Kimberly Harris
CEO

Puget Sound Energy

Dear Ms. Harris:

I am a Puget Sound Energy customer who lives in Olympia. I am a home owner and live on the shores of Puget Sound. I am writing today to urge you to continue exercising leadership in PSE's transition to renewable energy sources for all customers.

PSE's steps to shut down half of the Colstrip plant is commendable. When does PSE plan to decommission the remainder of the plant + transition to wind energy or another renewable technology? How will PSE ensure that this transition is done in a manner supportive of the local community, its families + economy? Can you provide assurance that this transition is done in a way that costs are not passed along to customers?

As a Washington resident and PSE customer, I am extremely concerned about the impacts climate change will have. I am also proud to be from a state that is a leader on this issue and encourage you to position

PSE as an example across Washington, the U.S. and globally of a utility that has gone to 100% renewable ahead of schedule. Imagine the legacy you would leave, the jobs created, lives saved and benefits to our natural environment that your leadership would leave!

Thank you again for steps already taken. Please step away from fossil fuel and play the role only you can for a stronger, cleaner, healthier Washington State.

With Appreciation,

Lesly Roskey
