To Whom it May Concern:

Re: Dockets UE-220066 and UG-220067

We received notice of the requested PSE rate changes, and were disgusted. During a time when our economy is already suffering and people are struggling to keep gas in their cars and food on their tables, a proposed increase of 13.59% for Electric Service and 12.98% for Natural Gas Service for 2023 is ridiculous. On top of that, the proposed increases for 2024 and 2025 are less than 3%. None of the reasons that PSE have given to justify the request for the increases balance out the damage this will cause many families and households.

While we understand that rate increases are inevitable, this rate of increase in such a small period of time is too much to ask. We hope that you will seriously consider this when you make your decision to approve or reject these changes. Thank you.
