	Glen Steele	E-mail	<p>It's time that our state Utilities and Transportation Commission sides with the people and stop rubber stamping rate hikes for monopoly energy utilities that are forcing continued dependence on dirty fossil fuels!! PSE has already raised their fracked gas rates. Now they are back for more.</p> <p>Regards, Glen Steele</p>
	Richard Lauckhart	E-mail	<p>***See attachments for multiple comments from Richard***</p>
	Jenny Hoffman	E-mail	<p>I have received a notification that our PSE rate will increase 12.15% next year and increasing rates the following two years as well. I am fine paying higher rates to pay for employees and infrastructure. What I am not okay with is the return on equity from 9.4% to 9.9% to investors. They do NOT need to increase their profits off the backs of the hard working people of Washington State during a time of recession and higher living costs. Please stand up to big business and stand up for your communities. We have choices to not spend our money with other businesses, but we have no choice who we purchase our power from. We need your support to stop this needless increase from happening. Thank you.</p>
	Dale Walter	E-mail	<p>One thing we can always expect is a rate increase on a regular basis from PSE! This request is ridiculous, especially during a high period of inflation. With very high food costs and gasoline costs, those of us on a fixed income are really struggling.</p> <p>Increases in our utility's costs further fuel inflation. I certainly hope the Commission does not approve this request! The timing could not be worse!</p> <p>Sincerely,          Dale Walter</p>

	Peg Giffels	E-mail	<p>Hello,</p> <p>Thank you for the flier included in my recent PSE bill outlining proposed rate increases, and the rationale for them, for 2023-2025. My main point is that the proposed total increase of 17% over three years seems steep, and I see no information about any cost cutting or efficiency measures PSE plans to undertake. So I ask you to consider the impact on PSE customers.</p> <p>I am a longtime PSE natural gas customer living in Seattle. I'm a customer because...I have no choice, no other provider for this service. Nothing about my income is going up at a similar rate — not salary, certainly not stocks, not Social Security if that still exists when I'm eligible. So when I see a proposed increase of this magnitude, what recourse do I have? Where is the 17% to PSE supposed to come from?</p> <p>In Monopoly, utilities are a safe bet, paying a steady return. How can PSE be more steady like that, by increasing efficiency and reducing cost rather than increasing charges to customers who are reliant on their service with no alternative?</p> <p>Thank you,</p> <p>Peg Giffels Seattle, WA</p>
	Robert Durham	E-mail	<p>To who it may concern,</p> <p>I would like to submit my concern/opposition to the electric rate increase requested by Puget Sound Energy. This electric rate increase will severely impact people on a fixed income (like us), who are having to try and absorb these outrageous price increases in all consumer goods AND the double digit property tax increases being generated by the insanely hot real estate market.</p> <p>I can understand that Puget's costs have gone up but a 16.34% increase for 800kwh in 2023!! That's outrageous, how about Puget tighten their belt a little more to at least limit the increases to a more reasonable 2-3% per year increase over the 3 year period. At least that would be more in line with general wage increases that the average person might expect to see.</p> <p>Their is no reason that during these tough times Puget should worry about anything more than doing the bare minimum to keep the lights on and meet their existing financial obligations.</p> <p>They don't need to be advertising on TV, supporting baseball teams, symphonies and for sure don't need to get an increase to 9.9% on equity return. Most average people get no where near an 9.4% return on equity, ratepayers don't need to subsidize stockholders/corporate salaries.</p> <p>Please do the right thing and protect us ratepayers from this excessive rate increase requested for 2023 and limit these increases to a reasonable amount.</p> <p>Thank you for your service to us and your attention to this email.</p>

			Robert Durham
	Valerie Krull	E-mail	<p>I am commenting as PSE customer. I strongly believe that PSE already has a hefty profit margin in a system that offers us no real choice. I vote for no rate increase and ask this multinational company to carry its own weight and not put it on the backs of struggling citizens.</p> <p>Sincerely, Valerie Krull</p>
	Ed Richards Jr.	E-mail	<p>I am opposed to the proposed rate increase. Years ago, PSE switched their computer system in doing so it created a huge increase in their operating expenses. I own three properties in a close proximity to one another and are on the same billing cycle. With their old system all three of my billings came together in one envelope. With the new system I get three separate billings requiring triple the cost postage of the mailing, triple the envelopes included and triple the newsletter sheets all of the paper used now becoming landfill or recycle matter. I am one of their thousands of customers and I am sure I am not the only one in this same situation.</p> <p>Sincerely, Ed Richards, Jr</p>
	Brenda Supasatit	E-mail	<p>Dear Washington State UTC,</p> <p>I am one citizen that is speaking up on behalf of many WA State Citizens who are under a heavy financial load from ever rising vehicle gas prices. The high price of vehicle gas prices, plus the requested hike of 12-15% for residential customers will leave many residents choosing between keeping warm, having food on the table or traveling to work.</p> <p>If there are other ways to deal with the budget to not charge this huge hike, please consider them!</p> <p>I pray you will have wisdom to think of other budget ways to work around the state's mandate to decarbonize energy sytems. This is a real crisis for Washington residents and utility customers.</p> <p>Thank you for your time.</p> <p>Respectfully, Brenda Supasatit</p>

	Bryan Higgins	E-mail	<p>I'm writing opposing PSEs request to increase electric and natural gas rates. (Dockets UE 220066 UG 220067. ) Customers are being squeezed with higher prices on every thing and no one has the money to afforded this increase. PSE is asking for a whopping 35% increase in rates over the next 3 years. This is extremely outrageous and unsustainable from a customer perspective. Anyone living on a fixed income cannot absorb this cost increase. Please ask PSE to propose a more modest and sustainable increase, one that all customers can afford. Providing power should not be a for profit business.</p> <p>Sincerely Bryan Higgins</p>
	Aj Notch	E-mail	<p>Reference: UE-220066 &amp; UG-220067</p> <p>I am against the subject rate increases, because I will feel the full brunt of the cost, as follows:</p> <p>I have been retired since 1995, have not had earned income since, yet do not qualify for PSE utility, property tax or Renton utility subsidies.</p> <p>It is well known that latter two subsidies, and I expect the one for PSE as well, result in costs being double what they'd be without subsidies (involuntary donations to charity).</p> <p>Subsidies should not be a part of any of these costs, but a separate state welfare program or not exist at all. I was taught that if one can't afford a home, which incurs these costs, one should not own it.</p> <p>AJ Notch</p>
	Heidi Beck	E-mail	<p>To Whom It May Concern,</p> <p>I am writing to protest the 13.59% / 12.98% rate increases proposed by PSE for 2023, followed by more modest single digit (under 5%) rate increases for 2024 and 2025 (included in my recent bill).</p> <p>Although I am sure the cost of doing energy business has gone up along with everything else, why the huge increase next year? On top of inflation and gas prices, how are lower and middle income folks possibly expected to accommodate yet one more large jump? At the very least, could not PSE average out the total increase more equally over the 3-year period?</p> <p>Please do not approve the increases without a more balanced (and manageable) rate.</p>

			<p>Thank you for the opportunity to express my opinion.</p> <p>Sincerely, Heidi A. Beck</p>
Richard Wolfe	E-mail	<p>To Whom It May Concern:</p> <p>I urge Washington Utilities and Transportation Commission to reject Puget Sound Energy’s latest request for rate changes. They are excessive in scope, burdensome to customers, and unjustified by the reasons provided. Hasn’t PSE been prior investing “to provide safe and reliable energy service,” or is this a new focus? Are we to believe that the system decarbonization mandates came as a surprise them in the last few months? Did the prior rate request not envision the last four years of capital and operating investments? Have operating costs really and significantly exceeded inflation (recall that these pressures only date to 2021)? Are the “upcoming capital investments and operating costs” really on pace to exceed current inflation (and, if so, why)? And, why should customers be on the hook to pay for increasing “PSE’s authorized return on equity”, especially at a time when those same customers face declining real wages and spiraling inflation in critical housing, transportation and food?</p> <p>I received the “Notice of Requested Changes to PSE Rates and Public Hearings” (hereafter “The Notice”) on July 13, 2022. The date of receipt is important; that same day the June CPI data was announced, at a stunning 9.1% aggregate. As the old adage goes, “ timing is everything.” So, at a time when consumers are being drowned by inflation—struggling to balance feeding their families, buying gas to go to work, and affording skyrocketing housing—PSE wants to raise utility rates. Really? According to The Notice, the average residential customer would pay 14.47% more for gas and electric service next year alone under the request, and then face additional increases for the subsequent two years. And, this is only the direct cost to the residential customer; that same customer will foot the bill for the non-residential increases through associated inflationary pressures accruing to goods and services as well as higher taxes to cover increased lighting (area and street) and other utility costs faced by the municipalities in which they reside. The rationale, as provided in The Notice and summarized above can only be described as tone deaf and outrageous. It must be rejected and replaced with rate increases calibrated to cover actual needs to support PSE’s mandate, sans increasing the monopoly’s ROE on the backs of a struggling customer base.</p> <p>Thank you for your consideration of my opinion.</p> <p>Regards,</p> <p>Richard Wolfe</p>	

			Sammanish, WA
	Kathy Florence	E-mail	<p>I am a Pierce County homeowner and wish to comment on Puget Sound Energy's request to raise electric rates effective Jan 1 2023.</p> <p>Everyone in our country is suffering the highest inflation rate in decades. Our purchasing power is severely diminished.</p> <p>I am a retired senior woman living on a fixed income. Even if I wanted to get a job, options would be limited for someone my age.</p> <p>I moved here from California five years ago primarily because my dollar would go further here in Washington. Now it feels like there's not much difference between the states, and that is very discouraging.</p> <p>A 15.80% increase in rates next year is unconscionable. For me, every dollar counts. As it is, I don't use lamps during the day. I don't use my one window a/c unless necessary (like 90° or higher). I do laundry once a week. The only thing that's always on is the refrigerator. I don't qualify for reduced rates for seniors.</p> <p>I am BEGGING you not to raise electric rates so drastically. Find other measures you can take to reach the goals stated in your Notice ... measures that do NOT involve passing along increased rates to your customers!!!</p> <p>Respectfully,</p> <p>Kathy Florence</p>
	Nick Santarosa	E-mail	<p>The rate increases submitted by PSE are very unfair and worrisome to consumers like me who is on fixed income and elderly. This is the problem with having a monopoly on these services. PSE along with Wave Broadband (Astound), Waste Management, and Kitsap PUD do not have any competition so they keep charging more for higher profits. I submit this comment because I think the situation is getting out of hand and we are the ones suffering. I just hope somebody there is listening.</p> <p>Sincerely,</p> <p>Nick Santarosa</p>

	Sylvia M.	E-mail	<p>This is simply ridiculous to put these increases on people with fixed incomes. Get rid of all the “fluff” employees who do nothing. Work within your means like we have to live within our means. We will have more homeless people living on the streets than we have people living in homes.</p> <p>Sylvia M.</p>
	Briana Cox	E-mail	<p>Hello,</p> <p>I am writing to note my opposition to the massive rate increases of over 15% proposed by PSE. As a resident of Thurston County and a homeowner, I think these increases are egregious. PSE has a monopoly on the market and therefore knows there is little for us citizens to do but pay the hikes while PSE pockets the over 1.6 billion in anticipated profits over 3 years from this rate increase alone. Please reconsider pushing this extreme rate increase onto your customers.</p> <p>Thank you for reading.</p> <p>Briana Cox</p>
	Michelle Swanson	E-mail	<p>Hello,</p> <p>I oppose PSE’s proposed increase to electricity rates. 13.59% is way too high.</p> <p>I’m less bothered by the proposed increase to natural gas rates, as we need to use less gas in order to reduce greenhouse gas emissions. Increasing the price is one way to do that, although I’d like to see them reinvest what they get from us in better programs to decarbonize our houses. The rebates they offer now are a drop in the bucket.</p> <p>If PSE wants to decarbonize the grid and pay for upgrades, I’d like to see them cut into their profit margins first before increasing our rates. We’re already paying them way too much.</p> <p>Thanks for listening, Michelle Swanson Olympia</p>
	Mike McRae	E-mail	<p>To whom it may concern,</p>

			<p>Pursuant to PSE's request for general rate hikes in 2023-25. I recognize the cost of everything is going up, but almost 18% over three years, I don't think so!! Utility prices are regulated for a reason, and this proposal certainly appears to demonstrate why.</p> <p>Nevertheless, if PSE can really prove they need this increase to continue to provide existing services, then so be it. However, if this is as it appears, just another opportunistic money grab using desirable but unnecessary environmental considerations as an excuse to grow and modernize, then say no!! Everyone out here, especially those of us on fixed incomes, are hurting right now. Don't pour salt in the wound!!</p> <p>Regards, Mike McRae</p>						
	Mikel Howell	E-mail	<p>While is it understandable that with all prices increasing, utilities must increase to pay their employees etc. But the percentage of increase being asked for is huge!</p> <p>PSE is not like a supermarket that a person can choose to shop elsewhere if he/she can't afford their prices. If a person lives in their service area, the customer either has to pay their rate or go without. That increase is going to create a big hardship on seniors and low income families!</p> <p>Please only grant 6.5% increase instead of the overall 15.80%.</p> <p>Thank—you for allowing our input. Mikel</p>						
	Al & Sandy Olsen	E-mail	<p>RE: Dockets UE-220066 (electric service)</p> <p>Dear Sir or Madam,</p> <p>The electric rates that PSE has proposed for next year (2023) are ridiculously high. There request for a 15.8% increase is laughable to say the least especially during this country's extreme inflation period that is expected to continue next year. The fact that PSE wishes to have this multiyear price increases leads to a 19.62% over the three year period. Enough is enough!</p> <p>A very fair increase would be:</p> <table><tr><td>6%</td><td>for 2023</td></tr><tr><td>2.62%</td><td>for 2024</td></tr><tr><td>1.20%</td><td>for 2025</td></tr></table> <p>total 9.82% for the three year period</p>	6%	for 2023	2.62%	for 2024	1.20%	for 2025
6%	for 2023								
2.62%	for 2024								
1.20%	for 2025								

			<p>Thank you for the opportunity to comment on the PSE proposed pricing increases.</p> <p>Al Olsen Coupeville</p>
Jorji Knickrehm	E-mail	<p>Dear Puget Sound Energy,</p> <p>Thanks for giving customers such as myself the opportunity to comment on PSE's proposed rate changes. My husband and I have been PSE customers for the past 20 years in Seattle. We were very surprised by the large and what we feel is unacceptable rate of increases over the next three years. To increase residents' rate by approximately 17% over 3 years is unreasonable and will cause financial distress to many residents. PSE should decrease the overall rate changes for electricity and gas in 2023 (the year PSE is proposing overall average increases of 12-15.8%) by at least half. Utilities should not make profits; they are public goods. If investments in infrastructure need to be made, that is understandable, but not by charging residents 12 to 15.8% more in one year. This kind of extreme increase could cause people to default on their payments or be unable to pay for food and other necessary items.</p> <p>Thank you for listening,</p> <p>Jorji Knickrehm and Jason Rich</p>	
Bob Crittenden	E-mail	<p>I can only agree with the increases for operations and capital increases and rely on your review to ensure those are needed and appropriate. I do question the increase in return on equity of almost 10%. They will be in the range of pharmaceutical company profits. There are few people/organizations now investing that make that year to year. In fact the structure you have provided guarantees them that return. Everyone else hopes for that return and uses it to counterbalance expected downturns - as we are now seeing. A more reasonable guaranteed return on equity would be 6%. I suggest you taper the return on equity over a few years with a large decrease in the first year to partially pay for the increased rates consumers will pay.</p> <p>Afterall, we are paying for their capital, their increased operating costs and their decarbonization efforts. They should contribute to those efforts by tapering instead of increasing guaranteed profits.</p> <p>Thank you,</p> <p>Robert A Crittenden, Consumer</p>	

			-- Bob Crittenden
Thomas Goetzl	E-mail	To whom it should concern:  This is a response to the Notice of requested changes tp PSE rates and public hearings I received July 16, 2022.  PSE's requested rate increase(s) should be denied. They would be inflationary. There is no justification for PSE seeking to increase its "authorized return on equity from 9.4% to 9.9%.  Even 9.4% is an unnecessarily high rate of return for what is essentially a risk-free investment. Increasing it can only harm hard-pressed consumers, few of whom are able to earn more than 1 or 2% returns on their meager savings.  Furthermore, if rates are to be raised, they should be raised on the high users (e.g., commercial and industrial users,) since they are in the best position to implement meaningful conservation measures. Residential users should be protected from increases in these extremely difficult times.  Thank you.  Tom Goetzl Bellingham	
Jeanette Marquardt	E-mail	I am a Natural Gas Service Customer and I can't believe the 12.15% increase in 2023 and all the increases thereafter.  There are many people who can't even afford to pay their increases in rent and mortgages and then to get hit with an increase of that amount is insane. Many people are forced from their homes and apartments becuz of the high increase in rents. It is all about greed. Not willing to help people.  There are many of us who are retired and on a fixed income and with all the prices going up; it is difficult to make ends meet anymore.  I could understand a smaller amount, but you have increases every single year which I feel is not necessary. I have PUD for electricity and this is the first time in years that they have increased their rates at a very minimum amount and they still provide great service and get done what needs to be done.	

			<p>I have to live within my budget; no one helps me out and I feel you need to do that as well instead of putting greed before people who can't afford the skyrocket hikes.</p> <p>Please consider a lower increase for 2023.</p> <p>Sincerely, Jeanette Marquardt</p>
Deborah Hill	E-mail	RE: The proposed rate 2023 PSE rate hike	<p>Dear Washington Utilities and Transportation Commission</p> <p>Regarding PSE's proposed rate hike in 2023 of an average of 12.15% for residential customers, I would like to say that such a rate hike is completely unfair and ridiculous. Even if PSE had proposed a rate hike of something like 6.15%, I would still think this to be an unfair burden on Washington rate payers.</p> <p>PSE says that these rate hikes are to do things like decarbonize its energy systems to comply with state mandates as well as to recover some years of capital investments made on behalf of customers. I do not recall being asked to evaluate these investments and being allowed to vote on whether these investments made any sense. I do not understand how PSE can now come to its customers asking them to pay for PSEs investments. If they chose to make investments I would think they had also chosen to assume the cost of those investments; passing a fraction of those costs on to their customers might be reasonable but this looks like they are just wanting their customers to outright pay for their business decisions. I say no.</p> <p>Further, PSE should be responsible for budgeting to do things like decarbonize its energy system which is what they should be doing anyway and not sticking it to rate and taxpayers for shortfalls in their business management.</p> <p>I understand that costs are going up for many things and I note that they propose rate hikes of 2.29% in 2024 and 1.82% in 2025 which seems reasonable and understandable. But at a time when inflation has eaten large holes in every household's budget and when there are ever fewer living wage jobs to be had and taxes are not going down, asking rate payers for a 12.15% rate hike for their natural gas is asking for too much, period.</p> <p>I would very much appreciate it if you recommend to PSE that they seriously revise their proposed rate hike downward.</p> <p>Thank you for your consideration of these comments.</p>

			Sincerely, Deborah Hill Tacoma, WA
	Jocelyn Traber	E-mail	Please reconsider energy rate hike of 13-15% in 2023. This is not a match to inflation and places undue stress on us homeowners.
	Zachary Agnew	E-mail	The proposed 3 year plan proposed for electric and natural gas services that significantly increases the consumers costs is a terrible idea. With the soaring gas prices, inflation, poor economy, downward trending stock market, the middle class is already stretched toooooo thin. Most in the middle class have had to cut many conveniences out of our lives and are struggling to maintain. It's nice that PSE wants to increase their profits from 9.4 to 9.9, but this is literally the worst time to do so. When did local companies start putting profits before the community?  Zachary Agnew
	Linda Standish	E-mail	Good Afternoon,  Most customers have agreed and adapted to previous increased, but this year the increase appears to be greatly increased.  With Bellingham wanting to go completely green (electric) with our city, I think your customers need to hear an explanation. With a green city, your company will have little to no competition.  With all the additional expenses that folks are having to adjust, I think its only reasonable to maintain rates or apply the 1-2 per cent increase.  Thank you for your time.  David and Linda Standish
	Dr. Philip E. Cassady	E-mail	To: Washington Utilities and Transportation Commission, I would like to comment on the requested Puget Sound Energy electrical rate increase (Docket UE-220066). I realize that Puget Sound Energy needs to operate a profitable company, but the requested rate increases are excessive. The requested 13.59% increase in rates for the year 2023 is not reasonable during these times of high inflation and potential business recession. It is quite out of line with the requested rate increases of 2.41% in 2024 and 1.8% in 2025.

			<p>Furthermore, the excessive rate increase requested in 2023 falls more heavily on the residential customers than the requested rate increases for subsequent years. The residential customers bear 116% of this excessive 2023 rate increase, and 109% of the requested 2024 rate increase, and 102% of the requested 2025 rate increase.</p> <p>The reasons given for these rate increases are not realistic. The more than four years of capital and operating investments were not made solely on behalf of the customers. Such capital investments are normally made to improve the returns of the investors. It is not reasonable to expect that upcoming capital investments and operating costs will be so heavily loaded into the first year of this three year plan.</p> <p>I request that this rate increase be rejected and a more realistic and reasonable Puget Sound Energy rate plan be approved by the Washington Utilities and Transportation Commission.</p> <p>Dr. Philip E. Cassady</p>
	Rhonda and John Bolton		<p>I feel the proposed rate hike is too steep especially considering the usual increase of 1-2%.</p> <p>I have a Notice of Requested Changes to PSE Rates and Public Hearings. In short, they want to increase power rates by 13.6% - 15.8% beginning Jan. 1, 2023.</p> <p>Thank you, Rhonda and John Bolton</p>
	Myron Berg	E-mail	<p>UTC,</p> <p>Every year PSE comes to the trough to ask for more and more money for gas and electric and every year our rates increase.</p> <p>The outrageous requests for double digit increases for 2023 for gas and electric will only serve to escalate the already out of control inflation which remains steadily on the increase.</p> <p>We can do without some things and cut back on other things but utilities used to live life should not be compromised .</p> <p>We currently watch our usages very closely and will not be able to cutback on gas and electricity any further.</p> <p>We are seniors on fixed income and cannot afford these requests for double digit increases. PSE is a privately owned foreign utility ( which should never have been permitted to take place) and they are motivated by profit only with no regard for the interests of the citizens who must foot the bill.</p> <p>Deny the requests for the requested increases please !!!</p>

			<p>The Berg Family</p> <p>Sent from my iPad</p>
Suzan Ellis	E-mail	<p>This rate increase affects low income and middle-income households. This is going to be too much burden placed on households. We shut off our lights, use LED's, heat only to 68 degrees in the winter and cool to 74 degrees in the summer. I have a small house. We wear sweaters or hoodies in the winter to save money. Our bill estimate per month is \$193. This is ridiculous.</p> <p>Where is the revenue \$310 million from power and \$143 million in gas going? Update system, trim trees that people have called in about for over 15 years because the branches are pushing down on power lines, replace transformers, make sure street lights do not stay on 24 hours a day? When looking at the salary of the CEO's of PSE, I am sure the money goes back into their pockets. \$5 million salary for one person, \$4million for another, \$3 million for yet another, etc</p> <p><a href="https://www1.salary.com/PUGET-SOUND-ENERGY-INC-Executive-Salaries.html">https://www1.salary.com/PUGET-SOUND-ENERGY-INC-Executive-Salaries.html</a> PUGET SOUND ENERGY INC Executive Salaries &amp; Other Compensation - Salary.com</p> <p>The proxy statement's main purpose is to alert shareholders to the annual meeting and provide them information about the issues that will be voted on during the annual meeting, including decisions such as electing directors, ratifying the selection of auditors, and other shareholder-related decisions, including shareholder-initiated initiatives.</p> <p>www1.salary.com</p> <p>We need an accounting of where this money is going now and for the future. PSE is not making good budget decisions and they are making the peons pay.</p> <p>No to this rate increase</p> <p>Suzan Ellis</p>	
Janine Richardson	E-mail	<p>Thank you for opportunity to send concerns regarding tentative action. PSE is a monopoly for our power here in Puget sound and beyond to a point. Understanding that PSE is a business yet monopoly combined makes rate hikes request almost humorous. As with any business costs of anything and everything fluctuate hence so do profit. People/consumers are curious as to profit associated with PSE as well as rate hikes. Myself being included. Where does an average person find out information on this topic please? What % of profit is carried over from fiscal year to next to deter rate hikes.</p>	

			Thank you for your time.
Daryl Lambert	E-mail	<p>I would like to express my feelings on the proposed rate increases. I think that a jump of 13.59% for electricity and 12.98% for gas in 2023 is far too much. That can be spread over the three years when the rates are not so high. People are being taxed out of their homes with the increases in property values and now paying utilities that were once the amount of a car payment are just too much in addition.</p> <p>We do want to say that we are satisfied with the good service of PSE and they came quickly to my house when we had a gas leak.</p> <p>I also think that you should have retired or senior and disabled discounts as they do not get salary increases to keep up with these rate increases.</p> <p>As you go more to solar, you might want to help seniors get off the grid and be able to contribute to the power supply so they can also make some income. I know you offer these types of services but you need to be more proactive in assisting seniors who may not be able on their own to navigate the paperwork and understand how it all works. That would be a win-win for the power companies in getting more green energy and having seniors/disabled/retired have another source of income as well as reduced or no charges on their bill.</p> <p>Thank you for considering my comments.</p> <p>Kathy and Daryl Lambert 425 260 7866</p>	
Wei Wang	E-mail	<p>The proposed Puget Sound Energy rate increase will be a financial shock to many families' budget under an already battered economy on the edge of a recession and will negatively impact the affordability of their basic energy needs. Puget Sound Energy should first explore options to operate more efficiently and reduce unnecessary expenses before asking for any rate increases. Also, any reasonable rate increase should be done gradually over several years so people can have the time to make financial adjustments to accommodate the higher energy cost without suffering hardship. Thank you very much for protecting and advocating for the interest of our community.</p> <p>Best regards, Wei</p>	

	Ali Naini	E-mail	<p>Dear Sir,</p> <p>I am writing to protest the proposed 15% rate increase by Puget Sound Energy.</p> <p>This is corporate profiteering and should not be approved.</p> <p>Thank you for your efforts on our behalf.</p> <p>Ali Naini Kirkland, WA</p>
	Lawrence Braun	E-mail	<p>Sir or Madam,</p> <p>In reference to Docket UE-220066, I must oppose these proposed rate increases. specifically bullet points 3, 5 and 6 on page 1 of the Notice of requested changes to PSE rates and public hearings dated Jan. 31, 2022. I feel all capital and operating investments (pts. 3 &amp; 5) should be borne by the owners of the company, regardless of whom the rate increase supposedly benefits. I have a feeling it will be PSE.</p> <p>An increase to PSE's authorized return on equity (pt. 6) seems to be pure greed. While almost everybody in the country is losing money on investments and equity, PSE wants an increase to 9.9% (I lost 6% on investments last quarter), using their customers hard earned money to pay for investments and then earn more money on those same investments. If I put up money for capital investments, I want a return on my money. I can see an increase to cover pts. 1,2 and 4, but not nearly 20 percent! I write in opposition to these rate increases.</p> <p>Thank you for your consideration, L.D. Braun</p>
	Stephen Nielsen	E-mail	<p>July 25, 2022</p> <p>Comment on proposed Docket UE-220067 , Natural Gas</p> <p>Rate increases are justified when contextual to realistic expenses. This proposal is not realistic. The proposed increase of 12.98 per cent in 2023, another 2.29 increase above the prior year in 2024 and another proposed increase of 1.82 of the prior year's increase does not, without careful justification, meet the threshold of a rational business model.</p> <p>PSE informs customers that rate adjustments are needed for several reasons.</p> <p>“To continue to provide safe and reliable service.” What will the increase do to achieve that goal? What data exists to show unsafe service and how specially will an increase be used to lessen risk?</p>

			<p>“To decarbonize it energy systems...” That work is needed and necessary. However, the work is capital dependent. Will the utility use rate increase revenues to support a bona fide capital expense? What other tools are available to address the need at lower cost? Capital needs can be bonded and utilized at lower cost than the current 9.4 return on equity. If PSE did that while enjoying the proposed rate hike, they will profit even higher from the difference of Bond expense to the Revenue increase.</p> <p>“To recover increased operating costs.” One does not recover increased cost. Whoever wrote that line does not understand finance. Has PSE had prior years of negative financial performance? If so, they are seeking to recover past loss. Every investor would be delighted if their past investments could be bolstered and increased against past reality. I trust you will pursue such sloppy thinking including conjecture on the part of PSE.</p> <p>“To set rates for a multiyear rate plan that reflect upcoming capital investments and operating costs over a three-year period.” With proper forecasts and documentation, PSE may have a case for some amount of rate increase. Please do not take their assessments and projections on face value. As a customer, I need and want their service. I have no choices outside of PSE. I and others need their service. Yet, they are bound as a regulated monopoly to a different standard above creating highly attractive investments.</p> <p>“To increase PSE’s authorized return on equity from 9.4 to 9.9%” Well above averaged inflation the proposed increases will benefit investors over customers. Monopolistic Utilities should not be able to make high profits at the expense of hurting customers and eventually themselves.</p> <p>Please do not accept the proposed docket’s remedies to PSEs perceived desires.</p> <p>Thank you,</p> <p>Stephen Nielsen A PSE customer</p>
	Len Nelson	E-mail	<p>Attention to whom it may concern @ Washington Utilities and Transportation Commission Washington Attorney General's Office</p> <p>While there is always justification for additional operating funds ie, wage increases, increased material costs etc etc. There is NO</p>

			<p>justification in PSE's request for a 13.59 % increase in 2023 that also includes a residential overall average increase of 15.80 %. Yikes.</p> <p>The first word that comes to mind is "Criminal". With the current economy under a prodigious inflation burden and stock and bond markets in turmoil I'm sure we would all like such a windfall. As a retiree on a fixed budget I know I am not alone in protesting this flagrant request.</p> <p>It also appears PSE hopes the Commission and others fail to read all of the reasons there is such a request. At the bottom of the list is the "need" to increase the return on equity to 9.9%. Right in the ballpark with the S &amp; P 500. Most investment managers would love such a return in the current market. Heck I would be overjoyed at the current rate of 9.4% that PSE enjoys.</p> <p>The customers need all of you to deny the current request and require Puget Sound Energy to return to the drawing board.</p> <p>PSE could start by explaining the more reasonable increases for 2024 and 2025 that (by their own request) seem sufficient &amp; manageable.</p> <p>Regards, Leonard Nelson Des Moines, WA</p>
Michael Ives	E-mail		<p>Washington Utilities and Transportation Commission: These comments refer to: UE-220066 and UG-220067</p> <p>My family recently received a notice from Puget Sound Energy stating they intend to request “An overall 13.56% increase in rates” in 2023 in order to make an “additional” \$310,600.000.00 selling electricity and, similarly, 12.98% increase selling natural gas.</p> <p>PSE is informing us the reasons they have to increase rates are that, essentially, there are some costs of doing business and they want to enrich their “stockholders”. First, a utility providing a necessity to the public should not be concerned about stockholders. Price hikes like this are among the reasons why a utility should be run by the government, or regulated to within an inch of its life.</p> <p>If wages are rising at all, they have been woefully behind the increase in the cost of living-even before</p>

			<p>the Pandemic. The Puget Sound has been a very expensive place to live for a long time. Wages have not reflected that ever. Now, on top of that, a private utility wants to just make more profit with the worst inflation I've seen in all my life (57y.o.). PSE is claiming they need to pay for “decarbonization”, recouping capitol investments and operating costs. A capitol investment should have had a return. We should be asked to pay less because of these capitol investments not more. PSE just needs to find another way to pay for these things if they truly need them. They can tighten their belts like everyone else. They don't have to pay dividends and they can make less profit because they have to pay the costs of doing business. That's just realistic and rational.</p> <p>WUTC, dose PSE make outrageous requests like this so you'll offer a compromise which would still be more than they need? Your counter offer should be nationalization. Better yet, don't offer, just do it.</p> <p>The Ives Family        Shoreline, WA</p>

	Ronna Cunningham	E-mail	<p>To whomever:</p> <p>In this time of the highest inflation rate in the past 40 years (9.9%), I urge you to re-evaluate your need to inflate the price of energy. I suggest you freeze all price increases for 3 years: then in the 4th year increase the electric service 1.2% and the natural gas 1.74%; in the 5th year increase the electric service 2.62% and the natural gas 2.19%. At the end of the 5th year, depending on the economy, re submit your outlandish request for double digit increases. You have a responsibility to your customers.</p> <p>Thank you for reading this        Ronna Cunningham</p>
	Christian Juenke	E-mail	<p>I received notice of PSE requesting a rate increase. I think it should only be granted if executive pay is capped at 17 times the lowest paid employees equivalent salary. They pay the CEO over \$5,000,000 in salary. CFO close to \$2,000,000. This is not ok.</p> <p>If they want more money to recover their investments then they should slash executive pay.</p> <p>Christian Juenke</p>

			PSE Customer
	Francis Warfel	E-mail	Why can't they average the increase over the three years. Like 6% a year instead of one big increase upfront. We can adjust to smaller increases more easily. Dockets UE-220066 and UG-220067. Thank you. FW
	Heather Hibbert-Rime	E-mail	Hello,  I think the increase they are requesting is too high, extremely too high for the service they offer and what they charge already. Ridiculous! It's not a one time increase, they want to increase for three consecutive years. When the power goes out during weather extremes, we are out for incredibly long times. Days and days. I live near state offices, fire and police . I don't see the money going to improving systems or to putting more money towards solar and wind power on cities..., where all customers could benefit from a percentage off their bills based on city solar and wind products and devices being used in the community, not just used on single residential, but on city buildings and businesses where's everyone benefits. Please don't allow the increase, especially not what they are asking for. It's too much. If they need to recover funds, look to the federal government, not off the back of current customers who pay their bills on time and in full. Sincerely, Heather HibbertRime
	Peter Tountas	E-mail	A proposed increase of 17% for Electric Service and a proposed 17% increase for Natural Gas over the next three years is totally unacceptable. It seems that it is much easier to increase prices that to figure out a way to decrease prices, simply because it takes far less effort. Clearly this is a severe blow to senior's who have spent their entire career paying every kind of tax conceivable, and now faced with the worse inflation in decades.  When there is a monopoly, such as Puget Sound Energy, we have no alternative source for power. We depend upon the UTC to bring some sort of sanity to these absurd increases. As senior retired persons, my wife and I have no other choice but to cut our charitable donations by the same amount as the increases. Sorry it has to be that way, but we enjoy eating and getting medical care.  Peter Tountas
	Kimberly Sims	Mail	***See Attached PDF***

	Darlyn M. DelBoca	Mail	*** See Attached PDF***
	Ellen Schug	Mail	*** See Attached PDF***
	Vivian Dorsett	E-mail	<p>Hello,</p> <p>I would like these comments/feedback documented and presented to the UTC with regard to PSE's proposed rate hikes to the electric and natural gas services for 2023 and through 2025, on January 31, 2022.</p> <p>The account holder for these services, in the 98055 area, is a senior citizen who is living on a fixed income. Due to the current economic situation, approval of rate increases of this magnitude will be crippling for those who are barely able to live right now.</p> <p>I would hope that PSE would take this fact into consideration and look into alternatives that will not adversely affect seniors and families, as this is NOT the time for yet another attempt to price gauge consumers who are struggling to make ends meet on a daily basis.</p> <p>PSE's rate hikes, if approved, would increase annually as follows:</p> <ul style="list-style-type: none"> <li>• Electric services:       <ul style="list-style-type: none"> <li>o 2023 - Annual cost would be increased to approximately \$174.36</li> <li>o 2024 - Annual cost would be increased to approximately \$207.60</li> <li>o 2025 - Annual cost would be increased to approximately \$208.91</li> </ul> </li> <li>• Natural gas services:       <ul style="list-style-type: none"> <li>o 2023 - Annual cost would be increased to approximately \$110.28</li> <li>o 2024 - Annual cost would be increased to approximately \$132.60</li> <li>o 2025 - Annual cost would be increased to approximately \$150.72</li> </ul> </li> </ul> <p>By 2025, the cost of electric and natural gas services would cost over \$75/year for the average PSE customer, which could potentially prevent people's ability to pay rent/mortgage, buy food and/or take care of their medical expenses!</p> <p>This is a HORRIBLE way for PSE to treat their customers, right on the heels of the worst time in history (e.g., pandemic, recession)!</p> <p>Thank you,        An Extremely Concerned Consumer</p>
	Kathy Knobbe	E-mail	I recently received notice that Puget Sound Energy is proposing a rate hike

		<p>I openly object to this rate hike!</p> <p>1). PSE of course should continue providing safe reliable energy service. This is what we are already paying them for!</p> <p>Perhaps they need to replace power lines and equipment. This should already be part of their budget and planning to do so. No more from me!</p> <p>2). Decarbonize? Yes of course. This is not new. Don't ask for more money. As you decarbonize, the expenses of carbonized power will be eliminated. Decarbonized energy often comes with more self sufficient renewable energy requiring much fewer employees and equipment. To decarbonize they will acquire more more efficient methods at a lower cost. More money? No!</p> <p>3). Recover capital investments? First of all, again-they should use their profits for such things, even when mandated to do so. Budget After all, you gotta spend money (your own, not ours) to make money</p> <p>4). Recover increased operating costs. How about we recover increased salaries of it's high salaried individuals in the company? I don't get to recover increased cost of electricity! No, I have to give up my health to recover. That is just great!</p> <p>5). Upcoming capital investments and operating costs. Again——budget for it! Don't ask users to pay so company and stock holders can not have to pitch in. You gotta spend money (yours, not ours) in order to make money</p> <p>Good grief! When all the cars, households and businesses go all electric, they will have all kinds of money rolling in! I seriously doubt our rates will decrease as their profits increase.</p> <p>6)). Increase profit return? ENOUGH IS ENOUGH!</p> <p>A nearly 20%increase, over three years. 15.8 % in the first year !!!</p> <p>As a person on limited income (social security and due to disabled no way to earn more) I cannot afford such increases. I can barely afford living now. I have been working on eliminating expenses and spending in all areas. Why should PSE not be required to do the same?</p> <p>Residential customers paying a higher percentage than the overall? What the heck. Why shouldn't any increase be equally spread across the board without burdening one class of users more or less than others</p>
--	--	---

			<p>Our economy will continue to slide as we are being asked to pay more and more. 20% is a lot more!!</p> <p>It is my hope that the WUTC will see through their request for more money for what it is. Greed! Greed at our expense while attempting to put all costs upon us and shrink from their moral and ethical obligations to work within a budget, or use their own money</p> <p>Yes. I object to any increase!</p> <p>Kathy Knobbe</p>
	Bonnie Connor	E-mail	<p>All I can say is YIKES!. I just don't know how people are supposed to survive without 25% pay hikes or Social Security raises. This will only increase homeless people. I can see raising rates some, but not to this extreme.</p> <p>Bonnie Connor Maple Valley WA</p>
	Natalie Williams	E-mail	<p>The docket number for my comment is Docket UE-220066 Puget Sound Energy Washington State Thank you, Natalie Williams</p> <p>----- Forwarded message ----- From: Natalie Williams &lt;natalieibclc@gmail.com&gt; Date: Thu, Jul 28, 2022, 7:55 PM Subject: Puget Sound Energy Rates To: &lt;comments@utc.wa.gov&gt;</p> <p>Dear UTC, Please help us keep our electric rates stable as we are having a hard time affording our many bills during this time of inflation and high housing costs. An increase would increase our suffering. I also am having a hard time and have not fully returned to work post having COVID.</p> <p>Thank you for listening, Natalie Williams</p>

			Washington State King County
	Wes Corey	E-mail	<p>These comments are referring to Dockets UE-220066 and UG-220067. I have two major issues with the proposed utility increases. First, this is no time for PSE to be greedy and increase the profit that they're allowed; current profit levels are more than sufficient. Second, the increase that they're asking for in the first year is too high. That needs to be spread across the three year period; not front-loaded so much. Additionally, the increased profit percentage should be subtracted from the requested increases.</p> <p>Sincerely,</p> <p>Wes Corey DuPont, WA</p>
	Lydia Bartholomew	E-mail	<p>I believe the initial year rate increases requested by PSE are unsubstantiated and will cause hardship to many. I consider myself fortunate compared to others and it will be difficult even for me. Every person and every business had a difficult time during the pandemic and had to make investments in their families, homes and businesses that were not reimbursed.</p> <p>A modest increase seems much more appropriate.</p> <p>Thank you</p> <p>Lydia Bartholomew</p>
	Jody Disney	E-mail	<p>I am a resident of Olympia, WA in Thurston Cty. My PSE bills are already too high. I have updated my home &amp; that of my daughter to reduce energy consumption as much as I can afford - however these costs are eating up too much of my monthly income. Last winter I spent over \$500 per month to heat these two homes (my daughter cannot afford this on her income).</p> <p>Adding a 10% increase to their desired gain is disgusting. Who gets 10% on their savings? Not me! How are we, the consumers able to afford this kind of increase? More people will be homeless and using government subsidies so this giant company can pay its investors! Disgusting and unjust behavior.</p> <p>Jody A Disney</p>

	Catherine Adams	E-mail	<p>I thought PSE was required to become a non-profit when they took over Washington Natural Gas, I remember writing against that purchase a very long time ago. Still disappointed in the sale going through....I've always found PSE to be money hungry regardless of the economy.</p> <p>What has changed that they are trying so hard to make such large profits?</p> <p>Best Regards,</p> <p>Catherine Adams</p>
	Vendors Award	E-mail	<p>I note PSE's request for a nearly 20% rate increase. While it's understandable given PSE's energy mix which is heavily reliant on fossil fuels, all of which have increased in price, the lack of investment in renewables is not understandable.</p> <p>I understand that energy costs will have to go up in line with inflation, but relying on fossil fuels for electrical generation not only requires me to use more electricity through the climate change it causes, but also subjects both ratepayers and PSE shareholders to unstable, unpredictable costs. If PSE is granted a rate increase, they should be required to diversify away from fossil fuels and towards renewable sources of energy so costs can be more stable and predictable.</p> <p>I also note that in our area, PSE has reduced its frequency of tree trimming which reduces service reliability and likely increases overall costs. We have all seen the results when California utilities allowed deferred maintenance to pile up - horrific wildfires, service interruptions and utility bankruptcies. I realize that the labor market is currently challenging, but PSE should also be required to invest in adequate maintenance if it is granted a rate increase.</p> <p>All too often, utility rate increases go directly into the pockets of utility shareholders. In this case, if a rate increase is granted, the money should go towards investments in network diversification and maintenance. Part of the bargain investors make in buying the stock of a monopoly utility is to expect a relatively small, fair and stable rate of return, versus outsize stock price growth driven by juiced quarterly earnings. In the Pacific Northwest, we need to think and plan more than one corporate quarterly earnings cycle at a time. The UTC must require utilities to do so.</p>
	Elisabeth Mason	E-mail	<p>Good Day PSE,</p> <p>I've been a great customer of yours, and one who always pays your bills as soon as I receive them.</p> <p>I'm in shock about the news of PSE increasing Electric rates in 2023 to 15.80% - this huge increase is</p>

			<p>unacceptable, and even more so given our out of control inflation. Unfortunately, my wages have remained and will remain the same.</p> <p>I understand that increases happen, but not at 15.80 % !</p> <p>A 1.50% per year is both doable and more acceptable.</p> <p>Thank you,</p> <p>Elisabeth Mason PSE acct # 2200 2647 2054</p>
	Melanie Drescher	E-mail	<p>We agree with our WA AG Ferguson, we cannot afford to pay anymore for our utilities than we are paying now. We are on a fixed retirement income. We can't afford to even buy the same amount of groceries anymore. The higher grocery prices, due to the gasoline increases which grocery stores are passing on to customers, are really nothing more than price gouging by oil companies. Now the utility companies want to increase their profits as well as lining stockholders pockets and the pockets of their CEO's.</p> <p>WE can't afford to pay anymore. We even looked at switching to PSE's option of getting our electricity from "green" companies, thinking it would save us money. But NO, PSE wants to charge us more for choosing renewable energy. The only thing PSE wants to do is make more money. They are not concerned about our ability to pay for it. Everyone is hurting. The war in Ukraine has caused huge global supply chain issues for everything from gasoline to chips.</p> <p>We cannot afford to pay anymore than we already pay for utilities and groceries if we still want to able to live in our home. We cannot work anymore, we are on a fixed retirement income. Many people are out of work. This is NOT THE TIME for big utility companies to increase their profits on the backs of retired and working Washingtonians. We say NO to Price Increases for PSE Utilities.</p> <p>Sincerely,</p> <p>Richard &amp; Melanie Drescher Olympia, WA</p>

	Mary Ann Lebold	E-mail	<p>I object to approval of PSE's requested 2023, 2024 and 2025 rate adjustments to provide electric service and natural gas service. PSE has a poor track record in providing reliable service. I would not want to pay more unless I were certain the service would improve.</p> <p>Mary Ann Lebold</p>
	Jennifer Godfrey	E-mail	<p>Thank you for all of your work.</p> <p>I am submitting comment about rate increases by PSE. I am a PSE and scl customer and both of the companies do not need to be increasing anything. SCL has jacked up prices extremely during the pandemic, and while they are not included on this comment, I would like to submit that for future consideration. During the pandemic, myself and many others noticed that our bills were about 30% higher without a change in usage.</p> <p>As far as PSE, their rates have been extremely high the entire time I've lived in Seattle and I see no reason for them to raise them. I also don't think that countries outside of the US should be determining our electric and gas rates. This is economic warfare.</p> <p>Thank you so much for soliciting public opinion and for all of your amazing work. We are lucky to have your office representing us in Washington.</p> <p>Sincerely, Jennifer Godfrey 98199</p>
	Richard & Penny Swymeler	E-mail	<p>Dear Members of the W.U.T.C.;</p> <p>While I understand the importance of companies to keep up with the price of inflation, I am discouraged that Puget Sound Energy is requesting to have a 12.98% increase in Natural Gas for the fiscal year 2023. I am not opposed to the increased of 2.29 in 2024 &amp; 1.82 in 2025 – as those rates are within the historic rate-of-inflation that many retired citizens planned for their golden years.</p> <p>The problem is Why should Puget Sound Energy only be looking at the outcome of their shareholders vs the citizens of the State of Washington who have to pay these continuing exorbitant prices for Natural Gas and Electricity.</p> <p>The corporation gets all kinds of tax benefits, deductions and such. The average citizen of the City of Seattle can hardly afford to live in their homes. As a senior citizen who has spent my entire life in this State, I am now being outpriced by people who make 3 times the salary that I did. I was able to purchase an affordable home in Seattle in the mid 1970's. If I had to do it all over again, I would NOT be able to purchase my home which is tax valued at over 1 million. Why should I carry the burden of increased costs.</p>

			<p>If Puget Sound Energy wants to increase prices to customers, I believe they should NOT look at their shareholders, but look at the demographics of those individuals who made this community and state what it is today. There should be some type of graduated scale of pricing based upon the persons income and ability to pay.</p> <p>If the WUTC agrees to these rate increases – I can do nothing else except leave the state that my family has called home since 1909 and let some other person or person(s).</p> <p>The plethora of reasons used to justify the rate increase – does not consider what “Joe Average” makes as a salary or “Annie Retirement” makes in retirement.</p> <p>It’s corporate greed and the only profit is the stockholders of the corporation.</p> <p>We oppose this rate increase.</p>
	Jenny Chan	E-mail	<p>Hi UTC,</p> <p>This is ridiculous that PSE wants to have a 10% profit margin and most likely the reality is more because this is based on their math. In times of high inflation, they are trying to profit even more from the people who need it most. PSE rates are already higher than what Seattle City Light is charging and since moving to a PSE controlled region, I have been unhappy with what they are charging.</p> <p>Why should the consumer be the one to offset the cost of their upgrades to "clean energy" when they are the ones taking the profits?</p> <p>-- Thanks, Jenny Chan</p>
	PSE Customer	E-mail	<p>Sirs, Short comment on energy increase requests:</p> <p><b>REJECT!</b></p>

			<p style="text-align: center;"><b>DO NOT SUPPORT THE GREED FACTOR TO INCREASE SHAREHOLDERS PROFITS</b> (return on equity)</p> <p>Thank you, PSE customer.</p>
	Carole Teshima	E-mail	<p>To whom it may concern,</p> <p>Thank you for the opportunity to comment on behalf of my family regarding the proposed utility rate hikes. We are a family of 3 struggling to live in east King County on one fixed retirement income, one full-time and one part-time teaching income. Our power bill on the budget plan increased from \$180 to \$240 a month beginning this month at the same time our rent increased from \$2800 to \$3000 a month. We had 2 catch-up PSE bills, last month and the month before of an extra \$500 total. We are stretched so thin because of all the other increases in fuel and food costs that I literally live in fear of homelessness. Not everyone works for Microsoft or Amazon. I have no idea where the poor service workers live, because I have searched constantly for more affordable housing within commuting distance to no avail.</p> <p>Please consider seriously the impact these rate increases have on what used to be middle class families, who are quickly becoming lower class. Without rent control or other lower cost housing options, there is no way we can afford any higher utility bills.</p> <p>I thank you for your time and consideration. Please feel free to contact me at any time.</p> <p>Sincerely,</p>
	Gary Robertson	E-mail	<p>I agree with WA State Attorney General Bob Ferguson that the proposed electric rate increase for 2023 of \$16 per month is not fair, reasonable and just. Right now WA residents are financially strained by a number of factors including high inflation. The last thing we need is an exorbitant rate increase by our utility provider. If the increase was approved, their profits would soar to almost 10% which is outrageous. I urge you to deny their rate increase and if they are granted a rate increase, scale it back to something that is more reasonable, fair and just to all of us who live in WA.</p> <p>Gary Robertson Federal Way</p>
	John & Sally Mulcahy	E-mail	<p>We were stunned to see the huge rate increased requested by PSE from 2023-2025. An almost 16% rate increase in 2023 alone, and 20% over 3 years??!! That is an exorbitant amount to increase what the</p>

			<p>consumers pay. We are retired and on a fixed income, and to say that is a huge strain on the budget is an understatement. Also, people that are working certainly don't get wage increases to come close to that amount. Why does this corporation get to increase its profits while the consumer continually loses. Maybe they should lower the rate so we (the consumer) see the same rates to match PSE's increase in profitability, rather than a huge deficit to our budget. Please be an advocate for the consumer and do NOT grant this huge rate increase.</p> <p>John &amp; Sally Mulcahy Clinton, WA</p>
	Phyllis Woodward	E-mail	<p>As a retired senior I am tired of rate increases from utilities, garbage services and on and on. No one is raising my social security to cover these increases. Fed up.</p>
	Beth Sellars	E-mail	<p>I am writing in regard to the repeated rate increases that Puget Sound Energy is requesting from the Washington Utilities and Transportation Commission. This request requires its ratepayers to help bail out the debts that PSE incurs through their inattentive management, such as the natural gas explosion in Seattle's Greenwood area in 2016.</p> <p>PSE records showed their broken gas service line was abandoned in 2004. PSE failed to properly disconnect and seal the line, allowing it to remain in service for nearly 12 years without proper oversight, the report said. PSE agreed to pay at least \$1.5 million in penalties for this disaster.</p> <p>Additionally offensive in their reasoning includes "...meeting the expectations of customers and stakeholders." Bottom line: The public ratepayers are once again expected to financially satisfy the money backers.</p> <p>And finally, NO mention of projected plans to introduce solar or wind to their operation, providing less expensive electrical rates.</p> <p>I, as a ratepayer, not a stakeholder, am very tired of corporate or public greed, always to the detriment of the tax or ratepayer. I urge the UTC to reject these requested changes.</p> <p>Thank you.        Beth Sellars</p>
	Bridget Foust	E-mail	<p>To Whom It May Concern,</p> <p>I am writing to encourage you to please decline PSE's requested rate increase. The rate for electric and natural gas is already a MAJOR expense for many households, even those not struggling. A 13.59% increase</p>

			<p>would be detrimental to households trying to make ends meet. There is simply no need for these rate increases. PSE's profit margins are already high, there is no need to gauge customers. Please decline this rate increase.</p> <p>Thank you,          Bridget Foust</p>
	Deenah	E-mail	<p>To whom it may concern,</p> <p>I received a letter detailing the proposed rate hike fee schedule for PSE recently and wanted to comment.</p> <p>As a single person with a meager single income, these proposed rate hikes will push me to a financial breaking point. I use my electricity and gas very conservatively as it is and still feel my bills, especially in winter with heat being used very sparingly, are absurdly too high.</p> <p>We are still not out of the woods with the pandemic, gas prices are out of this world and a recession is looming. Now is not the time to be hiking rates.</p> <p>As we've all seen at this point, most of these rate hikes mostly serve to benefit CEO and their ridiculous salaries.</p> <p>This 22 year PSE customer is vehemently against the proposed rate hikes and hope you will refrain from taking such action.</p> <p>Sent from my iPhone</p>
	Sharon & Rich Reich	E-mail	<p>Prices here for there services are already too high!!!!</p> <p>Sharon &amp; Rick Reich</p>
	Jacquelyne Kinsey	E-mail	<p>I note PSE's request for a nearly 20% rate increase. While it's understandable given PSE's energy mix which is heavily reliant on fossil fuels, all of which have increased in price, the lack of investment in renewables is not understandable. I understand that energy costs will have to go up in line with inflation, but relying on fossil fuels for electrical generation not only requires me to use more electricity through the climate change it causes, but also subjects both ratepayers and PSE shareholders to unstable, unpredictable costs. If PSE is granted a rate increase, they should be required to diversify away from fossil fuels and towards renewable sources of energy so costs can be more stable and predictable. I also note that in our area, PSE has reduced its frequency of tree trimming which reduces service reliability and likely increases overall costs. We have all seen the results when California utilities allowed deferred maintenance to pile up - horrific wildfires, service</p>

			<p>interruptions and utility bankruptcies. I realize that the labor market is currently challenging, but PSE should also be required to invest in adequate maintenance if it is granted a rate increase. All too often, utility rate increases go directly into the pockets of utility shareholders. In this case, if a rate increase is granted, the money should go towards investments in network diversification and maintenance. Part of the bargain investors make in buying the stock of a monopoly utility is to expect a relatively small, fair and stable rate of return, versus outside stock price growth driven by juiced quarterly earnings. In the Pacific Northwest, we need to think and plan more than one corporate quarterly earnings cycle at a time. The UTC must require utilities to do so.</p>
	<p>Frank Damiano</p>	<p>E-mail</p>	<p>I'd like to say that this is price gouging. I don't feel like I am being treated like a customer I feel like I am being treated like profit margin. I understand you have to stay in business to provide the service but to expect me to provide additional interest feels like I am being charged interest on the principal and interest on the interest.</p>
	<p>Abby Haubrich</p>	<p>E-mail</p>	<p>After receiving the notice of the requested rate increase, and the listed reasoning, I have the following questions/comments.</p> <p>Reason # 1 "To Continue to provide safe &amp; reliable energy service". - The number one reason for power outages is related to weather. A combination of wind &amp; rain or snow &amp; ice drastically increases the possibility of tree's falling on power lines. To make repairs during these weather conditions is not safe. Its also incredibly costly to pay for emergency repairs where labor rates increase into overtime rates. Its inefficient to address the most common cause of outages where the conditions are unknown.</p> <p>* Question I have is, what percent of PSE resources is dedicated to preventative care to reduce the most common cause of power outages? If more resources are dedicated to preventative maintenance, PSE should expect to have safer &amp; more reliable energy services.</p> <p>Reason # 2 "Decarbonize its energy system to comply with state mandates &amp; meet the expectation of customers &amp; stakeholders". - PSE's website states they have a goal to be "beyond net zero carbon" by 2045. If this goal was created by PSE to comply with state mandates &amp; stakeholder. Then PSE should look to the state &amp; stakeholders for means and methods on how to achieve it. PSE should place appealing incentives in place so that customers who also want to contribute to this goal can do so by making changes within their homes/business or to help finance this goal.</p> <p>* Washington state energy code is one of the most stringent in the US. PSE customers are required to pay far greater new construction &amp; remodels costs to achieve code requirement, then they would in any other state (with the exception of California). Equipment manufactures are also required to build water heaters, HVAC equipment and household appliances that meet energy code requirements which is also paid for by the homeowner. Question I have is, why does PSE expect their customers to repeatedly pay to meet the same code requirements?</p>

			<p>Reason # 3. "To recover more than four years of capital and operating investments made on behalf of customers and not currently included in PSE rates." - Investing is not a guarantee, which is why there is insurance for investing. If customers are required to pay to "recover", then PSE will need to issue a statement to each customer, on when &amp; how each customer benefited financially from previous years of investments.</p> <p>Reason # 4 "To recover increased operating costs." - No working citizen of Washington state could have guessed the rate of inflation, prior to requesting a raise from their employer. Why is PSE entitled to "recover" operating expenses when everyone else is required to reduce expenses to get by. PSE will need to reevaluate how they can reduce their own operating expenses.</p> <p>Reason # 5. "To set rates for a multiyear rate plan that reflect upcoming capital investments and operating costs over the three year period." Again, if PSE wants its customers to finance its investments, they need to provide information on how this financially benefits their customers. Otherwise, PSE stakeholders need to be willing to solely fund their investment out of their own profit margin.</p> <p>Reason # 6 "To increase PSE's authorized return on equity from 9.4% to 9.9%." - In the current condition of the US economy, this is a distasteful request to further burden their customers, when PSE is still turning profits.</p> <p>Thanks AH.</p>
	Jon Sutter	E-mail	<p>To whom it may concern.</p> <p>I am OPPOSED to any rate increase from PSE.</p> <p>PSE has wasted millions for decades now on lawsuits and pointless studies instead of doing what was right and updating our dams. They have far exceeded the repair costs with legal fees. Until they can learn to respect consumers' hard earned money and make responsible choices they do not deserve the right to any more of our earnings.</p> <p>On top of their lack of financial management they are asking for an excessive amount. 15.80% when people are already getting hit with 9%+ inflation is inhumane. and will cause undue hardship on many Washingtonians.</p> <p>If PSE needs to increase cash flow, they should look at reducing their executive salaries.</p>

	Amy Motter	E-mail	<p>Hello,</p> <p>I am not pleased with the rate increase.</p> <p>Thank you, Amy Motter</p>
	Phil Rochelle	E-mail	<p>Utility Folks!</p> <p>The proposed increases are UNACCEPTABLE! We are already struggling in this economy and you are proposing to MAKE IT ALL WORSE! It's bad enough already!!</p> <p>16% is an IMMENSE INCREASE and is completely unreasonable! It is as if you are deliberately trying to force us to switch to candles.</p> <p>Small increases every few years are understandable. But this is ridiculous!</p> <p>Please do not allow this to happen to us,</p> <p>Phil Rochelle Port Orchard, WA</p>
	Sandie Maki	E-mail	<p>I cannot believe you would actually seriously consider allowing yet another increase in utility rates. Puget Sound Energy has already increased rates way beyond what is necessary.</p> <p>The cost of living is outrageously high and those of use on Social Security are scrambling to keep costs down as much as we can without starving.</p> <p>Get real. Puget Sound Energy is not just owned by non-American country (the last time I was able to track ownership), we are paying for stockholders to get richer.</p> <p>I am against any further rate increases.</p> <p>Sandra Maki Olympia, WA</p>
	Meg Maroney	E-mail	<p>Hello, my name is Meg Maroney and I am a resident of Redmond, WA. I am writing to express my opposition to PSE's proposed increase in utility rates, beginning in 2023. At a time when we are all struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for utilities. Adding an average of about \$16 per month for electricity and \$12 per month</p>

			<p>for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.</p> <p>Meg Maroney Redmond, WA</p>
	Elizabeth Standal	E-mail	<p>I’m a Kirkland resident writing to express my opposition to PSE’s proposed increase in utility rates. Consumers are currently struggling with inflation and higher prices for essential goods and services, and it is unfair to impose excessive increases for a life-and-death necessity such as utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people.</p> <p>I urge the UTC to prioritize the welfare of Washington residents, not PSE’s disproportionate profit margin. Do not approve this rate increase.</p> <p>Thank you. Elizabeth Standal</p>
	Ben Pecora	E-mail	<p>You guys are making a rate change again? This is ludicrous. Give us a break and give us incentive to SAVE and CONSERVE!!!</p> <p>Ben Pecora</p>
	Rachel Doyle	E-mail	<p>Hello, my name is Rachel Doyle and I am a resident at 362 Bellevue way ne, apt n229, Bellevue,wa. I am writing to express my opposition to PSE’s proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>-- Warm regards, Rachel Doyle</p> <p>Pronouns: she/her/hers</p>

	Christy Bear	E-mail	<p>Hello, my name is Christy Bear and I am a resident of Bellevue. I am writing to express my opposition to PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people. I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you. Christy Bear</p>
	Renee Coe	E-mail	<p>Dear UTC Commissioners,</p> <p>The notice of requested changes to PSE's electric rates that was received with my last bill was shocking beyond words. For electric rates to increase by nearly 20% over the next 3 years is untenable for many customers who are already struggling with high inflation nationwide.</p> <p>Instead of PSE finding alternative sources of renewable energy to reduce rates, we, the customers are again being asked to accept the brunt of higher energy bills. My daughter who is 34 and living in a small 400 square foot studio apartment in Bellingham and paying nearly \$1,000 in rent said "I have another 50 years of this". When will we not be able to live because we can't afford to?</p> <p>As you weigh this important rate case decision presented by PSE, also ask yourself what your grandchildren will be able to afford in 5 years, 10 years, 20 years from now and why a 20% increase should be absorbed by the citizens of our state when so many hard working families are struggling with everyone wanting more from their paycheck.</p> <p>Thank you for your time. Renee Coe Point Roberts, WA</p>
	Deborah Gandolfo	E-mail	<p>Dear Utility Commission</p> <p>I am a resident of Kirkland. I am writing to express my opposition to PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people. PSE is a private company and already makes large profits.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you. Deborah Gandolfo</p>

	Kelli Keeley	E-mail	<p>As a retired employee of PSE’s contractor. I have first hand knowledge of the waste that goes on between both companies that eventually we as consumers pay for in our monthly bills. As of right now MOST buildings PSE has are not occupied by even 10 percent of their employees, since covid Employees were given the option to permanently work from home, and still are. But...PSE is still paying for the properties. Also as a former contractor employee, I do know that the office employees of the contractor thru all of covid were still occupying their buildings and being paid with NO employees in the field producing any work. Field workers were home. Therefore there was no processing of paperwork needed. But employees were being paid to be there to do nothing. All of these costs are put on the consumer at some point. Just another example of Big Business getting away with things.</p> <p>Thank you for listening.</p>
	Susan Seykota-Smith	E-mail	<p>To Whom It May Concern:</p> <p>We strongly oppose further rate increases by Puget Sound Energy. The company has regularly raised its rates over the past years, as have other utilities, including WAVE (Astound), Waste Management, and Kitsap Public Works (Sewer). In addition, prices for groceries and gasoline have soared, and property taxes hiked substantially. Meanwhile, my husband works as a helper clerk at Albertsons, and I have a fixed income on Social Security. We do not receive increases in our income to meet the increases in fees and rates. We ask that you do not approve the requested increases proposed by Puget Sound Energy.</p> <p>Thank you,        Chris and Susan Seykota-Smith</p>
	Judy Redmond	E-mail	<p>Hello, my name is Judy Redmond, and I am a resident of Woodinville. I am calling/writing to express my opposition to PSE’s proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people. I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you,        Judy Redmond</p>
	Arriba Stature	E-mail	<p>Hello,</p> <p>I am writing to express my opposition to PSE’s proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is bad</p>

			<p>timing to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people.</p> <p>This won’t just raise rates for PSE customers but for all energy consumers as well over time.</p> <p>Meanwhile what is PSE doing about finding more green energy or involving itself in home solar programs that would bring down energy costs?</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you, Arriba Stature Snoqualmie Washington 98065</p>
	Patricia Grohl	E-mail	<p>Hello, my name is Patricia Grohl and I am a resident of Redmond. I am writing to express my opposition to PSE’s proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people. I am retired and on a fixed income. This increase would negatively impact my budget.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you. Patricia Grohl</p>
	Maryanne Johanson	E-mail	<p>Hello,</p> <p>I am a resident of Sammamish, WA. I am writing to express my opposition to PSE’s proposed increase in utility rates, beginning in 2023. Many residents are senior citizens like me. We are on fixed income and already have to keep our heat very low, keep lights off, and be cognizant of how much hot water we use, just to pay the PSE bill each month.</p> <p>Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for seniors and many other people. Please do not allow this increase.</p> <p>Maryanne Johanson</p>
	Robert C. Willison	E-mail	<p>PSE's requested rate increase in the "teens" seems a bit steep! Please consider that it would be desirable for increases not to exceed the COLA received by Social Security recipients.</p>

			Thank you for your consideration of this factor.
	Oolaa Kaplan	E-mail	<p>To the UTC Commission</p> <p>I'm writing to express my opposition to PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair &amp; mean to impose larger than needed increases for their utilities.</p> <p>Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.</p> <p>Oolaa kaplan Bellevue 98008</p>
	Thomas R. Vest	E-mail	<p>I write to express my concern over the effect of lower and middle income Washington residents on the proposed multi-year large rate increases. We consumers living in the real world have predicted that the wonderful "benefits" of the "green energy revolution" were going to cause massive hardships to the living standards of everyday people. The ideas of driven mostly by the elitists in the upper income brackets.</p> <p>Therefore, I propose that the UTC require further rate classifications for residential customers to partially subsidize these large increases for those living below the standards of these proponents. Two new tiers should be required; the first giving a full dollar credit for all power usage at the level of about 20% of normal historical average residential energy use; the second, a freeze on rates at current levels for the next 30% of average usage; the final tier should be a slight increase in the proposed rate to compensate for the anticipated revenue loss as just described. Those state residents whose have the luxury to be able to afford to purchase and charge up their \$60,000 Teslas should be willing to put their money where their mouth is. Secondly, I would object to the proposed 0.5% increase in PSE profit level at a time of economic hardship for state residents.</p>
	Dale O'Key	E-mail	<p>Dear Sirs:</p> <p>RE: UE-220066 and UG-220067</p> <p>Once again Puget Energy is asking for a rate hike, which they were just granted and enacted in 2021.</p> <p>Further their "estimates" of change are never even close to the actual impact customers experience. While their proposal indicates three tiers over three years, the amounts are staggering. Particularly to those of us who are retired and on fixed incomes.</p>

			<p>Puget Energy is using this monstrous rate hike to fund their "green energy" target without any regard to practicality, current grid structure and the affect it will have on customers.</p> <p>I am not opposed to working towards more green energy throughout this state; however, I am opposed to their political only approach, which has set an arbitrary target deadline. 16.34% (E) and 12.14% (G) in year one--2023--demonstrates GREED above all, which is then to be followed by two more years of rate hikes of 2.68%/1.23% (E) and 2.19%/1.74% (G) respectively.</p> <p>There are a great many Washingtonians, as you like to say, besides those on fixed incomes who simply will no longer be able to afford electricity...and the social consequences will be huge. We all know Washington has failed miserably in addressing the social consequences of hasty and poorly thought actions.</p> <p>Dale A. O'Key Puget Energy Customer 220014962827 Olympia, WA 98501</p>
E Gary Pina	E-mail		<p>I adamantly OPPOSE the requested rate increases! Seriously, the price of electricity from established equipment doesn't just increase 20% overnight! With the exception of a few windmills the balance of equipment has been paid for many times over. This is opportunistic price gouging and not only should it be rejected but PSE should be penalized for attempting ream their customers who don't have the ability to obtain power from other providers! JUST SAY NO!!!</p> <p>E Gary Pina Acct #200022729764</p>
Alina Zollfrank	E-mail		<p>Hi,</p> <p>Our family lives in Bellingham, WA. PSE just announced a rate increase of by 13.6% - 15.8% beginning Jan. 1, 2023. I can honestly say that while we've been committing to Warm Fund donations and have a small solar array on our 2-bedroom home, last winter's bills were already a stretch for our family. We're 2 adults, 2 teens and have one income only - my husband, who has been battling cancer this year. We kept our house at 65 degrees in winter (brrrr) and layered up but will not be able to pay our bills next time around if these drastic rate increases are put into place.</p> <p>PSE needs to remember that many local families are still struggling with Covid set-backs and no one's income has gone up by 15% this year. In our region especially, the discrepancy between income and cost of living is enormous. This increase will cause more poverty and - especially in our neighborhood with lots of</p>

			<p>older, sub-maintained homes relying on electrical heat - health issues, especially for the very young, elderly, and people with pre-existing conditions.</p> <p>Please work with PSE to make this sustainable and to prevent desperate neighbors from burning inappropriate items in fireplaces and backyard pits (this happened in our neighborhood last winter and the air quality was profoundly affected).</p> <p>Thanks, Alina Zollfrank</p>
	Jeff Bouma	E-mail	<p>I am against the amount of the proposed 14% - 16% rate hike in Jan 2023.</p> <p>This is MUCH higher than current inflation rates. This is also not in line with the push by Washington state to move to electric power vs fossil fuels.</p> <p>Sincerely, Jeff Bouma</p>
	Elizabeth Harrisen	E-mail	<p>How are those of us on fixed income supposed to afford your proposed rate hike in January? I am so careful in my home not to waste energy because my budget is so tight. If you do this, is the city going to be able to help people like me keep warm this winter? (Weatherization waiting lists are long) Is there a reasonably priced program for help with installing solar? Heat pumps? I've be</p> <p>Elizabeth harrisen in Bellingham since 1986. There have been years that it has been a struggle; others not so much. Because of utility rate hikes (I understand that water is going to increase substantially as well), it looks like 2023 is going to be the one that finally drives me out. Seriously, please work with other city, county, state administrations to help seniors if you skyrocket our utilities. It's much less expensive for the body politic to have seniors stay in our homes than for the state to house us elsewhere.</p>
	Sandra Marsh	E-mail	<p>I am so glad we have the UTC to protect gas and electric customers from the proposed gouging by PSE.</p> <p>The proposed increases are really out of line. The reasons PSE gives are of little legitimacy. -Why would a rate increase provide safe and reliable energy service? Those two things have not changed as safety and reliable have always been foremost in any business. PSE is trying to create fear using buzz words. Will the employees not have a safe and reliable workplace if PSE does not get the increases? If that's the case then the UTC would need to put providing electricity and natural gas up for bid for a company that can</p>

provide safe and reliable services with out asking for increases each year. PSE needs to redo their budget and live within it as John Q Public has to. PSE lives in a dream world?

-PSE is not an American company so the money does not help our economy, rather it would further "enhance" our failing economy. CEO Mary Kipp's salary is \$5,300,000. Former CEO Kimberly Harris made \$5,029,000. And the list goes on, no one in the upper eschelon made less that \$1,000,000. This was in 2020, I can't find what they are making in 2022. More research needs to be done. Maybe PSE upper eschelon employees need to take a cut in pay rather than increase rates?

-The decarbonization of its energy systems to comply with state mandates and meet the expectations of customers and stakeholders? PSE has long known this was coming and should have set money aside for these mandates. And expectations of customers? I don't believe customers have expectations other than providing low cost energy and safety of its employees as it did before PSE went rogue. It doesn't make sense. Stakeholders? Well, if a person invests in stocks, bonds or utilities, surely stakeholders know investments are always a risk. If no one wants risk, then open a savings account.

-To recover four years of capital and operating investments made on behalf of customers not currently included in PSE rates. Was that PSE's choice to make these "investments"? If that's the case, then if it is accurate, bill those customers. If not, again, that sort of thing should have been built in their budget and not gouge customers.

-To recover increased operating costs. PSE has had many, many rate increases, where is the money they have received through these increases? Don't viable companies have operating cost increases built into their budgets? Seems that would be the logical and practical thing to do.

-To set rates for a multiyear rate plan that reflect upcoming capital investments and operation costs over the three year period. What three year period? Again, aren't these costs included in long range budget plans?

-To increase PSE's authorized return on equity from 9.4% to 9.9%. I wish I had that on my equity investments.

PSE is not an American company anymore. Any increases as does the income generated with or without increases, go to the owners in Canada. Shareholders, stockholders, stakeholders all know all investments go up and down. So, why would we be asked to pay for that? Again, if a person wants a guaranteed rate of return, open a savings account or buy a CD.

PSE and other wind sourced utilities continue to receive tax credits and subsidies from the federal government. As of 2018 it amounted to \$100billion.

			<p>I realize PSE and most utilities don't usually get the exact amount of raise they ask for. I suppose that is to make the customers "feel better". But, it doesn't. This asked for increase is so over the top I cannot believe I read it. Does the UTC actually look at their expenses and liability sheets? There is a "rumor" that these big conglomerates have 3 sets of books: One for the customers, one for the IRS, and the "actual" book. Which one is presented to the UTC?</p> <p>One other thing: Please quit calling these INCREASES changes. Say it like it is, an increase.</p> <p>I do put my faith in this commission that it will turn this travesty down flat. America is in a big hurt right now economically. Now is not the time for PSE to gouge their customers. I do feel you will do the right thing you all were elected to do: Protect the people who elected you.</p> <p>Very sincerely, Sandra Marsh</p>
	Liz Johnson	E-mail	<p>I was absolutely shocked and mortified upon reading the insert included in my last PSE bill regarding PSE's request to raise electric service rates 15.8% and natural gas service rates 12.15% for residential customers in 2023. With the rising cost of groceries, gas and other necessities right now so many families are already operating on very thin margins...and now this? A rate hike this steep will literally require some families to choose between food or heat. Please use your conscience and DO NOT grant PSE's request for a rate increase this drastic.</p> <p>Thank you, Liz Johnson</p>
	Bruce Helm	E-mail	<p>My wife and I, like so many others, are on a fixed income and feeling the pinch of inflation on most everything. To tell us that you are about to raise our electric bill by 20% over 3 years is unconscionable. How can you continue to feed this companies coffers with a guaranteed 10% return on equity? Someone, somewhere cut a sweet deal at the public's expense. Please put a stop to this now.</p> <p>Thank you,  Bruce Helm</p>

	CR Henry	E-mail	<p>To the UTC board, I very strongly oppose the 20% / 16% rate increases for electric/ gas services as requested by PSE over the next 3 years due to the current economic condition of the Country (RECESSION heading for DEPRESSION). When the cost of power and fuel increase the price of everything follows suit and most of US are having a hard time with the 19.1% true inflation rate. A rate increase to cover fuel cost is warranted but no other increases for the current conditions. Thank You</p>
	Jack Giuliano	E-mail	<p>Commissioners,</p> <p>Regarding the proposed 2023 rate increase of 13.59 %, I would like the commissioners to reject this exorbitant amount. No customer should be subsidizing the 'green' switchover of power generation from proven, lower cost and acceptable pollution levels methods. The hidden costs of battery storage, wind generation maintenance, and other futuristic methods should be borne by for-profit companies, not utilities. To be noted is that the most vocal proponents, in our state, of 'green' energy have very large incomes and are not on Social Security fixed income.</p> <p>-- Jack Giuliano PSE customer</p>
	Bonnie Gretz	E-mail	<p>The proposed overall for residential customers rate hike of 15.80% is much too high, especially for one year! I understand the need to make adjustments, but this is way too high and will severely impact many customers of limited incomes. I urge the commission to reject this massive increase. Thank you, Bonnie Gretz</p>
	Brian & Sarah Six	E-mail	<p>A 15.80% increase for residential customers in 2023 is a huge jump. Many customers are already stressed with increased costs just when buying gas and groceries. This rate increase would be a great burden on many customers.</p> <p>Please kindly reconsider, Sarah Six</p>

	Jackie W.	E-mail	<p>This new purposed rate increase is absolutely ridiculous. People are already struggling to live with the cost of gas, groceries, and all other necessities. Property taxes and rent are through the roof. How do you expect people to afford these rates?! I'm completely against this in every way.</p>
	Tim Verschuyt	E-mail	<p>RE: Docket UE 220066</p> <p>Dear UTC:</p> <p>Please do not allow all of the proposed utility rate increases by Puget Sound electric.</p> <p>I understand that some commodities, such as aluminum and copper, are increasing and that cost needs to be passed on to the PSE consumer. But some of that increase in commodities is due to the hopefully temporary increase in fuel cost. As fuel cost drop a bit, hopefully these commodity prices will also decrease. In addition all of the existing PSE customers are already served by the existing infrastructure. Could PSE consider charging only new users that require upgrading the capacity of the infrastructure with higher rates.</p> <p>Also I've noted that the basic charge for electrical service has been increased by 10.7%. With many of the meters today automatically posting consumption without the expense of meter to meter inspection, is this 10.7% basic charge, no matter what consumption takes place, justified?</p> <p>At 77 years old, I'm doing all I can presently to be environmentally responsible with my utility usage. My income is from the stock market which recently fell by 25%. Meanwhile inflation increases. I have less funds to buy more expensive products. I don't know how much longer I will be physically able to heat my home with a wood stove.</p> <p>Please do closely analyze PSE's request for such a large utility increase. Do they really need to increase their return on equity from 9.4% to 9.9% as detailed in their recent Notice of Requested Changes? I certainly hope that you will determine if PSE's requested rate change is a result of justified need from an efficient operation, or is it simply jumping on the inflation bandwagon in order to profit more?</p> <p>Thank you for considering my input.</p> <p>Sincerely,</p> <p>Tim Verschuyt</p>

	Brooke Boswell	E-mail	<p>Hello, we are loyal PSE customers who pay our bills on time. In this current economy, this rate change is too much! Why is PSE raising their return on equity? Passing along this to the consumer during this difficult time is not serving the community but is greedy. I do not approve this rate increase.</p> <p>Brooke Boswell</p>
	Mark Jarmuth	E-mail	<p>Raising rates in the wake of the worst economic crisis since the Great Depression is unconscionable. PSE and the Washington Democrats who prompted the rate hike have no conscience and are sworn enemies of Washington residents. Mark Jarmuth, jarmuthmark@gmail.com, 425-556-0916. I will support any movement, regardless of the political orientation of those who promote it, to privatize the delivery of energy services to the hardworking people of Washington.</p>
	Gerard & Eleanor Stromberg	Mail	<p>***See attached PDF***</p>
	Jeanne Pocock	Mail	<p>***See Attached PDF***</p>
	G. Robert Rohrbach	Mail	<p>***See attached PDF***</p>
	Betty McNiel	E-mail	<p>I oppose PSE's proposed increase in utility rates, beginning in 2023. PSE has not justified the extent of the rate increases they request. The Attorney General Office's experts determined that PSE included higher profit margins in their proposals than were justified. PSE is asking to increase its profit to nearly 10 percent, which is too high. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you,        Betty McNiel        Bellevue WA</p>
	Joan Gemmell	E-mail	<p>NO! NO! NO!</p> <p>ABSOLUTELY NO WAY. WE ARE IN THE MIDST OF A RECESSION (WHETHER SOME POLITICIANS WILL ADMIT IT OR NOT, WE ARE) FOR SO MANY OF OUR SENIORS THIS WILL BE A CASE OF" NO EAT IF YOU WANT HEAT."</p>

			<p>TOTALLY SCANDALOUS AT THIS TIME CONSIDERING THEY DID NOT MEET THREE OF THEIR GOALS IN OPERATIONS SERVICES. YEP, HEARD ALL THESE SORT OF EXCUSES BEFORE BLAH, BLAH, BLAH. EXCUSES, EXCUSES ALWAYS EXCUSES. WHEN I WAS WORKING IF THIS HAD BEEN MY END OF YEAR REVIEW THERE WOULD HAVE BEEN NO BONUS AND DEFINITELY NO RAISE, SO LET THIS BE THE SAME FOR PSE.</p> <p>LET'S SEE, DID ALL THOSE ON SOCIAL SECURITY GET THE SAME INCREASE IN PAYMENTS THAT PSE ARE LOOKING FOR, HECK NO. DID THE MANAGEMENT AT PSE TAKE A SALARY CUT BECAUSE THEY DID NOT MEET THEIR GOALS, AGAIN HECK NO. THEIR REVIEWS SHOULD READ PERFORMING BELOW EXPECTATIONS.</p> <p>IF THIS INCREASE IS APPROVED IT WILL CAUSE UNDUE HARDSHIP TO SO MANY PEOPLE, NOT TO MENTION THE TIMING COULD NOT BE ANY WORSE. THIS TRULY IS AN ABSOLUTE OUTRAGE AND EXCUSE THE PUN "AN ABUSE OF POWER"</p> <p>PLEASE FOR ONE MOMENT, TO THOSE OF YOU CONSIDERING THIS REQUEST FOR ONCE PLEASE PUT PEOPLE BEFORE "BIG BUCKS" AND DO THE RIGHT THING FOR THE COLLECTIVE GOOD.</p> <p>Sincerely</p> <p>Joan Gemmell</p>
	Samuel Rapoport	E-mail	<p>Hello, my name is Sam Rapoport and I am a resident of Kirkland I am calling/writing to express my opposition to PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people. I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.</p> <p>Samuel Rapoport</p>
	Lorie Lucky	E-mail	<p>Dear UTC members:</p> <p>my name is Lorie Lucky and I am a resident of Des Moines, WA. I am calling/writing to express my opposition to PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people.</p>

			<p>Our disabled, BIPOC and other vulnerable populations will be hit particularly hard. PSE is a private company making all its profits on energy supply and distribution, and reinvestment of profits on Wall Street - people in Washington State could be their own decentralized distributors if they had access to solar panels on all residences; PSE opposes individual citizen production of energy.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase. Without a state income tax, too many Washington State residents are struggling to stay sheltered as it is.</p> <p>Thank you for your attention to my letter. We appreciate your work for Washington State citizens.</p> <p>Lorie Lucky PSE Customer, Senior Citizen</p>
	Sara Bhakti	E-mail	<p>To Whom It May Concern:</p> <p>I oppose PSE's rate increase application. I don't think it is justified to increase their profit margin by so much. Rate increases should be tied to PSE's actual expenses plus a reasonable profit.</p> <p>I reside in Kirkland WA.</p> <p>Thank you for the opportunity to comment.</p> <p>Sara Bhakti</p>
	Rosemary Moore	E-mail	<p>Members of the Commission,</p> <p>As a Washington resident and PSE customer, I write to express my opposition to PSE's proposed increase in gas and electric rates, beginning in 2023. It is unreasonable to impose such large increases for these utilities, particularly at a time when consumers are struggling with inflation and higher prices for essential goods and services,. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people.</p> <p>In addition, PSE is not doing nearly enough to move our electric supply to 100% renewable sources. Only a significant shift might justify such an increase.</p> <p>I urge the UTC to consider the immediate and longterm welfare of Washington residents as well as PSE's heel dragging on changing to 100% renewable sources and deny this rate increase.</p> <p>Thank you,</p> <p>Rosemary Moore</p>

	Patricia Paisley	E-mail	<p>I am a resident of Stanwood, WA. I am writing to express my opposition to PSE’s proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.</p>
	Diana Antrim	E-mail	<p>Dear (pronoun of your choice, since that seems to be vitally important to some people),</p> <p>Concerning the requested Electric and Natural Gas Service rate increases proposed for 2023 and beyond, I implore you to reconsider and not approve the proposal as stated in recent communications to customers. The average of these increases for 2023 is a whopping 13.26%!!!!</p> <p>Inflation is over 8% currently and was 9.1% in June of 2022.</p> <p>Has the customer base's income increased 13.26% in the past year? Has it increased even 3.26%?</p> <p>As part of the aging middle class, these proposed rate hikes are WAY over-reaching people's ability to pay. Smaller, more gradual increases can usually be managed in a budget for NOT huge leaps!</p> <p>Please, please do reconsider this rate adjustment as we just cannot tolerate such abuse.</p> <p>Sincerely, Mrs. Diana Antrim PSE Customer Hansville, Washington</p>
	Cathy Harber	E-mail	<p>Hello, my name is Cathy Harber and I am a resident of Lake Forest Park. I am calling/writing to express my opposition to PSE’s proposed increase in utility rates, beginning in 2023. We are all struggling with inflation and higher prices for essential goods and services, and it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people, including my family. I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.</p> <p>Cathy Harber</p>
	Roger T. Martin	E-mail	<p>Please accept this correction to a typo I made in the earlier comment.</p> <p>...sat through the hearings on the first lawsuit against the LNG facility, and I was very disturbed by the way</p>

the judge sustained almost every objection to the plaintiffs and overruled almost every objection to PSE and PSCAA.

Thank you,

Roger T. Martin

Dear UTC,

A few years ago, I was (and remain) proud to have participated in the movement to stop the development of the proposed methanol facility on the Tacoma Tideflats. The next thing we knew, PSE wanted to build a liquefied natural-gas refinery, storage, and delivery facility there. Despite breaking all the rules about building before getting permits, the clear violation of indigenous tribes' treaties, no advisory input from any real scientists, and widespread public disapproval, PSE, with the help of the supposed regulatory entity, the Puget Sound Clean Air Authority, spent multiple millions of dollars on media ads, and now that dangerous facility is running, albeit under an open lawsuit from the tribes.

I sat through the hearings on the first lawsuit against the LNG facility, and I was very disturbed by the way the judge sustained almost every objection to the plaintiffs and overruled almost every objection from PSE and PSCAA.

One of the big selling points for the facility was that it would provide storage for natural gas during periods when demand was high, thus providing likely lower customer rates because of the additional stability in supply. So, just like most intelligent and informed people probably predicted, PSE wants to increase rates. I am confident the AG's office has it right, and picking through the financials shows that the foreign-owned PSE doesn't deserve rewarding them with an increase in their profits destined for holding-company executives and investors.

Where is the justice and honesty in this whole PSE-PSCAA enterprise? Unlike PSCAA and the judge in the lawsuit, I hope these greedy and dishonest people at PSE don't get an undeserved free pass this time.

Thank you,

Roger T. Martin

	R. Jim Parkes	E-mail	<p>Hello... First, I hope you do not roll over. Many of us rate payers and probably most, cannot afford those kind of rate increases. Our incomes do not match, especially among the retired community. It seems to me that PSE's failure to capture previous capital costs and operating expenses within its current rate structure should not be borne by me and my fellow PSE customers. Like any well-run company surely they can achieve efficiencies, especially with electricity. The electric service request is actually higher than for natural gas, a traded and volatile worldwide energy commodity.</p> <p>So...Audit their justification. Make them prove the numbers and make them report on progress to justify the final agreement.</p> <p>Thank you,</p> <p>R Jim Parkes 5220 90th Ave SE Mercer Island, WA 98040</p>
	Chris	E-mail	<p>Subject Dockets UE-220066/220067</p> <p>I want to be clear that rate increases NEED to be minimal and NECESSARY.</p> <p>In an attempt to be equitable to those who truly believe in this so called "green power" agenda I propose that these rate increases should primarily be put upon the shoulders of those that truly wish to have these more expensive power options.</p> <p>Those pushing wind and solar in the NW should have the option to check a box on their monthly bills to opt in to these new power generation options, and by doing so could show their true support by putting their money where there mouths are.</p> <p>I want, reliable, and inexpensive power. Period. Those that want to convert to these vastly more expensive technologies.....NEED to pay for them.</p> <p>Chris Tacoma</p>
	Kathy Wilson	E-mail	<p>I once again have gotten the news that rates are going up Every time we are "allowed" input but to no use ever! The reason I bother this time to write is the reason these rates are going up is the pressure to meet the backwards plans to "Green" the planet without any new affordable less damaging realistic plans in place</p>

			must you give in to this? Gas is green a good use of resources and you know it STAND UP now for us. TRY.
	Janet Kusakabe	E-mail	<p>Hello, my name is Janet Kusakabe and I am a resident of Bellevue, WA. I am writing to express my opposition to PSE’s proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”, and will pose a hardship for many people, especially retired residents like me.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.          Janet Kusakabe</p>
	Don Thompson	E-mail	<p>Hi, my name is Don Thompson and I’m a resident of Steilacoom. I am against the proposed rate increases to Puget Sound Energy’s (PSE’s) rates beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. While I understand that PSE may need to increase rates to keep up with inflation, the proposed increase would be more than that to increase their profit margin, which is not “fair, just and reasonable”, and will pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you,          Don Thompson          Steilacoom, WA</p>
	Jeanne Herold	E-mail	<p>Attn: UTC</p> <p>I am responding to the article in the Auburn reporter written by Steve Hunter regarding Bob Ferguson, State Attorney General's opposition to PSE's rate increase request.</p> <p>I am an 82 year old widowed woman and I am still living in my own home. I have a 63 year old disabled son that lives with me. I pay all my own utilities (no help from any discount programs) and I feel the increase that Puget Sound Energy is proposing is grossly unfair to all of Washington state residents and especially to seniors. This is just my letter to you to add to your stack of oppositions.</p> <p>I do wonder why though that all these huge companies feel they have to make so much profit. It's greed and all they care about is money. Comcast is another offender. The amount they charge is so overwhelming and in most cases TV is the only entertainment that some folks have. Comcast outsources all their telephone</p>

			<p>communication people to overseas and South America. So if a person needs to contact Comcast regarding their bill or a technical problem we're forced to speak to a foreigner. Most doctors do the same thing. America just isn't what it used to be.</p> <p>If you can help in some way it would be appreciated. Thank you.</p> <p>Sincerely, Jeanne Herold, citizen Auburn, Washington</p>
Jeanne Petranovich	E-mail		<p>Hello,</p> <p>I received the notice of requested changes to PSE rate and public hearings.</p> <p>I understand the need to raise the rates, but your proposal for 2023 for both electric 13.59% and natural gas 12.98% services are extremely high and will put a financial hardship on me and my family. My wages have not increased with inflation and I fear financial challenges in the future with rising costs of everything.</p> <p>Please reconsider lowering the 2023 rates to something more reasonable like 5% and leave the rates for 2024 and 2025 as proposed.</p> <p>Thank you, Ms Jean</p>
Dr. Mark D. Johnson	E-mail		<p>I am curious how much PSE pays for fossil fuel sourced electricity compared to wind and solar. A comparison with hydro power would be of interest, too. How do I find out how much PSE pays for electricity from different sources? Do you have that data? Note: it was the representative at PSE who directed me to you since she had no way to find out herself.</p> <p>Dr. Mark D. Johnson</p>
Louise Pathe	E-mail		<p>Hello,</p> <p>I am writing to express my opposition to PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for</p>

			<p>many people. I urge the UTC to consider the welfare of Washington residents and not approve this rate increase. Thank you. Louise Pathe Kirkland, WA</p>
John P. Daly	E-mail		<p>Greetings :</p> <p>I appreciate that energy costs can be volatile for utilities. At the same time it appears it's always a 1 way ratchet for the consumer - as the rate doesn't appear to ever go down - even in a fluctuating energy price market. For many of us fixed-income state retirees (No COLA for PERS 1) that recently saw a \$500/year property tax increase, \$5/gal gas prices, 10% general inflation, and now a proposed 15% increase in our energy bills, this is not sustainable. It might work okay for a CEO with a million dollar compensation package - but not so much for us moderate income residential customers.</p> <p>If this is in fact to cover increased energy costs - perhaps a surcharge that goes BOTH up &amp; down with energy prices might be appropriate. But these double-digit rate increases are simply inappropriate &amp; inequitable to consumers.</p> <p>My family spent thousands of dollars on a highly efficient inverter heat pump to reduce our load on the grid and reduce our bills - only to see that investment in efficiency negated by PSE rate increases every single year. The PSE company will need to shoulder its part of the "shared sacrifice" in these times of erratic economics.</p> <p>Thank you, John Daly Olympia WA</p>
Lisa Ornstein	E-mail		<p>Hello, my name is Lisa Ornstein and I am a resident of Olympia. I oppose PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase. Thank you. Lisa Ornstein</p> <p>Lisa Ornstein</p>

	Dwight Rousu	E-mail	<p>The one year increases are significant.</p> <p>Changes I would like to see:</p> <p>A. Less severe increases in electricity rates; larger increases in gas rates. Since gas production and use is directly a huge source of atmospheric methane and carbon, it should be dis-incentivized during this climate emergency. This would also tend to move people to electric power, which can be sourced more from renewable sources such as solar, wind, or thermal.</p> <p>B. Past and especially any future capital expenses for gas should not be allowed as reasons to boost customer rates. It has been known for years that burning gas was rushing us toward climate disaster that could endanger the lives of our grandchildren.</p> <p>C. The proposal makes no mention of net metering for people who have solar panels. The current net metering system lets PSE zero out the account value of surplus generated power once a year. This officially sanctioned theft of funds should have a policy change. That excess value in the account should be paid to the person generating the power, not to the treasury of PSE. And if the electric rates are increased, that increase should also be reflected in annual surplus payouts.</p> <p>Dwight Rousu Redmond, WA</p>
	Isabelle Colvin	E-mail	<p>Hello!</p> <p>I'm a Residential customer and I am writing to comment on the proposed rate increases to Puget Sound Energy services, Dockets UE-220066 and UG-220067, to be heard Wed. Sept. 28th.</p> <p>A rate increase is inevitable; inflation is here, and everything is rising in costs and prices. However, the proposed increase amount for 2023 that PSE wants to put into place is staggering. I had to re-reading the notice three times to make sure I saw it correctly. 13%+ percent? And average of 15% percent in 1 year?</p> <p>If you said a 1% or 2% increase over the next 5 to 10 years, I'd begrudgingly understand - no one likes bills going up, after all. but that is a "fair" amount to combat rising costs and makes sense. However, those</p>

			<p>increases in 2024 and 2025 plus a "bulk" one in 2023 of 13%/15%???</p> <p>This is going to strain already strained customers. Everything is costing more, and most of us don't see automatic raises to our paychecks. Very few people get "expected" cost of living increases, and this high of an increase to something as essential as energy, is going to hurt the people that always get hurt the most when costs go up; families and middle-class citizens. Not to mention that with the push to switch to electric cars in our state, all of us will end up paying even more on our electric bills.</p> <p>The reasoning behind this listed in the notice is nothing but buzz words. We all know everything is going to go up in price, so just say that. And if you really wanted to cut costs, how about not sending out those "efficacy reports" no one asked for and we can't opt out of? You know, the ones that tell you even those you are using under the amount they say too, that you still are using too much and keep your house at 63 in the winter?</p> <p>The bottom line is that WA is already a high cost of living state, and a 13% to 15% increase in a single year is too much. Please consider a smaller increase to the PSE rates. Thank you. ~Isabelle Corvin</p>
Mark Kane	E-mail		<p>Thank you for the opportunity to comment! It is very discerning to see a double digit rate increase for 2023 as proposed by PSE. Like most consumers inflation has taken it's toll. As a retired military officer, many of our young active duty folks in Kitsap County and retirees are struggling enough as it is, as well as many others living in the Greater Puget Sound Area. If rates go up commensurate with sustaining a viable public utility, that's one thing, but it must be justifiable. I've seen no explanation as to how this revenue (permanent increase) will be used for sustaining the grid. The Docket does not indicate if the rate is for just that year, or those years indicated will revert back to the current rate or becomes a permanent increase over the next 3 years which equates to about a 17% hike.</p> <p>Again what is not disclosed is the cost to improve and sustain infrastructure verses the Salary &amp; Support of PSE Executives &amp; Employees. If PSE is asking to hike rates of the consumer it would be nice to know just how much they are getting paid and if they have reasonable COLA's built in for their employees (No Golden Parachutes for the Executives).</p> <p>Now, I find it particularly odd that when we're trying to go green by pushing electric vehicles, which aren't exactly cheap for most individuals to purchase, let alone increase the price of electricity, that becomes self-defeating in the eyes of the consumer. It appears the auto makers and electric utility companies are try to capitalize on the Gov's rebate incentives (True Capitalism – Squeeze the Little Guy w/ Rate/Price Hikes).</p>

			<p>That being said, as consumers we need full disclosure and transparency as to how ANY INCREASE will benefit us.</p> <p>Again, thank you for your consideration!</p> <p>r/          Mark Kane</p>
	Alleen Penick	E-mail	<p>This request for a 15.80% 2023 and 2.41% 2024 &amp; 1.16% increase in rates is unfair to us consumers. Especially us social security people. I found that PSE already has a budget of over \$3billion and is a company for PROFIT. The 5.9% COLA for 2022 for me was \$66 dollars more a month but my space rate went up by \$60. Oh boy I had \$6. left . My space rent in a senior park is \$800 and I can't afford a 15.80% increase in my electricity. PLEASE DON'T APPROVE THIS RATE INCREASE.</p>
	Garrett Tatsumi	E-mail	<p>As a resident of Olympia, WA I oppose PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair for PSE to impose larger than needed increases for their utilities. The AGO has determined that adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not reasonable, and will pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.          Garrett Tatsumi          Olympia, 98501</p>
	Hugh Caton	E-mail	<p>Hello, my name is Hugh Caton and I am a resident of Olympia, Washington. I oppose PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair for PSE to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.</p>
	Madeline Bishop	E-mail	<p>I oppose PSE's proposed increase in utility rates, beginning in 2023. 	Karen Caton	E-mail	<p>Hello, my name is Karen Caton and I am a resident of Olympia, WA.</p> <p>I oppose PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair for PSE to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just, and reasonable", and will definitely pose a hardship for many people.</p> <p>I urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.</p> <p>Karen Caton</p>
	Glen Hubbard	E-mail	<p>Hello,</p> <p>my name is Glen Hubbard and I am a resident of Olympia. I oppose PSE's proposed increase in utility rates, beginning in 2023. At a time when consumers are struggling with inflation and higher prices for essential goods and services, it is unfair for PSE to impose larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not "fair, just and reasonable", and will pose a hardship for many people.</p> <p>I</p> <p>urge the UTC to consider the welfare of Washington residents and not approve this rate increase.</p> <p>Thank you.</p>
	Eliane Wilson	E-mail	<p>Utilities and Transportation Commissioners,</p> <p>My name is Eliane Wilson; I am a resident of Olympia, WA and a customer of PSE. I oppose the PSE's proposed increase in utility rates, beginning in 2023 to be considered at your September 28 hearing.</p>

			<p>At a time when consumers are struggling with both inflation and higher prices for essential goods and services, it is unfair for PSE to charge larger than needed increases for their utilities. Adding an average of about \$16 per month for electricity and \$12 per month for gas to the average bill is not “fair, just and reasonable”. If it gets approved by your body, it will pose a hardship for many people in the ten counties served in western Washington.</p> <p>I urge you all to consider the welfare of Washington residents and not approve a rate increase of this magnitude.</p> <p>Thank you for taking these issues into account in your votes.</p> <p>Eliane Wilson</p>
	Daniel Roloff	E-mail	<p>To UTC,</p> <p>I have received as a PSE customer, a proposed rate increase for the next three years. As a residential forced customer, it says I would get a HUGE increase in electric rates of 15.80% in 2023! One of the great advantages of living in Washington State was some of the lowest electric rates in the United States! With this HUGE increase that would destroy that advantage! No where is there any justification for such a HUGE increase! Since this is a monopoly business, it seems only just that the customers desire a explanation! Maybe it is for all the overpaid PSE executives to get a HUGE raise! At this point I see no explanation for such a HUGE increase! It is the UTC duty to do what is best for the customers also! The customers are receiving no greater value, for such a HUGE increase!</p> <p>Sincerely,</p> <p>Daniel Roloff</p>
	Virginia Haugen	E-mail	<p>In 1966 my husband and I signed a lease agreement with Washington Natural Gas Company for a gas water heater. When Puget Sound Energy bought the gas company I began paying my rental fee to PSE. A year or so ago I joined a e state Utilities and Transportation Commission hearing by telephone to give input on the sale of my lease agreement to Grand Heating. It's a company I know very little about. I and nearly all the customers who joined the UTC hearing spoke against having their contracts turned over to Grand Heating. Now PSE wants to raise our rates even though everything we pay for is taking more of our income. If I could afford solar electricity I would certainly have it. I am managing without it and I urge the State of Washington to make sure that PSE is not allowed to force another rate increase on our gas and electric bills. My thanks to Bob Ferguson for standing up for itility ratepayers in our state.</p>

	Paul Vlastelica	E-mail	<p>I am 100% against the outrageous 15.8% increase in electric rates. Do you think of retired people on fixed incomes? We are already hurting with 9% inflation and our raises do not even coming close to cover inflation.</p> <p>Vote against this huge, unrealistic increase in electric rates. Many like me only have electric available to use. Before you know it we will have rates as high as California.</p> <p>VOTE NO ON THIS ROBBERY.</p>
	Alex Golub	E-mail	<p>Dear UTC,</p> <p>Hello, My name is Alex Golub and I am writing to you today in regards to Docket UE-220066 (electric service increase of rates by PSU) I would like to state that Generally I am Mindblown in this Proposition that I have just read and cannot believe the audacity of a Utilities company to try to raise rates for electric by almost 20% in the next three years.</p> <p>I would like to say that my electric bill in the winter is almost \$600, I have two small children and a wife at home, I and many other neighbors of mine cannot afford to pay in some cases \$200 more for just one utility per month, let alone all of the others companies I assume are also trying to raise their rates.</p> <p>This is insane to me as in these harsh trying times, I did not get anywhere near a 20% raise at work yet Ive seen inflation nearly decimate my once flourishing family, in the midst of which PSU is attempting to rob me of the last bit of money that I am able to collect for emergencies.</p> <p>Please I am not asking you, I am begging you not to let this happen. There is no real reason for this utility rate increase, they state that they want to “recover increased operating costs” well we are all getting slammed by those costs, but the consumer is the one getting the short end of the stick forced to deal with high gas prices on top of paying for the companies “increased operating costs” as well.</p> <p>In the midst of the struggles of staying afloat in a young hardworking family I cannot deal with even more expenses. Please, I implore you do not approve this request and mae it harder for normal americans just so that companies wont hurt their bottom line!</p> <p>Very respectfully, -Alex Golub</p>
	Ward Bettes	E-mail	<p>I was amazed to see the level of gas and electric rate hikes proposed by Puget Sound Energy for 2023. 13.59% for electric service and 12.98% for gas service ( I have both) is unacceptable. Please do not allow this to happen. Some increase is expected but they should spread it out over several years, not take it in one lump sum.</p> <p>Thank you Ward Bettes</p>

	Bruce Gilbert	E-mail	<p>Hello,          I feel your(PSE) request of a 13.59% increase in 2023 for electric service, leading to a 15.8% increase in residential power bills is insensitive and excessive. The proposed increase of 12.15% in natural gas service is also excessive. This would hurt lower income households particularly hard at a time when inflation is already leading to tightly stretched household budgets. I am aware that costs for generating electricity and also natural gas prices are rising but it would be helpful if your(PSE) rate increases could be at least averaged out over the 3 year period from 2023-2025 instead of front loading them in 2023.          Please be respectful of the hardships facing consumers in these difficult times and show restraint in allowing PSE the proposed rate increases.          Sincerely,          Bruce R. Gilbert          Auburn</p>

	Elizabeth A.Rogers	E-mail	<p>I am writing to request that the referenced proposed PSE electrical increase be reconsidered and reduced to a more manageable amount. I can understand that some increase may be necessary. However, a jump of almost 20% over a 3-year period would present a clear and present hardship for many low- and moderate-income PSE customers, especially since almost all other living costs are also rising.</p> <p>My spouse (age 92) and I (85) are older adults living on a moderate, largely fixed income. We reside in a manufactured housing community, primarily because it is one of very few non-subsidized affordable housing options available to us. Please do not allow our electricity bills to be increased to the point that we can no longer remain in our home. We will be gone soon enough, but we need heat and lighting in the meantime!</p> <p>PSE investors are not the only stakeholders worth consideration. We, the customers, are as well.</p> <p>Elizabeth A. Rogers</p>
	Sarah Habel	E-mail	To Whom it Mat Concern:

			<p>Dockets UE-220066 (electric service)</p> <p>The proposed rate increases are unacceptable. In the next 3 years you are proposing a total average rate increase for electric service of 19.26%!! Many people in the south sound area will simply not be able to pay. People are already struggling with the price increase of everything else. I am a PSE customer for electric service and I urge you to NOT move forward with these high-rate increases- you may end up losing customers, increase the number of delinquent accounts and FORCE some people out of their homes. Please reconsider these rate increases! Sincerely Sarah Habel Lacey, WA</p>
	Josh & Michelle Zedwick	E-mail	<p>Please do all you can to NOT increase electric rates for PSE customers! This is not the time for funding extra projects that aren't an absolute necessity for the majority of citizens. Thank you.</p>
	Norene Scott	E-mail	<p>We do not need or want this proposed project or the unnecessary and unknown Costs involved. Norene Scott</p>
	Alice Evans	E-mail	<p>To Whom It May Concern,</p> <p>My name is Alice Evans.</p> <p>I am a member of CENSE and for years have attended CENSE meetings and city council meetings to stay informed regarding our energy situation. I have watched PSE and its representatives steam roller over its customers, some of whom have gone to great length to advocate with facts and research for a better and much more modern and fiscally sound solution to our energy future than that proposed by PSE.</p> <p>It is clear that PSE's first consideration is the return it can produce for its mostly foreign investors. It wants its customers to produce that return by paying higher electric rates. This is profoundly unfair and simply wrong. I ask you to turn down PSE's request for a rate hike and support the best interests of our local community.</p> <p>Sincerely yours,</p>

			Alice B. Evans
Margaret Moore	E-mail	August 30, 2022 TO: Washington Utilities and Transportation Commission RE: Puget Sound Energy GRC, Docket UE-220066 & UG-220067 Talk about salt in the wound! As we watch Puget Sound Energy erect poles which are much more intrusive than they ever conveyed, we also find we are now being asked to pay a projected \$300 million plus beginning next year – a 20% increase in residential electric rates over a three-year period. The project is nowhere near completion, and we are already expected to pay for something from which there is yet no benefit to any ratepayer! As you review the case, please keep in mind a number of important facts regarding this contentious issue: - PSE did not allow a citizen review committee to consider any other solution to the potential power increase than the one they were proposing. Many members did not sign the final document because they felt the public process was a sham.  - There currently are a number of 21st century solutions for increasing the reliability of power delivery becoming available at a reasonable cost. Most of these would be less intrusive, more dependable and cheaper than the one PSE is implementing. PSE should have been forced to consider these before any decision was made.  - PSE is no longer a regional entity. It has been allowed to inflict an outmoded delivery system on us for potential financial gain by the foreign consortium that owns it, and we, the users, will be saddled with paying for it over many years while they reap the financial benefit.  - The project is not completed and has not even been fully vetted in two key communities. Users should not have to pay for something that doesn't exist.  - Why should rate payers begin rewarding PSE with a 9.8% rate of return on an infrastructure investment whose total cost is still unknown, whose need has not been validated and that would cost ratepayers close to \$2 billion in increased rates over the life of the project?  If the community is forced to accept the PSE Energize Eastside project, we ask that the Washington Utilities Commission, at a minimum, consider the fairness of asking ratepayers to begin paying before the project is completed and any possible benefit is realized. Do not grant any accelerated rate request before the entire project is operational. Sincerely, MargaretR Moore	

	Jenny Chan	E-mail	<p>These rate hikes are ridiculous and not keeping pace with inflation. They are all for profit for the greedy PSE. Please follow Seattle's model of much more reasonable rate hikes.</p> <p>Thanks,          Jenny Chan</p>
	Jill Payne	E-mail	<p>Please do nit allow this rate hike we can hardly afford the electric bill now and I know I'm not the only one. A lot if people especially the elderly choose between eating or Mexican and do with out to pay their electric bill. We just had a rate hike not that long ago. You want everything to be electric , car , furnace's , solar panels on roofs and if it's an older home the weight will not hold and the roof will cave in. T you want us to redo our roofs to put the solar panels on that's at least 50 to a hundred thousand dollars that people the middle class at least what's left if it to pay nit only for themselves but fir low income people. I make 100 dollars to much to get any discounts and I just make it on today cost if living. Now with inflation being so high I've cut back on any entertainment , back on grocers now they want you to pay mire fir electric. At the rate we're going we will be like California and other states with brown outs and rolling black out. There us no way out production of electricity can meet the state's standard or the government because we do not produce enough and . T even 25 years ago if the government would have stepped up and regulate fishing, logging and made industrial companies stop polluting we would nit be in the shape we're in today but money talks and they bribe our politicians and they get riches while the citizens get poorer. It's about time for ode and our government to stop spending and start saving. It tough to make ends meet now it will be even harder with thus increase. Please do not vote to pass this. If DC. does not change policies We as Americans are going to be filing bankruptcy. Do nit pass thus rate hike. Thus is probably a waste of my time because out politics are fir big corporations and themselves making money nit helping us the people but the government needs mire money and they need to follow the laws and our constitution but they don't. All illegals should nit be getting welfare or help to stay here they are illegals. You couldn't go to their country and get the same help. Do nit let this rate hike go through.</p>
	Cascade Irrigation	E-mail	<p>Public Utility Commission,</p> <p>Regarding the proposed PSE electrical increase: Cascade Irrigation District is a public non-profit entity. We estimate this increase would cost us an additional \$80,000 per year for the first year with two addition increases to follow. This increase based on our current budget would constitute %42 of our budget. Cascade Irrigation falls into the electrical schedule #35. This happens to be Primary voltage irrigation which is the schedule with the largest increase of all proposed increases for the first year. This increase will adversely effect many of our customers two and possibly three fold as many customers also have PSE for their home as well as business/farm use. Also should this increase be approved when would this information be distributed to the public as we set our budget for the upcoming year in the first week of December. Should the UTC approve this increase we would prefer to see a smaller increase for each year even if the increases were spread out over a longer period of time (smaller increases over more years). We do understand that the cost</p>

			<p>of everything is going up and that relates to the cost to produce electricity, but it also relates to everyone else in that all of our costs are going up as well. To recap: the increase to our electrical needs being at such a high percentage topped with increases from other services and goods puts an extreme hardship on the district being a non-profit entity. Your consideration of this issue is greatly appreciated.</p> <p>Thank you,</p> <p>Kelton Montgomery District Manager</p>
	Carole Muth	E-mail	<p>Dear WUTC,</p> <p>I am writing in regard to Puget Power's request for a rate increase. I am a senior citizen, a sixty year resident of the area known as Somerset, and am in complete disagreement with Puget's wish to raise our rates to the degree they have stated. They ask for a rate increase of 20% for a project that is just now under construction. Even our esteemed Attorney General, who obviously knows a lot more about matter like this than I do, disagrees with their request. Just looking at it in a very measured, analytic way, it is unreasonable, and I would ask that you deny their ask.</p> <p>And on a personal basis, I have lived in my current house for nigh on sixty years now. Obviously my income is fixed, and a rate increase of this extent would present great difficulties.</p> <p>Thank you for your thoughtful consideration of Puget's request.</p> <p>Carole Muth</p>
	Susan & Stephen Bennett	E-mail	<p>Puget Sound Energy is a private company, with shareholders who want dividends. PSE is also a monopoly, which means customers have no choice in who provides our electricity, which is an essential for daily life. For those reasons, it is very important that PSE submit to monitoring, especially of service quality, compliance with state laws, and rates.</p> <p>We object vehemently to this 15% rate increase. To "decarbonize energy systems" will result in lower costs according to all the experts. To "recover more than four years of capital and operating investments" was their excuse for the last several increases . To "set rates for a multi-year rate plan" is not a reason but a statement which reflects the lack of respect PSE has for its customers.</p> <p>We request that this increase be denied.</p>

			Susan and Stephen L. Bennett
	Rick Fellows	E-mail	<p>Greetings, I am writing to oppose a PSE rate increase on electricity and gas. As a private, for profit entity PSE makes investment decisions seeking profit over public benefit, unless regulations or artificial incentives are in place. We have had to publicly force private companies to invest in conservation over energy supply.</p> <p>It seems PSE has invested in an LNG facility in Tacoma which the region and tribes strongly oppose. If this rate increase is to cover such investment, where is the incentive to engage in the kind of widely supported investment we need to be moving towards?</p>
	Nannette Kinge	E-mail	Ya my power bills have been way high mine 775 right
	Richard Escamilla	E-mail	My name is Richard Escamilla I have been retired for 16 years . PSE's 12.98% percent increase in 2023 is obscene. There was a time PSE was limited to a 4.9% increase , with staggering inflation increases like this are going to tax retirees to the limit. We are not living in luxury here. Attorney General Ferguson , there is no reason a utility company should hold Washington rate payers hostage.
	Luminita Sarbu	E-mail	<p>Hi,</p> <p>I have read about the proposed rate increase by PSE over the next 3 years which would add up to about 20%. I would like to express my concern this is way too steep of a rate increase over a short time. A lot of people are struggling to pay their bills as is. While some yearly increase would be reasonable. This would be is way too much and should not be allowed.</p> <p>Sincerely,        Luminita Sarbu        PSE customer.</p>
	Fang Cui	E-mail	<p>Dear Sir/Madam,</p> <p>We are very angry about the PSE Energize Eastside Project since the project is totally UNNECESSARY. By using old technology it destroyed thousands trees, damaged many city views and views for many houses; It is also possible to hurt people in the future, especially the children, by the much stronger EMF (Electric and Magnetic Fields).</p> <p>But the project is not finished yet , PSE started to ask high electricity bill. How greedy PSE is !! From I understand that PSE will make money from the Energize Eastside Project ( I believe this since they pushed the project so hard.) Then why let us, the suffered people from the project, pay the project back ? IF the government let PSE get their wish again, ( Like Bellevue and Renton city government did for Energize Eastside Project ) I would like to ask if our government is PSE's government or people's government?</p>

			<p>And recession may start soon, does our government want to increase burden on the ordinary people in this time??!!</p> <p>Thanks.</p> <p>Fang and Zijian Cui Residents in Bellevue, WA</p>
Mary Clark	E-mail		<p>I received the notice of requested changes to PSE rates and Public Hearings. I am writing to express my belief that these proposed rates are unacceptably high.</p> <p>PSE is requesting in 2023 an electric rate hike of 13.59% and a natural gas hike of 12.98%.</p> <p>PSE needs to slow down its expenses just like everyone else. Reduce staff as necessary - there should have been cost reductions with the meter reading technology coming on line - it doesn't work very well but it still should have reduced staffing cost for those positions. My bills fluctuate more than ever as some months the data is read at 29 days, sometimes at 33 days, sometimes electric has a different number of days than gas - this should have led to consistent billing but it has not - given the significant increases in the last year I don't even think it is necessarily accurate. They can and should identify critical and/ or necessary staffing and capital costs and only fund those in these inflationary times.</p> <p>PSE's desire to have an increase in authorized ROE from 9.4 to 9.9 % is absurd. The existing 9.4 is excessive as it is. Utility shareholders have a steady return typically in holding utility stocks as it is. The rest of us are being whipsawed through the market with our investment funds in 2022 and probably 2023. Utility shareholders are getting enough of a steady return at this point in time and that should not be a goal of rate setting during these financial times. They can hold steady just like the rest of us are trying to do - investments are a crapshoot, returns should not be guaranteed and certainly should not be increased in today's climate.</p> <p>If these rate increases go through my utility bills will reach over \$200 per month in the winter months. This is unacceptable in a "moderate" climate area. I am not a high utilizer falling in the "good" range in PSE's analytics. While I find some of these types of programs interesting I don't think they influence users at all - therefore the cost of the educational program should be eliminated. I am fortunate enough to have been able to reduce costs to cover inflation so far but many people cannot do this - and utilities are a necessity of life, not a luxury. Most cost reductions are one time opportunities to find and eliminate a given cost, however, with all other costs rising those eliminated costs are replaced and customers still lose ground. There is nothing left to cut.</p>

			<p>If PSE is struggling to meet climate mandates from the government then they should go to the government to get funding to support the move to lower carbon footprints. The state and federal government have supported funding for some of these transition costs and PSE should be making every effort to utilize funding available from these government programs. Their stakeholders should not expect even higher returns while investment in climate preserving technology occurs - they need to absorb some cost too.</p> <p>The bottom line is now is not the time for gigantic rate increases. PSE needs to hold the line where possible and request much smaller increases (3-5%) than they are proposing for 2023. Putting more people into a position of not being able to pay utility bills is not going to help PSE meet its ROE target.</p> <p>Mary Ann Clark</p>
	Catherine Siegler	E-mail	<p>I purchased a little cabin in September 2019.</p> <p>I don't have my records here, but if memory serves me, my first few bills were below \$100. When COVID hit, I was not able to visit, therefore did not use power (except to keep heat low so as not to freeze pipes). My bills were erratic and out-of-this-world high, up as high as \$155 and as low as \$13. I phoned a couple of times, even suggesting that perhaps the transformer or my meter was faulty? Each of the two times I called, my next month's bill was below \$30.</p> <p>To understand this better, I tried creating spreadsheets, but it was beyond me because billing was not monthly. I'm a single senior with few visitors, and at my place only on weekends. I don't use the oven nor dishwasher. My largest appliance is a 2017 fridge, I replaced an old microwave and other other small appliances with energy-efficient ones. My electric consumption needs are very modest. The neighbours I canvassed have confirmed my bills are higher than theirs.</p> <p>What does this all have to do with rate increases? Well, for one, you have to submit proper billing on a consistent timeline. Also, your customers need the assurance that equipment is functioning reliably and maintained on a regular basis. How do your customers know the bills are accurate if they're not on a monthly rate? How do they know their meters are functioning properly? What about the transformers?</p> <p>In closing, I feel at a huge disadvantage, helpless to effect positive changes, and reliant on whatever you mete out. I respectfully request you seriously temper your proposed rate increases with systems that are functioning properly and fairly.</p> <p>Catherine Siegler</p>

	Kenra Brewer	E-mail	<p>Utilities_and_Transportation_Commission ,          Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery with a rate increase. Dockets UE-220066 and UG-220067          The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.          PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE’s claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility’s use. A rate increase for these purposes is not in the best interest of the public.          This facility is predicated on PSE’s false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.          We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.          Kenra Brewer</p>
	Jack Hogan	E-mail	<p>Utilities_and_Transportation_Commission ,          Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery with a rate increase. Amy Faith	E-mail	<p>Dear UTC Members:</p> <p>I am writing to oppose Puget Sound Energy's proposed twenty percent rate increase over three years, starting in 2023. Rate payers should not reward PSE for Energize Eastside; a project not fully permitted yet, not proven to be necessary, nor completed yet. PSE would charge us over 300 million dollars for this project, and gain a 9.8 % rate of return ; earning more than 2 billion over the life of the project. Clearly, the only ones benefiting from this would be Puget Sound Energy. Please do not allow this increase.</p> <p>Sincerely, Amy Faith</p>

	Sarwesh Kumar	E-mail	<p>Dockets UE-220066 and UG-220067</p> <p>I read with interest the proposed rate increases by Puget Sound Energy (PSE). The rate increases for 2023 - 13.59% for electric and 12.98% for natural gas is preposterous. The reasons given by PSE:</p>

			<p>Continue to provide safe and reliable energy service - What is going to change that will require additional resources and funding?</p> <p>Capital and operating investments made on behalf of customers - Why were these done? Were these approved by customers? Were the customers told that by doing these investments, they will see a significant rate hike?</p> <p>Recover increased operating cost - Does these costs relate to substantial increase in pay for employees and management?</p> <p>Increase return on equity - Is current 9.4% return not enough? I will say that is a very high yield and very much comparable to market.</p> <p>The rate increases for 2024 and 2025 seems reasonable.</p> <p>Thank you.</p> <p>Sarwesh Kumar</p>
	Christina Marchione	E-mail	<p>I would like to submit a comment. I am currently on budget plan with PSE. I already know I will pay more this month because of using the air conditioner more. The proposed rate increase is full of a lot of unknowns. Summers are getting hotter. Other bills are going up around us, like food and gas. If PSE is truly honoring it's commitment for green energy, shouldn't rates be going down? Also, Recovering expenses as a reason to increase should have a little more accountability than just a notice of rate increase.</p> <p>Thank you.</p> <p>Christina Marchione (resident)</p>
	Melissa Roberts	E-mail	<p>Utilities_and_Transportation_Commission ,        Puget Sound Energy (PSE) should not receive a rate increase to pay for the Tacoma Liquefied Natural Gas (LNG) facility, Lake Hills Transmission Line, or Energize Eastside. Dockets UE-220066 and UG-220067 PSE prioritizes investments in fracked “natural” gas and costly unnecessary infrastructure projects. Instead, they should be investing in renewable energy, energy efficiency, energy storage, time-varying rates, and demand response. These actions would accelerate the transition to clean energy, improve reliability and lower customer costs. PSE’s decisions are influenced by their strong ties with the fossil gas industry and a focus on shareholder profits. The Utilities and Transportation Commission (UTC) needs to protect the interests of residential customers, who have no choice but to use the services monopolized by this corporation.</p>

			<p>The UTC looks out for customers by approving investments with the “lowest cost”. When examining what constitutes lowest cost, the UTC must start including more than just the upfront financial cost in their deliberations.</p> <p>When PSE wants to build more gas infrastructure, the cost of exacerbating the climate crisis with more methane emissions should be considered. Future costs related to sea level rise, deadly heat waves, droughts, worsening wildfire seasons, and the human health costs related to these events for our region and planet should be included.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE should also not continue to use ratepayer funds to keep the Colstrip coal-fired power plant running beyond 2025. The costs of mining, transporting and using coal create negative impacts on human health, water quality, and our climate. These costs are unacceptable when investments in renewable energy and energy efficiency are available instead.</p> <p>Melissa Roberts</p>
Aliza Yair	E-mail	Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery with a rate increase. Dockets UE-220066 and UG-220067 The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE’s claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility’s use. A rate increase for these purposes is not in the best interest of the public. This facility is predicated on PSE’s false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings. We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.	

			Aliza Yair
	Tim Leadingham	E-mail	<p>Dear Sir/Madam:</p> <p>I am a customer of PSE and I own a community solar share. PSE should be required to treat owners of a share of a solar project like an owner of solar generation anywhere else, with getting net-metering credit. We only get credit at the rate of half the retail rate for our production share. It would be reasonable to make a deduction for transmission costs, but PSE does not show us the justification for only crediting our share at half the retail rate. We sometimes use less than our share of production and we pay the full retail rate for what we use. PSE sells the excess of our share at the retail rate, so why don't we get full credit for that?</p> <p>PSE is selling its share in Colstrip 2 back to Talen. They should be required to invest all of that back into renewable energy for customers. PSE should also be required to present a plan to its customers for carbon-free electricity production by 2035. Thank you,</p>
	James Stanton	Phone	<p>External Email</p> <p>In addition to the information included in Attorney General Ferguson's opposition to the rate increase, the rate increase would also help fund an unlicensed LNG facility which is opposed by the Puyallup peoples. The combination of unjustified cost claims and suspect uses are sufficient reasons to reject this rate increase.</p> <p>James Stanton          Mercer Island, WA</p>
	Riley Lynch	E-mail	<p>Utilities_and_Transportation_Commission ,</p> <p>Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery with a rate increase. 	<p>Mark Davidson</p>	<p>E-mail</p>	<p>For-profit PSE spent unlimited and irresponsible amounts of money on professional lobbyists, a national campaign manager, national “experts” willing to prostitute themselves for enormous sums of money, lawyers who charge exorbitant rates and in house employees used for PR functions in order to get its Energize Eastside project approved over virtually unanimous neighborhood opposition and the well considered opinions of neutral experts.</p> <p>Now PSE seeks to pass these costs on to its customers by imposing very significant rate increases. Has PSE even been required to disclose how much it spent on its campaign for approval of Energize Eastside? And cross-examined to determine the truth of its disclosure? That information is essential to a fair appraisal of its rate increase request.</p> <p>On a larger scale, isn’t it enough that PSE’s profits will increase substantially as a result of the project approval when it sells the excess power its project will generate to third parties including Canadian companies? Its current request, if granted, means that residential customers like my wife and I, retired and on fixed incomes, will end up paying for the “spare no cost” campaign for Energize Eastside regulatory approval. Regrettably, PSE prevailed. That’s enough. It should not also be able to burden the losing parties with its battle costs. It started this war and it should not be allowed to saddle consumers like us with its cost of doing business. Especially a battle whose result will only increase its profits.</p> <p>PSE’s request for a rate increase should be denied.</p> <p>Mark Davidson</p>
	<p>Brett Anton</p>	<p>E-mail</p>	<p>Utilities_and_Transportation_Commission ,        As opposed by the Washington AG office, a rate increase should be avoided by PSE. While the company wishes to paint hikes as part of it’s public duty to create clean energy, such hikes are not reasonable given the</p>

			<p>cost of what PSE wants to do.</p> <p>Rate increases are primarily a boon to higher profits (the company wants to see 10% profit in upcoming years), a burden the public shouldn't bear.</p> <p>Additionally, PSE should not receive a rate increase to pay for the Tacoma Liquefied Natural Gas (LNG) facility, Lake Hills Transmission Line, or Energize Eastside. Dockets UE-220066 and UG-220067</p> <p>PSE prioritizes investments in fracked "natural" gas and costly unnecessary infrastructure projects. Instead, they should be investing in renewable energy, energy efficiency, energy storage, time-varying rates, and demand response. These actions would accelerate the transition to clean energy, improve reliability and lower customer costs. PSE's decisions are influenced by their strong ties with the fossil gas industry and a focus on shareholder profits. 	<p>Kristiana Lapo</p>	<p>E-mail</p>	<p>Utilities_and_Transportation_Commission ,        I am a PSE and I can't afford this rate increase. Even if I could, I'm barely making ends meet and I have no</p>

desire to increase your profit margin, especially one determined by the Attorney General to be bloated, with what little money I have for a basic human necessity of keeping my lights on and heating my home. Additionally, LNG is not a climate solution. LNG had long been used as a distraction from real climate solutions while still contributing to the problem. Even if LNG were a solution, the proposed facility I'm Tacoma is not going to heat my home - it's for cargo ships. Why am I paying for that? PSE should pay for their own pet project.

This rate increase is bad for customers, for whom heating and electricity is a basic right and necessity, it's bad for the environment despite claims otherwise.

I sign on with Tacoma350 on the following statement:

I oppose all rate increases requested by Puget Sound Energy (PSE) for dockets UE-220066 and UG-220067. PSE wants to raise residential electric rates by more than 20% during the next three years, and residential gas rates by almost 17%. This is unacceptable. PSE is already Washington's most expensive utility with many customers struggling or unable to pay their bills. Shareholder profits should not come before basic human needs.

Investments have not demonstrated an increase in reliability or quality of service for PSE residential customers despite continued rate increases. Frequency and duration of power outages vary by area creating inequities.

PSE's proposed rate increase is unprecedented in its scale and scope. They are largely seeking compensation for infrastructure projects completed in the past, currently being built, and unspecified, incomplete projects. Many of the past projects have been vigorously opposed by PSE's customers and are manifestly harmful to the environment.

Residential Customers should not have to pay for infrastructure that they will likely never use. The Tacoma LNG facility's main purpose is supplying gas to maritime customers as shipping fuel. PSE claims the facility will also be a backup power supply on a few of the coldest days of the year when demand is the highest. This assertion ignores the trend that demand is actually decreasing due to energy efficiency, and customer preference for renewable sources. Even if the backup was used, it would only account for less than 2% of the facility's use over the life of the lease, yet PSE is looking for reimbursement on almost half of the construction costs. This is not in the public's interest and the Utilities and Transportation Commission need to deny all reimbursement for this facility.

Continuing to build or expand fossil fuel infrastructure despite dire warnings from the Intergovernmental Panel on Climate Change to rapidly move away from these polluting sources is unacceptable. The impacts of exacerbating the climate crisis will fall hardest on Black, Brown and Indigenous families, low-income households. Please deny these rate increases and be part of a more equitable, healthy, and just future.

Best,  
Kristiana Lapo  
PSE Customer by monopoly and basic human necessity, not choice  
Kristiana Lapo

A rate increase for these purposes is not in the best interest of the public. This facility is predicated on PSE’s false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings. We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p>
Dale Walter	E-mail	<p>For people on fixed incomes, inflation has raised havoc. Again, PSE is requesting another rate increase that totally contributes to our already staggering inflation. I hope the UTC sees fit to reject the increase request. We can only handle so much!! Dale Walter</p>
Mark Vossler	E-mail	<p>Utilities_and_Transportation_Commission , I oppose all rate increases requested by Puget Sound Energy (PSE) for dockets UE-220066 and UG-220067. PSE wants to raise residential electric rates by more than 20% during the next three years, and residential gas rates by almost 17%. This is unacceptable. PSE is already Washington’s most expensive utility with many customers struggling or unable to pay their bills. Shareholder profits should not come before basic human needs. Investments have not demonstrated an increase in reliability or quality of service for PSE residential customers despite continued rate increases. Frequency and duration of power outages vary by area creating inequities. PSE's proposed rate increase is unprecedented in its scale and scope. They are largely seeking compensation</p>

			<p>for infrastructure projects completed in the past, currently being built, and unspecified, incomplete projects. Many of the past projects have been vigorously opposed by PSE’s customers and are manifestly harmful to the environment.</p> <p>Residential Customers should not have to pay for infrastructure that they will likely never use. The Tacoma LNG facility’s main purpose is supplying gas to maritime customers as shipping fuel. PSE claims the facility will also be a backup power supply on a few of the coldest days of the year when demand is the highest. This assertion ignores the trend that demand is actually decreasing due to energy efficiency, and customer preference for renewable sources. Even if the backup was used, it would only account for less than 2% of the facility’s use over the life of the lease, yet PSE is looking for reimbursement on almost half of the construction costs. This is not in the public’s interest and the Utilities and Transportation Commission need to deny all reimbursement for this facility.</p> <p>Continuing to build or expand fossil fuel infrastructure despite dire warnings from the Intergovernmental Panel on Climate Change to rapidly move away from these polluting sources is unacceptable. The impacts of exacerbating the climate crisis will fall hardest on Black, Brown and Indigenous families, low-income households. Please deny these rate increases and be part of a more equitable, healthy, and just future.</p> <p>Mark Vossler</p>
	Jesse Bohlin	E-mail	<p>Utilities_and_Transportation_Commission , To whom it may concern:</p> <p>I am writing to support the opinion that Puget Sound Energy (PSE) should not receive a rate increase to pay for the Tacoma Liquefied Natural Gas (LNG) facility, Lake Hills Transmission Line, or Energize Eastside. Dockets UE-220066 and UG-220067</p> <p>As a resident of the Puget Sound, I have been proud to see our region to push forward progressive, climate smart solutions that prioritize the health and safety of our communities. This proposed rate increase is to provide funds to PSE to prioritize investments in fracked “natural” gas and costly unnecessary infrastructure projects. This is not the type of renewable energy projects that members of our community have advocated for, and therefore should not be made to pay for these through rate increases.</p> <p>When PSE wants to build more gas infrastructure, the cost of exacerbating the climate crisis with more methane emissions should be considered. Future costs related to sea level rise, deadly heat waves, droughts, worsening wildfire seasons, and the human health costs related to these events for our region and planet should be included.</p> <p>I encourage you to deny this proposal by PSE and center the needs of the community.</p> <p>Jesse Bohlin Jesse Bohlin</p>

	Dave McIver	E-mail	<p>The proposed 2023 rate increases for PSE for electric and natural gas service should not be allowed. We are on a fixed budget as senior citizens and this will adversely effect us and other senior citizens. Furthermore, this large increase should not be allowed during a time of a recession. It will adversely affect most low to middle income class households. Also, this 2023 increase is larger than the current rate of inflation which equates to the cost of living for everyone. The reasons stated by PSE as to their justification for this large 2023 increase, as well as a multiyear rate plan, should be thoroughly questioned and changed based upon the realities stated above and other similar comments.</p> <p>Sincerely, David and Carol McIver</p>
	Ashley Zimmerman	E-mail	<p>Utilities_and_Transportation_Commission , I oppose all rate increases requested by Puget Sound Energy (PSE) for dockets UE-220066 and UG-220067. 			Tacoma, Washington 98405
	Cindy Kisska	E-mail	<p>I emailed a short comment and sent it to comments@utc.wa.gov on Thurs. Sept. 22, 2022 12:42 PM. Please replace it with this one I am sending in now, as this one is much longer and has many more detailed important facts. Thank you.</p> <p>My name is Cindy Kisska. I have been a Puget Sound Energy electric customer for 18 years. Every year PSE raises our rates. Every year the UTC holds a phone conference for one hour when we can call in. And every year the UTC ignores the public outcry to NOT give PSE permission to raise our rates AGAIN. Every year our complaints fall on deaf ears. We have one hour a year to speak our peace, and what happens? Nothing. It is business as usual. EVERY SINGLE YEAR PSE is allowed to RAISE OUR RATES.</p> <p>The UTC treats PSE as if it is two separate companies – one that services its shareholders, and one that services its customers. The company is ONE company, NOT two.</p> <p>Lets examine the facts: Truth is facts. What are the PSE’s facts? Simply put, PSE takes in Billions of dollars every year and gives away Millions of dollars in profits to its shareholders and CEOs every year, while STILL being allowed to raise our electric rates every single year.</p> <p>The profits PSE makes, should be funneled down to its customers FIRST to lower our electric rates, NOT funneled upward FIRST TO PAY their ALREADY wealthy shareholders. The UTC’s first and most important priority and concern is to protect the customers FIRST, because we are the one’s struggling to pay our ever rising PSE bills, while still being able to afford to put food on our tables. These are OUR FACTS.</p> <p>There are several programs, such as “LIHEAP” and the “H.E.L.P.” program in place to financially help low-income customers pay their electric PSE bills. BUT Puget Sound Energy, the Utilities and Transportation Commission, and the Attorney General’s Office, should NOT rest easy thinking that they have the poor people’s backs covered, when so many PSE customers don’t qualify for these programs BECAUSE THEIR INCOME IS JUST A FEW DOLLARS ABOVE THE CUT-OFF TO QUALIFY. KNOW FOR A FACT, there are 1000’s and 1000’s of families in the state of Washington, including children and the elderly, who are still suffering day and night in their cold houses and apartments because they cannot afford to turn their thermostats up any more than they already are. Tell this to PSE’s already wealthy CEOs and Shareholders.</p> <p>THE QUESTION REMAINS: WHY is PSE given the OKAY EVERY YEAR by the UTC TO GET AWAY WITH RAISING OUR RATES under the following BLARRING FACTS: 1) PSE paid almost \$40 million dollars to their top 5 Executive Employees over a 3 year period (2016, 2017, 2018) in salaries, incentives, compensations and bonuses. That was 4 years ago. It is now 2022. You can be</p>

sure the amount has gone up.  
2) PSE took in \$3.4 Billion Dollars in 2019 and paid out \$64.2 million to their shareholders to pay for 5 foreign country's pension funds.  
3) PSE belongs to a group called "Investor-Owned Utilities" ("IOUs") that service electric and gas customers across the state of WA. "They are all monopoly franchises" and "THEY EXIST to make a PROFIT FOR THEIR SHAREHOLDERS." PSE is a utility company, NOT a Fortune 500 Company.  
4) These Investor-Owned Utilities, including PSE, paid out a total of ALMOST \$400 MILLION DOLLARS - \$395.3 Million Dollars to be exact - in DIVIDENDS in 2019.  
5) PSE has become a "Profit-Churning Machine." They have become top heavy, with way too much money floating around at the top. WHY HAVE PSE'S PROFITS NEVER "trickled down" TO TRANSLATE INTO SAVINGS FOR PSE'S Electric Customers to LOWER OUR RATES?  
6) PSE takes in over \$100 MILLION DOLLARS EVERY MONTH from just their electric customers alone.  
7) PSE SHOULD NEVER BE ALLOWED TO INCLUDE as one of their REASONS to raise our rates because customers are using less electricity. People ARE USING LESS AND LESS ELECTRICITY BECAUSE THEY CAN'T AFFORD PSE'S HIGHER AND HIGHER RATES!

**PSE DOESN'T FOLLOW UTC'S ORDERS:**

- In 2013, the UTC ordered PSE to share its profits 50/50 with customers. I know of at least 2 more times, that the UTC also ordered PSE to share their profits with us. But somehow, PSE has found ways to get around this. They have NEVER shared their profits with us to lower our rates. How is it that PSE seems to have become more powerful than the UTC itself? PSE blatantly ignores and gets away with it, over and over again, UTC's direct orders to share their profits with their customers.

- When the UTC ordered PSE to share its profits 50/50 with customers, the Commission used what's called "earning tests" that required PSE to share excess profits with customers "in certain circumstances". This took place as part of a multi-year rate plan, and PSE's earnings would have had to go above an authorized amount before credits to customers were required. (The rate plan expired in 2017.)

- So....according to the "earning tests" PSE didn't make enough profits to share with their customers. AND I WANT TO SAY...."BUT NOT BEFORE PROFITS WERE TURNED OVER BY PSE TO ITS SHAREHOLDERS."

- PSE'S has a "Code of Conduct" that states that all their Corporate Officers, Treasurer, etc. "are empowered to ensure THAT ALL STAKEHOLDER'S INTERESTS (meaning Shareholder's interests, meaning profits) are appropriately balanced, protected and preserved."

- If PSE has re-constructed itself in such a way that profits to its shareholders come first, instead of savings to its customers....then this deranged arrangement needs to be taken up by the Attorney General's Office.

- The UTC and the OAG stand by and watch PSE's safety nets and structures that used to be in place to protect the customers, all being burned to the ground! If there are loop-holes in the way PSE has re-structured its utility company financially, then these loop-holes need to be closed. Where is the Attorney General, Bob Ferguson in all of this? It's not enough for him to just say he doesn't approve of PSE raisings its rates....it's another to actually do something about it. I'm surprised he hasn't already stepped up to stop PSE in their tracks and MAKE THEM TOW THE LINE by ensuring that UTC's orders are followed, and that PSE shares their profits with their customers FIRST, to ensure they lower our rates. Let PSE use their millions of dollars in profits to LOWER our rates. PSE SHOULD NOT BE ALLOWED TO USE A MYRP (Multi-Year Rate Plan). Instead they should be held to account EVERY SINGLE YEAR.

When I talk about an "Ethical Assessment" of PSE, THIS IS KEY: Why is PSE ALLOWED by UTC and Bob Ferguson in the OAG, to give away millions of dollars to the already very wealthy shareholders, while people in Washington State are shivering in their houses trying to keep warm because they can't afford to pay a higher electric bill? What sense does it make? NONE!

WHO IS PROTECTING THE RIGHTS OF THE PSE CUSTOMERS and ENSURING OUR INTERESTS/ NEEDS are "appropriately balanced, protected and preserved"?

THE WORD "INTERESTS" HAS A COMPLETELY DIFFERENT MEANING WHEN IT IS APPLIED TO SHAREHOLDERS, AS COMPARED TO WHEN IT IS APPLIED TO CUSTOMERS:

1) The answer PSE customers are given as to why PSE is allowed to raise our electric rates each and every year, is from the Office of the Attorney General:

"In the end, the Commissioners must ensure that rates are fair, just and reasonable for all interests involved."

2) PSE's Shareholder's interests are vastly different from PSE's Customer's interests. I feel these two "interests" should not be used in the same sentence, because their meaning is completely opposite one another.

3) Customer "interest" is actually the Customer's NEED....the need to stay warm in the winter and the need to still be able to afford to pay their ever rising PSE electric bill.

4) The Shareholder's interest means how much money (profits) they are able to make. In other words, the already wealthy becoming wealthier.

5) Under this context, raising PSE customer's electric rates every year IS NEITHER FAIR, JUST, NOR REASONABLE: The wealthy don't need protection, but the poor and vulnerable do.

6) Being able to stay warm in our houses in the winter should be a Human Right. UTC – Do your job and DO WHAT IS RIGHT. PSE's moral obligations and financial obligations should be one and the same. Right now, there is a huge cavern between them.

			<p>7) The UTC needs to hold PSE's feet to the fire! They are dishonest, lie, cheat, and are constantly manipulating and misrepresenting their financial facts to try and get more money. SHOCKING that this is our Utility company and WHO YOU have to deal with! It's impossible to find the honest truth when dealing with PSE. And we, the customers bear the cruelty of their dishonesty.</p> <p>One last thought: MILLIONS OF DOLLARS OF PSE PROFITS ARE BEING FUNNELED OUT OF WASHINGTON STATE AND THE U.S. EVERY YEAR. \$64.2 MILLION DOLLARS IN 2019 went to five Foreign Countries' Pension Funds. That's a HECK OF A LOT OF MONEY that could be well spent in our Local Communities:</p> <ul style="list-style-type: none"><li>a. The first priority should be for PSE to LOWER the costs of our energy bills.</li><li>b. Then, how about investing in SUSTAINABLE, RENEWABLE ENERGY SOURCES....like SOLAR POWER.</li><li>c. How about projects that help clean up our environment....protect our ecological natural resources....such as the vital salmon runs necessary for our food chain.</li><li>d. How about helping to fund our schools. The fact is most of our schools are severely lacking enough Student Counselors....the Blaine Middle School has ONLY ONE COUNSELOR FOR OVER 400 STUDENTS, and the High School HAS TWO COUNSELORS FOR ABOUT 650 STUDENTS.....The NEED for more counselors is ENORMOUS – the highest number (about 65% to 70%) of calls to the National Suicide Help Line are students between 11 and 15 years old wanting to end their lives because they are so stressed out by school itself (the heavy over-load of academi</li></ul>
	Ilsa Oldoski	E-mail	<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's</p>

			<p>use. A rate increase for these purposes is not in the best interest of the public. This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings. We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>lisa Oldoski loldoski@yahoo.com Tacoma, Washington 98404-3912</p>
	Jeremy Harrison-Smith	E-mail	<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) should not receive a rate increase to pay for the Tacoma Liquefied Natural Gas (LNG) facility, Lake Hills Transmission Line, or Energize Eastside. Dockets UE-220066 and UG-220067 PSE prioritizes investments in fracked "natural" gas and costly unnecessary infrastructure projects. Instead, they should be investing in renewable energy, energy efficiency, energy storage, time-varying rates, and demand response. These actions would accelerate the transition to clean energy, improve reliability and lower customer costs. PSE's decisions are influenced by their strong ties with the fossil gas industry and a focus on shareholder profits. The Utilities and Transportation Commission (UTC) needs to protect the interests of residential customers, who have no choice but to use the services monopolized by this corporation.</p> <p>The UTC looks out for customers by approving investments with the "lowest cost". When examining what constitutes lowest cost, the UTC must start including more than just the upfront financial cost in their deliberations.</p> <p>When PSE wants to build more gas infrastructure, the cost of exacerbating the climate crisis with more methane emissions should be considered. Future costs related to sea level rise, deadly heat waves, droughts, worsening wildfire seasons, and the human health costs related to these events for our region and planet should be included.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE should also not continue to use ratepayer funds to keep the Colstrip coal-fired power plant running beyond 2025. The costs of mining, transporting and using coal create negative impacts on human health, water quality, and our climate. These costs are unacceptable when investments in renewable energy and energy efficiency are available instead.</p> <p>Jeremy Harrison-Smith</p>

	Dana Harris	E-mail	<p>UTC &amp; Public Counsel,</p> <p>I feel this rate increase is quite steep. I cannot pinpoint if this is price gouging, but I know they raised their rates the other year as they always add on increases for the new year and the years after. I feel the steep increase for the 2023 year is based on a concept of what one might call the used car salesman and asking for an incredibly exorbitant price because the last price didn't work so they ask for a more significant raise to get some percent.</p> <p>Not all of this work at Microsoft or Google or Facebook, a lot of us just have regular jobs and are living paycheck to paycheck due to the increase in the cost of living, and now you want to increase electricity by almost 16% over what you already got granted in your previous increase? This is outrageous you're shareholders aren't starving as most of us are and can't make ends meet and now one needs to make a choice between using heat/electricity or groceries?</p> <p>You are the only company we can go with where we live, we don't get a choice of different companies, this is a full- monopoly! This is really ridiculous increase one does not even get that increase a year with employment for the cost of living~except for your shareholders or stakeholders. This is unacceptable and there's no other competition to keep the price down this is a monopoly, this is price gouging, and this is unfair! I also feel that the amount you say will generate is under, as you're not projecting the cost associated with the new transportation of the light rail and the electricity used for lighting in the East Side new trail.</p> <p>Each year you try to raise by an exuberate amount also attaching an increase for the next couple of years after, so what is the increase you have already been granted for 2022, 2023, and 24? I feel you think some of us forgot that.</p> <p>If people in Seattle are concerned about the Seattle City Light electric increase of around 5%, how is it your increase of almost 16% even compare?</p> <p>The price of gas and groceries are hurting a lot of us and you ask for a 16% increase on top of what you already got granted last year for this year. PSE, you really stink.</p> <p>Thank you, Dana Harris</p>
	Patti Rader	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record</p>

is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon

			<p>dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Patti Rader</p>
Jim Bernthal	E-mail		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). 	Jolie Misek	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p>

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to

			<p>pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Jolie Misek</p>

	Sara Bhakti	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Re: PSE request LNG project Tacoma</p> <p>Protecting the environment is my top priority. Please show us it is a priority of yours, too. I can't say it any better than this, from WEC, an environmental group that I support:</p> <p>The proposed LNG facility in Tacoma by PSE is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

			<p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Sara Bhakti</p>

	NJ Tuttle	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable</p>

impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.

			<ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so

			<p>would exacerbate climate harms and contribute to climate catastrophe.</p> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Roger Clark</p>
Mary Garttmeier	E-mail		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). 	Rich Lague	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility</li></ul>

will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,

			Rich Lague

	Robert Astyk	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

			<p>uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Robert Astyk</p>
	Barak Gale	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Second Day Rosh Hashanah</p> <p>Today, the Jewish New Year, we celebrate the birth of the world, acknowledge the privilege to live on this sacred Earth, and we also take an accounting our souls, of our deeds. I can't think of a better way to honor this day than to express my hope and desire that the Commissioners will deny prudence of the Tacoma LNG Project, a project that is more than mere folly, rather an egregious program harmful to the planet and to our population. I witnessed such folly living in S.F. In 1989 at the time of the Loma Prieta Earthquake, and I remember well the horror of the fire in the Marina District. Landfills, earthquake territory, gas pipelines- it was a scarily similar mix as we see now in Tacoma. There are much better ways, renewable paths. Let's waste no time and embrace the life sustaining paths.</p> <p>Thank you. Barak Gale PSE Customer Tumwater, WA *****</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To</p>

this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.

			<ul style="list-style-type: none"><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. 	Steve Uyenishi	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p>

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to

			<p>pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Steve Uyenishi</p>

	Cheryl Biale	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

			<p>uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Cheryl Biale</p>
	John Macdonald	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). 	Toniann Reading	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To</p>

this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.

			<ul style="list-style-type: none"><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Toniann Reading</p>

	Karen Taylor	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will</li></ul>

barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Karen Taylor

	Kristi Hendrickson	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility</li></ul>

will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,

			Kristi Hendrickson

	Jeri Harris	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

	DOmingo Hermosillo	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more</li></ul>

cities in Washington ban new gas utility connections in an effort to combat climate change.

- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Domingo Hermosillo
Kristen Randall	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,  Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma. 	Ilya Bucshteyn	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility</li></ul>

will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,

			Ilya Bukshteyn

Brown</p>
	Gill Fahrenwald	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

			<p>uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. 	Jennifer Morsello	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

			<p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Jennifer Morsello</p>

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Dennis Mace
Jill Tiffany	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,  Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.  Here are the facts:  This facility is not needed: <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.</li><li>• The main purpose of the facility is to provide LNG to marine vessels. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Jill Tiffany</p>
	Dave Baine	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will</li></ul>

barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Dave Baine

Larson</p>
	Patrick McKee	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Are you kidding? PSE jumps ahead of the permitting process and over-rules the express will of the Puyallup people to put an environmentally catastrophic LNG facility (intended for commercial sale of fracked gas, not for powering Washington homes) on unceded tide flat land in Tacoma, and now insists on increasing our rates to pay off their shareholders?</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). But the record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p>

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to

			<p>pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Patrick McKee</p>

Joel Flank	E-mail		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

			<p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Joel Flank</p>

	Mana Iluna	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

			<p>uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Mana Iluna</p>
Erik LaRue	E-mail		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). Betty Barats	E-mail		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more</li></ul>

cities in Washington ban new gas utility connections in an effort to combat climate change.

- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Betty Barats
Margretta Voinot-Baron	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,  Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma. 	Sally Bartow	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is NOT needed to provide gas utility service to ratepayers, has direct and UNACCEPTABLE impact to the Puyallup Tribe, has UNACCEPTABLE environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to DENY prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will</li></ul>

barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Sally Bartow

	Heather Kreeck	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). 	Thom Lufkin	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility</li></ul>

will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,

			Thom Lufkin

greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving

			<p>149,000 gasoline powered cars annually.</p> <ul style="list-style-type: none"><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Tina Ethridge</p>
	Emma Wyler	Email	<p>Utilities_and_Transportation_Commission , PSE customers shouldn't have to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. The Puyallup Tribe and Earthjustice are appealing the permits in court. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years before obtaining proper permits! The pollution from this facility will disproportionately impact already overburdened and marginalized communities: the Puyallup Tribe and immigrants living in the NW Detention Center. The Utilities and Transportation Commission (UTC) needs to consider impacts to overburdened communities in their decision making. Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public. This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both</p>

			<p>state and local government regulations are moving to curtail the use of gas in buildings. The UTC must immediately stop reimbursing PSE for infrastructure dealing in fracked gas. Emma Wyler</p>
	Adina Parsley	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). 	COLLEEN GRAY	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Fracked gas—stored dangerously close to where humans live and work—is being stored in a facility built before being permitted. On the last document I read, PSE claimed its natural gas customers will get 1-2 days worth of gas per year for up to ten years, if needed. This facility was never built to supply natural gas to its customers. It should not be allowed to operate and its costs should not be born by us.</p> <p>Thank you,        COLLEEN GRAY</p>
	Carolyn Treadway	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). IF species currently on Earth are to survive, all fossil fuels <b>MUST</b> remain IN THE GROUND. FOREVER. The LNG facility is an unmitigated disaster. It should be torn down immediately, and no other such facility built anywhere.</p>

The record is clear that this Tacoma facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon

			<p>dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. 	M. Judith Ferguson	Email	<p>Utilities_and_Transportation_Commission , Commission members - It's disturbing to know that Puget Sound Energy (PSE) is once again requesting additional \$\$ from residential customers to subsidize costs for the Tacoma Liquefied Natural Gas (LNG) refinery and their fossil fuel investments, including the Colestrip coal-fired power plant. Dockets UE-220066 and UG-220067</p> <p>Flaunting construction and permitting requirements, PSE began construction of the LNG refinery over two years before obtaining the proper permits. Those permits are still under appeal in court by the Puyallup Tribe</p>

			<p>and Earthjustice. PSE also completely altered the original purpose of the LNG facility, which was two fold: fueling for TOTE vessels and 'peak shaving.' It was stated many times in the early years that bunkering or export was not in their plans. Testimony last year during the Pollution Control Board appeal stated the now well known fact that LNG will be bunkered, barged and put on both ocean going vessels and interstate tractor-trailer rigs. PSE also stated, and continues to state, that the affects of an explosion at the LNG plant could be contained within a cyclone fence surrounding the facility. The Beirut, Lebanon explosion 'blew up' that ridiculous statement. Puget Sound Energy has also changed ownership a number of times. They have little to lose, but much to gain by continued consumer rate increase requests. State of Washington rate users have much to lose to a company that will simply sell itself to the next highest bidder when times get tough as the use of LNG continues to be questioned. During testimony at the Pollution Control Board hearing, PSE stated that they currently had no demand for Liquefied Natural Gas (LNG). They had no customers other than TOTE, their original client, whose ship retrofit had yet to be completed. Nor did PSE anticipate needing LNG for peak shaving, because it is only forecast to be needed during periods of high demand during the coldest winter months.</p> <p>PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>PSE has a long history of false assertions, the most recent one being that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings. PSE has also created headlines over the past several years regarding suits against them for being the cause of fires and/or explosions due to lack of line maintenance and management, as well as violations of gas-safety rules.</p> <p>As you are aware, the Port of Tacoma owns the LNG facility and leases it to PSE. In the event of a loss, Tacoma residents will be the ones holding the bag for a potentially lethal operation that is not adequately insured. There is no sound reason to grant a rate increase to PSE to subsidize an industry that is in decline. After a solid growth in 2021, China's gas and LNG demand is expected to slow down in 2022 and theirLNG imports are set to fall over 14% year-on-year to 69 million tonnes (Mt) in 2022, the largest decline since it began LNG imports, says Wood Mackenzie a Verisk business (Nasdaq:VRSK). The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure that is following a boom-bust business cycle.</p> <p>M. Judith Ferguson        Tacoma, WA</p>
	Amy McKay	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record</p>

is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to

			<p>pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Judah Easley</p>

	S. Schwenger	Email	<p>Commissioners Danner, Doumit, and Rendahl,</p> <p>I am writing today to urge you to reject the rate increase requests by Puget Sound Energy (PSE), which are asking customers to pay rates that are much too high for electricity and methane gas.</p> <p>Washington families are struggling right now as pocketbook expenses—from gasoline to milk and bread, and now utilities—soar higher. The rate increases requested by PSE would make utility costs even less affordable for ratepayers already struggling to pay their bills, especially as real wages have failed to keep pace with inflation.</p> <p>According to NPR, the National Energy Assistance Directors Association (NEADA) says more than 20 million families have fallen behind on their utility bills and the average amount they owe has grown to \$792 — nearly double what it was before the pandemic.</p> <p>"It's not a question of are families heating and cooling their homes responsibly," Wolfe says. "Families do this. They turn the heat down as low as they can. They use air conditioning sparingly. It's just that the cost of home heating and home cooling has gone up so much that low-income families are struggling to pay these bills" (NPR.org).</p> <p>Particularly troubling is that PSE has failed to justify the extent of the rate increases they request. In the "Notice of requested changes to PSE rates and public hearings," PSE cites a number of exceptionally vague reasons for the rate increases. PSE owes all of us detailed explanations, especially as so many Washingtonians struggle to pay their bills. I urge you, as part of your due diligence to ratepayers, to demand specific details of the rate increase requests. The rate increases do not appear to be reasonable and fair—they seem targeted at maximizing profits to the extent of the law.</p> <p>As a ratepayer, some questions I have around PSE's requests include:</p> <ul style="list-style-type: none"><li>• Do the rate increase requests pertain to recovering costs to serve Washington ratepayers specifically, or to recovering costs to serve ratepayers elsewhere, or a mix of both? If the increases are to cover costs elsewhere, who should Washingtonians foot the bill for these?</li><li>• Which state mandates is PSE referring to when they refer to the increased costs of compliance to "decarbonize"?</li><li>• What evidence has PSE provided you, the Commission, in the form of a financial statements, balance sheets, and/or audits or reports, to indicate that the cost of providing electricity and methane gas to Washington State ratepayers specifically, has increased?</li><li>• What specific capital and operating investments has PSE made in Washington State that they've been unable to recoup under current rates?</li></ul> <p>I haven't received a raise in nearly 3 years, despite legitimate justification. PSE definitely doesn't deserve approval to raise rates, especially to such high levels, without first providing rationale for why their requests are fair, just, and reasonable given improvements made or increased costs incurred specifically in Washington State.</p> <p>Sincerely,</p>

			S. Schwenger Kirkland

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

			<p>uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, deb kalahan</p>
	Karen Sheflo	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. 	<p>ELIZABETH SLOSS</p>	<p>Email</p>	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To</p>

this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.

			<ul style="list-style-type: none"><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, ELIZABETH SLOSS</p>
	Sheri Jacobson	Email	<p>Utilities_and_Transportation_Commission ,</p> <p>I strongly oppose the proposed rate hike for several reasons. It involves reimbursement for infrastructure that will run on fracked gas. My home state of Oklahoma has had significant earthquake activity due to fracking. Fracking also causes major environmental damage due to injection and disposal of waste water. As a PSE customer, I do not want my money to go projects that involve fracking, coal, or "natural" gas, which in reality is methane. PSE should be moving to electric heat pumps, particularly since state and government regulations will eventually phase out natural gas. To protect our environment, this rate hike should be denied.</p> <p>Sincerely, Sheri Jacobson</p>
	Scott Fortman	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). 	Sophia Sattar	Email	<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life</p>

			<p>of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>Sophia Sattar</p>

	Derek Benedict	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE).</p> <p>The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects.</p> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p>

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Derek Benedict
Florie Rothenberg	Email	Dear Commissioners Danner, Rendahl, and Doumit,  Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.  Here are the facts:  This facility is not needed: <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.</li><li>• The main purpose of the facility is to provide LNG to marine vessels. facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Joyce Grajczyk

	A Rosen	Email	<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p>

			<p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>A Rosen</p>
	Pam Schell	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so

			<p>would exacerbate climate harms and contribute to climate catastrophe.</p> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Dan Snyder</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

			<p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Betty McNiel</p>
April Brow	Email		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. 	Linda Wasserman	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p>

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Linda Wasserman
Ellen Madsen	Email		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). 	Dora Weyer	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record</p>

is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon

	Bonnie Miller	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p>

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to

			<p>pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Bonnie Miller</p>

	Nannette Gonnella	Email	<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth</p>

			<p>defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p>
	Carol Follett	Email	<p>Raising our utility bill by a net of 12.9% for electricity and 11.9% for natural gas would severely impact our household of older residents on a fixed income. Our costs are increasing in every necessary service from water to energy as well as food and fuel prices, but our income is not increasing at the same rate. The high costs of necessities causes anxiety, and it impacts our ability to contribute to our local economy with discretionary spending or sharing with charities.</p> <p>Exorbitantly increasing the profit of CEOs and other stockholders, many of whom do not reside in our state, comes at a serious cost to the health and well being of our family, neighbors, and communities.</p> <p>Please do not allow this rate increase.</p>
	Joseph Puchot	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>What do you plan to tell your children?</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p>

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Joseph Puchot

Regardless of PSE’s claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility’s use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE’s false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>tom barlet</p>
	Harry Gerecke	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To</p>

this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.

			<ul style="list-style-type: none"><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Harry Gerecke</p>

	Brendi Turner	E-mail	Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas

			<p>(LNG) refinery with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE’s claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility’s use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE’s false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>Brendi Turner</p>
	Christopher Murphy	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the</li></ul>

facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Christopher Murphy

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to</p>

greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving

			<p>149,000 gasoline powered cars annually.</p> <ul style="list-style-type: none"><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Deborah Ramos</p>

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.

			<ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, William Falk</p>

impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so

impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.

			<ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so

			<p>would exacerbate climate harms and contribute to climate catastrophe.</p> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, meredith berlin</p>
Julia Zelman	Email		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your attention to Puget Sound Energy (PSE). I ask you to deny the Tacoma LNG project, an unnecessary and harmful new facility that will hurt the Puyallup Tribe, increase greenhouse gas emissions, and force costs on ratepayers despite the fact that only one to two percent of the gas produced will benefit them.</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. 	Thomas Cox	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will</li></ul>

barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Thomas Cox

	Twylia Westling	Email	<p>Dear Executive Director Maxwell,</p> <p>I'm writing to state my opposition to the rate increase that Puget Sound Energy is requesting.</p> <p>I have been a resident of Washington state for over 30 years, and a Tacoma resident for the last 15 years. My family ties to Washington state run deep.</p> <p>For six years I have stood with The Puyallup Tribe of Indians and my neighbors to oppose the LNG refinery being built on Commencement Bay. If I recall correctly, one of the conditions that the UTC imposed upon PSE when initially approving the project, was a prohibition on recovering costs from the ratepayers. I hope to lay out a clear and concise analysis of my opposition to this request.</p> <p>PSE has stated that they seek this rate increase for the reasons noted below, and following each reason I will provide my justification for opposing this rate increase.</p> <ol style="list-style-type: none"><li>1. To continue to provide safe and reliable energy sources to the ratepayers</li></ol> <p>Safety and reliability ought to be a foundational mandate for a public utility. PSE has had at least two rate increases in the last couple of years and I think it is safe to assume that a portion of that increase should have also funded safety and reliability initiatives. Why are they now coming for nearly 17%? Are they that far behind in their safety and reliability initiatives? According to their annual reliability reports, it appears that PSE has not improved on its reliability in the last ten years. How is this allowed to continue?</p> <ol style="list-style-type: none"><li>2. To meet state mandates for decarbonization and to meet the expectations of ratepayers</li></ol> <p>Same principle stated above – decarbonization and delivery of safe, clean energy sources ought to be a public utility's major foundational mission, especially in the face of the evidence of climate chaos. For six years I have stood with others against the LNG project, and we have been consistent in our message that the methane generated by fracked gas is more dangerous than clean. According to the Environmental Defence Fund, methane's global warming potential is measured at 84, meaning it traps 84 times more heat per mass than carbon dioxide. Again, why is PSE now coming after a double-digit rate increase, after having ignored the voices and the evidence over the last 6 years? Because of companies like PSE, the mandates for clean air and clean water will become more costly. Communities will suffer under the effects of climate chaos. What will PSE do for the ratepayers then? Ask for more money? When ratepayers have lost their homes, will they still be expected to pay so that PSE can finally start working toward decarbonization?</p> <p>The pollution generated by the Tacoma LNG refinery is going to disproportionately affect marginalized and underserved communities, especially the Puyallup Tribe and immigrants held at the NW Detention Center. PSE has continued to anchor the ratepayers to projects that will exacerbate climate chaos and environmental</p>
--	-----------------	-------	--

injustice. AND THEN ASK US TO FUND IT.

3. Specifically to recover more than four years of capital and operating investments

This reason is equally repugnant. The costs of capital and operating investments include: the LNG facility, the Energize Eastside project, and the Lakehills Transmission Line. PSE has ignored community opposition on all these projects, moved them forward, and then has the audacity to make the public pay for those projects. PSE's investments into fossil fuel projects are short-sighted and irresponsible. As ratepayers start to realize the devastation of fossil fuel extraction and usage, they are starting to shift to more environmentally sustainable energy sources. My family is currently evaluating our options for removing gas usage in our home.

4. To increase their return on investment from 9.4% to 9.9%

Of all the reasons listed, this is perhaps the most audacious. This is an astonishing example of the inequality that historically exists in these conversations. Ratepayers who oppose projects are forced to bear the brunt of the costs, rendered voiceless and without agency. The UTC is supposed to be the agency watching out for the ratepayers. I ask you to consider the enormous economic disparity this creates by giving PSE's investors a financial 'leg up' while the ratepayers are left holding the bag

PSE has built their LNG refinery directly across from Chinook Landing, an economic investment of The Puyallup Tribe of Indians. As far as I know, the City of Tacoma has yet to do a safety evaluation of the refinery. I live about a mile away, as the crow flies, and any kind of breach of the facility would have a serious impact on my life. But an event would have a devastating economic and environmental impact on the Puyallup people. The people live within a three-mile radius of the refinery and are subject to the emissions.

I can't stress enough the importance of rigor and accountability in these regards. Just this week alone there have been two major fire incidents at the port. I live a mile away, as the crow flies, and am affected by the air anytime something happens. I, and others, live daily with the knowledge that industry continually receives opportunities to impose their will on residents and ratepayers, without living under the fear of environmental destruction or long term health impacts.

In summary, I want to make sure it is clear how I view this. PSE comes to the UTC to ask for money during an economic uncertainty that the average ratepayer has no protection against. Additionally, PSE has continued to ignore the will of its customer base, and moved forward on projects that create more environmental instability. I implore you to consider my words, and the words of any other ratepayers who raise their voices in opposition to this requested rate increase.

			<p>Miigwech (thank you) Twylia Westling, MPA</p> <p>-- Twylia Westling, MPA The 'i' is silent; I'm not.</p>
Victoria Urias	E-mail		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. cities in Washington ban new gas utility connections in an effort to combat climate change.

- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Kathy Mallalieu
Laurie Schaetzel- Hill	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,  Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.  Here are the facts:  This facility is not needed: <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.</li><li>• The main purpose of the facility is to provide LNG to marine vessels. barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

	Donna Gillespie	Email	<p>I disapprove of a rate increase for PSE on the following grounds:</p> <ol style="list-style-type: none"><li>1. I am tired of flickering lights, power surges and 'interruptions' (not 'actionable' by legal definition - as 'power failure'.) The People of Washington, need and deserve NOW: a reliable supply and cheaper system of power IN EACH COMMUNITY. **</li><li>2. PSE is unwieldy and expensive as a power distribution system: Long distances-Distribution Methods/Centralization of distribution: Vagaries of weather/ Each part vulnerable to computer hacking. PSEs mgmt/ownership structure/centralized bureaucracy: lacks flexibility to innovate and respond to changes.</li><li>3. PSE has a conflict-of-interest with the people and communities of Washington: It is owned and profits from rate-hikes, and its' management is approved by, a for-profit company responsible to shareholders not the taxpayers of Washington.</li><li>4 . PSE has a conflict-of-interest with 'competition' to PSE. e.g. solar or wind turbines owned/operated by landowners not allowed in Washington. In Scotland, Ireland and U.K., almost every farm has its own wind turbine(s) + solar. Communities need LOCAL GRIDS.** (less weather/hacking issues)</li><li>6. After recent Supreme Court decisions, Texas Freeze Meltdowns'/Brownouts /Overheated Power Grids may now be possible in Washington State. Last rate-hike request, I was informed "Federal Regulations would prevent that scenario from happening here". Since then, recent Supreme Court decisions restricted</li></ol>

			<p>Federal Government Regulations, regulations which protect communities from Businesses putting Profit over communities and people.</p> <p>7. PSE too slow for today's changing climate. Technology is available. Manpower is available. People are ready. LET'S DO IT in each community NOW!</p> <p>For these reasons I do not approve of a rate hike for PSE without a forceful, and well publicized, Climate-Responsive** plan for immediate implementation in local communities. NATURE isn't waiting!</p> <p>** Local Community Grids/individual ownership for wind-turbines/solar: PSE buy-backs &amp; PSE legal Assistance for Local 'Zoning/codes,etc' Objections. We deserve a reliable, cheaper and better power supply system NOW.</p> <p>Donna Gillespie</p>

	Gena DiLabio	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

			<p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Gena DiLabio</p>

facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Ji-Young Kim

Keith Dunavant	E-mail	<p>Utilities_and_Transportation_Commission ,</p> <p>I oppose all rate increases requested by Puget Sound Energy (PSE) for dockets UE-220066 and UG-220067. PSE wants to raise residential electric rates by more than 20% during the next three years, and residential gas rates by almost 17%. This is unacceptable. PSE is already Washington’s most expensive utility with many customers struggling or unable to pay their bills. Shareholder profits should not come before basic human needs.</p> <p>Investments have not demonstrated an increase in reliability or quality of service for PSE residential customers despite continued rate increases. Frequency and duration of power outages vary by area creating inequities.</p> <p>PSE's proposed rate increase is unprecedented in its scale and scope. They are largely seeking compensation for infrastructure projects completed in the past, currently being built, and unspecified, incomplete projects. Many of the past projects have been vigorously opposed by PSE’s customers and are manifestly harmful to the environment.</p> <p>Residential Customers should not have to pay for infrastructure that they will likely never use. The Tacoma LNG facility’s main purpose is supplying gas to maritime customers as shipping fuel. PSE claims the facility will also be a backup power supply on a few of the coldest days of the year when demand is the highest. This assertion ignores the trend that demand is actually decreasing due to energy efficiency, and customer preference for renewable sources. Even if the backup was used, it would only account for less than 2% of the facility’s use over the life of the lease, yet PSE is looking for reimbursement on almost half of the construction costs. This is not in the public’s interest and the Utilities and Transportation Commission need to deny all reimbursement for this facility.</p> <p>Continuing to build or expand fossil fuel infrastructure despite dire warnings from the Intergovernmental Panel on Climate Change to rapidly move away from these polluting sources is unacceptable. The impacts of exacerbating the climate crisis will fall hardest on Black, Brown and Indigenous families, low-income households. Please deny these rate increases and be part of a more equitable, healthy, and just future.</p> <p>Keith Dunavant</p>
Rebecca Glass	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p>

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to

			<p>pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Rebecca Glass</p>
Julie Martinson	Email	Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067 The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making. Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing & Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE’s claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility’s use. A rate increase for these purposes is not in the best interest of the public. This facility is predicated on PSE’s false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings. We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure. Julie Martinson	
Emily Withrow	Email	Dear Commissioners Danner, Rendahl, and Doumit,  Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable	

impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.

			<ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Emily Withrow</p>

	Margaret Donaldson	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). I hope you'll consider my comment as a PSE ratepayer and resident of the state of Washington.</p> <p>The Tacoma Liquefied Natural Gas facility should never have been built before permits and community &amp; safety reviews were completed. There are more problems: the record is clear that this facility is not needed to provide gas utility service to ratepayers, it has direct and unacceptable impact to the Puyallup Tribe, it has unacceptable environmental justice impacts, it is a net contributor to greenhouse gas emissions, and finally, it</p>

sets a bad precedent for how energy utilities could greenwash projects. I urge you to deny prudence of the Tacoma LNG project for a few important reasons: to ensure that ratepayers don't have to pay for this expensive and poorly conceived project, because it harms the planet and increases the hazards of climate change, and because it disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change. It is also possible that the state of Washington will make such a rule change for new construction within the state, as other states are also considering.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds.
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area. This puts this disproportionately-impacted community at even greater risk.

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next two decades to avoid catastrophe. Development of the Tacoma LNG facility would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change. When methane escapes into the atmosphere

			<p>uncombusted it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline-powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of this expensive, hasty and poorly conceived project.</p> <p>Thank you, Margaret Donaldson</p>
	Katherine Holmes	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so

			<p>would exacerbate climate harms and contribute to climate catastrophe.</p> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, James Wiley</p>

	Celeste Maris	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). This facility is not needed to provide gas utility service to ratepayers, PSE's proposed facility would have direct and unacceptable impact to the Puyallup Tribe, and the proposed facility has unacceptable environmental justice impacts--it would be a net contributor to greenhouse gas emissions, and it would set a bad precedent. I urge you to deny prudence of the Tacoma LNG project and to ensure that ratepayers don't have to pay for this expensive and poorly conceived project, which harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1-2% of the total gas produced at the facility will</li></ul>

be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use. The investors should bear the financial burden.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, including greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk
- This facility would be located next to I-5, a major interstate freeway, which could be impacted by events at the facility.
- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit about the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project and to ensure that ratepayers don't have to pay for this expensive and poorly conceived project.

Thank you,  
Celeste Maris

	Florence and Kenneth Robinson	Email	<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized</p>

			<p>communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat.</p> <p>PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE’s claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility’s use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE’s false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>Florence and Kenneth Robinson</p>
	Mary Ferm	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don’t have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"> <li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li> <li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will</li> </ul>

barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Mary Ferm

	Lael White	Email	<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat.</p>

			<p>PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>Lael White</p>

	Kate Richter	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

	E. O'Halloran	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility</li></ul>

will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,

			E. O'Halloran

	Jennifer Keller	Email	<p>These comments are for Puget Sound Energy GRC, Docket UE-220066 &amp; UG-220067.</p> <p>Dear UTC commissioners,</p> <p>Thank you for the opportunity to comment on PSE's rate hike request, and for your work overseeing PSE and other utilities in Washington. I live at 115 - 146th Ave SE, Bellevue, 98007. I am a PSE ratepayer. Please deny PSE's requests to pass along to ratepayers the costs of:</p> <ul style="list-style-type: none"><li>• The Tacoma LNG Facility</li><li>• Energize Eastside</li></ul> <p>These projects are unnecessary, damaging, expensive, poorly conceived projects that do not benefit ratepayers. PSE has gone ahead with them even without all the necessary permits or public process, and has assumed they can push the projects through and then force ratepayers to pay for them. This is unacceptable, and encourages other companies to try the same tactics.</p> <p>For the Tacoma LNG Facility:</p> <ul style="list-style-type: none"><li>• PSE has never proven the need. Demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in response to climate change.</li><li>• The facility provides almost no benefit to ratepayers. PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. But they want to charge ratepayers for 43% of the cost to build the facility. This is clearly unfair.</li><li>• The main purpose of the facility is to provide LNG to marine vessels, not benefit ratepayers. This is also</li></ul>

clearly unfair. Ratepayers should not be forced to pay for a fueling facility for marine ships.

- The project harms the surrounding communities, and goes against our state's commitments to address environmental justice. It brings direct, extremely negative impacts and risks to both the Puyallup Tribe and the thousands of people who live and work in and around the Port and Tideflats area. It puts these disproportionately impacted communities at even greater risk. Why should ratepayers be forced to pay for breaking our commitments to environmental justice?
- The project goes directly against Washington state efforts to reduce carbon emissions and make a transition to a low-carbon economy. It is wrong to require ratepayers to finance actions that will destroy the future of the young people alive today.

For Energize Eastside:

- PSE has never proven the need; the electrical demand on the Eastside isn't high enough. PSE claims that the project is needed, often by talking about all the growth on the Eastside, and then saying things about having "to keep up." It sounds plausible, because we all know that there's a lot of growth. But there is also a lot of energy conservation happening. We just don't waste energy at the rate we used to.

So we must look at electricity demand data. Both PSE's data (and by the way, Seattle City Light's), show that energy demand in our area has been growing extremely slowly. I'm aware that in the past, PSE repeatedly projected a significant growth in peak electricity demand, in IRPs submitted to you, the Washington UTC. And then their projections would turn out to be significantly too high, and they would have to adjust them downwards. This happened multiple times. Thank you for telling them this is not acceptable. What the data actually shows is that energy demand has been growing extremely slowly. We have time to look at our many options for dealing with this slow growth in demand. Ratepayers should not be forced to pay for pushing forward with Energize Eastside.

- PSE has also never proven the need for this approach to addressing electrical demand on the Eastside. PSE prepared an EIS and made a big show of inviting comment. I was one of many people who told them that they had done a poor job of examining alternatives, by doing studies that were guaranteed to put a number of effective, less expensive, and less destructive alternatives in a poor light. Did they do better studies? No. They took our comments and stuck them in an appendix in the EIS, and said that Energize Eastside must go forward. It is unfair to force ratepayers to pay for this project, when far better alternatives are available, more so every month.

Consider the period of time since Energize Eastside was first proposed in 2014. A lot of people, but not particularly PSE, have been using that time to really delve into the many other options becoming available. When you put together the many options, such as solar power, demand response, and battery storage, it becomes clearer and clearer every year that there are many other ways to make our grid more resilient--ways that are less destructive, more flexible, and much less expensive. But PSE presses on with Energize Eastside as if these possibilities don't even exist. Why should we pay for this unnecessary project?

I urge you to deny prudence of the Tacoma LNG and Energize Eastside projects, to ensure that ratepayers don't have to pay for these unnecessary, expensive, harmful, and poorly conceived projects.

Thank you.

			Jennifer Keller

	Robert Oxborrow	Email	Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas

			<p>(LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat.</p> <p>PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE’s claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility’s use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE’s false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>Robert Oxborrow</p>
	Nancy Osmundson	Email	<p>**See attached comment**</p> <p>To whom it may concern at UTC;</p> <p>I am a lifelong customer of PSE. I disagree with, and dispute the increase. In light of the current economic crisis the amount that PSE is trying to gain is too high! PSE wants their ROE, to increase from 9.4% to 9.9%. These increases over a three-year period are exorbitant, a 19.62% increase for electricity; a 17.08% increase in natural gas. Even though they are to be spread over a three-year period. It still ends up coming out of my pocket as an expense. NO THANK-YOU!!</p> <p>Three years, is way too fast, and PSE is asking way too much.</p>

			<p>In my opinion, this will create a hardship for all the citizens of the service area. Not just those working for minimum wages.</p> <p>For, example: My operating cost are dramatically rising. Yet my income is not. If you put these increases into place, I will struggle to pay my utility bill.</p> <p>Inflation is on the rise, and salaries are not rising to meet the minimum needs for the citizens. Where are we to find that extra money in an already restricted budget?</p> <p>Please protect the pocketbooks of those of us who are either on a fixed income, or currently are experiencing financial hardships due to the current state of the economy. And furthermore, due to the hardships following the pandemic.</p> <p>I would hope the UTC will review some of the citizens' complaints logged against PSE over the past three years. You may be appalled; at the strong-arm tactics they have used against some of their own "customers".</p> <p>I suggest that PSE either, recover their operating costs spread out over a much longer period of time, or consider a lesser amount of a rate increase.</p> <p>Time for the UTC to put a stop to PSE's requested rate adjustments!</p> <p>UTC just say NO! Nancy Osmundson</p>
	Wanda Unger	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more</li></ul>

cities in Washington ban new gas utility connections in an effort to combat climate change.

- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Wanda Unger

Joe Ross	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,	

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

			<p>uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Linda Dodson	E-mail		<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

			<p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Linda Dodson</p>

	Alex Fay	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to</p>

greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving

			<p>149,000 gasoline powered cars annually.</p> <ul style="list-style-type: none"><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Alex Fay</p>
	Caitlyn Wolfgang	Email	<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p>

	John Gieser	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

			<p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, John Gieser</p>

greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving

			<p>149,000 gasoline powered cars annually.</p> <ul style="list-style-type: none"><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.</li><li>• There was no adequate study or evaluation of the known hazards of building on top of shoreline landfill in the presence of rising sea levels and what was done to acknowledge and/or mitigate those hazards. Nor was there any adequate study or evaluation of the further known hazard of substrate liquefaction of the loose silt that goes down from 1500 to 2000 feet under the landfill before it comes in contact with the Tacoma Earthquake Fault. And there was no discussion about how PSE is not financially responsible for any fires or explosions that might come from the collapse of the LNG facility and the subsequent breakage of the natural gas line that also runs through the landfill to take gassified natural gas to the facility.</li></ul> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, Roger Martin</p>

cities in Washington ban new gas utility connections in an effort to combat climate change.

- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Sarah Campbell
JoAnna Redman-Smith	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

	Estelle Seeley	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility</li></ul>

will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,

			Estelle Seeley

	James Ploger	Email	Dear Commissioners Danner, Rendahl, and Doumit,

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

			<p>uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Jane Miller	Email	Utilities_and_Transportation_Commission ,	<p>Why was PSE allowed to begin construction on this facility two years before proper permits were obtained? Why were they held above the law in this aspect?</p> <p>Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat.</p> <p>PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The</p>

			UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure. Jane Miller
	Silus Marleau	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). 	Liselotte Silk	Email	<p>This proposed rate change will hit seniors like me very hard. It is not reasonable to increase our utilities by that much. We are not short of gas or electric if we are allowed to use what we have in the sea and ground. It's all well and good to try to go green but it should not be at the cost of the citizens of this country. Electric cars are using energy and car owners are getting it still free at the charging stations.</p> <p>Liselotte Silk Blaine, WA 98230</p>
	Kim Dobson	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p>

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

			<p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you,          Kim Dobson</p>
	Fred Walls	Email	<p>Utilities_and_Transportation_Commission ,          Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>Fred Walls</p>
	Robert Kenny	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record</p>

	Debbie Thorn	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere

			<p>uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.</p> <ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. 	Betty Williams	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the</li></ul>

facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,  
Betty Williams

impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;

The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Here are the facts:</p> <p>This facility is not needed:</p> <ul style="list-style-type: none"><li>• PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.</li><li>• PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility</li></ul>

will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tidelands area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Thank you,

			Emily Willoughby

	Tina McKim	E-mail	Dear Commissioners Danner, Rendahl, and Doumit,

Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.

- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquified Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so would exacerbate climate harms and contribute to climate catastrophe.

To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

			Thank you, Bob Schuessler
Kathleen Allen	E-mail	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. 	Robb Krehbiel	Email	Dear Commissioners Danner, Rendahl, and Doumit,

		<p>PSE's LNG facility is outrageous and illegal. LNG is a pipe dream - a fossil fuel that further keeps us beholden to polluting industries. The LNG facility was built illegally on the Puyallup Tribal Land without their consent or approval.</p> <p>Shame on PSE for pretending they care about the environment. Shame on them for perpetuating environmental racism. And shame on them for making rate payers pay for their illegal, polluting boondoggle.</p> <p>PSE should be held responsible for all of the pollution they have caused. Ultimately, they should be required to tear down their LNG facility.</p> <p>Thank you, Robb Krehbiel</p>

impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility’s cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples’ homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.
- As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.
- Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation. Doing so

			<p>would exacerbate climate harms and contribute to climate catastrophe.</p> <p>To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.</p> <p>Thank you, christopher Grannis</p>
Alyssa Parker	Email		<p>Utilities_and_Transportation_Commission , Puget Sound Energy (PSE) customers should not be forced to pay for the Tacoma Liquefied Natural Gas (LNG) refinery or any other fossil fuel investments including the Colestrip coal-fired power plant with a rate increase. Dockets UE-220066 and UG-220067</p> <p>The Puyallup Tribe and Earthjustice are still appealing the permits in court for this controversial refinery. The only reason the facility is fully constructed prior to these court proceedings is because PSE began construction two years prior to obtaining proper permits. They should not be rewarded for their bully tactics. The pollution from this facility will disproportionately impact already overburdened and marginalized communities—namely the Puyallup Tribe and immigrants living in the NW Detention Center. This injustice has been recognized by the Tacoma Human Rights Commission. In order to stop the cycle of systemic environmental racism, governing bodies like the Utilities and Transportation Commission (UTC) need to consider impacts to overburdened communities in their decision making.</p> <p>Approving reimbursement for infrastructure that will run on fracked gas must consider the following additional costs: 1) human costs such as violations of Indigenous sovereignty and increases in cases of Missing &amp; Murdered Indigenous Women 2) health costs to nearby communities such as cancer and birth defects 3) environmental costs such as poisoned water tables, earthquakes, and destruction of habitat. PSE claims the facility will provide cleaner fuel for marine shipping. Studies show that LNG is just as bad for climate as other marine bunker fuels when lifecycle emissions are counted. Regardless of PSE's claims, the cost of cleaning up the shipping industry should not be the burden of residential customers. Over the life of the lease, high-demand peak shaving for residential customers only accounts for about 2% of the facility's use. A rate increase for these purposes is not in the best interest of the public.</p> <p>This facility is predicated on PSE's false assertion that public demand for natural gas will increase. This assumption ignores the reality of growing public demand for electric heat pumps instead of gas heating. Both state and local government regulations are moving to curtail the use of gas in buildings.</p> <p>We can no longer ignore the warnings about methane by the International Panel on Climate Change. The UTC should stop reimbursing Puget Sound Energy and other utilities for fracked gas infrastructure.</p> <p>Alyssa Parker</p>

	Gwen Parker	Email	<p>Please don't give PSE the raise it is asking for. I am retired and on a fixed income. Inflation is really hurting my ability to stay in my home. I don't need this powerful group getting more of my money.</p> <p>Gwen Parker</p>

	Barbara Rombold	Email	<p>Dear Commissioners Danner, Rendahl, and Doumit,</p> <p>Thank you for your work to provide oversight and accountability to Puget Sound Energy (PSE). The record is clear that this facility is not needed to provide gas utility service to ratepayers, has direct and unacceptable</p>

impact to the Puyallup Tribe, has unacceptable environmental justice impacts, is a net contributor to greenhouse gas emissions, and sets a bad precedent for how an energy facilities can greenwash projects. To this end, I urge you to deny prudence of the Tacoma LNG project, to ensure that ratepayers don't have to pay for this expensive, and poorly conceived project that harms the planet and disproportionately harms highly impacted and vulnerable communities that live near the Port of Tacoma.

Here are the facts:

This facility is not needed:

- PSE has yet to prove this facility is needed – demand for gas utility service will continue to decline as more cities in Washington ban new gas utility connections in an effort to combat climate change.
- PSE represented during its environmental review that only 1% or 2% of the total gas produced at the facility will be used to benefit ratepayers. Yet, they want to charge ratepayers for 43% of the cost to build the facility. It is unfair to charge ratepayers for such a significant proportion of the facility's cost, when they will barely benefit at all from its use.
- The main purpose of the facility is to provide LNG to marine vessels. Ratepayers should not be forced to subsidize a fueling facility for marine ships.

This facility has unacceptable environmental justice impacts:

- Liquefied Natural Gas (LNG) has known air pollutants, ranging from greenhouse gas methane and smog-forming volatile organic compounds;
- The Tacoma LNG Facility can store large quantities of highly explosive fuels, such as propane and butane, near densely populated urban neighborhoods, which are adjacent to the Port of Tacoma. This elevates risks and threats of disaster scenarios, such as an unconfined vapor cloud explosion within blocks from peoples' homes.
- This highly polluting, and risky facility is located less than a mile from homes, schools, churches and daycare facilities, as well as the thousands of people who live and work in and around the Port and Tideflats area—and would put this disproportionately impacted community at even greater risk

This facility harms our climate:

- There is a broad scientific and policy consensus that GHG emissions must be radically reduced over the next few decades to avoid catastrophe. Development of the Tacoma LNG facility the project would generate large amounts of GHGs for decades, undermining state and agency climate goals and hindering the transition to a low-carbon economy.
- LNG is a fossil fuel composed primarily of methane. When burned for fuel, methane releases carbon dioxide, the primary contributor to global climate change, and when methane escapes into the atmosphere uncombusted, it is a highly potent GHG in its own right, more than 80 times more powerful than carbon dioxide.

			<ul style="list-style-type: none"><li>• As built, the Tacoma LNG facility would emit approximately the same amount of GHG pollution as driving 149,000 gasoline powered cars annually.</li><li>• Allowing PSE to recover costs for the facility would encourage the company to promote continued growth in the sale and use of fracked gas, a fossil fuel, by marine vessel customers and transportation.
