Rail Clearance Waiver Request- Andeavor Logistics Vancouver WA Terminal

Andeavor is requesting a permanent waiver of WAC 480-60-0040 and WAC 480-60-050 regarding overhead and side clearances, respectively, for the installation and operation of replacement access gangways for the three-car railroad tank car offloading rack at the Andeavor-leased facility within the Port of Vancouver Washington.

The rail siding that serves our offloading rack ends within our facility and is access-controlled by a locked gate. BNSF RR moves the rail cars in and out of our facility. Gangway replacement is desired to satisfy current OSHA fall-protection requirements.

Stamped drawings, a diagram indicating the position of the replacement gangways relative to the rail clearance envelope, and documentation of BNSF RR approval of the design accompany this request.

Please contact me if further background is desired to adequately consider our request for exemption.

Sincerely,

Jeff Carter
