Subject: Comments for Docket U-180907
Date: Thursday, December 20, 2018 4:23:37 PM

Dear Commissioners,

For Docket U-180907, please include these additional comments:

As examples of productive approaches to future energy needs and planning that take into account major technological advances and methods, I commend for your reading the information available at <http://news.mst.edu/2018/12/the-sharing-economys-next-frontier-energy-sharing/> and <https://www.rmi.org/insight/non-wires-solutions-playbook>.

These articles should make it clear that today's IRPs need to adjust to new cost-effective opportunities made possible by technological change, so that PSE can no longer justifiably cling to its status quo business model that depends primarily on an antiquated tunnel vision of poles and wires. The WUTC owes the public modernity.

Sincerely,

Larry G. Johnson
