EXHIBIT 3

BROADBAND PLAN

As they are known to the Company at the date of this Report, the following projects exist or are planned by Inland Telephone Company in order to further its broadband footprint. The “Current Projects” are those that the Company is presently working on completing; many have already been mentioned in previous filings (i.e. ETC Filing and SUSF Compliance).

Current Projects:

Dewatto Exchange – Rather than an Adtran/VDSL solution for the Dewatto exchange that was enumerated in the previous filing of this report, the Company is currently working on fiber-to-the-premise (“FTTP”) in portions of this exchange. Since the Company is not borrowing funds in order to upgrade Dewatto, the FTTP conversion will be done in phases with the first phase being to an area experiencing failing copper and the other area was selected for its premise density. As of the submission date of this report, the Adtran TA5000 has been purchased, delivered and installed in the central office, engineering is almost complete and construction has started. While FTTP is being constructed, the Company will be installing VDSL in other areas of the exchange in order to increase broadband speeds available. The Company has estimated the initial project (Phase 1) cost to be approximately \$500,000. The area that Phase 2 will encompass has yet to be decided as we examine customer densities. The Company does not have a timeframe for full completion of the exchange; however, the Company will be trying to complete Phase 1 by June 30, 2023. As of June 30, 2022, there are approximately 594 locations in the Dewatto exchange identified where service can be provided of which none are capable of speeds greater than or equal to 25/3 Mbps. Phase 1 will add approximately 60 locations capable of speeds greater than or equal to 25/3 Mbps. It is uncertain how many locations will be capable of speeds greater than or equal to 25/3 Mbps when the VDSL is installed.

Uniontown Exchange – As of the submission date of this report, the Company has completed FTTP in the towns of Uniontown and Colton and is working on construction of FTTP to the outlying remote areas of the exchange. The Company does not have a timeframe for full completion of the exchange.

Planned Projects:

Prescott Exchange – During 2021, the Company converted the exchange to VDSL; making 172 locations capable of speeds greater than or equal to 25/3 Mbps. As of June 30, 2021, there were 253 locations in the Prescott exchange identified where service can be provided of which none were capable of speeds greater than or equal to 25/3 Mbps. The Company had a capital expenditure of \$12,888 for this project in 2021. The Company plans on revisiting the expansion of fiber-to-the-premise (“FTTP”) to this area; there is no timeline for conversion from VDSL to FTTP as the Company is working on another exchange.

Roslyn Exchange – During 2021, the Company installed a VDSL cabinet; spicing the mainline fiber to the cabinet and transitioning customers. This cabinet provides service from what is known as the Anna Belle development to the Night Sky development (the last development before entering the Wenatchee National Forest). According to the Kittitas County Assessor’s website, there are currently 139 platted lots that are affected of which 50 have dwellings on them. The VDSL upgrade gave 24 locations capable of speeds greater than or equal to 25/3 Mbps. The Company plans on revisiting the expansion of fiber-to-the-premise (“FTTP”) to this area; there is no timeline for conversion from VDSL to FTTP in and around the Anna Belle development to the Night Sky development. The Company had a capital expenditure of \$40,992 for this project in 2021; excluding the additions to the Adtran TA5000 in the central office.
