

Rather than recalling the released capacity in the event of a Transporter notification of an imminent general OFO, Releasing Shipper may require Replacement Shipper to realign supply to the opposite side of the constraint point, reduce nomination through the constraint point, flow displacement gas through the constraint point or take other action mutually agreeable to Transporter to satisfy its share of the Releasing Shipper's OFO obligation. Releasing Shipper will immediately communicate to Replacement Shipper any notification Releasing Shipper receives from Transporter pursuant to Section 14.15d(iii) of Transporter's Tariff and will request Replacement Shipper to take the necessary actions to help comply with the OFO obligations imposed by Transporter upon the Releasing Shipper. Further, Releasing Shipper conditions its capacity release upon Replacement Shipper bearing the financial responsibility for any penalties assessed against Releasing Shipper as a result of any failure by Replacement Shipper to take the required actions to help satisfy Releasing Shipper's OFO obligations with respect to the released capacity.
