Dear Commissioners,

It is clear I need to do more research. However, I feel strongly about lending my voice towards our environmental concerns.

The need for coal is over and the location of these coal plants deplorable. A town that is predominantly underprivileged kids? They deserve better. There must be a way that those who work and serve can be provided new means of living that can benefit their town, state, and our nation. Maybe not every town needs a college, but one might make up for the loss when the mines close.

Please consider wind and solar farms. Please help our Evergreen state stop relying on a hypocrisy.

Sincerely,
Selena Hayes
