| Issue Title: | Create New Local Service Migrations Overview Practice |
|---------------------|--|

| | |
|--|---|
| Document Name: | LSOG |
| Industry Segment: | Local |
| Issue Statement/ Business Need: | <p>Issue Statement:</p> <p>The migration of end-users between Service Providers (e.g., CLECs, ILECs and/or Wireless Carriers) is complex. These migrations will usually involve more than two companies, each with specific migration interactions and responsibilities. Currently, there are federal, multiple state rules/guidelines and company specific local service migration ordering processes in various stages of development at local or regional levels.</p> <p>OBF process guidelines are designed from a national perspective, taking into consideration all known interconnection-ordering requirements. Therefore, the LSOG is designed to accommodate local service migrations for all industry parties, regardless of federal, state and/or company specific needs. However, not all impacted industry parties are OBF participants. Therefore, the LSOG documentation may be unfamiliar and/or intimidating for some non-OBF industry parties.</p> <p>OBF processes are developed as a National Industry Support Interface (ISI) Guideline. Lack of familiarity with the LSOG by all industry parties, federal or state regulatory bodies have inhibited the intended use of the document as a national standard for development of local and regional processes, which may be inconsistent.</p> <p>Business Need:</p> <p>There is a need for the OBF to identify and isolate all local service migration information and processes within a single source document to provide all industry parties a tool that explains the applicable OBF processes, forms and data elements.</p> <p>The LSOP Committee's Local Service Migrations Task Force (LSMTF) recommends development of a new informational practice, the Local Service Migrations (LSM) Overview Practice, to answer this business need.</p> <p>All industry parties, including regulatory bodies, which are interested or involved in local service migration guideline development at a local or regional level, will then be able to use this new practice as a tool for explaining and understanding the applicable OBF national processes, forms and data elements already available.</p> |
| Impact on Other Issues or Procedures: | <p>Issue 2372/LSOG: "Clarify the Industry Intent for all Activity Fields"</p> <p>Issue 2452/LSOG: "Local Service Ordering Guidelines Release Management"</p> |

| Issue Title: | Create New Local Service Migrations Overview Practice |
|---------------------|--|

| | |
|------------------------------|---|
| | LSOG PRACTICE: "ATIS/OBF/LSR-070" |
| Desired Results: | <p>Create a new Local Service Migrations (LSM) Overview Practice that:</p> <ul style="list-style-type: none"> - Contains all local service migration order flows. - Provides a cross-reference matrix that will indicate each LSOG Form and the associated practice's data elements that would be applicable per local service migration order flow. - As forms and data elements are identified in the new practice's matrices, add/modify/delete, where needed, LSOG data elements required for enhancing and/or simplifying the local service migrations ordering process. |
