

Graciela,

Thank you for allowing us to make follow up comments. I could hardly hear on the bridge connection and then it cut out when Jim was giving our suggested language changes to 100-123 (2) (d) so I will restate them here.

We propose to substitute the following language for (2)(d): "Necessary rights of way, easements, approvals and permits have not been secured; or"

Our rationale for this change is that generally it is the customer's responsibility to obtain rights of ways, etc. The proposed rule infers the utility is responsible for securing this and we would not like customers to have this impression.

I am comfortable with the Commission moving ahead with a decision and not deferring the adoption of 100-123 to a future meeting.

Carole
