

**BEFORE THE WASHINGTON UTILITIES AND TRANSPORTATION  
COMMISSION**

**Docket Nos. UE-060256**

**WUTC v. CASCADE**

**RESPONSE OF PUBLIC COUNSEL TO STAFF  
DATA REQUESTS**

Request No: 43  
Directed to: Judith Krebs  
Date Received: August 21, 2006  
Date Produced: September 6, 2006  
Prepared by: Jim Lazar  
Witnesses: Jim Lazar

**WUTC STAFF DATA REQUEST NO. 43**

**Re: Witness Jim Lazar**

Referring to page 33, line 15 through page 35, line 18 of Mr. Lazar's direct testimony, please provide all multiple regression price elasticity studies that Mr. Lazar has done on the inverted block rate design that he has proposed. Please provide a working electronic copy of the response and all supporting data.

**RESPONSE:**

Mr. Lazar has not done multiple regression price elasticity studies in association with this proposal. He has computed the estimated effect based on an arc elasticity of -0.3. A World Bank presentation on elasticity, that contributed to Mr. Lazar's selection of this arc elasticity is provided as WUTC 43 World Bank elasticity.ppt.

# Session 3 & 6

# Introduction to the Use of Economic and Financial Regulatory Models

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Topics

- The regulation problem
- Examples
  - Tariff rebalance to achieve social objectives
  - Devaluation and tariff pesification
- The model as a tool

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# The Regulation Problem

- Technological features of infrastructure sectors
  - Long life of assets
  - Investment irreversibility
  - High share of fixed costs
  - Natural monopoly
- Need to regulate

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultoras  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Regulatory Objectives

- **Sustainability:** adequate return on capital; attraction of capital to the industry
- **Allocative Efficiency** (prices = cost)
- **Productive Efficiency** (cost minimization)
- **Fairness:** to avoid unfair discrimination and ensure participation (universal service)

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Trade-offs between Objectives (1)

- Allocative Efficiency vs. Sustainability
  - Under a natural monopoly, marginal costs are lower than average costs
- Allocative Efficiency vs. Productive Efficiency
  - The leveling of tariffs and costs can reduce incentives to minimize costs

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

CONSULTORES

**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Trade-offs between Objectives

## (2)

- Efficiency vs. Fairness
  - Price discrimination is efficient but can be unfair
  
- Sustainability vs. Fairness
  - Social tariffs or subsidies to certain services can challenge service sustainability

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Economic-Financial Model

- It enables the analysis of alternative scenarios thus:
  - Providing a consistency framework among instruments, variables, parameters and functional relations
  - Quantifying the impact on the different actors (users, firm, government, creditors)
  - Contributing to the transparency and equanimity of the regulatory process

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACRO ENERGIA S.A.**  
en economía de los servicios públicos

# Features

- The model has been designed taking into consideration:
  - Sustainability objectives
  - Economic behavior
  - Social objectives
  - Conflicts among objectives

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Sustainability

- To find a suitable combination of variables to reach the equilibrium:
  - i.e., the internal rate of return equals the opportunity cost of capital
- Also, to verify the financial viability of the project
- Forecasted financial statements
- Analysis of financial indicators

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

CONSULTORES  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Economic Behavior

- It internalizes the behavior functions of economic agents:
  - Demand function
    - As a function of elasticity
  - Production function
    - Investments as a function of quality
    - Investments as a function of expansion
    - Efficiency gains

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Demand Function - Elasticities

- The model includes price and income elasticity as parameters
  - Electricity ■
  - Water ■
- Elasticity:
  - Percentage variation in quantity demanded after a change of 1% in the price (income) of the good (consumer)
- Quantification of users' reaction after changes in prices and/or income

# Price Elasticity: Numerical Example

## 20% Improvement in Service Quality

### => Tariff Increase

Electricity	Pe	Required Increase Variable Charge Block 1
No Elasticity	-	10.2%
Minimum	-0.1	10.6%
Maximum	-0.8	14.7%
Average	-0.4	12.0%

WORLD BANK INSTITUTE

Promoting knowledge and learning for a better world

CONSULTORES  
MACROENERGIA S.A.  
en economía de los servicios públicos

# Production Function - Investments

- Exogenous investments
  - The amount of the investment scheme is included in the model as a parameter
- Endogenous investments
  - The model determines the required investment amount on the basis of its parameters and forecasts
  - Treating investments endogenously implies a broad knowledge of the sector under analysis

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Investments as a Function of Quality - Electricity Sector

WORLD BANK INSTITUTE

Promoting knowledge and learning for a better world

CONSULTORES

MACROENERGIA S.A.  
en economía de los servicios públicos

# Production Function – Efficiency Gains

- Efficiency factor applicable to O&M costs
  - Introduced as a parameter
    - In accordance with benchmarking studies
  - Used as an instrument
    - What is the efficiency gain consistent with a given scenario?

# Efficiency Gains - Electricity Distribution Sector

- Fixing an X factor = 3% annually results in a decrease of electricity tariffs of about 6.6%
- A 10% tariff reduction requires an X factor = 4.4% annually

# Social Objectives

- The model provides for different tariff structures for each income level
- It enables the analysis of the effect of a measure on different types of users

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACRO ENERGIA SA**  
en economía de los servicios públicos

# Social Impact Indicator: Bill / Income

- Increase of 20% in Water tariffs

Bill / Family Income	Present	New	Difference
Poor	1.9%	2.3%	0.4%
Low income	1.3%	1.6%	0.3%
Medium income	1.1%	1.4%	0.3%
High income	0.9%	1.1%	0.2%

# Example using EFM

■ Electricity ■

■ Water ■

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores

**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Access Subsidy

## New Users

- Elimination of connection charge can be compensated for with
  - 6.5% increase of the fixed charge to all users
  - 23% increase of fixed charge for the 30% of users with highest income
  - Annual treasury contribution of 0.3M\$

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

CONSULTORES

**MACRO ENERGIA SA**  
en economía de los servicios públicos

# Access Subsidy Existing Users

- 50% decrease of fixed charge for the 20% of users with lowest income

WORLD BANK INSTITUTE

Promoting knowledge and learning for a better world

consultores

**MACROENERGIA SA**  
 en economía de los servicios públicos

# What does the Model Provide in these Scenarios?

- An instrument which
  - guaranties the consistency between the different instruments and objectives
  - quantifies the economic and financial impacts on the various actors
  - values the sensitivities of the analysis in relation to different variables and parameters assumptions
  - assures the transparency of the analysis and the justification for the decisions
- A list that verifies the information necessary to take decisions

# Model Basis

- Information:
  - Internal: related to the firm  
Regulatory Accounting
  - External: related to comparable  
efficient costs and demand. Market  
studies and benchmarking

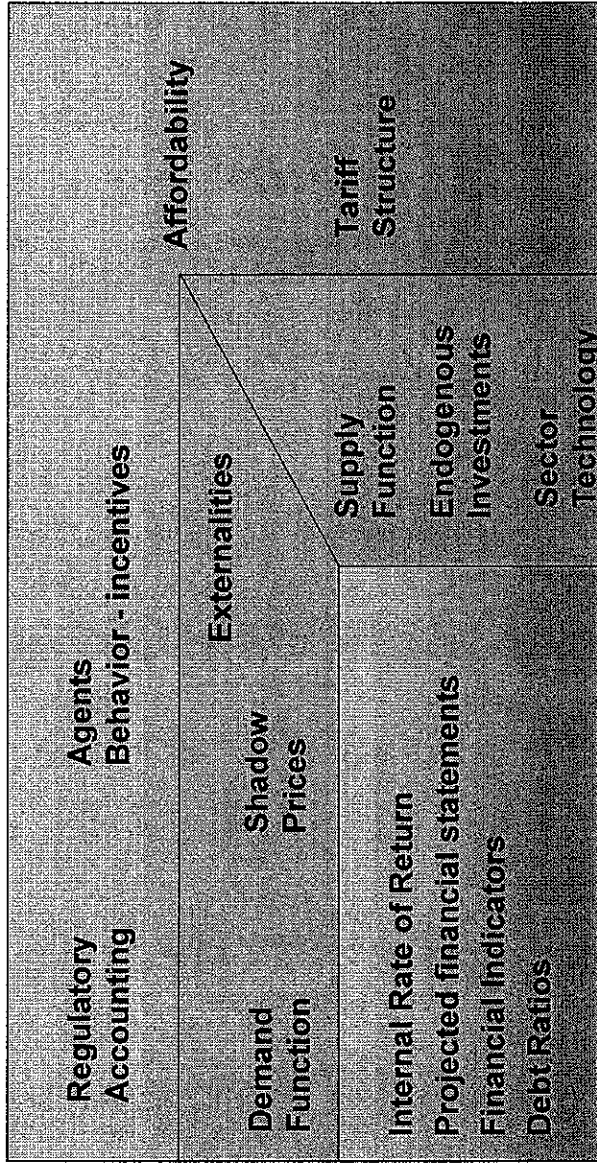

WORLD BANK INSTITUTE

# Electricity Distribution Example

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

CONSULTORES  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Base Case: Electricity Distribution

- Characteristics
  - Service concessions granted in 1992 for 95 years divided into ten-year management periods
  - Price cap regulation with reviews every five years
  - Tariffs in dollars indexed in accordance with US inflation
  - Minimum quality requirements

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACRO ENERGIA S.A.**  
en economía de los servicios públicos

# Base Case: Electricity Distribution

- Coverage
  - 100% coverage in the metropolitan area
- Quality
  - Substantial improvements of service quality
- Tariffs
  - Two-part (fixed charge and variable charge) and decreasing blocks (the higher the consumption, the lower the unit price)

# Residential Users: Base Case

	Low Income	Medium Income	High Income	Total
Number of Users	46,286	115,715	69,429	231,430
Average Tariff per Category - \$/month	6.98	9.43	11.77	9.51
% metered users	85%	100%	100%	97%
Billing for energy sales (M\$)	3.50	13.09	9.81	26.40

# Example 2

## Macroeconomic crisis

- Background
  - Recession since 1997
  - Deterioration of fiscal situation
  - Increase of country risk
  - Capital leakage
- Outbreak
  - Capital flow constrains
  - Default on sovereign debt
  - Economic Emergency Law

WORLD BANK INSTITUTE

*Promoting knowledge and learning for a better world*

consultores  
**MACRO ENERGIA S.A.**  
en economía de los servicios públicos

# Economic Emergency Law

- Pesification and no indexation of utility tariffs
- Renegotiation of contracts considering
  - 1) impact of tariffs on competitiveness of the economy and income distribution;
  - 2) service quality and investment schemes, when established by contract;
  - 3) users' interest and service affordability;
  - 4) security of systems involved; and
  - 5) firms' return

CONSULTORES  
**MACROENERGIA S.A.**  
en economía de los servicios públicos

# Economic Emergency Law

- Pesification and no indexation of utility tariffs
- Renegotiation of contracts considering
  - 1) impact of tariffs on competitiveness of the economy and income distribution;
  - 2) service quality and investment schemes, when established by contract;
  - 3) users' interest and service affordability;
  - 4) security of systems involved; and
  - 5) firms' return
