Roxie,

I have finalized arrangements for your site visit on May 17th and May 18th as outlined below:

May 17th—meet at the PSE East Building, main lobby at 8 am. The address is 355 110th Ave NE, Bellevue, WA 98004. A team from PSE (headed by David Landers, Director of Engineering) will take you and Bill to see the following types of projects:

- An activity project in which aerial electric distribution facilities (poles and overhead conductors) are being retired. If reasonably possible, a project in which new poles are also being installed is preferable.
- An activity project in which underground electric distribution facilities (underground conductors, etc.) are being retired. If reasonably possible, a project in which new underground facilities are also being installed is preferable.
- An activity project in which underground natural gas distribution facilities are being retired. If reasonably possible, a project in which new underground facilities are also being installed is preferable.
- Both a transmission and distribution substation. Preferably, one with a replacement project underway.

May 18th – Meet Ron Roberts, Director of Thermal Resources, at our Mint Farm Generating facility at 9a.m. The facility is located at 1200 Prudential Blvd, Longview, WA 98632, which is approximately 2 to 2 1/2 hours south of Seattle. Your day will include site visits at the following facilities:

- Mint Farm Generating Facility (1200 Prudential Blvd, Longview, WA 98632)
- Jackson Prairie Gas Storage Facility (239 Zandeki Road, Chehalis, WA 98532)
- Fredrickson Combustion Turbine Generating Station (4714 192nd Street East, Tacoma, WA 98446)

Let me know if you have any questions.
