

PSE CEO Kimberly Harris,

Thank you for your leadership in the decision to retire Colstrip 1+2 coal-burning plants — two of the dirtiest boiler units.

I wrote to urge you to commit to retiring unit 3+4 by 2025. I further urge you not to renew the coal burning contract for this plant.

We can't continue to burn fossil-fuels without further damaging the health of the planet and of this + future generations.

The public and political will to move away from fossil fuels — particularly coal-burning power plants and natural gas burning plants is growing stronger everyday. You can see this clearly in the recent decisions of REI, Microsoft and Starbucks to move to 100% renewable energy. It makes sense and cents for businesses and for the planet.

There is no stopping this wave of ratepayers in WA that are going to demand 100% renewable energy. The reason for this is the reality of Climate Change. We have no time to waste — it's essential that we stop burning fossil fuels before it's too late.

Wind turbines in Montana are a very viable replacement for the Colstrip plants. An investment today in renewable energy is an investment

in the future profits of PSE, PSE customers will increasingly choose and eventually demand 100% renewable energy from PSE. The future of our grandchildren's ability to live a healthy life on this our only planet, is at stake.

I urge you to seize this opportunity to decide to get ahead of the wave that's coming for renewable energy.

You are in a unique position to have a huge affect on the health of the NW - economic, physical, environmental - a decision that promotes health of the region, or a decision to damage the health of the region.

Please, for the sake of future generations - please retire units 3+4 at Colstrip by 2025.

Sincerely,

Mona Noelle
