Good morning!

We wanted to provide an update on where we are at with the haul, in regards to what was originally discussed and see if we can get some help on an issue that we are having.

As of Saturday we have provided the site with 19 twenty-yard drop boxes. The two (over the requested 17) were done to assist in the current problem. The issue is that the material coming out of the plant has too much water in it. Andy, our Route Manager, has been in constant contact with Kacey about our concerns. Is it possible to get the same group of folks together that showed us around the plant a month back together this morning with Andy to go over our concerns and look at the material on site together? I appreciate your help with this!

Thanks,

Charlie Dietrich
