t = \gamma RP_t + \gamma YD_t + (1-\gamma)K_{t-1} \qquad (4)$$

or

$$K_t = \alpha\gamma + (1+\beta)\gamma YD_t + (1-\gamma)K_{t-1} \qquad (4a)$$

For purposes here, we used the allowed return from 1 month earlier. Regulators are aware of recent allowed returns and will likely partially base their current allowed return awards on those recent historical allowed returns, consistent with Equation (3).[12] We then performed an ordinary least squares regression of the allowed returns on the corresponding bond yields and lagged allowed returns. This resulted in the following regression equation:

$$K_t = 0.03337 + \underset{(6.11)}{0.22301\,YD} + \underset{(8.58)}{0.56788K_{t-1}},$$
$$(\text{Durbin-Watson} = 2.41,\ R^2 = 0.905). \quad (5)$$

The t-statistics are shown in parentheses, and indicate significance for both independent variables at the 1% level. The implied value of γ, the adjustment factor, is $1 - 0.56788 = 0.43212$.

The implied risk premium equation, corresponding to Equation (2a), is

$$RP_t = 0.07722 - 0.48392\,YD_t. \quad (6)$$

Equation (6) indicates the presence of an inverse relationship between risk premia and interest rates. For every 100 basis point drop in interest rates, the risk premium *increases* by approximately 48 basis points and the cost of equity decreases by approximately 52 basis points. Conversely, for every 100 basis point increase in interest rates, the risk premium *decreases* by approximately 48 basis points and the cost of equity increases by approximately 52 basis points.

To the extent interest rate variability is a major factor in the level of capital costs, we would expect to empirically observe this inverse relationship between risk premia and interest rates.[13] That is, as interest rate variability increases, interest rate risk increases, interest rates increase, and risk premia fall since utility equity costs change very little, or decrease, for the reasons mentioned in the introduction. The converse would be true in the case of a decrease in interest rate variability.[14]

An alternative formulation of Equation (1) is

$$K_t^* = RP_t + GOV_t. \quad (7)$$

where GOV_t is the yield on long-term US Treasury bonds and RP_t is the corresponding risk premium. Performing a similar regression analysis with GOV instead of YD produces:

$$K_t = 0.1981 + \underset{(3.74)}{0.16016GOV_t} + \underset{(12.09)}{0.73703K_{t-1}},$$
$$(\text{Durbin-Watson} = 2.56,\ R^2 = 0.889). \quad (8)$$

The R^2 is statistically significant at the 1% level with both independent variables statistically significant.

The implied risk premium equation, corresponding to Equation (2a), is

$$K_t^* = 0.07533 - 0.39096GOV_t. \quad (9)$$

This formulation, too, indicates an inverse relationship between risk premia, measured relative to Treasury bonds, and Treasury bond yields. In particular, note that for a given 100 basis point increase in interest rates the risk premium decreases by 39 basis points. The relative change in risk premia is not as great, which is attributable to less interest rate variability and interest rate risk associated with Treasury bonds.[15] Over the 1982–93 period, while Treasury yields fell by 578 basis points, Moody's utility bond yields fell by 777 basis points.

REGRESSION RESULTS WITH BOND YIELD VARIABILITY

A factor that could directly and significantly affect risk premia is investor-perceived variability in utility bond yields. It is likely that historical variability in those bond yields would impact investor perceptions of interest rate risk and increase utility bond yields. Furthermore, to the extent that there is some substitutability between utility common stocks and utility bonds, as interest rate risk associated with bonds increases, investors may increase their preferences for utility stocks. This should tend to decrease required returns on utility common stock.[16] Both of these effects will tend to reduce the risk premium when utility bond interest rate risk increases.

While some of that interest rate variability may be picked up in the data on interest rate levels, those interest rate levels also reflect other factors, such as general tightness (or laxity) in capital market conditions, prevalence of call provisions, and differential tax wedges.[17] Thus, we performed a regression analysis that explicitly included a measure for interest rate variability. An obvious measure is the standard deviation (S.D.) in interest rates in the immediate past. If our hypothesis is correct, an increase in the S.D. should decrease RP.

We considered two different historical timeframes for estimating the S.D.: 3 years and 5 years (*SD3* and *SD5*, respectively). For example, with the 3 year time frame, the S.D. at month n is calculated using the 36 months prior to month n. With the 5-year time frame, the prior 60 months were used. Each of these measures was calculated separately for bond yields for Moody's *Aaa*, *Aa*, *A* and *Baa* utility bonds and then averaged across bond ratings to obtain the average *SD3* and *SD5* for each month.

Table 2. Regression Results With *YD*, Dependent Variable = *K*

Variable				
Constant	0.1077	0.0981	0.0790	0.1001
t	−0.0002** (−7.25)	−0.0002** (−6.16)	−0.0001** (−4.47)	−0.0002** (−6.09)

$SD3$	−0.5087** (−5.31)			
$RMSD3$		−0.1695** (−3.91)		
$SD5$			−0.1282 (−1.43)	
$RMSD5$				−0.1307** (−3.83)
K_{t-1}	0.1302 (1.59)	0.2131* (2.60)	0.3312** (4.18)	0.2099* (2.53)
R^2	0.9332**	0.9270**	0.9194**	0.9267**
Durbin-Watson	2.06	2.08	2.15	2.07
N	130	130	130	130

Note: t-statistics in parentheses. * and** indicate significance at the 5% and 1% levels, respectively.

These are reasonable historical time frames for purposes of estimating forward-looking investor expectations of interest rate risk. Of course, if there has been little change in these S.D.s during the sample period, then none of this matters. However, as discussed in Berry (1995) there has been significant volatility in bond yields. This has led to sharp increases in S.D.s in the early 1980s (almost triple the level in the 1970s), with some decrease in the latter 1980s.

Another way of gauging this variability is to consider the deviation of the immediately preceding month's yield from the relevant prior months' yields. As in the case of S.D.s, 3- and 5-year lags were considered. For example, in the case of 3 years, the formula used to calculate the root mean square deviation (*RMSD*) in month n is

$$RMSD3(n) = \left(\left[\sum_{i=n-36}^{n-1} (YD_{n-1} - YD_i)^2\right]/36\right)^{1/2} \tag{10}$$

where YD_{n-1} is the yield in the immediately preceding month and YD_i, $i = 1, \ldots, n-1$, corresponds to the yields in the prior months. An analogous formula for *RMSD* (*RMSD5*) was used for the case of 5 years. As in the cases for *SD3* and *SD5*, different data series were calculated for the four Moody's bond ratings and then averaged across bond ratings.

The *RMSD* may be an appropriate measure of the risk perceived by an investor since it measures the potential interest rate swings (based on prior months' interest rates) relative to the immediately preceding month's yield. In contrast, the variable S.D. measures interest variability over a prior time frame relative to the mean over that same time frame. That mean does not necessarily equal a current yield, and hence may underestimate investor perceptions with regard to potential interest rate variability. Thus, usage of the *RMSD* assumes that, in month n, investors may look at month $n-1$'s yield relative to prior months' interest rates to gauge the full impact of any potential interest rate swing. Note that, as discussed in Berry (1995) the trends in *RMSD* are similar to those of S.D.To comprehend for the possibility of a time trend in risk premia we included a monthly trend variable, t. This type of variable was discussed in Morin (1994), pp. 291–292) and was statistically significant there.

Our more complete formulation using *SD3* is then:

$$K_t^* = RP_t + YD_t \tag{11}$$

where

$$RP_t = \alpha + \beta t + \delta YD_t + \theta SD3_t. \tag{11a}$$

Assuming a regulator adjustment function as shown in Equation (3) and substituting Equations (11) and (11a) into Equation (3) produces our regression equation:

$$K_t = \alpha\gamma + \beta\gamma t + (\delta + 1)\gamma YD_t + \theta\gamma SD3_t + (1-\gamma)K_{t-1}. \tag{12}$$

Similar regression equations were used for *SD5*, *RMSD3* and *RMSD5*, where each of those variables were used in place of *SD3*. Our hypotheses are that the coefficient associated with t will be negative (consistent with Morin), the coefficient associated with *YD* will be positive, and that the coefficient associated with *SD3* (*SD5*, *RMSD3*, *RMSD5*) will be negative, as investors shift their relative preference to utility stock as interest rate risk on utility bonds increase.

Table 3. Implied Risk Premium Results, Dependent Variable = *RP*

Variable				
Constant	0.1238	0.1247	0.1181	0.1267

$SD3$	−0.5849			
$RMSD3$		−0.2154		
$SD5$			−0.1917	
$RMSD5$				−0.1654

Table 5. Implied Risk Premium Results, Dependent Variable = *RP*

Variable				
Constant	0.1366	0.1390	0.1208	0.1408
t	−0.0004	−0.0003	−0.0002	−0.0003
GOV	−0.7906	−0.8169	−0.7399	−0.8215
$SD3$	−0.3357			
$RMSD3$		−0.1848		
$SD5$			0.1045	
$RMSD5$				−0.1655

The dependent variable, K, was then regressed on the three independent variables: time, yield and measures of variability in yields. Those four regression results are shown in Table 2.

Note that the regression slope coefficients are generally significant, although the coefficient for $SD5$ was not. There is a statistically significant downward time trend, which is consistent with the result in Morin. The effects of YD on K are positive and significant. Three of the four coefficients associated with interest rate risk, $SD3$, $RMSD3$ and $RMSD5$ are significant and negative as was hypothesized. Finally, note that all of the slope coefficients associated with YD are significantly less than one, which supports the hypothesis that as interest rates decrease risk premia increase.

As can be seen in Table 2, the adjustment coefficients are in the range 67–87%, which are higher than the adjustment coefficient of 43% from Equation (5). This can be explained by noting that Equation (5) does not include the other factors shown in Table 2 (in particular, interest rate variability). Consequently, the adjustment coefficient measurement in Equation (5) is clouded by the effects of the other factors. It appears that regulators are not adjusting K to K^* very much (only 43%), simply because K is also reacting to other factors not captured in Equation (5). Table 2 properly captures those additional effects and isolates the larger adjustment coefficient effect.

The implied risk premium results, corresponding to Equation (11a), are shown in Table 3. As can be seen there, the coefficient associated with YD is between approximately -0.70 and -0.75. This indicates that each increase in utility bond yields of 100 basis points produces a decrease in the risk premium of 70 to 75 basis points. Increases in interest rates result in decreases in risk premia. Furthermore, the negative slope coefficients associated with interest rate risk, imply smaller risk premia as hypothesized. The trend variable in Table 3 has a negative slope, which is consistent with results reported in Morin (1994).[18]

To some extent the variable YD may include both the effects of general tightness or laxity in financial markets and interest rate risk. In order to better focus on the two separate factors, it would be appropriate to replace YD with GOV in

Table 4. Regression Results With *GOV*, Dependent Variable = *K*

Variable				
Constant	0.0781	0.0818	0.0639	0.0874
t	−0.0002** (−4.85)	−0.0002** (−5.10)	−0.0001** (−3.21)	−0.0002** (−5.44)
GOV	0.1197** (2.99)	0.1078** (2.66)	0.1376** (3.18)	0.1108** (2.80)
$SD3$	−0.1919 (−1.85)			
$RMSD3$		−0.1088* (−2.21)		
$SD5$			0.0553 (0.54)	
$RMSD5$				−0.1027** (−2.71)
K_{t-1}	0.4283** (5.30)	0.4113** (5.04)	0.4709** (6.01)	0.3794** (4.55)
R^2	0.9092**	0.9102**	0.9069**	0.9119**
Durbin–Watson	2.18	2.17	2.24	2.13
N	130	130	130	130

Note: t-statistics are in parentheses. * and ** indicate significance at the 5% and 1% levels, respectively.

Equations (11) and (11a), since *GOV* will more directly reflect changes in the supply and demand for loan funds, without the effect of utility bonds' interest rate risk. The corresponding equations with *SD3* are:

$$K_t^* = RP_t + GOV_t \qquad (13)$$

$$RP_t = \alpha + \beta t + \delta GOV_t + \theta SD3, \qquad (13a)$$

These Equations focus on the relationship between utility stocks and government bonds. Assuming an adjustment mechanism as shown in Equation (3) a regression equation analogous to Equation (12) can be developed. Those regression results are shown in Table 4 and are similar to those from Table 2. However, note that the slope coefficients associated with *GOV* are smaller than those associated with *YD* in Table 2. This is consistent with the results in Berry (1995) wherein it was shown that *GOV* had a larger effect on utility bond yields than on utility common stock dividend yields. Given an imperfect, although positive, relationship between Treasury bonds and utility bonds, and an imperfect relationship between utility bonds and utility stocks, it naturally follows that there would be an even more imperfect relationship between Treasury bonds and utility stocks. This means that there is more substitutability between utility common stocks and utility bonds than between utility stocks and US Treasury bonds. A further point to note from Table 4 is that the slope coefficients associated with S.D. are statistically insignificant, while those associated with *RMSD* are significant.

The implied risk premium results, corresponding to Equation (13a) are shown in Table 5. As can be seen there, the coefficient associated with *GOV* is between approximately -0.74 and -0.82 less than those associated with *YD* in Table 3. This is consistent with the point raised above concerning relative substitutability between stocks and bonds. An increase in Treasury yields of 100 basis points produces an increase of 18–26 basis points in the cost of equity, and a corresponding decrease in the risk premium of 74–82 basis points. In sharp contrast to the reported results in Table 1, controlling for other factors, risk premia relative to Treasury yields are not necessarily stable, but change as Treasury yields change. Increases in Treasury yields result in decreases in risk premia, and those decreases are greater than those associated with similar increases in utility bond yields. Furthermore, the negative slope coefficients associated with utility bond interest rate risk, imply smaller risk premia as hypothesized. The trend variable in Table 5 has a negative slope, which is consistent with results reported in Morin (1994), as well as in Table 3.

CONCLUSIONS

This paper examined, through regression analysis, the possibility that there is an inverse relationship between risk premia and both interest rates and interest rate risk in the utility industry. We demonstrated that that is the case over the 1982–93 time period. Furthermore, it was shown that there is a statistically significant basis for asserting that risk premia increase as interest rates decrease. Our analysis also indicated that there was a downward time trend in risk premia in that period. All of these phenomena occurred with either utility bond yields or long-term US Treasury bond yields. However, for an equivalent increase in either utility bond yields or Treasury yields, required equity returns increase by a slightly greater amount with regard to utility bond yields.

It was also shown that regulators may exhibit an inertia in their setting of allowed returns, such that they move partially to the new required return, in the event capital conditions warrant a change. The degree of movement is in the range of 50–80% relative to the prior month's allowed return.

There are several policy implications from the above analysis. First, when regulators use the risk premium method for setting the allowed return on equity, they should consider the degree of recent interest rate variability and consequent interest rate risk, in comparing utility common stocks and utility bonds. The appropriate risk premium will be narrower the greater the interest rate risk. As demonstrated here, the better measure of interest rate risk is *RMSD*, not S.D. Second, objective regulators who attempt to utilize the risk premium method should implicitly compensate for the indicated regulator inertia. For example, calculate the risk premium using K^*, rather than K. Third, while Table 1 implies that risk premia relative to Treasury bonds are more stable, that is not the case when consideration is made for other factors, as shown in Tables 4 and 5. There is not necessarily any gain in precision in using a risk premium method based on Treasury bonds.

Fourth, if the US enters a period of relative stability in interest rates, we are likely to see utility risk premia increase, a phenomenon utility executives nor regulators have any degree of control over. This widening will not occur because of increases in required equity returns, but because of relatively lower interest rates and less interest rate risk.

NOTES

1. See Bonbright *et al.*, 1988 (pp. 317–28) for a discussion of these methods.
2. Gordon and Halpern (1976) show that an increase in variable and uncertain inflation will theoretically decrease the spread between bond and share yields. This acts through the Fisher effect and the resultant increase in interest rate uncertainty. Examples of rate cases where this argument has been made are Arkansas Public Service Commission (1987), Docket No. 87-070-U, Federal Energy Regulatory Commission (1986), Docket Nos. EL86-58-000 and EL86-59-000, Hawaii Public Utility Commission, Docket No. 4156, Kentucky Public Service Commission, Case No. 8045, and Pennsylvania Public Utility Commission, Docket R-811510.
3. These points are noted in Brigham *et al.* (1985) and Taylor and Peake (1982).
4. See Ibbotson Associates (1993), Carleton *et al.* (1983), Brigham *et al.* (1985) and Harris (1986) for a discussion of risk premia.
5. See Brennan (1982), Brigham *et al.* (1985) and Harris (1986). Other sources are Harris and Marston (1992), Gordon and Halpern (1976) and Federal Energy Regulatory Commission Staff (1992).
6. This approach was also taken in the Federal Energy Regulatory Commission (1992) Staff study.
7. During the same period, any interest rate risk associated with Treasury bonds was not as large, nor did it exhibit as large a decrease.
8. Given the rate case process (testimony, hearing, order writing) a 6 month lag is reasonable. However, if the 6 month period is either too long or short, the analysis here would only result in a mis-estimate of the intercept term, not the slope coefficients. For example, in a period of increasing interest rates(non-accelerating), if the appropriate lag should have been only 3 months, the 6 month lag will result in an over-estimate of the intercept term, but no mis-estimate of the slope terms. With a non-decelerating decrease in interest rates, the intercept term will be under-estimated, with no mis-estimated slope terms. The focus of this paper is on the slope terms. Furthermore, regression analyses was also performed using (a) bond yields contemporaneous with the date of the allowed return and (b) bond yields from 12 months earlier. In both those cases, the Durbin–Watson statistics were worse and the corresponding R^2 were less than with the 6 month lag. Additionally, the slope coefficients for the *YD* and *GOV* variables were not as large, nor as significant as in the 6 month lag case. Consequently, the 6 month lag scenario was utilized here.
9. For the electric and gas rate cases the data was from *Public Utilities Fortnightly's* 'Annual Surveys', while the telecommunications data was from *Public Utilities Fortnightly's* 'Selected Utility Rate Filings'.
10. The data was aggregated into monthly data for three reasons. First, Durbin–Watson statistics can then be sensibly calculated. Second, this approach is consistent with prior studies. Third, this aggregation facilitates the partial adjustment feature. There were months when there were no reported allowed returns, which decreased our total sample size.
11. See Johnston, 1972 (pp. 300–301), for discussion of this technique.
12. This approach implicitly assumes that regulators focus on allowed returns in other jurisdictions in the prior month. This is reasonable for two reasons. First, there is a certain amount of 'peer pressure' amongst regulators wherein they generally do not want their own jurisdiction's allowed returns to be out of line with other jurisdictions, unless justified by general financial and economic circumstances (such as changes in interest rates). Second, the last allowed rate of return for a particular utility may be anywhere from 6 months to 3 years earlier. Modelling those differing periods adds unnecessary complexity to the analysis, in light of the first point raised.
13. See Berry (1995) for an empirical investigation of the impact of interest rate variability on the level of interest rates.
14. Other explanations for an inverse relationship between interest rates and risk premia have to do with call provisions and tax rates. In a high interest rate environment firms will include more call provisions in new bond issues, for which bond investors require even higher interest rate compensation. Additionally, with increasing interest rates, the tax wedge applied to interest on bonds grows relative to that on common stock due to the favorable tax treatment on the capital gains component of stock returns.
15. It could also be attributable to increased utility credit risk during that period.
16. This effect can be readily observed in the DCF method where K is calculated as $D/P+g$. D is the expected dividend, P is the stock's market price, and g is the investor-expected long-term growth rate in dividends. As P increases because of investors' relative preference for utility stocks, K will decrease.
17. As shown in Berry (1995), the impact of the tightness of capital markets has differential effects on interest rates and common stock dividend yields.
18. This negative slope coefficient associated with the time variable also provides an explanation as to why the positive interest rate slope coefficients are

smaller in Table 3 than that reflected in Equation (2). Throughout the 1982–93 period, interest rates were generally decreasing, which according to the results in Table 3, will lead to decreases in required equity returns. However, during that same period the trend variable t was increasing. This increasing trend variable implies an additional source for decreases in required equity returns over that time period. Since Equation (2) does not explicitly separate out the trend variable, the overall effect in Equation (2) includes both of these effects, which will make the Equation (2) slope coefficient larger.

Using Analysts' Growth Forecasts to Estimate Shareholder Required Rates of Return

Robert S. Harris

Robert S. Harris is a member of the faculty of the University of North Carolina at Chapel Hill. He is also an Associate Editor of Financial Management.

I. Introduction

Shareholder required rates of return play key roles in establishing economic criteria for resource allocation in many corporate and regulatory decisions. Theory dictates that such returns should be forward-looking return requirements that take into account the risk of the specific equity investment.

Estimation of such returns, however, presents numerous and difficult problems. Although theory clearly calls for a forward-looking required return, investigators, lacking a superior alternative, often resort to averages of historical realizations. One primary example is the determination of equity required return as a "least risk" rate plus a risk premium where an equity risk premium is calculated as an average of past differences between equity returns and returns on debt instruments. The historical studies of Ibbotson *et al.* [9] have been used frequently to implement this approach.[1] Use of such historical risk premia assumes that past realizations are a good surrogate for future expectations and that risk premia are roughly constant over time. Additionally, the choice of a time period over which to average data under such a procedure is essentially arbitrary. Carleton and Lakonishok [3] demonstrate empirically some of the problems with such historical premia when they are disaggregated for different time periods or groups of firms.

Recently Brigham, Shome, and Vinson [2] surveyed work on developing *ex ante* equity risk premia with particular emphasis on regulated utilities. They presented their own risk premia estimates, which make use of financial analysts' forecasts as surrogates for investor expectations.

The current paper follows an approach similar to Brigham *et al.* and derives equity required returns and risk premia using publicly available expectational

Finally, I thank colleagues at UNC for their helpful comments.

[1]Many leading texts in financial management use such historical risk premia to estimate a market return. See for example, Brealey and Myers [1]. Often a market risk premium is adjusted for the observed relative risk of a stock.

*All variables are defined in Exhibit 1 and graphed in Exhibit 6. Regressions were estimated for the 36 month period January 1982–December 1984 and were corrected for serial correlation using the Prais-Winsten method. For purposes of this regression variables are expressed in decimal form, *e.g.*, 14% = 0.14.

†Significantly different from zero at 0.05 level using two-tailed test

cause of lower variability over time in the dispersion of FAF for utility stocks as compared to equities in general. The yield spread between utility and government bonds is significantly positively related to utility equity risk premia. And, as in the case of stocks in general, introduction of this spread substantially reduces the independent effect of interest rate levels on equity risk premia.

Given the short time series (36 months), tests for the stability of the relationships found in Exhibit 7 present difficulties. As a check, the relationships were reestimated dividing the data into two 18-month periods. For stocks in general (SP500), coefficients on σ_g and $(i_c - i_{20})$ were positive in all regressions and significantly so, except in the case of $(i_c - i_{20})$ for the second 18-month period. The coefficient of i_{20} was significantly negative in both periods. This confirms the general findings for the SP500 in Panel A of Exhibit 7. For utility stocks, results for the subperiods also matched the entire period results. The coefficients of $(i_u - i_{20})$ were significantly positive in both subperiods while those of σ_g were insignificantly different from zero. The level of interest rates (i_{20}) had a significant negative effect in both subperiods.

In summary, the estimated risk premia change over time and the patterns of such change are directly related to changes in proxies for the risks of equity investments. Risk premia for both stocks in general and utilities are inversely related to the level of government interest rates but positively related to the bond yield spreads which proxy for the incremental risk of investing in equities rather than government bonds. For stocks in general, risk premia also increase over time with increases in the general level of disagreement about future corporate performance.

VI. Conclusions

Notions of shareholder required rates of return and risk premia are based in theory on investors' expectations about the future. Research has demonstrated the usefulness of financial analysts' forecasts for such expectations. When such forecasts are used to derive equity risk premia, the results are quite encouraging. In addition to meeting the theoretical requirement of using expectational data, the procedure produces estimates of reasonable magnitude that behave as economic theory would predict. Both over time and across stocks, the risk premia vary directly with the perceived riskiness of equity investment.

The approach offers a straightforward and powerful aid in establishing required rates of return either for corporate investment decisions or in the regulatory arena. Since data are readily available on a wide range of equities, an investigator can analyze various proxy groups (*e.g.*, portfolios of utility stocks) appropriate for a particular decision. An additional advantage of the estimated risk premia is that they allow analysis of changes in equity return requirements over time. Tracking such changes is important for managers facing changing economic climates.

In the following sections we provide an example of (i) calculating a CRSP Deciles Size Study premium and (ii) a Risk Premium Report Study size premium, using example data from each of the two data sets.

Size Premium Calculation: CRSP Deciles Size Study

In the 2019 data year of the Cost of Capital Navigator, the CRSP Deciles Size Study are calculated over the years 1926–2018. The following statistics are calculated over this time period:

- The "historical" average annual long-term equity risk premium is 6.91%.
- The average annual risk-free rate is 4.97%.
- CRSP Decile 9 average annual return equals 16.65%.
- CRSP Decile 9 OLS beta equals 1.34.

The beta-adjusted size premium for CRSP Decile 9 is calculated as follows:

Size Premium$_{\text{CRSP Decile 9}}$ *= actual excess return – excess return predicted by CAPM*

The *actual* excess return of Decile 9 is 11.69% (16.65% – 4.97%) (difference due to rounding), and the excess return that CAPM *predicted* is 9.23% (1.34 x 6.91%) (difference due to rounding). The size premium for CRSP Decile 9 is therefore 2.46%, which is "what actually happened" (11.69%) minus "what CAPM predicted" (9.23%). This is what is meant when we say that the beta of smaller

Utility stocks and the size effect-revisited

Thomas M. Zepp*[1]

Utility Resources, Inc., 1500 Liberty Street S.E., Suite 250, Salem, OR 97302, USA

Received 7 January 2002; received in revised form 27 August 2002; accepted 29 August 2002

Abstract

Wong concluded there is weak empirical support that firm size is a missing factor from the capital asset pricing model for industrial stocks but not for utility stocks. Her weak results, however, do not rule out the possibility of a small firm effect for utilities. The issue she addressed has important financial implications in regulated proceedings that set rates of return for utilities. New studies based on different size water utilities are presented that do support a small firm effect in the utility industry.

Keywords: Utility stocks; Beta risk; Firm size

Annie Wong concludes there is some weak evidence that firm size is a missing factor from the capital asset pricing model ("CAPM") for industrial stocks but not for utility stocks (Wong, 1993, p. 98). This "firm size effect" is an observation that small firms tend to earn higher returns than larger firms after controlling for differences in estimates of beta risk in the CAPM. Wong notes that if the size effect exists, it has important implications and should be considered by regulators when they determine fair rates of return for public utilities. This paper re-examines the basis for her conclusions and presents new information that indicates there is a small firm effect in the utility sector.

1. Reconsideration of the evidence provided by Wong

Wong relies on Barry and Brown (1984) and Brauer (1986) to suggest the small firm effect may be explained by differences in information available to investors of small and large firms.

* Tel.: +1-503-370-9563; fax: +1-503-370-9566.
E-mail address: tzepp@ur-inc.com (T.M. Zepp).

1062-9769/02/$-see front matter
PII: S1062-9769(02)00172-2

She states that requirements to file reports and information generated during regulatory proceedings indicate the same amount of information is available for large and small utilities and thus, if the differential information hypothesis explains the small firm effect, then the uniformity of information available among utility firms would suggest the size effect should not be observed in the utility industry. But contrary to the facts she assumes, there are differences in information available for large and small utilities. More parties participate in proceedings for large utilities and thus generate more information. Also, in some jurisdictions smaller utilities are not required to file all of the information that is required of larger firms. Thus, if the small firm effect is explained by differential information, contrary to Wong's hypothesis, differences in available information suggests there is a small firm effect in the utility industry. Wong did not discuss other potential explanations of the small firm effect for utilities.[2]

Wong's empirical results are not strong enough to conclude that beta risks of utilities are unrelated to size. In the period 1963-1967, when monthly data were used to estimate betas, her estimates of utilitybetas as well as industrial betas increased as the size of the firms decreased, but she did not find the same inverse relationship between size and beta risk for utilities in other periods. Being unable to demonstrate a relationship between size and beta in other periods may be the result of Wong using monthly, weekly and daily data to make those beta estimates. Roll (1980) concluded trading infrequency seems to be a powerful cause of bias in beta risk estimates when time intervals of a month or less are used to estimate betas for small stocks. When a small stock is thinly traded, its stock price does not reflect the movement of the market, which drives down the apparent covariance with the market and creates an artificially low beta estimate.

Ibbotson Associates (2002) found that when annual data are used to estimate betas, beta estimates for the smaller firms increase more than beta estimates for larger firms. Table 1 compares Value Line (2000) beta estimates for three relatively small water utilities that are made with weekly data and an adjusted beta estimated with pooled annual data for the utilities for the 5-year period ending in December 2000. In making the latter estimate, it is assumed that the underlying betafor each of water utilities is the same. The!-statistics for the unadjusted beta

Table 1
Beta estimates reported by Value Line and estimated with pooled annual returns for relatively small water utilities

	Value Line[a]	Estimated with annual data[b]
Connecticut Water Service	0.45	
Middlesex Water	0.45	
SJW Corporation	0.50	
Average	0.47	0.78
t-statistic		, 2 72[c,d]

[a] As reported in Value Line (2000). Betas estimated with 5 years of weekly data.

[b] Estimated with pooled annual return premiums for the 5-year period ending December 2000. Proxy market returns are total returns for the S&P 500 index. Dummy variable in 1999 to reflect the proposed acquisition of SJW Corporation included in analysis.

[c] Significant at the 95% level.

[d] The t-statistic for the null hypothesis that the true beta is 0.18 (the derived unadjusted Value Line beta) when the estimated betas is 0.65 (the unadjusted estimated beta) is 1.97. It is significant at the 95% level.

estimate is reported in parentheses. As was found by Ibbotson Associates (2002) for stocks in general, when annual data are used to estimate betas for small utility stocks, the beta estimate mcreases.

Wong used the Fama and MacBeth (1973) approach to estimate how well firm size and beta explain future returns in four periods. She reports weak empirical results for both the industrial and utility sectors. In every one of the statistical results reported for utilities, the coefficient for the size effect has a negative sign as would be expected if there is a size effect in the utility industry butonly oneof the results was found to be statistically significant at the 5% level. With the industrial sector, though she found two cases to have a significant size effect, a negative sign for the size coefficient occurred only 75% of the time. What is puzzling is that with these weak results, Wong concludes the analysis provides support for the small firm effect for the industrial industry but no support for a small firm effect for the utility industry.

2. New evidence on risk premiums required by small utilities

Two other studies support a conclusion that small utilities are more risky than larger ones. A study made by Staff of the Water Utilities Branch of the California Public Utilities Commission Advisory and Compliance Division (CPUC Staff, 1991) used proxies for beta risk and determined small water utilities were more risky than larger water utilities. Part of the difficulty with examining the question of relative risk of utilities is that the very small utilities are not publicly-traded. This CPUC Staff study addressed that concern by computing proxies for beta risk estimated with accounting data for the period 1981-1991 for 58 water utilities. Based on that analysis, CPUC Staff concluded that smaller water utilities were more risky and required higher equity returns than larger water utilities. Following 8 days of hearings and testimony by 21 witnesses regarding this study, it was adopted by the California Public Utilities Commission in CPUC Decision 92-03-093, dated March 31, 1992.

Table 2 provides the results of another study of differences in required returns estimated from discounted cash flow ("DCF") model estimates of the costs of equity for water utilities of different sizes. The study compares average estimates of equity costs for two smaller water utilities, Dominguez Water Company and SJW Corporation, with equity cost estimates for two larger companies, California Water Service and American States Water, for the period 1987- 1997. All four utilities operated primarily in the same regulatory jurisdiction during that period. Estimates of future growth are required to make DCF estimates. Gordon, Gordon, and Gould (1989) found that a consensus of analysts' forecasts of earnings per share for the next *5* years provides a more accurate estimate of growth required in the DCF model than three different historical measures of growth. Unfortunately, such analysts' forecasts are not generally available for small utilities and thus this study assumes, as was assumed by staff at the regulatory commission, that investors relied upon past measures of growth to forecast the future. The results in Table 2 show that the smaller water utilities had a cost of equity that, on average, was 99 basis points higher than the average cost of equity for the larger water utilities. This result is statistically significant at the 90% level. In terms of the issues being addressed by Wong, the 99 basis points could be the result of differences in beta risk, the small firm effect or some combination of the two.

Table2
Small firm equity costdifferential: case studybasedona comparison ofDCF equity cost estimates for larger andsmaller California water utilities (1987-1997)

	Larger water utilitiesa			Smaller water utilitiesb			Smaller utilities minus larger utilities
	Do/Po (%)	Estimated growth(%)"	Equity cost estimate (%)d	Do/Po (%)	Estimated growth(%)"	Equity cost estimate (%)d	
1987	6.60	7.17	14.24	5.38	10.06	15.98	1.74
1988	6.75	6.30	13.48	5.81	9.08	15.42	1.94
1989	7.10	6.30	13.84	6.47	7.00	13.93	0.09

a American States Water and California Water Service.
b Dominguez Water Company and SJW Corporation.
c Average of 5- and 10-year dividends per share growth, 10-year earnings per share growth and estimates of sustainable growth from internal and external sources for the most recent 10-year period when data are available (1991-1997), otherwise most recent 5-year period (1987-1990).
d DCF equity cost as computed by California PUC staff: $k =$ <Do/Po) x (1 $+ g) + g$.
e Significant at the 90% level.

3. Concluding remarks

Wong's concluding remarks should be re-examined and placed in perspective. She noted that industrial betas tend to decrease with increases in firm size but the same relationship is not found in every period for utilities. Had longer time intervals been used to estimated betas, as was done in Table 1, she may have found the same inverse relationship between size and beta risk for utilities in other periods. She also concludes "there is some weak evidence that firm size is a missing factor from the CAPM for the industrial but not the utility stocks" (Wong,1993, p. 98), but theweak evidence provides little support for a small firmeffect existing or not existing in either the industrial or utility sector. Two other studies discussed here support a conclusion that smaller water utility stocks are more risky than larger ones. To the extent that water utilities are representative of all utilities, there is support for smaller utilities being more risky than larger ones.

Notes

1. Vice President.
2. The small firm effect could also be a proxy for numerous other omitted risk differences between large and small utilities. An obvious candidate is differentials in access to :financial markets created by size. Some very small utilities are unable to borrow money without backing of the owner. Other small utilities are limited to private placements of debt and have no access to the more liquid :financial markets available to larger utilities.

Estimation and Applications

SECOND EDITION

Shannon P. Pratt, CFA, FASA, MCBA

JOHN WILEY & SONS, INC.

This process will return a rate equivalent to the before-tax discount rate. This is the desired method of calculating the true effect of taxes on the discount rate. Several things are occurring here that lead to a result on a before-tax basis. Generally, the reason for calculating the IRR is that inconsistent growth rates between net cash flow and before-tax income are difficult to model in an easy-to-understand formula. Unfortunately, the downside to this process is that it is more complex and a little more difficult to explain.

Multiplicative Value Adjustments

Ad Valorem Tax Addback

The most common multiplicative value adjustment in ad valorem assessment is the addback of ad valorem taxes. Many assessors want to remove the historical bias resulting from prior valuations. Therefore, they may prefer to account for property tax within the discount rate. They do so by adding back to the discount rate the percent relationship of tax to market value. This adjustment is most similar to the linear adjustment in income. The difference is that the adjustment is a direct function of value. In other words, if the value increases, the adjustment increases directly with the value, and vice versa. This can be demonstrated by the next formula:

Formula 20.19

$$k_q = k + (o \times PV) \div PV = \frac{1 + (o \times PV)}{PV}$$

thus, $k_q = k + o$

where:

o = Percent of tax to value

And with the addition of a growth component (g), the formula expands to:

Formula 20.20

$$k_q - g = k - g + o$$

thus, $k_q = k + o$

The same formula can be used for any adjustment that is equal to a percentage of value. This holds true even in random changes in value. The only caveat is that the percent relationship to value must remain constant. This adjustment is quite powerful and easy to demonstrate, which is likely the reason for its popularity.

Flotation Costs

Another type of multiplicative value adjustment is flotation costs. Flotation costs occur when new issues of stock or debt are sold to the public. The firm usually incurs

several kinds of flotation or transaction costs, which reduce the actual proceeds received by the firm. Some of these are direct out-of-pocket outlays, such as fees paid to underwriters, legal expenses, and prospectus preparation costs. Because of this reduction in proceeds, the firm's required returns on these proceeds equate to a higher return to compensate for the additional costs. Flotation costs can be accounted for either by amortizing the cost, thus reducing the cash flow to discount, or by incorporating the cost into the cost of capital. Because flotation costs are not typically applied to operating cash flow, one must incorporate them into the cost of capital.

The cost of flotation is a function of size and risk. The larger the issuance, the lower the cost as a percentage of the issuance price. Flotation costs are the greatest for equity issuance and the least for debt issuance. Preferred stock flotation costs tend to be somewhere in between. The next table shows examples of the relation of flotation cost to size of an issuance of stock that occurred during 1996 and 1997.

Company	Total Issuance	Total Flotation
Excite	39,100,000	9.46%
Team Rental	52,000,000	6.76%
Amazon	54,000,000	8.57%
IXC	89,600,000	8.67%
General Cigar	108,000,000	8.28%
Ciena	115,000,000	7.96%
Capstar	166,500,000	7.68%
General Cable	354,900,000	5.94%
Sabre	545,400,000	5.77%
Hartford Life	649,750,000	6.50%

OTHER ADJUSTMENTS TO THE COST OF CAPITAL

In the property tax arena, traditional techniques are king. Any new approaches are met with skepticism, because the results of many new techniques tend to lower the market value of the project and, thus, the taxes. This is true despite the validity of such approaches. The next paragraphs identify four "newer" techniques introduced in the ad valorem arena in the 1990s.

Ex Post and *Ex Ante* Risk Premia

The expected equity risk premium is unobservable in the market and must be estimated. For both the Capital Asset Pricing Model (CAPM) and the build-up method, *ex post* and *ex ante* risk premia are used to obtain estimates for the cost of equity.

An *ex post* risk premium is based on the assumption that historical returns are the best predictor of future returns. It is calculated by subtracting the long-term arithmetic average of the income return on long-term government bonds for the CAPM or

This rating methodology replaces "Regulated Electric and Gas Utilities" last revised on December 23, 2013. We have updated some outdated links and removed certain issuer-specific information.

Summary

This rating methodology explains our approach to assessing credit risk for regulated electric and gas utilities globally. This document does not include an exhaustive treatment of all factors that are reflected in our ratings but should enable the reader to understand the qualitative considerations and financial information and ratios that are usually most important for ratings in this sector.[1]

This report includes a detailed rating grid which is a reference tool that can be used to approximate credit profiles within the regulated electric and gas utility sector in most cases. The grid provides summarized guidance for the factors that are generally most important in assigning ratings to companies in the regulated electric and gas utility industry. However, the grid is a summary that does not include every rating consideration. The weights shown for each factor in the grid represent an approximation of their importance for rating decisions but actual importance may vary substantially. In addition, the grid in this document uses historical results while ratings are based on our forward-looking expectations. As a result, the grid-indicated rating is not expected to match the actual rating of each company.

THIS METHODOLOGY WAS UPDATED ON THE DATES LISTED AS NOTED: ON FEBRUARY 22, 2019, WE AMENDED A REFERENCE TO A METHODOLOGY IN APPENDIX E AND REMOVED OUTDATED TEXT; ON AUGUST 2, 2018, WE MADE MINOR FORMATTING ADJUSTMENTS THROUGHOUT THE METHODOLOGY; ON FEBRUARY 15, 2018, WE CORRECTED THE FORMATTING OF THE FACTOR 4: FINANCIAL STRENGTH TABLE ON PAGE 34; AND ON SEPTEMBER 27, 2017, WE REMOVED A DUPLICATE FOOTNOTE THAT WAS PLACED IN THE MIDDLE OF THE TEXT ON PAGE 7.

[1] This update may not be effective in some jurisdictions until certain requirements are met.

The grid contains four key factors that are important in our assessment for ratings in the regulated electric and gas utility sector:

1. Regulatory Framework
2. Ability to Recover Costs and Earn Returns
3. Diversification
4. Financial Strength

Some of these factors also encompass a number of sub-factors. There is also a notching factor for holding company structural subordination.

This rating methodology is not intended to be an exhaustive discussion of all factors that our analysts consider in assigning ratings in this sector. We note that our analysis for ratings in this sector covers factors that are common across all industries such as ownership, management, liquidity, corporate legal structure, governance and country related risks which are not explained in detail in this document, as well as factors that can be meaningful on a company-specific basis. Our ratings consider these and other qualitative considerations that do not lend themselves to a transparent presentation in a grid format. The grid used for this methodology reflects a decision to favor a relatively simple and transparent presentation rather than a more complex grid that might map grid-indicated ratings more closely to actual ratings.

Highlights of this report include:

» An overview of the rated universe

» A summary of the rating methodology

» A discussion of the key rating factors that drive ratings

» Comments on the rating methodology assumptions and limitations, including a discussion of rating considerations that are not included in the grid

The Appendices show the full grid (Appendix A), our approach to ratings within a utility family (Appendix B), a description of the various types of companies rated under this methodology (Appendix C), key industry issues over the intermediate term (Appendix D), regional and other considerations (Appendix E), and treatment of power purchase agreements (Appendix F).

This methodology describes the analytical framework used in determining credit ratings. In some instances our analysis is also guided by additional publications which describe our approach for analytical considerations that are not specific to any single sector. Examples of such considerations include but are not limited to: the assignment of short-term ratings, the relative ranking of different classes of debt and hybrid securities, how sovereign credit quality affects non-sovereign issuers, and the assessment of credit support from other entities. A link to documents that describe our approach to such cross-sector credit rating methodological considerations can be found in the Related Research section of this report.

About the Rated Universe

The Regulated Electric and Gas Utilities rating methodology applies to rate-regulated[2] electric and gas utilities that are not Networks[3]. Regulated Electric and Gas Utilities are companies whose predominant[4] business is the sale of electricity and/or gas or related services under a rate-regulated framework, in most cases to retail customers. Also included under this methodology are rate-regulated utilities that own generating assets as any material part of their business, utilities whose charges or bills to customers include a meaningful component related to the electric or gas commodity, utilities whose rates are regulated at a sub-sovereign level (e.g. by provinces, states or municipalities), and companies providing an independent system operator function to an electric grid. Companies rated under this methodology are primarily rate-regulated monopolies or, in certain circumstances, companies that may not be outright monopolies but where government regulation effectively sets prices and limits competition.

This rating methodology covers regulated electric and gas utilities worldwide. These companies are engaged in the production, transmission, coordination, distribution and/or sale of electricity and/or natural gas, and they are either investor owned companies, commercially oriented government owned companies or, in the case of independent system operators, not-for-profit or similar entities. As detailed in Appendix C, this methodology covers a wide variety of companies active in the sector, including vertically integrated utilities, transmission and distribution utilities with retail customers and/or sub-sovereign regulation, local gas distribution utility companies (LDCs), independent system operators, and regulated generation companies. These companies may be operating companies or holding companies.

An over-arching consideration for regulated utilities is the regulatory environment in which they operate. While regulation is also a key consideration for networks, a utility's regulatory environment is in comparison often more dynamic and more subject to political intervention. The direct relationship that a regulated utility has with the retail customer, including billing for electric or gas supply that has substantial price volatility, can lead to a more politically charged rate-setting environment. Similarly, regulation at the sub-sovereign level is often more accessible for participation by interveners, including disaffected customers and the politicians who want their votes. Our views of regulatory environments evolve over time in accordance with our observations of regulatory, political, and judicial events that affect issuers in the sector.

This methodology pertains to regulated electric and gas utilities and excludes the following types of issuers, which are covered by separate rating methodologies: Regulated Networks, Unregulated Utilities and Power Companies, Public Power Utilities, Municipal Joint Action Agencies, Electric Cooperatives, Regulated Water Companies and Natural Gas Pipelines.[5]

The Regulated Electric and Gas Utility sector is predominantly investment grade, reflecting the stability generally conferred by regulation that typically sets prices and also limits competition, such that defaults have been lower than in many other non-financial corporate sectors. However, the nature of regulation can

[2] Companies in many industries are regulated. We use the term rate-regulated to distinguish companies whose rates (by which we also mean tariffs or revenues in general) are set by regulators.

[3] Regulated Electric and Gas Networks are companies whose predominant business is purely the transmission and/or distribution of electricity and/or natural gas without involvement in the procurement or sale of electricity and/or gas; whose charges to customers thus do not include a meaningful commodity cost component; which sell mainly (or in many cases exclusively) to non-retail customers; and which are rate-regulated under a national framework.

[4] We generally consider a company to be predominantly a regulated electric and gas utility when a majority of its cash flows, prospectively and on a sustained basis, are derived from regulated electric and gas utility businesses. Since cash flows can be volatile (such that a company might have a majority of utility cash flows simply due to a cyclical downturn in its non-utility businesses), we may also consider the breakdown of assets and/or debt of a company to determine which business is predominant.

[5] A link to credit rating methodologies covering these and other sectors can be found in the Related Research section of this report.

vary significantly from jurisdiction to jurisdiction. Most issuers at the lower end of the ratings spectrum operate in challenging regulatory environments.

About this Rating Methodology

This report explains the rating methodology for regulated electric and gas utilities in six sections, which are summarized as follows:

1. Identification and Discussion of the Rating Factors in the Grid

The grid in this rating methodology focuses on four rating factors. The four factors are comprised of sub-factors that provide further detail:

Factor / Sub-Factor Weighting - Regulated Utilities

Broad Rating Factors	Broad Rating Factor Weighting	Rating Sub-Factor	Sub-Factor Weighting
Regulatory Framework	25%	Legislative and Judicial Underpinnings of the Regulatory Framework	12.5%
		Consistency and Predictability of Regulation	12.5%
Ability to Recover Costs and Earn Returns	25%	Timeliness of Recovery of Operating and Capital Costs	12.5%
		Sufficiency of Rates and Returns	12.5%
Diversification	10%	Market Position	5%*
		Generation and Fuel Diversity	5%**
Financial Strength, Key Financial Metrics	40%		
		CFO pre-WC + Interest / Interest	7.5%
		CFO pre-WC / Debt	15.0%
		CFO pre-WC – Dividends / Debt	10.0%
		Debt/Capitalization	7.5%
Total	100%		100%
Notching Adjustment			
Holding Company Structural Subordination			0 to -3

*10% weight for issuers that lack generation; **0% weight for issuers that lack generation

2. Measurement or Estimation of Factors in the Grid

We explain our general approach for scoring each grid factor and show the weights used in the grid. We also provide a rationale for why each of these grid components is meaningful as a credit indicator. The information used in assessing the sub-factors is generally found in or calculated from information in company financial statements, derived from other observations or estimated by our analysts.[6] All of the quantitative credit metrics incorporate Moody's standard adjustments to income statement, cash flow statement and balance sheet amounts for restructuring, impairment, off-balance sheet accounts, receivable securitization programs, under-funded pension obligations, and recurring operating leases.[7]

6 For definitions of our most common ratio terms, please see "Moody's Basic Definitions for Credit Statistics, User's Guide," a link to which may be found in the Related Research section of this report.

7 Our standard adjustments are described in "Financial Statement Adjustments in the Analysis of Non-Financial Corporations". A link to this and other sector and cross-sector credit rating methodologies can be found in the Related Research section of this report.

Our ratings are forward-looking and reflect our expectations for future financial and operating performance. However, historical results are helpful in understanding patterns and trends of a company's performance as well as for peer comparisons. We utilize historical data (in most cases, an average of the last three years of reported results) in the rating grid. However, the factors in the grid can be assessed using various time periods. For example, rating committees may find it analytically useful to examine both historic and expected future performance for periods of several years or more, or for individual twelve month periods.

3. Mapping Factors to the Rating Categories

After estimating or calculating each sub-factor, the outcomes for each of the sub-factors are mapped to a broad Moody's rating category (Aaa, Aa, A, Baa, Ba, B, or Caa).

4. Assumptions, Limitations and Rating Considerations Not Included in the Grid

This section discusses limitations in the use of the grid to map against actual ratings, some of the additional factors that are not included in the grid but can be important in determining ratings, and limitations and assumptions that pertain to the overall rating methodology.

5. Determining the Overall Grid-Indicated Rating[8]

To determine the overall grid-indicated rating, we convert each of the sub-factor ratings into a numeric value based upon the scale below.

Aaa	Aa	A	Baa	Ba	B	Caa	Ca
1	3	6	9	12	15	18	20

The numerical score for each sub-factor is multiplied by the weight for that sub-factor with the results then summed to produce a composite weighted-factor score. The composite weighted factor score is then mapped back to an alphanumeric rating based on the ranges in the table below.

Grid-Indicated Rating

Grid-Indicated Rating	Aggregate Weighted Total Factor Score
Aaa	$x < 1.5$
Aa1	$1.5 \leq x < 2.5$
Aa2	$2.5 \leq x < 3.5$
Aa3	$3.5 \leq x < 4.5$
A1	$4.5 \leq x < 5.5$
A2	$5.5 \leq x < 6.5$
A3	$6.5 \leq x < 7.5$
Baa1	$7.5 \leq x < 8.5$
Baa2	$8.5 \leq x < 9.5$
Baa3	$9.5 \leq x < 10.5$

8 In general, the grid-indicated rating is oriented to the Corporate Family Rating (CFR) for speculative-grade issuers and the senior unsecured rating for investment-grade issuers. For issuers that benefit from ratings uplift due to parental support, government ownership or other institutional support, the grid-indicated rating is oriented to the baseline credit assessment. For an explanation of baseline credit assessment, please refer to our rating methodology on government-related issuers. Individual debt instrument ratings also factor in decisions on notching for seniority level and collateral. The documents that provide broad guidance for these notching decisions are our rating methodologies on loss given default for speculative grade non-financial companies and for aligning corporate instrument ratings based on differences in security and priority of claim. The link to these and other sector and cross-sector credit rating methodologies can be found in the Related Research section of this report.

Grid-Indicated Rating

Grid-Indicated Rating	Aggregate Weighted Total Factor Score
Ba1	10.5 ≤ x < 11.5
Ba2	11.5 ≤ x < 12.5
Ba3	12.5 ≤ x < 13.5
B1	13.5 ≤ x < 14.5
B2	14.5 ≤ x < 15.5
B3	15.5 ≤ x < 16.5
Caa1	16.5 ≤ x < 17.5
Caa2	17.5 ≤ x < 18.5
Caa3	18.5 ≤ x < 19.5
Ca	x ≥ 19.5

For example, an issuer with a composite weighted factor score of 11.7 would have a Ba2 grid-indicated rating.

6. Appendices

The Appendices present a full grid and provide additional commentary and insights on our view of credit risks in this industry.

Discussion of the Grid Factors

Our analysis of electric and gas utilities focuses on four broad factors:

» Regulatory Framework

» Ability to Recover Costs and Earn Returns

» Diversification

» Financial Strength

There is also a notching factor for holding company structural subordination.

Factor 1: Regulatory Framework (25%)

Why It Matters

For rate-regulated utilities, which typically operate as a monopoly, the regulatory environment and how the utility adapts to that environment are the most important credit considerations. The regulatory environment is comprised of two rating factors - the Regulatory Framework and its corollary factor, the Ability to Recover Costs and Earn Returns. Broadly speaking, the Regulatory Framework is the foundation for how all the decisions that affect utilities are made (including the setting of rates), as well as the predictability and consistency of decision-making provided by that foundation. The Ability to Recover Costs and Earn Returns relates more directly to the actual decisions, including their timeliness and the rate-setting outcomes.

Utility rates[9] are set in a political/regulatory process rather than a competitive or free-market process; thus, the Regulatory Framework is a key determinant of the success of utility. The Regulatory Framework has many components: the governing body and the utility legislation or decrees it enacts, the manner in which regulators are appointed or elected, the rules and procedures promulgated by those regulators, the judiciary that interprets the laws and rules and that arbitrates disagreements, and the manner in which the utility manages the political and regulatory process. In many cases, utilities have experienced credit stress or default primarily or at least secondarily because of a break-down or obstacle in the Regulatory Framework – for instance, laws that prohibited regulators from including investments in uncompleted power plants or plants not deemed "used and useful" in rates, or a disagreement about rate-making that could not be resolved until after the utility had defaulted on its debts.

How We Assess Legislative and Judicial Underpinnings of the Regulatory Framework for the Grid

For this sub-factor, we consider the scope, clarity, transparency, supportiveness and granularity of utility legislation, decrees, and rules as they apply to the issuer. We also consider the strength of the regulator's authority over rate-making and other regulatory issues affecting the utility, the effectiveness of the judiciary or other independent body in arbitrating disputes in a disinterested manner, and whether the utility's monopoly has meaningful or growing carve-outs. In addition, we look at how well developed the framework is – both how fully fleshed out the rules and regulations are and how well tested it is – the extent to which regulatory or judicial decisions have created a body of precedent that will help determine future rate-making. Since the focus of our scoring is on each issuer, we consider how effective the utility is in navigating the regulatory framework – both the utility's ability to shape the framework and adapt to it.

A utility operating in a regulatory framework that is characterized by legislation that is credit supportive of utilities and eliminates doubt by prescribing many of the procedures that the regulators will use in determining fair rates (which legislation may show evidence of being responsive to the needs of the utility in general or specific ways), a long history of transparent rate-setting, and a judiciary that has provided ample precedent by impartially adjudicating disagreements in a manner that addresses ambiguities in the laws and rules will receive higher scores in the Legislative and Judicial Underpinnings sub-factor. A utility operating in a regulatory framework that, by statute or practice, allows the regulator to arbitrarily prevent the utility from recovering its costs or earning a reasonable return on prudently incurred investments, or where regulatory decisions may be reversed by politicians seeking to enhance their populist appeal will receive a much lower score.

In general, we view national utility regulation as being less liable to political intervention than regulation by state, provincial or municipal entities, so the very highest scoring in this sub-factor is reserved for this category. However, we acknowledge that states and provinces in some countries may be larger than small nations, such that their regulators may be equally "above-the-fray" in terms of impartial and technically-oriented rate setting, and very high scoring may be appropriate.

[9] In jurisdictions where utility revenues include material government subsidy payments, we consider utility rates to be inclusive of these payments, and we thus evaluate sub-factors 1a, 1b, 2a and 2b in light of both rates and material subsidy payments. For example, we would consider the legal and judicial underpinnings and consistency and predictability of subsidies as well as rates.

The relevant judicial system can be a major factor in the regulatory framework. This is particularly true in litigious societies like the United States, where disagreements between the utility and its state or municipal regulator may eventually be adjudicated in federal district courts or even by the US Supreme Court. In addition, bankruptcy proceedings in the US take place in federal courts, which have at times been able to impose rate settlement agreements on state or municipal regulators. As a result, the range of decisions available to state regulators may be effectively circumscribed by court precedent at the state or federal level, which we generally view as favorable for the credit- supportiveness of the regulatory framework.

Electric and gas utilities are generally presumed to have a strong monopoly that will continue into the foreseeable future, and this expectation has allowed these companies to have greater leverage than companies in other sectors with similar ratings. Thus, the existence of a monopoly in itself is unlikely to be a driver of strong scoring in this sub-factor. On the other hand, a strong challenge to the monopoly could cause lower scoring, because the utility can only recover its costs and investments and service its debt if customers purchase its services. There have some instances of incursions into utilities' monopoly, including municipalization, self-generation, distributed generation with net metering, or unauthorized use (beyond the level for which the utility receives compensation in rates). Incursions that are growing significantly or having a meaningful impact on rates for customers that remain with the utility could have a negative impact on scoring of this sub-factor and on factor 2 - Ability to Recover Costs and Earn Returns.

The scoring of this sub-factor may not be the same for every utility in a particular jurisdiction. We have observed that some utilities appear to have greater sway over the relevant utility legislation and promulgation of rules than other utilities – even those in the same jurisdiction. The content and tone of publicly filed documents and regulatory decisions sometimes indicates that the management team at one utility has better responsiveness to and credibility with its regulators or legislators than the management at another utility.

While the underpinnings to the regulatory framework tend to change relatively slowly, they do evolve, and our factor scoring will seek to reflect that evolution. For instance, a new framework will typically become tested over time as regulatory decisions are issued, or perhaps litigated, thereby setting a body of precedent. Utilities may seek changes to laws in order to permit them to securitize certain costs or collect interim rates, or a jurisdiction in which rates were previously recovered primarily in base rate proceedings may institute riders and trackers. These changes would likely impact scoring of sub-factor 2b - Timeliness of Recovery of Operating and Capital Costs, but they may also be sufficiently significant to indicate a change in the regulatory underpinnings. On the negative side, a judiciary that had formerly been independent may start to issue decisions that indicate it is conforming its decisions to the expectations of an executive branch that wants to mandate lower rates.

Factor 1a: Legislative and Judicial Underpinnings of the Regulatory Framework (12.5%)

Aaa	Aa	A	Baa
Utility regulation occurs under a fully developed framework that is national in scope based on legislation that provides the utility a nearly absolute monopoly (see note 1) within its service territory, an unquestioned assurance that rates will be set in a manner that will permit the utility to make and recover all necessary investments, an extremely high degree of clarity as to the manner in which utilities will be regulated and prescriptive methods and procedures for setting rates. Existing utility law is comprehensive and supportive such that changes in legislation are not expected to be necessary; or any changes that have occurred have been strongly supportive of utilities credit quality in general and sufficiently forward-looking so as to address problems before they occurred. There is an independent judiciary that can arbitrate disagreements between the regulator and the utility should they occur, including access to national courts, very strong judicial precedent in the interpretation of utility laws, and a strong rule of law. We expect these conditions to continue.	Utility regulation occurs under a fully developed national, state or provincial framework based on legislation that provides the utility an extremely strong monopoly (see note 1) within its service territory, a strong assurance, subject to limited review, that rates will be set in a manner that will permit the utility to make and recover all necessary investments, a very high degree of clarity as to the manner in which utilities will be regulated and reasonably prescriptive methods and procedures for setting rates. If there have been changes in utility legislation, they have been timely and clearly credit supportive of the issuer in a manner that shows the utility has had a strong voice in the process. There is an independent judiciary that can arbitrate disagreements between the regulator and the utility, should they occur including access to national courts, strong judicial precedent in the interpretation of utility laws, and a strong rule of law. We expect these conditions to continue.	Utility regulation occurs under a well developed national, state or provincial framework based on legislation that provides the utility a very strong monopoly (see note 1) within its service territory, an assurance, subject to reasonable prudency requirements, that rates will be set in a manner that will permit the utility to make and recover all necessary investments, a high degree of clarity as to the manner in which utilities will be regulated, and overall guidance for methods and procedures for setting rates. If there have been changes in utility legislation, they have been mostly timely and on the whole credit supportive for the issuer, and the utility has had a clear voice in the legislative process. There is an independent judiciary that can arbitrate disagreements between the regulator and the utility, should they occur, including access to national courts, clear judicial precedent in the interpretation of utility law, and a strong rule of law. We expect these conditions to continue.	Utility regulation occurs (i) under a national, state, provincial or municipal framework based on legislation that provides the utility a strong monopoly within its service territory that may have some exceptions such as greater self-generation (see note 1), a general assurance that, subject to prudency requirements that are mostly reasonable, rates will be set will be set in a manner that will permit the utility to make and recover all necessary investments, reasonable clarity as to the manner in which utilities will be regulated and overall guidance for methods and procedures for setting rates; or (ii) under a new framework where independent and transparent regulation exists in other sectors. If there have been changes in utility legislation, they have been credit supportive or at least balanced for the issuer but potentially less timely, and the utility had a voice in the legislative process. There is either (i) an independent judiciary that can arbitrate disagreements between the regulator and the utility, including access to courts at least at the state or provincial level, reasonably clear judicial precedent in the interpretation of utility laws, and a generally strong rule of law; or (ii) regulation has been applied (under a well developed framework) in a manner such that redress to an independent arbiter has not been required. We expect these conditions to continue.

Ba	B	Caa
Utility regulation occurs (i) under a national, state, provincial or municipal framework based on legislation or government decree that provides the utility a monopoly within its service territory that is generally strong but may have a greater level of exceptions (see note 1), and that, subject to prudency requirements which may be stringent, provides a general assurance (with somewhat less certainty) that rates will be set will be set in a manner that will permit the utility to make and recover necessary investments; or (ii) under a new framework where the jurisdiction has a history of less independent and transparent regulation in other sectors. Either: (i) the judiciary that can arbitrate disagreements between the regulator and the utility may not have clear authority or may not be fully independent of the regulator or other political pressure, but there is a reasonably strong rule of law; or (ii) where there is no independent arbiter, the regulation has mostly been applied in a manner such redress has not been required. We expect these conditions to continue.	Utility regulation occurs (i) under a national, state, provincial or municipal framework based on legislation or government decree that provides the utility monopoly within its service territory that is reasonably strong but may have important exceptions, and that, subject to prudency requirements which may be stringent or at times arbitrary, provides more limited or less certain assurance that rates will be set in a manner that will permit the utility to make and recover necessary investments; or (ii) under a new framework where we would expect less independent and transparent regulation, based either on the regulator's history in other sectors or other factors. The judiciary that can arbitrate disagreements between the regulator and the utility may not have clear authority or may not be fully independent of the regulator or other political pressure, but there is a reasonably strong rule of law. Alternately, where there is no independent arbiter, the regulation has been applied in a manner that often requires some redress adding more uncertainty to the regulatory framework. There may be a periodic risk of creditor-unfriendly government intervention in utility markets or rate-setting.	Utility regulation occurs (i) under a national, state, provincial or municipal framework based on legislation or government decree that provides the utility a monopoly within its service territory, but with little assurance that rates will be set in a manner that will permit the utility to make and recover necessary investments; or (ii) under a new framework where we would expect unpredictable or adverse regulation, based either on the jurisdiction's history of in other sectors or other factors. The judiciary that can arbitrate disagreements between the regulator and the utility may not have clear authority or is viewed as not being fully independent of the regulator or other political pressure. Alternately, there may be no redress to an effective independent arbiter. The ability of the utility to enforce its monopoly or prevent uncompensated usage of its system may be limited. There may be a risk of creditor-unfriendly nationalization or other significant intervention in utility markets or rate-setting.

Note 1: The strength of the monopoly refers to the legal, regulatory and practical obstacles for customers in the utility's territory to obtain service from another provider. Examples of a weakening of the monopoly would include the ability of a city or large user to leave the utility system to set up their own system, the extent to which self-generation is permitted (e.g. cogeneration) and/or encouraged (e.g., net metering, DSM generation). At the lower end of the ratings spectrum, the utility's monopoly may be challenged by pervasive theft and unauthorized use. Since utilities are generally presumed to be monopolies, a strong monopoly position in itself is not sufficient for a strong score in this sub-factor, but a weakening of the monopoly can lower the score.

How We Assess Consistency and Predictability of Regulation for the Grid

For the Consistency and Predictability sub-factor, we consider the track record of regulatory decisions in terms of consistency, predictability and supportiveness. We evaluate the utility's interactions in the regulatory process as well as the overall stance of the regulator toward the utility.

In most jurisdictions, the laws and rules seek to make rate-setting a primarily technical process that examines costs the utility incurs and the returns on investments the utility needs to earn so it can make investments that are required to build and maintain the utility infrastructure - power plants, electric transmission and distribution systems, and/or natural gas distribution systems. When the process remains technical and transparent such that regulators can support the financial health of the utility while balancing their public duty to assure that reliable service is provided at a reasonable cost, and when the utility is able to align itself with the policy initiatives of the governing jurisdiction, the utility will receive higher scores in this sub-factor. When the process includes substantial political intervention, which could take the form of legislators or other government officials publically second- guessing regulators, dismissing regulators who have approved unpopular rate increases, or preventing the implementation of rate increases, or when regulators ignore the laws/rules to deliver an outcome that appears more politically motivated, the utility will receive lower scores in this sub-factor.

As with the prior sub-factor, we may score different utilities in the same jurisdiction differently, based on outcomes that are more or less supportive of credit quality over a period of time. We have observed that some utilities are better able to meet the expectations of their customers and regulators, whether through better service, greater reliability, more stable rates or simply more effective regulatory outreach and communication. These utilities typically receive more consistent and credit supportive outcomes, so they will score higher in this sub-factor. Conversely, if a utility has multiple rapid rate increases, chooses to submit major rate increase requests during a sensitive election cycle or a severe economic downturn, has chronic customer service issues, is viewed as frequently providing incomplete information to regulators, or is tone deaf to the priorities of regulators and politicians, it may receive less consistent and supportive outcomes and thus score lower in this sub-factor.

In scoring this sub-factor, we will primarily evaluate the actions of regulators, politicians and jurists rather than their words. Nonetheless, words matter when they are an indication of future action. We seek to differentiate between political rhetoric that is perhaps oriented toward gaining attention for the viewpoint of the speaker and rhetoric that is indicative of future actions and trends in decision- making.

Factor 1b: Consistency and Predictability of Regulation (12.5%)

Aaa	Aa	A	Baa
The issuer's interaction with the regulator has led to a strong, lengthy track record of predictable, consistent and favorable decisions. The regulator is highly credit supportive of the issuer and utilities in general. We expect these conditions to continue.	The issuer's interaction with the regulator has a led to a considerable track record of predominantly predictable and consistent decisions. The regulator is mostly credit supportive of utilities in general and in almost all instances has been highly credit supportive of the issuer. We expect these conditions to continue.	The issuer's interaction with the regulator has led to a track record of largely predictable and consistent decisions. The regulator may be somewhat less credit supportive of utilities in general, but has been quite credit supportive of the issuer in most circumstances. We expect these conditions to continue.	The issuer's interaction with the regulator has led to an adequate track record. The regulator is generally consistent and predictable, but there may some evidence of inconsistency or unpredictability from time to time, or decisions may at times be politically charged. However, instances of less credit supportive decisions are based on reasonable application of existing rules and statutes and are not overly punitive. We expect these conditions to continue.

Ba	B	Caa
We expect that regulatory decisions will demonstrate considerable inconsistency or unpredictability or that decisions will be politically charged, based either on the issuer's track record of interaction with regulators or other governing bodies, or our view that decisions will move in this direction. The regulator may have a history of less credit supportive regulatory decisions with respect to the issuer, but we expect that the issuer will be able to obtain support when it encounters financial stress, with some potentially material delays. The regulator's authority may be eroded at times by legislative or political action. The regulator may not follow the framework for some material decisions.	We expect that regulatory decisions will be largely unpredictable or even somewhat arbitrary, based either on the issuer's track record of interaction with regulators or other governing bodies, or our view that decisions will move in this direction. However, we expect that the issuer will ultimately be able to obtain support when it encounters financial stress, albeit with material or more extended delays. Alternately, the regulator is untested, lacks a consistent track record, or is undergoing substantial change. The regulator's authority may be eroded on frequent occasions by legislative or political action. The regulator may more frequently ignore the framework in a manner detrimental to the issuer.	We expect that regulatory decisions will be highly unpredictable and frequently adverse, based either on the issuer's track record of interaction with regulators or other governing bodies, or our view that decisions will move in this direction. Alternately, decisions may have credit supportive aspects, but may often be unenforceable. The regulator's authority may have been seriously eroded by legislative or political action. The regulator may consistently ignore the framework to the detriment of the issuer.

Factor 2: Ability to Recover Costs and Earn Returns (25%)

Why It Matters

This rating factor examines the ability of a utility to recover its costs and earn a return over a period of time, including during differing market and economic conditions. While the Regulatory Framework looks at the transparency and predictability of the rules that govern the decision-making process with respect to utilities, the Ability to Recover Costs and Earn Returns evaluates the regulatory elements that directly impact the ability of the utility to generate cash flow and service its debt over time. The ability to recover prudently incurred costs on a timely basis and to attract debt and equity capital are crucial credit considerations. The inability to recover costs, for instance if fuel or purchased power costs ballooned during a rate freeze period, has been one of the greatest drivers of financial stress in this sector, as well as the cause of some utility defaults. In a sector that is typically free cash flow negative (due to large capital expenditures and dividends) and that routinely needs to refinance very large maturities of long-term debt, investor concerns about a lack of timely cost recovery or the sufficiency of rates can, in an extreme scenario, strain access to capital markets and potentially lead to insolvency of the utility (as was the case when "used and useful" requirements threatened some utilities that experienced years of delay in completing nuclear power plants in the 1980s). While our scoring for the Ability to Recover Costs and Earn Returns may primarily be influenced by our assessment of the regulatory relationship, it can also be highly impacted by the management and business decisions of the utility.

How We Assess Ability to Recover Costs and Earn Returns

The timeliness and sufficiency of rates are scored as separate sub-factors; however, they are interrelated. Timeliness can have an impact on our view of what constitutes sufficient returns, because a strong assurance of timely cost recovery reduces risk. Conversely, utilities may have a strong assurance that they will earn a full return on certain deferred costs until they are able to collect them, or their generally strong returns may allow them to weather some rate lag on recovery of construction-related capital expenditures. The timeliness of cost recovery is particularly important in a period of rapidly rising costs. During the past five years, utilities have benefitted from low interest rates and generally decreasing fuel costs and purchased power costs, but these market conditions could easily reverse. For example, fuel is a large component of total costs for vertically integrated utilities and for natural gas utilities, and fuel prices are highly volatile, so the timeliness of fuel and purchased power cost recovery is especially important.

While Factors 1 and 2 are closely inter-related, scoring of these factors will not necessarily be the same. We have observed jurisdictions where the Regulatory Framework caused considerable credit concerns – perhaps it was untested or going through a transition to de-regulation, but where the track record of rate case outcomes was quite positive, leading to a higher score in the Ability to Recover Costs and Earn Returns. Conversely, there have been instances of strong Legislative and Judicial Underpinnings of the Regulatory Framework where the commission has ignored the framework (which would affect Consistency and Predictability of Regulation as well as Ability to Recover Costs and Earn Returns) or has used extraordinary measures to prevent or defer an increase that might have been justifiable from a cost perspective but would have caused rate shock.

One might surmise that Factors 2 and 4 should be strongly correlated, since a good Ability to Recover Costs and Earn Returns would normally lead to good financial metrics. However, the scoring for the Ability to Recover Costs and Earn Returns sub-factor places more emphasis on our expectation of timeliness and sufficiency of rates over time; whereas financial metrics may be impacted by one-time events, market conditions or construction cycles - trends that we believe could normalize or even reverse.

How We Assess Timeliness of Recovery of Operating and Capital Costs for the Grid

The criteria we consider include provisions and cost recovery mechanisms for operating costs, mechanisms that allow actual operating and/or capital expenditures to be trued-up periodically into rates without having to file a rate case (this may include formula rates, rider and trackers, or the ability to periodically adjust rates for construction work in progress) as well as the process and timeframe of general tariff/base rate cases – those that are fully reviewed by the regulator, generally in a public format that includes testimony of the utility and other stakeholders and interest groups. We also look at the track record of the utility and regulator for timeliness. For instance, having a formula rate plan is positive, but if the actual process has included reviews that are delayed for long periods, it may dampen the benefit to the utility. In addition, we seek to estimate the lag between the time that a utility incurs a major construction expenditures and the time that the utility will start to recover and/or earn a return on that expenditure.

How We Assess Sufficiency of Rates and Returns for the Grid

The criteria we consider include statutory protections that assure full cost recovery and a reasonable return for the utility on its investments, the regulatory mechanisms used to determine what a reasonable return should be, and the track record of the utility in actually recovering costs and earning returns. We examine outcomes of rate cases/tariff reviews and compare them to the request submitted by the utility, to prior rate cases/tariff reviews for the same utility and to recent rate/tariff decisions for a peer group of comparable utilities. In this context, comparable utilities are typically utilities in the same or similar jurisdiction. In cases where the utility is unique or nearly unique in its jurisdiction, comparison will be made to other peers with an adjustment for local differences, including prevailing rates of interest and returns on capital, as well as the timeliness of rate-setting. We look at regulatory disallowances of costs or investments, with a focus on their financial severity and also on the reasons given by the regulator, in order to assess the likelihood that such disallowances will be repeated in the future.

Factor 2a: Timeliness of Recovery of Operating and Capital Costs (12.5%)

Aaa	Aa	A	Baa
Tariff formulas and automatic cost recovery mechanisms provide full and highly timely recovery of all operating costs and essentially contemporaneous return on all incremental capital investments, with statutory provisions in place to preclude the possibility of challenges to rate increases or cost recovery mechanisms. By statute and by practice, general rate cases are efficient, focused on an impartial review, quick, and permit inclusion of fully forward-looking costs.	Tariff formulas and automatic cost recovery mechanisms provide full and highly timely recovery of all operating costs and essentially contemporaneous or near-contemporaneous return on most incremental capital investments, with minimal challenges by regulators to companies' cost assumptions. By statute and by practice, general rate cases are efficient, focused on an impartial review, of a very reasonable duration before non-appealable interim rates can be collected, and primarily permit inclusion of forward-looking costs.	Automatic cost recovery mechanisms provide full and reasonably timely recovery of fuel, purchased power and all other highly variable operating expenses. Material capital investments may be made under tariff formulas or other rate-making permitting reasonably contemporaneous returns, or may be submitted under other types of filings that provide recovery of cost of capital with minimal delays. Instances of regulatory challenges that delay rate increases or cost recovery are generally related to large, unexpected increases in sizeable construction projects. By statute or by practice, general rate cases are reasonably efficient, primarily focused on an impartial review, of a reasonable duration before rates (either permanent or non-refundable interim rates) can be collected, and permit inclusion of important forward-looking costs.	Fuel, purchased power and all other highly variable expenses are generally recovered through mechanisms incorporating delays of less than one year, although some rapid increases in costs may be delayed longer where such deferrals do not place financial stress on the utility. Incremental capital investments may be recovered primarily through general rate cases with moderate lag, with some through tariff formulas. Alternately, there may be formula rates that are untested or unclear. Potentially greater tendency for delays due to regulatory intervention, although this will generally be limited to rates related to large capital projects or rapid increases in operating costs.

Ba	B	Caa	
There is an expectation that fuel, purchased power or other highly variable expenses will eventually be recovered with delays that will not place material financial stress on the utility, but there may be some evidence of an unwillingness by regulators to make timely rate changes to address volatility in fuel, or purchased power, or other market-sensitive expenses. Recovery of costs related to capital investments may be subject to delays that are somewhat lengthy, but not so pervasive as to be expected to discourage important investments.	The expectation that fuel, purchased power or other highly variable expenses will be recovered may be subject to material delays due to second-guessing of spending decisions by regulators or due to political intervention. Recovery of costs related to capital investments may be subject to delays that are material to the issuer, or may be likely to discourage some important investment.	The expectation that fuel, purchased power or other highly variable expenses will be recovered may be subject to extensive delays due to second-guessing of spending decisions by regulators or due to political intervention. Recovery of costs related to capital investments may be uncertain, subject to delays that are extensive, or that may be likely to discourage even necessary investment.	

Note: Tariff formulas include formula rate plans as well as trackers and riders related to capital investment.

Factor 2b: Sufficiency of Rates and Returns (12.5%)

Aaa	Aa	A	Baa
Sufficiency of rates to cover costs and attract capital is (and will continue to be) unquestioned.	Rates are (and we expect will continue to be) set at a level that permits full cost recovery and a fair return on all investments, with minimal challenges by regulators to companies' cost assumptions. This will translate to returns (measured in relation to equity, total assets, rate base or regulatory asset value, as applicable) that are strong relative to global peers.	Rates are (and we expect will continue to be) set at a level that generally provides full cost recovery and a fair return on investments, with limited instances of regulatory challenges and disallowances. In general, this will translate to returns (measured in relation to equity, total assets, rate base or regulatory asset value, as applicable) that are generally above average relative to global peers, but may at times be average.	Rates are (and we expect will continue to be) set at a level that generally provides full operating cost recovery and a mostly fair return on investments, but there may be somewhat more instances of regulatory challenges and disallowances, although ultimate rate outcomes are sufficient to attract capital without difficulty. In general, this will translate to returns (measured in relation to equity, total assets, rate base or regulatory asset value, as applicable) that are average relative to global peers, but may at times be somewhat below average.

Ba	B	Caa	
Rates are (and we expect will continue to be) set at a level that generally provides recovery of most operating costs but return on investments may be less predictable, and there may be decidedly more instances of regulatory challenges and disallowances, but ultimate rate outcomes are generally sufficient to attract capital. In general, this will translate to returns (measured in relation to equity, total assets, rate base or regulatory asset value, as applicable) that are generally below average relative to global peers, or where allowed returns are average but difficult to earn. Alternately, the tariff formula may not take into account all cost components and/or remuneration of investments may be unclear or at times unfavorable.	We expect rates will be set at a level that at times fails to provide recovery of costs other than cash costs, and regulators may engage in somewhat arbitrary second-guessing of spending decisions or deny rate increases related to funding ongoing operations based much more on politics than on prudency reviews. Return on investments may be set at levels that discourage investment. We expect that rate outcomes may be difficult or uncertain, negatively affecting continued access to capital. Alternately, the tariff formula may fail to take into account significant cost components other than cash costs, and/or remuneration of investments may be generally unfavorable.	We expect rates will be set at a level that often fails to provide recovery of material costs, and recovery of cash costs may also be at risk. Regulators may engage in more arbitrary second-guessing of spending decisions or deny rate increases related to funding ongoing operations based primarily on politics. Return on investments may be set at levels that discourage necessary maintenance investment. We expect that rate outcomes may often be punitive or highly uncertain, with a markedly negative impact on access to capital. Alternately, the tariff formula may fail to take into account significant cash cost components, and/or remuneration of investments may be primarily unfavorable.	

Factor 3: Diversification (10%)

Why It Matters

Diversification of overall business operations helps to mitigate the risk that economic cycles, material changes in a single regulatory regime or commodity price movements will have a severe impact on cash flow and credit quality of a utility. While utilities' sales volumes have lower exposure to economic recessions than many non-financial corporate issuers, some sales components, including industrial sales, are directly affected by economic trends that cause lower production and/or plant closures. In addition, economic activity plays a role in the rate of customer growth in the service territory and (absent energy efficiency and conservation) can often impact usage per customer. The economic strength or weakness of the service territory can affect the political and regulatory environment for rate increase requests by the utility. For utilities in areas prone to severe storms and other natural disasters, the utility's geographic diversity or concentration can be a key determinant for creditworthiness.

Diversity among regulatory regimes can mitigate the impact of a single unfavorable decision affecting one part of the utility's footprint.

For utilities with electric generation, fuel source diversity can mitigate the impact (to the utility and to its rate-payers) of changes in commodity prices, hydrology and water flow, and environmental or other regulations affecting plant operations and economics. We have observed that utilities' regulatory environments are most likely to become unfavorable during periods of rapid rate increases (which are more important than absolute rate levels) and that fuel diversity leads to more stable rates over time.

For that reason, fuel diversity can be important even if fuel and purchased power expenses are an automatic pass-through to the utility's ratepayers. Changes in environmental, safety and other regulations have caused vulnerabilities for certain technologies and fuel sources during the past five years. These vulnerabilities have varied widely in different countries and have changed over time.

How We Assess Market Position for the Grid

Market position is comprised primarily of the economic diversity of the utility's service territory and the diversity of its regulatory regimes. We also consider the diversity of utility operations (e.g., regulated electric, gas, water, steam) when there are material operations in more than one area.

Economic diversity is a typically a function of the population, size and breadth of the territory and the businesses that drive its GDP and employment. For the size of the territory, we typically consider the number of customers and the volumes of generation and/or throughput. For breadth, we consider the number of sizeable metropolitan areas served, the economic diversity and vitality in those metropolitan areas, and any concentration in a particular area or industry. In our assessment, we may consider various information sources. For example, in the US, information sources on the diversity and vitality of economies of individual states and metropolitan areas may include Moody's Economy.com. We also look at the mix of the utility's sales volumes among customer types, as well as the track record of volume sales and any notable payment patterns during economic cycles. For diversity of regulatory regimes, we typically look at the number of regulators and the percentages of revenues and utility assets that are under the purview of each. While the highest scores in the Market Position sub-factor are reserved for issuers regulated in multiple jurisdictions, when there is only one regulator, we make a differentiation of regimes perceived as having lower or higher volatility.

Issuers with multiple supportive regulatory jurisdictions, a balanced sales mix among residential, commercial, industrial and governmental customers in a large service territory with a robust and diverse economy will generally score higher in this sub-factor. An issuer with a small service territory economy that has a high dependence on one or two sectors, especially highly cyclical industries, will generally score lower in this sub-factor, as will issuers with meaningful exposure to economic dislocations caused by natural disasters.

For issuers that are vertically integrated utilities having a meaningful amount of generation, this sub- factor has a weighting of 5%. For electric transmission and distribution utilities without meaningful generation and for natural gas local distribution companies, this sub-factor has a weighting of 10%.

How We Assess Generation and Fuel Diversity for the Grid

Criteria include the fuel type of the issuer's generation and important power purchase agreements, the ability of the issuer economically to shift its generation and power purchases when there are changes in fuel prices, the degree to which the utility and its rate-payers are exposed to or insulated from changes in commodity prices, and exposure to Challenged Source and Threatened Sources (see the explanations for how we generally characterize these generation sources in the table below). A regulated utility's capacity mix may not in itself be an indication of fuel diversity or the ability to shift fuels, since utilities may keep old and inefficient plants (e.g., natural gas boilers) to serve peak load. For this reason, we do not incorporate set percentages reflecting an "ideal" or "sub-par" mix for capacity or even generation. In addition to looking at a utility's generation mix to evaluate fuel diversity, we consider the efficiency of the utility's plants, their placement on the regional dispatch curve, and the demonstrated ability/inability of the utility to shift its generation mix in accordance with changing commodity prices.

Issuers having a balanced mix of hydro, coal, natural gas, nuclear and renewable energy as well as low exposure to challenged and threatened sources of generation will score more highly in this sub-factor. Issuers that have concentration in one or two sources of generation, especially if they are threatened or challenged sources, will incur lower scores.

In evaluating an issuer's degree of exposure to challenged and threatened sources, we will consider not only the existence of those plants in the utility's portfolio, but also the relevant factors that will determine the impact on the utility and on its rate-payers. For instance, an issuer that has a fairly high percentage of its generation from challenged sources could be evaluated very differently if its peer utilities face the same magnitude of those issues than if its peers have no exposure to challenged or threatened sources. In evaluating threatened sources, we consider the utility's progress in its plan to replace those sources, its reserve margin, the availability of purchased power capacity in the region, and the overall impact of the replacement plan on the issuer's rates relative to its peer group. Especially if there are no peers in the same jurisdiction, we also examine the extent to which the utility's generation resources plan is aligned with the relevant government's fuel/energy policy.

Factor 3: Diversification (10%)

Weighting 10%	Sub-Factor Weighting	Aaa	Aa	A	Baa
Market Position	5.00% *	A very high degree of multinational and regional diversity in terms of regulatory regimes and/or service territory economies.	Material operations in three or more nations or substantial geographic regions providing very good diversity of regulatory regimes and/or service territory economies.	Material operations in two to three nations, states, provinces or regions that provide good diversity of regulatory regimes and service territory economies. Alternately, operates within a single regulatory regime with low volatility, and the service territory economy is robust, has a very high degree of diversity and has demonstrated resilience in economic cycles.	May operate under a single regulatory regime viewed as having low volatility, or where multiple regulatory regimes are not viewed as providing much diversity. The service territory economy may have some concentration and cyclicality, but is sufficiently resilient that it can absorb reasonably foreseeable increases in utility rates.
Generation and Fuel Diversity	5.00% **	A high degree of diversity in terms of generation and/or fuel sources such that the utility and rate-payers are well insulated from commodity price changes, no generation concentration, and very low exposures to Challenged or Threatened Sources (see definitions below).	Very good diversification in terms of generation and/or fuel sources such that the utility and rate-payers are affected only minimally by commodity price changes, little generation concentration, and low exposures to Challenged or Threatened Sources.	Good diversification in terms of generation and/or fuel sources such that the utility and rate-payers have only modest exposure to commodity price changes; however, may have some concentration in a source that is neither Challenged nor Threatened. Exposure to Threatened Sources is low. While there may be some exposure to Challenged Sources, it is not a cause for concern.	Adequate diversification in terms of generation and/or fuel sources such that the utility and rate-payers have moderate exposure to commodity price changes; however, may have some concentration in a source that is Challenged. Exposure to Threatened Sources is moderate, while exposure to Challenged Sources is manageable.

	Sub-Factor Weighting	Ba	B	Caa	Definiitons
Market Position	5.00% *	Operates in a market area with somewhat greater concentration and cyclicality in the service territory economy and/or exposure to storms and other natural disasters, and thus less resilience to absorbing reasonably foreseeable increases in utility rates. May show somewhat greater volatility in the regulatory regime(s).	Operates in a limited market area with material concentration and more severe cyclicality in service territory economy such that cycles are of materially longer duration or reasonably foreseeable increases in utility rates could present a material challenge to the economy. Service territory may have geographic concentration that limits its resilience to storms and other natural disasters, or may be an emerging market. May show decided volatility in the regulatory regime(s).	Operates in a concentrated economic service territory with pronounced concentration, macroeconomic risk factors, and/or exposure to natural disasters.	Challenged Sources are generation plants that face higher but not insurmountable economic hurdles resulting from penalties or taxes on their operation, or from environmental upgrades that are required or likely to be required. Some examples are carbon-emitting plants that incur carbon taxes, plants that must buy emissions credits to operate, and plants that must install environmental equipment to continue to operate, in each where the taxes/credits/upgrades are sufficient to have a material impact on those plants' competitiveness relative to other generation types or on the utility's rates, but where the impact is not so severe as to be likely require plant closure.

Generation and Fuel Diversity	5.00% **	Modest diversification in generation and/or fuel sources such that the utility or rate-payers have greater exposure to commodity price changes. Exposure to Challenged and Threatened Sources may be more pronounced, but the utility will be able to access alternative sources without undue financial stress.	Operates with little diversification in generation and/or fuel sources such that the utility or rate-payers have high exposure to commodity price changes. Exposure to Challenged and Threatened Sources may be high, and accessing alternate sources may be challenging and cause more financial stress, but ultimately feasible.	Operates with high concentration in generation and/or fuel sources such that the utility or rate-payers have exposure to commodity price shocks. Exposure to Challenged and Threatened Sources may be very high, and accessing alternate sources may be highly uncertain.	Threatened Sources are generation plants that are not currently able to operate due to major unplanned outages or issues with licensing or other regulatory compliance, and plants that are highly likely to be required to de-activate, whether due to the effectiveness of currently existing or expected rules and regulations or due to economic challenges. Some recent examples would include coal fired plants in the US that are not economic to retro-fit to meet mercury and air toxics standards, plants that cannot meet the effective date of those standards, nuclear plants in Japan that have not been licensed to re-start after the Fukushima Dai-ichi accident, and nuclear plants that are required to be phased out within 10 years (as is the case in some European countries).

* 10% weight for issuers that lack generation **0% weight for issuers that lack generation

Factor 4: Financial Strength (40%)

Why It Matters

Electric and gas utilities are regulated, asset-based businesses characterized by large investments in long-lived property, plant and equipment. Financial strength, including the ability to service debt and provide a return to shareholders, is necessary for a utility to attract capital at a reasonable cost in order to invest in its generation, transmission and distribution assets, so that the utility can fulfill its service obligations at a reasonable cost to rate-payers.

How We Assess It for the Grid

In comparison to companies in other non-financial corporate sectors, the financial statements of regulated electric and gas utilities have certain unique aspects that impact financial analysis, which is further complicated by disparate treatment of certain elements under US Generally Accepted Accounting Principles (GAAP) versus International Financial Reporting Standards (IFRS). Regulatory accounting may permit utilities to defer certain costs (thereby creating regulatory assets) that a non- utility corporate entity would have to expense. For instance, a regulated utility may be able to defer a substantial portion of costs related to recovery from a storm based on the general regulatory framework for those expenses, even if the utility does not have a specific order to collect the expenses from ratepayers over a set period of time. A regulated utility may be able to accrue and defer a return on equity (in addition to capitalizing interest) for construction-work-in-progress for an approved project based on the assumption that it will be able to collect that deferred equity return once the asset comes into service. For this reason, we focus more on a utility's cash flow than on its reported net income.

Conversely, utilities may collect certain costs in rates well ahead of the time they must be paid (for instance, pension costs), thereby creating regulatory liabilities. Many of our metrics focus on Cash Flow from Operations Before Changes in Working Capital (CFO Pre-WC) because, unlike Funds from Operations (FFO), it captures the changes in long-term regulatory assets and liabilities.

However, under IFRS the two measures are essentially the same. In general, we view changes in working capital as less important in utility financial analysis because they are often either seasonal (for example, power demand is generally greatest in the summer) or caused by changes in fuel prices that are typically a relatively automatic pass-through to the customer. We will nonetheless examine the impact of working capital changes in analyzing a utility's liquidity (see Other Rating Considerations – Liquidity).

Given the long-term nature of utility assets and the often lumpy nature of their capital expenditures, it is important to analyze both a utility's historical financial performance as well as its prospective future performance, which may be different from backward-looking measures. Scores under this factor may be higher or lower than what might be expected from historical results, depending on our view of expected future performance. Multi-year periods are usually more representative of credit quality because utilities can experience swings in cash flows from one-time events, including such items as rate refunds, storm cost deferrals that create a regulatory asset, or securitization proceeds that reduce a regulatory asset. Nonetheless, we also look at trends in metrics for individual periods, which may influence our view of future performance and ratings.

For this scoring grid, we have identified four key ratios that we consider the most consistently useful in the analysis of regulated electric and gas utilities. However, no single financial ratio can adequately convey the relative credit strength of these highly diverse companies. Our ratings consider the overall financial strength of a company, and in individual cases other financial indicators may also play an important role.

CFO Pre-Working Capital Plus Interest/Interest or Cash Flow Interest Coverage

The cash flow interest coverage ratio is an indicator for a utility's ability to cover the cost of its borrowed capital. The numerator in the ratio calculation is the sum of CFO Pre-WC and interest expense, and the denominator is interest expense.

CFO Pre-Working Capital / Debt

This important metric is an indicator for the cash generating ability of a utility compared to its total debt. The numerator in the ratio calculation is CFO Pre-WC, and the denominator is total debt.

CFO Pre-Working Capital Minus Dividends / Debt

This ratio is an indicator for financial leverage as well as an indicator of the strength of a utility's cash flow after dividend payments are made. Dividend obligations of utilities are often substantial, quasi- permanent outflows that can affect the ability of a utility to cover its debt obligations, and this ratio can also provide insight into the financial policies of a utility or utility holding company. The higher the level of retained cash flow relative to a utility's debt, the more cash the utility has to support its capital expenditure program. The numerator of this ratio is CFO Pre-WC minus dividends, and the denominator is total debt.

Debt/Capitalization

This ratio is a traditional measure of balance sheet leverage. The numerator is total debt and the denominator is total capitalization. All of our ratios are calculated in accordance with our standard adjustments[10], but we note that our definition of total capitalization includes deferred taxes in addition to total debt, preferred stock, other hybrid securities, and common equity. Since the presence or absence of deferred taxes is a function of national tax policy, comparing utilities using this ratio may be more meaningful among utilities in the same country or in countries with similar tax policies. High debt levels in comparison to capitalization can indicate higher interest obligations, can limit the ability of a utility to raise additional financing if needed, and can lead to leverage covenant violations in bank credit facilities or other financing agreements[11]. A high ratio may result from a regulatory framework that does not permit a robust cushion of equity in the capital structure, or from a material write-off of an asset, which may not have impacted current period cash flows but could affect future period cash flows relative to debt.

There are two sets of thresholds for three of these ratios based on the level of the issuer's business risk – the Standard Grid and the Lower Business Risk (LBR) Grid. In our view, the different types of utility entities covered under this methodology (as described in Appendix E) have different levels of business risk.

Generation utilities and vertically integrated utilities generally have a higher level of business risk because they are engaged in power generation, so we apply the Standard Grid. We view power generation as the highest-risk component of the electric utility business, as generation plants are typically the most expensive part of a utility's infrastructure (representing asset concentration risk) and are subject to the greatest risks in both construction and operation, including the risk that incurred costs will either not be recovered in rates or recovered with material delays.

Other types of utilities may have lower business risk, such that we believe that they are most appropriately assessed using the LBR Grid, due to factors that could include a generally greater transfer of risk to customers, very strong insulation from exposure to commodity price movements, good protection from volumetric risks, fairly limited capex needs and low exposure to storms, major accidents and natural

10 In certain circumstances, analysts may also apply specific adjustments.

11 We also examine debt/capitalization ratios as defined in applicable covenants (which typically exclude deferred taxes from capitalization) relative to the covenant threshold level.

disasters. For instance, we tend to view many US natural gas local distribution companies (LDCs) and certain US electric transmission and distribution companies (T&Ds, which lack generation but generally retain some procurement responsibilities for customers), as typically having a lower business risk profile than their vertically integrated peers. In cases of T&Ds that we do not view as having materially lower risk than their vertically integrated peers, we will apply the Standard grid. This could result from a regulatory framework that exposes them to energy supply risk, large capital expenditures for required maintenance or upgrades, a heightened degree of exposure to catastrophic storm damage, or increased regulatory scrutiny due to poor reliability, or other considerations. The Standard Grid will also apply to LDCs that in our view do not have materially lower risk; for instance, due to their ownership of high pressure pipes or older systems requiring extensive gas main replacements, where gas commodity costs are not fully recovered in a reasonably contemporaneous manner, or where the LDC is not well insulated from declining volumes.

The four key ratios, their weighting in the grid, and the Standard and LBR scoring thresholds are detailed in the following table.

Factor 4: Financial Strength

Weighting 40%	Sub-Factor Weighting		Aaa	Aa	A	Baa	Ba	B	Caa
CFO pre-WC + Interest / Interest	7.50%		≥ 8.0x	6.0x - 8.0x	4.5x - 6.0x	3.0x - 4.5x	2.0x - 3.0x	1.0x - 2.0x	< 1.0x
CFO pre-WC / Debt	15.00%	Standard Grid	≥ 40%	30% - 40%	22% - 30%	13% - 22%	5% - 13%	1% - 5%	< 1%
		Low Business Risk Grid	≥ 38%	27% - 38%	19% - 27%	11% - 19%	5% - 11%	1% - 5%	< 1%
CFO pre-WC - Dividends / Debt	10.00%	Standard Grid	≥ 35%	25% - 35%	17% - 25%	9% - 17%	0% - 9%	(5%) - 0%	< (5%)
		Low Business Risk Grid	≥ 34%	23% - 34%	15% - 23%	7% - 15%	0% - 7%	(5%) - 0%	< (5%)
Debt / Capitalization	7.50%	Standard Grid	< 25%	25% - 35%	35% - 45%	45% - 55%	55% - 65%	65% - 75%	≥ 75%
		Low Business Risk Grid	< 29%	29% - 40%	40% - 50%	50% - 59%	59% - 67%	67% - 75%	≥ 75%

Notching for Structural Subordination of Holding Companies

Why It Matters

A typical utility company structure consists of a holding company ("HoldCo") that owns one or more operating subsidiaries (each an "OpCo"). OpCos may be regulated utilities or non-utility companies. A HoldCo typically has no operations – its assets are mostly limited to its equity interests in subsidiaries, and potentially other investments in subsidiaries that are structured as advances, debt, or even hybrid securities.

Most HoldCos present their financial statements on a consolidated basis that blurs legal considerations about priority of creditors based on the legal structure of the family, and grid scoring is thus based on consolidated ratios. However, HoldCo creditors typically have a secondary claim on the group's cash flows and assets after OpCo creditors. We refer to this as structural subordination, because it is the corporate legal structure, rather than specific subordination provisions, that causes creditors at each of the utility and non-utility subsidiaries to have a more direct claim on the cash flows and assets of their respective OpCo obligors. By contrast, the debt of the HoldCo is typically serviced primarily by dividends that are upstreamed by the OpCos[12]. Under normal circumstances, these dividends are made from net income, after payment of the OpCo's interest and preferred dividends. In most non- financial corporate sectors where cash often moves freely between the entities in a single issuer family, this distinction may have less of an impact. However, in the regulated utility sector, barriers to movement of cash among companies in the corporate family can be much more restrictive, depending on the regulatory framework. These barriers can lead to significantly different probabilities of default for HoldCos and OpCos. Structural subordination also affects loss given default. Under most default[13] scenarios, an OpCo's creditors will be satisfied from the value residing at that OpCo before any of the OpCo's assets can be used to satisfy claims of the HoldCo's creditors. The prevalence of debt issuance at the OpCo level is another reason that structural subordination is usually a more serious concern in the utility sector than for investment grade issuers in other non-financial corporate sectors.

The grids for factors 1-4 are primarily oriented to OpCos (and to some degree for HoldCos with minimal current structural subordination; for example, there is no current structural subordination to debt at the operating company if all of the utility family's debt and preferred stock is issued at the HoldCo level, although there is structural subordination to other liabilities at the OpCo level). The additional risk from structural subordination is addressed via a notching adjustment to bring grid outcomes (on average) closer to the actual ratings of HoldCos.

How We Assess It

Grid-indicated ratings of holding companies may be notched down based on structural subordination. The risk factors and mitigants that impact structural subordination are varied and can be present in different combinations, such that a formulaic approach is not practical and case-by-case analyst judgment of the interaction of all pertinent factors that may increase or decrease its importance to the credit risk of an issuer are essential.

Some of the potentially pertinent factors that could increase the degree and/or impact of structural subordination include the following:

» Regulatory or other barriers to cash movement from OpCos to HoldCo

» Specific ring-fencing provisions

» Strict financial covenants at the OpCo level

» Higher leverage at the OpCo level

» Higher leverage at the HoldCo level[14]

» Significant dividend limitations or potential limitations at an important OpCo

» HoldCo exposure to subsidiaries with high business risk or volatile cash flows

Strained liquidity at the HoldCo level

» The group's investment program is primarily in businesses that are higher risk or new to the group

Some of the potentially mitigating factors that could decrease the degree and/or impact of structural subordination include the following:

[12] The HoldCo and OpCo may also have intercompany agreements, including tax sharing agreements, that can be another source of cash to the HoldCo.

[13] Actual priority in a default scenario will be determined by many factors, including the corporate and bankruptcy laws of the jurisdiction, the asset value of each OpCo, specific financing terms, inter-relationships among members of the family, etc.

[14] While higher leverage at the HoldCo does not increase structural subordination per se, it exacerbates the impact of any structural subordination that exists

» Substantial diversity in cash flows from a variety of utility OpCos

» Meaningful dividends to HoldCo from unlevered utility OpCos

» Dependable, meaningful dividends to HoldCo from non-utility OpCos

» The group's investment program is primarily in strong utility businesses

» Inter-company guarantees - however, in many jurisdictions the value of an upstream guarantee may be limited by certain factors, including by the value that the OpCo received in exchange for granting the guarantee

Notching for structural subordination within the grid may range from 0 to negative 3 notches. Instances of extreme structural subordination are relatively rare, so the grid convention does not accommodate wider differences, although in the instances where we believe it is present, actual ratings do reflect the full impact of structural subordination.

A related issue is the relationship of ratings within a utility family with multiple operating companies, and sometimes intermediate holding companies. Some of the key issues are the same, such as the relative amounts of debt at the holding company level compared to the operating company level (or at one OpCo relative to another), and the degree to which operating companies have credit insulation due to regulation or other protective factors. Appendix B has additional insights on ratings within a utility family.

Rating Methodology Assumptions, Limitations, and Other Rating Considerations

The grid in this rating methodology represents a decision to favor simplicity that enhances transparency and to avoid greater complexity that might enable the grid to map more closely to actual ratings. Accordingly, the four rating factors and the notching factor in the grid do not constitute an exhaustive treatment of all of the considerations that are important for ratings of companies in the regulated electric and gas utility sector. In addition, our ratings incorporate expectations for future performance, while the financial information that is used in the grid in this document is mainly historical. In some cases, our expectations for future performance may be informed by confidential information that we can't disclose. In other cases, we estimate future results based upon past performance, industry trends, competitor actions or other factors. In either case, predicting the future is subject to the risk of substantial inaccuracy.

Assumptions that may cause our forward-looking expectations to be incorrect include unanticipated changes in any of the following factors: the macroeconomic environment and general financial market conditions, industry competition, disruptive technology, regulatory and legal actions.

Key rating assumptions that apply in this sector include our view that sovereign credit risk is strongly correlated with that of other domestic issuers, that legal priority of claim affects average recovery on different classes of debt, sufficiently to generally warrant differences in ratings for different debt classes of the same issuer, and the assumption that lack of access to liquidity is a strong driver of credit risk.

In choosing metrics for this rating methodology grid, we did not explicitly include certain important factors that are common to all companies in any industry such as the quality and experience of management, assessments of corporate governance and the quality of financial reporting and information disclosure. Therefore ranking these factors by rating category in a grid would in some cases suggest too much precision in the relative ranking of particular issuers against all other issuers that are rated in various industry sectors.

Ratings may include additional factors that are difficult to quantify or that have a meaningful effect in differentiating credit quality only in some cases, but not all. Such factors include financial controls, exposure to uncertain licensing regimes and possible government interference in some countries.

Regulatory, litigation, liquidity, technology and reputational risk as well as changes to consumer and business spending patterns, competitor strategies and macroeconomic trends also affect ratings. While these are important considerations, it is not possible precisely to express these in the rating methodology grid without making the grid excessively complex and significantly less transparent.

Ratings may also reflect circumstances in which the weighting of a particular factor will be substantially different from the weighting suggested by the grid.

This variation in weighting rating considerations can also apply to factors that we choose not to represent in the grid. For example, liquidity is a consideration frequently critical to ratings and which may not, in other circumstances, have a substantial impact in discriminating between two issuers with a similar credit profile. As an example of the limitations, ratings can be heavily affected by extremely weak liquidity that magnifies default risk. However, two identical companies might be rated the same if their only differentiating feature is that one has a good liquidity position while the other has an extremely good liquidity position.

Other Rating Considerations

We consider other factors in addition to those discussed in this report, but in most cases understanding the considerations discussed herein should enable a good approximation of our view on the credit quality of companies in the regulated electric and gas utilities sector. Ratings consider our assessment of the quality of management, corporate governance, financial controls, liquidity management, event risk and seasonality. The analysis of these factors remains an integral part of our rating process.

Liquidity and Access to Capital Markets

Liquidity analysis is a key element in the financial analysis of electric and gas utilities, and it encompasses a company's ability to generate cash from internal sources as well as the availability of external sources of financing to supplement these internal sources. Liquidity and access to financing are of particular importance in this sector. Utility assets can often have a very long useful life- 30, 40 or even 60 years is not uncommon, as well as high price tags. Partly as a result of construction cycles, the utility sector has experienced prolonged periods of negative free cash flow – essentially, the sum of its dividends and its capital expenditures for maintenance and growth of its infrastructure frequently exceeds cash from operations, such that a portion of capital expenditures must routinely be debt financed. Utilities are among the largest debt issuers in the corporate universe and typically require consistent access to the capital markets to assure adequate sources of funding and to maintain financial flexibility. Substantial portions of capex are non-discretionary (for example, maintenance, adding customers to the network, or meeting environmental mandates); however, utilities were swift to cut or defer discretionary spending during the 2007-2009 recession. Dividends represent a quasi-permanent outlay, since utilities typically only rarely will cut their dividend. Liquidity is also important to meet maturing obligations, which often occur in large chunks, and to meet collateral calls under any hedging agreements.

Due to the importance of liquidity, incorporating it as a factor with a fixed weighting in the grid would suggest an importance level that is often far different from the actual weight in the rating. In normal circumstances most companies in the sector have good access to liquidity. The industry generally requires, and for the most part has, large, syndicated, multi-year committed credit facilities. In addition, utilities have demonstrated strong access to capital markets, even under difficult conditions. As a result, liquidity generally has not been an issue for most utilities and a utility with very strong liquidity may not warrant a rating distinction compared to a utility with strong liquidity. However, when there is weakness in liquidity or liquidity management, it can be the dominant consideration for ratings.

Our assessment of liquidity for regulated utilities involves an analysis of total sources and uses of cash over the next 12 months or more, as is done for all corporates. Using our financial projections of the utility and our analysis of its available sources of liquidity (including an assessment of the quality and reliability of alternate liquidity such as committed credit facilities), we evaluate how its projected sources of cash (cash from operations, cash on hand and existing committed multi-year credit facilities) compare to its projected uses (including all or most capital expenditures, dividends, maturities of short and long-term debt, our projection of potential liquidity calls on financial hedges, and important issuer-specific items such as special tax payments). We assume no access to capital markets or additional liquidity sources, no renewal of existing credit facilities, and no cut to dividends. We examine a company's liquidity profile under this scenario, its ability to make adjustments to improve its liquidity position, and any dependence on liquidity sources with lower quality and reliability.

Management Quality and Financial Policy

The quality of management is an important factor supporting the credit strength of a regulated utility or utility holding company. Assessing the execution of business plans over time can be helpful in assessing management's business strategies, policies, and philosophies and in evaluating management performance relative to performance of competitors and our projections. A record of consistency provides us with insight into management's likely future performance in stressed situations and can be an indicator of management's tendency to depart significantly from its stated plans and guidelines.

We also assess financial policy (including dividend policy and planned capital expenditures) and how management balances the potentially competing interests of shareholders, fixed income investors and other stakeholders. Dividends and discretionary capital expenditures are the two primary components over which management has the greatest control in the short term. For holding companies, we consider the extent to which management is willing to stretch its payout ratio (through aggressive increases or delays in needed decreases) in order to satisfy common shareholders. For a utility that is a subsidiary of a parent company with several utility subsidiaries, dividends to the parent may be more volatile depending on the cash generation and cash needs of that utility, because parents typically want to assure that each utility maintains the regulatory debt/equity ratio on which its rates have been set. The effect we have observed is that utility subsidiaries often pay higher dividends when they have lower capital needs and lower dividends when they have higher capital expenditures or other cash needs. Any dividend policy that cuts into the regulatory debt/equity ratio is a material credit negative.

Size – Natural Disasters, Customer Concentration and Construction Risks

The size and scale of a regulated utility has generally not been a major determinant of its credit strength in the same way that it has been for most other industrial sectors. While size brings certain economies of scale that can somewhat affect the utility's cost structure and competitiveness, rates are more heavily impacted by costs related to fuel and fixed assets. Particularly in the US, we have not observed material differences in the success of utilities' regulatory outreach based on their size. Smaller utilities have sometimes been better able to focus their attention on meeting the expectations of a single regulator than their multi-state peers.

However, size can be a very important factor in our assessment of certain risks that impact ratings, including exposure to natural disasters, customer concentration (primarily to industrial customers in a single sector) and construction risks associated with large projects. While the grid attempts to incorporate the first two of these into Factor 3, for some issuers these considerations may be sufficiently important that the rating reflects a greater weight for these risks. While construction projects always carry the risk of cost over-runs and delays, these risks are materially heightened for projects that are very large relative to the size of the utility.

Interaction of Utility Ratings with Government Policies and Sovereign Ratings

Compared to most industrial sectors, regulated utilities are more likely to be impacted by government actions. Credit impacts can occur directly through rate regulation, and indirectly through energy, environmental and tax policies. Government actions affect fuel prices, the mix of generating plants, the certainty and timing of revenues and costs, and the likelihood that regulated utilities will experience financial stress. While our evolving view of the impact of such policies and the general economic and financial climate is reflected in ratings for each utility, some considerations do not lend themselves to incorporation in a simple ratings grid.[15]

Diversified Operations at the Utility

A small number of regulated utilities have diversified operations that are segments within the utility company, as opposed to the more common practice of housing such operations in one or more separate affiliates. In general, we will seek to evaluate the other businesses that are material in accordance with the appropriate methodology and the rating will reflect considerations from such methodologies. There may be analytical limitations in evaluating the utility and non-utility businesses when segment financial results are not fully broken out and these may be addressed through estimation based on available information. Since regulated utilities are a relatively low risk business compared to other corporate sectors, in most cases diversified non-utility operations increase the business risk profile of a utility. Reflecting this tendency, we note that assigned ratings are typically lower than grid- indicated ratings for such companies.

Event Risk

We also recognize the possibility that an unexpected event could cause a sudden and sharp decline in an issuer's fundamental creditworthiness. Typical special events include mergers and acquisitions, asset sales, spin-offs, capital restructuring programs, litigation and shareholder distributions.

Corporate Governance

Among the areas of focus in corporate governance are audit committee financial expertise, the incentives created by executive compensation packages, related party transactions, interactions with outside auditors, and ownership structure.

Investment and Acquisition Strategy

In our credit assessment we take into consideration management's investment strategy. Investment strategy is benchmarked with that of the other companies in the rated universe to further verify its consistency. Acquisitions can strengthen a company's business. Our assessment of a company's tolerance for acquisitions at a given rating level takes into consideration (1) management's risk appetite, including the likelihood of further acquisitions over the medium term; (2) share buy-back activity; (3) the company's commitment to specific leverage targets; and (4) the volatility of the underlying businesses, as well as that of the business acquired. Ratings can often hold after acquisitions even if leverage temporarily climbs above normally acceptable ranges. However, this depends on (1) the strategic fit; (2) pro-forma

[15] See also the cross-sector methodology "How Sovereign Credit Quality May Affect Other Ratings." A link to this and other sector and cross-sector credit rating methodologies can be found in the Related Research section of this report.

capitalization/leverage following an acquisition; and (3) our confidence that credit metrics will be restored in a relatively short timeframe.

Financial Controls

We rely on the accuracy of audited financial statements to assign and monitor ratings in this sector. Such accuracy is only possible when companies have sufficient internal controls, including centralized operations, the proper tone at the top and consistency in accounting policies and procedures.

Weaknesses in the overall financial reporting processes, financial statement restatements or delays in regulatory filings can be indications of a potential breakdown in internal controls.

Appendix A: Regulated Electric and Gas Utilities Methodology Factor Grid

Factor 1a: Legislative and Judicial Underpinnings of the Regulatory Framework (12.5%)

Aaa	Aa	A	Baa
Utility regulation occurs under a fully developed framework that is national in scope based on legislation that provides the utility a nearly absolute monopoly (see note 1) within its service territory, an unquestioned assurance that rates will be set in a manner that will permit the utility to make and recover all necessary investments, an extremely high degree of clarity as to the manner in which utilities will be regulated and prescriptive methods and procedures for setting rates. Existing utility law is comprehensive and supportive such that changes in legislation are not expected to be necessary; or any changes that have occurred have been strongly supportive of utilities credit quality in general and sufficiently forward- looking so as to address problems before they occurred. There is an independent judiciary that can arbitrate disagreements between the regulator and the utility should they occur, including access to national courts, very strong judicial precedent in the interpretation of utility laws, and a strong rule of law. We expect these conditions to continue.	Utility regulation occurs under a fully developed national, state or provincial framework based on legislation that provides the utility an extremely strong monopoly (see note 1) within its service territory, a strong assurance, subject to limited review, that rates will be set in a manner that will permit the utility to make and recover all necessary investments, a very high degree of clarity as to the manner in which utilities will be regulated and reasonably prescriptive methods and procedures for setting rates. If there have been changes in utility legislation, they have been timely and clearly credit supportive of the issuer in a manner that shows the utility has had a strong voice in the process. There is an independent judiciary that can arbitrate disagreements between the regulator and the utility, should they occur including access to national courts, strong judicial precedent in the interpretation of utility laws, and a strong rule of law. We expect these conditions to continue.	Utility regulation occurs under a well developed national, state or provincial framework based on legislation that provides the utility a very strong monopoly (see note 1) within its service territory, an assurance, subject to reasonable prudency requirements, that rates will be set in a manner that will permit the utility to make and recover all necessary investments, a high degree of clarity as to the manner in which utilities will be regulated, and overall guidance for methods and procedures for setting rates. If there have been changes in utility legislation, they have been mostly timely and on the whole credit supportive for the issuer, and the utility has had a clear voice in the legislative process. There is an independent judiciary that can arbitrate disagreements between the regulator and the utility, should they occur, including access to national courts, clear judicial precedent in the interpretation of utility law, and a strong rule of law. We expect these conditions to continue.	Utility regulation occurs (i) under a national, state, provincial or municipal framework based on legislation that provides the utility a strong monopoly within its service territory that may have some exceptions such as greater self-generation (see note 1), a general assurance that, subject to prudency requirements that are mostly reasonable, rates will be set will be set in a manner that will permit the utility to make and recover all necessary investments, reasonable clarity as to the manner in which utilities will be regulated and overall guidance for methods and procedures for setting rates; or (ii) under a new framework where independent and transparent regulation exists in other sectors. If there have been changes in utility legislation, they have been credit supportive or at least balanced for the issuer but potentially less timely, and the utility had a voice in the legislative process. There is either (i) an independent judiciary that can arbitrate disagreements between the regulator and the utility, including access to courts at least at the state or provincial level, reasonably clear judicial precedent in the interpretation of utility laws, and a generally strong rule of law; or (ii) regulation has been applied (under a well developed framework) in a manner such that redress to an independent arbiter has not been required. We expect these conditions to continue.

Ba	B	Caa
Utility regulation occurs (i) under a national, state, provincial or municipal framework based on legislation or government decree that provides the utility a monopoly within its service territory that is generally strong but may have a greater level of exceptions (see note 1), and that, subject to prudency requirements which may be stringent, provides a general assurance (with somewhat less certainty) that rates will be set will be set in a manner that will permit the utility to make and recover necessary investments; or (ii) under a new framework where the jurisdiction has a history of less independent and transparent regulation in other sectors. Either: (i) the judiciary that can arbitrate disagreements between the regulator and the utility may not have clear authority or may not be fully independent of the regulator or other political pressure, but there is a reasonably strong rule of law; or (ii) where there is no independent arbiter, the regulation has mostly been applied in a manner such redress has not been required. We expect these conditions to continue.	Utility regulation occurs (i) under a national, state, provincial or municipal framework based on legislation or government decree that provides the utility monopoly within its service territory that is reasonably strong but may have important exceptions, and that, subject to prudency requirements which may be stringent or at times arbitrary, provides more limited or less certain assurance that rates will be set in a manner that will permit the utility to make and recover necessary investments; or (ii) under a new framework where we would expect less independent and transparent regulation, based either on the regulator's history in other sectors or other factors. The judiciary that can arbitrate disagreements between the regulator and the utility may not have clear authority or may not be fully independent of the regulator or other political pressure, but there is a reasonably strong rule of law. Alternately, where there is no independent arbiter, the regulation has been applied in a manner that often requires some redress adding more uncertainty to the regulatory framework. There may be a periodic risk of creditor-unfriendly government intervention in utility markets or rate-setting.	Utility regulation occurs (i) under a national, state, provincial or municipal framework based on legislation or government decree that provides the utility a monopoly within its service territory, but with little assurance that rates will be set in a manner that will permit the utility to make and recover necessary investments; or (ii) under a new framework where we would expect unpredictable or adverse regulation, based either on the jurisdiction's history of in other sectors or other factors. The judiciary that can arbitrate disagreements between the regulator and the utility may not have clear authority or is viewed as not being fully independent of the regulator or other political pressure. Alternately, there may be no redress to an effective independent arbiter. The ability of the utility to enforce its monopoly or prevent uncompensated usage of its system may be limited. There may be a risk of creditor- unfriendly nationalization or other significant intervention in utility markets or rate-setting.

Note 1: The strength of the monopoly refers to the legal, regulatory and practical obstacles for customers in the utility's territory to obtain service from another provider. Examples of a weakening of the monopoly would include the ability of a city or large user to leave the utility system to set up their own system, the extent to which self-generation is permitted (e.g. cogeneration) and/or encouraged (e.g., net metering, DSM generation). At the lower end of the ratings spectrum, the utility's monopoly may be challenged by pervasive theft and unauthorized use. Since utilities are generally presumed to be monopolies, a strong monopoly position in itself is not sufficient for a strong score in this sub-factor, but a weakening of the monopoly can lower the score.

* 10% weight for issuers that lack generation **0% weight for issuers that lack generation

Factor 1b: Consistency and Predictability of Regulation (12.5%)

Aaa	Aa	A	Baa
The issuer's interaction with the regulator has led to a strong, lengthy track record of predictable, consistent and favorable decisions. The regulator is highly credit supportive of the issuer and utilities in general. We expect these conditions to continue.	The issuer's interaction with the regulator has a led to a considerable track record of predominantly predictable and consistent decisions. The regulator is mostly credit supportive of utilities in general and in almost all instances has been highly credit supportive of the issuer. We expect these conditions to continue.	The issuer's interaction with the regulator has led to a track record of largely predictable and consistent decisions. The regulator may be somewhat less credit supportive of utilities in general, but has been quite credit supportive of the issuer in most circumstances. We expect these conditions to continue.	The issuer's interaction with the regulator has led to an adequate track record. The regulator is generally consistent and predictable, but there may some evidence of inconsistency or unpredictability from time to time, or decisions may at times be politically charged. However, instances of less credit supportive decisions are based on reasonable application of existing rules and statutes and are not overly punitive. We expect these conditions to continue.

Ba	B	Caa
We expect that regulatory decisions will demonstrate considerable inconsistency or unpredictability or that decisions will be politically charged, based either on the issuer's track record of interaction with regulators or other governing bodies, or our view that decisions will move in this direction. The regulator may have a history of less credit supportive regulatory decisions with respect to the issuer, but we expect that the issuer will be able to obtain support when it encounters financial stress, with some potentially material delays. The regulator's authority may be eroded at times by legislative or political action. The regulator may not follow the framework for some material decisions.	We expect that regulatory decisions will be largely unpredictable or even somewhat arbitrary, based either on the issuer's track record of interaction with regulators or other governing bodies, or our view that decisions will move in this direction. However, we expect that the issuer will ultimately be able to obtain support when it encounters financial stress, albeit with material or more extended delays. Alternately, the regulator is untested, lacks a consistent track record, or is undergoing substantial change. The regulator's authority may be eroded on frequent occasions by legislative or political action. The regulator may more frequently ignore the framework in a manner detrimental to the issuer.	We expect that regulatory decisions will be highly unpredictable and frequently adverse, based either on the issuer's track record of interaction with regulators or other governing bodies, or our view that decisions will move in this direction. Alternately, decisions may have credit supportive aspects, but may often be unenforceable. The regulator's authority may have been seriously eroded by legislative or political action. The regulator may consistently ignore the framework to the detriment of the issuer.

Factor 2a: Timeliness of Recovery of Operating and Capital Costs (12.5%)

Aaa	Aa	A	Baa
Tariff formulas and automatic cost recovery mechanisms provide full and highly timely recovery of all operating costs and essentially contemporaneous return on all incremental capital investments, with statutory provisions in place to preclude the possibility of challenges to rate increases or cost recovery mechanisms. By statute and by practice, general rate cases are efficient, focused on an impartial review, quick, and permit inclusion of fully forward -looking costs.	Tariff formulas and automatic cost recovery mechanisms provide full and highly timely recovery of all operating costs and essentially contemporaneous or near-contemporaneous return on most incremental capital investments, with minimal challenges by regulators to companies' cost assumptions. By statute and by practice, general rate cases are efficient, focused on an impartial review, of a very reasonable duration before non-appealable interim rates can be collected, and primarily permit inclusion of forward- looking costs.	Automatic cost recovery mechanisms provide full and reasonably timely recovery of fuel, purchased power and all other highly variable operating expenses. Material capital investments may be made under tariff formulas or other rate-making permitting reasonably contemporaneous returns, or may be submitted under other types of filings that provide recovery of cost of capital with minimal delays. Instances of regulatory challenges that delay rate increases or cost recovery are generally related to large, unexpected increases in sizeable construction projects. By statute or by practice, general rate cases are reasonably efficient, primarily focused on an impartial review, of a reasonable duration before rates (either permanent or non- refundable interim rates) can be collected, and permit inclusion of important forward -looking costs.	Fuel, purchased power and all other highly variable expenses are generally recovered through mechanisms incorporating delays of less than one year, although some rapid increases in costs may be delayed longer where such deferrals do not place financial stress on the utility. Incremental capital investments may be recovered primarily through general rate cases with moderate lag, with some through tariff formulas. Alternately, there may be formula rates that are untested or unclear. Potentially greater tendency for delays due to regulatory intervention, although this will generally be limited to rates related to large capital projects or rapid increases in operating costs.

Ba	B	Caa
There is an expectation that fuel, purchased power or other highly variable expenses will eventually be recovered with delays that will not place material financial stress on the utility, but there may be some evidence of an unwillingness by regulators to make timely rate changes to address volatility in fuel, or purchased power, or other market-sensitive expenses. Recovery of costs related to capital investments may be subject to delays that are somewhat lengthy, but not so pervasive as to be expected to discourage important investments.	The expectation that fuel, purchased power or other highly variable expenses will be recovered may be subject to material delays due to second-guessing of spending decisions by regulators or due to political intervention. Recovery of costs related to capital investments may be subject to delays that are material to the issuer, or may be likely to discourage some important investment.	The expectation that fuel, purchased power or other highly variable expenses will be recovered may be subject to extensive delays due to second-guessing of spending decisions by regulators or due to political intervention. Recovery of costs related to capital investments may be uncertain, subject to delays that are extensive, or that may be likely to discourage even necessary investment.

Note: Tariff formulas include formula rate plans as well as trackers and riders related to capital investment.

Factor 2b: Sufficiency of Rates and Returns (12.5%)

Aaa	Aa	A	Baa
Sufficiency of rates to cover costs and attract capital is (and will continue to be) unquestioned.	Rates are (and we expect will continue to be) set at a level that permits full cost recovery and a fair return on all investments, with minimal challenges by regulators to companies' cost assumptions. This will translate to returns (measured in relation to equity, total assets, rate base or regulatory asset value, as applicable) that are strong relative to global peers.	Rates are (and we expect will continue to be) set at a level that generally provides full cost recovery and a fair return on investments, with limited instances of regulatory challenges and disallowances. In general, this will translate to returns (measured in relation to equity, total assets, rate base or regulatory asset value, as applicable) that are generally above average relative to global peers, but may at times be average.	Rates are (and we expect will continue to be) set at a level that generally provides full operating cost recovery and a mostly fair return on investments, but there may be somewhat more instances of regulatory challenges and disallowances, although ultimate rate outcomes are sufficient to attract capital without difficulty. In general, this will translate to returns (measured in relation to equity, total assets, rate base or regulatory asset value, as applicable) that are average relative to global peers, but may at times be somewhat below average.

Ba	B	Caa
Rates are (and we expect will continue to be) set at a level that generally provides recovery of most operating costs but return on investments may be less predictable, and there may be decidedly more instances of regulatory challenges and disallowances, but ultimate rate outcomes are generally sufficient to attract capital. In general, this will translate to returns (measured in relation to equity, total assets, rate base or regulatory asset value, as applicable) that are generally below average relative to global peers, or where allowed returns are average but difficult to earn. Alternately, the tariff formula may not take into account all cost components and/or remuneration of investments may be unclear or at times unfavorable.	We expect rates will be set at a level that at times fails to provide recovery of costs other than cash costs, and regulators may engage in somewhat arbitrary second-guessing of spending decisions or deny rate increases related to funding ongoing operations based much more on politics than on prudency reviews. Return on investments may be set at levels that discourage investment. We expect that rate outcomes may be difficult or uncertain, negatively affecting continued access to capital. Alternately, the tariff formula may fail to take into account significant cost components other than cash costs, and/or remuneration of investments may be generally unfavorable.	We expect rates will be set at a level that often fails to provide recovery of material costs, and recovery of cash costs may also be at risk. Regulators may engage in more arbitrary second-guessing of spending decisions or deny rate increases related to funding ongoing operations based primarily on politics. Return on investments may be set at levels that discourage necessary maintenance investment. We expect that rate outcomes may often be punitive or highly uncertain, with a markedly negative impact on access to capital. Alternately, the tariff formula may fail to take into account significant cash cost components, and/or remuneration of investments may be primarily unfavorable.

Factor 3: Diversification (10%)

Weighting 10%	Sub-Factor Weighting	Aaa	Aa	A	Baa
Market Position	5% *	A very high degree of multinational and regional diversity in terms of regulatory regimes and/or service territory economies.	Material operations in three or more nations or substantial geographic regions providing very good diversity of regulatory regimes and/or service territory economies.	Material operations in two to three nations, states, provinces or regions that provide good diversity of regulatory regimes and service territory economies. Alternately, operates within a single regulatory regime with low volatility, and the service territory economy is robust, has a very high degree of diversity and has demonstrated resilience in economic cycles.	May operate under a single regulatory regime viewed as having low volatility, or where multiple regulatory regimes are not viewed as providing much diversity. The service territory economy may have some concentration and cyclicality, but is sufficiently resilient that it can absorb reasonably foreseeable increases in utility rates.
Generation and Fuel Diversity	5% **	A high degree of diversity in terms of generation and/or fuel sources such that the utility and rate-payers are well insulated from commodity price changes, no generation concentration, and very low exposures to Challenged or Threatened Sources (see definitions below).	Very good diversification in terms of generation and/or fuel sources such that the utility and rate-payers are affected only minimally by commodity price changes, little generation concentration, and low exposures to Challenged or Threatened Sources.	Good diversification in terms of generation and/or fuel sources such that the utility and rate-payers have only modest exposure to commodity price changes; however, may have some concentration in a source that is neither Challenged nor Threatened. Exposure to Threatened Sources is low. While there may be some exposure to Challenged Sources, it is not a cause for concern.	Adequate diversification in terms of generation and/or fuel sources such that the utility and rate-payers have moderate exposure to commodity price changes; however, may have some concentration in a source that is Challenged. Exposure to Threatened Sources is moderate, while exposure to Challenged Sources is manageable.

	Sub-Factor Weighting	Ba	B	Caa	Definitions
Market Position	5% *	Operates in a market area with somewhat greater concentration and cyclicality in the service territory economy and/or exposure to storms and other natural disasters, and thus less resilience to absorbing reasonably foreseeable increases in utility rates. May show somewhat greater volatility in the regulatory regime(s).	Operates in a limited market area with material concentration and more severe cyclicality in service territory economy such that cycles are of materially longer duration or reasonably foreseeable increases in utility rates could present a material challenge to the economy. Service territory may have geographic concentration that limits its resilience to storms and other natural disasters, or may be an emerging market. May show decided volatility in the regulatory regime(s).	Operates in a concentrated economic service territory with pronounced concentration, macroeconomic risk factors, and/or exposure to natural disasters.	Challenged Sources are generation plants that face higher but not insurmountable economic hurdles resulting from penalties or taxes on their operation, or from environmental upgrades that are required or likely to be required. Some examples are carbon-emitting plants that incur carbon taxes, plants that must buy emissions credits to operate, and plants that must install environmental equipment to continue to operate, in each where the taxes/credits/upgrades are sufficient to have a material impact on those plants' competitiveness relative to other generation types or on the utility's rates, but where the impact is not so severe as to be likely require plant closure.
Generation and Fuel Diversity	5% **	Modest diversification in generation and/or fuel sources such that the utility or rate- payers have greater exposure to commodity price changes. Exposure to Challenged and Threatened Sources may be more pronounced, but the utility will be able to access alternative sources without undue financial stress.	Operates with little diversification in generation and/or fuel sources such that the utility or rate-payers have high exposure to commodity price changes. Exposure to Challenged and Threatened Sources may be high, and accessing alternate sources may be challenging and cause more financial stress, but ultimately feasible.	Operates with high concentration in generation and/or fuel sources such that the utility or rate-payers have exposure to commodity price shocks. Exposure to Challenged and Threatened Sources may be very high, and accessing alternate sources may be highly uncertain.	Threatened Sources are generation plants that are not currently able to operate due to major unplanned outages or issues with licensing or other regulatory compliance, and plants that are highly likely to be required to de- activate, whether due to the effectiveness of currently existing or expected rules and regulations or due to economic challenges. Some recent examples would include coal fired plants in the US that are not economic to retro-fit to meet mercury and air toxics standards, plants that cannot meet the effective date of those standards, nuclear plants in Japan that have not been licensed to re-start after the Fukushima Dai-ichi accident, and nuclear plants that are required to be phased out within 10 years (as is the case in some European countries).

* 10% weight for issuers that lack generation **0% weight for issuers that lack generation

Factor 4: Financial Strength

Weighting 40%	Sub-Factor Weighting		Aaa	Aa	A	Baa	Ba	B	Caa
CFO pre-WC + Interest / Interest	7.5%		≥ 8x	6x - 8x	4.5x - 6x	3x - 4.5x	2x - 3x	1x - 2x	< 1x
CFO pre-WC / Debt	15%	Standard Grid	≥ 40%	30% - 40%	22% - 30%	13% - 22%	5% - 13%	1% - 5%	< 1%
		Low Business Risk Grid	≥ 38%	27% - 38%	19% - 27%	11% - 19%	5% - 11%	1% - 5%	< 1%
CFO pre-WC - Dividends / Debt	10%	Standard Grid	≥ 35%	25% - 35%	17% - 25%	9% - 17%	0% - 9%	(5%) - 0%	< (5%)
		Low Business Risk Grid	≥ 34%	23% - 34%	15% - 23%	7% - 15%	0% - 7%	(5%) - 0%	< (5%)
Debt / Capitalization	7.5%	Standard Grid	< 25%	25% - 35%	35% - 45%	45% - 55%	55% - 65%	65% - 75%	≥ 75%
		Low Business Risk Grid	< 29%	29% - 40%	40% - 50%	50% - 59%	59% - 67%	67% - 75%	≥ 75%

Appendix B: Approach to Ratings within a Utility Family

Typical Composition of a Utility Family

A typical utility company structure consists of a holding company ("HoldCo") that owns one or more operating subsidiaries (each an "OpCo"). OpCos may be regulated utilities or non-utility companies. Financing of these entities varies by region, in part due to the regulatory framework. A HoldCo typically has no operations – its assets are mostly limited to its equity interests in subsidiaries, and potentially other investments in subsidiaries or minority interests in other companies. However, in certain cases there may be material operations at the HoldCo level. Financing can occur primarily at the OpCo level, primarily at the HoldCo level, or at both HoldCo and OpCos in varying proportions. When a HoldCo has multiple utility OpCos, they will often be located in different regulatory jurisdictions. A HoldCo may have both levered and unlevered OpCos.

General Approach to a Utility Family

In our analysis, we generally consider the stand-alone credit profile of an OpCo and the credit profile of its ultimate parent HoldCo (and any intermediate HoldCos), as well as the profile of the family as a whole, while acknowledging that these elements can have cross-family credit implications in varying degrees, principally based on the regulatory framework of the OpCos and the financing model (which has often developed in response to the regulatory framework).

In addition to considering individual OpCos under this (or another applicable) methodology, we typically[16] approach a HoldCo rating by assessing the qualitative and quantitative factors in this methodology for the consolidated entity and each of its utility subsidiaries. Ratings of individual entities in the issuer family may be pulled up or down based on the interrelationships among the companies in the family and their relative credit strength.

In considering how closely aligned or how differentiated ratings should be among members of a utility family, we assess a variety of factors, including:

» Regulatory or other barriers to cash movement among OpCos and from OpCos to HoldCo

» Differentiation of the regulatory frameworks of the various OpCos

» Specific ring-fencing provisions at particular OpCos

» Financing arrangements – for instance, each OpCo may have its own financing arrangements, or the sole liquidity facility may be at the parent; there may be a liquidity pool among certain but not all members of the family; certain members of the family may better be able to withstand a temporary hiatus of external liquidity or access to capital markets

» Financial covenants and the extent to which an Event of Default by one OpCo limits availability of liquidity to another member of the family

» The extent to which higher leverage at one entity increases default risk for other members of the family

» An entity's exposure to or insulation from an affiliate with high business risk

» Structural features or other limitations in financing agreements that restrict movements of funds, investments, provision of guarantees or collateral, etc.

» The relative size and financial significance of any particular OpCo to the HoldCo and the family

[16] See paragraph at the end of this section for approaches to Hybrid HoldCos.

See also those factors noted in Notching for Structural Subordination of Holding Companies.

Our approach to a Hybrid HoldCo (see definition in Appendix C) depends in part on the importance of its non-utility operations and the availability of information on individual businesses. If the businesses are material and their individual results are fully broken out in financial disclosures, we may be able to assess each material business individually by reference to the relevant Moody's methodologies to arrive at a composite assessment for the combined businesses. If non-utility operations are material but are not broken out in financial disclosures, we may look at the consolidated entity under more than one methodology. When non-utility operations are less material but could still impact the overall credit profile, the difference in business risks and our estimation of their impact on financial performance will be qualitatively incorporated in the rating.

Higher Barriers to Cash Movement with Financing Predominantly at the OpCos

Where higher barriers to cash movement exist on an OpCo or OpCos due the regulatory framework or debt structural features, ratings among family members are likely to be more differentiated. For instance, for utility families with OpCos in the US, where regulatory barriers to free cash movement are relatively high, greater importance is generally placed on the stand-alone credit profile of the OpCo.

Our observation of major defaults and bankruptcies in the US sector generally corroborates a view that regulation creates a degree of separateness of default probability. For instance, Portland General Electric (Baa1 RUR-up) did not default on its securities, even though its then-parent Enron Corp. entered bankruptcy proceedings. When Entergy New Orleans (Ba2 stable) entered into bankruptcy, the ratings of its affiliates and parent Entergy Corporation (Baa3 stable) were unaffected. PG&E Corporation (Baa1 stable) did not enter bankruptcy proceedings despite bankruptcies of two major subsidiaries - Pacific Gas & Electric Company (A3 stable) in 2001 and National Energy Group in 2003.

The degree of separateness may be greater or smaller and is assessed on a case by case basis, because situational considerations are important. One area we consider is financing arrangements. For instance, there will tend to be greater differentiation if each member of a family has its own bank credit facilities and difficulties experienced by one entity would not trigger events of default for other entities. While the existence of a money pool might appear to reduce separateness between the participants, there may be regulatory barriers within money pools that preserve separateness. For instance, non-utility entities may have access to the pool only as a borrower, only as a lender, and even the utility entities may have regulatory limits on their borrowings from the pool or their credit exposures to other pool members. If the only source of external liquidity for a money pool is borrowings by the HoldCo under its bank credit facilities, there would be less separateness, especially if the utilities were expected to depend on that liquidity source. However, the ability of an OpCo to finance itself by accessing capital markets must also be considered. Inter-company tax agreements can also have an impact on our view of how separate the risks of default are.

For a HoldCo, the greater the regulatory, economic, and geographic diversity of its OpCos, the greater its potential separation from the default probability of any individual subsidiary. Conversely, if a HoldCo's actions have made it clear that the HoldCo will provide support for an OpCo encountering some financial stress (for instance, due to delays and/or cost over-runs on a major construction project), we would be likely to perceive less separateness.

Even where high barriers to cash movement exist, onerous leverage at a parent company may not only give rise to greater notching for structural subordination at the parent, it may also pressure an OpCo's rating, especially when there is a clear dependence on an OpCo's cash flow to service parent debt.

While most of the regulatory barriers to cash movement are very real, they are not absolute. Furthermore, while it is not usually in the interest of an insolvent parent or its creditors to bring an operating utility into a bankruptcy proceeding, such an occurrence is not impossible.

The greatest separateness occurs where strong regulatory insulation is supplemented by effective ring-fencing provisions that fully separate the management and operations of the OpCo from the rest of the family and limit the parent's ability to cause the OpCo to commence bankruptcy proceedings as well as limiting dividends and cash transfers. Typically, most entities in US utility families (including HoldCos and OpCos) are rated within 3 notches of each other. However, it is possible for the HoldCo and OpCos in a family to have much wider notching due to the combination of regulatory imperatives and strong ring-fencing that includes a significant minority shareholder who must agree to important corporate decisions, including a voluntary bankruptcy filing.

Lower Barriers to Cash Movement with Financing Predominantly at the OpCos

Our approach to rating issuers within a family where there are lower regulatory barriers to movement of cash from OpCos to HoldCos (e.g., many parts of Asia and Europe) places greater emphasis on the credit profile of the consolidated group. Individual OpCos are considered based on their individual characteristics and their importance to the family, and their assigned ratings are typically banded closely around the consolidated credit profile of the group due to the expectation that cash will transit relatively freely among family entities.

Some utilities may have OpCos in jurisdictions where cash movement among certain family members is more restricted by the regulatory framework, while cash movement from and/or among OpCos in other jurisdictions is less restricted. In these situations, OpCos with more restrictions may vary more widely from the consolidated credit profile while those with fewer restrictions may be more tightly banded around the other entities in the corporate family group.

Appendix C: Brief Descriptions of the Types of Companies Rated Under This Methodology

The following describes the principal categories of companies rated under this methodology:

Vertically Integrated Utility: Vertically integrated utilities are regulated electric or combination utilities (see below) that own generation, distribution and (in most cases) electric transmission assets. Vertically integrated utilities are generally engaged in all aspects of the electricity business. They build power plants, procure fuel, generate power, build and maintain the electric grid that delivers power from a group of power plants to end-users (including high and low voltage lines, transformers and substations), and generally meet all of the electric needs of the customers in a specific geographic area (also called a service territory). The rates or tariffs for all of these monopolistic activities are set by the relevant regulatory authority.

Transmission & Distribution Utility: Transmission & Distribution utilities (T&Ds) typically operate in deregulated markets where generation is provided under a competitive framework. T&Ds own and operate the electric grid that transmits and/or distributes electricity within a specific state or region.

T&Ds provide electrical transportation and distribution services to carry electricity from power plants and transmission lines to retail, commercial, and industrial customers. T&Ds are typically responsible for billing customers for electric delivery and/or supply, and most have an obligation to provide a standard supply or provider-of-last-resort (POLR) service to customers that have not switched to a competitive supplier. These factors distinguish T&Ds from Networks, whose customers are retail electric suppliers and/or other electricity companies. In a smaller number of cases, T&Ds rated under this methodology may not have an obligation to provide POLR services, but are regulated in sub- sovereign jurisdictions. The rates or tariffs for these monopolistic T&D activities are set by the relevant regulatory authority.

Local Gas Distribution Company: Distribution is the final step in delivering natural gas to customers. While some large industrial, commercial, and electric generation customers receive natural gas directly from high capacity pipelines that carry gas from gas producing basins to areas where gas is consumed, most other users receive natural gas from their local gas utility, also called a local distribution company (LDC). LDCs are regulated utilities involved in the delivery of natural gas to consumers within a specific geographic area. Specifically, LDCs typically transport natural gas from delivery points located on large-diameter pipelines (that usually operate at fairly high pressure) to households and businesses through thousands of miles of small-diameter distribution pipe (that usually operate at fairly low pressure). LDCs are typically responsible for billing customers for gas delivery and/or supply, and most also have the responsibility to procure gas for at least some of their customers, although in some markets gas supply to all customers is on a competitive basis. These factors distinguish LDCs from gas networks, whose customers are retail gas suppliers and/or other natural gas companies. The rates or tariffs for these monopolistic activities are set by the relevant regulatory authority.

Integrated Gas Utility: Integrated gas regulated utilities are regulated utilities that deliver gas to all end users in a particular service territory by sourcing the commodity; operating transport infrastructure that often combines high pressure pipelines with low pressure distribution systems and, in some cases, gas storage, re-gasification or other related facilities; and performing other supply-related activities, such as customer billing and metering. The rates or tariffs for the totality of these activities are set by the relevant regulatory authority. Many integrated gas utilities are national in scope.

Combination Utility: Combination utilities are those that combine an LDC or Integrated Gas Utility with either a vertically integrated utility or a T&D utility. The rates or tariffs for these monopolistic activities are set by the relevant regulatory authority.

Regulated Generation Utility: Regulated generation utilities (Regulated Gencos) are utilities that almost exclusively have generation assets, but their activities are generally regulated like those of vertically integrated utilities. In the US, this means that the purchasers of their output (typically other investor-owned, municipal or cooperative utilities) pay a regulated rate based on the total allowed costs of the Regulated Genco, including a return on equity based on a capital structure designated by the regulator (primarily FERC). Companies that have been included in this group include certain generation companies (including in Korea and China) that are not rate regulated in the usual sense of recovering costs plus a regulated rate of return on either equity or asset value. Instead, we have looked at a combination of governmental action with respect to setting feed-in tariffs and directives on how much generation will be built (or not built) in combination with a generally high degree of government ownership, and we have concluded that these companies are currently best rated under this methodology. Future evolution in our view of the operating and/or regulatory environment of these companies could lead us to conclude that they may be more appropriately rated under a related methodology (for example, Unregulated Utilities and Power Companies).

Independent System Operator: An Independent System Operator (ISO) is an organization formed in certain regional electricity markets to act as the sole chief coordinator of an electric grid. In the areas where an ISO is established, it coordinates, controls and monitors the operation of the electrical power system to assure that electric supply and demand are balanced at all times, and, to the extent possible, that electric demand is met with the lowest-cost sources. ISOs seek to assure adequate transmission and generation resources, usually by identifying new transmission needs and planning for a generation reserve margin above expected peak demand. In regions where generation is competitive, they also seek to establish rules that foster a fair and open marketplace, and they may conduct price-setting auctions for energy and/or capacity. The generation resources that an ISO coordinates may belong to vertically integrated utilities or to independent power producers. ISOs may not be rate-regulated in the traditional sense, but fall under governmental oversight. All participants in the regional grid are required to pay a fee or tariff (often volumetric) to the ISO that is designed to recover its costs, including costs of investment in systems and equipment needed to fulfill their function. ISOs may be for profit or not-for-profit entities.

In the US, most ISOs were formed at the direction or recommendation of the Federal Energy Regulatory Commission (FERC), but the ISO that operates solely in Texas falls under state jurisdiction. Some US ISOs also perform certain additional functions such that they are designated as Regional Transmission Organizations (or RTOs).

Transmission-Only Utility: Transmission-only utilities are solely focused on owning and operating transmission assets. The transmission lines these utilities own are typically high-voltage and allow energy producers to transport electric power over long distances from where it is generated (or received) to the transmission or distribution system of a T&D or vertically integrated utility. Unlike most of the other utilities rated under this methodology, transmission-only utilities primarily provide services to other utilities and ISOs. Transmission-only utilities in most parts of the world other than the US have been rated under the Regulated Networks methodology.

Utility Holding Company (Utility HoldCo): As detailed in Appendix B, regulated electric and gas utilities are often part of corporate families under a parent holding company. The operating subsidiaries of Utility HoldCos are overwhelmingly regulated electric and gas utilities.

Hybrid Holding Company (Hybrid HoldCo): Some utility families contain a mix of regulated electric and gas utilities and other types of companies, but the regulated electric and gas utilities represent the majority of the consolidated cash flows, assets and debt. The parent company is thus a Hybrid HoldCo.

Appendix D: Key Industry Issues Over the Intermediate Term

Political and Regulatory Issues

As highly regulated monopolistic entities, regulated utilities continually face political and regulatory risk, and managing these risks through effective outreach to key customers as well as key political and regulatory decision-makers is, or at least should be, a core competency of companies in this sector. However, larger waves of change in the political, regulatory or economic environment have the potential to cause substantial changes in the level of risk experienced by utilities and their investors in somewhat unpredictable ways.

One of the more universal risks faced by utilities currently is the compression of allowed returns. A long period of globally low interest rates, held down by monetary stimulus policies, has generally benefitted utilities, since reductions in allowed returns have been slower than reductions in incurred capital costs. Essentially all regulated utilities face a ratcheting down of allowed and/or earned returns. More difficult to predict is how regulators will respond when monetary stimulus reverses, and how well utilities will fare when fixed income investors require higher interest rates and equity investors require higher total returns and growth prospects.

The following global snapshot highlights that regulatory frameworks evolve over time. On an overall basis in the US over the past several years, we have noted some incremental positive regulatory trends, including greater use of formula rates, trackers and riders, and (primarily for natural gas utilities) de-coupling of returns from volumetric sales. In Canada, the framework has historically been viewed as predictable and stable, which has helped offset somewhat lower levels of equity in the capital structure, but the compression of returns has been relatively steep in recent years. In Japan, the regulatory authorities are working through the challenges presented by the decision to shut down virtually all of the country's nuclear generation capacity, leading to uncertainty regarding the extent to which increased costs will be reflected in rate increases sufficient to permit returns on capital to return to prior levels. China's regulatory framework has continued to evolve, with fairly low transparency and some time-to-time shifts in favored versus less-favored generation sources balanced by an overall state policy of assuring sustainability of the sector, adequate supply of electricity and affordability to the general public. Singapore and Hong Kong have fairly well developed and supportive regulatory frameworks despite a trend towards lower returns, whereas Malaysia, Korea and Thailand have been moving towards a more transparent regulatory framework. The Philippines is in the process of deregulating its power market, while Indian power utilities continue to grapple with structural challenges. In Latin America, there is a wide dispersion among frameworks, ranging from the more stable, long established and predictable framework in Chile to the decidedly unpredictable framework in Argentina. Generally, as Latin American economies have evolved to more stable economic policies, regulatory frameworks for utilities have also shown greater stability and predictability.

All of the other issues discussed in this section have a regulatory/political component, either as the driver of change or in reaction to changes in economic environments and market factors.

Economic and Financial Market Conditions

As regulated monopolies, electric and gas utilities have generally been quite resistant to unsettled economic and financial market conditions for several reasons. Unlike many companies that face direct market-based competition, their rates do not decrease when demand decreases. The elasticity of demand for electricity and gas is much lower than for most products in the consumer economy.

When financial markets are volatile, utilities often have greater capital market access than industrial companies in competitive sectors, as was the case in the 2007-2009 recession. However, regulated electric and gas utilities are by no means immune to a protracted or severe recession.

Severe economic malaise can negatively affect utility credit profiles in several ways. Falling demand for electricity or natural gas may negatively impact margins and debt service protection measures, especially when rates are designed such that a substantial portion of fixed costs is in theory recovered through volumetric charges. The decrease in demand in the 2007-2009 recession was notable in comparison to prior recessions, especially in the residential sector. Poor economic conditions can make it more difficult for regulators to approve needed rate increases or provide timely cost recovery for utilities, resulting in higher cost deferrals and longer regulatory lag. Finally, recessions can coincide with a lack of confidence in the utility sector that impacts access to capital markets for a period of time. For instance, in the Great Depression and (to a lesser extent) in the 2001 recession, access for some issuers was curtailed due to the sector's generally higher leverage than other corporate sectors, combined with a concerns over a lack of transparency in financial reporting.

Fuel Price Volatility and the Global Impact of Shale Gas

The ability of most utilities to pass through their fuel costs to end users may insulate a utility from exposure to price volatility of these fuels, but it does not insulate consumers. Consumers and regulators complained vociferously about utility rates during the run-up in hydro-carbon prices in 2005-2008 (oil, natural gas and, to a lesser extent, coal). The steep decline in US natural gas prices since 2009, caused in large part by the development of shale gas and shale oil resources, has been a material benefit to US utilities, because many have been able to pass through substantial base rate increases during a period when all-in rates were declining. Shale hydro-carbons have also had a positive impact, albeit one that is less immediate and direct, on non-US utilities. In much of the eastern hemisphere, natural gas prices under long-term contracts have generally been tied to oil prices, but utilities and other industrial users have started to have some success in negotiating to de-link natural gas from oil. In addition, increasing US production of oil has had a noticeable impact on world oil prices, generally benefitting oil and gas users.

Not all utilities will benefit equally. Utilities that have locked in natural gas under high-priced long- term contracts that they cannot re-negotiate are negatively impacted if they cannot pass through their full contracted cost of gas, or if the high costs cause customer dissatisfaction and regulatory backlash. Utilities with large coal fleets or utilities constructing nuclear power plants may also face negative impacts on their regulatory environment, since their customers will benefit less from lower natural gas prices.

Distributed Generation Versus the Central Station Paradigm

The regulation and the financing of electric utilities are based on the premise that the current model under which electricity is generated and distributed to customers will continue essentially unchanged for many decades to come. This model, called the central station paradigm (because electricity is generated in large, centrally located plants and distributed to a large number of customers, who may in fact be hundreds of miles away), has been in place since the early part of the 20th century. The model has worked because the economies of scale inherent to very large power plants has more than offset the cost and inefficiency (through power losses) inherent to maintaining a grid for transmitting and distributing electricity to end users.

Despite rate structures that only allow recovery of invested capital over many decades (up to 60 years), utilities can attract capital because investors assume that rates will continue to be collected for at least that long a period. Regulators and politicians assume that taxes and regulatory charges levied on electricity usage will be paid by a broad swath of residences and businesses and will not materially discourage usage of electricity in a way that would decrease the amount of taxes collected. A corollary assumption is that the number of customers taking electricity from the system during that period will continue to be high enough such that rates will be reasonable and generally more attractive than other alternatives. In the event that consumers were to switch en masse to alternate sources of generating or receiving power (for instance distributed generation), rates for remaining customers would either not cover the utility's costs, or rates would need to be increased so much that more customers may be incentivized to leave the system. This scenario has been experienced in the regulated US copper wire telephone business, where rates have increased quite dramatically for users who have not switched to digital or wireless telephone service. While this scenario continues to be unlikely for the electricity sector, distributed generation, especially from solar panels, has made inroads in certain regions.

Distributed generation is any retail-scale generation, differentiated from self-generation, which generally describes a large industrial plant that builds its own reasonably large conventional power plant to meet its own needs. While some residential property owners that install distributed generation may choose to sever their connection to the local utility, most choose to remain connected, generating power into the grid when it is both feasible and economic to do so, and taking power from the grid at other times. Distributed generation is currently concentrated in roof-top photovoltaic solar panels, which have benefitted from varying levels of tax incentives in different jurisdictions.

Regulatory treatment has also varied, but some rate structures that seek to incentivize distributed renewable energy are decidedly credit negative for utilities, in particular net metering.

Under net metering, a customer receives a credit from the utility for all of its generation at the full (or nearly full) retail rate and pays only for power taken, also at the retail rate, resulting in a materially reduced monthly bill relative to a customer with no distributed generation. The distributed generation customer has no obligation to generate any particular amount of power, so the utility must stand ready to generate and deliver that customer's full power needs at all times. Since most utility costs, including the fixed costs of financing and maintaining generation and delivery systems, are currently collected through volumetric rates, a customer owning distributed generation effectively transfers a portion of the utility's costs of serving that customer to other customers with higher net usage, notably to customers that do not own distributed generation. The higher costs may incentivize more customers to install solar panels, thereby shifting the utility's fixed costs to an even smaller group of rate-payers. To date, solar generation and net metering have not had a material credit impact on any utilities, but ratings could be negatively impacted if the programs were to grow and if rate structures were not amended so that each customer's monthly bill more closely approximated the cost of serving that customer.

In our current view, the possibility that there will be a widespread movement of electric utility customers to sever themselves from the grid is remote. However, we acknowledge that new technologies, such as the development of commercially viable fuel cells and/or distributed electric storage, could disrupt materially the central station paradigm and the credit quality of the utility sector.

Nuclear Issues

Utilities with nuclear generation face unique safety, regulatory, and operational issues. The nuclear disaster at Fukushima Daiichi had a severely negative credit impact on its owner, Tokyo Electric Power Company, Incorporated, as well as all the nuclear utilities in the country. Japan previously generated about 30% of its power from 50 reactors, but all are currently either idled or shut down, and utilities in the country face materially higher costs of replacement power, a credit negative.

Fukushima Daiichi also had global consequences. Germany's response was to require that all nuclear power plants in the country be shut by 2022. Switzerland opted for a phase-out by 2031. (Most European nuclear plants are owned by companies rated under other the Unregulated Utilities and Power Companies methodology.) Even in countries where the regulatory response was more moderate, increased regulatory scrutiny has raised operating costs, a credit negative, especially in the US, where low natural gas prices have rendered certain primarily smaller nuclear plants uneconomic. Nonetheless, we view robust and independent nuclear safety regulation as a credit-positive for the industry.

Other general issues for nuclear operators include higher costs and lower reliability related to the increasing age of the fleet. In 2013, Duke Energy Florida, Inc. decided to shut permanently Crystal River Unit 3 after it determined that a de-lamination (or separation) in the concrete of the outer wall of the containment building was uneconomic to repair. San Onofre Nuclear Generating Station was closed permanently in 2013 after its owners decided not to pursue a re-start in light of operating defects in two steam generators that had been replaced in 2010 and 2011.

Appendix E: Regional and Other Considerations

Notching Considerations for US First Mortgage Bonds

In most regions, our approach to notching between different debt classes of the same regulated utility issuer follows the guidance on notching corporate instrument ratings based on differences in security and priority of claim, including a one notch differential between senior secured and senior unsecured debt.[17] However, in most cases we have two notches between the first mortgage bonds and senior unsecured debt of regulated electric and gas utilities in the US.

Wider notching differentials between debt classes may also be appropriate in speculative grade. Additional insights for speculative grade issuers are provided in the publication "Loss Given Default for Speculative-Grade Companies."[18]

First mortgage bond holders in the US generally benefit from a first lien on most of the fixed assets used to provide utility service, including such assets as generating stations, transmission lines, distribution lines, switching stations and substations, and gas distribution facilities, as well as a lien on franchise agreements. In our view, the critical nature of these assets to the issuers and to the communities they serve has been a major factor that has led to very high recovery rates for this class of debt in situations of default, thereby justifying a two notch uplift. The combination of the breadth of assets pledged and the bankruptcy-tested recovery experience has been unique to the US.

In some cases, there is only a one notch differential between US first mortgage bonds and the senior unsecured rating. For instance, this is likely when the pledged property is not considered critical infrastructure for the region, or if the mortgage is materially weakened by carve-outs, lien releases or similar creditor-unfriendly terms.

Securitization

The use of securitization, a financing technique utilizing a discrete revenue stream (typically related to recovery of specifically defined expenses) that is dedicated to servicing specific securitization debt, has primarily been used in the US, where it has been quite pervasive in the past two decades. The first generation of securitization bonds were primarily related to recovery of the negative difference between the market value of utilities' generation assets and their book value when certain states switched to competitive electric supply markets and utilities sold their generation (so-called stranded costs). This technique was then used for significant storm costs (especially hurricanes) and was eventually broadened to include environmental related expenditures, deferred fuel costs, or even deferred miscellaneous expenses. States that have implemented securitization frameworks include Arkansas, California, Connecticut, Illinois, Louisiana, Maryland, Massachusetts, Mississippi, New Hampshire, New Jersey, Ohio, Pennsylvania, Texas and West Virginia. In its simplest form, a securitization isolates and dedicates a stream of cash flow into a separate special purpose entity (SPE). The SPE uses that stream of revenue and cash flow to provide annual debt service for the securitized debt instrument. Securitization is typically underpinned by specific legislation to segregate the securitization revenues from the utility's revenues to assure their continued collection, and the details of the enabling legislation may vary from state to state. The utility benefits from the securitization because it receives an immediate source of cash (although it gives up the opportunity to earn a return on the corresponding asset), and ratepayers benefit because the cost of the securitized debt is

17 A link to this and other sector and cross-sector credit rating methodologies can be found in the Related Research section of this report.
18 A link to this and other sector and cross-sector credit rating methodologies can be found in the Related Research section of this report,

lower than the utility's cost of debt and much lower than its all-in cost of capital, which reduces the revenue requirement associated with the cost recovery.

In the presentation of US securitization debt in published financial ratios, we make our own assessment of the appropriate credit representation but in most cases follows the accounting in audited statements under US Generally Accepted Accounting Principles (GAAP), which in turn considers the terms of enabling legislation. As a result, accounting treatment may vary. In most states utilities have been required to consolidate securitization debt under GAAP, even though it is technically non- recourse.

In general, we view securitization debt of utilities as being on-credit debt, in part because the rates associated with it reduce the utility's headroom to increase rates for other purposes while keeping all-in rates affordable to customers. Thus, where accounting treatment is off balance sheet, we seek to adjust the company's ratios by including the securitization debt and related revenues for our analysis. Where the securitized debt is on balance sheet, our credit analysis also considers the significance of ratios that exclude securitization debt and related revenues. Since securitization debt amortizes mortgage-style, including it makes ratios look worse in early years (when most of the revenue collected goes to pay interest) and better in later years (when most of the revenue collected goes to pay principal).

Strong levels of government ownership in Asia Pacific (ex-Japan) provide rating uplift

Strong levels of government ownership have dominated the credit profiles of utilities in Asia Pacific (excluding Japan), generally leading to ratings that are a number of notches above the Baseline Credit Assessment. Regulated electric and gas utilities with significant government ownership are rated using this methodology in conjunction with the Joint Default Analysis approach in our methodology for Government-Related Issuers.[19]

Support system for large corporate entities in Japan can provide ratings uplift, with limits

Our ratings for large corporate entities in Japan reflect the unique nature of the country's support system, and they are higher than they would otherwise be if such support were disregarded. This is reflected in the tendency for ratings of Japanese utilities to be higher than their grid implied ratings. However, even for large prominent companies, our ratings consider that support will not be endless and is less likely to be provided when a company has questionable viability rather than being in need of temporary liquidity assistance.

[19] A link to this and other sector and cross-sector credit rating methodologies can be found in the Related Research section of this report.

Appendix F: Treatment of Power Purchase Agreements ("PPAs")

Although many utilities own and operate power stations, some have entered into PPAs to source electricity from third parties to satisfy retail demand. The motivation for these PPAs may be one or more of the following: to outsource operating risks to parties more skilled in power station operation, to provide certainty of supply, to reduce balance sheet debt, to fix the cost of power, or to comply with regulatory mandates regarding power sourcing, including renewable portfolio standards. While we regard PPAs that reduce operating or financial risk as a credit positive, some aspects of PPAs may negatively affect the credit of utilities. The most conservative treatment would be to treat a PPA as a debt obligation of the utility as, by paying the capacity charge, the utility is effectively providing the funds to service the debt associated with the power station. At the other end of the continuum, the financial obligations of the utility could also be regarded as an ongoing operating cost, with no long-term capital component recognized.

Under most PPAs, a utility is obliged to pay a capacity charge to the power station owner (which may be another utility or an Independent Power Producer – IPP); this charge typically covers a portion of the IPP's fixed costs in relation to the power available to the utility. These fixed payments usually help to cover the IPP's debt service and are made irrespective of whether the utility calls on the IPP to generate and deliver power. When the utility requires generation, a further energy charge, to cover the variable costs of the IPP, will also typically be paid by the utility. Some other similar arrangements are characterized as tolling agreements, or long-term supply contracts, but most have similar features to PPAs and are thus we analyze them as PPAs.

PPAs are recognized qualitatively to be a future use of cash whether or not they are treated as debt-like obligations in financial ratios

The starting point of our analysis is the issuer's audited financial statements – we consider whether the utility's accountants determine that the PPA should be treated as a debt equivalent, a capitalized lease, an operating lease, or in some other manner. PPAs have a wide variety of operational and financial terms, and it is our understanding that accountants are required to have a very granular view into the particular contractual arrangements in order to account for these PPAs in compliance with applicable accounting rules and standards. However, accounting treatment for PPAs may not be entirely consistent across US GAAP, IFRS or other accounting frameworks. In addition, we may consider that factors not incorporated into the accounting treatment may be relevant (which may include the scale of PPA payments, their regulatory treatment including cost recovery mechanisms, or other factors that create financial or operational risk for the utility that is greater, in our estimation, than the benefits received). When the accounting treatment of a PPA is a debt or lease equivalent (such that it is reported on the balance sheet, or disclosed as an operating lease and thus included in our adjusted debt calculation), we generally do not make adjustments to remove the PPA from the balance sheet.

However, in relevant circumstances we consider making adjustments that impute a debt equivalent to PPAs that are off-balance sheet for accounting purposes.

Regardless of whether we consider that a PPA warrants or does not warrant treatment as a debt obligation, we assess the totality of the impact of the PPA on the issuer's probability of default. Costs of a PPA that cannot be recovered in retail rates creates material risk, especially if they also cannot be recovered through market sales of power.

Additional considerations for PPAs

PPAs have a wide variety of financial and regulatory characteristics, and each particular circumstance may be treated differently by Moody's. Factors which determine where on the continuum we treat a particular PPA include the following:

» Risk management: An overarching principle is that PPAs have normally been used by utilities as a risk management tool and we recognize that this is the fundamental reason for their existence. Thus, we will not automatically penalize utilities for entering into contracts for the purpose of reducing risk associated with power price and availability. Rather, we will look at the aggregate commercial position, evaluating the risk to a utility's purchase and supply obligations. In addition, PPAs are similar to other long-term supply contracts used by other industries and their treatment should not therefore be fundamentally different from that of other contracts of a similar nature.

» Pass-through capability: Some utilities have the ability to pass through the cost of purchasing power under PPAs to their customers. As a result, the utility takes no risk that the cost of power is greater than the retail price it will receive. Accordingly we regard these PPA obligations as operating costs with no long-term debt-like attributes. PPAs with no pass-through ability have a greater risk profile for utilities. In some markets, the ability to pass through costs of a PPA is enshrined in the regulatory framework, and in others can be dictated by market dynamics. As a market becomes more competitive or if regulatory support for cost recovery deteriorates, the ability to pass through costs may decrease and, as circumstances change, our treatment of PPA obligations will alter accordingly.

» Price considerations: The price of power paid by a utility under a PPA can be substantially above or below the market price of electricity. A below-market price will motivate the utility to purchase power from the IPP in excess of its retail requirements, and to sell excess electricity in the spot market. This can be a significant source of cash flow for some utilities. On the other hand, utilities that are compelled to pay capacity payments to IPPs when they have no demand for the power or at an above-market price may suffer a financial burden if they do not get full recovery in retail rates. We will focus particularly on PPAs that have mark-to-market losses, which typically indicates that they have a material impact on the utility's cash flow.

» Excess Reserve Capacity: In some jurisdictions there is substantial reserve capacity and thus a significant probability that the electricity available to a utility under PPAs will not be required by the market. This increases the risk to the utility that capacity payments will need to be made when there is no demand for the power. We may determine that all of a utility's PPAs represent excess capacity, or that a portion of PPAs are needed for the utility's supply obligations plus a normal reserve margin, while the remaining portion represents excess capacity. In the latter case, we may impute debt to specific PPAs that are excess or take a proportional approach to all of the utility's PPAs.

» Risk-sharing: Utilities that own power plants bear the associated operational, fuel procurement and other risks. These must be balanced against the financial and liquidity risk of contracting for the purchase of power under a PPA. We will examine on a case-by case basis the relative credit risk associated with PPAs in comparison to plant ownership.

» Purchase requirements: Some PPAs are structured with either options or requirements to purchase the asset at the end of the PPA term. If the utility has an economically meaningful requirement to purchase, we would most likely consider it to be a debt obligation. In most such cases, the obligation would already receive on-balance sheet treatment under relevant accounting standards.

» Default provisions: In most cases, the remedies for default under a PPA do not include acceleration of amounts due, and in many cases PPAs would not be considered as debt in a bankruptcy scenario and could potentially be cancelled. Thus, PPAs may not materially increase Loss Given Default for the utility. In addition, PPAs are not typically considered debt for cross- default provisions under a utility's debt and liquidity arrangements. However, the existence of non-standard default provisions that are debt-like would have a large impact on our treatment of a PPA. In addition, payments due under PPAs are senior unsecured obligations, and any inability of the utility to make them materially increases default risk.

Each of these factors will be considered by our analysts and a decision will be made as to the importance of the PPA to the risk analysis of the utility.

Methods for estimating a liability amount for PPAs

According to the weighting and importance of the PPA to each utility and the level of disclosure, we may approximate a debt obligation equivalent for PPAs using one or more of the methods discussed below. In each case we look holistically at the PPA's credit impact on the utility, including the ability to pass through costs and curtail payments, the materiality of the PPA obligation to the overall business risk and cash flows of the utility, operational constraints that the PPA imposes, the maturity of the PPA obligation, the impact of purchased power on market-based power sales (if any) that the utility will engage in, and our view of future market conditions and volatility.

» Operating Cost: If a utility enters into a PPA for the purpose of providing an assured supply and there is reasonable assurance that regulators will allow the costs to be recovered in regulated rates, we may view the PPA as being most akin to an operating cost. Provided that the accounting treatment for the PPA is, in this circumstance, off-balance sheet, we will most likely make no adjustment to bring the obligation onto the utility's balance sheet.

» Annual Obligation x 6: In some situations, the PPA obligation may be estimated by multiplying the annual payments by a factor of six (in most cases). This method is sometimes used in the capitalization of operating leases. This method may be used as an approximation where the analyst determines that the obligation is significant but cannot otherwise be quantified otherwise due to limited information.

» Net Present Value: Where the analyst has sufficient information, we may add the NPV of the stream of PPA payments to the debt obligations of the utility. The discount rate used will be our estimate of the cost of capital of the utility.

» Debt Look-Through: In some circumstances, where the debt incurred by the IPP is directly related to the off-taking utility, there may be reason to allocate the entire debt (or a proportional part related to share of power dedicated to the utility) of the IPP to that of the utility.

» Mark-to-Market: In situations in which we believe that the PPA prices exceed the market price and thus will create an ongoing liability for the utility, we may use a net mark-to-market method, in which the NPV of the utility's future out-of-the-money net payments will be added to its total debt obligations.

» Consolidation: In some instances where the IPP is wholly dedicated to the utility, it may be appropriate to consolidate the debt and cash flows of the IPP with that of the utility. If the utility purchases only a portion of the power from the IPP, then that proportion of debt might be consolidated with the utility.

If we have determined to impute debt to a PPA for which the accounting treatment is not on-balance sheet, we will in some circumstances use more than one method to estimate the debt equivalent obligations imposed by the PPA, and compare results. If circumstances (including regulatory treatment or market conditions) change over time, the approach that is used may also vary.

Moody's Related Research

The credit ratings assigned in this sector are primarily determined by this credit rating methodology. Certain broad methodological considerations (described in one or more credit rating methodologies) may also be relevant to the determination of credit ratings of issuers and instruments in this sector. Potentially related sector and cross-sector credit rating methodologies can be found here.

For data summarizing the historical robustness and predictive power of credit ratings assigned using this credit rating methodology, see link.

Please refer to Moody's Rating Symbols & Definitions, which is available here, for further information. Definitions of Moody's most common ratio terms can be found in "Moody's Basic Definitions for Credit Statistics, User's Guide", accessible via this link.

EXECUTIVE SUMMARY

U.S. investor-owned electric utilities (electric "IOUs") in jurisdictions with historical test year rate cases are grappling today with financial stresses that threaten their ability to serve the public well. Unit costs are rising because growth in sales volumes and other billing determinants is not keeping pace with growth in cost. Cost growth is stimulated by the need to rebuild and expand legacy infrastructure and to meet environmental and other public policy goals. In this situation historical test years, still used in almost 20 U.S. jurisdictions, can erode credit quality and condemn IOUs to chronic underearning.

This report provides an in depth discussion of the test year issue. It includes the results of empirical research which explores why the unit costs of electric IOUs are rising and shows that utilities operating under forward test years realize higher returns on capital and have credit ratings that are materially better than those of utilities operating under historical test years. The research suggests that shifting to a future test year is a prime strategy for rebuilding utility credit ratings as insurance against an uncertain future.

CHAPTER 1 (FORWARD TEST YEARS) provides an introduction to test year issues. Problems with historical test years are discussed. We explain that the "matching principle" used to rationalize historical test years assumes that cost and revenue remain balanced. This assumption doesn't hold when unit cost is rising. In a rising unit cost environment, rates based on historical test years are uncompensatory even in the year they are implemented. As a result, operating risk increases, raising the cost of obtaining funds in capital markets. Service quality may be compromised. Customers receive out of date price signals that encourage excessive consumption. The problems are aggravated when rate hearings are protracted. Utilities commonly respond with more frequent rate case filings but these raise regulatory cost, weaken performance incentives, and distract managers from their basic business while still not giving utilities sufficient attrition relief. It is unfair to expect utilities to offset revenue shortfalls produced by regulatory lag with higher productivity and unrealistic to think that they can do so. Forward test years can yield better results for utilities and their customers.

The unit cost trends of utilities are driven by conditions that are substantially beyond their control. These conditions include trends in input prices, productivity, and the average use of utility services by customers. For the matching principle to work, some combination of growth in utility productivity and average use must offset input price inflation.

Utility efforts to promote customer energy conservation slow growth in average use, thereby raising unit cost and making historical test year rates less compensatory. Forward test years can anticipate the slower growth in average use that results from utility conservation programs. They therefore help to remove utility disincentives to promote conservation aggressively.

The forecasts of costs and billing determinants that are made in a forward test year proceeding are uncertain but involve conditions that are at most two years into the future. A large part of utility cost is no more difficult to budget under forward test years than under historical test years. More volatile components of cost are often subject to true-up mechanisms. Conservative, well-reasoned methods for making forecasts are available. In a rising unit cost environment, the uncertainty of forecasts is less of a concern than the bias of historical test year rates.

Utilities seeking forward test years must be mindful of their high evidentiary burden. The following rate case measures bolster confidence.

- Provide concrete evidence as to why future test years and not historical test years are needed under current circumstances. Evidence concerning trends in the unit cost of utilities and in key unit cost drivers is especially pertinent.
- Provide cost and billing determinant data for one or more historical reference years and carefully explain methodologies for predicting cost and billing determinant changes between those years and the forward test year.
- Use forecasting methods that are transparent and based on reason but not needlessly complex.
- Routine variance reports comparing costs and billing determinants to utility forecasts can increase comfort that forecasts are unbiased.

CHAPTER 2 (TEST YEAR HISTORY) presents a brief history of test years in the United States. Historical test years became the norm in the U.S. because periods of stable or declining unit cost, made possible by slow price inflation and brisk growth in utility productivity and average use, were the rule rather than the exception in the electric utility industry prior to the late 1960s. Growth in productivity and average use have slowed enough in subsequent decades that unit cost has frequently risen. Under favorable business conditions, unit cost can still be flat for several years, making historical test years more reasonable. However, conditions like these can give way to conditions in which unit cost rises for years at a time.

Forward test years were adopted in many jurisdictions during the 1970s and 1980s as unit cost grew briskly, spurred by input price inflation and slower growth in average use and utility productivity. Unit cost growth was flat during most of the 1990s because business conditions driving unit cost growth were more favorable. Input price inflation slowed. Investment needs were more limited, as many utilities grew into capacity added during the construction cycle of the 1970's and early 1980's. Average use grew less rapidly than in the past but nonetheless increased appreciably in most years. Under these conditions, utilities were sometimes able to commit to multiyear base rate freezes.

Unit cost growth has since rebounded due to higher inflation, increased plant additions, and slowing growth in average use. Commissions in several states with historical test year traditions have recently moved in the direction of forward test years. Many of these states are in the West, where comparatively rapid economic growth has stimulated plant additions. The ranks of U.S. jurisdictions that use alternatives to historical test years have swollen and now encompass well over half of the total.

In summary, historical test years became the norm in U.S. rate cases during decades when unit cost was flat or declining due to remarkably brisk utility productivity and average use. Under contemporary conditions, in which average use grows slowly, if at all, and the productivity growth of utilities is more like that of the economy, unit cost may rise for extended periods undermining the matching principle.

CHAPTER 3 (EMPIRICAL SUPPORT FOR FORWARD TEST YEARS) presents results of some empirical research on test year issues. In original work for this paper, we calculated the unit cost trends of a sample of vertically integrated electric utilities from 1996 to 2008. Trends in business conditions that drive unit cost growth were measured. We also considered how test year policies affect credit metrics and utility operating performance.

Here are some salient results.

- The unit cost of sampled utilities was fairly stable from 1996 to 2002 but has since rebounded, averaging 2.3% annual growth from 2003 to 2008. The underlying causes of rising unit cost included higher input price inflation and capital spending and slower growth in the average system use of residential and commercial customers.
- In the three year period from 2006 to 2008 average use actually declined for the typical utility, pulled down by sluggish economic growth and government policies that encourage conservation. The decline was especially marked in states with large conservation programs.
- These results suggest that many IOUs may not be able in the future to count on brisk growth in average use by residential and commercial customers to buffer the impact on unit cost growth of input price inflation and increased plant additions. The problem will be considerably more acute in service territories where there are aggressive conservation programs.
- Utilities operating under forward test years were more profitable and had better credit ratings on average than those of utilities operating under historical test years. For example, from 2006 to 2008 utilities operating under forward test years realized an average return on capital of 9.2% and maintained a typical credit rating between A- and BBB+ whereas the utilities operating under historical test years realized an average return of 7.9% and maintained a typical credit rating between BBB and BBB-.
- Examination of recent trends in operation and maintenance ("O&M") expenses of utilities provides no evidence that historical test years encourage better cost management.

CHAPTER 4 (CONCLUDING REMARKS) provides some suggestions as to how interested regulators can get started down the road to forward test years.

1. Allow a forward test year on a trial basis for one interested utility.

2. Allow forward test years on an as needed basis when a utility makes a convincing case that rising unit costs make historical test years unjust and unreasonable.
3. Borrow one or two of the methods used in FTY rate cases to make additional adjustments to *historical* test year costs and billing determinants. For example, historical test year O&M expenses can be adjusted for forecasts of price inflation prepared by respected independent agencies. Special adjustments can be made for large plant additions that are expected to be finished in the near future.
4. Try a current test year (essentially the year of the rate case), which involves forecasts only one year into the future. Current test years can be combined with interim rate increases which are subject to true up when the rate case is finalized. A combination of a current test year and interim rates eliminates regulatory lag without the necessity of a two year forecast.

In states where regulators aren't ready to abandon historical test years but are sympathetic to the attrition problems caused by rising unit costs, alternative measures are available to relieve the financial attrition. Options include the following:

1. Make sure that historical test year calculations incorporate the full array of normalization, annualization, and known and measurable change adjustments that are used in other jurisdictions.
2. Grant utilities interim rate increases at the outset of a rate case. Even when later adjusted for the final rate case outcome, interim rates effectively reduce regulatory lag by a year.
3. Capital spending trackers can ensure timely recovery of the costs of plant additions, without rate cases, as assets become used and useful.
4. Several methods have been established to compensate utilities for acceleration in unit cost growth that results from flat or declining average system use. These include decoupling true up plans, lost revenue adjustment mechanisms, and higher customer charges.
5. Multiyear rate plans can give utilities rate escalation between rate cases for inflation and other business conditions that drive cost growth.

1. FORWARD TEST YEARS

This chapter provides an in depth discussion of test year issues. Basic test year concepts are introduced in Section 1.1. The rationale for forward test years is discussed in Section 1.2. The kinds of evidence used in forward test year proceedings are explored in Section 1.3.

1.1 Basic Concepts

1.1.1 Rate Cases

In the United States, rates for the services of energy utilities are periodically reset by regulators in litigated proceedings called rate cases. These cases typically take about nine or ten months to resolve and sometimes end in a settlement between contending parties which is approved by the regulator. The first year following approval of new rates is called the "rate year".

In a rate case, rates are reset to reflect the cost and service levels of the utility in a test year. The first step in this process is to establish a revenue "requirement" that is commensurate with a cost for service deemed reasonable for test year operating conditions. Rates are then established which recover the revenue requirement given the levels of service provided in the test year. The service levels (*e.g.* the number of customers served and the power delivery volume) are sometimes called "billing determinants".

Bills of energy utilities often contain charges to recover the cost of energy commodities (*e.g.* fuel and purchased power) procured on a customer's behalf which are separate from the charges to recover the cost of capital, labor, and other inputs used to operate their systems. The rates that recover the costs of non-energy inputs are commonly called "base" rates. Base rate revenues are sometimes called "margins".

Rates for the cost of energy procurement are commonly subject to true ups to recover the actual cost of energy procured. Base rates, on the other hand, have traditionally been reset only in rate cases. The earnings of utilities thus depend primarily on the difference between their base rate revenues and the cost of their base rate inputs.

1.1.2 Historical Test Years

Various kinds of test years are used in rate cases today. An historical test year ("HTY") is a twelve month period that ends before the rate case filing. It typically ends a few months before the filing because it is desirable for the test year to be as current as possible but it takes several months to properly account for a year of costs and take the other steps needed to prepare a rate case. The year between an historical test year and the rate year is sometimes called the "bridge year".

The passage of time between a test year and the rate year is sometimes called "regulatory lag".[1] The lag between an historical test year and the rate year is typically two years. A utility filing for new rates in calendar 2011, for example, would typically file in March or April of 2010 using a calendar 2009 test year. Thus, historical test year rates applicable in 2011 would typically reflect business conditions in 2009.

Regulatory lag in this case has several causes. One is the necessity of using a year of historical data in the rate case filing. Another is the time required to prepare a rate case filing. Still another is the time required to execute the rate case and reach a final decision on new rates.

Historical test year data are usually adjusted in some fashion to make rates more relevant to rate year business conditions. Costs and billing determinants are often normalized for the effects of volatile business conditions on the grounds that there is no reason to expect these conditions to be abnormal during the rate year. For example, if residential and commercial delivery volumes during an historical test year were elevated by unusually high summer temperatures, they may be statistically normalized to reflect average summer weather conditions. Other examples of abnormal events that can prompt normalization adjustments include ice storms, recessions, and extended generation plant outages.

Cost and output conditions in the historical test year may also be "annualized". Effects may be removed, for a full year, of conditions that occurred during part of the HTY but are not expected to continue. One example would be costs reported for the HTY that pertained to years before the test year. Another would be the volume and peak demand of a large industrial customer who has closed its local operations.

Impacts of conditions that occurred only during certain months of the test year and are expected to prevail in the near future may also be annualized. For example, the value of the rate base at the end of an historical test year is sometimes assumed to be applicable for

[1] This is one of several definitions of "regulatory lag" which are sometimes used in discussions of regulation. Another is the length of time between rate cases.

the entire year for purposes of calculating depreciation and the return on rate base. If union wage rates are raised in the last month of the HTY pursuant to the terms of a labor contract, labor expenses may be adjusted so that the higher cost per employee is effective for the entire year.

Cost and output data may, additionally, be adjusted for "known and measurable" (sometimes called "imminent certain") changes that have already occurred since the historical test year or are likely to occur in the near future. For example, if a labor contract provides for an escalation in union wages in the bridge year, HTY cost may be adjusted to reflect the wage rates provided in the contract.

The adjustments made to HTY cost and billing determinants vary across jurisdictions. While all such adjustments tend to make rates more relevant to rate year conditions, the HTY adjustment process often ignores important changes in business conditions that occur between an historical test year and a rate year. Here are some typical omissions.

- Cost is usually not adjusted to reflect future inflation in the prices of materials, services, and new equipment because the extent of such inflation isn't known with certainty.
- Costs of plant additions in the bridge year and the rate year are often omitted if their completion date and/or final cost aren't known with certainty.
- Billing determinants are usually not adjusted to reflect trends that are likely to occur after the test year because these are not known with certainty.
- Adjustments for known and measurable changes are sometimes limited arbitrarily to the bridge year.

1.1.3 Forward and Hybrid Test Years

A forward or future test year ("FTY") is a twelve month period that begins after the rate case is filed. Test year cost and billing determinants must in this case be forecasted, and forward test years are for this reason sometimes called forecasted test years. Utilities in some jurisdictions file rate cases with *multiple* forward test years. In the Canadian province of Alberta, for instance, it has recently been common for utilities to file for two forward test years in a rate case.

Most commonly, a forward test year begins about the time that the rate case is expected to end. The test year is then the same as the rate year. A utility filing on April 1

2010, for instance, might use calendar 2011 as its test year on the assumption that the rate case will take nine months to complete.

Some utilities use FTYs that begin about the time of the rate case filing. This kind of test year may be called a "current" FTY. The initial filing is in this case based entirely on forecasts but some months of actual data for the test year become available in the course of the proceeding.

Utilities in some states make rate case filings using test years that encompass some months *before* the filing and some months *afterwards*. Data for all months of the test year are then likely to become available during the course of the filing. This kind of test year has been called a "hybrid" or "partial" test year.

1.2 Rationale for Forward Test Years

1.2.1 The Financial Challenge

The Key Role of Unit Cost

We have noted that the rates that result from a rate case are designed to recover a revenue requirement that equals cost in a test year. In the case of an historical test year the new rates embody business conditions that are typically about two years older than those of the rate year. Business conditions are likely to change between an historical test year and the rate year, causing both cost and revenue to differ from the HTY level. For rates to be exactly compensatory, base rate cost and revenue must differ from their HTY levels in the same proportion.

The assumption that cost and revenue remain in balance underlies the matching principle that regulators still use to rationalize historical test years. Kamershen and Paul note in a thoughtful 1978 article on regulatory lag that "Philosophically, the strict [historical] test year assumes the past relationship among revenues, costs, and net investment will continue into the future."[2] A 2003 NARUC *Rate Case and Audit Manual* states in this regard that

> When looking at an historical test year, one of the first questions asked is whether the test year is too stale to make it a reasonable basis upon which to establish rates for a future period… In looking at the months beyond the end of the test year, have the growth rates for rate base, expenses, and revenues all remained fairly close and constant, maintaining the test year relationship

[2] David R. Kamershen and Chris W. Paul II, "Erosion and Attrition: A Public Utility's Dilemma", *Public Utilities Fortnightly*, December 1978, p. 23.

> among these three elements, or has one element changed dramatically, making the test year out of kilter with current operations? If so, can this situation be resolved through adjustments to the test year?[3]

Cost in the rate year is likely to be substantially higher than cost in an historical test year. To understand why, consider that cost growth in any business can be decomposed into inflation in the prices it pays for inputs plus the growth in its output less the growth in its productivity:

growth Cost = growth Input Prices + growth Output – growth Productivity. [1]

The productivity growth of a business is typically not rapid enough to offset the combined effects of input price inflation and output growth. A recent study reported in testimony by Pacific Economics Group ("PEG") found, for example, that a national sample of U.S. power distributors averaged 1.03% annual growth in multifactor productivity ("MFP") from 1996 to 2006 whereas input price growth averaged 2.72% and customer growth averaged 1.00%.[4] The productivity trend of sampled distributors was similar to that of the U.S. private business sector but far from sufficient to offset the combined effects on cost of input price inflation and customer growth.

As for base rate revenue during the rate year, it can exceed the HTY revenue requirement only due to growth in billing determinants because rates are fixed at levels that reflect HTY conditions. Whether or not historical test year rates are compensatory thus depends critically on whether *unit* cost is stable in the sense that growth in billing determinants has kept pace with cost growth. If cost growth exceeds growth in billing determinants, unit cost will rise and HTY rates will be uncompensatory.

An element of complexity is added when it is considered that a utility offers many services and gathers revenue for each service from multiple charges, each with its own billing determinant. A bill for residential service, for instance, typically involves a flat monthly charge called a "customer" or "basic" charge and a "volumetric" (per kWh) charge. In this world of multiple billing determinants, historical test years will yield uncompensatory rates to the extent that cost growth between the test year and the rate year exceeds a *weighted average* of the growth in billing determinants, where the weight for each determinant is its

share of the total base rate revenue. In other words, rates are uncompensatory when cost growth exceeds the growth in a billing determinant *index*. This is the definition of growth in a *unit cost index*.

The utility uses most of its base rate revenue to pay its workforce, vendors of materials and services (including construction services), bondholders, and tax authorities. The residual margin, called net income or earnings, is available to provide the company's shareholders with a return on their investments. The return on equity is the component of cost that is most at risk for non-recovery when base rate revenue falls short of cost. When historical test year rates are non-compensatory they can reduce a utility's rate of return on equity ("ROE") materially.

Unit Cost Drivers

If the unit cost growth of a utility has made new historical test year rates non-compensatory, it may fairly be asked whether utility actions could have stopped the growth and avoided the problem. Research over many years has shown that the unit cost of a utility is driven chiefly by changes in business conditions that are beyond its control. Growth in the unit cost of a utility's base rate inputs depends on inflation in the prices it pays for those inputs, growth in the productivity with which it uses the inputs, and an average use effect:

growth Unit Cost = growth Input Prices – (growth Productivity + Average Use). [2]

We discuss each of these unit cost "drivers" in turn.

Input Price Inflation Inflation routinely occurs in the prices utilities pay for labor, materials, services, and equipment. Since utilities have capital-intensive technologies, inflation in the price of capital is an especially important driver of their input price growth. The trend in the price of capital depends chiefly on trends in construction costs, tax rates, and the going rates of return on debt and equity in capital markets.[5]

Productivity The productivity growth of a utility depends on various conditions that include technological change, the realization of scale economies, and the pace of plant additions as

[5] The impact of construction cost on price inflation is complex. In setting rates, utility plant is valued in historical dollars. The cost of service thus depends on prices paid for construction in past decades. Construction costs in more recent years matter more because the corresponding assets are less depreciated. The rate base will tend, on average, to reflect construction costs more than a decade into the past. For most utilities, new investments therefore embody more than a decade of construction cost inflation compared to investments of average vintage. This is one of the reasons why unusually large plant additions can increase the rate base so substantially.

well as utility efforts to root out inefficiencies. Plant additions may boost efficiency gains in the long run but can slow them in the short run, especially if they involve major investments such as new base load generating units, advanced metering infrastructure, or an accelerated program to replace aging infrastructure. Scale economies depend on the pace of output growth and on whether the utility is so large that it has reached a minimum efficient scale at which incremental scale economies from output growth aren't available.

The ability of utilities to achieve productivity surges is limited in the short run. Since technology is capital intensive, the depreciation and return on rate base associated with older investments --- which cannot be changed in the short run --- account for a large share of the total cost of base rate inputs. A utility can increase productivity only by slowing growth in O&M expenses and plant additions. Opportunities to achieve *sustained* productivity gains often involve sizable upfront costs and net gains may not occur for more than a year. A downsizing of the labor force, for instance, may involve severance payments. The chief means for a utility to trim its cost in the very short run is to defer maintenance expenses and plant additions. Such deferrals must be followed by higher expenses in short order if service quality is to be maintained. A utility can't rely on a deferral strategy year after year when it is filing frequent rate cases.

Average Use A utility's unit cost growth also depends on the difference in the impact that its output growth has on its revenue and its cost. When output growth boosts revenue more than cost, unit cost growth slows. When output growth causes cost to rise more rapidly than revenue, unit cost growth accelerates.

A utility's output growth has different impacts on revenue and cost when two conditions are present. One is that the design of base rates doesn't reflect the drivers of base rate input cost. The other is that billing determinants tend to grow at a different rate than cost drivers.

Consider, first, whether the design of utility base rates is cost causative. The cost of a utility's base rate inputs is largely fixed in the short run with respect to system use. Cost is much more sensitive to growth in the number of customers served.[6] As for billing determinants, we have seen that utility tariffs for most services involve multiple charges. These include one or more "variable" charges that are so called because they vary with

[6] Cost growth may also depend, in the long run, on the growth in peak demand and/or the delivery volume.

system use. Volumetric charges vary with the volume of power delivered. "Demand" charges vary with the peak level of demand (*i.e.* the highest hourly volume registered during the month). There are, additionally, "fixed" charges that are so called because they do not vary with a customer's use of the system during the billing period. Chief amongst the fixed charges of electric utilities are customer charges. Residential and small business customers account for the bulk of a utility's base rate revenue because these customers account for the bulk of a utility's cost. In these customer classes, base rate revenue is drawn chiefly from volumetric charges.

Under these circumstances, the difference between the way that output growth affects revenue and cost is chiefly a matter of the difference between the trends in the volume of sales to residential and small business customers and the trends in the number of customers served. This is equivalent to the trends in the delivery *volume per customer* of these service classes, which are sometimes referred to as the trends in their average (system) use. Unit cost growth slows when average use rises and accelerates when growth in average use slows.

In the electric utility industry, as in most sectors of the economy, the productivity growth of utilities has for decades been a good bit slower than the inflation in the prices they pay for inputs.[7] The recent PEG study noted earlier, for example, found that power distributor productivity growth fell short of input price growth by about 169 basis points annually on average from 1996 to 2006.[8] Under conditions like these, the average use trends of residential and small-volume business customers play an important role in determining whether a utility's unit cost rises. If growth in average use is *brisk* (*e.g.* 1.5 to 2% annually), the difference between input price and cost efficiency growth can be offset.[9] If average use is *static*, unit cost will rise substantially even under normal inflationary conditions. If average use is *declining*, the rise in unit cost can be quite rapid.

Recent changes in state and federal policy are encouraging more electricity demand-side management ("DSM") and development of customer-sited solar resources. These policies include net metering, tighter appliance efficiency standards and building codes, and

[7] The difference is greater in periods of brisk input price inflation and smaller in periods of slow inflation, since productivity does not characteristically rise and fall with inflation.
[8] Lowry *et al.* (2008) *op. cit.*
[9] Irston Barnes wrote, for example, in a classic treatise on rate regulation, that "as an offset to such factors making for rising rates, the increased volume of business that usually accompanies an upward movement of prices may so reduce the overhead charges per unit as to make any increase in rates unnecessary". See Irston R. Barnes, *The Economics of Public Utility Regulation* (New York: F.S. Crofts, 1942).

subsidies for energy efficiency investments. Our discussion suggests that such programs can accelerate unit cost growth by slowing growth in average use. Whether or not the utility provides DSM programs, average use can become static or decline, removing a key means by which utilities have traditionally coped with input price inflation and avoided unit cost growth. The problem can be remedied by redesigning rates in ways that raise customer charges. But rate designs are regulated and regulators in the United States generally do not sanction high customer charges.[10]

Implications Our analysis suggests that the unit cost of an electric utility is likely to rise, making historical test year rates non-compensatory, to the extent that the following external business conditions prevail.

- Input price inflation is brisk.
- Utilities need to make large plant additions that temporarily slow productivity growth.
- Average use of the utility system is static or declining.

Situations in which unit cost is stable, encouraging use of historical test years, include those in which inflation is slow, utilities aren't making large plant additions, and average use is growing briskly.

A program to accelerate the replacement of aging distribution facilities provides a classic example of the non-compensatory nature of historical test year rates. Suppose that a power distributor replaces 10% of its distribution infrastructure during a year when new rates are implemented. The new plant has capacity similar to the plant replaced but reflects more than forty years of construction cost inflation. The company's rate base will rise substantially, temporarily slowing productivity growth and accelerating unit cost growth. Even with normal growth in input prices and average use a utility with rates based on historical test years may earn little return on this sizable investment for as much as two years after it becomes used and useful.

Conclusions

These results permit us to draw several conclusions concerning the reasonableness of historical test years in ratemaking.

[10] High customer charges are more common for U.S. gas utilities and for gas and electric IOUs in Canada.

1) Historical test years are rationalized by a matching principle that assumes a balance of cost and revenue. Our analysis shows that this relationship is not balanced in a rising unit cost environment.
2) An individual utility reporting that rates produced by historical test years are uncompensatory may be suspected by stakeholders of poor cost management. However, research shows that a utility's unit cost trend is determined primarily by business conditions over which it has little control. These include the trends in input price inflation, average use, and the need for plant additions.
3) In a rising unit cost environment, the ability of a utility to "take a hair cut" between the historical test year and the rate year is limited. Long term performance gains involve upfront costs. Deferment of expenses lowers cost today at the expense of higher costs in the future.
4) Absent favorable operating conditions, the rise in a utility's unit cost due to changing business conditions may be so great that it is unable to earn its allowed rate of return under historical test year rates even with normal productivity gains. As Kamerschen and Paul comment, "while a utility is never guaranteed that it will earn its authorized fair rate of return, if no allowance is made for attrition or the other explosive elements, the utility is denied a realistic opportunity of earning the permitted rate of return."[11] In this situation, rates produced by historical test years are inherently unjust and unreasonable. This can prompt the investment community to downgrade its credit valuations, not just for the subject utility but for other utilities in the same jurisdiction.
5) Firms in competitive markets have ways of coping with rising unit costs that aren't available to utilities. The prices a competitive firm receives for its products will tend to rise at the same pace as the unit cost of its industry. Firms experiencing unit cost growth in excess of growth in sales prices can always scale back their offerings. A utility, in contrast, charges prices set by regulators which may not be reflective of unit cost trends. The utility is obligated to provide service even if prices are non-compensatory due to flawed ratemaking practices.

[11] Kamerschen and Paul *op. cit.* p. 23.

6) Unit cost pressures are not constant over time. Several years of flat unit cost can give way to a sustained period of rising unit cost. Thus, historical test years can produce reasonable results for many years and then become uncompensatory for many years due to rising unit cost. A utility's success at earning its allowed ROE during a string of recent years does not necessarily mean that a forward test year isn't warranted prospectively.
7) Forward test years have major advantages over historical test years in a rising unit cost environment. Rates are more likely to reflect unit cost conditions in the rate year and are, to this extent, more just and reasonable. Customers receive better price signals. Lower operating risk reduces the utility's cost of securing funds in capital markets. This benefit is especially important in periods of large plant additions, when high borrowing costs can have an especially large impact on the embedded cost of debt.
8) Whether or not unit cost is rising, historical test years do not adjust rates for slowdowns in volume growth, between the test year and the rate year, which are due to utility conservation initiatives. They therefore dampen utility incentives to encourage conservation.

1.2.2 Uncertainty

Opponents of forward test years often stress the uncertainty of cost and billing determinant forecasts. Future costs cannot be verified. The changes in business conditions that drive unit cost growth (*e.g.* inflation and the in service dates on looming plant additions) can be hard to predict accurately. The impact that changing business conditions have on unit cost is not always well understood. Opponents also argue that utilities are incented to exaggerate future cost growth and to understate future growth in billing determinants. Cost and billing determinants in a historical test year are, meanwhile, known with certainty.

On the other hand, the projections at issue in a forward test year concern business conditions that are at most two years into the future. A large chunk of future cost, the depreciation and the return on older plant, is known with considerable certainty at the time that the forecast is made. There are many aids in the preparation of credible forecasts, as we discuss further in Section 1.3. Consider also that volatile components of a utility's unit cost (*e.g.* expenses for pensions and uncollectible bills) are often subject to trackers that reduce or eliminate the risk of bad forecasts.

Current test years involve less forecasting uncertainty because the test year is only a year into the future at the time that the rate case is filed. Actual data for some or all months of the test year become available in the course of the proceeding. The accuracy of the methods used to forecast cost and billing determinants can thus be tested against their ability to predict the actuals in some months of the test year.

FTY projections are, in any event, quickly followed by actual data, and a utility that makes forecasts that are consistently biased in its favor will find that its forecasts are discounted in ratemaking. Biased forecasts can even jeopardize a regulator's willingness to use forward test years. The other stakeholders to the rate case process have incentives to bias cost and sales forecasts in the other direction. These circumstances reduce or eliminate the bias of the forecasts on which FTY rates are ultimately based. If the forecast of future cost and output is accurate, the utility will receive revenue that is exactly equal to its cost. FTY rates will be fair to the utility and ratepayer alike, whereas historical test year rates are likely to be biased in a rising (or falling) unit cost environment.

On balance then forward test year rates, while involving some uncertainty, are likely to be more reflective of future business conditions than are historical test year rates in a rising unit cost environment. The uncertainty involved in basing rates on FTYs is no greater than that involved in rate freezes and other kinds of multiyear rate plans that are often approved by regulators. The Michigan Public Service Commission ("PSC") commented, in a recent decision on an FTY rate filing for Consumers Energy, that

> The basis for using a forward test year is to address the problem of regulatory lag between past and future costs. While the advantage of historical data is its objective and verifiable nature, it lacks the necessary forward perspective required in a changing economic environment. An historical test year is by definition not timely and may fail to adequately consider future demands….What is gained by dealing with data that is "known and measurable" can be lost in forcing a utility to operate with outdated numbers.[12]

[12] Michigan PSC *Opinion and Order*, Case U-175645, November 2009.

1.2.3 Regulatory Cost

A third consideration in weighing the advantages of historical and forward test years is regulatory cost. The net impact of forward test years on regulatory cost is difficult to assess. Forward test year rate cases typically do involve higher cost than rate cases based on historical test years because of the need for forecasts.

On the other hand, a number of the major issues in a rate case, including the depreciation rates and the rate of return on common equity, are not markedly more complicated in a forward test year proceeding. Depreciation on existing plant is easy to predict once a depreciation rate is established. Some of the more uncertain components of cost and revenue may be subject to trackers that mitigate rate case controversy. The cost of FTY rate cases falls as jurisdictions gain experience with forecasted evidence. Consider also that in a rising unit cost environment rates based on forward test years can, by reducing earnings attrition, sometimes reduce the frequency of rate cases.

1.2.4 Operating Efficiency

The effect of alternative test year approaches on utility operating efficiency is also frequently discussed in debates on test year approaches. Opponents of forward test years sometimes argue that they weaken utility incentives to operate efficiently. In a rising unit cost environment, an expectation that rates are going to be non-compensatory might encourage utilities to tighten their belts. FTY opponents also argue that a utility wishing to inflate its cost in an historical test year, in an effort to create higher rates in the rate year, would incur a real cost to do so.

On the other hand, the notion that rate cases generally weaken utility performance incentives is a central result of regulatory economics and is not confined to future test years. When a utility is operating under a series of annual rate cases with historical test years, cost savings this year lead quickly to lower rates. The fact that a forward test year involves forecasts does not in and of itself weaken performance incentives. Forward test year forecasts are often linked to actual costs in one or more historical reference years, so the utility must once again incur a real cost if it wishes to bolster its argument for higher costs in the test year.

Consider also that when unit cost is rising, the non-compensatory rates yielded by forward test years may cause utilities to file rate cases more frequently. This weakens performance incentives, and senior managers devote less time to the utility's basic business of providing quality service at a reasonable cost. Analysis by PEG Research has revealed that reducing the frequency of rate cases from one to three years increases a utility's productivity performance by about 50 basis points annually in the long run.[13] We therefore do not expect utility operating incentives to differ significantly between historical and forward test years on balance.

It is, in any event, unreasonable for stakeholders and regulators to acquiesce in non-compensatory HTY rates on the grounds that they encourage utilities to trim "fat" if the existence of fat has not been demonstrated in the rate case. J. Michael Harrison, an administrative law judge with the New York PSC, commented in this regard in a 1979 article on forward test years that

> It is reasonable to set rates conservatively when company's management or operations are significantly and demonstrably poor… Evidence of general management inadequacy, however, is rarely seen in rate cases and … management normally will be striving to improve efficiency in periods of continuously rising costs. Regulatory commissions certainly have an obligation to monitor operations and management effectiveness, but it does not appear justifiable to indulge in a presumption, absent specific evidence to the contrary, that deficient earnings can be attributed to management shortcomings rather than to unfavorable operating conditions.[14]

1.2.5 Other Considerations

Here are some additional considerations that merit note in a discussion of forward test year pros and cons.

- Forward test years encourage the utility, other stakeholders, and the Commission to focus more attention on the utility's plans for the future. Undesirable trends, such as rising costs that reflect inadequate attention to productivity growth, can be recognized and discouraged in advance of their occurrence. Budgeting is apt to play a more central role in cost management.

[13] See, for example, "Incentive Plan Design for Ontario's Gas Utilities", a presentation made by the senior author in work for the Ontario Energy Board in November 2006.
[14] J. Michael Harrison, "Forecasting Revenue Requirements", *Public Utilities Fortnightly*, March 1979, p. 13.

- Forward test year rate cases sharpen the ability of the regulatory community to undertake and review statistical analyses of unit cost trends. These same skills are useful in the design of multiyear rate plans in which rates are adjusted automatically between rate cases to reflect changing business conditions. Multiyear rate plans can reduce regulatory cost and strengthen utility performance incentives, creating benefits that can be shared with customers.

1.3 Evidentiary Basis for FTY Forecasts

Good evidence on future costs and billing determinants is critical to the effectiveness of forward test year rate cases. The New York PSC stated, in an order rejecting a forward test year for New York State Electric and Gas in 1972, that

> To justify the commission in deviating from its long-standing policy of using an actual test year adjusted for known changes, there must be a full showing that such a change is a practical necessity. This showing must encompass the twin requirements of substantial accuracy and an impending, uncontrollable diminution in profitability.

We have already discussed at some length the kinds of conditions that can cause unit cost to rise between an historical test year and the rate year. We consider here kinds of evidence used in FTY rate cases that increase the confidence of regulators that forecasts are accurate.

Linkage to Historical Data

Utilities in forward test year rate cases usually file detailed and extensive evidence concerning cost and billing determinants in one or more historical reference years.[15] Data for these years are usually subject to normalization and annualization adjustments like those used in historical test year filings. The utility will then present evidence on expected changes in cost and billing determinants between the historical reference year and the test year.[16] Cost projections are often made for the same detailed Uniform System of Account categories that are used in historical test year rate cases. J. Michael Harrison commented in this regard in his 1979 article that "the New York commission's requirement that a verifiable nexus be established between a forecast and an historical base of actual experience is a sine qua non

[15] An historical reference year is sometimes called a "base period".
[16] This sometimes includes a forecast of cost during the rate case year (if different), which is sometimes called the "bridge year".

for forecasting revenue requirements. The burden of proving the reasonableness of its filing remains with the utility company."[17]

Indexation

Indexation is used by several utilities in FTY rate cases to escalate cost items for changing business conditions. Recall from Section 1.2.1 that the growth in the cost of a utility equals the inflation in the prices it pays for inputs plus the growth in its output less the trend in its productivity. The trend in the productivity of utilities tends to be similar to the growth in their output. Testimony just prepared by PEG Research for San Diego Gas & Electric reports that, for a national sample of power distributors, MFP averaged 0.88% annual growth from 1999 to 2008 while the number of customers served averaged 1.37% average annual growth.[18] An assumption that productivity growth equals output growth makes it possible to escalate cost from historical reference year(s) values by the forecasted growth in prices. This is the most common use of indexing in FTY forecasts.

The United States is fortunate to have available some of the best data in the world on utility input price trends. One company, Whitman, Requardt and Associates, has for decades published "Handy Whitman Indexes" of trends in the construction costs of both gas and electric utilities.[19] These are available for six geographic regions of the United States for detailed asset classes. Another company, Global Insight, has a *Power Planner* service that has forecasts, updated quarterly, of construction cost indexes. Global Insight also forecasts inflation in the prices of labor, materials, and services used by gas and electric utilities.[20] The materials and service ("M&S") price indexes are available for the detailed O&M expense categories that are itemized in the FERC's Uniform System of Accounts. Global Insight input price indexes have been used for many years to adjust revenue requirements in the multiyear rate plans of California gas and electric utilities.

Some utilities instead escalate O&M expenses in rate cases using familiar macroeconomic price indexes. The gross domestic product price index ("GDPPI") is often preferred for this purpose to the better known consumer price index because the GDPPI assigns less weight to price volatile commodities, such as food and energy, which do not

[17] J. Michael Harrison, *op. cit.*, p. 13.

[19] Whitman, Requardt & Associates LLP, "The Handy-Whitman Index of Public Utility Construction Costs".
[20] A discussion of an early use of detailed inflation forecasts in ratemaking is found in Michael J. Riley and H. Kendall Hobbs, Jr. "The Connecticut Solution to Attrition", *Public Utilities Fortnightly*, November 1982.

loom large in base rate input costs. Our research over the years has found that the GDPPI and CPI both tend to understate escalation in the prices of utility O&M inputs. One reason is that they are measures of inflation in the economy's prices of final goods and services and therefore reflect the productivity growth of the U.S. economy, which has been substantial in recent years. In a recent report for Hawaiian Electric, for instance, PEG found that from 1996 to 2007 the GDPPI averaged 2.21% average annual growth whereas an index of the O&M input prices paid by HECO averaged 3.05% average growth.[21] The GDPPI should therefore inspire confidence as an O&M escalator that often yields reasonable results for customers.

Simple Trend Analyses

Simple approaches to forecasting based on historical trends can, if well designed, strike a reasonable balance between the desire of regulators for accuracy and simplicity. For example, a given cost item can equal its adjusted value in the historical reference year, plus a one or two-year escalation for the average annual growth of this cost for a group of peer utilities in recent years. This approach is more sensible to the extent that the recent inflation, productivity, and output trends of the peers are similar to those that the subject utility will experience in the near future. A refinement on this general approach would be to assume a trend in cost *per customer* equal to the recent historical trend of peer utilities and then to reach cost by adding a forecast of the utility's own customer growth. Simple methods like these have counterparts for the forecasting of billing determinants. For example, the volume of residential sales in a future test year can be forecasted as the expected number of customers multiplied by the expected volume per customer, where the latter is allowed to differ from the normalized value(s) in the historical reference year(s) by its normalized trend in the last three years.

Budgeting

Some utilities use the same figures in forward test year filings that they use in their own budgeting process.

[21] Mark Newton Lowry *et al.*, *Revenue Decoupling for Hawaiian Electric Companies*, Pacific Economics Group, January 2009. pp. 65-66.

Econometric Modeling

Econometric modeling is used by several utilities in FTY cost and billing determinant projections. In an econometric model, the variable to be forecasted is posited to be a function of one or more external business conditions. Model parameters are estimated using historical data on the variable to be forecasted and the business conditions. A rich theoretical and empirical literature is available to guide model development. Given forecasts of the business conditions, the model can forecast how cost will grow between one or more historical reference years and the forward test year.

Benchmarking

Utilities can bolster the confidence of regulators in their FTY cost forecasts by benchmarking them using data from other utilities. A variety of benchmarking methods are available, ranging from econometric modeling to peer group comparisons that use simple unit cost metrics. Public Service of Colorado, for instance, recently filed a study in an FTY rate case filing that benchmarked their non-fuel O&M expense forecast.[22] The study used an econometric benchmarking model as well as unit cost metrics for a Western Interconnect peer group. The authors found that the forecasted expenses reflected a high level of operating efficiency.

[22] See Public Service Company of Colorado's Exhibit MNL-1 in docket 09AL-299E before the Public Utilities Commission of Colorado, filed October 13, 2009.

2. TEST YEAR HISTORY AND PRECEDENTS

2.1 A BRIEF HISTORY

Few states have laws on the books that mandate a particular test year approach. Statutes instead commonly feature more general provisions on regulation such as guidelines that rates be just and reasonable, that terms of service be non-discriminatory, and that service be of good quality. Flexibility with respect to test years is also encouraged by the Supreme Court's influential *Hope* decision, which held that

> The Commission was not bound to the use of any single formula or combination of formulae in determining rates. Under the statutory [Natural Gas Act] standard of "just and reasonable" it is the result reached and not the method which is controlling…If the total effect of the rate order cannot be said to be unjust and unreasonable, judicial inquiry under the Act is at an end.[23]

Historical test years were nonetheless the norm in the early history of electric utility rate cases, and this reflects the prevalence over many years of business conditions that were conducive to slow unit cost growth. Slow price inflation was a contributing factor. Table 1 shows the history of GDPPI inflation in the United States from 1930 to 2009. It can be seen that inflation was negative in most years of the 1930s but was brisk during World War II, the immediate post war years, and in 1951. After the Korean War, the table shows that GDPPI inflation averaged only 1.74% annually in the 1952-1965 period.

Table 1 also shows the trend in the MFP index for the electric, gas, and sanitary sector of the U.S. economy. This index was computed by the U.S. Bureau of Labor Statistics ("BLS") for many years and was sensitive to the productivity trend in the electric utility industry due to the industry's disproportionately large size. It can be seen that the productivity growth of the electric, gas, and sanitary sector was extraordinarily rapid during the 1952-65 period, averaging 4.13% per annum. This was more than double the MFP index trend for the U.S. non-farm private business sector as a whole.

Under these favorable operating conditions, the unit cost of the electric utilities was typically stable or declining.[24] Rate cases were rare and historical test years were the norm in the rate cases that did occur. Regulators gained confidence that the matching principle could

yield just and reasonable rates.

The unit cost growth of electric utilities accelerated in the late 1960s and remained high for about two decades thereafter for several reasons.

- Price inflation accelerated, spurred initially by the Vietnam War and subsequently by the oil price shocks of 1974-75 and 1979-80. During the 1973-81 period, GDPPI inflation averaged 7.49% annually. Inflation thereafter slowed but still averaged 3.58% annually during the 1982-91 period.
- Rising utility rates and slowing economic growth slowed growth in use per customer.
- Utility productivity growth, far from keeping pace with inflation, slowed substantially falling by 0.22% annually on average in the 1973-1981 period and averaging only 0.69% annual growth in the 1982-91 period. Factors contributing to the slowdown included the exhaustion of scale economies by some of the nation's larger electric utilities and the propensity of some utilities to continue making major plant additions despite slower demand growth.

Under these changed conditions, utilities in the two decades after 1967 sought financial relief by filing frequent rate cases. However, many utilities found that they could not earn their allowed ROE under newly established rates. One author commented in 1974, a particularly bad year, that "it would be difficult, if not impossible, to find a utility which has been able in the first year in which a rate increase was in effect to earn the return on which the rate increase was predicted".[25] A study found that the earned ROE on equity in the electric utility industry was more than 200 basis points below the allowed rate of return on average in 1974, 1979, and 1980.[26] Interest coverage fell markedly for many utilities, limiting their ability to issue new debt. Financing of new investments required greater reliance on issuance of new common stock, and the value of stock fell below the book value of assets in many cases. Articles about attrition and regulatory lag appeared with regularity in the trade press.[27]

[25] W. Truslow Hyde, "It Could Not Happen Here – But it Did", *Public Utilities Fortnightly*, June 1974.
[26] Walter G. French, "On the Attrition of Utility Earnings", *Public Utilities Fortnightly*, February 1981.
[27] See, as another example, Theodore F. Brophy, "The Utility Problem of Regulatory Lag", *Public Utilities Fortnightly*, January 1975.

Regulators responded to this situation with an array of measures, some of which had been used at one time or another in the past. The measures included interim rate increases; the inclusion of construction work in progress ("CWIP") in rate base; more widespread use of fuel adjustment clauses; the addition of an "attrition allowance" to the target ROE, and more widespread use of forward and hybrid test years. Adopters of FTYs in these years of brisk unit cost growth included the Federal Energy Regulatory Commission ("FERC") and state commissions in California, Connecticut, Florida, Georgia, Hawaii, and New York.

Some of these states initially experimented with hybrid test years which, as we have noted, make it possible to update rate filings as actual data for the later months of the test year become available. J. Michael Harrison explained in his 1979 article some grounds for dissatisfaction with hybrid test year experiments:

> Parties charged with testing or contesting a utility's rate case presentation were faced with figures and issues that changed and shifted through all phases of the case. Even after their direct evidentiary presentations were made, these parties were faced with a required reevaluation of their positions and the possibility that a host of new issues would be created by emerging actual data. The commission staff, which in New York bore the brunt of this burden, faced an almost impossible task of analyzing new data, even as its case went to the administrative law judge or commission for decision. It became clear that the value of the already completed hearings was being seriously undermined.[28]

The New York Commission decided in 1977 to move to fully forecasted test years consisting of the first twelve months expected under the new rates.[29]

The need for forward test years subsided with the slowdown of unit cost growth that occurred in the electric utility industry in the 1990s. This slowdown was driven primarily by a partial reversal of the business conditions that had previously caused brisk unit cost growth. During the 1992-2003 period GDPPI growth averaged only 1.92% per year. Yields on newly issued long term bonds fell substantially as the market lowered its expectation of future inflation. The productivity growth of the electric, gas, and sanitary sectors increased modestly, averaging 0.94% annually during the 1992-98 period, a trend similar to that of the private business sector. One reason for the productivity rebound was a slowdown in plant additions as the industry increased utilization of the generation and transmission capacity

[28] J. Michael Harrison, *op. cit.*, p. 12.
[29] New York Public Service Commission, "Statement of Policy on Test Periods in Major Rate Proceedings", November 1977.

built in the previous twenty years. Several electric utilities operated under base rate freezes during these years. Their willingness to agree to freezes reflected in part the generally favorable unit cost conditions but sometimes also reflected an expected spurt of productivity growth due to participation in mergers or acquisitions.

Interest in forward test years has renewed for electric utilities in recent years due to a renewed growth in unit cost, which is discussed in more detail in Section 3.1 below. We note here that general inflation accelerated after 2003, with GDPPI growth averaging 2.84% annually during the 2004-2008 period. Inflation slowed in 2009 but will likely rebound as the world economy recovers from the recession. Utility investment needs increased during the period to replace aging facilities, reverse declining generation capacity margins, implement "smart grid" technologies, and meet the rising demand for transmission services to reach remote sources of renewable energy and promote bulk power market competition. Growth in average use has slowed with slowing economic growth and new initiatives to promote energy conservation.

Interest in forward test years has been especially keen in the American west. Brisk economic growth in most western states has increased the need for plant additions. Here is a brief summary of changing test year policies in selected states.

Colorado

In Colorado, the commission rejected an FTY request by Public Service of Colorado in 1993 but acknowledged that "the purpose of a test year is to provide, as closely as possible, an interrelated picture of revenue, expense, and investment reasonably representative of the interrelationships that will be in place at the time the new rates proposed in a rate case will be in effect".[30] The commission did not forbid FTY evidence and encouraged the company to consider a *current* test year, an option that it said "might provide a promising mixture of comfort and flexibility acceptable to the parties and the commission.[31]

Public Service filed FTY evidence in a 2008 rate case but the approved settlement in the case was based on historical test year evidence.[32] In May 2009, Public Service again filed FTY evidence as it sought to include in its cost of service some major plant additions,

[30] PUC Colorado Decision No. C93-1346 in Docket No. 93S-001EG, October 1993, pp. 21-22.
[31] *Ibid*, p. 40.
[32] Docket No. 08S-520E.

including a new coal-fired generating unit and a smart grid build out, which would come online in late 2009 or 2010.[33] A settlement agreement, approved with modifications, based the revenue requirement on a historical 2008 test year with extraordinary adjustments to include the cost of the impending major plant additions. The company agreed not to file a rate case for two years.

This settlement also indicated an expectation that the company would file FTY evidence in its next rate case. It commits the company to provide companion historical test year evidence, including a detailed analysis of deviations between HTY and FTY results. The Company agreed to work with interested parties on reporting requirements with respect to such deviation analyses in order to facilitate the review of future cases.

Idaho

In Idaho the largest electric utility, Idaho Power, successfully used a hybrid test year in a rate case filing in 2003. In a 2009 filing it successfully used a test year beginning in January 2009.[34] This was essentially a current FTY.

Illinois

The move to forward test years is not confined to western states. Illinois utilities have long retained the right to file FTY rate cases and Integrys recently did so successfully for its North Shore Gas and Peoples Gas Light and Coke units.[35] Peoples has a major need to increase replacement investments in its aging system, which serves Chicago.

Michigan

In Michigan, utilities have used varied test year approaches. Recent legislation (2008 PA 286) explicitly sanctions forward test year filings. The law also permits utilities to "self-implement" interim rates if rate cases aren't resolved in 180 days. Consumers Energy and Detroit Edison have recently filed FTY rate cases successfully.

New Mexico

In New Mexico a bill was passed in 2009 that allows the state commission to use forward test years in electric and gas rate proceedings. The bill states that

[33] Docket No. 09AL-299E.
[34] Docket No. IPC-E-09-10.
[35] Dockets No. 09-0166 and 09-0167.

> In making a determination of just and reasonable rates of a utility, the commission shall select a test period that, on the basis of substantial evidence in the whole record, the commission determines best reflects the conditions to be experienced during the period when the rates determined by the commission take effect. If a utility proposes a future test period, a rebuttable presumption shall exist that a future test period best reflects the conditions to be experienced during the period when the rates determined by the commission take effect.[36]

The Bill was supported by majority voice vote of the New Mexico Public Regulation Commission. Public Service of New Mexico recently filed an FTY rate case.

Utah

Utah statutes were amended in 2003 to allow hybrid and forward test years for gas and electric utilities. The amended statutes state that

> If in the commission's determination of just and reasonable rates the commission uses a test period, the commission shall select a test period that, on the basis of the evidence, the commission finds best reflects the conditions that a public utility will encounter during the period when the rates determined by the commission will be in effect.[37]

The choice of a test year has since become an issue in the early stages of rate cases. In 2004, for example, PacifiCorp [d/b/a Rocky Mountain Power ("RMP")] filed a rate case based on a forward test year. It defended the FTY on the grounds that its costs were increasing due to rapid system growth and a plan to improve system reliability. An unopposed Test Year Stipulation acknowledged that the FTY was the most sensible test year for this case and provided for a task force to address test period procedural issues. The terms of the stipulation were not binding for future proceedings. The Commission commented in its order approving the stipulation that

> Each case needs to be considered on its own merits and the test period selected should be the most appropriate for that case. The test period selected for a utility in a particular case may not be appropriate for another utility or even the same utility in a different case. Some of the factors that need to be considered in selecting a test period include the general level of inflation, changes in the utility's investment, revenues, or expenses, changes in utility services, availability and accuracy of data to the parties, ability to synchronize the utility's investment, revenues, and expenses, whether the utility is in a cost

[36] New Mexico Senate Bill 477, 2009.
[37] Utah Code Annotated Section 54-4-4 (3).

> increasing or cost declining status, incentives to efficient management and operation, and the length of time the new rates are expected to be in effect.[38]

In December 2007, RMP filed a rate case based on a forward test year beginning in July 2008.[39] The Commission instead chose a current FTY beginning in January 2008. The Company was compelled to update its testimony to reflect the sanctioned test year. In its final decision in the case, the Commission instructed the Company to file a semi-annual "variance report" comparing its actual operating results to its rate case forecasts.

In April 2009, RMP filed a notice of intent to file a rate case in June 2009 based on a forward test year beginning in January 2010. A high level of capital investment was emphasized in advocating the need for an FTY. The Commission approved a Test Period Stipulation providing for a current FTY beginning in June 2009. The decision notes that the Division of Public Utilities argued in support of the stipulation that

> the stipulated test period, combined with the opportunity for the Company to request alternative cost recovery treatment for major plant additions, will balance the interest of the Company in reducing regulatory lag and the interests of customers by reducing the risks associated with the timing and cost of major capital additions projected to be completed 18 months into the future.[40]

Wyoming

In Wyoming, a stipulation approved in 2006 provided that RMP (d/b/a PacifiCorp) could, on a one time trial basis, file a rate case based on a forward test year. RMP filed a rate case in June 2007 using an FTY ending in August 2008. The Wyoming Public Service Commission approved a rate settlement based on the forecasts for this test year. They indicated a willingness to hear forward test year evidence in the general rate case but required the company to submit conventional historical test year evidence as well. The Commission also directed the company to prepare a report comparing its actual cost and billing determinants for the current test year to those which the company forecasted in the proceeding. In the event, the variance report stated that the company had overestimated its

cost by a small amount but overestimated its revenue and on balance did not earn its allowed rate of return for the year.

In July 2008, RMP filed a new rate case with a current FTY ending in June 2009 using calendar 2007 as a historical reference year. The company emphasized in its case the inability of historical test year rates to compensate the utility for sizable new investments in its system. The Commission approved a settlement that included a provision that RMP file historical test year evidence as well as any FTY evidence in its next rate proceeding.[41] RMP will continue to file operating results that will permit the Commission to review the accuracy of its FTY forecasts.

2.2 Current Status

Table 2 and Figure 1 detail the test year approaches that are currently in use across the United States. It can be seen that historical test years are now used by most large IOUs in less than twenty U.S. jurisdictions. Nearly as many jurisdictions (AL, CA, CT, FL, GA, HI, ME, MI, MN, MS, NY, OR, RI, TN, WI, and the FERC) use forward test years routinely, at least for larger utilities. Forward test years are also used in several Canadian jurisdictions. Four jurisdictions (AR, OH, NJ, & PA) use hybrid test years. An additional 13 jurisdictions are not neatly categorized. Here are some examples.

- Large utilities in Illinois, Kentucky, Maryland, and North Dakota utilities use various test years.
- As previously noted, test years used by utilities in Utah and Wyoming depend on conditions at the time of filing and New Mexico is heading in that direction.

2.3 Conclusions

In Section 1.2 we noted that the matching principle used in historical test year rate cases is based on the assumption that growth in billing determinants matches cost growth so that unit cost is stable. This is true when growth in utility productivity and average use somehow combine to offset the cost impact of input price growth. We report in this chapter that conditions like these have not been normal for electric utilities since the 1960s. Periods of unit cost stability can still occur, but are apt to be followed by periods of rising unit cost.

Transitional/Varying (13)

Utility Name	Notes
Colorado	Public Service of Colorado can file FTY evidence. No FTY rates have yet been approved but the most recent case made extraordinary HTY adjustments.
District of Columbia	PEPCO has filed rate cases using both hybrid and historical test years recently.
Delaware	Before restructuring FTY filings were common, but companies have used HTY in recent filings.
Idaho	
Illinois	Historic test years are the norm in IL. However, utilities have the right to make FTY filings and an FTY was accepted in a recent rate case of the Integrys gas utilities.
Kentucky	FTYs are legally authorized, but only Duke Energy has utilized them to date.
Louisiana	Cleco Power frequently uses hybrid test years. Entergy New Orleans recently had a hybrid test year approved via settlement.
Maryland	Baltimore Gas & Electric tends to file hybrid test years while other utilities tend to file historical test years.
Missouri	Utilities have the option to file hybrid year forecasts that are trued up during the course of the proceeding.
New Mexico	Recently passed law allows for use of FTY, but no rate case with an FTY has yet been approved.
North Dakota	Utilities use various test years including FTYs.
Utah	Test year selection is part of the rate case and can be contested. Several recent rate cases have used FTYs.
Wyoming	Rocky Mountain Power has recently had FTYs approved.

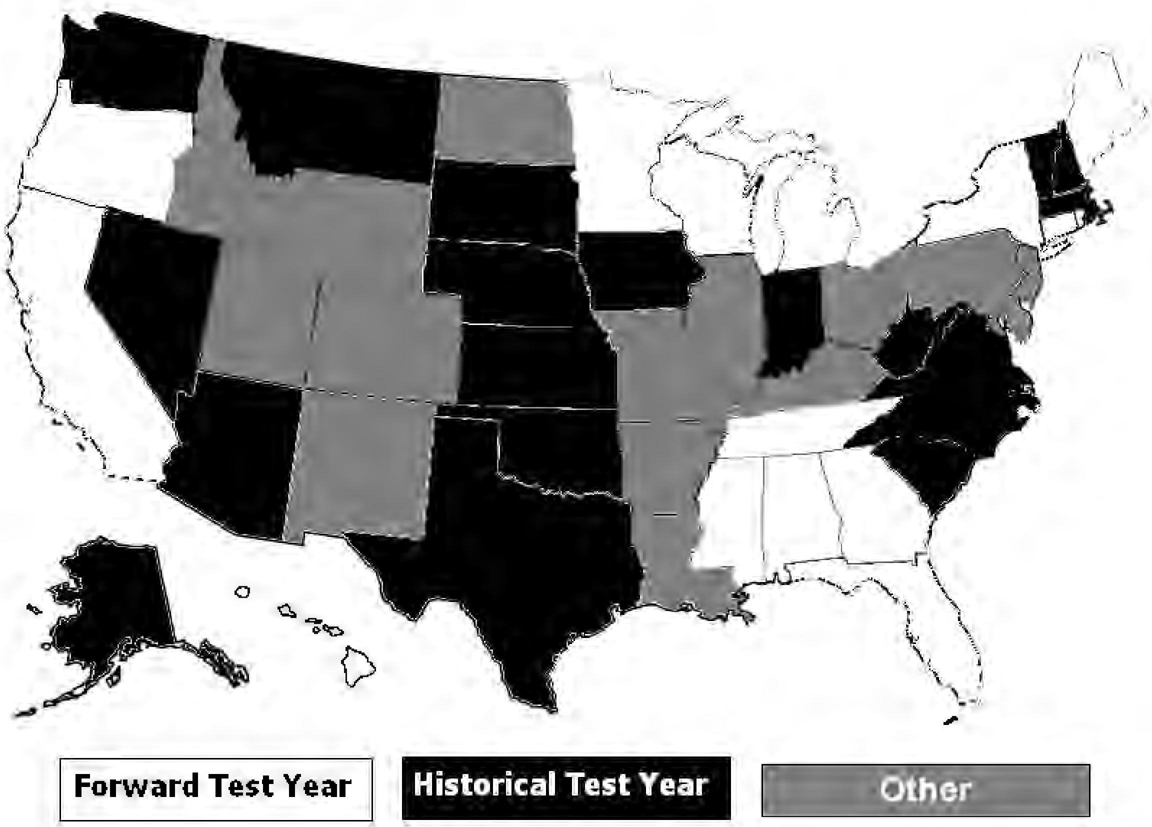
Map of Jurisdictions by Approved Test Year



Numerous regulators have moved away from historical test years in periods when unit cost is rising. Historical test year jurisdictions are now in the minority.

3. EMPIRICAL SUPPORT FOR FORWARD TEST YEARS

3.1 UNIT COST TRENDS OF U.S. ELECTRIC UTILITIES

In Section 1.2 we detailed the key role that the trend in the unit cost of utilities has in determining the reasonableness of historical test years and the need for forward test years. In original research for this paper, we have calculated the unit cost trends of a sample of vertically integrated electric utilities ("VIEUs"). In this section, we explain our research methods in some detail before discussing the results.

3.1.1 Data

The primary source of utility cost date used in the study was the FERC Form 1. Major investor-owned electric utilities in the United States are required by law to file this form annually. Data reported on Form 1 must conform to the FERC's Uniform System of Accounts. Details of these accounts can be found in Title 18 of the Code of Federal Regulations.

Unit cost calculations also require data on billing determinants. Data on the number of customers served were drawn from FERC Form 1. Data on delivery volumes were drawn from Form EIA 861. The FERC Form 1 and Form EIA 861 data used in this study were gathered by SNL Financial, a respected commercial vendor.

Data were considered for inclusion in the sample from all major investor-owned VIEUs that did not offer gas distribution service or sell or spin off the bulk of their transmission assets in recent years. To be included in the study the data were required, additionally, to be plausible and not unduly burdensome to process. Data from the thirty four companies listed in Table 3 were used in the unit cost research. The sample period was 1996-2008. The year 2008 is the latest for which the requisite data were available when the study was prepared.

Supplemental data sources were used to measure input price trends. Handy Whitman indexes were used to measure electric utility construction cost trends. Global Insight indexes were used to measure trends in the prices of electric utility materials and services. Employment cost indexes prepared by the BLS were used to measure trends in labor prices. Regulatory Research Associates data was used to measure trends in target ROEs approved by regulators.

3.1.2 Definition of Unit Cost

In Section 1.2.1 we discussed a measure of unit cost growth that is relevant in the appraisal of test years. It is constructed by taking the difference between growth in the net cost of base rate inputs and the growth in an index of utility billing determinants. For each sampled utility, we calculated the total cost of base rate inputs net of taxes as the sum of non-energy O&M expenses, depreciation, amortization, and return on rate base. Non-energy O&M expenses were calculated as total O&M expenses less customer service and information expenses and energy expenses that included those for steam power generation fuel, nuclear power generation fuel, other power generation fuel, and purchased power.[42] [43]

Return on rate base was calculated as the value of the rate base times a weighted average cost of capital ("WACC"). In constructing the WACC we assumed 50/50 weights for debt and common equity. The rate of return on debt was calculated as the ratio of the interest payments of electric utilities to the value of their debt as reported on the FERC Form 1. The ROE was calculated as the average applicable allowed ROEs of electric utilities as reported by Regulatory Research Associates.[44] The rate base for each utility was calculated as its net plant value less net accumulated deferred income taxes plus the value of its fuel, material, and supply inventories.

We reduced the base rate cost thus calculated by two kinds of "non-core" revenues, as is common in the calculation of retail base rate revenue requirements. One item deducted was Other Operating Revenue. This is the revenue from miscellaneous goods and services that include bulk power wheeling. The other component of non-core revenues was an estimate of the margin from power sales for resale.[45]

The growth in the billing determinant index used in our study is a weighted average of the growth in important billing determinants of electric utilities. The determinants used in index construction were the numbers of residential, commercial, and other retail customers

---

[42]Customer service and information expenses were excluded because they tended to rise over the sample period due to expanding demand-side management programs. The cost of DSM programs is typically recovered using tracker-rider mechanisms.

[43] We also excluded the Other Expenses category of Other Power Supply Expenses. We believe that large and volatile commodity-related costs are sometimes reported in this category.

[44] In this calculation, we assumed that the target ROE approved for a utility in its most recent rate case was applicable until a new target ROE was approved.

[45] These margins were computed as the difference between sales for resale revenue and an estimate of the energy commodity costs used in power supply.

and the corresponding delivery volumes.[46] We weather normalized the volumes using econometric demand research. In constructing the index, the trends in the billing determinants thus assembled were weighted by our estimates of the typical shares of individual billing determinants in the base rate revenue requirements of VIEUs.[47] The estimates were drawn from a perusal of recent VIEU rate case filings.

3.1.3 Unit Cost Results

Unit Cost Trends

The average annual trends of the sampled utilities in their cost, billing determinants, and unit cost can be found in Table 4 and Figure 2. It can be seen that unit cost declined by a modest 0.78% annually on average in the 1996-2002 period as average growth in billing determinants exceeded average growth in cost. The average growth in unit cost was positive in only one year of this period. These results suggest that, under typical operating conditions, historical test years would have yielded compensatory outcomes in rate cases during this period.

In the 2003-2008 period, on the other hand, it can be seen that unit cost grew briskly, averaging about 2.31% annually. Utilities experienced unit cost growth on average in every year of the period. Cost averaged 1.98% annual growth from 1996 to 2002 and 4.36% annual growth thereafter. The normalized growth of billing determinants averaged 2.75% per annum through 2002 but only 2.05% per annum thereafter. Thus, growth in billing determinants slowed despite marked acceleration of cost growth.

Earnings Impact

To consider the earnings attrition resulting from 2.3% annual unit cost growth, consider that if the typical company in the sample earned its target ROE it would constitute about 13% of the total cost of its base rate inputs. Assuming two years of 2.3% unit cost growth, revenue based on prices reflecting only the normalized business conditions of the historical test year would be expected to result in a 4.45% base rate revenue shortfall. If there was no tax adjustment, this would reduce the return on equity by about 35%. Assuming

---

[46] The retail peak demands of commercial and industrial customers are also important billing determinants but data on these were unavailable.

[47] We assigned the base rate revenue shares corresponding to demand charges to the "other retail" delivery volume, expecting that these volumes have trends that are similar to those of demand charge billing determinants.

Table 4

Trends in the Unit Cost of US Vertically Integrated Utilities

Sample Average Annual Growth Rates, Unweighted

Year	**Cost[1]**	**Billing Determinants[2]**	**Unit Cost**

Average Annual Growth Rates			
1996-2008	**3.08%**	**2.43%**	**0.65%**
1996-2002	**1.98%**	**2.75%**	**-0.78%**
2003-2008	**4.36%**	**2.05%**	**2.31%**

[1] The net cost formula is (Total O&M Expenses - Energy O&M Expenses - Customer Service and Information Expenses) + (Depreciation + Amortization + WACC x Rate Base) - (Other Operating Revenues + Estimated Resale Margin). The source of the cost data is FERC Form 1.

[2] The annual growth in billing determinants is a weighted average of the growth in residential, commercial, and other retail delivery volumes and customers served. The weights are shares in the base rate revenue requirement that are typical of vertically integrated electric utilities. Volumes were weather normalized by PEG Research using econometric demand modelling. The source of the raw volume data is Form EIA 861. The source of the customer data is FERC Form 1.

an allowed ROE of 11%, this would mean a drop in ROE of around 375 basis points before tax adjustments. While lower income taxes would mitigate the earnings impact, we may conclude from this analysis that historical test years would have been inherently non-compensatory for a utility operating under the *typical* business conditions facing VIEUs in recent years. Results would be much worse for utilities facing more pronounced unit cost pressures due, for example, to an accelerated program of replacement capex or a large scale DSM program.

Unit Cost Drivers

Input Prices Our discussion in Section 1.2.1 contained the result that input price inflation, productivity growth, and the trend in average use were key drivers of unit cost growth. We calculated for this report indexes of the inflation in the prices of base rate inputs faced by the sampled VIEUs. The growth rates of the summary input price indexes are weighted averages of the growth rates in indexes of prices for electric utility plant and O&M labor and materials and services. The index for each utility uses as weights the share of each input group in the total cost of the company's base rate inputs.[48] The index for the price of plant was calculated from the trends in bond yields, allowed returns on equity, and the Handy Whitman Construction Cost Index for vertically integrated electric utilities in the applicable region.

Results of our input price research are presented in Table 5 and Figure 3. It can be seen that the prices of base rate inputs averaged 2.76% annual inflation in the 1996-2002 period and 3.65% inflation in the 2003-2008 period --- an increase of 89 basis points. The price acceleration was primarily in materials and services and capital. M&S price inflation averaged 2.08% annually in the 1996-2002 period and 4.31% annually in the 2003-2008 period.

[48] An input price index with cost share weights effectively estimates the impact of price inflation on cost.

Plant Additions Large plant additions were noted in Section 1.2.1 to be an important driver of utility productivity growth. Table 6 and Figure 4 describe the trend in real (*i.e.* inflation adjusted) plant additions per customer of the sampled utilities. It can be seen that from 2003 through 2008, real plant additions were 25% higher on average than in the 1995-2002 period.

Average Use In Table 7 and Figure 5 we present information on the trends in weather normalized average use by the residential and commercial customers of a large sample of U.S. electric utilities from 1996 to 2008. The sample included specialized transmission and distribution utilizes as well as VIEUs. It can be seen that the growth rates in average use have tended to fall for both residential and commercial customers since 2002. The trend was more pronounced for residential customers. Growth in normalized average use of power by residential customers averaged 1.09% per year in the 1996-2002 period and 0.43% per year in the 2003-2008 period. Growth in weather-normalized average use by commercial customers averaged 1.04% per year in the 1996-2002 period and 0.74% per year in the 2003-2008 period.

The average use slowdown was especially pronounced in the 2006-2008 period. The normalized average use of residential customers averaged a slight 0.19% annual decline and average use by commercial customers was essentially flat. For this more recent period, we separately calculated trends for utilities in service territories with large DSM programs and the trends for utilities in other territories. The normalized average use by residential customers of utilities operating in territories with large DSM programs declined by a remarkable 0.68% on average.

These results suggest that the typical IOUs may not be able in the future to count on brisk growth in average use by residential and commercial customers to buffer the impact on unit cost growth of input price inflation and increased plant additions. The problem will be considerably more acute in service territories where there are aggressive conservation programs. Forward test years will be particularly uncompensatory where utilities must cope with the consequences for load of aggressive DSM programs.

Table 6

Real Plant Additions Per Customer of Sampled Utilities

	Real Additions to Plant in Service (1995=100)	Number of Customers (1995=100)	Real Additions per Customer (1995=100)

3.2 HOW TEST YEARS AFFECT CREDIT QUALITY METRICS

Table 8 presents results for selected credit quality metrics for a large sample of electric utilities. The reported metrics are averages for the 2006-2009 period. The source is *Credit Stats: Electric Utilities—U.S.*, a report appearing in the Global Credit Portal of Standard & Poor's RatingsDirect. We present results for four credit metrics: Standard & Poor's corporate credit rating, the (rate of) return on capital, and two cash flow ratios (EBITDA interest coverage and FFO/Debt).

Cash flow ratios are used by credit analysts to assess a utility's ability to service debt. The cash flow measures are normally calculated as adjustments to net income that add back cash flows that could be used to service debt. FFO (funds from operations), for instance, adds back depreciation and amortization expenses. EBITDA (earnings before interest, taxes, depreciation, and amortization) adds back interest and tax payments as well as depreciation and amortization.

Table 8 reports averages for each of the numerical metrics for utilities that operated under historical, hybrid, and forward test years throughout the 2006-2008 period. There is also an indeterminate category for utilities that are not easily categorized as having operated under one kind of test year during this period.

Caution must be taken in making comparisons inasmuch as these metrics may differ between the sampled utilities due to differences in several other business conditions as well as to any differences in test years. The other relevant business conditions include the ability to rate base construction work in progress, the local severity of the 2008 recession, and whether or not utilities operated under formula rates and/or revenue decoupling. Despite these complications, the samples are large and diverse enough to shed some light on the effect that test years have on credit metrics.

Comparing the results, it can be seen that the values of all four credit metrics were typically much more favorable for the *forward* test year utilities than for the *historical* test year utilities.

- The forward test year utilities had a typical credit rating between BBB+ and A- whereas the historical test year utilities had a typical credit rating between BBB- and BBB.

Source: Standard & Poor's Ratings Direct, *Credit Stats: Electric Utilities - U.S.* August 24, 2009. Financial metrics are averages of the years 2006-2008.

- The forward test year utilities had an average return on capital of 9.2% whereas the historical test year utilities had an average return of 7.9%.
- The forward test year utilities had an average EBITDA/interest coverage of 5.1 whereas the historical test year utilities had an average coverage of 4.2
- The forward test year utilities had an average FFO/debt ratio of 21.0% whereas the historical test year utilities had an average ratio of 18.2%.

Additional insights concerning the effect of forward test years on credit quality can be found in another recent Standard & Poor's report.[49] The study sought to rank state regulatory regimes with respect to their effect on credit quality. Of the fourteen states covered by the study which had well-established forward test year traditions at the time of the study, the author found five to be "more credit supportive", six to be "credit supportive", only two to be "less credit supportive", and none to be "least credit supportive". In contrast, of the seventeen states covered by the study that had well-established historical test year conditions, only three were categorized as "more credit supportive", seven were categorized as "credit supportive", six were categorized as "less credit supportive" and one was categorized as "least credit supportive".

3.3 Incentive Impact of Forward Test Years

In Section 1.2.4 we noted that the incentive impact of forward test years has been an issue in some proceedings. We argued, based on our experience in the field of incentive regulation, that the incentive impact of forward and historical test years should be similar on balance. To test the hypothesis that the choice of a test year has no impact on operating efficiency, PEG Research measured the trends in the O&M expenses of a large group of VIEUs over the 1996-2008 sample period. O&M expenses are a better focus than the total cost of base rate inputs in such a study because some utilities had greater needs than others for major plant additions and these needs had little to do with the kind of test year in a jurisdiction. Differences in cost growth are due in part to differences in output growth, so we divided O&M expenses by three alternative output metrics: generation volumes, generation capacity, and the number of customers served. We calculated how the trends in the three cost metrics differed for utilities operating under three kinds of test years: historical, hybrid, and

[49] Todd Shipman, *Assessing U.S. Utility Regulatory Environments*, Standard & Poor's Ratings Direct, November 2008.

forward. If forward test years weaken operating efficiency, we would expect the growth in the cost metrics to be higher on average for the forward test year utilities.

Results of this exercise are reported in Table 9. It can be seen that, using all three cost metrics, the cost trends of the forward test year utilities were similar to --- and a little slower than --- those of the historical test year utilities and of the full utility sample. These results are consistent with the notion that there is no significant difference in the incentives to contain cost that are generated by future and historical test years.

Table 9

Trends in Unit Non-Fuel O&M Expenses by Test Year, 1996-2008

	Test Year Type			
	Historic	Partial	Forward	All
Cost/Customer	2.1%	2.0%	1.9%	2.2%
Cost/Generation Volume	2.2%	3.0%	1.4%	2.3%
Cost/Generation Capacity	1.9%	3.2%	1.3%	1.9%

4. CONCLUDING REMARKS

Having established in some detail in the chapters above the financial stresses imposed on U.S. electric utilities by historical test years today, we provide in this chapter some concluding remarks on action plans for regulators who wish to move forward with sensible remedies.

4.1 Sensible First Steps

In states where regulators are interested in experimenting with forward test years but not yet prepared to "make the plunge" to large scale adoption, our discussion has identified a number of cautious first steps down the road that limit the risk of bad outcomes but permit the regulatory community to learn more about FTY pros and cons.

- Allow a forward test year on a trial basis for one interested utility.
- Allow forward test years on an occasional basis when a utility makes a convincing case that rising unit costs make historical test years unjust and unreasonable. A ruling on the test year issue can precede the preparation of a rate case, as in Utah.
- Borrow a few of the methods used in FTY rate cases to make additional adjustments to *historical* test year costs and billing determinants. For example, HTY O&M expenses and/or plant addition costs can be adjusted for forecasts of price inflation prepared by respected independent agencies. Residential and commercial delivery volumes can be adjusted for recent average use trends. Special adjustments can be made for looming major plant additions.
- Try current FTYs, which involve forecasts only one year into the future. Current test years can be combined with interim rate increases at the outset a rate case which are subject to true up when new rates are ultimately approved. The combination of current test years and interim rates is a salient option because it eliminates regulatory lag without a two year forecast.

4.2 Alternative Remedies for Test Year Attrition

In states where regulators aren't ready to abandon historical test years but are sympathetic to the attrition problems that they sometimes cause, a variety of alternative measures are available to relieve the financial attrition that can result from using historical test years in a rising unit cost environment.

1. HTY calculations can incorporate the full array of normalization, annualization, and known and measurable change adjustments that are used in other jurisdictions.
2. Utilities can be permitted to implement interim rate increases. Interim rates can effectively reduce regulatory lag by a year. States that permit interim rates include HI, IA, MI, MO, NH, OK, TX, VA, and WI.
3. Capital spending trackers can ensure timely commencement of the recovery of costs of plant additions, without rate cases, when assets become used and useful. Trackers can be designed to maintain incentives for good capital cost management and timely project completion. Monitoring by PEG Research reveals that capital spending trackers have been approved for use by energy utilities in AR, CA, FL, GA, IA, ID, IL, IN, KS, KY, MD, ME, MN, MO, NJ, NY, OH, OK, OR, PA, TX, VA, and WI.
4. The inclusion of CWIP in rate base improves cash flow and reduces future rate shocks. This practice also reduces the losses that a utility experiences making large plant additions under historical test year rates. Monitoring by the Edison Electric Institute has found that states that have recently allowed inclusion of CWIP in rate base include CO, FL, GA, IN, KS, KY, LA, MI, MO, NC, NM, NV, SD, TN, VA, and WV.
5. Cost trackers can also adjust rates automatically to ensure timely recovery of O&M expenses that are unusually volatile and/or expected to rise rapidly. Expenses that are often recovered using trackers include those for pensions and benefits, uncollectible bills, and DSM.
6. Several methods have been established to compensate utilities for slowing growth in average use.
    - Lost revenue adjustment mechanisms (a/k/a lost margin trackers) restore margins that are estimated to have been lost because of utility conservation programs. These are currently used by electric utilities in CT, IN, KY, OH, NC, and SC.

- Decoupling true-up plans help base rate revenue track revenue requirements more closely and can thereby restore lost margins that result from slow growth in average use resulting from a wider variety of sources, including conservation programs administered by independent agencies. Such plans are currently used by electric utilities in CA, CT, DC, HI, ID, MA, MD, MI, NY, OR, VT, and WI. They are used by gas utilities in several additional states (*e.g.* AR, CO, IN, MN, NJ, NC, UT, VA, WA, and WY).
- Higher customer charges are also effective in reducing attrition from declining average use. Straight fixed variable pricing, which recovers *all* fixed costs using fixed charges, is used by gas utilities in GA, MO, OH, OK, and ND.

7. The duration of rate cases can be limited. A reasonable cap is the average length of cases in the United States, which is currently between nine and ten months.[50]
8. Multiyear rate plans can give utilities rate escalation between rate cases for inflation and other business conditions that drive cost growth. Such plans typically have a duration of three to five years, and terms of seven to ten years have been approved. Even if an historical test year makes the initial rates under such plans non-compensatory, it would only happen once in a multiyear period. Utilities would have several years to recoup their losses through superior productivity growth --- and an incentive to do so. North American jurisdictions where multiyear rate plans are common include CA, ME, MA, NY, OH, and VT in the United States and Alberta, British Columbia, and Ontario in Canada. This approach to ratemaking is more the rule than the exception overseas.

[50] See *EEI 2007 Financial Review*, p. 36.

APPENDIX: UNIT COST LOGIC

To better understand the conditions that can cause historical test year rates to produce earnings attrition, suppose that year t is a rate year (a year when new rates take effect) and that the utility is underearning with its newly implemented HTY rates. The cost of base rate inputs then exceeds base rate revenue and the ratio of cost to revenue is positive.

$$Cost_t / Revenue_t > 0.$$

To simplify the story, suppose next that the utility has only one service and the base rate for that service is gathered exclusively from a volumetric charge. In the historical test year, the revenue requirement is then the product of a price (P_{t-2}) and a volume (V_{t-2}) and this is set equal to the allowed cost of service

$$P_{t-2} \times V_{t-2} = Cost_{t-2}$$

so that

$$P_{t-2} = Cost_{t-2} / V_{t-2} = Unit\ Cost_{t-2}.$$

The rate equals the cost per kWh of sales, which we may call the *unit* cost of service in the historical test year.

Revenue in the rate year is the product of this same price, which reflects *historical* business conditions, and the *contemporary* sales volume. The ratio of cost to revenue may then be restated as

$$\begin{aligned} Cost_t / Revenue_t &= Cost_t / (P_{t-2} \times V_t) \\ &= Cost_t / [(Cost_{t-2} / V_{t-2}) \times V_t] \\ &= (Cost_t / V_t) / (Cost_{t-2} / V_{t-2}) \\ &= Unit\ Cost_t / Unit\ Cost_{t-2}. \end{aligned} \quad [A1]$$

An historical test year rate is thus non-compensatory if the utility's unit cost is higher in the rate year than it was two years ago in the test year. Growth in the unit cost of the utility is thus the fundamental reason for earnings attrition. Note also that

$$Unit\ Cost_t / Unit\ Cost_{t-2} = (Cost_t / Cost_{t-2}) / (V_t/V_{t-2}). \quad [A2]$$

Unit cost thus grows between the test year and the rate year if cost grows more rapidly than the sales volume. Growth in the sales volume therefore matters as well as cost growth in determining a utility's unit cost trend. Moreover, the ability of historical test year rates to avoid under or, for that matter, over earning depends on the stability of the relationship between cost and billing determinants.

The key result that historical test years are non-compensatory when unit cost is rising extends to the real world situation in which a utility provides multiple services, each with several charges. In this situation the ratio of the total delivery volume in [A2] is replaced by a weighted average of the ratios for all billing determinants.[51]

[51] The weight for each individual billing determinant is its share of the total base rate revenue.

Securities registered pursuant to Section 12(b) of the Act:

Title of Each Class	Trading Symbol(s)	Name of Each Exchange on Which Registered
Common Stock, par value $0.01 per share	NI	NYSE
Depositary Shares, each representing a 1/1,000th ownership interest in a share of 6.50% Series B Fixed-Rate Reset Cumulative Redeemable Perpetual Preferred Stock, par value $0.01 per share, liquidation preference $25,000 per share and a 1/1,000th ownership interest in a share of Series B-1 Preferred Stock, par value $0.01 per share, liquidation preference $0.01 per share	NI PR B	NYSE
Series A Corporate Units	NIMC	NYSE

Securities registered pursuant to Section 12(g) of the Act: None

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act. Yes ☑ No ☐

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or 15(d) of the Act. Yes ☐ No ☑

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.
Yes ☑ No ☐

Indicate by check mark whether the registrant has submitted electronically every Interactive Data File required to be submitted pursuant to Rule 405 of Regulation S-T (§232.405 of this chapter) during the preceding 12 months (or for such shorter period that the registrant was required to submit such files).
Yes ☑ No ☐

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, a smaller reporting company, or an emerging growth company. See the definition of "large accelerated filer," "accelerated filer," "smaller reporting company," and "emerging growth company" in Rule 12-b-2 of the Exchange Act.

Large accelerated filer ☑ Accelerated Filer ☐ Emerging Growth Company ☐ Non-accelerated Filer ☐ Smaller Reporting Company ☐

If an emerging growth company, indicate by check mark if the registrant has elected not to use the extended transition period for complying with any new or revised financial accounting standards provided pursuant to Section 13(a) of the Exchange Act. ☐

Indicate by check mark whether the registrant has filed a report on and attestation to its management's assessment of the effectiveness of its internal control over financial reporting under Section 404(b) of the Sarbanes-Oxley Act (15 U.S.C. 7262(b)) by the registered public accounting firm that prepared or issued its audit report. ☑

If securities are registered pursuant to Section 12(b) of the Act, indicate by check mark whether the financial statements of the registrants included in the filing reflect the correction of an error to previously issued financial statements. ☐

Indicate by check mark whether any of those error corrections are restatements that required a recovery analysis of incentive-based compensation received by any of the registrant's executive officers during the relevant recovery period pursuant to §240. 10D-1(b).☐

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Act). Yes ☐ No ☑

The aggregate market value of the registrant's common stock, par value $0.01 per share (the "Common Stock") held by non-affiliates was approximately $11,950,785,429 based upon the June 30, 2022, closing price of $29.49 on the New York Stock Exchange.

There were 412,507,944Āshares of Common Stock outstanding as of February 15, 2023.

<u>Documents Incorporated by Reference</u>

Part III of this report incorporates by reference specific portions of the Registrant’s Notice of Annual Meeting and Proxy Statement relating to the Annual Meeting of Stockholders to be held on May 23, 2023.

DEFINED TERMS

The following is a list of frequently used abbreviations or acronyms that are found in this report:

NiSource Subsidiaries and Affiliates

Columbia of Kentucky	Columbia Gas of Kentucky, Inc.
Columbia of Maryland	Columbia Gas of Maryland, Inc.
Columbia of Massachusetts	Bay State Gas Company
Columbia of Ohio	Columbia Gas of Ohio, Inc.
Columbia of Pennsylvania	Columbia Gas of Pennsylvania, Inc.
Columbia of Virginia	Columbia Gas of Virginia, Inc.
NIPSCO	Northern Indiana Public Service Company LLC
NiSource ("we," "us" or "our")	NiSource Inc.
Rosewater	Rosewater Wind Generation LLC and its wholly owned subsidiary, Rosewater Wind Farm LLC
Indiana Crossroads Wind	Indiana Crossroads Wind Generation LLC and its wholly owned subsidiary, Indiana Crossroads Wind Farm LLC

Abbreviations and Other

AFUDC	Allowance for funds used during construction
AOCI	Accumulated Other Comprehensive Income (Loss)
ASC	Accounting Standards Codification
ASU	Accounting Standards Update
ATM	At-the-market
BTA	Build-transfer agreement
CAP	Compliance Assurance Process
CCGT	Combined Cycle Gas Turbine
CCRs	Coal Combustion Residuals
CEP	Capital Expenditure Program
CERCLA	Comprehensive Environmental Response Compensation and Liability Act (also known as Superfund)
Corporate Units	Series A Corporate Units
COVID-19 ("the COVID-19 pandemic" or "the pandemic")	Novel Coronavirus 2019 and its variants, including the Delta and Omicron variants, and any other variant that may emerge
DE&I	Diversity Equity and Inclusion
DPU	Department of Public Utilities
DSM	Demand Side Management
EPA	United States Environmental Protection Agency
EPS	Earnings per share
Equity Units	Series A Equity Units
FAC	Fuel adjustment clause
FERC	Federal Energy Regulatory Commission
FMCA	Federally Mandated Cost Adjustment
GAAP	Generally Accepted Accounting Principles
GCA	Gas cost adjustment
GHG	Greenhouse gases
HLBV	Hypothetical Liquidation at Book Value
IRA	Inflation Reduction Act
IRP	Infrastructure Replacement Program
IRS	Internal Revenue Service

DEFINED TERMS

IURC	Indiana Utility Regulatory Commission
JV	Joint Venture
LDCs	Local distribution companies
LIBOR	London InterBank Offered Rate
LIFO	Last-in, first-out
LIHEAP	Low Income Heating Energy Assistance Programs
Massachusetts Business	All of the assets sold to, and liabilities assumed by, Eversource pursuant to the Asset Purchase Agreement
MGP	Manufactured Gas Plant
MISO	Midcontinent Independent System Operator
MMDth	Million dekatherms
MW	Megawatts
MWh	Megawatt hours
NOL	Net Operating Loss
NTSB	National Transportation Safety Board
NYMEX	The New York Mercantile Exchange
OPEB	Other Postretirement and Postemployment Benefits
PCB	Polychlorinated biphenyls
PHMSA	Pipeline and Hazardous Materials Safety Administration
PPA	Power Purchase Agreement
PSC	Public Service Commission
PUC	Public Utilities Commission
ROE	Return on Equity
ROU	Right of Use
SAVE	Steps to Advance Virginia's Energy Plan
Scope 1 GHG Emissions	Direct emissions from sources owned or controlled by us (e.g., emissions from our combustion of fuel, vehicles, and process emissions and fugitive emissions)
Scope 2 GHG Emissions	Indirect emissions from sources owned or controlled by us
SEC	Securities and Exchange Commission
SMRP	Safety Modification and Replacement Program
SMS	Safety Management System
STRIDE	Strategic Infrastructure Development and Enhancement
TCJA	An Act to provide for reconciliation pursuant to titles II and V of the concurrent resolution on the budget for fiscal year 2018 (commonly known as the Tax Cuts and Jobs Act of 2017)
TDSIC	Transmission, Distribution and Storage System Improvement Charge
U.S. Attorney's Office	U.S. Attorney's Office for the District of Massachusetts
VIE	Variable Interest Entity

Note regarding forward-looking statements

This Annual Report on Form 10-K contains "forward-looking statements," within the meaning of Section 27A of the Securities Act of 1933, as amended (the "Securities Act"), and Section 21E of the Securities Exchange Act of 1934, as amended (the "Exchange Act"). Investors and prospective investors should understand that many factors govern whether any forward-looking statement contained herein will be or can be realized. Any one of those factors could cause actual results to differ materially from those projected. These forward-looking statements include, but are not limited to, statements concerning our plans, strategies, objectives, expected performance, expenditures, recovery of expenditures through rates, stated on either a consolidated or segment basis, and any and all underlying assumptions and other statements that are other than statements of historical fact. Expressions of future goals and expectations and similar expressions, including "may," "will," "should," "could," "would," "aims," "seeks," "expects," "plans," "anticipates," "intends," "believes," "estimates," "predicts," "potential," "targets," "forecast," and "continue," reflecting something other than historical fact are intended to identify forward-looking statements. All forward-looking statements are based on assumptions that management believes to be reasonable; however, there can be no assurance that actual results will not differ materially.

Factors that could cause actual results to differ materially from the projections, forecasts, estimates and expectations discussed in this Annual Report on Form 10-K include, among other things, our ability to execute our business plan or growth strategy, including utility infrastructure investments; potential incidents and other operating risks associated with our business; our ability to adapt to, and manage costs related to, advances in technology; impacts related to our aging infrastructure; our ability to obtain sufficient insurance coverage and whether such coverage will protect us against significant losses; the success of our electric generation strategy; construction risks and natural gas costs and supply risks; fluctuations in demand from residential and commercial customers; fluctuations in the price of energy commodities and related transportation costs or an inability to obtain an adequate, reliable and cost-effective fuel supply to meet customer demands; the attraction and retention of a qualified, diverse workforce and ability to maintain good labor relations; our ability to manage new initiatives and organizational changes; the actions of activist stockholders; the performance of third-party suppliers and service providers; potential cybersecurity attacks; increased requirements and costs related to cybersecurity; any damage to our reputation; any remaining liabilities or impact related to the sale of the Massachusetts Business; the impacts of natural disasters, potential terrorist attacks or other catastrophic events; the physical impacts of climate change and the transition to a lower carbon future; our ability to manage the financial and operational risks related to achieving our carbon emission reduction goals, including our Net Zero Goal (as defined below); our debt obligations; any changes to our credit rating or the credit rating of certain of our subsidiaries; any adverse effects related to our equity units; adverse economic and capital market conditions or increases in interest rates; inflation; recessions; economic regulation and the impact of regulatory rate reviews; our ability to obtain expected financial or regulatory outcomes; continuing and potential future impacts from the COVID-19 pandemic; economic conditions in certain industries; the reliability of customers and suppliers to fulfill their payment and contractual obligations; the ability of our subsidiaries to generate cash; pension funding obligations; potential impairments of goodwill; the outcome of legal and regulatory proceedings, investigations, incidents, claims and litigation; potential remaining liabilities related to the Greater Lawrence Incident; compliance with the agreements entered into with the U.S. Attorney's Office to settle the U.S. Attorney's Office's investigation relating to the Greater Lawrence Incident; compliance with applicable laws, regulations and tariffs; compliance with environmental laws and the costs of associated liabilities; changes in taxation; and other matters set forth in Item 1, "Business," Item 1A, "Risk Factors" and Part II, Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations," of this report, some of which risks are beyond our control. In addition, the relative contributions to profitability by each business segment, and the assumptions underlying the forward-looking statements relating thereto, may change over time.

All forward-looking statements are expressly qualified in their entirety by the foregoing cautionary statements. We undertake no obligation to, and expressly disclaim any such obligation to, update or revise any forward-looking statements to reflect changed assumptions, the occurrence of anticipated or unanticipated events or changes to the future results over time or otherwise, except as required by law.

PART I

ITEM 1. BUSINESS

NISOURCE INC.

NiSource Inc. is an energy holding company under the Public Utility Holding Company Act of 2005 whose primary subsidiaries are fully regulated natural gas and electric utility companies, serving approximately 3.7 million customers in six states. NiSource is the successor to an Indiana corporation organized in 1987 under the name of NIPSCO Industries, Inc., which changed its name to NiSource Inc. on April 14, 1999.

NiSource's principal subsidiaries include NiSource Gas Distribution Group, Inc., a natural gas distribution holding company, and NIPSCO, a gas and electric company. NiSource derives substantially all of its revenues and earnings from the operating results of these rate-regulated businesses.

Business Strategy

We focus our business strategy on providing safe and reliable service through our core, rate-regulated asset-based utilities, with the goal of adding value to all stakeholders. Our utilities continue to make progress on core safety, infrastructure and environmental investment programs supported by complementary regulatory and customer initiatives across all six states in which we operate. Our goal is to develop strategies that benefit all stakeholders as we (i) embark on long-term infrastructure investment and safety programs to better serve our customers, (ii) align our tariff structures with our cost structure, and (iii) address changing customer conservation patterns. These strategies focus on improving safety and reliability, enhancing customer service, pursuing regulatory and legislative initiatives to increase accessibility for customers currently not on our gas and electric service, ensuring customer affordability and reducing emissions while generating sustainable returns.

NiSource remains committed to the advancement of our SMS for the safety of our customers, communities and employees. Our SMS is the established operating model within NiSource. In 2022, NiSource achieved conformance certification to the American Petroleum Institute Recommended Practice 1173, which serves as the guiding practice for our SMS. This certification marks an important milestone for our SMS and NiSource's journey towards operational excellence. Moving forward, our focus shifts to maintaining, sustaining and continuously improving the process, procedures, capabilities and talent to enhance safety and reduce operational risk. Additionally, we continue to pursue regulatory and legislative initiatives that will allow customers not currently on our system to obtain gas and electric service in a cost effective manner.

NiSource has two reportable segments: Gas Distribution Operations and Electric Operations. The remainder of our operations, which are not significant enough on a stand-alone basis to warrant treatment as an operating segment, are included as Corporate and Other. The activities occurring within this non-segment consist of our centralized financing and treasury activities and are primarily comprised of interest expense on holding company debt and unallocated corporate costs and activities. The following is a summary of the business for each reporting segment. Refer to Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" and Note 21, "Business Segment Information," in the Notes to Consolidated Financial Statements for additional information related to each segment.

Gas Distribution Operations

Our natural gas distribution operations serve approximately 3.3 million customers in six states. Through our wholly-owned subsidiary NiSource Gas Distribution Group, Inc., we own five distribution subsidiaries that provide natural gas to approximately 2.4 million residential, commercial and industrial customers in Ohio, Pennsylvania, Virginia, Kentucky, and Maryland. Additionally, we distribute natural gas to approximately 859,000 customers in northern Indiana through our wholly-owned subsidiary NIPSCO. We operate approximately 54,800 miles of distribution main pipeline plus the associated individual customer service lines and 1,000 miles of transmission main pipeline located in our service areas described below. Throughout our service areas we also have gate stations and other operations support facilities.

Competition. Open access to natural gas supplies over interstate pipelines and the deregulation of the natural gas supply has led to tremendous change in the energy markets and natural gas competition. Due to open access to natural gas supplies, LDC customers can purchase gas directly from producers and marketers in an open, competitive market. This separation or "unbundling" of the transportation and other services offered by LDCs allows customers to purchase the commodity independent of services provided by LDCs. LDCs continue to purchase gas and recover the associated costs from their customers. Certain of our Gas Distribution Operations' subsidiaries are involved in programs that provide our residential and commercial customers the opportunity to purchase their natural gas requirements from third parties and use our Gas Distribution Operations' subsidiaries for transportation services. As of December 31, 2022, 24.5% of our residential customers and 33.3% of our commercial customers participated in such programs.

Gas Distribution Operations competes with (i) investor-owned, municipal, and cooperative electric utilities throughout its service areas, (ii) other regulated and unregulated natural gas intra and interstate pipelines and (iii) other alternate fuels, such as propane and fuel oil. Gas Distribution Operations continues to be a strong competitor in the energy market as a result of strong customer preference for natural gas. Competition with providers of electricity has traditionally been the strongest in the residential and commercial markets of Kentucky, southern Ohio, central Pennsylvania and western Virginia due to comparatively low electric rates.

Additionally, our gas distribution operations are subject to seasonal fluctuations in sales. Revenues from gas distribution operations are more significant during the heating season, which is primarily from November through March. Please refer to Part II, Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Results and Discussion of Segment Operations - Gas Distribution Operations," for additional information.

Electric Operations

We generate, transmit and distribute electricity through our subsidiary NIPSCO to approximately 486,000 customers in 20 counties in the northern part of Indiana and also engage in wholesale electric and transmission transactions. We own and operate sources of generation as well as source power through PPAs. We continue to transition our generation portfolio to primarily renewable sources. During 2021, we operated Rosewater for the full year, Indiana Crossroads Wind went into service during December 2021, and in December of 2022 we closed on the Indiana Crossroads Solar project, which is expected to go into service in 2023. In October 2021, NIPSCO completed the retirement of two coal-burning units with installed capacity of approximately 903 MW at Schahfer Generating Station, located in Wheatfield, IN. We also purchased energy generated from renewable sources through PPAs in 2022. As of December 31, 2022 we have multiple PPAs that provide 500 MW of capacity, with contracts expiring between 2024 and 2040. See below for information on our owned operating facilities:

Facility Name	Location	Fuel Type	Generating Capacity (MW)(1)
R.M. Schahfer	Wheatfield, IN	Steam - Coal	722
Michigan City	Michigan City, IN	Steam - Coal	455
Sugar Creek	West Terre Haute, IN	CCGT	563
R.M. Schahfer	Wheatfield, IN	Natural Gas	155
Oakdale	Carroll County, IN	Hydro	9
Norway	White County, IN	Hydro	7
Rosewater Wind Generation LLC(2)	White County, IN	Wind	102
Indiana Crossroads Wind Generation LLC(2)	White County, IN	Wind	302
Total MW Capacity			2,315

(1)Represents current net generating capability of each fossil fuel and hydro generating unit. Nameplate capacity is listed for wind generating units.
(2)NIPSCO is the managing partner of these JVs. Refer to Note 4, "Variable Interest Entities," in the Notes to Consolidated Financial Statements for more information.

In November 2021, NIPSCO submitted its 2021 Integrated Resource Plan ("2021 Plan") with the IURC. The 2021 plan builds upon the 2018 Integrated Resource Plan which outlined NIPSCO's plan to retire its coal generating assets by 2028. The 2021 plan affirmed the 2018 retirement decisions and calls for the replacement of the retiring units with a diverse portfolio of resources including demand side management resources, modest amounts of incremental solar, stand-alone energy storage, new gas peaking resources and upgrades to existing facilities at the Sugar Creek Generating Station, among other steps. Refer to Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations" for further discussion of these plans.

NIPSCO's transmission system, with voltages from 69,000 to 765,000 volts, consists of 3,016 circuit miles. NIPSCO is interconnected with eight neighboring electric utilities.

NIPSCO participates in the MISO transmission service and wholesale energy market. MISO is a nonprofit organization created in compliance with FERC regulations to improve the flow of electricity in the regional marketplace and to enhance electric reliability. Additionally, MISO is responsible for managing energy markets, transmission constraints and the day-ahead, real-time, Financial Transmission Rights and ancillary markets. NIPSCO has transferred functional control of its electric transmission assets to MISO, and transmission service for NIPSCO occurs under the MISO Open Access Transmission Tariff. NIPSCO generating units are dispatched by MISO which takes into account economics, reliability of the MISO system and unit availability. During the year ended December 31, 2022, NIPSCO generating units were dispatched to meet 41.65% of its load requirements, and NIPSCO purchased 58.35% from the MISO market.

NISOURCE INC.

Competition. Our electric utilities generally have exclusive service areas under Indiana regulations, and retail electric customers in Indiana do not have the ability to choose their electric supplier. NIPSCO faces non-utility competition from other energy sources, such as self-generation by large industrial customers and other distributed energy sources.

Our electric operations are subject to seasonal fluctuations in sales. Revenues from electric operations are more significant during the cooling season, which is primarily from June through September. Please refer to Part II, Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Results and Discussion of Segment Operations - Electric Operations," for additional information.

Political Action

The NiSource Political Action Committee ("NiPAC") provides our employees a voice in the political process. NiPAC is a voluntary, employee and director driven and funded political action committee, and NiPAC makes bipartisan political contributions to local, state and federal candidates, where permitted and in accordance with established guidelines. Consistent with our commitments and our approach to engagement, the NiPAC leadership committee members evaluate candidates for support on issues important to our business.

Regulatory

The regulatory landscape applicable to our operations, including environmental regulations, at both the state and federal levels, continue to evolve. These changes have had and will continue to have an impact on our operations, structure and profitability. Management continually seeks new ways to be more competitive and profitable in this environment, while keeping service and affordability for customers at the forefront. We believe we are, in all material respects, in compliance with such laws and regulations and do not expect continued compliance to have a material impact on our capital expenditures, earnings, or competitive position. We continue to monitor existing and pending laws and regulations, and the impact of regulatory changes cannot be predicted with certainty.

Rate Case Actions. The following table describes current rate case actions as applicable in each of our jurisdictions net of tracker impacts. See "Cost Recovery and Trackers" below for further detail on trackers.

(in millions)

Company	Proposed ROE	Approved ROE	Requested Incremental Revenue	Approved Incremental Revenue	Filed	Status	Rates Effective
Currently Approved in Current or Future Rates							
Columbia of Pennsylvania[1]	10.95 %	None specified	$ 82.2	$ 44.5	March 18, 2022	Approved December 8, 2022	December 2022
Columbia of Maryland	10.85 %	9.65 %	$ 5.8	$ 3.5	May 13, 2022	Approved November 17, 2022	December 2022
Columbia of Kentucky[2]	10.30 %	9.35 %	$ 26.7	$ 18.3	May 28, 2021	Approved December 28, 2021	January 2022
Columbia of Virginia[3]	10.95 %	None specified	$ 14.2	$ 1.3	August 28, 2018	Approved June 12, 2019	February 2019
Columbia of Ohio	10.95 %	9.60 %	$ 221.4	$ 68.2	June 30, 2021	Approved January 26, 2023	March 2023
NIPSCO - Gas[4]	10.50 %	9.85 %	$ 109.7	$ 71.8	September 29, 2021	Approved July 27, 2022	September 2022
NIPSCO - Electric	10.80 %	9.75 %	$ 21.4	$ (53.5)	October 31, 2018	Approved December 4, 2019	January 2020
Active Rate Cases							
Columbia of Virginia[5]	10.75 %	In process	$ 40.6	In process	April 29, 2022	Order Expected Q1 2023	Interim Rates October 2022
NIPSCO - Electric[6]	10.40 %	In process	$ 291.8	In process	September 19, 2022	Order Expected Q3 2023	September 2023

[1] No approved ROE is identified for this matter since the approved revenue increase is the result of a black box settlement under which parties agree upon the amount of increase.
[2]The approved ROE for natural gas capital riders (*e.g.*,SMRP) is 9.275%.
[3]Columbia of Virginia's rate case resulted in a black box settlement, representing a settlement to a specific revenue increase but not a specified ROE. The settlement provides use of a 9.70% ROE for future SAVE filings.
[4]New rates are implemented in 2 steps, with implementation of Step 1 rates in September 2022. The Step 2 rates were filed on February 21, 2023, with rates effective March 2023.
[5] Beginning October 2022, interim rates are being billed subject to refund, pending a final commission order. On December 9, 2022, a Stipulation and Proposed Recommendation was filed with the Virginia State Corporation Commission recommending approval of $25.8 million of incremental revenue.
[6]New rates will be implemented in 2 steps, with implementation of Step 1 rates to be effective in September 2023 and Step 2 rates to be effective in March 2024. On February 16, 2023, NIPSCO filed rebuttal updating the requested revenue requirement to $279.2 million.

NISOURCE INC.

FERC. NiSource's service companies and operating companies are subject to varying degrees of regulation by the FERC. NiSource Corporate Services files a FERC Form 60 annual report with its financial information as a FERC jurisdictional centralized service company. NiSource also files an annual FERC Form 61 which contains a narrative description of the service company's functions during the prior calendar year.

As natural gas LDCs, Columbia of Maryland and Columbia of Ohio have limited jurisdictional certificates to transport gas in the respective service territories into interstate commerce. NIPSCO and Columbia of Pennsylvania currently have applications pending at FERC for limited jurisdictional certificates.

As an electric company, NIPSCO has Market Based Rate authority and is a Transmission Owner subject to FERC jurisdiction. NIPSCO files the following reports annually: FERC Form 1, which is a comprehensive financial and operating report, FERC Form 566, which is a list of its 20 largest purchases of electricity over the past three years; FERC Form 715, which is its Annual Transmission Planning and Evaluation Report and the base case power flow data from the Eastern Interconnection Reliability Assessment Group Multiregional Modeling Working Group, which was used by NIPSCO for transmission planning; and FERC Form 730, which is NIPSCO's Report of Transmission Investment Activity. As a Transmission Owner subject to the MISO Transmission Owners Agreement and Tariff, NIPSCO has various FERC jurisdictional obligations such as maintaining its Attachment O formula rates and corresponding protocols. NIPSCO also has FERC approvals to make affiliate transactions between itself and various JVs. NIPSCO's officers, on the electric side, are also subject to FERC's interlocking directorate rules and reporting requirements.

Regulatory Framework. The Gas Distribution Operations utilities have pursued non-traditional revenue sources within the evolving natural gas marketplace. These efforts include (i) the sale of products and services in the companies' service territories, and (ii) gas supply cost incentive mechanisms for service to their core markets. The on-system services are offered by us to customers and include products such as the transportation and balancing of gas on the Gas Distribution Operations utility's system. The incentive mechanisms give the Gas Distribution Operations utilities an opportunity to share in the savings created from such situations as gas purchase prices paid below an agreed upon benchmark and their ability to reduce pipeline capacity charges with their customers.

We recognize that energy efficiency reduces emissions, conserves natural resources and saves our customers money. Our gas distribution companies offer programs such as energy efficiency upgrades, home checkups and weatherization services. The increased efficiency of natural gas appliances and improvements in home building codes and standards contributes to a long-term trend of declining average use per customer. While we are looking to expand offerings so the energy efficiency programs can benefit as many customers as possible, our Gas Distribution Operations have pursued changes in rate design to more effectively match recoveries with costs incurred. Columbia of Ohio has adopted a straight fixed variable rate design that closely links the recovery of fixed costs with fixed charges. Columbia of Maryland and Columbia of Virginia have regulatory approval for weather and revenue normalization adjustments for certain customer classes, which adjust monthly revenues that exceed or fall short of approved levels. Columbia of Pennsylvania continues to operate its pilot residential weather normalization adjustment and also has a fixed customer charge. This weather normalization adjustment only adjusts revenues when actual weather compared to normal varies by more than 3%. Columbia of Kentucky incorporates a weather normalization adjustment for certain customer classes and also has a fixed customer charge. In a prior gas base rate proceeding, NIPSCO implemented a higher fixed customer charge for residential and small customer classes moving toward recovering more of its fixed costs through a fixed recovery charge, but has no weather or usage protection mechanism.

While increased efficiency of electric appliances and improvements in home building codes and standards has similarly impacted the average use per electric customer in recent years, NIPSCO expects future growth in per customer usage as a result of increasing electric applications. Further growth is anticipated as electric vehicles become more prevalent. These ongoing changes in use of electricity will likely lead to development of innovative rate designs, and NIPSCO will continue efforts to design rates that increase the certainty of recovery of fixed costs.

Cost Recovery and Trackers. Comparability of our line item operating results is impacted by regulatory trackers that allow for the recovery in rates of certain costs such as those described below. Increases in the expenses that are subject to approved regulatory tracker mechanisms generally lead to increased regulatory assets, which ultimately result in a corresponding increase in operating revenues and, therefore, have essentially no impact on total operating income results. Certain approved regulatory tracker mechanisms allow for abbreviated regulatory proceedings in order for the operating companies to quickly implement revised rates and recover associated costs.

A portion of the Gas Distribution Operations revenue is related to the recovery of gas costs, the review and recovery of which occurs through standard regulatory proceedings. All states in our operating area require periodic review of actual gas procurement activity to determine prudence and confirm the recovery of prudently incurred energy commodity costs supplied to customers.

A portion of the Electric Operations revenue is related to the recovery of fuel costs to generate power and the fuel costs related to purchased power. These costs are recovered through a FAC, which is updated quarterly to reflect actual costs incurred to supply electricity to customers.

Environmental and Safety Matters

PHMSA Regulations
On December 27, 2020, the Protecting Our Infrastructure of Pipelines and Enhancing Safety (PIPES) Act of 2020 was signed into law, reauthorizing funding for federal pipeline safety programs through September 30, 2023. Among other things, the PIPES Act requires that PHMSA revise the pipeline safety regulations to require operators to update, as needed, their existing distribution integrity management plans, emergency response plans, and operation and maintenance plans. The PIPES Act also requires PHMSA to adopt new requirements for managing records and updating, as necessary, existing district regulator stations to eliminate common modes of failure that can lead to overpressurization. PHMSA must also require that operators implement and utilize advanced leak detection and repair technologies that enable the location and categorization of all leaks that are hazardous, or potentially hazardous, to human safety or the environment. Natural gas companies, including NiSource and our subsidiaries, may see increased costs depending on how PHMSA implements the new mandates resulting from the PIPES Act.

Climate Change Issues
Physical Climate Risks. Increased frequency of severe and extreme weather events associated with climate change could materially impact our facilities, energy sales, and results of operations. We are unable to predict these events. However, we perform ongoing assessments of physical risk, including physical climate risk, to our business. More extreme and volatile temperatures, increased storm intensity and flooding, and more volatile precipitation leading to changes in lake and river levels are among the weather events that are most likely to impact our business. Efforts to mitigate these physical risks continue to be implemented on an ongoing basis.

Transition Climate Risks. Future legislative and regulatory programs, at both the federal and state levels, could significantly limit allowed GHG emissions or impose a cost or tax on GHG emissions. Revised or additional future GHG legislation and/or regulation related to the generation of electricity or the extraction, production, distribution, transmission, storage and end use of natural gas could materially impact our gas supply, financial position, financial results and cash flows.

Regarding federal policies, we continue to monitor the implementation of any final and proposed climate change-related legislation and regulations, including the Infrastructure Investment and Jobs Act, signed into law in November 2021; the development of the Enhancement and Standardization of Climate-Related Disclosures, proposed by the SEC in March 2022; the IRA, signed into law in August 2022; and the EPA's proposed methane regulations for the oil and natural gas industry, but we cannot predict their impact on our business at this time. We have identified potential opportunities associated with the Infrastructure Investment and Jobs Act and the IRA and are evaluating how they may align with our strategy going forward. The energy-related provisions of the Infrastructure Investment and Jobs Act include new federal funding for power grid infrastructure and resiliency investments, new and existing energy efficiency and weatherization programs, electric vehicle infrastructure for public chargers and additional LIHEAP funding over the next five years. The IRA contains climate and energy provisions, including funding to decarbonize the electric sector.

In February 2021, the United States rejoined the Paris Agreement, an international treaty through which parties set nationally determined contributions to reduce GHG emissions, build resilience, and adapt to the impacts of climate change. Subsequently, the Biden Administration released a target for the United States to achieve a 50%-52% GHG reduction from 2005 levels by 2030, which supports the President's goals to create a carbon-free power sector by 2035 and net zero emissions economy no later than 2050. There are many pathways to reach these goals.

On June 30, 2022, the Supreme Court of the United States ruled for the petitioners in West Virginia v. EPA, which examined the authority of the EPA to regulate GHG emissions from the power sector. We will continue to evaluate this matter, but we remain committed to our previously stated carbon reduction goals.

We also continue to monitor the implementation of any final and proposed state policy. The Virginia Clean Economy Act was signed into law in 2020. While the Act does not establish any new mandates on Columbia of Virginia, certain natural gas customers may, over the long-term, reduce their use of natural gas to meet the 100% renewable electricity requirement. Columbia of Virginia will continue to monitor this matter, but we cannot predict its final impact on our business at this time. Separately, the Virginia Energy Innovation Act, enacted into law in April 2022, and effective July 1, 2022, allows natural gas utilities to supply alternative forms of gas that meet certain standards and reduce emissions intensity. The Act also provides that the costs of enhanced leak detection and repair may be added to a utility's plan to identify proposed eligible infrastructure replacement projects and related cost recovery mechanisms, known as the SAVE Plan. Furthermore, under the Act, utilities can recover eligible biogas supply infrastructure costs on an ongoing basis. The provisions of these laws may provide opportunities for Columbia of Virginia as it participates in the transition to a lower carbon future.

The Climate Solutions Now Act of 2022 requires Maryland to reduce GHG emissions by 60% by 2031 (from 2006 levels), and it requires the state to reach net zero emissions by 2045. The Maryland Department of the Environment is required to adopt a plan to achieve the 2031 goal by December 2023, and it is required to adopt a plan for the net zero goal by 2030. The Act also enacts a state policy to move to broader electrification of both existing buildings and new construction, and requires the Public Service Commission to complete a study assessing the capacity of gas and electric distribution systems to successfully serve customers under a transition to a highly electrified building sector. Columbia of Maryland will continue to monitor this matter, but we cannot predict its final impact on our business at this time.

NIPSCO, Columbia of Maryland, Columbia of Pennsylvania, Columbia of Virginia and Columbia of Kentucky each filed petitions to implement the Green Path Rider, which will be a voluntary rider that allows customers to opt in and offset either 50% or 100% of their natural gas related emissions. To reduce the emissions, the utilities will purchase RNG attributes and carbon offsets to match the usage for customers opting into the program. The program was approved by the IURC at NIPSCO in November 2022 with a January 2023 start date. After reaching settlement with other parties in September 2022, NIPSCO agreed to add a third tier to offset 25% of customer usage. Columbia of Maryland's filing was denied by the PUC in January 2023. The filings for Columbia of Pennsylvania, Columbia of Virginia and Columbia of Kentucky are still being evaluated. Additionally, NIPSCO has a voluntary Green Power Rider program in place that allows customers to designate a portion or all their monthly electric usage to come from power generated by renewable energy sources.

Net Zero Goal. In response to these transition risks and opportunities, on November 7, 2022, we announced a goal of net zero greenhouse gas emissions by 2040 covering both Scope 1 and Scope 2 emissions ("Net Zero Goal"). Our Net Zero Goal builds on greenhouse gas emission reductions achieved to-date and demonstrates that continued execution of our long-term business plan will drive further greenhouse gas emission reductions. We remain on track to achieve previously announced interim greenhouse gas emission reduction targets by reducing fugitive methane emissions from main and service lines by 50 percent from 2005 levels by 2025 and reducing Scope 1 greenhouse gas emissions from company-wide operations by 90 percent from 2005 levels by 2030. We plan to achieve our Net Zero Goal primarily through continuation and enhancement of existing programs, such as retiring and replacing coal-fired electric generation with low- or zero-emission electric generation, ongoing pipe replacement and modernization programs, and deployment of advanced leak-detection technologies. In addition, we plan to advance other low- or zero-emission energy resources and technologies, such as hydrogen, renewable natural gas, and/or deployment of carbon capture and utilization technologies, if and when these become technologically and economically feasible. Carbon offsets and renewable energy credits may also be used to support achievement of our Net Zero Goal. As of the end of 2021, we had reduced Scope 1 GHG emissions by approximately 58% from 2005 levels.

Our greenhouse gas emissions projections, including achieving a Net Zero Goal, are subject to various assumptions that involve risks and uncertainties. Achievement of our Net Zero Goal by 2040 will require supportive regulatory and legislative policies, favorable stakeholder environments and advancement of technologies that are not currently economical to deploy. Should such regulatory and legislative policies, stakeholder environments or technologies fail to materialize, our actual results or ability to achieve our Net Zero Goal, including by 2040, may differ materially.

As discussed in Management's Discussion within "Results and Discussion of Segment Operations - Electric Operations," NIPSCO continues to execute on an electric generation transition consistent with the preferred pathways identified in its 2018 and 2021 Integrated Resource Plans. Additionally, as discussed in Management's Discussion within "Liquidity and Capital Resources - Regulatory Capital Programs," our natural gas distribution companies are lowering methane emissions by replacing aging infrastructure, which also increases safety and reliability for customers and communities.

Human Capital

Human Capital Management Governance and Organizational Practices. The Compensation and Human Capital Committee of our Board of Directors (the "Board") is primarily responsible for assisting the Board in overseeing our human capital management practices. The Compensation and Human Capital Committee charter includes reviewing our human capital management function and programs, including related procedures, programs, policies and practices, and making recommendations to management with respect to equal employment opportunity and DE&I initiatives, employee engagement and corporate culture, and talent management.

In addition to overseeing our human capital management practices, in 2022 our Board was refreshed and is committed to ensuring that the Board is comprised of directors with diverse skills, expertise, experience and demographics, including racial and gender diversity. Women and people of color ("POC") each comprise 33% of our Board.

Human Capital Goals and Objectives. We have aligned our human capital goals to achieve overall company strategic and operational objectives by driving an enhanced talent strategy, elevating support for front-line leaders, fostering a culture of rigor and accountability and strengthening our human resources function. We aspire to be an employer of choice in the utility industry through accelerating and embedding DE&I throughout the enterprise and creating an enviable employee experience.

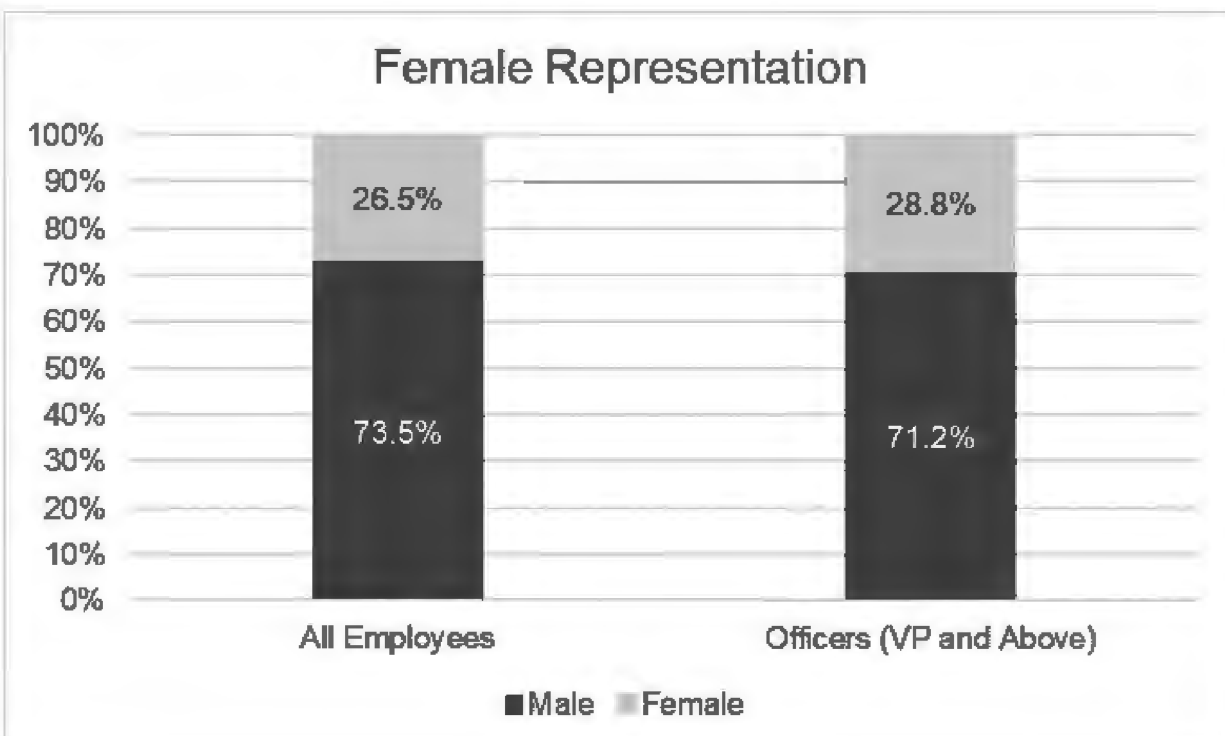
Workforce Composition. As of December 31, 2022, we had 7,117 full-time and 45 part-time active employees. Thirty-five percent of our employees were subject to collective bargaining agreements with various labor unions which expire between 2026 and 2027.

Diversity, Equity and Inclusion. We are committed to accelerating and embedding DE&I throughout the enterprise to reflect the communities and customers we serve. We have worked to develop diverse sourcing strategies to attract and increase our diverse representation. Our talent acquisition team hired 523 external candidates in 2022 across all business segments. Twenty-eight percent of external hires in 2022 were racially or ethnically diverse and 44% were female.

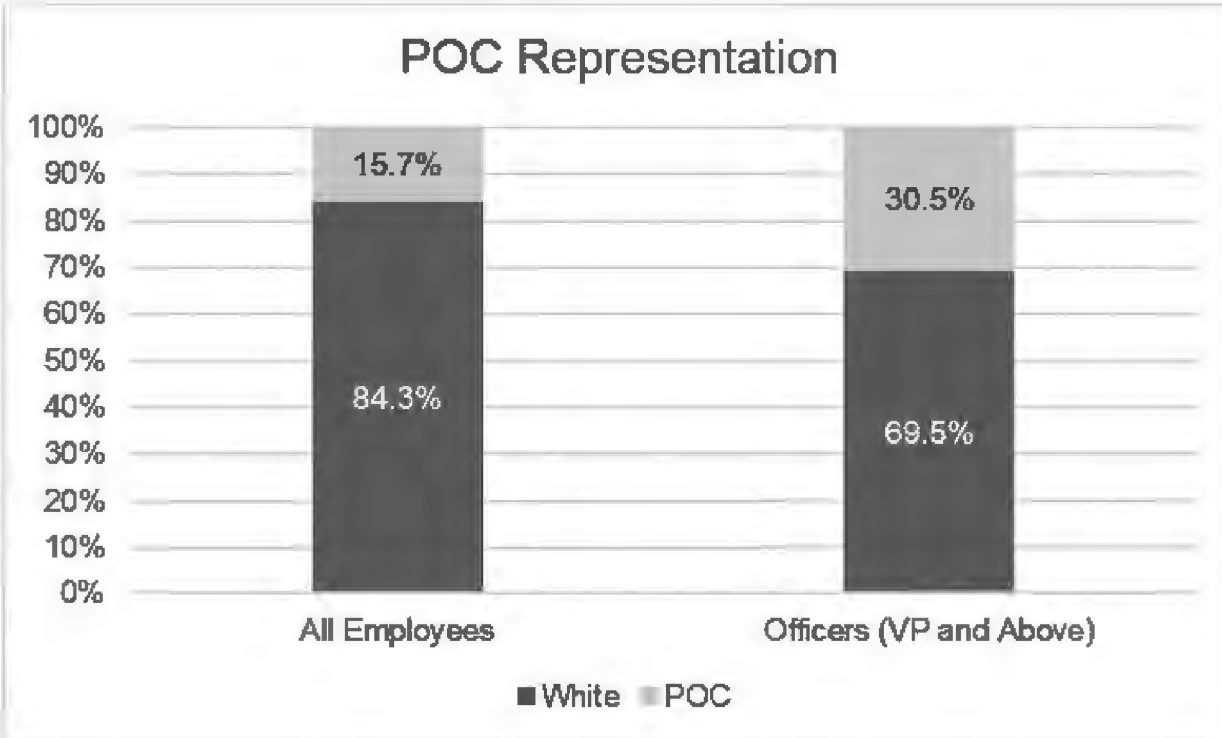
In addition, we have focused on our implementation and development of programs to drive higher retention and engagement of our employees. Through our efforts, we have been able to increase participation in our Targeted Development for Diverse Talent program in 2022. Participants in this program are either female or POC. POC make up 49% of the participant population for 2022. In addition, we have implemented over 50 DE&I programs with a strong emphasis on professional development and retention efforts within our seven Employee Resource Groups.

We plan to post our 2022 consolidated EEO-1 report data on our website by the end of the first quarter of 2023.

The following graph shows the percentage of total employees represented by gender overall and for our officers as of December 31, 2022:



The following graph shows the percentage of total employees and officers represented by race/ethnicity as of December 31, 2022:



Talent Attraction. To recruit and hire individuals with a variety of skills, talents, backgrounds and experiences, we value and cultivate relationships with the community and diverse outreach partners. We also target job fairs, including those focused on people of color, veterans and women candidates, and partner with local colleges and universities to identify and recruit qualified applicants in the communities we serve.

We are focused on our future of work and creating a more flexible, agile model for roles that can be performed in a more remote setting to attract talent across our footprint. In 2022, we introduced a hybrid-working model, which recognizes differing ways of working: onsite, hybrid and remote. As of December 31, 2022, 58% of our workforce is onsite, 35% are hybrid and 7% are remote. This new working model supports colleague connection, development and mentoring as well as broader team building.

Talent Development and Retention. We offer leadership development programs to enhance the behaviors and skills of our existing and future leaders. In 2022, we had participation from employees at all levels in our extensive technical and non-technical employee leadership development training programs.

We strive to provide promotion and advancement opportunities for employees. In 2022, for all leadership positions at the supervisor and above level posted externally, we filled 69% with internal employees. We develop and implement targeted development action plans to increase succession candidate readiness for leadership roles. Additionally, we monitor the risk and potential impact of talent loss and take action to increase retention of top talent. Retention in 2022 was over 91%. We calculate retention as the total number of separations divided by the average headcount for the annual period. These separations include involuntary separation (2%), resignation (5%), and retirement (2%).

Executive Succession Planning. We perform succession planning quarterly for officer level positions to ensure that we develop and sustain a strong bench of talent capable of performing at the highest levels. Talent is identified, and potential paths of development are discussed to ensure that employees have an opportunity to build their skills and are well-prepared for future roles. We maintain formal succession plans for our Chief Executive Officer ("CEO") and key executive officers. The succession plan for our CEO is reviewed by the Environmental, Social, Nominating and Governance Committee of the Board and the succession plans for executive officers (other than the CEO) and other critical roles are reviewed by the Compensation and Human Capital Committee annually or more frequently as needed.

Employee and Workplace Health and Safety. We have several programs to support employees, and their families' physical, mental, and financial well-being. These programs include a paid wellness day, telemedicine services, an Employee Assistance Program, Integrated Health Management navigation services, employee paid sick/disability leave, parental leave, and paid illness in family days. We also offer competitive medical, dental, vision, life and long-term disability programs, including employee health savings account company contributions.

We have a robust program to support employee, contractor and public safety, which is led by our Chief Safety Officer and is overseen by the Safety, Operations, Regulatory and Policy Committee of our Board. As we will outline in our annual safety report on our corporate website, we continue to invest in risk reduction activities and assets.

Culture and Engagement. Our culture is another important aspect of our ability to advance our strategic and operational objectives. In addition to our DE&I, recruiting, development and retention programs described above, we also invest in internal communications programs, including in-person and virtual learning and networking opportunities, as well as regular town hall communications with employees. We measure and monitor culture and employee engagement through a variety of channels including employee lifecycle, pulse, and census surveys.

To instill and reinforce our values and culture, we require our employees to participate in regular trainings on ethics and compliance topics each year, including raising concerns, treating others with respect, preventing discrimination in the workplace, anti-bribery and corruption, data protection, unconscious biases, harassment, conflicts of interest, and how to use the anonymous ethics and compliance hotline. All employees receive training on our Code of Business Conduct biannually or more frequently if there is a material change in content. Our business ethics program, including the employee training program, is reviewed annually by our executive leadership team and the Audit Committee of our Board.

Our Compensation and Human Capital Committee reviews reports from our Chief Human Resources Officer and Chief Diversity, Equity and Inclusion Officer on employee engagement and corporate culture. Our Board reviews results and action plans related to our enterprise-wide comprehensive employee engagement survey. Our executive leadership team, including our Chief Executive Officer, communicates directly and regularly with all employees on timely ethics topics through electronic messages, coffee chats, and all-employee town hall meetings. These communications emphasize the importance of our values and culture in the workplace.

Other Relevant Business Information

Our customer base is broadly diversified, with no single customer accounting for a significant portion of revenues.

For a listing of material subsidiaries of NiSource, refer to Exhibit 21.

We electronically file various reports with the SEC, including annual reports on Form 10-K, quarterly reports on Form 10-Q, current reports on Form 8-K and amendments to such reports, as well as our proxy statements for the Company's annual meetings of stockholders at *http://www.sec.gov*. Additionally, we make all SEC filings available without charge to the public on our web site at *http://www.nisource.com*. The information contained on our website is not included in, nor incorporated by reference into, this Annual Report on Form 10-K.

INFORMATION ABOUT OUR EXECUTIVE OFFICERS

NiSource Inc.

The following is a list of our Executive Officers, including their names, ages, offices held and other recent business experience.

Name	Age	Office(s) Held in Past 5 Years
Lloyd M. Yates	62	President and Chief Executive Officer
		Executive Vice President, Customer and Delivery Operations, and President, Carolinas Region, of Duke Energy Corporation from 2014 to 2019.
Donald E. Brown	51	Executive Vice President and Chief Financial Officer
		Executive Vice President of NiSource since May 2015.
		Chief Financial Officer of NiSource since July 2015.
		President, NiSource Corporate Services since June 2020.
Melody Birmingham	51	Executive Vice President, Chief Innovation Officer
		Senior Vice President and Chief Administrator Officer of Duke Energy Corporation from May 2021 to June 2022.
		Senior Vice President, Supply Chain and Chief Procurement Officer of Duke Energy Corporation from November 2018 to April 2021.
		President of Duke Energy Corporation from June 2015 to November 2018
William Jefferson, Jr	61	Executive Vice President, Operations and Chief Safety Officer
		Station Director and Vice President at STPNOC, Wadsworth, Texas, from 2016 to May 2022.
Shawn Anderson	41	Senior Vice President,Strategy and Chief Risk Officer
		Vice President, Strategy of NiSource from January 2019 to May 2020.
		Vice President of NiSource from May 2018 to December 2018.
		Treasurer and Chief Risk Officer of NiSource from June 2016 to December 2018.
Kimberly S. Cuccia	39	Senior Vice President, General Counsel and Corporate Secretary
		Vice President General Counsel, Interim Corporate Secretary of NiSource from January 2022 to March 2022.
		Vice President and Deputy General Counsel, Regulatory, of NiSource Corporate Services Company, from January 2021 to December 2021.
		Vice President and General Counsel, Columbia Gas of Massachusetts, NiSource Corporate Services Company, from October 2019 to December 2020.
		Vice President and General Counsel, Massachusetts Restoration, NiSource Corporate Services Company, from October 2018 to October 2019.
		Chief Counsel, Columbia Gas Companies from June 2015 to September 2018.
Melanie B. Berman	52	Senior Vice President and Chief Human Resources Officer
		Executive Vice President and Chief Human Resources Officer of The Michaels Companies, Inc. from 2020 to 2021.
		Vice President, Human Resources of Anthem, Inc. from January 2018 to 2019.

NISOURCE INC.

Our operations and financial results are subject to various risks and uncertainties, including those described below, that could adversely affect our business, financial condition, results of operations, cash flows, and the market price of our common stock.

OPERATIONAL RISKS

We may not be able to complete the sale of a minority interest in NIPSCO on the expected timeline or at all.

On November 7, 2022, we announced our intention to sell a minority interest in NIPSCO (the "NIPSCO Minority Interest Sale"). We intend to evaluate various alternatives to determine the optimal transaction structure to maximize stakeholder value as a result of the NIPSCO Minority Interest Sale. A successful sale will be dependent on factors such as regulatory approval(s) and negotiations with one or more counterparties. There can be no assurances that we will be able to successfully complete the NIPSCO Minority Interest Sale on the anticipated timeline or at all. Furthermore, there can be no assurances that the NIPSCO Minority Interest Sale will lead to the anticipated benefits to stockholders.

We may not be able to execute our business plan or growth strategy, including the NIPSCO Minority Interest Sale and utility infrastructure investments.

Business or regulatory conditions may result in our inability to execute our business plan or growth strategy, including the NIPSCO Minority Interest Sale and identified, planned and other utility infrastructure investments, which includes investments related to natural gas pipeline modernization and our renewable energy projects, and the build-transfer execution goals within our business plan.

Our Enterprise Transformation Roadmap initiatives are designed to identify long-term sustainable capability enhancements, cost optimization improvements, technology investments and work process optimization, has increased the volume and pace of change and may not be effective as it continues. Our customer and regulatory initiatives may not achieve planned results. Utility infrastructure investments may not materialize, may cease to be achievable or economically viable and may not be successfully completed. Natural gas may cease to be viewed as an economically and environmentally attractive fuel. Certain environmental activist groups, investors and governmental entities continue to oppose natural gas delivery and infrastructure investments because of perceived environmental impacts associated with the natural gas supply chain and end use. Energy conservation, energy efficiency, distributed generation, energy storage, policies favoring electric heat over gas heat and other factors may reduce demand for natural gas and electricity. In addition, we consider acquisitions or dispositions of assets or businesses, JVs, including in connection with the NIPSCO Minority Interest Sale, and mergers from time to time as we execute on our business plan and growth strategy. Any of these circumstances could adversely affect our results of operations and growth prospects. Even if our business plan and growth strategy are executed, there is still risk of, among other things, human error in maintenance, installation or operations, shortages or delays in obtaining equipment, including as a result of transportation delays and availability, labor availability and performance below expected levels (in addition to the other risks discussed in this section). We are currently experiencing, and expect to continue to experience, supply chain challenges, including labor availability issues, impacting our ability to obtain materials for our gas and electric projects. Risks to our capital projects, including risks related to supply chain challenges and labor availability, are described in a separate risk factor below.

Our gas distribution and transmission activities, as well as generation, transmission and distribution of electricity, involve a variety of inherent hazards and operating risks, including potential public safety risks.

Our gas distribution and transmission activities, as well as generation, transmission and distribution of electricity, involve a variety of inherent hazards and operating risks, including, but not limited to, gas leaks and over-pressurization, downed power lines, stray electrical voltage, excavation or vehicular damage to our infrastructure, outages, environmental spills, mechanical problems and other incidents, which could cause substantial financial losses, as demonstrated in part by the Greater Lawrence Incident. We also have distribution propane assets that involve similar risks. In addition, these hazards and risks have resulted and may result in the future in serious injury or loss of life to employees and/or the general public, significant damage to property, environmental pollution, impairment of our operations, adverse regulatory rulings and reputational harm, which in turn could lead to substantial losses for NiSource and its stockholders. The location of pipeline facilities, including regulator stations, liquefied natural gas and underground storage, or generation, transmission, substation and distribution facilities near populated areas, including residential areas, commercial business centers and industrial sites, could increase the level of damages resulting from such incidents. As with the Greater Lawrence Incident, certain incidents have subjected and may in the future subject us to both civil and criminal litigation or administrative or other legal proceedings from time to time, which could result in substantial monetary judgments, fines, or penalties against us, be resolved on unfavorable terms, and require us to incur significant operational expenses. The occurrence of incidents has in certain instances adversely affected and could in the future adversely affect our reputation, cash flows, financial position and/or results of operations. We maintain insurance against some, but not all, of these risks and losses.

We may conduct certain operations, including in connection with the NIPSCO Minority Interest Sale, through a JV arrangement involving third-party investors that may result in delays, litigation or operational impasses.

We may enter into JV arrangements involving third-party investors, including in connection with the NIPSCO Minority Interest Sale. As part of a JV arrangement, third-party investors may hold certain protective rights that may impact our ability to make certain decisions. Any such third-party investors may have interests and objectives which may differ from ours and, accordingly, disputes may arise that may result in delays, litigation or operational impasses.

Failure to adapt to advances in technology and manage the related costs could make us less competitive and negatively impact our results of operations and financial condition.

A key element of our electric business model includes generating power at central station power plants to achieve economies of scale and produce power at a competitive cost. We continue to transition our generation portfolio in order to implement new and diverse technologies including renewable energy, distributed generation, energy storage, and energy efficiency designed to reduce regulated emissions. Advances in technology and potential competition supported by changes in laws or regulations could reduce the cost of electric generation and provide retail alternatives causing power sales to decline and the value of our generating facilities to decline.

Our natural gas business model depends on widespread utilization of natural gas for space heating as a core driver of revenues. Alternative energy sources, new technologies or alternatives to natural gas space heating, including cold climate heat pumps and/or efficiency of other products, could reduce demand and increase customer attrition, which could impact our ability to recover on our investments in our gas distribution assets.

Our future success will depend, in part, on our ability to anticipate and successfully adapt to technological changes, to offer services that meet customer demands and evolving industry standards, including environmental impacts associated with our products and services, and to recover all, or a significant portion of, remaining investments in retired assets. A failure by us to effectively adapt to changes in technology and manage the related costs could harm the ability of our products and services to remain competitive in the marketplace and could have a material adverse impact on our results of operations and financial condition.

Aging infrastructure may lead to disruptions in operations and increased capital expenditures and maintenance costs, all of which could negatively impact our financial results.

We have risks associated with aging electric and gas infrastructure. These risks can be driven by threats such as, but not limited to, electrical faults, mechanical failure, internal corrosion, external corrosion, ground movement and stress corrosion and/or cracking. The age of these assets may result in a need for replacement, a higher level of maintenance costs or unscheduled outages, despite efforts by us to properly maintain or upgrade these assets through inspection, scheduled maintenance and capital investment. In addition, the nature of the information available on aging infrastructure assets, which in some cases is incomplete, may make the operation of the infrastructure, inspections, maintenance, upgrading and replacement of the assets particularly challenging. Missing or incorrect infrastructure data may lead to (1) difficulty properly locating facilities, which can result in excavator damage and operational or emergency response issues, and (2) configuration and control risks associated with the modification of system operating pressures in connection with turning off or turning on service to customers, which can result in unintended outages or operating pressures. Also, additional maintenance and inspections are required in some instances to improve infrastructure information and records and address emerging regulatory or risk management requirements, resulting in increased costs.

Supply chain issues related to shortages of materials and transportation logistics may lead to delays in the maintenance and replacement of aging infrastructure, which could increase the probability and/or impact of a public safety incident. We lack diversity in suppliers of some gas materials. While we have implemented contractual protections with suppliers and stockpile some materials in inventory for such supply risks, we may not be effective in ensuring that we can obtain adequate emergency supply on a timely basis in each state, that no compromises are being made on quality and that we have alternate suppliers available. The failure to operate our assets as desired could result in interruption of electric service, major component failure at generating facilities and electric substations, gas leaks and other incidents, and an inability to meet firm service and compliance obligations, which could adversely impact revenues, and could also result in increased capital expenditures and maintenance costs, which, if not fully recovered from customers, could negatively impact our financial results.

We may be unable to obtain insurance on acceptable terms or at all, and the insurance coverage we do obtain may not provide protection against all significant losses.

Our ability to obtain insurance, as well as the cost and coverage of such insurance, are affected by developments affecting our business; international, national, state, or local events; and the financial condition and underwriting considerations of insurers. For example, some insurers are moving away from underwriting certain carbon-intensive energy-related businesses such as those in the coal industry or those exposed to specific perils such as wildfires as well as gas explosion events or other infrastructure-related or natural catastrophe risks. The utility insurance market continues to be impacted by a prevalence of severe losses, and despite significant annual increases in rates over the past few years, markets are experiencing unacceptable loss ratios. Certain perils, such as cyber, are now being excluded from some master policies for property and casualty insurance, requiring procurement of additional policies to be obtained to maintain consistent coverage at an additional cost. Capacity limits insurers are willing to issue have decreased, requiring participation from more insurers to provide adequate coverage. Insurance coverage may not continue to be available at limits, rates or terms acceptable to us. In addition, our insurance is not sufficient or effective under all circumstances and against all hazards or liabilities to which we are subject. Certain types of damages, expenses or claimed costs, such as fines and penalties, have been and in the future may be excluded under the policies. In addition, insurers providing insurance to us may raise defenses to coverage under the terms and conditions of the respective insurance policies that could result in a denial of coverage or limit the amount of insurance proceeds available to us. Any losses for which we are not fully insured or that are not covered by insurance at all could materially adversely affect our results of operations, cash flows and financial position.

Aspects of the implementation of our electric generation strategy, including the retirement of our coal generation units, may be delayed and may not achieve intended results.

As discussed in “Results and Discussion of Segment Operations - Electric Operations,” in Management’s Discussion and Analysis of Financial Condition and Results of Operations, our 2018 Integrated Resource Plan (“2018 Plan”) outlines the path to retire the remaining two coal units at R.M. Schahfer by the end of 2025 and the remaining coal-fired generation by the end of 2028, to be replaced by lower-cost, reliable and cleaner options. Our 2021 Integrated Resource Plan (“2021 Plan”) validated the activities underway pursuant to our 2018 Plan and calls for the retirement of the Michigan City Generating Station, replacement of existing vintage gas peaking units at the R.M. Schahfer Generating Station and upgrades to the transmission system to enhance our electric generation transition. Recent developments, including macro supply chain issues and U.S. federal policy actions, have created significant uncertainty around the availability of key input material necessary to develop and place our renewable energy projects in service. In the U.S., solar industry supply chain issues include the pending U.S. Department of Commerce investigation on Antidumping and Countervailing Duties Anti Circumvention Petition filed by a domestic solar manufacturer (the “DOC Investigation”), the Uyghur Forced Labor Protection Act, Section 201 Tariffs and persistent general global supply chain and labor availability issues. The most prominent effect of these issues is the significant curtailment of imported solar panels and other key components required to complete utility scale solar projects in the U.S. Any available solar panels may not meet the cost and efficiency standards of our currently approved projects and the incremental cost may not be recoverable through customer rates. As a result of the challenges in obtaining solar panels, many solar projects in the U.S. have been delayed or canceled. As we are in the midst of a transition to an electric generation portfolio with more renewable resources, including solar, our projects are subject to the effects of these issues.

Our expectation has been that solar energy sources would be one of the primary ways in which we will meet our electric generation capacity and reliability obligations to the MISO market and reliably serve our customers when we retire our coal generation capacity. The high level of uncertainty surrounding the completion of our solar renewable energy projects creates significant risks for us to reliably meet our capacity and energy obligations to MISO and to provide reliable and affordable energy to our customers. Any additional delays to the completion dates of our ten planned and approved solar projects are expected to impact our capacity position and our ability to meet our resource adequacy obligations to MISO. Delays to the completion dates of our projects could also include delays in the financial return of certain investments and impact the overall timing of our electric generation transition.

As noted above, we expect our electric generation strategy to require additional investment to meet our MISO obligations and may require significant future capital expenditures, operating costs and charges to earnings that may negatively impact our financial position, financial results and cash flows. An inability to secure and deliver on renewable projects is negatively impacting our generation transition timeline and may negatively impact our achievement of decarbonization goals and reputation.

Our capital projects and programs subject us to construction risks and natural gas costs and supply risks, and are subject to regulatory oversight, including requirements for permits, approvals and certificates from various governmental agencies.

Our business requires substantial capital expenditures for investments in, among other things, capital improvements to our electric generating facilities, electric and natural gas distribution infrastructure, natural gas storage and other projects, including projects for environmental compliance. As we undertake these projects and programs, we may be unable to complete them on schedule or at the anticipated costs due in part to shortages in materials as described more fully below. Additionally, we may construct or purchase some of these projects and programs to capture anticipated future growth, which may not materialize, and may cause the construction to occur over an extended period of time.

Our existing and planned capital projects require numerous permits, approvals and certificates from federal, state, and local governmental agencies. If there is a delay in obtaining any required regulatory approvals or if we fail to obtain or maintain any required approvals or to comply with any applicable laws or regulations, we may not be able to construct or operate our facilities, we may be forced to incur additional costs or we may be unable to recover any or all amounts invested in a project. We also may not receive the anticipated increases in revenue and cash flows resulting from such projects and programs until after their completion. Other construction risks include changes in the availability and costs of materials, equipment, commodities or labor (including changes to tariffs on materials), delays caused by construction incidents or injuries, work stoppages, shortages in qualified labor, poor initial cost estimates, unforeseen engineering issues, the ability to obtain necessary rights-of-way, easements and transmissions connections and general contractors and subcontractors not performing as required under their contracts.

We are monitoring risks related to increasing order and delivery lead times for construction and other materials, increasing risk associated with the unavailability of materials due to global shortages in raw materials and issues with transportation logistics, and risk of decreased construction labor productivity in the event of disruptions in the availability of materials critical to our gas and electric operations. Our efforts to enhance our resiliency to supply chain shortages may not be effective. We are also seeing increasing prices associated with certain materials, equipment and products, which impacts our ability to complete major capital projects at the cost that was planned and approved. To the extent that delays occur or costs increase, customer affordability as well as our business operations, results of operations, cash flows and financial condition could be materially adversely affected. In addition, to the extent that delays occur on projects that target system integrity, the risk of an operational incident could increase. For more information on global availability of materials for our renewable projects, see " - Results and Discussion of Segment Operations - Electric Operations - Electric Supply and Generation Transition." To the extent that delays occur, costs become unrecoverable or recovery is delayed, or we otherwise become unable to effectively manage and complete our capital projects, our results of operations, cash flows, and financial condition may be adversely affected.

A significant portion of the gas and electricity we sell is used by residential and commercial customers for heating and air conditioning. Accordingly, fluctuations in weather, gas and electricity commodity costs, inflation and economic conditions impact demand of our customers and our operating results.

Energy sales are sensitive to variations in weather. Forecasts of energy sales are based on "normal" weather, which represents a long-term historical average. Significant variations from normal weather resulting from climate change or other factors could have, and have had, a material impact on energy sales. Additionally, residential usage, and to some degree commercial usage, is sensitive to fluctuations in commodity costs for gas and electricity, whereby usage declines with increased costs, thus affecting our financial results. Commodity prices have been and may continue to be volatile. Rising gas costs could heighten regulator and stakeholder sensitivity relative to the impact of base rate increases on customer affordability. Lastly, residential and commercial customers' usage is sensitive to economic conditions and factors such as recession, inflation, unemployment, consumption and consumer confidence. Therefore, prevailing economic conditions affecting the demand of our customers may in turn affect our financial results.

Fluctuations in the price of energy commodities or their related transportation costs or an inability to obtain an adequate, reliable and cost-effective fuel supply to meet customer demands may have a negative impact on our financial results.

Our current electric generating fleet is dependent on coal and natural gas for fuel, and our gas distribution operations purchase and resell a portion of the natural gas we deliver to our customers. These energy commodities are subject to price fluctuations and fluctuations in associated transportation costs. We use physical hedging through the use of storage assets and use financial products in certain jurisdictions in order to offset fluctuations in commodity supply prices. We rely on regulatory recovery mechanisms in the various jurisdictions in order to fully recover the commodity costs incurred in selling energy to our customers. However, while we have historically been successful in the recovery of costs related to such commodity prices, there can be no assurance that such costs will be fully recovered through rates in a timely manner.

In addition, we depend on electric transmission lines, natural gas pipelines, and other transportation facilities owned and operated by third parties to deliver the electricity and natural gas we sell to wholesale markets, supply natural gas to our gas storage and electric generation facilities, and provide retail energy services to our customers. If transportation is disrupted, if capacity is inadequate or if supply is interrupted due to issues at the wellhead, we may be unable to sell and deliver our gas and electric services to some or all of our customers. As a result, we may be required to procure additional or alternative electricity and/or natural gas supplies at then-current market rates, which, if recovery of related costs is disallowed, could have a material adverse effect on our businesses, financial condition, cash flows, results of operations and/or prospects.

Failure to attract and retain an appropriately qualified workforce, and maintain good labor relations, could harm our results of operations.

We operate in an industry that requires many of our employees and contractors to possess unique technical skill sets. An aging workforce without appropriate replacements, the mismatch of skill sets to future needs, the unavailability of talent for internal positions and the unavailability of contract resources may lead to operating challenges or increased costs. These operating challenges include lack of resources, loss of knowledge and a lengthy time period associated with skill development. For example, certain skills, such as those related to construction, maintenance and repair of transmission and distribution systems, are in high demand and have a limited supply. Current and prospective employees may determine that they do not wish to work for us due to market, economic, employment and other conditions, including those related to organizational changes as described in the risk factor below.

We face increased competition for talent in the current environment of sustained labor shortage and increased turnover rates. Incidents of any pandemic in our workforce could increase the risk of worker illness and availability. These or other employee workforce factors could negatively impact our business, financial condition or results of operations.

A significant portion of our workforce is subject to collective bargaining agreements. Our collective bargaining agreements are generally negotiated on an operating company basis with some companies having multiple bargaining agreements, which may span different geographies. Any failure to reach an agreement on new labor contracts or to renegotiate these labor contracts might result in strikes, boycotts or other labor disruptions. Our workforce continuity plans may not be effective in avoiding work stoppages that may result from labor negotiations or mass resignations. Labor disruptions, strikes or significant negotiated wage and benefit increases, whether due to union activities, employee turnover or otherwise, could have a material adverse effect on our businesses, results of operations and/or cash flows.

Our strategic plan includes enhanced technology and transmission and distribution investments and a reduction in reliance on coal-fired generation. As part of our strategic plan, we will need to attract and retain personnel that are qualified to implement our strategy and may need to retrain or re-skill certain employees to support our long-term objectives.

Failure to hire and retain qualified employees, including the ability to transfer significant internal historical knowledge and expertise to the new employees, may adversely affect our ability to manage and operate our business. If we are unable to successfully attract and retain an appropriately qualified workforce and maintain satisfactory collective bargaining agreements, safety, service reliability, customer satisfaction and our results of operations could be adversely affected.

If we cannot effectively manage new initiatives and organizational changes, we will be unable to address the opportunities and challenges presented by our strategy and the business and regulatory environment.

In order to execute on our sustainable growth strategy and enhance our culture of ongoing continuous improvement, we must effectively manage the complexity and frequency of new initiatives and organizational changes. The organizational changes from our transformation initiatives have put short-term pressure on employees due to the volume and pace of change and, in some cases, loss of personnel. Front-line workers are being impacted by the variety of process and technology changes that are currently in progress.

If we are unable to make decisions quickly, assess our opportunities and risks, and successfully implement new governance, managerial and organizational processes as needed to execute our strategy in this increasingly dynamic and competitive business and regulatory environment, our financial condition, results of operations and relationships with our business partners, regulators, customers, employees and stockholders may be negatively impacted.

Actions of activist stockholders could negatively affect our business and stock price and cause us to incur significant expenses.

We may be subject to actions or proposals from activist stockholders or others that may not be aligned with our long-term strategy or the interests of our other stockholders. We have had communications with an activist stockholder. Our response to suggested actions, proposals, director nominations and contests for the election of directors by activist stockholders could disrupt our business and operations, divert the attention of our board of directors, management and employees and be costly and time-consuming. Potential actions by activist stockholders or others may interfere with our ability to execute our strategic plans; create perceived uncertainties as to the future direction of our business or strategy; cause uncertainty with our regulators; make it more difficult to attract and retain qualified personnel; and adversely affect our relationships with our existing and potential business partners. Any of the foregoing could adversely affect our business, financial condition and results of operations. Also, we may be required to incur significant fees and other expenses related to responding to stockholder activism, including for third-party advisors. Moreover, our stock price could be subject to significant fluctuation or otherwise be adversely affected by the events, risks and uncertainties of any stockholder activism.

We outsource certain business functions to third-party suppliers and service providers, and substandard performance by those third parties could harm our business, reputation and results of operations.

Utilities rely on extensive networks of business partners and suppliers to support critical enterprise capabilities across their organizations. Like other companies in the utilities industry, we are seeing slowing deliveries from suppliers and in some cases materials and labor shortages for capital projects. We outsource certain services to third parties in areas including construction services, information technology, materials, fleet, environmental, operational services, corporate and other areas. In addition to delays and unavailability at times, outsourcing of services to third parties could expose us to inferior service quality or substandard deliverables, which may result in non-compliance (including with applicable legal requirements and industry standards), interruption of service or accidents or reputational harm, which could negatively impact our results of operations. We do not have full visibility into our supply chain, which may impact our ability to serve customers in a safe, reliable and cost-effective manner. These risks include the risk of operational failure, reputation damage, disruption due to new supply chain disruptions, exposure to significant commercial losses and fines and poorly positioned and distressed suppliers. If we continue to see delayed deliveries and shortages or if any other difficulties in the operations of these third-party suppliers and service providers, including their systems, were to occur, they could adversely affect our results of operations, or adversely affect our ability to work with regulators, unions, customers or employees.

A cyber-attack on any of our or certain third-party technology systems upon which we rely may adversely affect our ability to operate and could lead to a loss or misuse of confidential and proprietary information or potential liability.

We are reliant on technology to run our business, which is dependent upon financial and operational technology systems to process critical information necessary to conduct various elements of our business, including the generation, transmission and distribution of electricity; operation of our gas pipeline facilities; and the recording and reporting of commercial and financial transactions to regulators, investors and other stakeholders. In addition to general information and cyber risks that all large corporations face (e.g., ransomware, malware, unauthorized access attempts, phishing attacks, malicious intent by insiders, third-party software vulnerabilities and inadvertent disclosure of sensitive information), the utility industry faces evolving and increasingly complex cybersecurity risks associated with protecting sensitive and confidential customer and employee information, electric grid infrastructure, and natural gas infrastructure. Deployment of new business technologies, along with maintaining legacy technology, represents a large-scale opportunity for attacks on our information systems and confidential customer and employee information, as well as on the integrity of the energy grid and the natural gas infrastructure. Additionally, the conflict between Russia and Ukraine, as well as increased surveillance activity from China, has increased the likelihood of a cyber-attack on critical infrastructure systems.

Increasing large-scale corporate attacks in conjunction with more sophisticated threats continue to challenge power and utility companies. Any failure of our technology systems, or those of our customers, suppliers or others with whom we do business, could materially disrupt our ability to operate our business and could result in a financial loss and possibly do harm to our reputation.

Additionally, our information systems experience ongoing, often sophisticated, cyber-attacks by a variety of sources, including foreign sources, with the apparent aim to breach our cyber-defenses. While we have implemented and maintain a cybersecurity program designed to protect our information technology, operational technology, and data systems from such attacks, our cybersecurity program does not prevent all breaches or cyberattack incidents. We have experienced an increase in the number of attempts by external parties to access our networks or our company data without authorization. We have experienced, and expect to continue to experience, cyber intrusions and attacks to our information systems and our operational technology. To our knowledge, none of these intrusions or attacks have resulted in a material cybersecurity intrusion or data breach. The risk of a disruption or breach of our operational technology, or the compromise of the data processed in connection with our operations, through cybersecurity breach or ransomware attack has increased as attempted attacks have advanced in sophistication and number around the world. Technological complexities combined with advanced cyber-attack techniques, lack of cyber hygiene and human error can result in a cybersecurity incident, such as a ransomware attack. Supplier non-compliance with cyber controls can also result in a cybersecurity incident. Attacks can occur at any point in the supply chain or with any suppliers. In addition, unmanned aircraft systems (UAS) or drones are used for various commercial and recreational purposes across the country. The Cybersecurity & Infrastructure Security Agency (CISA) released alerts pertaining to UASs being used for malicious activities and the cybersecurity risk is continuing to increase.

In addition, we collect and retain personally identifiable information of our customers, stockholders and employees. Customers, stockholders and employees expect that we will adequately protect their personal information. The regulatory environment surrounding information security and privacy is increasingly demanding.

Although we attempt to maintain adequate defenses to these attacks and work through industry groups and trade associations to identify common threats and assess our countermeasures, a security breach of our information systems and/or operational technology, or a security breach of the information systems of our customers, suppliers or others with whom we do business, could (i) adversely impact our ability to safely and reliably deliver electricity and natural gas to our customers through our generation, transmission and distribution systems and potentially negatively impact our compliance with certain mandatory reliability and gas flow standards, (ii) subject us to reputational and other harm or liabilities associated with theft or inappropriate release of certain types of information such as system operating information or information, personal or otherwise, relating to our customers or employees, (iii) impact our ability to manage our businesses, and/or (iv) subject us to legal and regulatory proceedings and claims from third parties, in addition to remediation costs, any of which, in turn, could have a material adverse effect on our businesses, cash flows, financial condition, results of operations and/or prospects. Although we do maintain cyber insurance, it is possible that such insurance will not adequately cover any losses or liabilities we may incur as a result of a cybersecurity incident.

Compliance with and changes in cybersecurity requirements have a cost and operational impact on our business, and failure to comply with such laws and regulations could adversely impact our reputation, results of operations, financial condition and/or cash flows.

As cyber-attacks are becoming more sophisticated, U.S. government warnings have indicated that critical infrastructure assets, including pipelines and electric infrastructure, may be specifically targeted by certain groups. In 2021, the Transportation Security Administration ("TSA") announced two new security directives in response to a ransomware attack on the Colonial Pipeline that occurred earlier in the year. These directives require critical pipeline owners to comply with mandatory reporting measures, designate a cybersecurity coordinator, provide vulnerability assessments, and ensure compliance with certain cybersecurity requirements. Such directives or other requirements may require expenditure of significant additional resources to respond to cyberattacks, to continue to modify or enhance protective measures, or to assess, investigate and remediate any critical infrastructure security vulnerabilities. Additionally, on November 30, 2022, the TSA issued an advance notice of proposed rulemaking (ANPRM) seeking public comment on more comprehensive, formal cybersecurity regulations for the pipeline industry. Any failure to comply with such government regulations or failure in our cybersecurity protective measures may result in enforcement actions that may have a material adverse effect on our business, results of operations and financial condition. In addition, there is no certainty that costs incurred related to securing against threats will be recovered through rates.

The impacts of natural disasters, acts of terrorism, acts of war, civil unrest, cyber-attacks, accidents, public health emergencies or other catastrophic events may disrupt operations and reduce the ability to service customers.

A disruption or failure of natural gas distribution systems, or within electric generation, transmission or distribution systems, in the event of a major hurricane, tornado, or other major weather event, or terrorist attack, acts of war, including the political and economic disruption and uncertainty related to Russia's military invasion of Ukraine, civil unrest, cyber-attack (as further detailed above), accident, public health emergency, pandemic, or other catastrophic event could cause delays in completing sales, providing services, or performing other critical functions. We have experienced disruptions in the past from hurricanes and tornadoes and other events of this nature. Also, companies in our industry face a heightened risk of exposure to and have experienced acts of terrorism and vandalism. Our electric and gas physical infrastructure may be targets of physical security threats or terrorist activities that could disrupt our operations. We have increased security given the current environment and may be required by regulators or by the future threat environment to make investments in security that we cannot currently predict. In addition, the supply chain constraints that we are experiencing could impact timely restoration of services. The occurrence of such events could adversely affect our financial position and results of operations. In accordance with customary industry practice, we maintain insurance against some, but not all, of these risks and losses.

We are exposed to significant reputational risks, which make us vulnerable to a loss of cost recovery, increased litigation and negative public perception.

As a utility company, we are subject to adverse publicity focused on the reliability of our services, the speed with which we are able to respond effectively to electric outages, natural gas leaks or events and related accidents and similar interruptions caused by storm damage, physical or cyber security incidents, or other unanticipated events, as well as our own or third parties' actions or failure to act. We are subject to prevailing labor markets and potential high attrition, which may impact the speed of our customer service response. We are also facing supply chain challenges, the impacts of which may adversely impact our reputation in several areas as described elsewhere in these risk factors. We are also subject to adverse publicity related to actual or perceived environmental impacts. If customers, legislators or regulators have or develop a negative opinion of us, this could result in less favorable legislative and regulatory outcomes or increased regulatory oversight, increased litigation and negative public perception. The adverse publicity and investigations we experienced as a result of the Greater Lawrence Incident may have an ongoing negative impact on the public's perception of us. It is difficult to predict the ultimate impact of this adverse publicity. The foregoing may have continuing adverse effects on our business, results of operations, cash flow and financial condition.

The physical impacts of climate change and the transition to a lower carbon future are impacting our business and could materially adversely affect our results of operations.

Climate change is exacerbating risks to our physical infrastructure by increasing the frequency of extreme weather, including heat stresses to power lines, cold temperature stress to our electric and gas systems, and storms and floods that damage infrastructure. In addition, climate change is likely to cause lake and river level changes that affect the manner in which services are currently provided and droughts or other limits on water used to supply services, and other extreme weather conditions. We have adapted and will continue to evolve our infrastructure and operations to meet current and future needs of our stakeholders. With higher frequency of these and other possible extreme weather events it may become more costly for us to safely and reliably deliver certain products and services to our customers. Some of these costs may not be recovered. To the extent that we are unable to recover those costs, or if higher rates arising from recovery of such costs result in reduced demand for services, our future financial results may be adversely impacted. Further, as the intensity and frequency of significant weather events increases, insurers may reprice or remove themselves from insuring risks for which the company has historically maintained insurance, resulting in increased cost or risk to us.

Our strategy may be impacted by policy and legal, technology, market and reputational risks and opportunities that are associated with the transition to a lower-carbon economy, as disclosed in other risk factors in this section. As a result of increased awareness regarding climate change, coupled with adverse economic conditions, availability of alternative energy sources, including private solar, microturbines, fuel cells, energy-efficient buildings and energy storage devices, and new regulations restricting emissions, including potential regulations of methane emissions, some consumers and companies may use less energy, meet their own energy needs through alternative energy sources or avoid expansions of their facilities, including natural gas facilities, which may result in less demand for our services. As these technologies become a more cost-competitive option over time, whether through cost effectiveness or government incentives and subsidies, certain customers may choose to meet their own energy needs and subsequently decrease usage of our systems and services, which may result in, among other things, our generating facilities becoming less competitive and economical. Further, evolving investor sentiment related to the use of fossil fuels and initiatives to restrict continued production of fossil fuels could result in a significant impact on our electric generation and natural gas businesses in the future.

Some of our baseload generation is dependent on natural gas and coal, and we pass through the costs for these energy sources to our customers. In addition, in our gas distribution business, we procure natural gas on behalf of certain customers, and we pass through the actual cost of the gas consumed. Diminished investor interest in funding fossil fuel development could reduce the amount of exploration and production of natural gas or coal, or investment in gas transmission pipelines. Reduced production and transportation of natural gas could, in the long-term, lead to supply shortages leading to baseload generation outages. Given that we pass through commodity costs to customers, this could also create the potential for regulatory questions resulting from increased customer costs. We are unable to forecast the future of commodity markets, but reduced fossil fuel investment, due to evolving investor sentiment, could lead to higher commodity prices and shortages impacting our generation and our reputation with regulators. Conversely, demand for our services may increase as a result of customer changes in response to climate change. For example, as the utilization of electric vehicles increases, demand for electricity may increase, resulting in increased usage of our systems and services.

Any negative views with respect to our environmental practices or our ability to meet the challenges posed by climate change from regulators, customers, investors or legislators could harm our reputation and adversely affect the perceived value of our products and services. Changes in policy to combat climate change, and technology advancement, each of which can also accelerate the implications of a transition to a lower carbon economy, may materially adversely impact our business, financial position, results of operations, and cash flows. For example, in February 2023, the Maryland Office of People's Counsel filed a petition with the Maryland Public Service Commission seeking an investigation regarding planning, practices, and future operations of natural gas suppliers in the state.

We are subject to operational and financial risks and liabilities associated with the implementation and efforts to achieve our carbon emission reduction goals.

On November 7, 2022, we announced our goal of reaching net zero Scope 1 and 2 greenhouse gas emissions by 2040 (the "Net Zero Goal"). Achieving the Net Zero Goal will require supportive regulatory and legislative policies, favorable stakeholder environments and advancement of technologies that are not currently economical to deploy, the impacts and costs of which are not fully understood at this time. NIPSCO's electric generation transition is a key element of the Net Zero Goal. Our analysis and plan for execution, which is outlined in the NIPSCO 2021 Integrated Resource Plan, requires us to make a number of assumptions. These goals and underlying assumptions involve risks and uncertainties and are not guarantees. Should one or more of our underlying assumptions prove incorrect, our actual results and ability to achieve our emissions goal could differ materially from our expectations. Certain of the assumptions that could impact our ability to meet our emissions goal include, but are not limited to: the accuracy of current emission measurements, service territory size and capacity needs remaining in line with expectations; regulatory approval; impacts of future environmental regulations or legislation; impact of future GHG pricing regulations or legislation, including a future carbon tax or methane fee; price, availability and regulation of carbon offsets; price of fuel, such as natural gas; cost of energy generation technologies, such as wind and solar, natural gas and storage solutions; adoption of alternative energy by the public, including adoption of electric vehicles; rate of technology innovation with regards to alternative energy resources; our ability to implement our modernization plans for our pipelines and facilities; the ability to complete and implement generation alternatives to NIPSCO's coal generation and retirement dates of NIPSCO's coal facilities by 2028; the ability to construct and/or permit new natural gas pipelines; the ability to procure resources needed to build at a reasonable cost, the lack of scarcity of resources and labor, project cancellations, construction delays or overruns and the ability to appropriately estimate costs of new generation; impact of any supply chain disruptions; and advancement of energy efficiencies. Any negative opinions with respect to these goals or our environmental practices, including any inability to achieve, or a scaling back of these goals, formed by regulators, customers, investors or legislators could harm our reputation and have an adverse effect on our financial condition.

FINANCIAL, ECONOMIC AND MARKET RISKS

We have substantial indebtedness which could adversely affect our financial condition.

Our business is capital intensive and we rely significantly on long-term debt to fund a portion of our capital expenditures and repay outstanding debt, and on short-term borrowings to fund a portion of day-to-day business operations. We had total consolidated indebtedness of $11,315.5 million outstanding as of December 31, 2022. Our substantial indebtedness could have important consequences. For example, it could:

- limit our ability to borrow additional funds or increase the cost of borrowing additional funds;
- reduce the availability of cash flow from operations to fund working capital, capital expenditures and other general corporate purposes;

- limit our flexibility in planning for, or reacting to, changes in the business and the industries in which we operate;
- lead parties with whom we do business to require additional credit support, such as letters of credit, in order for us to transact such business;
- place us at a competitive disadvantage compared to competitors that are less leveraged;
- increase vulnerability to general adverse economic and industry conditions; and
- limit our ability to execute on our growth strategy, which is dependent upon access to capital to fund our substantial infrastructure investment program.

Some of our debt obligations contain financial covenants related to debt-to-capital ratios and cross-default provisions. Our failure to comply with any of these covenants could result in an event of default, which, if not cured or waived, could result in the acceleration of outstanding debt obligations.

A drop in our credit ratings could adversely impact our cash flows, results of operation, financial condition and liquidity.

The availability and cost of credit for our businesses may be greatly affected by credit ratings. The credit rating agencies periodically review our ratings, taking into account factors such as our capital structure, earnings profile, and overall shifts in the economy or business environment. We are committed to maintaining investment grade credit ratings; however, there is no assurance we will be able to do so in the future. Our credit ratings could be lowered or withdrawn entirely by a rating agency if, in its judgment, the circumstances warrant. Any negative rating action could adversely affect our ability to access capital at rates and on terms that are attractive. A negative rating action could also adversely impact our business relationships with suppliers and operating partners, who may be less willing to extend credit or offer us similarly favorable terms as secured in the past under such circumstances.

Certain of our subsidiaries have agreements that contain “ratings triggers” that require increased collateral in the form of cash, a letter of credit or other forms of security for new and existing transactions if our credit ratings (including the standalone credit ratings of certain of our subsidiaries) are dropped below investment grade. These agreements are primarily for insurance purposes and for the physical purchase or sale of gas or power. As of December 31, 2022, the collateral requirement that would be required in the event of a downgrade below the ratings trigger levels would amount to approximately $85.7 million. In addition to agreements with ratings triggers, there are other agreements that contain “adequate assurance” or “material adverse change” provisions that could necessitate additional credit support such as letters of credit and cash collateral to transact business.

If our or certain of our subsidiaries’ credit ratings were downgraded, especially below investment grade, financing costs and the principal amount of borrowings would likely increase due to the additional risk of our debt and because certain counterparties may require additional credit support as described above. Such amounts may be material and could adversely affect our cash flows, results of operations and financial condition. Losing investment grade credit ratings may also result in more restrictive covenants and reduced flexibility on repayment terms in debt issuances, lower share price and greater stockholder dilution from common equity issuances, in addition to reputational damage within the investment community.

Adverse economic and market conditions, including increased inflation, increases in interest rates, recession or changes in investor sentiment could materially and adversely affect our business, results of operations, cash flows, financial condition and liquidity.

Deteriorating, sluggish or volatile economic conditions in our operating jurisdictions could adversely impact our ability to maintain or grow our customer base and collect revenues from customers, which could reduce our revenue or growth rate and increase operating costs. A continued economic downturn or recession, or slowing or stalled recovery from such economic downturn or recession, may have a material adverse effect on our business, financial condition, or results of operations.

We rely on access to the capital markets to finance our liquidity and long-term capital requirements, including expenditures for our utility infrastructure and to comply with future regulatory requirements, to the extent not satisfied by the cash flow generated by our operations. We have historically relied on long-term debt and on the issuance of equity securities to fund a portion of our capital expenditures and repay outstanding debt, and on short-term borrowings to fund a portion of day-to-day business operations. Actions to reduce inflation, including raising interest rates, increase our cost of borrowing, which in turn could make it more difficult to obtain financing for our operations or investments on favorable terms. Successful implementation of our long-term business strategies, including capital investment, is dependent upon our ability to access the capital and credit markets, including the banking and commercial paper markets, on competitive terms and rates. An economic downturn or uncertainty, market turmoil, changes in interest rates, changes in tax policy, challenges faced by financial institutions, changes in our credit ratings, or a change in investor sentiment toward us or the utilities industry generally could adversely affect our ability to raise additional capital or refinance debt. For example, because NIPSCO's current generating facilities substantially rely on coal for its operations, certain financial institutions may choose not to participate in our financing arrangements. In addition, large institutional investors may choose to sell or choose not to purchase our stock due to environmental, social and governance ("ESG") concerns or concerns regarding renewable energy supply chain challenges. Reduced access to capital markets, increased borrowing costs, and/or lower equity valuation levels could reduce future earnings per share and cash flows. In addition, any rise in interest rates may lead to higher borrowing costs, which may adversely impact reported earnings, cost of capital and capital holdings.

If, in the future, we face limits to the credit and capital markets or experience significant increases in the cost of capital or are unable to access the capital markets, it could limit our ability to implement, or increase the costs of implementing, our business plan, which, in turn, could materially and adversely affect our results of operations, cash flows, financial condition and liquidity.

The COVID-19 pandemic has adversely impacted and may continue to adversely impact our business, results of operations, financial condition, liquidity and cash flows.

The COVID-19 pandemic has resulted in widespread impacts on the global economy and financial markets. The duration and ultimate impact of the COVID-19 pandemic on our business, results of operations and financial condition, including liquidity, capital and financing resources, will depend on numerous evolving factors and future developments, which are highly uncertain and cannot be predicted at this time. Such factors and developments may include the severity and duration of the COVID-19 pandemic, including whether there are periods of increased COVID-19 cases; the emergence of other new or more contagious variants that may render vaccines ineffective or less effective; disruption to our operations resulting from employee illnesses or any inability to attract, retain or motivate employees; the development, availability and administration of effective treatment or vaccines and the willingness of individuals to receive a vaccine; the extent and duration of the impact on the U.S. or global economy, including the pace and extent of recovery from the COVID-19 pandemic; and the actions that have been or may be taken by various governmental authorities in response to the COVID-19 pandemic.

Most of our revenues are subject to economic regulation and are exposed to the impact of regulatory rate reviews and proceedings.

Most of our revenues are subject to economic regulation at either the federal or state level. As such, the revenues generated by us are subject to regulatory review by the applicable federal or state authority. These rate reviews determine the rates charged to customers and directly impact revenues. Our financial results are dependent on frequent regulatory proceedings in order to ensure timely recovery of costs and investments. As described in more detail in the risk factor below, the outcomes of these proceedings are uncertain, potentially lengthy and could be influenced by many factors, some of which may be outside of our control, including the cost of providing service, the necessity of expenditures, the quality of service, regulatory interpretations, customer intervention, economic conditions and the political environment. Further, the rate orders are subject to appeal, which creates additional uncertainty as to the rates that will ultimately be allowed to be charged for services.

The actions of regulators and legislators could result in outcomes that may adversely affect our earnings and liquidity.

The rates that our electric and natural gas companies charge their customers are determined by their state regulatory commissions and by the FERC. These commissions also regulate the companies' accounting, operations, the issuance of certain securities and certain other matters. The FERC also regulates the transmission of electric energy, the sale of electric energy at wholesale, accounting, issuance of certain securities and certain other matters, including reliability standards through the North American Electric Reliability Corporation (NERC).

Under state and federal law, our electric and natural gas companies are entitled to charge rates that are sufficient to allow them an opportunity to recover their prudently incurred operating and capital costs and a reasonable rate of return on invested capital, to attract needed capital and maintain their financial integrity, while also protecting relevant public interests. Our electric and natural gas companies are required to engage in regulatory approval proceedings as a part of the process of establishing the terms and rates for their respective services. Each of these companies prepares and submits periodic rate filings with their respective regulatory commissions for review and approval, which allows for various entities to challenge our current or future rates, structures or mechanisms and could alter or limit the rates we are allowed to charge our customers. These proceedings typically involve multiple parties, including governmental bodies and officials, consumer advocacy groups, and various consumers of energy, who have differing concerns. Any change in rates, including changes in allowed rate of return, are subject to regulatory approval proceedings that can be contentious, lengthy, and subject to appeal. This may lead to uncertainty as to the ultimate result of those proceedings. Established rates are also subject to subsequent prudency reviews by state regulators, whereby various portions of rates could be adjusted, subject to refund or disallowed, including cost recovery mechanisms. The ultimate outcome and timing of regulatory rate proceedings could have a significant effect on our ability to recover costs or earn an adequate return. Adverse decisions in our proceedings could adversely affect our financial position, results of operations and cash flows.

There can be no assurance that regulators will approve the recovery of all costs incurred by our electric and natural gas companies, including costs for construction, operation and maintenance, and compliance with current and future changes in environmental, federal pipeline safety, critical infrastructure and cyber security laws and regulations. Challenges arise with state regulators on inflationary pricing for electric and gas materials and potential price increases, ensuring that updated pricing for electric and gas materials is included in plans and regulatory assumptions, and ensuring there is a regulatory recovery model for emergency inventory stock. There is debate among state regulators and other stakeholders over how to transition to a decarbonized economy and prudency arguments relative to investing in natural gas assets when the depreciable life of the assets may be shortened due to electrification. The inability to recover a significant amount of operating costs could have an adverse effect on a company's financial position, results of operations and cash flows.

Changes to rates may occur at times different from when costs are incurred. Additionally, catastrophic events at other utilities could result in our regulators and legislators imposing additional requirements that may lead to additional costs for the companies.

In addition to the risk of disallowance of incurred costs, regulators may also impose downward adjustments in a company's allowed ROE as well as assess penalties and fines. Regulators may reduce ROE to mitigate potential customer bill increases due to items unrelated to capital investments such as potential increases in taxes and incremental costs related to COVID-19. These actions would have an adverse effect on our financial position, results of operations and cash flows.

Our electric business is subject to mandatory reliability and critical infrastructure protection standards established by NERC and enforced by the FERC. The critical infrastructure protection standards focus on controlling access to critical physical and cybersecurity assets. Compliance with the mandatory reliability standards could subject our electric utilities to higher operating costs. In addition, compliance with PHMSA regulations could subject our gas utilities to higher operating costs. If our businesses are found to be in noncompliance, we could be subject to sanctions, including substantial monetary penalties, or damage to our reputation.

Changes in tax laws, as well as the potential tax effects of business decisions, could negatively impact our business, results of operations (including our expected project returns from our planned renewable energy projects), financial condition and cash flows.

Our business operations are subject to economic conditions in certain industries.

Business operations throughout our service territories have been and may continue to be adversely affected by economic events at the national and local level where our businesses operate. In particular, sales to large industrial customers, such as those in the steel, oil refining, industrial gas and related industries, are impacted by economic downturns and recession; geographic or technological shifts in production or production methods; and consumer demand for environmentally friendly products and practices. The U.S. manufacturing industry continues to adjust to changing market conditions including international competition, inflation and increasing costs, and fluctuating demand for its products. In addition, our results of operations are negatively impacted by lower revenues resulting from higher bankruptcies, predominately focused on commercial and industrial customers not able to sustain operations through the economic disruptions related to the pandemic.

We are exposed to risk that customers will not remit payment for delivered energy or services, and that suppliers or counterparties will not perform under various financial or operating agreements.

Our extension of credit is governed by a Corporate Credit Risk Policy, involves considerable judgment by our employees and is based on an evaluation of a customer or counterparty's financial condition, credit history and other factors. We monitor our credit risk exposure by obtaining credit reports and updated financial information for customers and suppliers, and by evaluating the financial status of our banking partners and other counterparties by reference to market-based metrics such as credit default swap pricing levels, and to traditional credit ratings provided by the major credit rating agencies. Adverse economic conditions result in an increase in defaults by customers, suppliers and counterparties.

ITEM 1A. RISK FACTORS

NISOURCE INC.

We are a holding company and are dependent on cash generated by our subsidiaries to meet our debt obligations and pay dividends on our stock.

We are a holding company and conduct our operations primarily through our subsidiaries, which are separate and distinct legal entities. Substantially all of our consolidated assets are held by our subsidiaries. Accordingly, our ability to meet our debt obligations or pay dividends on our common stock and preferred stock is largely dependent upon cash generated by these subsidiaries. In the event a major subsidiary is not able to pay dividends or transfer cash flows to us, our ability to service our debt obligations or pay dividends could be negatively affected.

The trading prices for our Equity Units, initially consisting of Corporate Units, and related treasury units and Series C Mandatory Convertible Preferred Stock, are expected to be affected by, among other things, the trading prices of our common stock, the general level of interest rates and our credit quality.

The trading prices of the Equity Units, initially consisting of Corporate Units, which are listed on the New York Stock Exchange, and the related treasury units and Series C Mandatory Convertible Preferred Stock in the secondary market, are expected to be affected by, among other things, the trading prices of our common stock, the general level of interest rates and our credit quality. It is impossible to predict whether the price of our common stock or interest rates will rise or fall. The price of our common stock could be subject to wide fluctuations in the future in response to many events or factors, including those discussed in the risk factors herein, many of which events and factors are beyond our control. Fluctuations in interest rates may give rise to arbitrage opportunities based upon changes in the relative value of the common stock underlying the purchase contracts and of the other components of the Equity Units. Any such arbitrage could, in turn, affect the trading prices of the Corporate Units, treasury units, mandatory convertible preferred stock and our common stock.

The early settlement right triggered under certain circumstances and the supermajority rights of the Series C Mandatory Convertible Preferred Stock following a fundamental change, could discourage a potential acquirer.

The fundamental change early settlement right with respect to the purchase contracts triggered under certain circumstances by a fundamental change and the supermajority voting rights of the Series C Mandatory Convertible Preferred Stock in connection with certain fundamental change transactions jointly could discourage a potential acquirer, including potential acquirers that would otherwise seek a transaction with us that would be attractive to our investors.

Our Equity Units, initially consisting of Corporate Units, and related Series C Mandatory Convertible Preferred Stock, and the issuance and sale of common stock in settlement of the purchase contracts and conversion of mandatory convertible preferred stock, may all adversely affect the market price of our common stock and will cause dilution to our stockholders.

The market price of our common stock is likely to be influenced by our Equity Units, initially consisting of Corporate Units, and related mandatory convertible preferred stock. For example, the market price of our common stock could become more volatile and could be depressed by:

- investors' anticipation of the sale into the market of a substantial number of additional shares of our common stock issued upon settlement of the purchase contracts or conversion of our mandatory convertible preferred stock;
- possible sales of our common stock by investors who view our Equity Units, initially consisting of Corporate Units, or related mandatory convertible preferred stock as a more attractive means of equity participation in us than owning shares of our common stock; and
- hedging or arbitrage trading activity that may develop involving our Equity Units, initially consisting of Corporate Units, or related mandatory convertible preferred stock and our common stock.

In addition, we cannot predict the effect that future issuances or sales of our common stock, if any, including those made upon the settlement of the purchase contracts or conversion of the mandatory convertible preferred stock, may have on the market price for our common stock.

Our Equity Units, initially consisting of Corporate Units, and the issuance and sale of substantial amounts of common stock, including issuances and sales upon the settlement of the purchase contracts or conversion of the mandatory convertible preferred stock, could adversely affect the market price of our common stock and will cause dilution to our stockholders.

Capital market performance and other factors may decrease the value of benefit plan assets, which then could require significant additional funding and impact earnings.

NISOURCE INC.

The performance of the capital markets affects the value of the assets that are held in trust to satisfy future obligations under defined benefit pension and other postretirement benefit plans. We have significant obligations in these areas and hold significant assets in these trusts. These assets are subject to market fluctuations and may yield uncertain returns, which fall below our projected rates of return. A decline in the market value of assets may increase the funding requirements of the obligations under the defined benefit pension plans. Additionally, changes in interest rates affect the liabilities under these benefit plans; as interest rates decrease, the liabilities increase, which could potentially increase funding requirements. Further, the funding requirements of the obligations related to these benefits plans may increase due to changes in governmental regulations and participant demographics, including increased numbers of retirements or longer life expectancy assumptions, as well as voluntary early retirements. In addition, lower asset returns result in increased expenses. Ultimately, significant funding requirements and increased pension or other postretirement benefit plan expense could negatively impact our results of operations and financial position.

We have significant goodwill. Any future impairments of goodwill could result in a significant charge to earnings in a future period and negatively impact our compliance with certain covenants under financing agreements.

In accordance with GAAP, we test goodwill for impairment at least annually and review our definite-lived intangible assets for impairment when events or changes in circumstances indicate its fair value might be below its carrying value. Goodwill is also tested for impairment when factors, examples of which include reduced cash flow estimates, a sustained decline in stock price or market capitalization below book value, indicate that the carrying value may not be recoverable.

A significant charge in the future could impact the capitalization ratio covenant under certain financing agreements. We are subject to a financial covenant under our revolving credit facility and term credit agreement, which requires us to maintain a debt to capitalization ratio that does not exceed 70%. As of December 31, 2022, the ratio was 58.9%.

LITIGATION, REGULATORY AND LEGISLATIVE RISKS

The outcome of legal and regulatory proceedings, investigations, inquiries, claims and litigation related to our business operations may have a material adverse effect on our results of operations, financial position or liquidity.

We are involved in legal and regulatory proceedings, investigations, inquiries, claims and litigation in connection with our business operations, including those related to the Greater Lawrence Incident, the most significant of which are summarized in Note 19, "Other Commitments and Contingencies," in the Notes to Consolidated Financial Statements. Our insurance does not cover all costs and expenses that we have incurred relating to the Greater Lawrence Incident, and does not fully cover incidents that could occur in the future. Due to the inherent uncertainty of the outcomes of such matters, there can be no assurance that the resolution of any particular claim or proceeding would not have a material adverse effect on our results of operations, financial position or liquidity.

The Greater Lawrence Incident has materially adversely affected and may continue to materially adversely affect our financial condition, results of operations and cash flows and we may have continued financial liabilities related to the sale of the Massachusetts Business.

In connection with the Greater Lawrence Incident, we have incurred and will incur various costs and expenses. While we have recovered the full amount of our liability insurance coverage available under our policies, total expenses related to the incident exceeded such amount. Expenses in excess of our liability insurance coverage have materially adversely affected and may continue to materially adversely affect our results of operations, cash flows and financial position. We may also incur additional costs associated with the Greater Lawrence Incident, beyond the amount currently anticipated, including in connection with civil litigation. Additionally, it may be difficult to determine whether a claim for damages from a third party related to the Massachusetts Business or the Greater Lawrence Incident is our responsibility or Eversource’s, and we may expend substantial resources trying to determine whether we or Eversource has responsibility for the claim. Further, state or federal legislation may be enacted that would require us to incur additional costs by mandating various changes, including changes to our operating practice standards for natural gas distribution operations and safety. In addition, if it is determined in other matters that we did not comply with applicable statutes, regulations or rules in connection with the operations or maintenance of our natural gas system, and we are ordered to pay additional amounts in penalties, or other amounts, our financial condition, results of operations, and cash flows could be materially and adversely affected.

Our settlement with the U.S. Attorney’s Office in respect of federal charges in connection with the Greater Lawrence Incident may expose us to further penalties, liabilities and private litigation, and may impact our operations.

On February 26, 2020, the Company entered into a DPA and Columbia of Massachusetts entered into a plea agreement with the U.S. Attorney’s Office to resolve the U.S. Attorney’s Office’s investigation relating to the Greater Lawrence Incident, which was subsequently approved by the United States District Court for the District of Massachusetts. The agreements impose various compliance and remedial obligations on the Company and Columbia of Massachusetts. Failure to comply with the terms of these agreements could result in further enforcement action by the U.S. Attorney's Office, expose the Company and Columbia of Massachusetts to penalties, financial or otherwise, and subject the Company to further private litigation, each of which could impact our operations and have a material adverse effect on our business.

Our businesses are subject to various federal, state and local laws, regulations, tariffs and policies. We could be materially adversely affected if we fail to comply with such laws, regulations, tariffs and policies or with any changes in or new interpretations of such laws, regulations, tariffs and policies.

Our businesses are subject to various federal, state and local laws, regulations, tariffs and policies, including, but not limited to, those relating to natural gas pipeline safety, employee safety, the environment and our energy infrastructure. In particular, we are subject to significant federal, state and local regulations applicable to utility companies, including regulations by the various utility commissions in the states where we serve customers. These regulations significantly influence our operating environment, may affect our ability to recover costs from utility customers, and cause us to incur substantial compliance and other costs. Existing laws, regulations, tariffs and policies may be revised or become subject to new interpretations, and new laws, regulations, tariffs and policies may be adopted or become applicable to us and our operations. In some cases, compliance with new laws, regulations, tariffs and policies increases our costs or risks of liability. Supply chain constraints may challenge our ability to remain in compliance if we cannot obtain the materials that we need to operate our business in a compliant manner. If we fail to comply with laws, regulations and tariffs applicable to us or with any changes in or new interpretations of such laws, regulations, tariffs or policies, our financial condition, results of operations, regulatory outcomes and cash flows may be materially adversely affected.

Our businesses are regulated under numerous environmental laws and regulations. The cost of compliance with these laws and regulations, and changes to or additions to, or reinterpretations of the laws and regulations, could be significant, and the cost of compliance may not be recoverable. Liability from the failure to comply with existing or changed laws and regulations could have a material adverse effect on our business, results of operations, cash flows and financial condition.

Our businesses are subject to extensive federal, state and local environmental laws and rules that regulate, among other things, air emissions, water usage and discharges, GHG and waste products such as CCR. Compliance with these legal obligations require us to make significant expenditures for installation of pollution control equipment, remediation, environmental monitoring, emissions fees, and permits at many of our facilities. Furthermore, if we fail to comply with environmental laws and regulations or are found to have caused damage to the environment or persons, that failure or harm may result in the assessment of civil or criminal penalties and damages against us, injunctions to remedy the failure or harm, and the inability to operate facilities as designed and intended.

Existing environmental laws and regulations may be revised and new laws and regulations may be adopted or become applicable to us, with an increasing focus on the impact of coal and natural gas facilities that may result in significant additional expense and operating restrictions on our facilities, which may not be fully recoverable from customers and could materially affect the continued economic viability of our facilities.

An area of significant uncertainty and risk are potential changes to the laws concerning emission of GHG. While we continue to execute our plan to reduce our Scope 1 GHG emissions through the retirement of coal-fired electric generation, increased sourcing of renewable energy, priority pipeline replacement, leak detection and repair, and other methods, and while we have set a Net Zero Goal, GHG emissions are anticipated to be associated with energy delivery for many years. Future GHG legislation and/or regulation related to the generation of electricity or the extraction, production, distribution, transmission, storage and end use of natural gas could materially impact our gas supply, financial position, financial results and cash flows.

Another area of significant uncertainty and risk are the regulations concerning CCR. The EPA has issued regulations and plans to promulgate additional regulations concerning the management, transformation, transportation and storage of CCRs. NIPSCO is also incurring or will incur costs associated with closing, corrective action, and ongoing monitoring of certain CCR impoundments. We have two pending petitions at the Indiana Utility Regulatory Commission (IURC) seeking recovery of ash pond closure costs related to federal regulations governing CCRs at the Michigan City and R.M. Schahfer Generating Stations and believe there is supportive Indiana law authorizing such recovery. Further, a release of CCR to the environment could result in remediation costs, penalties, claims, litigation, increased compliance costs, and reputational damage.

We currently have a pending application with the EPA to continue operation of a CCR impoundment that is tied to operation of R.M. Schahfer Generating Station Units 17 and 18 to the end of 2025, with the CCR impoundment closing by October 2028. In proposed and final EPA actions denying continued operation of CCR impoundments at other utilities, EPA said that CCR impoundments should cease receipt of CCRs within 135 days of final EPA action unless certain conditions are demonstrated, such as potential reliability issues. In the event that approval is not obtained, future operations could be impacted.

The actual future expenditures to achieve environmental compliance depends on many factors, including the nature and extent of impact, the method of improvement, the cost of raw materials, contractor costs, and requirements established by environmental authorities. Changes in costs and the ability to recover under regulatory mechanisms could affect our financial position, financial results and cash flows.

Changes in taxation and the ability to quantify such changes as well as challenges to tax positions could adversely affect our financial results.

We are subject to taxation by the various taxing authorities at the federal, state and local levels where we do business. Legislation or regulation which could affect our tax burden could be enacted by any of these governmental authorities. The IRA imposed a 15 percent minimum tax rate on book earnings for corporations with higher than $1 billion of annual income, along with a 1 percent excise tax on corporate stock repurchases while providing tax incentives to promote various clean energy initiatives. We are currently assessing the potential impact of these legislative changes. The outcome of regulatory proceedings regarding the extent to which the effect of a change in corporate tax rate will impact customers and the time period over which the impact will occur could significantly impact future earnings and cash flows. Separately, a challenge by a taxing authority, changes in taxing authorities' administrative interpretations, decisions, policies and positions, our ability to utilize tax benefits such as carryforwards or tax credits, or a deviation from other tax-related assumptions may cause actual financial results to deviate from previous estimates.

ITEM 1B. UNRESOLVED STAFF COMMENTS

NISOURCE INC.

None.

ITEM 2. PROPERTIES

Discussed below are the principal properties held by us and our subsidiaries as of December 31, 2022.

Gas Distribution Operations
Refer to Item 1, "Business - Gas Distribution Operations," of this report for further information on Gas Distribution Operations properties.

Electric Operations
Refer to Item 1, "Business - Electric Operations," of this report for further information on Electric Operations properties.

Corporate and Other Operations
We own the Southlake Complex, our 325,000 square foot headquarters building located in Merrillville, Indiana.

Character of Ownership
Our principal properties and our subsidiaries' principal properties are owned free from encumbrances, subject to minor exceptions, none of which are of such a nature as to impair substantially the usefulness of such properties. Many of our subsidiary offices in various communities served are occupied under leases. All properties are subject to routine liens for taxes, assessments and undetermined charges (if any) incidental to construction. It is our practice to regularly pay such amounts, as and when due, unless contested in good faith. In general, the electric lines, gas pipelines and related facilities are located on land not owned by us or our subsidiaries, but are covered by necessary consents of various governmental authorities or by appropriate rights obtained from owners of private property. We do not, however, generally have specific easements from the owners of the property adjacent to public highways over, upon or under which our electric lines and gas distribution pipelines are located. At the time each of the principal properties was purchased, a title search was made. In general, no examination of titles as to rights-of-way for electric lines, gas pipelines or related facilities was made, other than examination, in certain cases, to verify the grantors’ ownership and the lien status thereof.

ITEM 3. LEGAL PROCEEDINGS

For a description of our legal proceedings, see Note 19, "Other Commitments and Contingencies - C. Legal Proceedings," in the Notes to Consolidated Financial Statements.

ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

PART II

ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

NISOURCE INC.

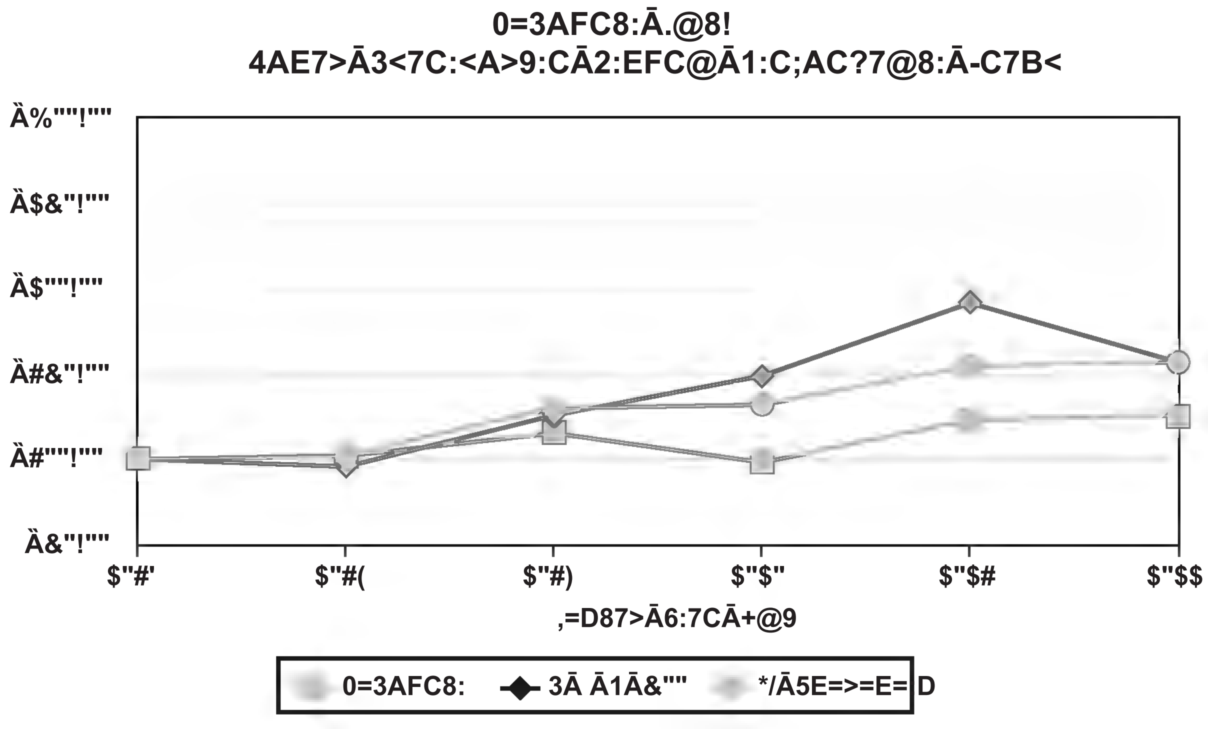
NiSource's common stock is listed and traded on the New York Stock Exchange under the symbol "NI."

Holders of shares of NiSource's common stock are entitled to receive dividends if and when declared by the Board out of funds legally available, subject to the prior dividend rights of holders of our preferred stock or the depositary shares representing such preferred stock outstanding, and if full dividends have not been declared and paid on all outstanding shares of preferred stock in any dividend period, no dividend may be declared or paid or set aside for payment on our common stock. The policy of the Board has been to declare cash dividends on a quarterly basis payable on or about the 20th day of February, May, August, and November. At its January 26, 2023 meeting, the Board declared a quarterly common dividend of $0.250 per share, payable on February 17, 2023 to holders of record on February 7, 2023.

Although the Board currently intends to continue the payment of regular quarterly cash dividends on common shares, the timing and amount of future dividends will depend on the earnings of NiSource's subsidiaries, their financial condition, cash requirements, regulatory restrictions, any restrictions in financing agreements and other factors deemed relevant by the Board. There can be no assurance that NiSource will continue to pay such dividends or the amount of such dividends.

As of February 15, 2023, NiSource had 16,572 common stockholders of record and 412,507,944 shares outstanding.

The graph below compares the cumulative total shareholder return of NiSource's common stock for the period commencing December 31, 2017 and ending December 31, 2022 with the cumulative total return for the same period of the S&P 500 and the Dow Jones Utility indices.



The foregoing performance graph is being furnished as part of this annual report solely in accordance with the requirement under Rule 14a-3(b)(9) to furnish stockholders with such information, and therefore, shall not be deemed to be filed or incorporated by reference into any filings by NiSource under the Securities Act or the Exchange Act.

The total shareholder return for NiSource common stock and the two indices is calculated from an assumed initial investment of $100 and assumes dividend reinvestment.

Purchases of Equity Securities by Issuer and Affiliated Purchasers. For the three months ended December 31, 2022, no equity securities that are registered by NiSource Inc. pursuant to Section 12 of the Securities Exchange Act of 1934 were purchased by or on behalf of us or any of our affiliated purchasers.

Gas Distribution Operations	39
Electric Operations	42
Liquidity and Capital Resources	46
Market Risk Disclosures	50
Other Information	51

EXECUTIVE SUMMARY

This Management's Discussion and Analysis of Financial Condition and Results of Operations ("Management's Discussion") includes management's analysis of past financial results and certain potential factors that may affect future results, potential future risks and approaches that may be used to manage those risks. See "Note regarding forward-looking statements" and Item 1A, "Risk Factors" at the beginning of this report for a list of factors that may cause results to differ materially.

This Management's Discussion is designed to provide an understanding of our operations and financial performance and should be read in conjunction with our Consolidated Financial Statements and related Notes to Consolidated Financial Statements in this annual report.

We are an energy holding company under the Public Utility Holding Company Act of 2005 whose subsidiaries are fully regulated natural gas and electric utility companies serving customers in six states. We generate substantially all of our operating income through these rate-regulated businesses, which are summarized for financial reporting purposes into two primary reportable segments: Gas Distribution Operations and Electric Operations.

Refer to the "Business" section under Item 1 of this annual report and Note 21, "Business Segment Information," in the Notes to Consolidated Financial Statements for further discussion of our regulated utility business segments.

Our goal is to develop strategies that benefit all stakeholders as we (i) embark on long-term infrastructure investment and safety programs to better serve our customers, (ii) align our tariff structures with our cost structure, and (iii) address changing customer conservation patterns. These strategies focus on improving safety and reliability, enhancing customer service, ensuring customer affordability and reducing emissions while generating sustainable returns. The safety of our customers, communities and employees remains our top priority. In 2022, NiSource achieved conformance certification to the American Petroleum Institute Recommended Practice 1173, which serves as the guiding practice for our SMS. This certification marks an important milestone for our SMS and NiSource's journey towards operational excellence. Additionally, we continue to pursue regulatory and legislative initiatives that will allow residential customers not currently on our system to obtain gas service in a cost effective manner.

2022 Overview: In 2022, we continued to make significant progress towards our strategic and financial goals and objectives. We completed the first full year of operating Indiana Crossroads Wind, and construction is near completion for two of our solar projects. In 2022, we filed four rate cases and resolved three, in Pennsylvania, Maryland, and the gas rate case in Indiana filed in 2021. In addition, the Ohio rate case was resolved in January 2023 and the Virginia rate case is anticipated to be resolved in the first quarter of 2023. These cases represent balanced outcomes supporting all stakeholders. Between our Gas Distribution and Electric Operating Segments, we added 25,000 customers. We also invested $1.6 billion in infrastructure modernization to enhance safe, reliable service, including replacement of 410 miles of distribution main and service lines, 48 miles of underground cable and 1,352 electric poles.

We also made advancements in key strategic initiatives, described in further detail below.

Your Energy, Your Future: Our plan to replace our coal generation capacity by the end of 2028 with primarily renewable resources, initiated through our 2018 Integrated Resource Plan ("2018 Plan") is well underway, and we are continually adjusting to the dynamic renewable energy landscape. As of December 31, 2022, we have executed and received IURC approval for BTAs and PPAs with a combined nameplate capacity of 1,950 MW and 1,380 MW, respectively, under the 2018 Plan. During 2022, we made significant progress on our first two solar BTAs and anticipate completion of these projects and tax equity financing in 2023. We have also taken contractual actions on a number of our other renewable projects to address the timing of these projects as well as consider the broad market issues facing the industry. We remain on track to retire R.M Schahfer's remaining two coal units by the end of 2025. In August 2022, the IRA was signed into law. We are evaluating the impact of this legislation to our renewable projects with potential to drive increased value to customers as part of our expansion of renewable projects and generation transition strategy. However, the leveraging of the IRA will be considered on a project-by-project basis and evaluate several factors, both quantitative and qualitative, that results in the best position for project success as well as customer and company considerations. For additional information, see "Results and Discussion of Segment Operations - Electric Operations," in this Management's Discussion.

In 2021, we announced and filed with the IURC the Preferred Energy Resource Plan associated with our 2021 Integrated Resource Plan ("2021 Plan"). The 2021 Plan lays out a timeline to retire the Michigan City Generating Station by the end of 2028. The 2021 Plan calls for the replacement of the retiring units with a diverse portfolio of resources including demand side management resources, incremental solar, stand-alone energy storage and upgrades to existing facilities at the Sugar Creek Generating Station, among other steps. Additionally, the 2021 Plan calls for a natural gas peaking unit to replace existing vintage gas peaking units at the R.M. Schahfer Generating Station to support system reliability and resiliency, as well as upgrades to the transmission system to enhance our electric generation transition. The planned retirement of the two vintage gas peaking units at the R.M. Schahfer Generating Station is also expected to occur by the end of 2028. Final retirement dates for these units, as well as Michigan City, will be subject to MISO approval. We are continuing to evaluate potential projects under the 2021 Plan given the responses to our Request for Proposal issued in August 2022.

Transformation: The NiNext initiative, which commenced in 2020, focused on optimizing our workforce and advancing our operations. NiNext has been foundational in preparing for incremental, enterprise-wide investments to address inefficiencies in our current technology footprint, which stem primarily from a complex array of legacy systems. We plan to address these inefficiencies through our Enterprise Transformation Roadmap with investments in technology systems and infrastructure. As a result of these investments, we will deliver more modern, dependable, and secure IT systems backed with standardized processes to reduce the operating risks of our business, increase workforce efficiencies, and increase visibility to data which will be leveraged to drive risk-informed decisions. Our Enterprise Transformation Roadmap will position us to accomplish future strategic investments and aspirational goals.

Economic Environment: We are monitoring risks related to increasing order and delivery lead times for construction and other materials, increasing risk of unavailability of materials due to global shortages in raw materials, and risk of decreased construction labor productivity in the event of disruptions in the availability of materials. We are also seeing increasing prices associated with certain materials and supplies. To the extent that delays occur or our costs increase, our business operations, results of operations, cash flows, and financial condition could be materially adversely affected. For more information on supply chain impacts to our electric generation strategy, see "Results and Discussion of Segment Operations - Electric Operations," in this Management's Discussion.

Early in 2022, NIPSCO experienced a rail service shortage in deliveries of coal, particularly to its Michigan City Generating Station, and the primary rail carrier for that generating station was unable to provide assurance of adequate future service to maintain coal inventory. A lack of adequate coal deliveries to any of our coal-fired generating facilities for an extended period could deplete our inventories to a level that prevents the generating station from running, and NIPSCO would need to rely on market purchases of replacement power, which could increase the cost of electricity for NIPSCO's customers. NIPSCO believes these shortages have been resolved but continues to monitor deliveries of coal from its rail carriers. This did not have a material impact on our operations in 2022.

We are faced with increased competition for employee and contractor talent in the current labor market, which has resulted in increased costs to attract and retain talent. We are ensuring that we use all internal human capital programs (development, leadership enablement programs, succession, performance management) to promote retention of our current employees along with having a competitive and attractive appeal for potential recruits. With a focus on workforce planning, we are anticipating to evaluate our talent footprint for the future by creating flexible work arrangements where we can, to ensure we have the right people, in the right role, and at the right time. To the extent we are unable to execute on our workforce planning initiatives and experience increased employee and contractor costs, our business operations, results of operations, cash flows, and financial condition could be materially adversely affected.

We experienced an increase in natural gas costs as the spot market for natural gas substantially increased throughout much of 2022, followed by a decrease in the price of natural gas since November 2022. Nationally, levels of gas in storage were lower in 2022 compared to 2021, liquified natural gas exports to Europe continued at a steady pace, and domestic production saw a recent decline in demand. These factors drove increased volatility in the marketplace, which influenced customer bills throughout 2022. While production was increasing towards the end of 2022, weather changes have limited demand and decreased withdrawals, causing inventory balances to be higher compared to 2021. With this decline in price, we expect to see lower volatility and declining customer bills. For the year ended December 31, 2022, we did not see this volatility have a material impact on our results of operations. For more information on our commodity price impacts, see "Results and Discussion of Segment Operations - Gas Distribution Operations," and "Market Risk Disclosures."

Due to rising interest rates, we experienced higher interest expense in 2022 compared to 2021 associated with short-term borrowings. We continue to evaluate our financing plan to manage interest expense and exposure to rates. For more information on interest rate risk, see "Market Risk Disclosures".

For more information on global availability of materials for our renewable projects, see "Results and Discussion of Segment Operations - Electric Operations - Electric Supply and Generation Transition."

Summary of Consolidated Financial Results

A summary of our consolidated financial results for the years ended December 31, 2022, 2021 and 2020, are presented below:

Year Ended December 31, *(in millions, except per share amounts)*	**2022**	2021	2020	Favorable (Unfavorable) 2022 vs. 2021	Favorable (Unfavorable) 2021 vs. 2020
Operating Revenues	**$ 5,850.6**	$ 4,899.6	$ 4,681.7	$ 951.0	$ 217.9
Operating Expenses					
Cost of energy	**2,110.5**	1,392.3	1,109.3	(718.2)	(283.0)
Other Operating Expenses	**2,474.3**	2,500.4	3,021.6	26.1	521.2
Total Operating Expenses	**4,584.8**	3,892.7	4,130.9	(692.1)	238.2
Operating Income	**1,265.8**	1,006.9	550.8	258.9	456.1
Total Other Deductions, Net	**(309.4)**	(300.3)	(582.1)	(9.1)	281.8
Income Taxes	**164.6**	117.8	(17.1)	(46.8)	(134.9)
Net Income (Loss)	**791.8**	588.8	(14.2)	203.0	603.0
Net income (loss) attributable to noncontrolling interest	**(12.3)**	3.9	3.4	16.2	(0.5)
Net Income (Loss) attributable to NiSource	**804.1**	584.9	(17.6)	219.2	602.5
Preferred dividends	**(55.1)**	(55.1)	(55.1)	—	—
Net Income (Loss) Available to Common Shareholders	**749.0**	529.8	(72.7)	219.2	602.5
Basic Earnings (Loss) Per Share	**$ 1.84**	$ 1.35	$ (0.19)	$ 0.49	$ 1.54
Diluted Earnings (Loss) Per Share	**$ 1.70**	$ 1.27	$ (0.19)	$ 0.43	$ 1.46

The majority of the costs of energy in both segments are tracked costs that are passed through directly to the customer, resulting in an equal and offsetting amount reflected in operating revenues.

The increase in net income available to common shareholders during 2022 was primarily due to higher revenues from outcomes of gas base rate proceedings and regulatory capital programs, as well as an insurance settlement related to the Greater Lawrence Incident, offset by higher income taxes in 2022 compared to 2021.

For additional information on operating income variance drivers see "Results and Discussion of Segment Operations" for Gas and Electric Operations in this Management's Discussion.

Other Deductions, Net

The change in Other deductions, net in 2022 compared to 2021 is primarily driven by higher long-term and short-term debt interest in 2022 and lower non-service pension benefits partially offset by the interest rate swap settlement gain in 2022 and charitable contributions in 2021. See Note 15, "Long-Term Debt," Note 16, "Short-Term Borrowings," and Note 12, "Pension and Other Postemployment Benefits," in the Notes to Consolidated Financial Statements for additional information.

Income Taxes
The increase in income tax expense in 2022 compared to the same period in 2021 is primarily attributable to higher pre-tax income, offset by higher state flow through and the reduction of the Pennsylvania corporate income tax rate.

Refer to Note 11, "Income Taxes," in the Notes to Consolidated Financial Statements for additional information on income taxes and the change in the effective tax rate.

RESULTS AND DISCUSSION OF OPERATIONS

Presentation of Segment Information
Our operations are divided into two primary reportable segments: Gas Distribution Operations and Electric Operations. The remainder of our operations, which are not significant enough on a stand-alone basis to warrant treatment as an operating segment, are presented as "Corporate and Other" within the Notes to the Consolidated Financial Statements and primarily are comprised of interest expense on holding company debt, and unallocated corporate costs and activities.

NISOURCE INC.
Gas Distribution Operations

Financial and operational data for the Gas Distribution Operations segment for the years ended December 31, 2022, 2021 and 2020, are presented below:

				Favorable (Unfavorable)	
Year Ended December 31, *(in millions)*	**2022**	2021	2020	2022 vs. 2021	2021 vs. 2020
Operating Revenues	**$ 4,019.8**	$ 3,183.5	$ 3,140.1	$ 836.3	$ 43.4
Operating Expenses					
Cost of energy	**1,534.8**	962.7	794.2	(572.1)	(168.5)
Operation and maintenance	**1,045.3**	993.8	1,138.0	(51.5)	144.2

NISOURCE INC.
Gas Distribution Operations (continued)

Comparability of operation and maintenance expenses, depreciation and amortization, and other taxes may be impacted by regulatory, depreciation and tax trackers that allow for the recovery in rates of certain costs.

The underlying reasons for changes in our operating revenues and expenses from 2022 to 2021 are presented in the respective tables below. Please refer to Part II, Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Results and Discussion of Segment Operations - Gas Distribution Operations," of the Company's 2021 Annual Report on Form 10-K for discussion of underlying reasons for changes in our operating revenues and expenses for 2021 versus 2020.

		Favorable (Unfavorable)
Changes in Operating Revenues *(in millions)*		**2022 vs 2021**
New rates from base rate proceedings and regulatory capital programs	$	169.7
The effects of weather in 2022 compared to 2021		31.1
Higher revenue related to off system sales		8.8
The effects of customer growth		4.9
Higher revenue due to the effects of resuming common credit mitigation practices		3.5
Increased customer usage		2.3
Other		4.7
Change in operating revenues (before cost of energy and other tracked items)	$	225.0
Operating revenues offset in operating expense		
Higher cost of energy billed to customers		572.1
Higher tracker deferrals within operation and maintenance, depreciation, and tax		39.2
Total change in operating revenues	**$**	**836.3**

Weather
In general, we calculate the weather-related revenue variance based on changing customer demand driven by weather variance from normal heating degree days, net of weather normalization mechanisms. Our composite heating degree days reported do not directly correlate to the weather-related dollar impact on the results of Gas Distribution Operations. Heating degree days experienced during different times of the year or in different operating locations may have more or less impact on volume and dollars depending on when and where they occur. When the detailed results are combined for reporting, there may be weather-related dollar impacts on operations when there is not an apparent or significant change in our aggregated composite heating degree day comparison.

Throughput
The increase in total volumes sold and transported in 2022 compared to 2021 of 26.4 MMDth is primarily attributable to the effects of colder weather.

Commodity Price Impact
Cost of energy for the Gas Distribution Operations segment is principally comprised of the cost of natural gas used while providing transportation and distribution services to customers. All of our Gas Distribution Operations companies have state-approved recovery mechanisms that provide a means for full recovery of prudently incurred gas costs. These are tracked costs that are passed through directly to the customer, and the gas costs included in revenues are matched with the gas cost expense recorded in the period. The difference is recorded on the Consolidated Balance Sheets as under-recovered or over-recovered gas cost to be included in future customer billings. Therefore, increases in these tracked operating expenses are offset by increases in operating revenues and have essentially no impact on net income.

Certain Gas Distribution Operations companies continue to offer choice opportunities, where customers can choose to purchase gas from a third-party supplier, through regulatory initiatives in their respective jurisdictions.

NISOURCE INC.
Gas Distribution Operations (continued)

Changes in Operating Expenses *(in millions)*		**Favorable (Unfavorable) 2022 vs 2021**
Property insurance settlement related to the Greater Lawrence Incident	$	105.0
Lower NiSource Next program expenses		20.0
Lower other than income taxes primarily related to property tax expense		17.8
Loss on sale and expenses related to the Massachusetts Business in 2021		16.6
Higher depreciation and amortization expense		(35.1)
Higher outside services expenses		(12.2)
Higher employee and administrative related expenses		(10.0)
Higher fleet expenses		(5.5)
Rate case settlement impacts		(3.7)
Higher unrecoverable environmental remediation costs		(2.7)
Higher materials and supplies expense		(2.7)
Earnings test reserve adjustment in 2021		(2.5)
Other		(11.7)
Change in operating expenses (before cost of energy and other tracked items)	$	73.3
Operating expenses offset in operating revenue		
Higher cost of energy billed to customers		(572.1)
Higher tracker deferrals within operation and maintenance, depreciation, and tax		(39.2)
Total change in operating expense	**$**	**(538.0)**

Columbia of Massachusetts Asset Sale

On October 9, 2020, we completed the sale of our Massachusetts Business. In March 2021, we reached an agreement with Eversource regarding the final purchase price, including net working capital adjustments. This resulted in a pre-tax loss for the years ended December 31, 2022 and 2021 of zero and $6.8 million, respectively, based on asset and liability balances as of the close of the transaction on October 9, 2020, transaction costs and the final purchase price. The pre-tax loss is presented as "Loss (gain) on sale of assets, net" on the Statements of Consolidated Income (Loss).

NISOURCE INC.
Electric Operations

Financial and operational data for the Electric Operations segment for the years ended December 31, 2022, 2021 and 2020, are presented below:

				Favorable (Unfavorable)	
Year Ended December 31, *(in millions)*	**2022**	2021	2020	2022 vs. 2021	2021 vs. 2020

NiSource Inc.
Electric Operations (continued)

Comparability of operation and maintenance expenses and depreciation and amortization may be impacted by regulatory and depreciation trackers that allow for the recovery in rates of certain costs.

The underlying reasons for changes in our operating revenues and expenses from 2022 to 2021 are presented in the respective tables below. Please refer to Part II, Item 7, "Management's Discussion and Analysis of Financial Condition and Results of Operations - Results and Discussion of Segment Operations - Electric Operations," of the Company's 2021 Annual Report on Form 10-K for discussion of underlying reasons for changes in our operating revenues and expenses for 2021 versus 2020.

Changes in Operating Revenues *(in millions)*		**Favorable (Unfavorable) 2022 vs 2021**
PPA revenue from renewable JV projects, fully offset by JV operating expenses and noncontrolling interest net income (loss)	$	27.5
The effects of customer growth		4.6
Decreased fuel handling costs		4.0
New rates from regulatory capital and DSM programs		2.8
Decreased customer usage		(18.5)
Reduction in gross receipts tax, offset in operating expenses		(10.3)
FAC adjustment[1]		(8.0)
FAC over earnings reserve		(5.8)
The effects of weather in 2022 compared to 2021		(5.0)
Other		(2.4)
Change in operating revenues (before cost of energy and other tracked items)	$	(11.1)
Operating revenues offset in operating expense		
Higher cost of energy billed to customers		146.1
Lower tracker deferrals within operation and maintenance, depreciation and tax		(0.4)
Total change in operating revenues	**$**	**134.6**

[1]See Note 9, "Regulatory Matters," in the Notes to Consolidated Financial Statements for additional information.

Weather
In general, we calculate the weather-related revenue variance based on changing customer demand driven by weather variance from normal heating or cooling degree days. Our composite heating or cooling degree days reported do not directly correlate to the weather-related dollar impact on the results of Electric Operations. Heating or cooling degree days experienced during different times of the year may have more or less impact on volume and dollars depending on when they occur. When the detailed results are combined for reporting, there may be weather-related dollar impacts on operations when there is not an apparent or significant change in our aggregated composite heating or cooling degree day comparison.

Sales
NIPSCO's Electric Segment results remains closely linked to the performance of the steel industry. MWh sales to steel-related industries accounted for approximately 47.4% and 48.1% of the total industrial MWh sales for the years ended December 31, 2022 and 2021, respectively.

Commodity Price Impact
Cost of energy for the Electric Operations segment is principally comprised of the cost of coal, natural gas purchased for internal generation of electricity at NIPSCO, and the cost of power purchased from generators of electricity. NIPSCO has a state-approved recovery mechanism that provides a means for full recovery of prudently incurred costs of energy. The majority of these costs of energy are passed through directly to the customer, and the costs of energy included in operating revenues are matched with the cost of energy expense recorded in the period. The difference is recorded on the Consolidated Balance Sheets as under-recovered or over-recovered fuel cost to be included in future customer billings. Therefore, increases in these tracked operating expenses are offset by increases in operating revenues and have essentially no impact on net income.

Total change in operating expense	**$**	**(160.0)**

[1]See Note 9, "Regulatory Matters," in the Notes to Consolidated Financial Statements for additional information.

Electric Supply and Generation Transition

NIPSCO continues to execute on an electric generation transition consistent with the 2018 Plan, which outlines the path to retire the remaining two coal units at Schahfer by the end of 2025 and the remaining coal-fired generation by the end of 2028, to be replaced by lower-cost, reliable and cleaner options. See "Project Status" discussion, below, and "Liquidity and Capital Resources" in this Management's Discussion for anticipated barriers to the success of our electric generation transition and additional information on our capital investment spend.

NIPSCO continues to work with the EPA and the Indiana Department of Environmental Management to obtain administrative approvals associated with the operation of R.M. Schahfer's remaining two coal units beyond 2023. In the event that the approvals are not obtained, future operations could be impacted. We cannot estimate the financial impact on us if these approvals are not obtained.

The current replacement plan primarily includes renewable sources of energy, including wind, solar, and battery storage to be obtained through a combination of NIPSCO ownership and PPAs. NIPSCO has sold, and may in the future sell, renewable energy credits from this generation to third parties to offset customer costs. NIPSCO has executed several PPAs to purchase 100% of the output from renewable generation facilities at a fixed price per MWh. Each facility supplying the energy will have an associated nameplate capacity, and payments under the PPAs will not begin until the associated generation facility is constructed by the owner/seller. NIPSCO has also executed several BTAs with developers to construct renewable generation facilities.

Three wind projects have been placed into service, totaling approximately 804 MW of nameplate capacity. All announced projects below have received IURC approval. During 2022, NIPSCO amended certain of its BTAs and PPAs. NIPSCO is discussing potentially amending other BTAs and PPAs. Any amendments that result in increased project costs may require additional approval by the IURC in order to obtain recovery for increased costs. Our current replacement program will be augmented by the Preferred Energy Resource Plan outlined in our 2021 Integrated Resource Plan. See "Executive Summary - Your Energy, Your Future" in this Management's Discussion for additional information.

Gibson	22 year PPA	Solar	280	—
Green River	20 year PPA	Solar	200	—

(1) Ownership of the facilities will be transferred to JVs whose members are expected to include NIPSCO and an unrelated tax equity partner.

Project Status. Our contract amendments with certain solar agreements will result in the majority of our remaining projects, and investments, being placed in service between 2023 and 2025. These amendments also formally address inflationary cost pressures communicated from the developers of our solar and storage projects that are primarily due to (i) unavailability of solar panels and other uncertainties related to the pending U.S. Department of Commerce investigation on Antidumping and Countervailing Duties petition filed by a domestic solar manufacturer (the "DOC Investigation"), (ii) the U.S. Department of Homeland Security's June 2021 Withhold Release Order on silica-based products made by Hoshine Silicon Industry Co., Ltd./ Uyghur Forced Labor Prevention Act, (iii) Section 201 Tariffs and (iv) persistent general global supply chain and labor availability issues. We are also monitoring the developers of our renewable energy projects related to local permitting processes and obtaining interconnection rights. Preliminary findings from the DOC Investigation were released in December 2022, with a final decision expected in May 2023. The resolution of these issues, including the final conclusion of the DOC Investigation will determine which, if any, of our solar projects will be subject to any tariffs imposed.

In June 2022, the Biden Administration announced a 24-month tariff relief on solar panels subject to the ongoing U.S. Department of Commerce investigation and authorized the use of the Defense Production Act, to accelerate domestic production of clean energy technologies, including solar panel parts.

NISOURCE INC.

Liquidity and Capital Resources

We continually evaluate the availability of adequate financing to fund our ongoing business operations, working capital and core safety and infrastructure investment programs. Our financing is sourced through cash flow from operations and the issuance of debt and/or equity. External debt financing is provided primarily through the issuance of long-term debt, accounts receivable securitization programs and our $1.5 billion commercial paper program, which is backstopped by our committed revolving credit facility with a total availability from third-party lenders of $1.85 billion. On December 20, 2022, we entered into a $1.0 billion term credit agreement that matures on December 19, 2023. On February 18, 2022, we amended our revolving credit agreement to, among other things, extend its term to February 18, 2027. The commercial paper program and credit facility provide cost-effective, short-term financing until it can be replaced with a balance of long-term debt and equity financing that achieves our desired capital structure. On June 10, 2022, we completed the issuance and sale of $350.0 million of 5.00% senior unsecured notes maturing in 2052, which resulted in approximately $344.6 million of net proceeds after discount and debt issuance costs. We intend to disburse an amount equal to the net proceeds of the notes to finance, in whole or in part, the acquisition of our 302 MW Indiana Crossroads Wind project and 102 MW Rosewater Wind project from the project developer. On November 7, 2022, we announced that we intend to pursue the sale of a minority interest in our NIPSCO business unit. We utilize an ATM equity program that allows us to issue and sell shares of our common stock up to an aggregate issuance of $750.0 million through December 31, 2023. As of December 31, 2022, the ATM program had approximately $300.0 million of equity available for issuance. We also expect to remarket the Series C Mandatory Convertible Preferred Stock prior to December 1, 2023, which could result in additional cash proceeds. See Note 13, "Equity," in the Notes to Consolidated Financial Statements for more information on our ATM program and Equity Units.

We believe these sources provide adequate capital to fund our operating activities and capital expenditures in 2023 and beyond.

Greater Lawrence Incident. As discussed in Part I, Item 1A, "Risk Factors," and in Note 19, "Other Commitments and Contingencies," in the Notes to Consolidated Financial Statements, due to the inherent uncertainty of litigation, there can be no assurance that the outcome or resolution of any particular claim related to the Greater Lawrence Incident will not continue to have an adverse impact on our cash flows. Through income generated from operating activities, amounts available under the short-term revolving credit facility, and our ability to access capital markets, we believe we have adequate capital available to settle remaining anticipated claims associated with the Greater Lawrence Incident.

Operating Activities

Net cash from operating activities for the year ended December 31, 2022 was $1,409.4 million, an increase of $191.5 million from 2021. This increase was primarily driven by a year over year increase in revenue and collection of under-recovered gas and fuel cost from the prior year. This was offset by increased cash outflows related to inventory purchases year over year due to higher gas costs.

Investing Activities

Net cash used for investing activities for the year ended December 31, 2022 was $2,570.2 million, an increase of $365.3 million from 2021. Our current year investing activities were comprised of increased capital expenditures related to system growth and reliability as well as payments to renewable generation asset developers related to Dunn's Bridge I and Indiana Crossroads Solar milestone payments. This was offset by the property insurance settlement related to the Greater Lawrence Incident.

NISOURCE INC.

Capital Expenditures. The table below reflects actual capital expenditures and certain other investing activities by segment for 2022.

(in millions)	**Actual 2022**
Gas Distribution Operations	
System Growth and Tracker	**$ 1,266.1**
Maintenance	**329.7**
Total Gas Distribution Operations[1]	**1,595.8**
Electric Operations	
System Growth and Tracker	**345.0**
Maintenance	**164.2**
Generation Transition Investments	**31.4**
Total Electric Operations[1]	**540.6**
Corporate and Other Operations - Maintenance[1]	**161.6**
Total Capital Expenditures[2]	**$ 2,298.0**

[1]Amounts differ from those presented in Note 21, "Business Segment Information," in the Notes to Consolidated Financial Statements due to the allocation of Corporate and Other Maintenance Costs to the Gas Distribution and Electric Operations segments.
[2]Amounts differ from those presented on the Statements of Consolidated Cash Flows primarily due to the capitalized portion of the Corporate Incentive Plan payout, inclusion of capital expenditures included in current liabilities and AFUDC Equity.

In addition to these capital expenditures, we made $323.9 million of capital investments in the form of milestone payments to the renewable generation asset developer.

We expect to make capital investments totaling approximately $15 billion during the 2023-2027 period related to infrastructure modernization, generation transition and renewables and customer growth for the next five years:

(in billions)	**2022 Actual**	**2023 Estimated**	**2024 Estimated**	**2025 Estimated**	**2026 Estimated**	**2027 Estimated**
Capital Investments	$2.6	$3.3 - 3.6	$2.6 - 2.9	$3.1 - 3.4	$2.7 - 3.0	$ 2.7 - 3.0

Regulatory Capital Programs. We replace pipe and modernize our gas infrastructure to enhance safety and reliability and reduce leaks. An ancillary benefit of these programs is the reduction of GHG emissions. In 2022, we continued to move forward on core infrastructure and environmental investment programs supported by complementary regulatory and customer initiatives across all six states of our operating area.

NISOURCE INC.

The following table describes the most recent vintage of our regulatory programs to recover infrastructure replacement and other federally mandated compliance investments currently in rates or pending commission approval:

(in millions)

Company	Program	Incremental Revenue	Incremental Capital Investment	Investment Period	Costs Covered[1]	Rates Effective
Columbia of Ohio[2]	IRP - 2022	$ 25.0	$ 232.9	1/21-12/21	Replacement of (1) hazardous service lines, (2) cast iron, wrought iron, uncoated steel, and bare steel pipe, (3) natural gas risers prone to failure and (4) installation of AMR devices.	May 2022
Columbia of Ohio[2]	CEP - 2022	$ 32.2	$ 253.5	1/21-12/21	Assets not included in the IRP.	September 2022
NIPSCO - Gas[3]	TDSIC 4	$ 0.5	$ 77.5	7/21-12/21	New or replacement projects undertaken for the purpose of safety, reliability, system modernization or economic development.	July 2022
NIPSCO - Gas[4]	FMCA 1	$ 1.5	$ 14.1	10/21-3/22	Project costs to comply with federal mandates.	October 2022
NIPSCO - Gas[4]	FMCA 2	$ 5.3	$ 38.2	4/22-9/22	Project costs to comply with federal mandates.	April 2023
Columbia of Virginia[5]	SAVE - 2023	$ 4.5	$ 45.9	1/23-12/23	Replacement projects that (1) enhance system safety or reliability, or (2) reduce, or potentially reduce, greenhouse gas emissions.	January 2023
Columbia of Kentucky[6]	SMRP - 2023	$ 1.6	$ 41.6	1/23-12/23	Replacement of mains and inclusion of system safety investments.	January 2023
Columbia of Maryland	STRIDE - 2023	$ 1.3	$ 18.0	1/23-12/23	Pipeline upgrades designed to improve public safety or infrastructure reliability.	January 2023
NIPSCO - Electric[7]	TDSIC - 1	$ 10.4	$ 148.5	6/21-1/22	New or replacement projects undertaken for the purpose of safety, reliability, system modernization or economic development.	August 2022
NIPSCO - Electric	TDSIC - 2	$ 6.6	$ 143.5	2/22-7/22	New or replacement projects undertaken for the purpose of safety, reliability, system modernization or economic development.	February 2023

(1)Programs do not include any costs already included in base rates.
(2)The January through March 2021 investments included in these filings are also included in the pending Columbia of Ohio rate case. The infrastructure filings will be adjusted to reflect the final rate case outcome.
(3)NIPSCO Gas program incremental revenue decreased because of revisions for the rate case compliance filings amounts included in base rates.
(4)NIPSCO received approval for a new certificate of public convenience and necessity on December 28, 2022 for an additional Pipeline Safety III Compliance Plan, including $235.3M in capital and $34.1M in operation and maintenance expense project investments.
(5) Columbia of Virginia received a final order on November 1, 2022 modifying the SAVE filing incremental revenue and investments.
(6)Columbia of Kentucky received an Order on December 28, 2022, modifying its 2023 SMRP filing by removing recovery of the 2022 investment not recovered as part of the most recently approved rate case. This modification lowered incremental revenue recovered through SMRP to $1.6M, a reduction of $3.2M from the original filing.
(7)NIPSCO filed for a new electric TDSIC plan on June 1, 2021. An order approving NIPSCO's new electric TDSIC plan was received on December 28, 2021.

On March 30, 2022, NIPSCO Electric filed a petition with the IURC seeking approval of NIPSCO's federally mandated costs for closure of Michigan City Generating Station's CCR ash ponds. The project includes a total estimated $40.0 million of federally mandated retirement costs. A final order is expected in the first quarter of 2023. On November 2, 2022, NIPSCO Electric filed a petition with the IURC seeking approval of NIPSCO's federally mandated costs for closure of R.M. Schahfer Generation Station's multi-cell unit. The project includes a total estimated $53.0 million of federally mandated retirement costs. NIPSCO is requesting all associated accounting and ratemaking relief, including establishment of a periodic rate adjustment through the FMCA mechanism. On February 21, 2023, the Indiana Court of Appeals issued a decision in a case filed by an Indiana utility company interpreting a statute authorizing recovery of federally mandated costs, finding that such costs incurred prior to issuance of an order by the IURC are not recoverable as federally mandated costs. If any of NIPSCO's CCR costs were determined to be not eligible for recovery under the federal mandate mechanism, NIPSCO would seek recovery through depreciation within base rates. Refer to Note 19, "Other Commitments and Contingencies - E. Environmental Matters," in the Notes to Consolidated Financial Statements for further discussion of the CCRs.

Refer to Note 9, "Regulatory Matters," in the Notes to Consolidated Financial Statements for a further discussion of regulatory developments during 2022.

NISOURCE INC.

Financing Activities

Common Stock, Preferred Stock and Equity Unit Sale. Refer to Note 13, "Equity," in the Notes to Consolidated Financial Statements for information on common stock, preferred stock and equity units activity.

Short-term Debt. Refer to Note 16, "Short-Term Borrowings," in the Notes to Consolidated Financial Statements for information on short-term debt.

Long-term Debt. Refer to Note 15, "Long-Term Debt," in the Notes to Consolidated Financial Statements for information on long-term debt.

Non-controlling Interest. Refer to Note 4, "Variable Interest Entities," in the Notes to Consolidated Financial Statements for information on contributions from noncontrolling interest activity.

Sources of Liquidity

The following table displays our liquidity position as of December 31, 2022 and 2021:

Year Ended December 31, *(in millions)*	**2022**	2021
Current Liquidity		
Revolving Credit Facility	**$ 1,850.0**	$ 1,850.0
Accounts Receivable Programs[1]	**447.2**	251.2
Less:		
Commercial Paper	**415.0**	560.0
Accounts Receivable Programs Utilized	**347.2**	—
Letters of Credit Outstanding Under Credit Facility	**10.2**	18.9
Add:		
Cash and Cash Equivalents	**40.8**	84.2
Net Available Liquidity	**$ 1,565.6**	$ 1,606.5

[1]Represents the lesser of the seasonal limit or maximum borrowings supportable by the underlying receivables.

Debt Covenants. We are subject to a financial covenant under our revolving credit facility and term credit agreement, which requires us to maintain a debt to capitalization ratio that does not exceed 70%. As of December 31, 2022, the ratio was 58.9%.

Credit Ratings. The credit rating agencies periodically review our ratings, taking into account factors such as our capital structure and earnings profile. The following table includes our and NIPSCO's credit ratings and ratings outlook as of December 31, 2022. There have been no changes to our credit ratings or outlooks since February 2020.

A credit rating is not a recommendation to buy, sell or hold securities, and may be subject to revision or withdrawal at any time by the assigning rating organization.

	S&P		Moody's		Fitch	
	Rating	Outlook	Rating	Outlook	Rating	Outlook
NiSource	BBB+	Stable	Baa2	Stable	BBB	Stable
NIPSCO	BBB+	Stable	Baa1	Stable	BBB	Stable
Commercial Paper	A-2	Stable	P-2	Stable	F2	Stable

Certain of our subsidiaries have agreements that contain "ratings triggers" that require increased collateral if our credit ratings or the credit ratings of certain of our subsidiaries are below investment grade. These agreements are primarily for insurance purposes and for the physical purchase or sale of power. As of December 31, 2022, a collateral requirement of approximately $85.7 million would be required in the event of a downgrade below investment grade. In addition to agreements with ratings triggers, there are other agreements that contain "adequate assurance" or "material adverse change" provisions that could necessitate additional credit support such as letters of credit and cash collateral to transact business.

Equity. Our authorized capital stock consists of 620,000,000 shares, $0.01 par value, of which 600,000,000 are common stock and 20,000,000 are preferred stock. As of December 31, 2022, 412,142,602 shares of common stock and 1,302,500 shares of preferred stock were outstanding. For more information regarding our common and preferred stock, see Note 13, "Equity," in the Notes to Consolidated Financial Statements.

NISOURCE INC.

Contractual Obligations, Cash Requirements and Off-Balance Sheet Arrangements
We have certain contractual obligations requiring payments at specified periods. Our material cash requirements are detailed below. We intend to use funds from the liquidity sources referenced above to meet these cash requirements.

At December 31, 2022, we had $1,761.9 million in short-term borrowings outstanding. Refer to Note 15, "Long-Term Debt," and Note 16, "Short-Term Borrowings," in the Notes to Consolidated Financial Statements for further information on long-term debt and short-term borrowings, respectively.

During 2023 and 2024, we expect to make cash payments of $642.2 million and $556.9 million, respectively, related to pipeline service obligations including demand for gas transportation, gas storage and gas purchases.

Our expected payments include employer contributions to pension and other postretirement benefits plans expected to be made in 2023. Plan contributions beyond 2023 are dependent upon a number of factors, including actual returns on plan assets, which cannot be reliably estimated at this time. In 2023, we expect to make contributions of approximately $2.6 million to our pension plans and approximately $23.7 million to our postretirement medical and life plans. Refer to Note 12, "Pension and Other Postemployment Benefits," in the Notes to Consolidated Financial Statements for more information.

We cannot reasonably estimate the settlement amounts or timing of cash flows related to certain of our long-term obligations classified as "Total Other Liabilities" on the Consolidated Balance Sheets.

We have uncertain income tax positions for which we are unable to predict when the matters will be resolved. Refer to Note 11, "Income Taxes," in the Notes to Consolidated Financial Statements for more information.

NIPSCO has executed several PPAs to purchase 100% of the output from renewable generation facilities at a fixed price per MWh. NIPSCO has also executed several BTAs with developers to construct renewable generation facilities. See Note 19, "Other Commitments and Contingencies - A. Contractual Obligations," and Note 19, "Other Commitments and Contingencies," - F. "Other Matters - Generation Transition," in the Notes to Consolidated Financial Statements for additional information.

In addition, we, along with certain of our subsidiaries, enter into various agreements providing financial or performance assurance to third parties on behalf of certain subsidiaries. Such agreements include guarantees and stand-by letters of credit.

Refer to Note 19, "Other Commitments and Contingencies," in the Notes to Consolidated Financial Statements for additional information regarding our contractual obligations over the next 5 years and thereafter and our off-balance sheet arrangements.

Market Risk Disclosures

Risk is an inherent part of our businesses. The extent to which we properly and effectively identify, assess, monitor and manage each of the various types of risk involved in our businesses is critical to our profitability. We seek to identify, assess, monitor and manage, in accordance with defined policies and procedures, the following principal market risks that are involved in our businesses: commodity price risk, interest rate risk and credit risk. We manage risk through a multi-faceted process with oversight by the Risk Management Committee that requires constant communication, judgment and knowledge of specialized products and markets. Our senior management takes an active role in the risk management process and has developed policies and procedures that require specific administrative and business functions to assist in the identification, assessment and control of various risks. These may include, but are not limited to market, operational, financial, compliance and strategic risk types. In recognition of the increasingly varied and complex nature of the energy business, our risk management process, policies and procedures continue to evolve and are subject to ongoing review and modification.

Commodity Price Risk
Our Gas and Electric Operations have commodity price risk primarily related to the purchases of natural gas and power. To manage this market risk, our subsidiaries use derivatives, including commodity futures contracts, swaps, forwards and options. We do not participate in speculative energy trading activity.

Commodity price risk resulting from derivative activities at our rate-regulated subsidiaries is limited and does not bear signification exposure to earnings risk, since our current regulatory mechanisms allow recovery of prudently incurred purchased power, fuel and gas costs through the rate-making process, including gains or losses on these derivative instruments. These changes are included in the GCA and FAC regulatory rate-recovery mechanisms. If these mechanisms were to be adjusted or eliminated, these subsidiaries may begin providing services without the benefit of the traditional rate-making process and may be more exposed to commodity price risk. For additional information, see "Results and Discussion of Segment Operations" in this Management's Discussion.

Our subsidiaries are required to make cash margin deposits with their brokers to cover actual and potential losses in the value of outstanding exchange traded derivative contracts. The amount of these deposits, some of which is reflected in our restricted cash balance, may fluctuate significantly during periods of high volatility in the energy commodity markets.

Refer to Note 10, "Risk Management Activities," in the Notes to Consolidated Financial Statements for further information on our commodity price risk assets and liabilities as of December 31, 2022 and 2021.

Interest Rate Risk

We are exposed to interest rate risk as a result of changes in interest rates on borrowings under our revolving credit agreement, commercial paper program, term credit agreement and accounts receivable programs, which have interest rates that are indexed to short-term market interest rates. Based upon average borrowings and debt obligations subject to fluctuations in short-term market interest rates, an increase (or decrease) in short-term interest rates of 100 basis points (1%) would have increased (or decreased) interest expense by $8.7 million and $3.1 million for 2022 and 2021, respectively. We are also exposed to interest rate risk as a result of changes in benchmark rates that can influence the interest rates of future debt issuances. From time to time we may enter into forward interest rate instruments to lock in long term interest costs and/ or rates.

Refer to Note 10, "Risk Management Activities," in the Notes to Consolidated Financial Statements for further information on our interest rate risk assets and liabilities as of December 31, 2022 and 2021.

Credit Risk

Due to the nature of the industry, credit risk is embedded in many of our business activities. Our extension of credit is governed by a Corporate Credit Risk Policy. In addition, our Risk Management Committee has put guidelines in place which document management approval levels for credit limits, evaluation of creditworthiness, and credit risk mitigation efforts. Exposures to credit risks are monitored by the risk management function, which is independent of commercial operations. Credit risk arises due to the possibility that a customer, supplier or counterparty will not be able or willing to fulfill its obligations on a transaction on or before the settlement date. For derivative-related contracts, credit risk arises when counterparties are obligated to deliver or purchase defined commodity units of gas or power to us at a future date per execution of contractual terms and conditions. Exposure to credit risk is measured in terms of both current obligations and the market value of forward positions net of any posted collateral such as cash and letters of credit.

We evaluate the financial status of our banking partners through the use of market-based metrics such as credit default swap pricing levels, and also through traditional credit ratings provided by major credit rating agencies.

Other Information

Critical Accounting Estimates

We apply certain accounting policies in accordance with GAAP, which require that we make estimates and judgments that have had, and may continue to have, significant impacts on our operations and Consolidated Financial Statements. We evaluate our estimates on an ongoing basis. We base our estimates on historical experience and on various other assumptions that we believe are reasonable under the circumstances, the results of which form the basis for making judgments about the carrying values of assets and liabilities that are not readily apparent from other sources. Actual results may differ from these estimates. We believe the following represent the more significant items requiring the use of judgment in preparing our Consolidated Financial Statements:

Basis of Accounting for Rate-Regulated Subsidiaries. ASC Topic 980, *Regulated Operations*, provides that rate-regulated subsidiaries account for and report assets and liabilities consistent with the economic effect of the way in which regulators establish rates, if the rates established are designed to recover the costs of providing the regulated service and if the competitive environment makes it probable that such rates can be charged and collected. Certain expenses and credits subject to utility regulation or rate determination normally reflected in income are deferred on the Consolidated Balance Sheets and are recognized in income as the related amounts are included in service rates and recovered from or refunded to customers. The total amounts of regulatory assets and liabilities reflected on the Consolidated Balance Sheets were $2,580.8 million and $2,012.6 million at December 31, 2022, and $2,492.2 million and $1,980.0 million at December 31, 2021, respectively. For additional information, refer to Note 9, "Regulatory Matters," in the Notes to Consolidated Financial Statements.

In the event that regulation significantly changes the opportunity for us to recover our costs in the future, all or a portion of our regulated operations may no longer meet the criteria for the application of ASC Topic 980, *Regulated Operations*. In such event, a write-down of all or a portion of our existing regulatory assets and liabilities could result. If transition cost recovery is approved by the appropriate regulatory bodies that would meet the requirements under GAAP for continued accounting as

NISOURCE INC.

regulatory assets and liabilities during such recovery period, the regulatory assets and liabilities would be reported at the recoverable amounts. If we were unable to continue to apply the provisions of ASC Topic 980, *Regulated Operations*, we would be required to apply the provisions of ASC Topic 980-20, *Discontinuation of Rate-Regulated Accounting*. In management's opinion, our regulated subsidiaries will be subject to ASC Topic 980, *Regulated Operations* for the foreseeable future.

Certain of the regulatory assets reflected on our Consolidated Balance Sheets require specific regulatory action in order to be included in future service rates. Although recovery of these amounts is not guaranteed, we believe that these costs meet the requirements for deferral as regulatory assets. If we determine that the amounts included as regulatory assets are no longer probable of recovery, a charge to income would immediately be required to the extent of the unrecoverable amounts.

One of the more significant items recorded through the application of this accounting guidance is the regulatory overlay for JV accounting. The application of HLBV to consolidated VIEs generally results in the recognition of profit from the related JVs over a time frame that is different from when the regulatory return is earned. In accordance with the principles of ASC 980, we have recognized a regulatory deferral of certain amounts representing the timing difference between the profit earned from the JVs and the amount included in regulated rates to recover our approved investments in consolidated JVs. For additional information, refer to Note 1, "Nature of Operations and Summary of Significant Accounting Policies - S. VIEs and Allocation of Earnings," in the Notes to Consolidated Financial Statements.

Equity Unit Transaction. We record the Series C Mandatory Convertible Preferred Stock and forward purchase contracts that comprise the Corporate Units as a single unit of account and classify the Corporate Units as equity under the provisions of ASC 480 and ASC 815. Significant judgments regarding the economic linkage between the Series C Mandatory Convertible Preferred Stock and the forward purchase contracts, as well as the substance of the terms and conditions of the Corporate Units, were required by management in making these determinations.

The initial classification of the Corporate Units, whether viewed as a single unit of account or as two freestanding financial instruments, would affect our financial results. If determined to be two units of account, the forward purchase contracts underlying the Corporate Units would be classified as a derivative and result in impacts to net income through the recognition of interest expense and mark-to-market adjustments. If determined to be one unit of account, the equity classification of the Corporate Units would have no material impact on net income. Each classification has differing impacts to the numerator in the computation of EPS.

We consider that there are a small number of similar equity hosted unit structures and that our unit structure is unique. We also consider that the provisions of ASC 480 and ASC 815 that govern the determination of unit of account are highly complex and that alternate conclusions reached under this guidance would result in materially different financial results. See Note 13, "Equity," in the Notes to Consolidated Financial Statements for additional details of the equity unit transaction.

Pension and Postretirement Benefits. We have defined benefit plans for both pension and other postretirement benefits. The calculation of the net obligations and annual expense related to the plans requires a significant degree of judgment regarding the discount rates to be used in bringing the liabilities to present value, expected long-term rates of return on plan assets, health care trend rates, and mortality rates, among other assumptions. Due to the size of the plans and the long-term nature of the associated liabilities, changes in the assumptions used in the actuarial estimates could have material impacts on the measurement of the net obligations and annual expense recognition. Differences between actuarial assumptions and actual plan results are deferred into AOCI or a regulatory balance sheet account, depending on the jurisdiction of our entity. These deferred gains or losses are then amortized into the income statement when the accumulated differences exceed 10% of the greater of the projected benefit obligation or the fair value of plan assets (known in GAAP as the "corridor" method) or when settlement accounting is triggered.

The discount rates, expected long-term rates of return on plan assets, health care cost trend rates and mortality rates are critical assumptions. Methods used to develop these assumptions are described below. While a third party actuarial firm assists with the development of many of these assumptions, we are ultimately responsible for selecting the final assumptions.

The discount rate is utilized principally in calculating the actuarial present value of pension and other postretirement benefit obligations and net periodic pension and other postretirement benefit plan costs. Our discount rates for both pension and other postretirement benefits are determined using spot rates along an AA-rated above median yield curve with cash flows matching the expected duration of benefit payments to be made to plan participants.

The expected long-term rate of return on plan assets is a component utilized in calculating annual pension and other postretirement benefit plan costs. We estimate the expected return on plan assets by evaluating expected bond returns, equity risk premiums, target asset allocations, the effects of active plan management, the impact of periodic plan asset rebalancing and historical performance. We also consider the guidance from our investment advisors in making a final determination of our expected rate of return on assets. For measurement of 2022 net periodic benefit cost, we selected a weighted-average assumption of the expected pre-tax long-term rate of return of 4.80% and 5.72% for our pension and other postretirement benefit plan assets, respectively. For measurement of 2023 net periodic benefit cost, we selected a weighted-average assumption of the expected pre-tax long-term rate of return of 7.00% and 6.69% for our pension and other postretirement benefit plan assets, respectively.

We estimate the assumed health care cost trend rate, which is used in determining our other postretirement benefit net expense, based upon our actual health care cost experience, the effects of recently enacted legislation, third-party actuarial surveys and general economic conditions.

We utilize a full yield curve approach to estimate the service and interest components of net periodic benefit cost for pension and other postretirement benefits by applying the specific spot rates along the yield curve used in the determination of the benefit obligation to the relevant projected cash flows. For further discussion of our pension and other postretirement benefits, see Note 12, "Pension and Other Postemployment Benefits," in the Notes to Consolidated Financial Statements.

Typically, we use the Society of Actuaries' most recently published mortality data in developing a best estimate of mortality as part of the calculation of the pension and other postretirement benefit obligations. We adopted Aon's U.S. Endemic Mortality Improvement scale MP-2021, accounting for both the near-term and long-term COVID-19 impacts.

The following tables illustrate the effects of changes in these actuarial assumptions while holding all other assumptions constant:

	Impact on December 31, 2022 Projected Benefit Obligation Increase/(Decrease)	
Change in Assumptions *(in millions)*	Pension Benefits	Other Postretirement Benefits
+50 basis points change in discount rate	$ (52.6)	$ (19.2)
-50 basis points change in discount rate	56.7	20.8

	Impact on 2022 Expense Increase/(Decrease)[1]	
Change in Assumptions *(in millions)*	Pension Benefits	Other Postretirement Benefits
+50 basis points change in discount rate	$ (1.7)	$ 0.5
-50 basis points change in discount rate	1.9	0.8
+50 basis points change in expected long-term rate of return on plan assets	(9.2)	(1.5)
-50 basis points change in expected long-term rate of return on plan assets	9.2	1.5

[1]Before labor capitalization and regulatory deferrals.

Goodwill and Other Intangible Assets. We have six goodwill reporting units, comprised of the six state operating companies within the Gas Distribution Operations reportable segment. Our goodwill assets at December 31, 2022 were $1,486 million, most of which resulted from the acquisition of Columbia on November 1, 2000.

As required by GAAP, we test for impairment of goodwill on an annual basis and on an interim basis when events or circumstances indicate that a potential impairment may exist. Our annual goodwill test takes place in the second quarter of each year and was performed on May 1, 2022. A qualitative ("step 0") test was completed on May 1, 2022 for all reporting units. In the Step 0 analysis, we assessed various assumptions, events and circumstances that would have affected the estimated fair value of the applicable reporting units as compared to the baseline "step 1" fair value measurement performed May 1, 2020. The results of this assessment indicated that it was more likely than not that the estimated fair value of the reporting units substantially exceeded the related carrying values of our reporting units; therefore, no "step 1" analysis was required and no impairment charges were indicated. Since the annual evaluation, there have been no indications that the fair values of the goodwill reporting units have decreased below the carrying values.

As noted above, application of the qualitative goodwill impairment test requires evaluating various events and circumstances to determine whether it is not more likely than not that the fair value of a reporting unit is less than its carrying amount. Although we believe all relevant factors were considered in the qualitative impairment analysis to reach the conclusion that goodwill is not impaired, significant changes in any one of the assumptions could potentially result in the recording of an impairment that could have significant impacts on the Consolidated Financial Statements.

See Note 7, "Goodwill," in the Notes to Consolidated Financial Statements for further information.

Unbilled Revenue. We record utility operating revenues when energy is delivered to our customers. However, the determination of energy sales to individual customers is based upon the reading of their meters, which occurs on a systematic basis throughout the month. At the end of each month, amounts of energy delivered to customers since the date of their last meter reading are estimated and corresponding unbilled revenues are calculated. This unbilled revenue is estimated each month based upon historical usage, customer rates and weather. As of December 31, 2022 we recorded $453.0 million of customer accounts receivable for unbilled revenue. Significant fluctuations in energy demand for the unbilled period or changes in the composition of customer classes could impact the accuracy of the unbilled revenue estimate. Refer to Note 3, "Revenue Recognition," in the Notes to Consolidated Financial Statements for additional information regarding our significant judgments and estimates related to unbilled revenue recognition.

Income Taxes. The consolidated income tax provision and deferred income tax assets and liabilities, as well as any unrecognized tax benefits and valuation allowances, require use of estimates and significant management judgement. Although we believe that current estimates for deferred tax assets and liabilities are reasonable, actual results could differ from these estimates for a variety of reasons, including reasonable projections of taxable income, the ability and intent to implement tax planning strategies if necessary, and interpretations of applicable tax laws and regulations across multiple taxing jurisdictions. Ultimate resolution or clarification of income tax matters may result in favorable or unfavorable impacts to net income and cash flows, and adjustments to tax-related assets and liabilities could be material.

We account for uncertain income tax positions using a benefit recognition model with a two-step approach including a more-likely-than-not recognition threshold and a measurement approach based on the largest amount of tax benefit that is greater than 50% likely of being realized upon ultimate settlement. We evaluate each position based solely on the technical merits and facts and circumstances of the position, assuming the position will be examined by a taxing authority having full knowledge of all relevant information. Significant judgment is required to determine whether the recognition threshold has been met and, if so, the appropriate amount of tax benefits to be recorded in the consolidated financial statements. At December 31, 2022 we had $21.7 million of unrecognized tax benefits. Changes in these unrecognized tax benefits may result from remeasurement of amounts expected to be realized, settlements with tax authorities and expiration of statutes of limitations.

Valuation allowances against deferred tax assets are recorded when we conclude it is more likely than not such asset will not be realized in future periods. Accounting for income taxes also requires that only tax benefits for positions taken or expected to be taken on tax returns that meet the more-likely-than-not recognition threshold can be recognized or continue to be recognized. We evaluate each position solely on the technical merits and facts and circumstances of the position, assuming that the position will be examined by a taxing authority that has full knowledge of all relevant information. Significant judgment is required to determine recognition thresholds and the related amount of tax benefits to be recognized. At December 31, 2022, we had established $7.8 million of valuation allowances related to certain state NOL carryforwards. Refer to Note 11, "Income Taxes," in the Notes to Consolidated Financial Statements for additional information.

Recently Issued Accounting Pronouncements

NISOURCE INC.
REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the shareholders and the Board of Directors of NiSource Inc.

Opinion on the Financial Statements

We have audited the accompanying consolidated balance sheets of NiSource Inc. and subsidiaries (the "Company") as of December 31, 2022 and 2021, the related statements of consolidated income (loss), comprehensive income (loss), stockholders' equity, and cash flows for each of the three years in the period ended December 31, 2022, and the related notes and the schedule listed in the Index at Item 15 (collectively referred to as the "financial statements"). In our opinion, the financial statements present fairly, in all material respects, the financial position of the Company as of December 31, 2022 and 2021, and the results of its operations and its cash flows for each of the three years in the period ended December 31, 2022, in conformity with accounting principles generally accepted in the United States of America.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States) (PCAOB), the Company's internal control over financial reporting as of December 31, 2022, based on criteria established in Internal Control — Integrated Framework (2013) issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 22, 2023, expressed an unqualified opinion on the Company's internal control over financial reporting.

Basis for Opinion

These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on the Company's financial statements based on our audits. We are a public accounting firm registered with the PCAOB and are required to be independent with respect to the Company in accordance with the U.S. federal securities laws and the applicable rules and regulations of the Securities and Exchange Commission and the PCAOB.

We conducted our audits in accordance with the standards of the PCAOB. Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement, whether due to error or fraud. Our audits included performing procedures to assess the risks of material misstatement of the financial statements, whether due to error or fraud, and performing procedures that respond to those risks. Such procedures included examining, on a test basis, evidence regarding the amounts and disclosures in the financial statements. Our audits also included evaluating the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statements. We believe that our audits provide a reasonable basis for our opinion.

Critical Audit Matters

The critical audit matter communicated below is a matter arising from the current-period audit of the financial statements that was communicated or required to be communicated to the audit committee and that (1) relates to accounts or disclosures that are material to the financial statements and (2) involved our especially challenging, subjective, or complex judgments. The communication of critical audit matters does not alter in any way our opinion on the financial statements, taken as a whole, and we are not, by communicating the critical audit matter below, providing a separate opinion on the critical audit matter or on the accounts or disclosures to which it relates.

Impact of Rate Regulation on the Financial Statements - Refer to Notes 1 and 9 to the consolidated financial statements

Critical Audit Matter Description

The Company’s subsidiaries are fully regulated natural gas and electric utility companies serving customers in six states. These rate-regulated subsidiaries account for and report assets and liabilities consistent with the economic effect of the manner in which regulators establish rates, if the rates established are designed to recover the costs of providing the regulated service and it is probable that such rates can be charged to and collected from customers. Certain expenses and credits subject to utility regulation or rate determination normally reflected in income are deferred on the consolidated balance sheets and are later recognized in income as the related amounts are included in customer rates and recovered from or refunded to customers.

The Company’s subsidiaries’ rates are subject to regulatory rate-setting processes. Rates are determined and approved in regulatory proceedings based on an analysis of the subsidiaries’ costs to provide utility service and a return on, and recovery of, the subsidiaries’ investment in the utility business. Regulatory decisions can have an impact on the recovery of costs, the rate of return earned on investment, and the timing and amount of assets to be recovered by rates. The respective commission’s regulation of rates is premised on the full recovery of prudently incurred costs and a reasonable rate of return on invested

NISOURCE INC.
REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

capital. Decisions to be made by the commission in the future will impact the accounting for regulated operations, including decisions about the amount of allowable costs and return on invested capital included in rates and any refunds that may be required. While the Company has indicated it expects to recover costs from customers through regulated rates, there is a risk that the commission will not approve: (1) full recovery of the costs of providing utility service, or (2) full recovery of all amounts invested in the utility business and a reasonable return on that investment.

We identified the accounting for rate-regulated subsidiaries as a critical audit matter due to the significant judgments made by management to support its assertions about impacted account balances and disclosures and the high degree of subjectivity involved in assessing the impact of future regulatory orders on the financial statements. Management judgments include assessing the likelihood of (1) recovery in future rates of incurred costs and (2) refunds of amounts previously collected from customers. Given that management’s accounting judgments are based on assumptions about the outcome of future decisions by regulatory commissions, auditing these judgments required specialized knowledge of accounting for rate regulation and the rate making process due to its inherent complexities.

How the Critical Audit Matter Was Addressed in the Audit

Our audit procedures related to the uncertainty of future decisions by the commissions focused on the ongoing Columbia Gas of Ohio base rate case and the Northern Indiana Public Service Company electric base rate case proceedings and included the following, among others:

- We tested the effectiveness of management’s controls over the evaluation of the likelihood of (1) the recovery in future rates of costs incurred as property, plant, and equipment and deferred as regulatory assets, and (2) a refund or a future reduction in rates that should be reported as regulatory liabilities. We also tested the effectiveness of management’s controls over the initial recognition of amounts as property, plant, and equipment; regulatory assets or liabilities; and the monitoring and evaluation of regulatory developments, that may affect the likelihood of recovering costs in future rates or of a future reduction in rates.
- We evaluated the Company’s disclosures related to the impacts of rate regulation, including the balances recorded and regulatory developments.
- We read relevant regulatory orders issued by the commissions for the Company, regulatory statutes, interpretations, procedural memorandums, filings made by interveners, and other publicly available information to assess the likelihood of recovery in future rates or of a future reduction in rates based on precedents of the commissions’ treatment of similar costs under similar circumstances. We evaluated the external information and compared to management’s recorded regulatory asset and liability balances for completeness.
- For regulatory matters in process, we inspected the Company’s and intervenors’ filings with the commissions that may impact the Company’s future rates, for any evidence that might contradict management’s assertions related to recoverability of recorded assets. Additionally, we evaluated the joint stipulation filed by Columbia Gas of Ohio with the Public Utilities Commission of Ohio.
- We inquired of management about property, plant, and equipment that may be abandoned with an emphasis on the generation strategy related to Northern Indiana Public Service Company’s R.M. Schahfer and Michigan City Generating Stations. We inspected minutes of the board of directors and regulatory orders and other filings with the commissions to identify evidence that may contradict management’s assertion regarding probability of an abandonment.
- We read the relevant regulatory orders issued by the Commission for the Company’s renewable energy investments. We evaluated the appropriateness of recognizing a regulatory liability or asset representing timing differences between the profit allocated under the Hypothetical Liquidation at Book Value (HLBV) method related to the consolidated joint ventures and the allowed earnings included in regulatory rates. We also evaluated the appropriateness of the offset to the regulatory liability or asset recorded in depreciation expense.
- We evaluated the Company’s disclosures related to the application of ASC Topic 980 to consolidated joint venture accounting.

/s/ DELOITTE & TOUCHE LLP
Columbus, Ohio
February 22, 2023

We have served as the Company's auditor since 2002.

The accompanying Notes to Consolidated Financial Statements are an integral part of these statements.

1. Nature of Operations and Summary of Significant Accounting Policies

A. Company Structure and Principles of Consolidation. We are an energy holding company incorporated in Delaware and headquartered in Merrillville, Indiana. Our subsidiaries are fully regulated natural gas and electric utility companies serving approximately 3.7 million customers in six states. We generate substantially all of our operating income through these rate-regulated businesses. The consolidated financial statements include the accounts of us, our majority-owned subsidiaries, and VIEs of which we are the primary beneficiary after the elimination of all intercompany accounts and transactions.

B. Use of Estimates. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenues and expenses during the reporting period. Actual results could differ from those estimates.

C. Cash, Cash Equivalents and Restricted Cash. We consider all highly liquid investments with original maturities of three months or less to be cash equivalents. We report amounts deposited in brokerage accounts for margin requirements as restricted cash. In addition, we have amounts deposited in trusts to satisfy requirements for the provision of various property, liability, workers compensation, and long-term disability insurance, which is classified as restricted cash on the Consolidated Balance Sheets and disclosed with cash and cash equivalents on the Statements of Consolidated Cash Flows.

D. Accounts Receivable and Unbilled Revenue. Accounts receivable on the Consolidated Balance Sheets includes both billed and unbilled amounts. Unbilled amounts of accounts receivable relate to a portion of a customer's consumption of gas or electricity from the last cycle billing date through the last day of the month (balance sheet date). Factors taken into consideration when estimating unbilled revenue include historical usage, customer rates, weather and reasonable and supportable forecasts. Accounts receivable fluctuates from year to year depending in large part on weather impacts and price volatility. Our accounts receivable on the Consolidated Balance Sheets include unbilled revenue, less reserves. The reserve for uncollectible receivables is our best estimate of the amount of probable credit losses in the existing accounts receivable. We determined the reserve based on historical collection experience, current market conditions and reasonable and supportable forecasts. Account balances are charged against the allowance when it is anticipated the receivable will not be recovered. Refer to Note 3, "Revenue Recognition," for additional information on customer-related accounts receivable, including amounts related to unbilled revenues.

E. Investments in Debt Securities. Our investments in debt securities are carried at fair value and are designated as available-for-sale. These investments are included within "Available-for-sale debt securities" on the Consolidated Balance Sheets. Unrealized gains and losses, net of deferred income taxes, are recorded to accumulated other comprehensive income or loss. At each reporting period these investments are qualitatively and quantitatively assessed to determine whether a decline in fair value below the amortized cost basis has resulted from a credit loss or other factors. Impairments related to credit loss are recorded through an allowance for credit losses. Impairments that are not related to credit losses are included in other comprehensive income and are reflected in the Statements of Consolidated Income (Loss). No material impairment charges were recorded for the years ended December 31, 2022, 2021 or 2020. Refer to Note 18, "Fair Value," for additional information.

F. Basis of Accounting for Rate-Regulated Subsidiaries. Rate-regulated subsidiaries account for and report assets and liabilities consistent with the economic effect of the way in which regulators establish rates, if the rates established are designed to recover the costs of providing the regulated service and it is probable that such rates can be charged and collected. Certain expenses and credits subject to utility regulation or rate determination normally reflected in income are deferred on the Consolidated Balance Sheets and are later recognized in income as the related amounts are included in customer rates and recovered from or refunded to customers.

We continually evaluate whether or not our operations are within the scope of ASC 980 and rate regulations. As part of that analysis, we evaluate probability of recovery for our regulatory assets. In management's opinion, our regulated subsidiaries will be subject to regulatory accounting for the foreseeable future. Refer to Note 9, "Regulatory Matters," for additional information.

G. Plant and Other Property and Related Depreciation and Maintenance. Property, plant and equipment (principally utility plant) is stated at cost. Our rate-regulated subsidiaries record depreciation using composite rates on a straight-line basis over the remaining service lives of the electric, gas and common properties, as approved by the appropriate regulators.

Non-utility property includes renewable generation assets owned by JVs of which we are the primary beneficiary and is generally depreciated on a straight-line basis over the life of the associated assets. Refer to Note 6, "Property, Plant and Equipment," for additional information related to depreciation expense.

For rate-regulated companies where provided for in rates, AFUDC is capitalized on all classes of property except organization costs, land, autos, office equipment, tools and other general property purchases. The allowance is applied to construction costs for that period of time between the date of the expenditure and the date on which such project is placed in service. Our consolidated pre-tax rate for AFUDC was 3.4% in 2022, 3.3% in 2021 and 2.6% in 2020.

Generally, our subsidiaries follow the practice of charging maintenance and repairs, including the cost of removal of minor items of property, to expense as incurred. When our subsidiaries retire regulated property, plant and equipment, original cost plus the cost of retirement, less salvage value, is charged to accumulated depreciation. However, when it becomes probable a regulated asset will be retired substantially in advance of its original expected useful life or is abandoned, the cost of the asset and the corresponding accumulated depreciation is recognized as a separate asset. If the asset is still in operation, the gross amounts are classified as "Non-Utility and Other " as described in Note 6, "Property, Plant and Equipment." If the asset is no longer operating but still subject to recovery, the net amount is classified in "Regulatory assets" on the Consolidated Balance Sheets. If we are able to recover a full return of and on investment, the carrying value of the asset is based on historical cost. If we are not able to recover a full return on investment, a loss on impairment is recognized to the extent the net book value of the asset exceeds the present value of future revenues discounted at the incremental borrowing rate.

External and internal costs associated with on-premise computer software developed for internal use are capitalized. Capitalization of such costs commences upon the completion of the preliminary stage of each project. Once the installed software is ready for its intended use, such capitalized costs are amortized on a straight-line basis generally over a period of five years. External and internal up-front implementation costs associated with cloud computing arrangements that are service contracts are deferred on the Consolidated Balance Sheets. Once the installed software is ready for its intended use, such deferred costs are amortized on a straight-line basis to "Operation and maintenance," over the minimum term of the contract plus contractually-provided renewal periods that are reasonable, expected to be exercised.

H. Goodwill and Other Intangible Assets. Substantially all of our goodwill relates to the excess of cost over the fair value of the net assets acquired in the Columbia acquisition on November 1, 2000. We test our goodwill for impairment annually as of May 1, or more frequently if events and circumstances indicate that goodwill might be impaired. Fair value of our reporting units is determined using a combination of income and market approaches. See Note 7, "Goodwill," for additional information.

I. Accounts Receivable Transfer Programs. Certain of our subsidiaries have agreements with third parties to transfer certain accounts receivable without recourse. These transfers of accounts receivable are accounted for as secured borrowings. The entire gross receivables balance remains on the December 31, 2022 and 2021 Consolidated Balance Sheets. When amounts are securitized, the short-term debt is recorded in the amount of proceeds received from the transferees involved in the transactions. Refer to Note 16, "Short-Term Borrowings," for further information.

J. Gas Cost and Fuel Adjustment Clause. Our regulated subsidiaries defer most differences between gas and fuel purchase costs and the recovery of such costs in revenues and adjust future billings for such deferrals on a basis consistent with applicable state-approved tariff provisions. These deferred balances are recorded as "Regulatory assets" or "Regulatory liabilities," as appropriate, on the Consolidated Balance Sheets. Refer to Note 9, "Regulatory Matters," for additional information.

K. Inventory. Both the LIFO inventory methodology and the weighted average cost methodology are used to value natural gas in storage, as approved by regulators for all of our regulated subsidiaries. Inventory valued using LIFO was $43.0 million and $44.9 million at December 31, 2022 and 2021, respectively. Based on the average cost of gas using the LIFO method, the estimated replacement cost of gas in storage was greater than the stated LIFO cost by $7.7 million at December 31, 2022 and was less than the stated LIFO cost by $13.6 million at December 31, 2021. As all LIFO inventory costs are collected from customers through our rate-regulated subsidiaries, no inventory impairment has been recorded. Gas inventory valued using the weighted average cost methodology was $488.7 million at December 31, 2022 and $282.4 million at December 31, 2021.

Electric production fuel is valued using the weighted average cost inventory methodology, as approved by NIPSCO's regulator.

Materials and supplies are valued using the weighted average cost inventory methodology.

L. Accounting for Exchange and Balancing Arrangements of Natural Gas. Our Gas Distribution Operations segment enters into balancing and exchange arrangements of natural gas as part of its operations and off-system sales programs. We record a receivable or payable for any of our respective cumulative gas imbalances, as well as for any gas inventory borrowed or lent under a Gas Distribution Operations exchange agreement. Exchange gas is valued based on individual regulatory jurisdiction requirements (for example, historical spot rate, spot at the beginning of the month). These receivables and payables are recorded as “Exchange gas receivable” or “Exchange gas payable” on our Consolidated Balance Sheets, as appropriate.

M. Accounting for Risk Management Activities. We account for our derivatives and hedging activities in accordance with ASC 815. We recognize all derivatives as either assets or liabilities on the Consolidated Balance Sheets at fair value, unless such contracts are exempted as a normal purchase normal sale under the provisions of the standard. The accounting for changes in the fair value of a derivative depends on the intended use of the derivative and resulting designation.

We do not offset the fair value amounts recognized for any of our derivative instruments against the fair value amounts recognized for the right to reclaim cash collateral or obligation to return cash collateral for derivative instruments executed with the same counterparty under a master netting arrangement. See Note 10, "Risk Management Activities," for additional information.

N. Income Taxes and Investment Tax Credits. We record income taxes to recognize full interperiod tax allocations. Under the asset and liability method, deferred income taxes are provided for the tax consequences of temporary differences by applying enacted statutory tax rates applicable to future years to differences between the financial statement carrying amount and the tax basis of existing assets and liabilities. Investment tax credits associated with regulated operations are deferred and amortized as a reduction to income tax expense over the estimated useful lives of the related properties.

To the extent certain deferred income taxes of the regulated companies are recoverable or payable through future rates, regulatory assets and liabilities have been established. Regulatory assets for income taxes are primarily attributable to property-related tax timing differences for which deferred taxes had not been provided in the past when regulators did not recognize such taxes as costs in the rate-making process. Regulatory liabilities for income taxes are primarily attributable to the regulated companies’ obligation to refund to ratepayers deferred income taxes provided at rates higher than the current Federal income tax rate. Such property-related amounts are credited to ratepayers using either the average rate assumption method or the reverse South Georgia method. Non property-related amounts are credited to ratepayers consistent with state utility commission direction.

Pursuant to the Internal Revenue Code and relevant state taxing authorities, we and our subsidiaries file consolidated income tax returns for federal and certain state jurisdictions. We and our subsidiaries are parties to a tax sharing agreement. Income taxes recorded by each party represent amounts that would be owed had the party been separately subject to tax.

O. Pension Remeasurement. We utilize a third-party actuary for the purpose of performing actuarial valuations of our defined benefit plans. Annually, as of December 31, we perform a remeasurement for our pension plans. Quarterly, we monitor for significant events, and if a significant event is identified, we perform a qualitative and quantitative assessment to determine if the resulting remeasurement would materially impact the NiSource financial statements. If material, an interim remeasurement is performed. We had one such interim remeasurement in the second quarter of 2022. See Note 12, "Pension and Other Postemployment Benefits," for additional information.

P. Environmental Expenditures. We accrue for costs associated with environmental remediation obligations, including expenditures related to asset retirement obligations and cost of removal, when the incurrence of such costs is probable and the amounts can be reasonably estimated, regardless of when the expenditures are actually made. The undiscounted estimated future expenditures are based on currently enacted laws and regulations, existing technology and estimated site-specific costs where assumptions may be made about the nature and extent of site contamination, the extent of cleanup efforts, costs of alternative cleanup methods and other variables. The liability is adjusted as further information is discovered or circumstances change. The accruals for estimated environmental expenditures are recorded on the Consolidated Balance Sheets in “Other accruals” for short-term portions of these liabilities and “Other noncurrent liabilities” for the respective long-term portions of these liabilities. Rate-regulated subsidiaries applying regulatory accounting establish regulatory assets on the Consolidated Balance Sheets to the extent that future recovery of environmental remediation costs is probable through the regulatory process. Refer to Note 8, "Asset Retirement Obligations," and Note 19, "Other Commitments and Contingencies," for further information.

Q. Excise Taxes. As an agent for some state and local governments, we invoice and collect certain excise taxes levied by state and local governments on customers and record these amounts as liabilities payable to the applicable taxing jurisdiction. Such balances are presented within "Other accruals" on the Consolidated Balance Sheets. These types of taxes collected from customers, comprised largely of sales taxes, are presented on a net basis affecting neither revenues nor cost of sales. We account for excise taxes for which we are liable by recording a liability for the expected tax with a corresponding charge to "Other taxes" expense on the Statements of Consolidated Income (Loss).

R. Accrued Insurance Liabilities. We accrue for insurance costs related to workers compensation, automobile, property, general and employment practices liabilities based on the most probable value of each claim. In general, claim values are determined by professional, licensed loss adjusters who consider the facts of the claim, anticipated indemnification and legal expenses, and respective state rules. Claims are reviewed by us at least quarterly and an adjustment is made to the accrual based on the most current information.

S. VIEs and Allocation of Earnings. We fund a significant portion of our renewable generation assets through JVs with tax equity partners. We consolidate these JVs in accordance with ASC 810 as they are VIEs in which we hold a variable interest, and we control decisions that are significant to the JVs' ongoing operations and economic results (i.e., we are the primary beneficiary).

These JVs are subject to profit sharing arrangements in which the allocation of the JVs' cash distributions and tax benefits to members is based on factors other than members' relative ownership percentages. As such, we utilize the HLBV method to allocate proceeds to each partner at the balance sheet date based on the liquidation provisions of the related JV's operating agreement and adjusts the amount of the VIE's net income attributable to us and the noncontrolling tax equity member during the period.

In each reporting period, the application of HLBV to our consolidated VIEs results in a difference between the amount of profit from the consolidated JVs and the amount included in regulated rates. As discussed above in "F. Basis of Accounting for Rate-Regulated Subsidiaries," we are subject to the accounting and reporting requirements of ASC 980. In accordance with these principles, we recognize a regulatory liability or asset for amounts representing the timing difference between the profit earned from the JVs and the amount included in regulated rates to recover our approved investments in consolidated JVs. The amounts recorded in income will ultimately reflect the amount allowed in regulated rates to recover our investments over the useful life of the projects. The offset to the regulatory liability or asset associated with our renewable investments included in regulated rates is recorded in "Depreciation expense" on the Statements of Consolidated Income (Loss).

2. Recent Accounting Pronouncements

Recently Issued Accounting Pronouncements

We have evaluated recently issued accounting pronouncements and do not believe any pronouncements will have a significant impact on our Consolidated Financial Statements or Notes to the Consolidated Financial Statements.

Recently Adopted Accounting Pronouncements

In March 2020, the FASB issued ASU 2020-04, *Reference Rate Reform (Topic 848): Facilitation of the Effects of Reference Rate Reform on Financial Reporting* and in January 2021, the FASB issued ASU 2021-01, *Reference Rate Reform (Topic 848): Scope.* These pronouncements provide temporary optional expedients and exceptions for applying GAAP principles to contract modifications and hedging relationships to ease the financial reporting burdens of the expected market transition from LIBOR and other interbank offered rates to alternative reference rates. These pronouncements were effective upon issuance on March 12, 2020 through December 31, 2022. In December 2022, the FASB issued ASU 2022-06, *Reference Rate Reform (Topic 848): Deferral of the Sunset Date of Topic 848*, to extend the temporary accounting rules under Topic 848 from December 31, 2022 to December 31, 2024, after which entities will no longer be permitted to apply the relief in Topic 848. During the third quarter of 2022, the company applied the practical expedient under Topic 848 which allowed for the continuation of cash flow hedge accounting for interest rate derivative contracts upon the transition from LIBOR to alternative reference rates. The application of this expedient had no material impact on the Consolidated Financial Statements.

In November 2021, the FASB issued ASU 2021-10, *Government Assistance (Topic 832): Disclosures by Business Entities about Government Assistance*. This pronouncement requires certain annual disclosures for transactions with a government that are accounted for by applying a grant or contribution accounting model by analogy to other accounting guidance. This pronouncement is effective for financial statements issued for annual periods beginning after December 15, 2021. The company adopted this pronouncement in the fourth quarter of 2022. The adoption of this pronouncement did not have an impact on the Notes to the Consolidated Financial Statements.

In September 2022, the FASB issued ASU 2022-04, *Liabilities-Supplier Finance Programs (Topic 405-50) - Disclosure of Supplier Finance Program Obligations*. This pronouncement requires that a buyer in a supplier finance program disclose sufficient information to allow a user of financial statements to understand the program's nature, activity during the period, changes from period to period, and potential magnitude. This pronouncement is expected to improve financial reporting by requiring new disclosures about supplier finance programs, thereby allowing financial statement users to better consider the effect of such programs on an entity's working capital, liquidity, and cash flows. This pronouncement is effective for fiscal years beginning after December 15, 2022. The company adopted this pronouncement as of January 1, 2023. We had no active supplier finance programs as of December 31, 2022.

3. Revenue Recognition

Customer Revenues. Substantially all of our revenues are tariff-based. Under ASC 606, the recipients of our utility service meet the definition of a customer, while the operating company tariffs represent an agreement that meets the definition of a contract, which creates enforceable rights and obligations. Customers in certain of our jurisdictions participate in programs that allow for a fixed payment each month regardless of usage. Payments received that exceed the value of gas or electricity actually delivered are recorded as a liability and presented in "Customer Deposits and Credits" on the Consolidated Balance Sheets. Amounts in this account are reduced and revenue is recorded when customer usage exceeds payments received.

We have identified our performance obligations created under tariff-based sales as 1) the commodity (natural gas or electricity, which includes generation and capacity) and 2) delivery. These commodities are sold and / or delivered to and generally consumed by customers simultaneously, leading to satisfaction of our performance obligations over time as gas or electricity is delivered to customers. Due to the at-will nature of utility customers, performance obligations are limited to the services requested and received to date. Once complete, we generally maintain no additional performance obligations.

Transaction prices for each performance obligation are generally prescribed by each operating company's respective tariff. Rates include provisions to adjust billings for fluctuations in fuel and purchased power costs and cost of natural gas. Revenues are adjusted for differences between actual costs, subject to reconciliation, and the amounts billed in current rates. Under or over recovered revenues related to these cost recovery mechanisms are included in "Regulatory Assets" or "Regulatory Liabilities" on the Consolidated Balance Sheets and are recovered from or returned to customers through adjustments to tariff rates. As we provide and deliver service to customers, revenue is recognized based on the transaction price allocated to each performance obligation. Distribution revenues are generally considered daily or "at-will" contracts as customers may cancel their service at any time (subject to notification requirements), and revenue generally represents the amount we are entitled to bill customers.

In addition to tariff-based sales, our Gas Distribution Operations segment enters into balancing and exchange arrangements of natural gas as part of our operations and off-system sales programs. Performance obligations for these types of sales include transportation and storage of natural gas and can be satisfied at a point in time or over a period of time, depending on the specific transaction. For those transactions that span a period of time, we record a receivable or payable for any cumulative gas imbalances, as well as for any gas inventory borrowed or lent under a Gas Distributions Operations exchange agreement.

Revenue Disaggregation and Reconciliation. We disaggregate revenue from contracts with customers based upon reportable segment as well as by customer class.

The tables below reconcile revenue disaggregation by customer class to segment revenue, as well as to revenues reflected on the Statements of Consolidated Income (Loss):

Year Ended December 31, 2022 (in millions)	Gas Distribution Operations	Electric Operations	Corporate and Other[(2)]	Total
Customer Revenues[(1)]				
Residential	$ 2,609.7	$ 592.4	$ —	$ 3,202.1
Commercial	939.6	571.0	—	1,510.6
Industrial	220.6	560.6	—	781.2
Off-system	192.9	—	—	192.9
Miscellaneous	40.3	11.5	—	51.8
Total Customer Revenues	$ 4,003.1	$ 1,735.5	$ —	$ 5,738.6
Other Revenues	4.1	95.4	12.5	112.0
Total Operating Revenues	$ 4,007.2	$ 1,830.9	$ 12.5	$ 5,850.6

(1)Customer revenue amounts exclude intersegment revenues. See Note 21, "Business Segment Information," for discussion of intersegment revenues.
(2)Other revenues related to the Transition Services Agreement entered into in connection with the sale of the Massachusetts Business, which was substantially completed as of June 30, 2022.

Year Ended December 31, 2021 *(in millions)*	Gas Distribution Operations	Electric Operations	Corporate and Other[(2)]	Total
Customer Revenues[(1)]				
Residential	$ 2,109.4	$ 567.9	$ —	$ 2,677.3
Commercial	722.4	534.9	—	1,257.3
Industrial	195.7	493.4	—	689.1
Off-system	71.3	—	—	71.3
Miscellaneous	27.3	8.2	0.8	36.3
Total Customer Revenues	$ 3,126.1	$ 1,604.4	$ 0.8	$ 4,731.3
Other Revenues	45.1	91.9	31.3	168.3
Total Operating Revenues	$ 3,171.2	$ 1,696.3	$ 32.1	$ 4,899.6

(1)Customer revenue amounts exclude intersegment revenues. See Note 21, "Business Segment Information," for discussion of intersegment revenues.
(2)Other revenues related to the Transition Services Agreement entered into in connection with the sale of the Massachusetts Business.

Year Ended December 31, 2020 *(in millions)*	Gas Distribution Operations	Electric Operations	Corporate and Other[(2)]	Total
Customer Revenues[(1)]				
Residential	$ 2,075.0	$ 527.8	$ —	$ 2,602.8
Commercial	670.5	480.3	—	1,150.8
Industrial	212.8	412.1	—	624.9
Off-system	41.0	—	—	41.0
Miscellaneous	32.7	20.2	0.8	53.7
Total Customer Revenues	$ 3,032.0	$ 1,440.4	$ 0.8	$ 4,473.2
Other Revenues	96.1	95.5	16.9	208.5
Total Operating Revenues	$ 3,128.1	$ 1,535.9	$ 17.7	$ 4,681.7

(1)Customer revenue amounts exclude intersegment revenues. See Note 21, "Business Segment Information," for discussion of intersegment revenues.
(2)Other revenues related to the Transition Services Agreement entered into in connection with the sale of the Massachusetts Business.

Other Revenues. As permitted by accounting principles generally accepted in the United States, regulated utilities have the ability to earn certain types of revenue that are outside the scope of ASC 606. These revenues primarily represent revenue earned under alternative revenue programs. Alternative revenue programs represent regulator-approved mechanisms that allow for the adjustment of billings and revenue for certain approved programs. We maintain a variety of these programs, including demand side management initiatives that recover costs associated with the implementation of energy efficiency programs, as well as normalization programs that adjust revenues for the effects of weather or other external factors. Additionally, we maintain certain programs with future test periods that operate similarly to FERC formula rate programs and allow for recovery of costs incurred to replace aging infrastructure. When the criteria to recognize alternative revenue have been met, we establish a regulatory asset and present revenue from alternative revenue programs on the Statements of Consolidated Income (Loss) as “Other revenues”. When amounts previously recognized under alternative revenue accounting guidance are billed, we reduce the regulatory asset and record a customer account receivable.

Customer Accounts Receivable. Accounts receivable on our Consolidated Balance Sheets includes both billed and unbilled amounts, as well as certain amounts that are not related to customer revenues. Unbilled amounts of accounts receivable relate to a portion of a customer’s consumption of gas or electricity from the date of the last cycle billing through the last day of the month (balance sheet date). Factors taken into consideration when estimating unbilled revenue include historical usage, customer rates and weather. A significant portion of our operations are subject to seasonal fluctuations in sales. During the heating season, primarily from November through March, revenues and receivables from gas sales are more significant than in other months. The opening and closing balances of customer receivables for the year ended December 31, 2022, are presented in the table below. We had no significant contract assets or liabilities during the period. Additionally, we have not incurred any significant costs to obtain or fulfill contracts.

(in millions)	Customer Accounts Receivable, Billed (less reserve)	Customer Accounts Receivable, Unbilled (less reserve)
Balance as of December 31, 2021	$ 459.6	$ 337.0
Balance as of December 31, 2022	560.5	453.0

Utility revenues are billed to customers monthly on a cycle basis. We expect that substantially all customer accounts receivable will be collected following customer billing, as this revenue consists primarily of periodic, tariff-based billings for service and usage. We maintain common utility credit risk mitigation practices, including requiring deposits and actively pursuing collection of past due amounts. Our regulated operations also utilize certain regulatory mechanisms that facilitate recovery of bad debt costs within tariff-based rates, which provides further evidence of collectibility. It is probable that substantially all of the consideration to which we are entitled from customers will be collected upon satisfaction of performance obligations.

Allowance for Credit Losses. To evaluate for expected credit losses, customer account receivables are pooled based on similar risk characteristics, such as customer type, geography, payment terms, and related macro-economic risks. Expected credit losses are established using a model that considers historical collections experience, current information, and reasonable and supportable forecasts. Internal and external inputs are used in our credit model including, but not limited to, energy consumption trends, revenue projections, actual charge-offs data, recoveries data, shut-offs, customer delinquencies, final bill data, and inflation. We continuously evaluate available information relevant to assessing collectability of current and future receivables. We evaluate creditworthiness of specific customers periodically or following changes in facts and circumstances. When we become aware of a specific commercial or industrial customer's inability to pay, an allowance for expected credit losses is recorded for the relevant amount. We also monitor other circumstances that could affect our overall expected credit losses; including, but not limited to, creditworthiness of overall population in service territories, adverse conditions impacting an industry sector, and current economic conditions.

At each reporting period, we record expected credit losses to an allowance for credit losses account. When deemed to be uncollectible, customer accounts are written-off. A rollforward of our allowance for credit losses as of December 31, 2022 and December 31, 2021, are presented in the tables below:

(in millions)	Gas Distribution Operations	Electric Operations	Corporate and Other	Total
Balance as of January 1, 2022	$ 18.9	$ 3.8	$ 0.8	$ 23.5
Current period provisions	29.1	6.9	—	36.0
Write-offs charged against allowance	(52.1)	(5.3)	—	(57.4)
Recoveries of amounts previously written off	21.3	0.5	—	21.8
Balance as of December 31, 2022	$ 17.2	$ 5.9	$ 0.8	$ 23.9

(in millions)	Gas Distribution Operations	Electric Operations	Corporate and Other	Total
Balance as of January 1, 2021	$ 41.8	$ 9.7	$ 0.8	$ 52.3
Current period provisions	5.8	1.4	—	7.2
Write-offs charged against allowance	(46.7)	(7.7)	—	(54.4)
Recoveries of amounts previously written off	18.0	0.4	—	18.4
Balance as of December 31, 2021	$ 18.9	$ 3.8	$ 0.8	$ 23.5

In connection with the COVID-19 pandemic, certain state regulatory commissions instituted regulatory moratoriums that impacted our ability to pursue our standard credit risk mitigation practices. Following the issuance of these moratoriums, certain of our regulated operations have been authorized to recognize a regulatory asset for bad debt costs above levels currently recovered in rates. At the balance sheet date, in addition to our evaluation of the allowance for credit losses discussed above, we considered benefits available under governmental COVID-19 relief programs, the impact of unemployment benefits initiatives, and flexible payment plans being offered to customers affected by or experiencing hardship as a result of the pandemic, which could help to mitigate the potential for increasing customer account delinquencies. We also considered the on-time bill payment promotion and robust customer marketing strategy for energy assistance programs that we have implemented. Based upon this evaluation, we have concluded that the allowance for credit losses as of December 31, 2022 adequately reflected the collection risk and net realizable value of our receivables. See Note 9, "Regulatory Matters," for additional information on regulatory moratoriums and regulatory assets.

4. Variable Interest Entities

A VIE is an entity in which the controlling interest is determined through means other than a majority voting interest. Refer to Note 1, "Nature of Operations and Summary of Significant Accounting Policies - S. VIEs and Allocation of Earnings," for information on our accounting policy for the VIEs.

NIPSCO owns and operates two wind facilities, Rosewater and Indiana Crossroads Wind, which have 102 MW and 302 MW of nameplate capacity, respectively. NIPSCO also owns one solar facility, which is expected to go into service in 2023, Indiana Crossroads Solar, which has 200 MW of nameplate capacity. We control decisions that are significant to these entities' ongoing operations and economic results. Therefore, we have concluded that we are the primary beneficiary and have consolidated all three entities.

Members of the respective JVs are NIPSCO (who is the managing member) and tax equity partners. Earnings, tax attributes and cash flows are allocated to both NIPSCO and the tax equity partner in varying percentages by category and over the life of the partnership. NIPSCO and each tax equity partner contributed cash, and NIPSCO also assumed an obligation to the developers of the wind facilities representing the remaining economic interest. The developers of the wind facilities are not a partner in the JV for federal income tax purposes and do not receive any share of earnings, tax attributes, or cash flows of each JV. Once the tax equity partner has earned their negotiated rate of return and we have reached the agreed upon contractual date, NIPSCO has the option to purchase at fair market value from the tax equity partner the remaining interest in the respective JV. NIPSCO has an obligation to purchase, through a PPA at established market rates, 100% of the electricity generated by the JVs.

The following table displays the total contributions paid and obligations incurred in the periods presented:

(in millions)		**December 31, 2022**		December 31, 2021		December 31, 2020
NIPSCO Cash Contributions	**$**	**151.8**	$	2.8	$	0.7
Tax Equity Partner Cash Contributions		**21.2**		245.1		86.1
NIPSCO's Obligation to Developer[1]		**—**		277.5		69.7
Total Contributions	**$**	**173.0**	$	525.4	$	156.5

[1] Outstanding amounts in "Obligations to renewable generation asset developer" in the Consolidated Balance Sheets.

We did not provide any financial or other support during the year that was not previously contractually required, nor do we expect to provide such support in the future.

Our Consolidated Balance Sheets included the following assets and liabilities associated with VIEs.

(in millions)		**December 31, 2022**		December 31, 2021
Net Property, Plant and Equipment	**$**	**978.5**	$	695.9
Current assets		**25.7**		14.3
Total assets[1]		**1,004.2**		710.2
Current liabilities		**128.2**		10.0
Asset retirement obligations		**30.6**		20.5
Total liabilities	**$**	**158.8**	$	30.5

[1]The assets of each VIE represent assets of a consolidated VIE that can be used only to settle obligations of the respective consolidated VIE. The creditors of the liabilities of the VIEss do not have recourse to the general credit of the primary beneficiary.

5. Earnings Per Share

The calculations of basic and diluted EPS are based on the weighted average number of shares of common stock and potential common stock outstanding during the period. For the purposes of determining diluted EPS, the shares underlying the purchase contracts included within the Equity Units were included in the calculation of potential common stock outstanding for the years ended December 31, 2022 and 2021 using the if-converted method under US GAAP. This method assumes conversion at the beginning of the reporting period, or at time of issuance, if later. For the purchase contracts, the number of shares of our common stock that would be issuable at the end of each reporting period will be reflected in the denominator of our diluted EPS calculation. If the stock price falls below the initial reference price of $24.51, subject to anti-dilution adjustments, the number of shares of our common stock used in calculating diluted EPS will be the maximum number of shares per the contract as described in Note 13, "Equity." Conversely, if the stock price is above the initial reference price of $24.51, subject to anti-dilution adjustments, a variable number of shares of our common stock will be used in calculating diluted EPS. A numerator adjustment was reflected in the calculation of diluted EPS for interest expense incurred in 2022 and 2021, net of tax, related to the purchase contracts.

We adopted ASU 2020-06 on January 1, 2022, which resulted in additional dilution from our Equity Units by requiring us to assume share settlement of the remaining purchase contract payment balance based on the average share price during the period.

The shares underlying the Series C Mandatory Convertible Preferred Stock included within the Equity Units are contingently convertible as the conversion is contingent on a successful remarketing as described in Note 13, "Equity." Contingently convertible shares where conversion is not tied to a market price trigger are excluded from the calculation of diluted EPS until such time as the contingency has been resolved under the if-converted method. As of December 31, 2022 and 2021, the contingency was not resolved and thus no shares were reflected in the denominator in the calculation of diluted EPS for the years ended December 31, 2022 and 2021.

Diluted EPS also includes the incremental effects of the various long-term incentive compensation plans and the open ATM forward agreements during the period under the treasury stock method when the impact would be dilutive. Refer to Note 13, "Equity," for more information on our ATM forward agreements.

For the year ended December 31, 2020, we had a net loss on the Statements of Consolidated Income (Loss) during the period, and any potentially dilutive shares would have had an anti-dilutive impact on EPS. The following table presents the calculation of our basic and diluted EPS:

Year Ended December 31, *(in millions, except per share amounts)*		**2022**		2021		2020
Numerator:						
Net Income (Loss) Available to Common Shareholders - Basic	**$**	**749.0**	$	529.8	$	(72.7)
Dilutive effect of Equity Units		**2.0**		1.6		—
Net Income (Loss) Available to Common Shareholders - Diluted	**$**	**751.0**	$	531.4	$	(72.7)
Denominator:						
Average common shares outstanding - Basic		**407.1**		393.6		384.3
Dilutive potential common shares:						
Equity Units purchase contracts		**30.2**		22.0		—
Equity Units purchase contract payment balance		**3.2**		—		—
Shares contingently issuable under employee stock plans		**0.9**		0.8		—
Shares restricted under employee stock plans		**0.5**		0.3		—
ATM Forward agreements		**0.8**		0.6		—
Average Common Shares - Diluted		**442.7**		417.3		384.3
Earnings per common share:						
Basic	**$**	**1.84**	$	1.35	$	(0.19)
Diluted	**$**	**1.70**	$	1.27	$	(0.19)

6. Property, Plant and Equipment

Our property, plant and equipment on the Consolidated Balance Sheets are classified as follows:

At December 31, *(in millions)*		**2022**		2021
Property, Plant and Equipment				
Gas Distribution Utility[1]	**$**	**16,576.4**	$	15,240.6
Electric Utility[1]		**7,162.4**		6,754.9
Corporate		**271.7**		217.8
Construction Work in Process		**1,398.2**		808.0
Renewable Generation Assets[2]		**702.2**		702.4
Non-Utility and Other		**1,440.4**		1,447.6
Total Property, Plant and Equipment	**$**	**27,551.3**	$	25,171.3
Accumulated Depreciation and Amortization				
Gas Distribution Utility[1]	**$**	**(3,678.1)**	$	(3,490.2)
Electric Utility[1]		**(2,557.4)**		(2,433.1)
Corporate		**(160.0)**		(132.2)
Renewable Generation Assets[2]		**(29.7)**		(6.5)
Non-Utility and Other		**(1,283.5)**		(1,227.5)
Total Accumulated Depreciation and Amortization	**$**	**(7,708.7)**	$	(7,289.5)
Net Property, Plant and Equipment	**$**	**19,842.6**	$	17,881.8

[1]NIPSCO's common utility plant and associated accumulated depreciation and amortization are allocated between Gas Distribution Utility and Electric Utility Property, Plant and Equipment.
[2]Our renewable generation assets are part of our electric segment and represent Non-Utility Property, owned and operated by JVs between NIPSCO and unrelated tax equity partners, and depreciated straight-line over 30 years. Refer to Note 4, "Variable Interest Entities," for additional information.

On October 1, 2021, NIPSCO retired R.M. Schahfer Generating Station Units 14 and 15. The net book value of the retired units was reclassified from "Net Property, Plant and Equipment," to current and long-term "Regulatory Assets." The estimated net book value of R.M. Schahfer Generating Station's coal Units 14 and 15 and other associated plant retired was approximately $600.0 million. See Note 9, "Regulatory Matters," for additional details regarding the recovery of the regulatory assets associated with retired generating stations.

The weighted average depreciation provisions for utility plant, as a percentage of the original cost, for the periods ended December 31, 2022, 2021 and 2020 were as follows:

	2022	2021	2020
Electric Operations	**3.1 %**	3.4 %	3.4 %
Gas Distribution Operations	**2.3 %**	2.2 %	2.3 %

We recognized depreciation expense of $685.0 million, $672.1 million and $655.6 million for the years ended 2022, 2021 and 2020, respectively. The 2022 and 2021 depreciation expense amounts include an $11.0 million and $5.3 million increase related to the regulatory deferral of income (loss) associated with our JVs, which is not included in current rates. See Note 9, "Regulatory Matters," for additional details.

Amortization of on-premise Software Costs. We amortized $53.1 million, $49.4 million and $56.7 million in 2022, 2021 and 2020, respectively, related to software recorded as intangible assets. Our unamortized software balance was $190.1 million and $181.8 million at December 31, 2022 and 2021, respectively.

Amortization of Cloud Computing Costs. We amortized $11.1 million, $10.0 million and $3.4 million in 2022, 2021 and 2020, respectively, related to cloud computing costs to "Operation and maintenance" expense. Our unamortized cloud computing balance was $45.7 million and $42.4 million at December 31, 2022 and 2021, respectively.

7. Goodwill

Substantially all of our goodwill relates to the excess of cost over the fair value of the net assets acquired in the Columbia acquisition on November 1, 2000. Our goodwill balance was $1,485.9 million as of December 31, 2022 and 2021. All our goodwill has been allocated to our Gas Distribution Operations segment.

For our annual goodwill impairment analysis performed as of May 1, 2022, we completed a qualitative "step 0" assessment and determined that it was more likely than not that the estimated fair value of the reporting unit substantially exceeded the related carrying value of our reporting unit. For this test, we assessed various assumptions, events and circumstances that would have affected the estimated fair value of the reporting units as compared to the baseline "step 1" fair value measurement performed May 1, 2020.

8. Asset Retirement Obligations

We have recognized asset retirement obligations associated with various legal obligations including costs to remove and dispose of certain construction materials located within many of our facilities (including our JV facilities), certain costs to retire pipeline, removal costs for certain underground storage tanks, removal of certain pipelines known to contain PCB contamination, closure costs for certain sites including ash ponds, solid waste management units and a landfill, as well as some other nominal asset retirement obligations. We also have an obligation associated with the decommissioning of our two hydro facilities located in Indiana. These hydro facilities have an indeterminate life, and as such, no asset retirement obligation has been recorded.

Changes in our liability for asset retirement obligations for the years 2022 and 2021 are presented in the table below:

(in millions)	**2022**	2021
Beginning Balance	**$ 512.4**	$ 495.6
Accretion recorded as a regulatory asset/liability	**17.1**	16.0
Additions	**9.5**	23.2
Settlements	**(22.3)**	(11.2)
Change in estimated cash flows	**(3.2)**	(11.2)
Ending Balance	**$ 513.5**	$ 512.4

Certain non-legal costs of removal that have been, and continue to be, included in depreciation rates and collected in the customer rates of the rate-regulated subsidiaries are classified as "Regulatory liabilities" on the Consolidated Balance Sheets.

9. Regulatory Matters

Regulatory Assets and Liabilities

We follow the accounting and reporting requirements of ASC Topic 980, which provides that regulated entities account for and report assets and liabilities consistent with the economic effect of regulatory rate-making procedures when the rates established are designed to recover the costs of providing the regulated service and it is probable that such rates will be charged and collected from customers. Certain expenses and credits subject to utility regulation or rate determination normally reflected in income or expense are deferred on the balance sheet and are recognized in the income statement as the related amounts are included in customer rates and recovered from or refunded to customers. We assess the probability of collection for all of our regulatory assets each period.

Regulatory assets were comprised of the following items:

At December 31, *(in millions)*		2022		2021
Regulatory Assets				
Unrecognized pension and other postretirement benefit costs (see Note 12)	**$**	**607.5**	$	512.1
Deferred pension and other postretirement benefit costs (see Note 12)		**72.2**		74.8
Environmental costs (see Note 19-E.)		**41.4**		45.8
Regulatory effects of accounting for income taxes (see Note 1-N. and Note 11)		**158.0**		194.8
Under-recovered gas and fuel costs (see Note 1-J.)		**85.5**		73.6
Depreciation		**191.3**		177.5
Post-in-service carrying charges		**251.5**		237.9
Safety activity costs		**200.7**		171.9
DSM programs		**37.5**		39.2
Retired coal generating stations		**744.0**		803.9
Losses on commodity price risk programs (See Note 10)		**10.0**		9.6
Deferred property taxes		**68.5**		65.1
Renewable energy investments (See Note 1-S. and Note 4)		**37.7**		18.5
Other		**75.0**		67.5
Total Regulatory Assets	**$**	**2,580.8**	$	2,492.2
Less: Current Portion		**233.2**		206.2
Total Noncurrent Regulatory Assets	**$**	**2,347.6**	$	2,286.0

Regulatory liabilities were comprised of the following items:

At December 31, *(in millions)*		2022		2021
Regulatory Liabilities				
Over-recovered gas and fuel costs (see Note 1-J.)	**$**	**20.6**	$	5.4
Cost of removal (see Note 8)		**675.9**		749.5
Regulatory effects of accounting for income taxes (see Note 1-N. and Note 11)		**996.3**		1,040.8
Deferred pension and other postretirement benefit costs (see Note 12)		**66.8**		75.9
Gains on commodity price risk programs (See Note 10)		**90.0**		34.2
Customer Assistance Programs		**32.9**		13.2
Rate Refunds		**51.4**		8.2
Other		**78.7**		52.8
Total Regulatory Liabilities	**$**	**2,012.6**	$	1,980.0
Less: Current Portion		**236.8**		137.4
Total Noncurrent Regulatory Liabilities	**$**	**1,775.8**	$	1,842.6

Regulatory assets, including under-recovered gas and fuel costs and depreciation, of approximately $1,324.7 million and $1,207.0 million as of December 31, 2022 and 2021, respectively, are not earning a return on investment. These costs are recovered over a remaining life, the longest of which is 50 years.

Assets:

Unrecognized pension and other postretirement benefit costs. Represents the deferred other comprehensive income or loss of the actuarial gains or losses and the prior service costs or credits that arise during the period but that are not immediately recognized as components of net periodic benefit costs by certain subsidiaries that will ultimately be recovered through base rates.

Deferred pension and other postretirement benefit costs. Primarily relates to the difference between defined benefit plan expense recorded by certain subsidiaries due to regulatory orders and the corresponding expense that would otherwise be recorded in accordance with GAAP. The majority of these amounts are driven by Columbia of Ohio. On January 26, 2023, the PUCO approved the joint stipulation in Columbia of Ohio's rate case. In the stipulation, Columbia agreed to forego the continuation of its pension and OPEB deferral prospectively as of March 31, 2021. Amounts deferred as of March 31, 2021 will be included in base rates.

Environmental costs. Includes certain recoverable costs related to gas plant sites, disposal sites or other sites onto which material may have migrated, the recovery of which is to be addressed in future base rates, billing riders or tracking mechanisms of certain of our subsidiaries.

Regulatory effects of accounting for income taxes. Represents the deferral and under collection of deferred taxes in the rate making process.

Under-recovered gas and fuel costs. Represents the difference between the costs of gas and fuel and the recovery of such costs in revenue and is used to adjust future billings for such deferrals on a basis consistent with applicable state-approved tariff provisions. Recovery of these costs is achieved through tracking mechanisms.

Depreciation. Represents differences between depreciation expense incurred on a GAAP basis and that prescribed through regulatory order. The majority of this balance is driven by Columbia of Ohio's IRP and CEP deferrals, however, starting in March 2023, the majority of these costs will be in base rates.

Post-in-service carrying charges. Represents deferred debt-based carrying charges incurred on certain assets placed into service but not yet included in customer rates. The majority of this balance is driven by Columbia of Ohio's IRP and CEP deferrals, however, starting in March 2023, the majority of these costs will be in base rates.

Safety activity costs. Represents the difference between costs incurred by certain of our subsidiaries in eligible safety programs in compliance with PHMSA regulations in excess of those being recovered in rates. The majority of this balance is driven by Columbia of Ohio, which will begin recovery in March 2023 through base rates.

DSM programs. Represents costs associated with Gas Distribution Operations and Electric Operations segments' energy efficiency and conservation programs. Costs are recovered through tracking mechanisms.

Retired coal generating stations. Represents the net book value of Units 7 and 8 of Bailly Generating Station that was retired during 2018 and the net book value of Units 14 and 15 of R.M. Schahfer Generating Station retired in 2021. These amounts are currently being amortized at a rate consistent with their inclusion in customer rates. The December 2019 NIPSCO electric rate case order allows for the recovery of, and on, the net book value of the stations by the end of 2032 and implements a revenue credit for the retired units. The credit is based on the difference between the net book value of Units 14 and 15 upon retirement and the last base rate case proceeding. The credit will be reset when new base rates are determined. See Note 6, "Property, Plant and Equipment," for further details.

Losses on commodity price risk programs. Represents the unrealized losses related to certain of our subsidiary's commodity price risk programs. These programs help to protect against the volatility of commodity prices and these amounts are collected from customers through their inclusion in customer rates.

Deferred property taxes. Represents the deferral and under collection of property taxes in the rate making process for Columbia of Ohio and is driven by the IRP and CEP deferrals, however, starting in March 2023, the majority of these costs will be in base rates.

Renewable energy investments. Represents the regulatory deferral of certain amounts representing the timing difference between the profit earned from the JVs and the amount included in regulated rates to recover our approved investments in consolidated JVs. These amounts will be collected through base rates over the life of the renewable generating assets to which they relate. Refer to Note 1, "Nature of Operations and Summary of Significant Accounting Policies - S. VIEs and Allocation of Earnings," for additional information. Renewable energy formation and developer costs are also included in this regulatory asset.

Liabilities:

Over-recovered gas and fuel costs. Represents the difference between the cost of gas and fuel and the recovery of such costs in revenues and is the basis to adjust future billings for such refunds on a basis consistent with applicable state-approved tariff provisions. Refunding of these revenues is achieved through tracking mechanisms.

Cost of removal. Represents anticipated costs of removal for utility assets that have been collected through depreciation rates for future costs to be incurred.

Regulatory effects of accounting for income taxes. Represents amounts owed to customers for deferred taxes collected at a higher rate than the current statutory rates and liabilities associated with accelerated tax deductions owed to customers. Balance includes excess deferred taxes recorded upon implementation of the TCJA in December 2017, net of amounts amortized through 2022.

Deferred pension and other postretirement benefit costs. Primarily represents cash contributions in excess of postretirement benefit expense that is deferred by certain subsidiaries.

Gains on commodity price risk programs. Represents the unrealized gains related to certain of our subsidiary's commodity price risk programs. These programs help to protect against the volatility of commodity prices, and these amounts are passed back to customers through their inclusion in customer rates.

Customer Assistance Programs. Represents the difference between the eligible customer assistance program costs and collections, which will be refunded to customers.

Rate Refunds. Represents supplier refunds received by the company that are owed to customers and will be remitted.

NIPSCO change in accounting estimate

As part of the NIPSCO Gas Settlement and Stipulation Agreement filed on March 2, 2022, NIPSCO Gas agreed to change the depreciation methodology for its calculation of depreciation rates, which reduces depreciation expense and subsequent revenues and cash flows. An order was received on July 27, 2022 approving the rate case and rates were effective as of September 1, 2022. NIPSCO has proposed a similar change in depreciation methodology in its pending electric base rate case.

Columbia of Ohio regulatory filing update

On Wednesday, April 6, 2022, the PUCO Staff issued its Staff Report in Columbia of Ohio's base rate case, filed on June 21, 2021, which was filed in conjunction with applications for an alternative rate plan, approval of certain deferral authority, and updates to certain riders. Columbia of Ohio's application requested a net rate increase approximating a 21.3% or $221.4 million increase in revenue per year. On October 31, 2022, Columbia of Ohio filed a joint stipulation and recommendation with certain parties to settle the base rate case. The joint stipulation and recommendation includes a rate increase of 7.97%, or $68.2 million and includes adjustments to plant assets, pension expenses, environmental remediation costs and other operations and maintenance expenses. The joint stipulation and recommendation also proposes to extend both of Columbia of Ohio's capital investment riders, the IRP and CEP, for capital invested through the 2026 calendar year. Columbia of Ohio recorded the material effects of the joint stipulation in the fourth quarter. On January 26, 2023, the PUCO approved the joint stipulation and recommendation.

Regulatory deferral related to renewable energy investments

The offset to the regulatory liability or asset associated with our renewable investments included in regulated rates is recorded in "Depreciation expense" on the Statements of Consolidated Comprehensive Income (Loss). Refer to Note 4, "Variable Interest Entities," and Note 6, "Property, Plant and Equipment," for additional information.

FAC Adjustment

As ordered by the IURC on June 15, 2022, NIPSCO is required to refund to customers $8.0 million of over-collected fuel costs. The remaining refund is recorded as a regulatory liability on the Consolidated Balance Sheets and is expected to be refunded in 2023.

COVID-19 Regulatory Filings

In response to COVID-19, we received approvals or directives from the regulatory commissions in the states in which we operate. The ongoing impacts of these approvals or directives are described in the table below:

Jurisdiction	Regulatory Asset balance as of December 31, 2022 *(in millions)*	Regulatory Asset balance as of December 31, 2021 *(in millions)*	Deferred COVID-19 Costs
Columbia of Ohio	$ —	$ 2.1	Incremental operation and maintenance expenses
NIPSCO	$ 2.1	$ 2.2	Incremental bad debt expense and the costs to implement the requirements of the COVID-19 related order
Columbia of Pennsylvania	$ 2.8	$ 5.2	Incremental bad debt expense incurred from March 13, 2020 through December 29, 2021, above levels currently in rates
Columbia of Virginia	$ 1.9	$ 1.5	Incremental incurred costs, including incremental bad debt expense
Columbia of Maryland	$ 1.3	$ 0.9	Incremental costs (including incremental bad debt expense) incurred to ensure that customers have essential utility service during the state of emergency in Maryland. Such incremental costs must be offset by any benefit received in connection with the pandemic

On January 26, 2023, the PUCO approved the joint stipulation in Columbia of Ohio's rate case. As part of this stipulation, Columbia agreed to forego recovery of its deferred COVID-19 costs.

The Pennsylvania PUC lifted its prior pandemic-related moratorium on service terminations for non-payments of utility bills beginning April 1, 2021. In CPA's recent rate case order, total COVID-19 deferrals were updated with the remaining balance being amortized over a four-year period.

For Columbia of Virginia, the moratorium on non-residential disconnections ended on October 6, 2020, and the moratorium on residential disconnections and late payment fees ended on August 30, 2021.

In connection with the Maryland Relief Act and the order issued by the PSC of Maryland on June 15, 2021, Columbia of Maryland received approximately $0.8 million of assistance that was applied to customer accounts in August 2021. Columbia of Maryland's recent rate case order includes continued amortization of operation and maintenance expenses. All termination moratoriums will be lifted after April 1, 2023 and normal collections procedures will be resumed.

Unless otherwise noted above, all other pandemic-related regulatory actions have expired or been lifted.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA (continued)

10. Risk Management Activities

We are exposed to certain risks related to our ongoing business operations; namely commodity price risk and interest rate risk. We recognize that the prudent and selective use of derivatives may help to lower our cost of debt capital, manage interest rate exposure and limit volatility in the price of natural gas.

Risk management assets and liabilities on our derivatives are presented on the Consolidated Balance Sheets as shown below:

	December 31, 2022		December 31, 2021	
(in millions)	**Assets**	**Liabilities**	**Assets**	**Liabilities**
Current[(1)]				
Derivatives designated as hedging instruments	$ —	$ —	$ —	$ 136.4
Derivatives not designated as hedging instruments	**18.8**	**1.1**	10.6	0.4
Total	$ **18.8**	$ **1.1**	$ 10.6	$ 136.8
Noncurrent[(2)]				
Derivatives designated as hedging instruments	$ —	$ —	$ —	$ —
Derivatives not designated as hedging instruments	**66.0**	**1.9**	13.8	7.4
Total	$ **66.0**	$ **1.9**	$ 13.8	$ 7.4

(1) Presented in "Prepayments and other" and "Other accruals", respectively, on the Consolidated Balance Sheets.
(2) Presented in "Deferred charges and other" and "Other noncurrent liabilities", respectively, on the Consolidated Balance Sheets.

Our derivative instruments are subject to enforceable master netting arrangements or similar agreements. No collateral was either received or posted related to our outstanding derivative positions at December 31, 2022. If the above gross asset and liability positions were presented net of amounts owed or receivable from counterparties, we would report a net asset position of $81.8 million and $16.6 million at December 31, 2022 and 2021, respectively.

Derivatives Not Designated as Hedging Instruments
C***ommodity price risk management.*** We, along with our utility customers, are exposed to variability in cash flows associated with natural gas purchases and volatility in natural gas prices. We purchase natural gas for sale and delivery to our retail, commercial and industrial customers, and for most customers the variability in the market price of gas is passed through in their rates. Some of our utility subsidiaries offer programs whereby variability in the market price of gas is assumed by the respective utility. The objective of our commodity price risk programs is to mitigate the gas cost variability, for us or on behalf of our customers, associated with natural gas purchases or sales by economically hedging the various gas cost components using a combination of futures, options, forwards or other derivative contracts. As of December 31, 2022 and 2021, we had 99.0 MMDth and 124.5 MMDth, respectively, of net energy derivative volumes outstanding related to our natural gas hedges.

NIPSCO has received IURC approval to lock in a fixed price for its natural gas customers using long-term forward purchase instruments and is limited to 20% of NIPSCO's average annual GCA purchase volume. As of December 31, 2022, the remaining terms of these instruments range from one to five years.

All gains and losses on these derivative contracts are deferred as regulatory liabilities or assets and are remitted to or collected from customers through NIPSCO's quarterly GCA mechanism. These instruments are not designated as hedging instruments. Refer to Note 9, "Regulatory Matters," for additional information.

Derivatives Designated as Hedging Instruments
Interest rate risk management. As of December 31, 2022, we have no forward-starting interest rate swaps outstanding.

On June 7, 2022, we settled a $250.0 million forward-starting interest rate swap agreement contemporaneously with the issuance of $350.0 million of 5.00% senior unsecured notes maturing in 2052. The derivative contract was accounted for as a cash flow hedge. As part of the transaction, the associated net unrealized gain position of $10.2 million is being amortized from AOCI into interest expense over the life of the associated debt. Refer to Note 15, "Long-Term Debt," for additional information.

On December 21, 2022, we settled a $250.0 million forward-starting interest rate swap agreement that was designated as a cash flow hedge. As part of the transaction, the associated net unrealized gain position of $10.0 million was recognized immediately in "Other, net" on the Statements of Consolidated Income (Loss) due to the probability that the forecasted borrowing transaction would no longer occur.

Cash flow hedges included in "Accumulated other comprehensive loss" on the Consolidated Balance Sheets were:

(in millions)		AOCI[(1)]	Gain Expected to be Reclassified to Earnings During the Next 12 Months[(1)]	Maximum Term
Interest Rate	$	(12.6)	(0.3)	353 months

(1) All amounts are net of tax.

The net gain related to these swaps are recorded to AOCI. We amortize the net gain over the life of the debt associated with these swaps as we recognize interest expense. These amounts are immaterial in 2022, 2021 and 2020 and are recorded in "Interest expense, net" on the Statements of Consolidated Income (Loss).

There were no amounts excluded from effectiveness testing for derivatives in cash flow hedging relationships at December 31, 2021 and 2020.

Our derivative instruments measured at fair value as of December 31, 2022 and 2021 did not contain any credit-risk-related contingent features. Cash flows for derivative financial instruments are generally classified as operating activities.

11. Income Taxes

Income Tax Expense. The components of income tax expense (benefit) were as follows:

Year Ended December 31, *(in millions)*	**2022**	2021	2020
Income Taxes			
Current			
Federal	**$ 0.4**	$ (0.1)	$ 0.2
State	**7.3**	6.0	11.7
Total Current	**7.7**	5.9	11.9
Deferred			
Federal	**181.0**	99.2	(0.4)
State	**(23.0)**	13.8	(27.4)
Total Deferred	**158.0**	113.0	(27.8)
Deferred Investment Credits	**(1.1)**	(1.1)	(1.2)
Income Taxes	**$ 164.6**	$ 117.8	$ (17.1)

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA (continued)

Statutory Rate Reconciliation. The following table represents a reconciliation of income tax expense at the statutory federal income tax rate to the actual income tax expense from continuing operations:

Year Ended December 31, *(in millions)*	**2022**		2021		2020	
Book income (loss) before income taxes	**$ 956.4**		$ 706.6		$ (31.3)	
Tax expense (benefit) at statutory federal income tax rate	**200.8**	**21.0 %**	148.3	21.0 %	(6.6)	21.0 %
Increases (reductions) in taxes resulting from:						
State income taxes, net of federal income tax benefit	**4.5**	**0.5**	14.1	2.0	(11.7)	37.4
Amortization of regulatory liabilities	**(38.5)**	**(4.0)**	(39.1)	(5.5)	(38.4)	122.7
Fines and penalties	**0.3**	**—**	—	—	11.8	(37.7)
Employee stock ownership plan dividends and other compensation	**(1.2)**	**(0.1)**	(1.2)	(0.2)	(1.3)	4.2
Deferred taxes on TCJA regulatory liability divested	**—**	**—**	—	—	23.3	(74.5)
Tax accrual adjustments	**0.2**	**—**	(0.1)	—	8.9	(28.4)
Federal tax credits	**(2.3)**	**(0.2)**	(2.1)	(0.3)	(2.5)	8.0
Other adjustments	**0.8**	**—**	(2.1)	(0.3)	(0.6)	1.9
Income Taxes	**$ 164.6**	**17.2 %**	$ 117.8	16.7 %	$ (17.1)	54.6 %

The difference in tax expense year-over-year has a relative impact on the effective tax rate proportional to pretax income or loss. The 0.5% increase in effective tax rate in 2022 versus 2021 was primarily due to decreased amortization of excess deferred income taxes, offset by the state jurisdictional mix of pre-tax income in 2022 tax effected at statutory tax rates, and the reduction of the Pennsylvania corporate income tax rate.

The 37.9% decrease in effective tax rate in 2021 versus 2020 was primarily the result of higher pre-tax income, state jurisdictional mix of pre-tax income in 2021 tax effected at statutory tax rates and increased amortization of excess deferred federal income taxes in 2021 compared to 2020. These items were offset by decreased deferred tax expense recognized on the sale of Columbia of Massachusetts' regulatory liability in 2020, established due to TCJA in 2017, that would have otherwise been recognized over the amortization period, 2020 non-deductible penalties and valuation allowance related to Columbia of Massachusetts and 2020 one-time tax accrual adjustments.

Net Deferred Income Tax Liability Components. Deferred income taxes result from temporary differences between the financial statement carrying amounts and the tax basis of existing assets and liabilities. The principal components of our net deferred tax liability were as follows:

At December 31, *(in millions)*	**2022**	2021
Deferred tax liabilities		
Accelerated depreciation and other property differences	**$ 2,527.9**	$ 2,454.4
Other regulatory assets	**348.4**	308.6
Total Deferred Tax Liabilities	**2,876.3**	2,763.0
Deferred tax assets		
Other regulatory liabilities and deferred investment tax credits (including TCJA)	**294.3**	284.7
Pension and other postretirement/postemployment benefits	**124.7**	104.8
Net operating loss carryforward and AMT credit carryforward	**491.0**	545.9
Environmental liabilities	**20.7**	22.2
Other accrued liabilities	**55.9**	42.1
Other, net	**43.0**	111.7
Total Deferred Tax Assets	**1,029.6**	1,111.4
Valuation Allowance	**(7.8)**	(7.8)
Net Deferred Tax Assets	**1,021.8**	1,103.6
Net Deferred Tax Liabilities	**$ 1,854.5**	$ 1,659.4

At December 31, 2022, we have federal net operating loss carryforwards of $410.0 million (tax effected). The federal net operating loss carryforwards are available to offset taxable income and will begin to expire in 2036. We believe it is more likely than not that we will realize the benefit from the federal net operating loss carryforwards.

We also have $73.2 million (tax effected, net of federal benefit) of state net operating loss carryforwards. Depending on the jurisdiction in which the state net operating loss was generated, the carryforwards will begin to expire in 2028.
