

Dear Mrs. Harris,

My name is Michael Leggett and I'm a PSE customer. Originally from Texas, I moved to the Pacific Northwest for the wonderful outdoors, family (my wife's family is based here), and the progressive actions of the region in fighting climate change. That last reason may sound far fetched, but it really was a factor. I have grown deeply concerned for how ~~to~~ what kind of world I will give to my three children. I love ~~how~~ how we are able to use so much hydroelectric energy to power our community and our access to clean water.

I'm proud that PSE has invested in wind and committed to retiring 2 of the 4 boilers at Colstrip. But what is the plan for the other 2 boilers? And what will replace these sources of energy <over>

and sources of jobs in Colstrip? I'm trying to do all I can as a citizen - I installed a 6.3 kW solar system on my own home in 2013.

How can ~~PSE~~ you lead PSE and help show the way ~~to~~ ~~the~~ for other utilities at this critical time? How can PSE retire all the boilers at Colstrip in the next 8 years? And can we go entirely with renewables instead of natural gas which while better than coal, has its own drawbacks from a safety, financial, and climate stand point? I'm really concerned my children won't have a better planet than the one I was raised in. It is my #1 issue - please show us and the rest of the nation bold leadership.

Sincerely,
Michael Lesgett
