

RECEIVED

April 26, 1991

AT&T Gateway Tower  
Eighteenth Floor  
700 Fifth Avenue  
Seattle, WA 98104-5018

To: Bob Wallis - WUTC  
From: Ron Gayman - AT&T  
Subject: AOS Rulemaking Docket 90-0726

The Commission staff has received numerous comments about the unblocking of 10XXX access and issues of increased toll fraud and economic hardships if and when such 10XXX0 access be ordered. FCC Docket 91-35 was prompted by Congress' directive to the FCC to propose rules to ensure customers' access to their preferred operator services provider. In comments filed April 12, 1991, with the FCC, numerous states, including Missouri's Public Counsel, Missouri Public Service Commission, Alabama Public Service Commission, Texas Public Commission as well as NARUC, supported 10XXX unblocking.

Of particular note was the Texas Public Utility Commission's comments that it (Texas PUC) had ordered unblocking of 10XXX0 calls in late 1989, and "since then, not one waiver request has been filed." Increased toll fraud, and economic hardships for compliance obviously did not exist in the industry.

I am providing you a copy of the Arizona Corporation Commission's order issued April 5, 1991 that also mandated the unblocking of 10XXX0 calls, and provides for a waiver procedure "should compelling evidence to the contrary be found in a detailed cost analysis." (pages 16-17).

Again, to point out, there are techniques that can be used to defraud the telecommunications industry. Stolen credit card numbers are frequently used to bill literally thousands of dollars per month to consumers. Persons roaming with cordless phones bypass physical control of telephone lines and sets. Placing calls to toll-free numbers then allowing the connection to time out and "fall back" to dial tone (a technique known as regenerated dial tone) bypasses controls built into smart sets and allows fraudulent calls to be placed.

The allegations that the 10XXX access code however cannot be unblocked because rampant fraud will occur are not true. There are ways to prevent both 10XXX 1+ and 10XXX 0+ fraud. First, where possible both PBX's and private pay phones should be programmed to block 10XXX 1+ calls while at the same time allowing 10XXX 0+ calls.

For example, all AT&T card caller phones have been programmed in this manner. In some cases, depending upon calling features desired, Local Exchange Carrier (LEC) end offices can be programmed to perform the desired blocking. LEC's use these features in their end offices on their card caller phones. In those cases where the phone or PBX cannot be programmed, an external Toll Restrictor can be installed between the phones and LEC end office to accomplish the same result. The Toll Restrictors currently available are state of the art devices that recover properly from commercial power failures, etc. and are even programmable to periodically call to some prearranged point to report on their health.

In addition to the foregoing, telephone lines can be protected against fraud placed through an operator. For example, someone can gain access to a phone, call the operator, and say "I'm having trouble dialing this call, will you dial it for me?" If there is nothing to alert the operator that the call should not be billed to the originating line the operator will dial it and allow the billing requested. There is an industry standard set of signals that are sent from the originating LEC end office to the carrier operator system that will alert the system that special billing restrictions apply. Those signals are associated with the originating line type. If the proper line type has been ordered the signals are sent regardless of the carrier on the call. It is a requirement that the owners of the phone have ordered the proper line type and all carriers respond properly when those signals are received. All AT&T operator systems are programmed accordingly and the signaling is available to all other carriers.

The point of this memo is to reemphasize the fact that methods and techniques are widely available today to protect both carriers and aggregators from fraud. The methods are reasonably priced. These tools cannot prevent all types of fraud. For example, stolen credit cards appear legitimate until someone receives the bill. However, fraud is not caused or allowed by the unblocking of 10XXX. Fraud is allowed when the available tools are not properly understood and utilized.

3 Cynthia Haglin, Staff Attorneys, on behalf of  
the Staff of the Arizona Corporation  
Commission.

## 4 BY THE COMMISSION:

5 During 1988 and 1989, Telesphere Limited, Inc. ("Telesphere"),  
6 Automated Communications, Inc. ("Automated"), Triple Crown  
7 Industries, Inc. ("Triple Crown"), American Telecommunications  
8 Corporation, Century Network, Inc. ("Century"), Pentagon Computer  
9 Data, Ltd., Long Distance/USA, Inc. ("LD/USA"), and U.S. Long  
10 Distance, Inc. ("USLD") filed with the Arizona Corporation Commission  
11 ("Commission") applications for authority to provide alternative  
12 operator telecommunications services ("AOS") in Arizona.

13 By Procedural Orders dated July 24, 1989 and October 11, 1989,  
14 the above-captioned matters were consolidated for purposes of hearing  
15 and Order with respect to the general issues pertaining to the  
16 provision of AOS. The cases were designated to then proceed on a  
17 individual basis to address company-specific issues. The July 24,  
18 1989 Procedural Order also scheduled the consolidated hearing to  
19 commence on October 30, 1989.

20 Intervention in these consolidated matters has been granted to  
21 the Association of Arizona Exchange Carriers ("AAEC"), AT&T  
22 Communications of the Mountain States, Inc. ("AT&T"), Citizens  
23 Utilities Company and Citizens Utilities Rural Company, Inc.  
24 ("Citizens"), Com Systems, Inc. ("Com Systems"), International  
25 Telecharge, Inc. ("ITI"), the Residential Utility Consumer Office

26  
27 <sup>1</sup> The application was originally filed by American Operator  
28 Services, Inc., doing business as National Telephone Services, Inc.  
or NTS. The company participated at hearing as NTS. The caption and  
references herein to the company reflect the recent name change to  
Telesphere Limited, Inc.

1 ("RUCO"), United Artists Operator Services Corporation, and U S West  
2 Communications ("US West").

3 On October 19, 1989, Century filed a notice of withdrawal of its  
4 application in this proceeding. On October 26, 1989, Triple Crown  
5 filed a similar notice. On November 19, 1990, Automated filed a  
6 request that it be dismissed from the case because it is no longer  
7 active in the AOS area. On December 14, 1990, US Sprint  
8 Communications Company Limited Partnership ("Sprint") filed a motion  
9 to dismiss the application of Long Distance/USA, Inc. ("LD/USA")  
10 because Sprint has acquired LD/USA and the authority is no longer  
11 needed. These requests are unopposed and should be granted.<sup>2</sup>

12 The consolidated hearing commenced as scheduled and continued on  
13 October 31 and November 1 and 2, 1989.

14 By Procedural Order dated January 8, 1990, the hearing was  
15 scheduled to reconvene on February 1, 1990 to afford the parties an  
16 opportunity to cross-examine RUCO witness Shifman on supplemental  
17 testimony submitted based upon discovery requests which had been  
18 outstanding at the time he originally testified. By Procedural Order  
19 dated January 29, 1990, the date for reconvening the hearing was  
20 continued to March 8, 1990. The hearing reconvened and concluded on  
21 that date.

22 The parties filed initial briefs in these matters on or about  
23 April 20, 1990 and reply briefs on or about May 11, 1990.

24  
25  
26  
27  
28 <sup>2</sup> The remaining companies with applications pending in these  
matters will be collectively referred to herein as "Applicants".

DISCUSSION

1  
2 As a segment of the telecommunications industry, AOS companies<sup>3</sup>  
3 typically lease transmission facilities from interexchange ("IEC")  
4 and local exchange carriers ("LEC") and provide live and automated  
5 operator assistance for the completion of collect, credit card, and  
6 third-party calls. The traffic handled by AOS companies originates  
7 from presubscribed locations. Hotels, motels, airports, hospitals,  
8 universities, and private pay telephones are targeted locations for  
9 AOS service because the transient market generates a high volume of  
10 calls requiring operator assistance. In exchange for subscribing to  
11 a particular AOS provider, the location owner receives a commission  
12 based upon the amount of traffic aggregated. It is the location  
13 owner who is the subscriber and customer of the AOS company. The  
14 end-user of the service has no direct relationship to the provider.  
15 Payment of the charges for AOS service may be made by the end-user  
16 through a calling card, a commercial credit card, a hotel bill, or a  
17 telephone bill if the provider or its billing agent has a billing and  
18 collection agreement with the LEC.

19  
20 3 The Applicants and other AOS companies participating in  
21 these proceedings have generally referred to themselves as operator  
22 service providers' ("OSP"). It should be noted, however, that AOS  
23 and OSP are not synonymous terms. The OSP group encompasses the  
24 traditional carriers, such as AT&T and the LECs, as well as the AOS  
25 companies. An important distinction between the traditional  
26 carriers and the AOS companies is the relationship between the  
27 provider and its customer. In general, the customer of a  
28 traditional carrier is the end-user who receives service under a  
contractual arrangement or service agreement whereas, as discussed  
below, the customer of an AOS company is the location owner and the  
actual end-user of AOS service, as a patron of the location owner,  
has no relationship with the provider. In recognition of this and  
other differences, this Opinion and Order will utilize 'AOS  
companies', 'AOS providers', or 'AOS firms' as more being accurate  
terms of reference for the Applicants and intervening AOS companies.  
This form of reference also recognizes the fact that the scope of  
these proceedings includes only service by the Applicants, and not  
other OSP providers.

1 AOS service has been available in Arizona since approximately  
 2 1987, although the intrastate aspect of the service has not been  
 3 subject to state regulation. The purpose of this consolidated  
 4 proceeding is to determine whether the provision of intrastate  
 5 interLATA AOS service should be authorized in Arizona and, if so, to  
 6 establish the regulatory requirements which should generally attach  
 7 to any authorization granted the Applicants as a result of the  
 8 company-specific phase of these proceedings.

9 THE COMMISSION'S JURISDICTION

10 As the inaugural decision in which the provision of AOS service  
 11 in this state is being considered, the Commission's jurisdiction over  
 12 the matter should be clearly set forth. Under Article XV, Section 3,  
 13 of the Arizona Constitution, the Commission is granted:

14 full power to . . . prescribe . . . just and reasonable  
 15 rates and charges to be made and collected, by public  
 16 service corporations within the State for service rendered  
 17 therein, and make reasonable rules, regulations, and  
 18 orders, by which such corporations shall be governed in the  
 transaction of business within the State, and may prescribe  
 the forms of contracts and the systems of keeping accounts  
 to be used by such corporations in transacting such  
 business . . . .

19 The public service corporations subject to the Commission's  
 20 jurisdiction are defined in Article XV, Section 2, of the Arizona  
 21 Constitution. Section 2 provides, in pertinent part, that:

22 All corporations other than municipal engaged . . . in  
 23 transmitting messages or furnishing public . . . telephone  
 service. . . shall be deemed public service corporations.

24 Applicants are AOS resellers of interexchange long distance service  
 25 engaged in the business of transmitting messages or furnishing  
 26 telephone service to the public within the foregoing definition and  
 27 are, therefore, public service corporations subject to the  
 28 jurisdiction of the Commission.

THE PUBLIC INTEREST ISSUE

1  
2 Applicants seek authority to operate in Arizona pursuant to  
3 A.R.S. §40-281, et seq., governing the issuance of Certificates of  
4 Convenience and Necessity ("Certificate" or "CC&N"). Under case law  
5 applicable to A.R.S. §§40-281 and 40-282, Certificates may only be  
6 acquired from the Commission upon a showing that issuance would serve  
7 the public interest. James P. Paul Water Co. v. Arizona Corporation  
8 Commission, 137 Ariz 426 (1983). See also Davis v. Arizona  
9 Corporation Commission, 96 Ariz 215 (1964) and Pacific Greyhound  
10 Lines v. Sun Valley Bus Lines, 70 Ariz 65 (1950).

11 In order to establish the requisite public interest, the AOS  
12 companies participating in these proceedings have introduced evidence  
13 to demonstrate the public benefits of AOS service. The claimed  
14 benefits are: competition for operator services; a choice of  
15 carriers for operator assisted calls; an upgrade of the services  
16 available from the traditional carriers due to competition; service  
17 to new locations, such as mobile marine stations and cellular  
18 carriers which make operator assistance available for calls placed  
19 from ships, taxicabs, and buses; the convenience of placing an  
20 interexchange operator assisted call without first dialing an access  
21 code; the availability of multilingual operator assistance; improved  
22 handling of emergency calls; innovative offerings such as voice  
23 mailbox service, voice store and forward services, electronic yellow  
24 pages, conference calling, concierge service, translation services  
25 for the hearing and speech impaired, and informational services; the  
26 placement of additional pay telephones; the capability for non-LEC  
27 pay telephone providers to have on-line information, offer call  
28 screening, and handle operator assisted international traffic; the

1 compensation of traffic aggregators (the location owners) for their  
2 investment in the equipment necessary to provide telecommunications  
3 services to patrons; an increased menu of billing options for the  
4 end-user; and lower rates for operator services due to competition.  
5 The AOS companies contend that the record conclusively demonstrates  
6 that operator services competition is in the public interest.

7 Staff has undertaken an analysis of this matter and has found  
8 many of the benefits raised by the AOS companies to be unproven,  
9 questionable, or only conceptual in nature. Staff has expressed  
10 concern for: the poor record of performance by AOS companies in  
11 providing service to end-users under reasonable rates, charges,  
12 terms, and conditions, which has led to excessive bills and numerous  
13 end-user complaints; the multiple billing problems which have  
14 occurred; the abusive practices resulting from the provider-  
15 subscriber relationship; and the potential revenue erosion for LECs  
16 if AOS companies complete unauthorized intrastate intraLATA calls.  
17 Nonetheless, Staff has concluded that the Commission should  
18 certificate fit AOS firms and impose adequate consumer safeguards on  
19 the provision of the service. It reached that conclusion not on the  
20 basis that the public interest would be furthered by certification,  
21 but because a prohibition of intrastate AOS service may not be  
22 possible to enforce and the public interest would be harmed if AOS  
23 companies are effectively permitted to operate on their own terms  
24 without adequate state regulation.

25 Citizens shares Staff's reservations over the effectiveness of  
26 an intrastate AOS ban and believes it would be in the best interests  
27 of the public to provide and require full Commission regulation of  
28

DOCKET NO. U-2507-88-045, ET AL.

1 AOS operations in Arizona, including determination of the fitness to  
2 operate and regulation of rates, conditions, and terms of service.

3 AT&T favors competition in the operator services market and  
4 supports certification of qualified AOS providers, subject to minimal  
5 regulatory requirements.

6 RUCO is the only party opposed to the operation and regulation  
7 of intrastate AOS service in Arizona. Through pre-filed direct  
8 testimony, RUCO witness Shifman presented the conclusion that AOS  
9 service, as currently offered or proposed, is not in the public  
10 interest and should be banned by the Commission. Mr. Shifman listed  
11 eight reasons in support of his conclusion: AOS companies provide  
12 lower quality and higher priced service than that offered by  
13 traditional carriers; many end-users are unaware that an AOS company  
14 is processing their call; end-users who wish to instead reach their  
15 chosen carrier are likely to experience great difficulty; AOS could  
16 threaten the public safety by hindering the completion of emergency  
17 calls; end-users of AOS service are more likely to be charged for  
18 incomplete or unanswered calls than customers of traditional  
19 carriers; locations subscribing to AOS service are likely to block,  
20 or charge for, access to toll-free numbers; the provision of AOS  
21 service is not economically efficient; and upward rate pressure may  
22 be exerted on other telecommunications services if AOS companies do  
23 not pay intrastate access charges or compensate LECs for lost  
24 intraLATA revenue.

25 At hearing, Mr. Shifman expressed what he and RUCO have  
26 attempted to characterize as a clarification, but what rather appears  
27 to be a significant change of position from an absolute ban. In  
28 response to the comments and rebuttal testimony of other parties, Mr.

1 Shifman now believes that "AOS companies may have something to offer  
 2 as enhanced service providers" and that they should be permitted to  
 3 operate in Arizona if access to other carriers is not blocked and  
 4 monopolies are not created. He has suggested that this be  
 5 accomplished by certificating the AOS companies as enhanced service  
 6 providers without zero-plus, one-plus, or zero-minus capability. He  
 7 would route those types of calls only to one interexchange carrier,  
 8 AT&T.

9 After carefully reviewing the record compiled in this  
 10 consolidated matter, the Commission finds that the weight of the  
 11 evidence establishes that the provision of intrastate, interLATA AOS  
 12 service in Arizona, subject to the regulatory requirements set forth  
 13 below, is in the public interest.<sup>4</sup> The evidence demonstrates that,  
 14 with proper oversight, benefits in the form of innovative or unique  
 15 service offerings and benefits resulting from competition will accrue  
 16 to the public through the availability of the service.

#### 17 THE REGULATORY REQUIREMENTS

18 The evolution of the AOS industry has thus far been extremely  
 19 problematic. The benefits from the enhanced service offerings and a  
 20 competitive market have been overshadowed by end-user confusion,  
 21 frustration, and, as expressed during the public comments received in  
 22 this consolidated proceeding, anger over problems such as excessive  
 23 rates and charges, unreasonable billing delays, and a nonresponsive  
 24 attitude by the AOS providers. In order for the benefits to be  
 25 realized and the public interest to be served, these problems must be  
 26 eliminated. The Commission's authorization of AOS service in Arizona

27 <sup>4</sup> Whether the provision of AOS service by a particular  
 28 applicant is in the public interest remains in question and will be  
 addressed in the second phase of the pending matters.

1 is, therefore, expressly contingent on the implementation of a  
2 regulatory framework which adequately addresses the problems  
3 associated with the industry.

4 Staff has submitted a comprehensive proposal for the regulation  
5 of interstate, intraLATA AOS service. For eight general categories  
6 of problems encountered with AOS service (rates and charges, customer  
7 notification and choice, public safety, billing, call splashing,  
8 complaint processing, quality of service, and LEC intrastate revenue  
9 loss), Staff has developed minimum safeguards as well as stricter,  
10 alternative requirements for the Commission's consideration. The  
11 summary table of Staff's proposal is attached hereto as Exhibit A and  
12 incorporated herein by reference.

13 The AOS providers participating in this consolidated proceeding  
14 have expressed general support for the adoption of reasonable  
15 regulations to protect the public. They have, however, each proposed  
16 various modifications to the recommendations by Staff.

17 The safeguards are discussed by category below. In analyzing  
18 the regulatory options presented by the parties, the Commission has  
19 evaluated each requirement on an individual basis to ensure that it  
20 will address the intended problem and on a collective basis to ensure  
21 that the requirements adopted will form a fair and reasonable scheme  
22 of regulation necessary for end-user protection. To avoid confusion,  
23 the discussion of Staff's proposal will be limited to the minimum or  
24 alternative requirement it prefers, unless the other option is found  
25 to be more reasonable or appropriate.

26 It must be stressed that these regulatory requirements apply  
27 only to the instant Applicants. The suggestion pressed by the AOS  
28 participants that the requirements be applied with equal force to all

DOCKET NO. U-2507-88-045, ET AL.

1 interexchange providers of operator service, including, for example  
 2 AT&T, MCI, US Sprint, and the LECs, is beyond the scope of these CC&N  
 3 cases. The service conditions of the other carriers are simply not  
 4 at issue.

#### 5 Rates and Charges

6 It is Staff's recommendation that Applicants' tariffs specify  
 7 all of the provider's rates and charges, exclusive of the maximum  
 8 location-specific surcharges which an AOS subscriber, such as a hotel  
 9 or hospital, may impose. The maximum location-specific surcharges  
 10 could either be filed with the Commission, since they are not uniform  
 11 from location to location, or a maximum surcharge could be specified  
 12 in the tariffs. Staff further recommends that the maximum surcharges  
 13 be available to the provider's operators and specified in the service  
 14 contract with the location owner.

15 The only opposition to the recommendation was expressed by AT&T.  
 16 AT&T argues that adoption of a maximum surcharge would place billing  
 17 agents for the AOS companies in an enforcement posture which would be  
 18 inappropriate and impossible to perform due to a lack of the billing  
 19 detail needed to determine whether a particular surcharge exceeds a  
 20 tariffed maximum.

21 Specifying in Commission approved tariffs the exact rates and  
 22 charges end-users will be assessed for AOS service, and stating in  
 23 either tariffs or filings the maximum applicable surcharge, should  
 24 reduce the possibility for excessive charges to be levied and should  
 25 enable end-users to verify the accuracy of their bills. Staff's  
 26 recommendation promotes the public interest and should be adopted.  
 27 Because the surcharges vary by carrier and location, and due to the  
 28 lack of detail in the billing data, the Commission recognizes that

*Staff will review AT&T's rates which AT&T should file with the Commission.*

1 the LECs and other billing agents do not have the ability to police  
2 compliance with stated maximums.

3 End-user Notification and Choice

4 Staff's position on end-user notification and choice is premised  
5 on the belief that end-users should be made aware that they have  
6 reached an AOS company before any charges are incurred and, upon  
7 request, should be advised how to access alternative carriers. To  
8 this end, Staff has formulated recommendations for branding calls,  
9 posting information, providing rate quotations, and furnishing access  
10 instructions.

11 Call branding, as contemplated by Staff, would require a live or  
12 automated message at the outpulse of the terminating number which  
13 informs the end-user that a named AOS provider has been reached and  
14 that the provider's rates and charges apply to the call. At the  
15 conclusion of the branding message, the end-user would be permitted  
16 to terminate the call at no charge.

17 Universal support for a branding requirement has been expressed  
18 by the AOS participants, but they find objectionable inclusion of a  
19 statement in the message that the provider's rates and charges apply.  
20 The focus of the objections is on the imposition of a different  
21 verbal announcement than already in place, the alleged  
22 superfluousness of the additional statement in light of the other  
23 branding and posting provisions, and the significant expense claimed  
24 to be associated with a two to five second longer holding time for  
25 the message of approximately \$1.2 to \$1.8 million per second annually  
26 for ITI, in addition to the cost of increased access time and the  
27 cost of system hardware and software modifications which would be  
28 necessary to accommodate the new message.

1 The crux of the branding issue is whether a statement as simple  
2 as "our rates apply" should be added to the present salutation which  
3 only identifies the carrier, such as "Telesphere". The Commission  
4 finds that the salutation should be expanded for all intrastate  
5 interLATA calls carried by Applicants. The purpose of a brand is to  
6 provide sufficient information for the end-user to make an informed  
7 choice whether to complete the call through the presubscribed  
8 carrier. Absent an express indication that the rates of the AOS  
9 company are applicable, there is no reason to expect the end-user to  
10 assume that fact from just the carrier identification, particularly  
11 users of calling cards who could reasonably assume that acceptance of  
12 the card number renders the call subject to the issuer's rates. The  
13 statement that the AOS company's rates apply is a material fact  
14 necessary for the end-user to avoid confusion and make an informed  
15 choice.

16 In reaching this determination, the Commission is not unmindful  
17 of the type of costs associated with the replacing the brands in use.  
18 ITI's \$1.2 to \$1.8 million per second estimate for increased holding  
19 time, however, has neither been substantiated nor shown to be  
20 representative for other carriers. The record evidence fails to  
21 establish that the cost of including a phrase like "our rates apply"  
22 in the brands will be unreasonable.

23 As a further notification measure, Staff has proposed that rate  
24 quotations, including the location-specific or tariffed maximum  
25 surcharge, and instructions for accessing alternative carriers, such  
26 as the preferred carrier's access code or toll-free customer service  
27 number, be furnished to the end-user upon request without charge.  
28

DOCKET NO. U-2507-88-045, ET AL.

1 ITI and Telesphere object to providing access instructions to  
2 end-users as being an expensive, burdensome, and administratively  
3 difficult requirement. The AOS companies allege that they would  
4 encounter problems in maintaining an up to date list of the other  
5 carriers authorized in Arizona and the correct access codes or  
6 customer service numbers for those carriers.

7 The Commission will accept the rate quotation requirement  
8 proposed by Staff, but will adopt a modified provision on furnishing  
9 access information. Requiring a presubscribed carrier to provide the  
10 access code or customer service number of another carrier would  
11 exceed the scope of open access requirements and the informational  
12 responsibility of an AOS company and would impermissibly intrude on  
13 competition. It will be sufficient for an AOS company to inform the  
14 end-user that the preferred carrier can be reached by an access code  
15 or toll-free customer service number. As AT&T has recognized, "[i]t  
16 should be each carrier's responsibility, as a competitive service  
17 provider, to inform its customers on how to reach its operators where  
18 it is not the presubscribed '0+' carrier."

19 Staff has proposed that the notification measures also include  
20 posting information for end-users through the use of tent cards and  
21 stickers on or near the telephone instrument. The information to be  
22 posted would include the name of the AOS provider, an indication that  
23 the provider's rates apply, location-specific surcharges, a statement  
24 that the calling card carrier will not carry the call, dialing  
25 instructions, a toll-free number for billing inquiries, and a  
26 description of complaint procedures. The provider's tariffs would  
27 describe the precise contents and methods of posting, as established  
28 in the second phase of these proceedings, and would require the

1 disconnection of a subscriber for failing to continuously meet the  
2 posting requirements.

3 The only objection raised to Staff's proposal is the inability  
4 of an AOS company to police the premises of its subscribers to ensure  
5 compliance with the posting requirement. As noted by Staff, however,  
6 enforcement efforts will depend on end-user inquiries and complaints.  
7 Staff's recommendation is reasonable and should be adopted.

8 The Commission is also concerned with the impact on consumers of  
9 collect calls received through AOS providers. As the called party is  
10 the end-user and customer of record they should receive the same  
11 notification as other end users. That notification should include,  
12 but not be limited to the clear identification of the AOS provider,  
13 and a statement of the rates that apply. The called party should  
14 also be afforded the opportunity to inform the caller that the call  
15 is being refused due to the carrier.

16 As the final provision in the end-user notification and choice  
17 category, Staff has recommended that the Applicants' tariffs and  
18 contracts dictate that neither the AOS provider nor the subscriber  
19 shall require or participate in blocking any end-user's access to a  
20 preferred carrier. The tariffs would additionally list a toll-free  
21 customer service number for all certificated IECs.

22 The AOS participants generally agree with a prohibition against  
23 blocking<sup>5</sup>, but are concerned that it could create a significant risk  
24 of fraud because the subscriber equipment at some locations would  
25 allow end-users to complete "10XXX" access code calls which would be

26  
27 <sup>5</sup> ITI supports blocking "10XXX+1" calls and "10XXX+0" calls  
28 originating from equipment which cannot be modified to prevent fraud,  
from prisons, and from areas where line screening is not available  
from the LEC.

1 billed to the subscriber rather than the end-user. Other equipment  
 2 is unable to accept "10XXX" access codes or cannot distinguish  
 3 between "10XXX+1" and "10XXX+0" calls. Staff has responded to this  
 4 concern with detailed instructions for the Applicants to follow in  
 5 the second phase of these matters in requesting a waiver from the  
 6 prohibition for those locations with limited equipment capabilities.

7 Blocking access to other IECs from presubscribed locations is  
 8 inapposite to an open access network and a competitive market for  
 9 operator services. It has also been a particular source of end-user  
 10 confusion and frustration. Adoption of a prohibition against  
 11 blocking is certainly justified. In order to ensure that subscribers  
 12 comply with the blocking prohibition, an additional requirement is  
 13 warranted. Applicants should be required to withhold on a location  
 14 specific basis the payment of any compensation, including  
 15 commissions, to an aggregator which the provider believes is blocking  
 16 end-users' access to preferred carriers. Specific waivers from the  
 17 blocking ban and any conditions which should attach to such waivers  
 18 are hereby deferred to the second phase in which they can be more  
 19 meaningfully assessed.

20 The Applicants are hereby placed on notice that waivers from the  
 21 blocking ban will be considered only if accompanied by the type of  
 22 detailed cost/benefit analysis outlined by Staff and will be granted  
 23 only if the evidence compels a finding that without blocking the risk  
 24 of fraud and revenue erosion to the provider would be significant.  
 25 The Applicants are further placed on notice that the pervasiveness of  
 26 the blocking needed for deficiencies in customer premises equipment  
 27 will be a factor taken into consideration in determining whether it  
 28 is in the public interest for the Applicant to be certificated.

DOCKET NO. U-2507-88-045, ET AL.

1 For the reasons previously discussed, the Commission will not  
2 adopt a requirement that toll-free customer service numbers for all  
3 other certificated carriers be included in Applicants' tariffs.

#### 4 Public Safety

5 In order to protect the public safety in emergency situations,  
6 Staff has proposed a requirement that Applicants route all zero-minus  
7 calls immediately to the LEC unless, in the second phase of these  
8 matters, the provider clearly and convincingly demonstrates that it  
9 has the capability to process such calls as with equal quickness and  
10 accuracy. At the time reply briefs were filed, no opposition to this  
11 requirement remained. It should be adopted.

#### 12 Billing

13 In the billing category, Staff has proposed regulations to  
14 govern provider identification, the acceptance of calling cards,  
15 uncompleted calls, billing delays, and the disconnection of service  
16 for non-payment.

17 Staff recommends that the bills issued for the intrastate  
18 interLATA AOS service provided by Applicants include the minimum  
19 information required by A.A.C. R14-2-508(B) as well as the name of  
20 the AOS provider(s) and each company's toll-free customer service  
21 number so that the end-user has the information needed to pursue a  
22 billing inquiry or complaint. According to Staff, US West has the  
23 ability to accommodate the identification of the individual  
24 providers, but further evaluation of the requirement and possible  
25 waivers from it may be necessary in the second phase for the bills  
26 rendered by the independent LECs which have billing arrangements with  
27 the National Exchange Carrier Association.

28

DOCKET NO. U-2507-88-045, ET AL.

1 The AOS companies and US West have challenged the provision  
2 which would require the identification of AOS providers on end-user  
3 bills primarily because US West and the independent LECs do not have  
4 the technical capability to list the identity of the underlying  
5 provider if it uses a clearinghouse to submit billing data. They  
6 claim that the cost of implementing such capability would be  
7 exorbitant and would be passed on the AOS providers. It has been  
8 suggested that the end-user's bill could instead identify the billing  
9 agent or clearinghouse since they are authorized by the provider to  
10 handle billing disputes.

11 According to the evidence, no LEC in Arizona has sub-carrier  
12 identification capability, with the possible exception of US West and  
13 there is a conflict in the record over its technical abilities. As  
14 a consequence, mandating AOS provider identification on end-user  
15 bills would serve little purpose if the requirement is impossible to  
16 effectuate. In order to provide end-users with a feasible avenue to  
17 pursue billing matters, the provision should be modified to require  
18 the identification of the AOS provider(s) to the extent that the LEC  
19 has the capability to do so and, in the absence of that capability,  
20 the identification of the billing agent or clearinghouse and its  
21 toll-free customer service number shall be required. The claims that  
22 sub-carrier identification would be prohibitively expensive have not  
23 been substantiated for Arizona and have, therefore, been rejected.

24 Staff has developed several safeguards to protect the end-user  
25 who wishes to use an IEC calling card for purposes of billing AOS  
26 charges. Staff recommends that: Applicant's tariffs specify rates  
27 for calls charged to calling cards; the end-user be informed, at no  
28 charge, that the card issuer will not carry the call and that

DOCKET NO. U-2507-88-045, ET AL.

1 different rates may apply; and the AOS provider instruct the end-user  
2 on how to access the issuer upon request.

3 Since the branding requirement established above will advise the  
4 card holder that a provider other than the issuer has been reached  
5 and that its rates apply and since a requirement to provide access  
6 codes or information numbers for other carriers has previously been  
7 rejected, the only aspect of Staff's recommendation remaining to be  
8 addressed is the inclusion of the rates for calling card calls in  
9 Applicants' tariffs. That provision is reasonable and should be  
10 adopted.

11 In instances where calls have not been completed, Staff  
12 recommends that Applicants be prohibited from billing for such calls  
13 and be required to refund, with interest, any such charges which have  
14 been inadvertently billed. The stated purpose of the interest  
15 provision is to compensate end-users for the inconvenience of the  
16 overcharge and to serve as an incentive for the Applicants to prevent  
17 incorrect billings.

18 The AOS companies disagree with the imposition of interest on  
19 the overcharge. They argue that billing for uncompleted calls  
20 results from a problem with answer supervision signalling and is not  
21 unique to, or intentional by, the AOS industry. They further argue  
22 that the inadvertent charges are measurable in terms of pennies upon  
23 which interest would not be perceptible.

24 For the reasons articulated by the AOS companies, the Commission  
25 is persuaded that a full refund of any charge levied for an  
26 uncompleted call is sufficient to protect the end-user without  
27 imposing interest on the amount of the overcharge.

28

1 In order to ensure the timely rendering of bills for AOS  
2 service, Staff has recommended that Applicants, or their billing  
3 agents, be prohibited from billing for calls which occurred more than  
4 60 days prior to the billing date. Staff's motivation for this  
5 proposal is to conform to the public expectation of prompt billing  
6 and to allow the end-user to readily verify the accuracy of the  
7 charges and avoid budgeting constraints.

8 In opposition to the requirement, the AOS companies argued that  
9 rendering bills requires additional time due to LEC billing cycles  
10 and occasional difficulties or delays in processing charges. It was  
11 suggested that 90 or 120 days would be a more appropriate billing  
12 periods. Establishing any billing period is unacceptable to US West  
13 if it would be expected to enforce the deadline, which it claims  
14 would necessitate software changes and create an administrative  
15 burden.

16 The mere fact that the AOS companies occasionally encounter  
17 difficulties or delays in processing charges does not dissuade the  
18 Commission from finding that a 60-day billing period is reasonable.  
19 The AOS companies have presented no evidence that the incidence of  
20 such difficulties or delays is of such frequency, duration, or scope  
21 that achieving the deadline is unrealistic. To the contrary, the  
22 typical processing cycle recited by the companies fits well within  
23 the 60-day period and allows for a cushion of several days to  
24 accommodate processing problems.

25 The final Staff recommendation in the billing category addresses  
26 service disconnection. Staff recommends that, as a transitional  
27 measure, Applicants' tariffs and contracts prohibit the disconnection  
28 of an end-user's local service for failing to pay AOS charges. It is

DOCKET NO. U-2507-88-045, ET AL.

1 Staff's suggestion that, upon application by a certificated provider,  
2 this prohibition be reconsidered in approximately one year, after the  
3 Commission's regulation of intrastate interLATA AOS has been  
4 established and compliance with the other requirements is attained.

5 The AOS participants, Citizens, and the AAEC oppose the  
6 prohibition as being unnecessary. As several providers noted, in the  
7 event a customer disputes AOS charges by filing a complaint with the  
8 Commission, a LEC can not terminate service pursuant to A.A.C. R14-2-  
9 509(A)(1)(f). Telesphere claims that the inability to terminate the  
10 local service of end-users for non-payment of AOS charges will  
11 subject the AOS providers to a significant amount of fraud. ITI sees  
12 no useful purpose in including the provision in its service contracts  
13 since the prohibition does not affect the contractual relationship  
14 with the subscriber.

15 The Commission finds that the minimum requirement proposed by  
16 Staff will most appropriately balance the interest of protecting the  
17 end-user from abusive practices and overcharges by the AOS industry  
18 with the interest of the Applicants in being able to collect  
19 legitimate charges for the service rendered. Under this provision,  
20 the disconnection of local service for the non-payment of intrastate  
21 interLATA AOS charges would be permitted, but only in accordance with  
22 the detailed procedures set forth in the Commission's rule on  
23 termination for telephone utilities, A.A.C. R14-2-509. Disconnection  
24 would be unlawful if a bill dispute existed or if the charges had not  
25 been calculated in accordance with authorized rates. Rejection of  
26 the prohibition is consistent with Mountain States Telephone and  
27 Telegraph Co., Decision No. 54843 (January 10, 1986), at 60.

28

DOCKET NO. U-2507-88-045, ET AL.

1 Call splashing

2 Call splashing occurs when an AOS provider which has an out of  
3 state operator service center transfers a call to the closest  
4 location of a preferred IEC and that carrier is unwilling or unable  
5 to identify the origination of the call so it applies interstate  
6 rates for a call from the geographic point of the transfer to the  
7 point of termination rather than its intrastate rates for a call from  
8 the point of origin to the point of termination. For example, an  
9 end-user placing a call from Phoenix to Tucson, Arizona which has  
10 been splashed to AT&T in Denver, Colorado would be charged by AT&T  
11 for a Denver to Tucson call rather than for a Phoenix to Tucson call.

12 To address this problem, Staff has recommended that Applicants'  
13 tariffs require the transfer of calls to other carriers at no charge  
14 so that rating and billing properly reflect the originating and  
15 terminating points. When such transfers are not possible, the  
16 tariffs would require the provider to inform the end-user that the  
17 call cannot be completed and to provide instructions on how to reach  
18 the preferred carrier.

19 The AOS participants have not objected to the tariff language.  
20 AT&T, however, contends that the most equitable method of dealing  
21 with call splashing is prohibiting those types of transfers, even for  
22 the purpose of connecting the end-user to a preferred carrier.

23 Adoption of a blocking prohibition which will allow the end-user  
24 to directly access the preferred carrier, and these tariff provisions  
25 suggested by Staff, should virtually eliminate the problem of call  
26 splashing. Staff's recommendation should be adopted, as modified for  
27 the reasons discussed above, to require Applicants to inform end-

28

DOCKET NO. U-2507-88-045, ET AL.

1 users whose calls cannot be completed that the preferred carrier may  
2 be reached by access code or toll-free customer service number.

3 Complaint Processing

4 Staff believes that the determination of each Applicant's  
5 fitness to receive certification in Arizona should be based in part  
6 upon an evaluation of its complaint processing procedures. Staff  
7 has, accordingly, recommended that Applicants be directed to submit  
8 a detailed description of such procedures for the Commission's  
9 consideration in the second phase of these proceedings, along with  
10 the name, address, and telephone number of a representative for  
11 complaint matters. Staff further recommends that certificated  
12 Applicants be directed to semiannually submit a list of subscribers  
13 and locations served.

14 Other than noting the confidentiality of subscriber lists, the  
15 AOS participants have not objected to providing the suggested  
16 information. Staff's recommendations should be adopted.

17 Quality of Service

18 As another aspect of the certification process, Staff believes  
19 that the provider's quality of service should receive consideration.  
20 To that end, Staff has recommended that Applicants be directed to  
21 develop and submit for review standards for operator response time  
22 and call processing time. Upon certification, Applicants would be  
23 required to submit semiannual reports comparing the company's actual  
24 monthly performance with the standards.

25 ITI has noted the proprietary nature of performance data, but  
26 does not object to Staff's recommendation. Telesphere does. It is  
27 Telesphere's position that regulatory performance standards are not  
28

DOCKET NO. U-2507-88-045, ET AL.

1 needed because competition in the market and end-user dissatisfaction  
2 with response times provide sufficient impetus for improvement.

3 The quality of AOS service, in terms of the length of time it  
4 takes to place a call, has been the source of end-user complaint.  
5 Establishing performance standards for each provider and comparing  
6 actual monthly data to the standards will enable the Commission to  
7 effectively monitor the quality of service and ensure that it is  
8 maintained at a reasonable and acceptable level.

### 9 Intrastate Revenue Loss

10 Since the Commission has not yet determined whether competition  
11 for the provision of intraLATA interexchange service is in the public  
12 interest, Staff recommends that AOS firms be authorized to provide  
13 only interLATA operator services. The evaluation of Applicants'  
14 fitness for certification would then include either an assessment of  
15 the firm's ability to restrict intraLATA traffic or proof that the  
16 volume of intraLATA calling will be insignificant, for which the LEC  
17 would not be compensated. Staff further recommends that Applicants  
18 be directed to specify in their tariffs the access charges to be paid  
19 for all intrastate interLATA calls.

20 ITI disagrees with a restriction on carrying intraLATA  
21 interexchange calls and with any compensation scheme which fails to  
22 offset the loss of intraLATA revenues to the LECs with their avoided  
23 costs of not handling the calls. Citizens, on the other hand, urges  
24 the Commission to require Applicants to refer unauthorized intraLATA  
25 toll calls to the appropriate LEC. The AAEC supports a requirement  
26 that the AOS provider pass off all intraLATA calls to the LEC for the  
27 reasons that: it is technologically and economically possible; it is  
28 unreasonable to expect the AAEC or individual members to participate

DOCKET NO. U-2507-88-045, ET AL.

1 in each AOS certification proceeding to pursue adequate compensation;  
2 evaluating the effect of revenue diversion on a carrier by carrier  
3 basis ignores the cumulative impact on LECs; and an 'insignificant'  
4 level of intraLATA calling has not been quantified.

5 The question whether competition for the provision of intraLATA  
6 interexchange service is in the public interest exceeds the scope of  
7 this proceeding. At present, intraLATA competition has not been  
8 authorized in Arizona and we will not permit the AOS industry to make  
9 inroads into that market. Even an 'insignificant' or 'incidental'  
10 volume of intraLATA traffic carried by an AOS company will erode the  
11 revenues of the LEC and could cumulatively create a serious revenue  
12 diversion problem for which the LEC would seek rate relief from  
13 jurisdictional customers. We will not tolerate the expansion of AOS  
14 service in Arizona at the expense of the LECs and their customers.  
15 The Commission, therefore, agrees with the AAEC and Citizens that  
16 Applicants should be required to transfer all intraLATA toll calls to  
17 the appropriate LEC.

#### 18 FURTHER COMMISSION ACTION

#### 19 Phase II

20 Having determined that the provision of intrastate interLATA AOS  
21 service, subject to the regulatory requirements set forth above, is  
22 in the public interest, these matters may now proceed on an  
23 individual basis to the second phase, in which the fitness of each  
24 Applicant for certification will be evaluated. In the second phase  
25 of these proceedings, the Commission's evaluation of each application  
26 will include, but not be limited to, the following: the proposed  
27 level of the rates and charges; the technical capability to provide  
28 the proposed services, including the ability to handle emergency

DOCKET NO. U-2507-88-045, ET AL.

1 calls; the firm's financial structure; the proposed terms and  
2 conditions for service; the adequacy of the branding and posting  
3 methods; the proposed quality of service standards; the complaint  
4 processing procedures; the ability to transfer intraLATA toll calls;  
5 and the willingness of the provider to comply with Commission rules  
6 and regulations, including the regulatory requirements adopted  
7 herein. As recommended by Staff, Applicants should be directed to  
8 supplement their applications, as needed, to incorporate the  
9 regulatory requirements and to offer any additional information which  
10 will assist the Commission's evaluation.

11 From the testimony at hearing and the arguments raised on brief,  
12 it appears that the AOS participants are under a misapprehension that  
13 waivers from the regulatory requirements can be pursued and easily  
14 obtained during the second phase. The parties are hereby placed on  
15 notice that the second phase of these proceedings will not include an  
16 opportunity to re-litigate the regulatory requirements just adopted.  
17 In the interest of uniformity and to avoid discriminatory treatment  
18 between Applicants, the requirements will be accorded the force and  
19 effect of Commission rules from which waivers will be granted only  
20 upon a clear and convincing demonstration that a particular safeguard  
21 is inapplicable to the service being offered or in a very specific  
22 and unusual situation is inappropriate. This includes the blocking  
23 provision discussed above.

#### 24 Notice to Non-Applicant AOS Providers

25 In addition to the Applicants, other companies, such as  
26 intervenors ITI and Com Systems, are providing intrastate interLATA  
27 AOS service in Arizona. As a result of the Commission's finding  
28 herein that AOS providers are public service corporations within the

1 meaning of Article XV, Section 2, of the Arizona Constitution, those  
 2 other companies must submit applications for certification.

3 To this end, Staff has recommended that the LECs which offer  
 4 billing and collection service to AOS companies notify each provider  
 5 that it must file an application for a CC&N within a reasonable  
 6 period and that billing and collection service will not be provided  
 7 for non-certificated carriers. The recommendation is unopposed.

8 Staff's recommendation should be adopted as a reasonable and  
 9 effective means of ensuring that the AOS companies operating in  
 10 Arizona submit to the Commission's jurisdiction. The LECs  
 11 participating in these consolidated proceedings<sup>6</sup> should provide the  
 12 notice by first class U.S. mail within 15 days of the effective date  
 13 of this Decision. The AOS companies should be given until May 24,  
 14 1991 to file the applications and serve an affidavit of filing on the  
 15 LEC. Absent a pending application for a CC&N, the participating LECs  
 16 should effective with the first billing cycle after June 1, 1991  
 17 cease providing billing and collection service for intrastate calls  
 18 carried by unauthorized AOS providers operating unlawfully in the  
 19 state.

### 20 Rulemaking

21 The unique market structure occupied by the AOS industry, the  
 22 problems which it has spawned, and the need for strict regulation of  
 23 AOS service to protect the public interest has led the Commission to  
 24 conclude that the provision of intrastate interLATA AOS service in  
 25 Arizona should be governed by formal rules and regulations rather

26  
 27 <sup>6</sup> Not all of the LECs authorized to conduct business in  
 28 Arizona are participants in these consolidated proceedings. Rio  
 Virgin Telephone Company and South Central Utah Telephone Association  
 have neither sought intervention nor are represented by the AAEC.

\*  
 Applies to all AOS companies

1 than by requirements attached to individual Certificates.<sup>7</sup> A  
 2 rulemaking proceeding should be initiated. Staff should develop and  
 3 submit to the Commission proposed rules which are not inconsistent  
 4 with the regulatory requirements adopted herein, with additional  
 5 provisions as it believes are necessary, and should request authority  
 6 to submit a notice of proposed rulemaking to the Office of the  
 7 Secretary of State.

\* \* \* \* \*

8 Having considered the entire record herein and being fully  
 9 advised in the premises, the Commission finds, concludes, and orders  
 10 that:

FINDINGS OF FACT

11  
 12 1. Applicants are AOS resellers of interexchange long distance  
 13 service engaged in the business of transmitting messages or  
 14 furnishing telephone service to the public and are seeking authority  
 15 to operate in Arizona.

16  
 17 2. By Procedural Orders dated July 24, 1989 and October 11,  
 18 1989, the above-captioned matters were consolidated for purposes of  
 19 hearing and Order with respect to the general issues pertaining to  
 20 the provision of AOS and were designated to then proceed on a  
 21 individual basis to address company-specific issues.

22 3. The consolidated hearing commenced as scheduled on October  
 23 30, 1989 and concluded on March 8, 1990.

24 4. Notice of hearing was duly provided.

25 5. The evidence demonstrates that, with proper oversight,  
 26 benefits in the form of innovative or unique service offerings and

---

27 <sup>7</sup> Upon implementation, the rules will supersede the  
 28 regulatory requirements and will be equally applicable to Applicants  
 and other AOS providers.

1 benefits resulting from competition will accrue to the public through  
2 the availability of AOS service.

3 6. The authorization of AOS service in Arizona is expressly  
4 contingent on the implementation of a regulatory framework which  
5 adequately addresses the problems associated with the industry.

6 7. The regulatory requirements adopted herein will, on an  
7 individual basis, address the intended problem and, on a collective  
8 basis, form a fair and reasonable scheme of regulation necessary for  
9 end-user protection.

10 8. In addition to the Applicants, other companies, such as  
11 intervenors ITI and Com Systems, are providing intrastate interLATA  
12 AOS service in Arizona.

13 9. As a result of the Commission's finding herein that AOS  
14 providers are public service corporations within the meaning of  
15 Article XV, Section 2, of the Arizona Constitution, the other  
16 companies must submit applications for certification.

17 10. Because of the unique market structure occupied by the AOS  
18 industry, the problems which it has spawned, and the need for strict  
19 regulation of AOS service to protect the public interest, the  
20 provision of intrastate interLATA AOS service in Arizona should be  
21 governed by formal rules and regulations rather than by requirements  
22 attached to individual Certificates.

#### 23 CONCLUSIONS OF LAW

24 1. Applicants seek authority to operate as public service  
25 corporations within the meaning of Article XV, Section 2, of the  
26 Arizona Constitution.

27 2. The Commission has jurisdiction over the Applicants and the  
28 subject matter of the applications.

1           3. The requests by Automated, Century, LD/USA, and Triple  
2 Crown to withdraw their applications are unopposed and should be  
3 granted.

4           4. The provision of intrastate interLATA AOS service in  
5 Arizona, subject to the regulatory requirements set forth above, is  
6 in the public interest.

7           5. The regulatory requirements adopted herein are fair, just,  
8 and reasonable.

9           6. Applicants should be directed to supplement their  
10 applications, as needed, to incorporate the regulatory requirements  
11 adopted herein and to offer any additional information which they  
12 believe will assist the Commission's evaluation.

13           7. The LECs participating in these consolidated proceedings  
14 which offer billing and collection service to AOS companies should be  
15 directed to notify each provider by first class U.S. mail within 15  
16 days of the effective date of this Decision that, no later than May  
17 24, 1991, it must file an application with the Commission for a CC&N  
18 and an affidavit of filing with the LEC and that, absent a pending  
19 application, billing and collection service will not be provided for  
20 intrastate calls carried by unauthorized AOS providers operating  
21 unlawfully in the state.

22           8. Absent a pending application by an AOS provider for a CC&N,  
23 the participating LECs should be directed to cease providing billing  
24 and collection service effective with the first billing cycle after  
25 June 1, 1991 for intrastate calls carried by unauthorized AOS  
26 providers.

27           9. Staff should develop and submit to the Commission proposed  
28 rules which are not inconsistent with the regulatory requirements

DOCKET NO. U-2507-88-045, ET AL.

1 adopted herein, with additional provisions as it believes are  
2 necessary, and should request authority to submit a notice of  
3 proposed rulemaking to the Office of the Secretary of State.

4 ORDER

5 IT IS THEREFORE ORDERED that the requests by Automated, Century,  
6 LD/USA, and Triple Crown to withdraw their applications are hereby  
7 granted without prejudice.

8 IT IS FURTHER ORDERED that the provision of intrastate interLATA  
9 AOS service in Arizona, subject to the regulatory requirements  
10 adopted herein, is in the public interest.

11 IT IS FURTHER ORDERED that the regulatory requirements set forth  
12 above are hereby adopted and shall be attached to any authorization  
13 which is granted Applicants in the second phase of these matters.

14 IT IS FURTHER ORDERED that Applicants shall supplement their  
15 applications, as needed, to incorporate the regulatory requirements  
16 adopted herein and to offer any additional information which they  
17 believe will assist the Commission's evaluation.

18 IT IS FURTHER ORDERED that the LECs participating in these  
19 consolidated proceedings which offer billing and collection service  
20 to AOS companies shall notify each provider by first class U.S. mail  
21 within 15 days of the effective date of this Decision that, no later  
22 than May 24, 1991, it must file an application with the Commission  
23 for a CC&N and an affidavit of filing with the LEC and that, absent  
24 a pending application, billing and collection service will not be  
25 provided for intrastate calls carried by unauthorized AOS providers  
26 operating unlawfully in the state.

27 IT IS FURTHER ORDERED that, absent a pending application by an  
28 AOS provider for a CC&N, the participating LECs shall cease providing

DOCKET NO. U-2507-88-045, ET AL.

1 billing and collection service effective with the first billing cycle  
2 after June 1, 1991 for intrastate calls carried by unauthorized AOS  
3 providers.

4 IT IS FURTHER ORDERED that Staff shall develop and submit to the  
5 Commission proposed rules which are not inconsistent with the  
6 regulatory requirements adopted herein, with additional provisions it  
7 believes are necessary, and should request authority to submit a  
8 notice of proposed rulemaking to the Office of the Secretary of  
9 State.

10 IT IS FURTHER ORDERED that this Decision shall become effective  
11 immediately.

12 BY ORDER OF THE ARIZONA CORPORATION COMMISSION.
