Hello,
Here are my comments to the EIP.

PSE should work to

1) Reduce peak demand by requiring PSE to expedite and expand their Demand Response and Time Varying Rates programs.
2) Reduce price volatility and greenhouse gas emissions by requiring PSE to accelerate acquisition of new renewable clean energy resources.
3) Increase the resiliency of the electric system by requiring PSE to increase programs that encourage local solar and battery installations.
4) Reflect future capacity needs more accurately by requiring PSE to revise temperature modeling to reflect the changing climate and then resubmit their CEIP.
5) Stop promoting Natural Gas appliances and use, since Natural gas use will need to be reduced sooner, and eventually cease later.

Thank you
