Ref: Docket U-180117

from: J Ott

analog meters are superior
3-7-18

We should NOT use wireless technologies. They do not provide long term solutions for reliable, affordable, efficient internet access. (See Re-Inventing Wires: The Future of Landlines and Networks.) Analog meters are superior, they are not hackable do not collect private data, emit no EMI, are not known to cause fires, not susceptible to weather conditions and last 5-7+decades!
