June 10, 2019

Mr. Evan Enright,

I am reaching out to you today on behalf of Lonza Wood Protection to request clearance waivers for the facility located at:

532 Hendrickson Dr  
Kalama WA 98625

There are two clearance waivers requested, and are as follows:

1. Height clearance within a building with pass through rails reduced from 22'6", which is the standard overhead clearance requirements per WAC 180-60-040, to 18'8", which is the measurement from the track to the bottom of our safety loading cage. The cage is restricted from going higher due to the building's ceiling. This cage provides us with much improved fall protection and is designed by Saferack Loading Rack Technologies.
2. Side clearance reduced from 8'6", which is the standard side clearance requirements per WAC 480-60-050, to 6'0" for a previously installed pulley mount block outside the entrance to the building discussed in waiver request #1. This block was installed previously for railcar movement but has become obsolete but represents a significant expense to remove. At a height of only 26" and the addition of close clearance signage, this should represent minimal hazard to railroad personnel.

Please let me know if you need any further information on these clearance waiver requests. Thank you in advance.

Sincerely,

Nick Kamerath
