AWEC Data Request 142

**AWEC Data Request 142**

**Rate Design** - Please identify the amount of load-shifting that has occurred on Schedule 48T from on-peak times to off-peak times since the Company's last rate case. Please explain any assumptions PacifiCorp makes to answer this question and provide supporting data and work papers.

**Response to AWEC Data Request 142**

Please refer to Attachment AWEC 142. In its last general rate case (GRC), Docket No. UE-191024, the Company estimated that on-peak energy was roughly 40 percent of overall Schedule 48T energy consumption. This value has been relatively stable with the proportion of on-peak energy to total energy for the class being about 39 percent in this GRC proceeding.
