RE: Docket UE-231031 (Advice No. 2023-60) Puget Sound Energy's Electric Tariff Revision

I am writing to express PSCCU's full endorsement of this revised tariff submission. Customers of PSE deserve rates that are calculated with precise, comprehensive, and impartial data, and that take into account concerns of fairness and equality. The purpose of this tariff filing is to provide PSE customers with transparent information so that they can make well-informed choices regarding their investments in clean energy, until a thorough, scientific, and unbiased study can be conducted on the value of solar energy. The findings of the study will then assist in determining appropriate future compensation for the clean energy generated by solar adopters and contributed to the grid.

Maintaining the current structure for net-metered solar power without any changes is crucial to prevent any negative impact on consumers. This includes both those interested in adopting solar power and those who benefit from the clean energy generated by their neighbors. This tariff request showcases PSE's commitment to a responsible and collaborative approach to determining the most equitable net metering tariff that is in the best interest of all of their customers.

I respectfully request that you approve this tariff filing.

Shannon Ellis-Brock
