Washington

West Control Area (WCA) Allocation Handbook

West Control Area Interjurisdictional Allocation Methodology

Overview

PacifiCorp employs the West Control Area (WCA) interjurisdictional methodology for the purpose of allocating its costs to customers in the state of Washington. This method was adopted by the Washington Utilities and Transportation Commission in Docket No. UE-061546. In its Final Order, the Commission stated, "We approve PacifiCorp's proposed West Control Area (WCA) interjurisdictional cost-allocation for Washington modified by ... Staff's adjustments We approve the Company's recommended five-year trial period and Staff's recommended "oversight committee." We reject all other proposed modifications to the WCA." (Order 08, p. 13, par. 43)

The west control area consists of PacifiCorp's California, Oregon and Washington jurisdictions. Generation and transmission resources assigned to the west control area consist of company-owned resources located within the west control area or with physical capability to deliver energy into the west control area. Generation resources located within the west control area consist of the west-side hydroelectric resources and the Hermiston and Chehalis generating stations. The Colstrip and Jim Bridger generating stations are also assigned to the west control area, though not located within it, because transmission capability exists to deliver their output into the west control area. Additionally, wholesale purchase contracts such as the Bonneville Power Administration (BPA) peak purchase and Mid-Columbia hydro contracts are assigned to the west control area. The WCA method identifies the costs associated with these resources, purchases and sales, and allocates them to Washington based on Washington's relative contribution to the west control area's energy usage.

Purpose of this handbook

This allocation handbook illustrates how the WCA factors are calculated and how they are used in determining Washington's revenue requirement. Below, the Energy Allocation Notes provide general explanations on methods of allocation. Part II of the handbook explains each factor in detail, how it is calculated, and gives a brief description of the types of costs allocated on each factor. Data in Part II used to demonstrate the calculation of factors correlates with the June 2008 Washington General Rate Case. Part III is a list of PacifiCorp's accounts that shows which factors are used to allocate the costs of those accounts.

Energy Allocation Notes

I. <u>Classification of Resource Costs</u>

All resource fixed costs, wholesale contracts and short-term purchases and sales are classified as 75 percent demand-related, 25 percent energy-related. All costs associated with fuel, non-firm purchases and sales are classified as 100 percent energy-related.

II. <u>Allocation of Resource Costs and Wholesale Revenues</u>

Generation and transmission resources are assigned to either the east or west control area. The factors used to allocate these costs are the Control Area Generation East (CAGE) and Control Area Generation West (CAGW) factors. Certain generation and transmission expenses such as administration and engineering cannot be assigned to specific resources. These costs are allocated using the System Generation (SG) factor. Control area fuel-related costs and non-firm sales and purchase are allocated using the control area energy factors; Control Area Energy West

(CAEW) and Control Area Energy East (CAEE). The factors used to allocate costs associated with the Jim Bridger plant are weighted to reflect the fact that the total output of the plant cannot be delivered to the west control area. Resource and fixed costs related to the Jim Bridger Plant are allocated using the Jim Bridger Generation (JBG) factor. Fuel-related costs associated with the Jim Bridger Plant are allocated using the Jim Bridger Energy (JBE) factor. The factors used to allocate wheeling revenues are based on the control area allocation of net transmission plant. Firm wheeling revenues are allocated using the Wheeling Revenue – Generation (WRG) factor. Non-firm wheeling revenues are allocated using the Wheeling Revenue – Energy (WRE) factor.

III. Assignment of Distribution Costs

All distribution-related expenses and investments that can be identified with a specific state are directly assigned to the state in which they are located. Certain distribution costs such as administration and engineering that cannot be assigned to a specific state are allocated using the System Net Plant Distribution (SNPD) factor.

IV. Allocation of Administrative and General Costs

Administrative and general expenses are allocated on the following factors: state-specific – Situs (S), customer-related – Customer Number (CN) and general administrative and general expenses – System Overhead (SO). General and Intangible plant are allocated on the following factors: state-specific – Situs; customer-related – CN; generation and transmission – SG, CAGW, JBG, CAGE; fuel-related – SE, CAEW, JBE, CAEE; general office – SO.

WCA Allocation Handbook - PacifiCorp Part II

System Energy (SE) is based on each state's annual energy (Mwh) as a percentage of total system annual (Mwh). The SE factor is used to allocate fuel and non-firm energy-related costs that are general in nature and cannot be assinged to a control area.

SE (WA) = 4,482,377 divided by the sum of the Total energy for all states = 7.67%.

SC	1.83%	28.26%	8.37%	13.71%	41.60%	5.85%	0.38%	

System Capacity (SC) is based on each state's contribution to the total system's 12 monthly coincidental peaks (MW). The SC factor is not used to allocate any costs. It is used to develop the capacity weighting for the System Generation (SG) factor below.

SC (WA) = 8,435 divided by the sum of all states = 8.37%.

iii) SYSTEM GENERATION (SG)

System Generation (SG) is calculated using the SE and SC factors [i & ii above]. It is based on a 75% capacity weighting (SC) and 25% energy weighting (SE). SG is used to allocate generation and transmission related costs that cannot be assigned to a specific control area.

SG (WA) = (8.37% x 75%) + (7.67% x 25%) = 8.193%.

iv) SITUS (S)

Situs (S) directly assigns 100% of the costs to one state. This factor is used to assign general busisness revenues, miscellaneous revenues, distribution costs, customer-related costs that can be identified with a specific state.

v) SYSTEM OVERHEAD (SO)

	West				JURISDICTION'S TOTAL GROSS		
CA	OR	WA	WY	UT	ID	FERC	PLANT
366,045,750	4,186,838,008	1,119,315,048	2,143,868,912	6,872,136,894	933,684,066	10,925,467	15,632,814,146
		<u> </u>					
2.3415%	26.7824%	7.1600%	13.7139%	43.9597%	5.9726%	0.0699%	

System Overhead (SO) is based on the allocation of total gross plant. The SO factor is calculated by dividing the gross plant allocated to each state (excluding SO allocated plant) by total Company gross plant. The SO factor is used to allocate general and intangible plant and administrative & general expenses.

SO (WA) = 1,119,315,408 divided by 15,632,814,146 = 7.160%.

vi) CUSTOMER NUMBER (CN)

	West			East					
CA	OR	WA	WY	UT	ID	FERC	CUSTOMERS		
45,011	552,622	125,678	132,189	779,184	69,440	-	1,704,124		
2.6413%	32.4285%	7.3749%	7.7570%	45.7234%	4.0748%	0.0000%			

The Customer Number (CN) is based on each state's number of customers compared to total company customers. The CN factor is used to allocate customer-related plant and expenses.

CN (WA) = 125,678 divided by 1,704,124 = 7.375%.

CAEE	64.1115%	9.9744%	25.3502%	0.5639%	100.00%

Control Area Energy East (CAEE) is based on each ECA state's annual energy (Mwh) as a percentage of the east control area's annual energy (Mwh). The CAEE factor is used to allocate fuel and non-firm energy-related costs that are assinged to the east control area.

xi) CONTROL AREA GENERATION EAST (CAGE)

Control Area Generation East (CAGE) is calculated using the ECA Coincidental Peak and CAEE factors [viii & x above]. It is based on a 75% capacity weighting (ECA 12 CP) and 25% energy weighting (CAEE). CAGE is used to allocate generation and transmission related costs that are assigned to the east control area.

xii) CONTROL AREA GENERATION WEST (CAGW)

Control Area Generation West (CAGW) is calculated using the WCA Coincidental Peak and CAEW factors [vii & ix above]. It is based on a 75% capacity weighting (WCA 12 CP) and 25% energy weighting (CAEW). CAGW is used to allocate generation and transmission related costs that are assigned to the west control area.

CAGW (WA) = (21.34% x 75%) + (21.34% x 25%) = 21.341%.

xiii) GROSS PLANT SYSTEM (GPS)

	WEST

Gross Plant System (GPS) is based on the allocation of total gross plant. The GPS factor is calculated by dividing the gross plant allocated to each state by total Company gross plant. The GPS factor is used to allocate property taxes.

GPS (WA) = 1,165,713,304 divided by 16,280,831,263 = 7.160%.

System Net Plant (SNP) factor is based on the allocation of total net plant. The SNP factor is calculated by dividing the net plant allocated to each state by the total company net plant. The SNF factor is used to allocate interest expense and certain income tax related items.

SNP (WA) = (WA Gross Plant, 1,165,713,304 (xiii) less WA Accum. Depr., 487,788,805 (xiv)) divided by (Total Co. Gross Plant, 16,280,831,263 (xiii) less Total Co. Accum. Depr., 6,599,539,051 (xiv)) = 7.002%.

xv) SYSTEM NET PLANT DISTRIBUTION (SNPD)

	WEST							
DISTRIBUTION :	CA	OR	WA	WY	UT	ID	FERC	TOTAL
TOTAL NET DISTRIBUTION PLANT	110,265,809	901,837,128	207,337,557	281,689,621	1,388,900,038	<u>138,993,248</u>	-	- 3,029,023,400
SYSTEM NET PLANT DISTRIBUTION	3.6403%	29.7732%	6.8450%	9.2997%	45.8531%	4.5887%	0.0000%	100.0000%

System Net Plant Distribution (SNPD) factor is based on the allocation of net distribution plant. The SNPD factor is calculated by dividing net distribution plant allocated to each state by the total company net disribution plant. The SNPD factor is used to allocate distribution related expenses that cannot be directly assigned to a specific state.

SNPD (WA) = 207,337,557 divided by 3,029,023,400 = 6.8450%

xvi) CONTRIBUTIONS IN AID OF CONSTRUCTION (CIAC)

Contributions in Aid of Construction (CIAC) factor is based on the allocation of net distribution plant. The CIAC factor is calculated by dividing net distribution plant allocated to each state by the total company net disribution plant. The CIAC factor is used to allocate a Schedule M item related to contributions received in aid of construction.

CIAC (WA) = 6.8450%

xvii) SYSTEM NET PLANT TRANSMISSION (SNPT)

System Net Plant Transmission (SNPT) factor is based on the allocation of net transmission plant. The SNPT factor is calculated by dividing net transmission plant allocated to each state by the total company net transmission plant. The SNPT factor is not used to directly allocate any costs. It is used in the calculation of the Wheeling Revenue - Generation (WRG) and Wheeling Revenue - Energy (WRE) factors (see xxand xxi below).

SNPT (WA) = 121,919,990 divided by 1,784,213,018) = 6.833%

xviii) JIM BRIDGER GENERATION (JBG)

Jim Bridger Generation(JBG) factor is based on two other factors; CAGW [xi above] and Jim Bridger's WCA transmission capacity. Jim Bridger's WCA transmission capacity at June 2008 is 95.78 %. The transmission capacity is calculated by dividing Jim Bridger's WCA transmission capacity by the Jim Bridger plant nameplate capacity (see calculation below). The JBG factor is used to allocate production and transmission plant and operating costs associated with the Jim Bridger plant.

JBG (WA) = CAGW of 21.341% x 95.78% = 20.44%

--- based on transmission capability

xix) JIM BRIDGER ENERGY (JBE)

Jim Bridger Energy (JBE) factor is based on two other factors; CAEW [viii above] and Jim Bridger's WCA transmission capacity (see calculation above). The JBE factor is used to allocate fuel related costs associated with the Jim Bridger plant.

JBE (WA) = CAEW of 21.341% x 95.78% = 20.44%

xx) WHEELING REVENUE - GENERATION (WRG)

Wheeling Revenue Generation (WRG) factor is based on two other factors; CAGW (xii above) and SNPT for the WCA states (Oregon, Washington and California (see xv above)). The WRG factor is used to allocate firm wholesale wheeling revenues.

WRG (WA) = CAGW of 21.341% x SNPT of 32.015% (sum of CA, OR, WA) = 6.832%.

xxi) WHEELING REVENUE - ENERGY (WRE)

Wheeling Revenue Energy (WRE) factor is based on two other factors; CAEW (ix above) and SNPT for the WCA states (Oregon, Washington and California (see xv above)). The WRE factor is used to allocate non-firm wholesale wheeling revenues.

WRE (WA) = CAEW of 21.341% x SNPT of 32.015% (sum of CA, OR, WA) = 6.832%.

xxii) BAD DEBT EXPENSES

WEST							
CA	OR	WA	WY	UT	ID	FERC	TOTAL

-0.3520%	41.2375%	14.4758%	5.5639%	35.9180%	3.1567%	0.0000%	

Bad Debt Expense (BADDEBT) factor is based on balances in FERC Account 904. The BADDEBT factor is calculated by dividing each state's account 904 balance by the total account 904 balance. This factor is used to allocate only the situs portion of deferred federal income taxes relating to unrecoverable customer account balances. WA's percentage in the June 2008 General Rate Case was 14.476%.

xxiii) TROJAN DECOMMISSIONING ALLOCATOR (TROJD)

IKUJU	4.7411%	73.9181%	21.3408%	100.0000%

Trojan Decommissioning Allocator (TROJD) was created in order to allocate the costs of decommissioning the Trojan Nuclear Plant which closed in 1993. This factor is calculated by dividing each WCA states' portion of the decommissioning costs by the WCA total in account 228.42. WA's percentage in the June 2008 General Rate Case was 21.341%.

xxiv) ACCUMULATED INVESTMENT TAX CREDIT (ITC)

a) 1984 (ITC 84)
c) 1986 (ITC 86)
d) 1988 (ITC 88)

e) 1989 (ITC 89)

f) 1990 (ITC 90)

Acumulated Investment Tax Credit (ITC) ITC 84, ITC 85, ITC 86, ITC 89, ITC 90 are the factors used to allocate the Rate Base Reduction called Unamortized ITC (Investment Tax Credit) in FERC Account 255. These are static factors that were calculated in the year the ITC originated and do not change.

	CA	OR	WA	WY	NON-UTILITY
ITC84	3.29%	70.98%	14.18%	10.95%	0.61%

xxvi) DEFERRED INCOME TAX BALANCES (DITBAL)

Deferred Income Tax Balance (DITBAL) is generated by the Company's tax model, "Power Tax" based on state allocations of property-related deferred tax balances. This factor is used to allocate property related deferred income tax balances.

xxvii) TAX DEPRECIATION (TAXDEPR)
