

Dear Kimberly,

Thank you for moving in the direction of clean energy. I understand your customers are your upmost priority. I'm sure if customers had the choice between 100% renewable energy and a fossil fuel based energy, they would choose a more sustainable source that is better for their families and surrounding environments.

I ~~commend~~ commend your efforts to move toward 15% wind generated energy however our goal should be 100%.

Our rivers, streams, waterways, habitats and communities cannot sustain on an energy source that has irreversible effects on its ecosystem.

I hope you will not falter and stand up to be a leader in clean energy not only for your customers but for the communities and habitats that are negatively effected on a daily basis.

All my regards in 100% renewable energy  
Linda Silver
