XO Wholesale

- “With XO UNE-P Replacement Services, you can share DSO capacity within our ILEC collocations by moving your existing UNE-P lines to an XO-provided UNE-L solution. You can even extend your footprint by leveraging our metro fiber networks that serve 75 markets across the nation.” (X Change Magazine, 1/1/06).
- “XO Communications Ready to Provide UNE Alternatives to Carriers Affected by FCC’s New Network Unbundling Rules” (www.xo.com/news/214.html, 2/3/05)
 - As one of the largest facilities-based national local exchange carriers, XO is ready to offer carriers a wide range of cost-effective transport and local service alternatives that will enable them to transition off the RBOC unbundled network elements, including the UNE platform, and onto XO’s network facilities and fiber.
 - Services available from XO include:
 - XO Private Line, which can serve as a replacement for UNE transport of Enhanced Extended Loop (EEL). XO Private Line can provide carriers with high-capacity point-to-point connectivity at DS1 and DS3 speeds to connect to central offices or reach their switching assets within carrier hotels.
 - XO Wholesale Voice Services, which can serve as a replacement for UNE-P. XO Wholesale Local Voice Services enable carriers to offer T-1 level local, long distance voice and data services to customers utilizing XO’s national array of local network facilities.
- “XO Carrier Private Line services provide high speed, dedicated point-to-point connectivity for voice, data and video applications.” (www.xo.com/products/carrier/transport/privateline)
 - Achieves 100% network availability with capacities from DS-1 to OC-n.
 - Flexible market and CO level pricing is available and customers can select from 12 up to 60 month contract terms.
- “XO Communications Launches Wholesale Local Voice Solution for Services Providers Focused on Residential Telecommunications Market” (XO Press Release, 8/29/05)
 - Building on its success in supporting business-focused CLECs, the XO Wholesale Local Voice services platform can now help CLECs focused on residential customers transition off of the RBOCs’ unbundled network element platform (UNE-P) and utilized central office and transport services from XO in order to continue to cost-effectively deliver telephone services.

- The platform offers CLECs a more cost-effective alternative to building local network facilities and **presents an opportunity to save between 15 and 30 percent over the long-term wholesale agreements with the RBOCs.** (emphasis added).
- XO now has network assets in the Seattle, Tacoma, Portland/Vancouver and Spokane markets. (www.xo.com/about/network/maps/voice_normal.html)

Competition. It's what keeps this industry on the ball. But is the recent FCC UNE ruling stretching your competitive edge to the limit? XO® can help you bounce back.

With XO UNE-P Replacement Services, you can share DSO capacity within our ILEC collocations by moving your existing UNE-P lines to an XO-provided UNE-L solution. You can even extend your footprint by leveraging our metro fiber networks that serve 75 markets across the nation.

Rebound against the competition with full-service, carrier-exclusive products that have real sticking power, including VOIP Termination, Multimarket PRIs, Private Lines, Long Distance Termination, Local Voice and Telco Collocation.

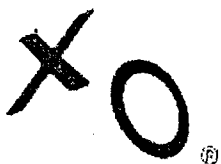

Rolling with the changes. Together.

XO®. The National Local Exchange Carrier™.

XO Offers Cost-Effective Transport and Voice Service Platform Alternatives

RESTON, VA - XO Communications, Inc. (OTCBB: XOCM.OB) today announced it is ready to assist telecommunications companies and other service providers that will be affected by the new final rules to be issued this week by the Federal Communications Commission (FCC) regarding the local network unbundling obligations of the regional Bell operating companies (RBOC). The new rules will increase the rates competitive carriers pay to lease switching and transport facilities from the RBOCs.

As one of the largest facilities-based national local exchange carriers, XO is ready to offer carriers a wide range of cost-effective transport and local voice service alternatives that will enable them to transition off the RBOC unbundled network elements, including the UNE platform, and onto XO's network facilities and fiber.

"As a result of these new FCC rules, competitive carriers will no longer have cost-based access to the RBOCs' local network facilities," said Ernie Ortega, president of carrier sales at XO Communications. "With our extensive array of facilities and fiber networks in local markets across the country, XO can provide a wide range of cost-effective UNE transport and UNE-P alternative solutions so that carriers can continue to offer services to their customers."

Services available from XO include:

- XO Private Line, which can serve as a replacement for UNE transport or Enhanced Extended Loop (EEL). XO Private Line can provide carriers with high-capacity point-to-point connectivity at DS1 and DS3 speeds to connect to central offices or reach their switching assets within carrier hotels. For more information about XO Private Line, go to <http://www.xo.com/products/carrier/transport/privateline>.
- XO Wholesale Voice Services, which can serve as a replacement for UNE-P. XO Wholesale Local Voice Services enables carriers to offer T-1 level local, long distance voice and data services to business customers utilizing XO's national array of local network facilities. For more information about XO Wholesale Local Voice Services, go to <http://www.xo.com/products/carrier/voice/local>.

To contact an XO sales representative for more information about these services, call (800) 474-1763.

Overview

XO® Carrier Private Line services provide high-speed, dedicated point-to-point connectivity for voice, data and video applications. Typically consisting of non-switched communications circuits and the required equipment to connect two or more locations, Carrier Private Line has long-haul and local circuits available in a variety of configurations. XO Carrier Private Line:

- Lets you select from IntraLATA, InterLATA and Interstate lines available in point-to-point or multipoint configurations
- Achieves 100% network availability with capacities from DS-1 to OC-n
- Convenient network interconnection options including (1) customer collocation of network equipment within XO pop locations or (2) a point-to-point private line DS-3 / OC-n mux configuration
- Offers state-of-the art, self-healing fiber system for network recovery within milliseconds
- Uses our extensive intercity and metropolitan network that spans more than 400,000 route miles to 50 cities nationally

Features

- High-capacity bandwidth from DS-1 (1.5 Mbps) to DS-3 (45 Mbps) to OC-n
- 100% network availability
- SONET architecture
- Self-healing fiber system
- Proactive 24x7 network management and monitoring
- Customized circuits between locations
- Consolidated voice and data bill
- Flexible market and CO level pricing is available and customers can select from 12- up to 60-month contract terms
- A web-based customer portal provides capability to pre-qualify locations, obtain price quotes and submit and track orders online
- XO Carrier Private Line service is backed by competitive service level agreements (SLAs)

Pricing and Availability

XO Communications Launches Wholesale Local Voice Solution for Service Providers Focused on Residential Telecommunications Market

August 29, 2005

Represents First Major National Facilities-Based Solution to UNE-P for Carriers in Competition with Local Telephone Companies

RESTON, VA - XO Communications, Inc. (OTCBB: XOCM.OB) today announced that it is broadening its Wholesale Local Voice services platform to support competitive local exchange carriers (CLECs) that offer local and long distance services to residential customers in competition with the regional Bell operating companies (RBOCs).

Building on its success in supporting business-focused CLECs, the XO Wholesale Local Voice services platform can now help CLECs focused on residential customers transition off of the RBOCs' unbundled network element platform (UNE-P) and utilize central office and transport services from XO in order to continue to cost-effectively deliver telephone services. As a result of new rules governing local network unbundling issued by the Federal Communications Commission earlier this year, competitive carriers now pay higher rates for leasing switching and transport facilities from the RBOCs and can no longer rely exclusively on UNE-P to provide services.

XO offers its Wholesale Local Voice services platform through more than 950 collocation facilities in 70 metropolitan markets across the United States. The platform offers CLECs a more cost-effective alternative to building local network facilities and presents an opportunity to save between 15 and 30 percent over long-term wholesale agreements with the RBOCs.

"As the largest independent national local exchange carrier, XO can offer CLECs a more cost-effective facilities-based alternative to the Bells' UNE-P platform," said Ernie Ortega, president of carrier sales at XO Communications. "By utilizing our national facilities-based network, competitive providers in the residential market can continue to provide their customers with an alternative to the local telephone companies."

To support residential-focused CLECs, the XO Wholesale Local Voice services platform provides a pre-determined block of capacity for telephone lines and a physical connection for transporting voice traffic from the XO collocation facility to the competitive provider's voice switch. Competitive service providers will need to provision local loops to their customers, but the platform eliminates the need for competitive providers to build costly switching facilities in every central office in order to provide services to their customers.

The XO Wholesale Local Voice services platform already supports a number of business-focused CLECs in providing local voice and integrated services. The platform provides a number of services that enable business-focused CLECs to cost-effectively continue to offer services and enter new markets. These services include:

- Wholesale Integrated Access – provides voice and data over a

single T-1 to carriers' end users needing at least 6 analog or digital voice lines and 512 Kbps of data speed

- Wholesale PRI – provides full PRI configuration to carriers' end users
- Wholesale Digital PBX – provides a full T-1 of digital trunks to carriers' end users.

For information about the service or to contact an XO sales representative, call 214-237-7887.
